TO ARCHITECTS, &c.—The IMPROVED SELF-ACTING WATER-BAR for FRENCH CASEMENTS, the best and most effectual yet invented, is made by T. SMITH, of 14, Queen-street, Oxford-street, near Argyll-street, where a working model can be seen, or a sketch will be sent on application.

N.B. Espagnolette Bolts of a superior quality, at reduced prices.

TO IRONMONGERS AND THE TRADE GENERALLY.

D. HULETT and CO. Manufacturers of GAS CHANDELIERS, HALL LANTERNS, GLASS LUSTRES, &c. &c. A large assortment of the newest designs always on show—every article marked in plain figures. Patentees and manufacturers of the Mercurial Gas Regulator. Complete pattern-book and price list, 10s.—55 and 56, High Holborn.

NEW GLASS GAS STOVE.—NEALL'S PATENT; Unique, Elegant, Efficient, and Inexpensive; price only 30s.—This valuable invention combines the important advantages of light and heat, with perfect freedom from smoke or smell, forms an ornament to a drawing-room or gentleman's hall, and is equally available for public or private offices.—DEANE, DRAY, and CO Gas Engineers, London-bridge, S.E. London Agents. The trade supplied.

RADIATING and REFLECTING STOVE. WILLIAM S. BURTON'S NEW REGISTER STOVE combines completely the well-known principles of both Stephen's and Sylvester's celebrated patent stoves, while it has others equally valuable, which are peculiarly its own, and for which a patent has been granted. Its reflecting and radiating powers are perfect. It is very simple, and cannot be put out of order, consumes but little fuel, is most cleanly and cheerful in use, while its general appearance, no fender being needed, is most imposing. Prices, complete, black or bronzed, from 2l. 10s.; bright, 14l. 8s. and upwards. One may be seen in action in his Show-rooms, which contain such an assortment of fenders, stoves, ranges, fire-irons, and general ironmongery, as cannot be approached elsewhere, either for variety, novelty, beauty of design, or exquisiteness of workmanship. Bright stoves, with bronzed ornaments, and two sets of bars, 4l. 14s. to 13l. 13s.; ditto, with ormolu ornaments and two sets of bars, 8l. 8s. to 22l. Bronzed fenders, with standards, 7s. to 4l. 12s.; steel fenders, 2l. 15s. to 11l.; ditto, with rich ormolu ornaments, 3l. 15s. to 18l. Fire-irons, from 1s. 9d. the set to 4l. 4s.

The late additions to these extensive premises already by far the largest in Europe, are of such a character that the entire of EIGHT HOUSES is devoted to the display of the most magnificent stock of GENERAL HOUSE IRONMONGERY (including Cutlery, Nickel Silver, Plated Goods, Baths, Brushes, Turnery, Lamps, Gasoliers, Iron and Brass Bedsteads, Bedding and Bed Hangings), so arranged in Sixteen Large Show-rooms as to afford to parties furnishing, facilities in the selection of goods that cannot be hoped for elsewhere. Illustrated catalogues sent per post free.—39, Oxford-street; 1, 1a, 2, and 3, Newman-street; and 4, 5, and 6, Perry's-place.

TO BELL-HANGERS, GAS-FITTERS, IRONMONGERS, &c. &c.—The Trade supplied on the best terms with House Bells, Zinc Tube, and Copper Wire. Gas Pendants, Brackets, and Joints of all descriptions for Gas-fitting, in Brass and Iron; Tin, Composition, Iron and Brass Tubing, Cornice-poles, Rings and Lacquered Gas Tube for Picture Rods Desk Rails, &c. &c.

Superior Rolled Brass for Engravers, Castings in Pine and Common Brass, Gun Metal, &c. at

RICHARD EVERED'S, Brass and Bell Foundry and Metal Warehouses, Nos. 10, 11, and 12, Charles-street, Long-acre, London.

CIRCULAR-SAW.—TO BE SOLD, a Saw-table, saws, and Iron-wheel 5 feet diameter, for hand power. Second-hand, well made, and in excellent working order.—Apply to J. BARNETT, 13, Wells-street, Oxford-street.

COMPLETE IMMUNITY from FIRE, THIEVES, and GUNPOWDER. EDWIN COTTERILL, Inventor, Patentee, and Sole Manufacturer of the Royal Climax Detector Locks. The only locks which have not been picked, and cannot be blown up with gunpowder. Descriptive drawings, with testimonials, and full report of the unsuccessful attempt of Mr. Hobbs to pick the Climax Detector Lock (an ordinary commercial one), at Manchester, forwarded free.—Manufacturer of Fire-proof Safes and Chests. Patent Double and Single-Action Door-Springs, &c. &c.—4, Victoria-street, corner of Regent-place, Birmingham.

GLASS PAINTING.—Messrs. HEATON and BUTLER (late of 24, Albany-street, Regent's-park), beg to call attention to their GRISAILLE DESIGNS for Ornamental and Clerestory Windows, produced at an unusually moderate cost, although painted by hand.—32, Gloucester-place, New-road (opposite Circus-street).

CRYSTAL WHITE SHEET GLASS, First, Second, and Third Quality, in Cases of 100, 200, and 300 feet, suitable for Pictures and superior Glazing, from 3d. to 6d. per foot; also in Cases of 100 and 200 feet, assorted sizes. 			100	

The Author will endeavour in the several chapters to define the apparent origin, and trace the development of the several styles of Ornament. He will proceed to ascertain the laws which govern their composition; both those which are general to all styles and those which are peculiar to each. He will further attempt in the 20th chapter to show how bearing in mind these general laws which have endeavoured to pervade the works of nature as I returning to her for fresh inspiration, we may yet go forward; and, whilst availing ourselves of the experience of all time, may be enabled to produce works in harmony with our own times—instead of busily following in the footsteps of the past.

The collection of this vast amount of material has been the labour of many years. On the eve of giving it forth to the world the Author fully feels the difficulty of the task he has undertaken; he trusts nevertheless that with this collection at hand, and all others engaged in any way with the decorative arts, will have before them an amount of material which does not elsewhere exist in any such convenient form, and in the use of which it will be his endeavour to serve them as a guide.

N.B. The Letterpress, with many Wood Engravings, will appear complete with the last Part of the Work on Dec. 15.

Rates have and moderate, Cases of which, with every information, to be had gratis, on application at the Chief Office, 52, Gracechurch-street, London

N.B. Parcels to be sent the same day must be at the Chief Office by THREE p.m.

TO BREWERS, DISTILLERS, DYERS, MILLOWNERS, and OTHERS who have steam engines, and to all who feel an interest in the establishment of baths and washhouses, or who for any purpose may require a plentiful supply of hot water at little expense. The discharged steam from high-pressure engines, as is well known, with few exceptions is conducted either through the roof into the open air, into a drain below, or into the chimney shaft, and is consequently entirely wasted; whereas, by means of a noiseless, simple, compact, and comparatively inexpensive apparatus, it may be made available for heating water to boiling point in any quantity up to what can be obtained from the consumption of three-fourths of the fuel used to drive the engine. By the use of this apparatus in connection with an engine of one-horse power only, a sufficient supply of hot water is insured for the constant use of from ten to twelve baths, and their number may be increased in proportion as the engine increases in power; and wherever engines range from six to ten horse power or upwards, both baths and washhouses may with advantage be constructed together. Although preferable, it is not absolutely necessary that the apparatus should be on the same side of the street as the engine, as but little heat would be lost by conducting the discharged steam a distance of some sixty or eighty feet, through insulated pipes under a roadway. The apparatus having been in use upwards of three years in a large public establishment with perfect success, it is now confidently anticipated, independent of its general usefulness, that it will render the establishment of baths and washhouses comparatively easy in many quarters where they would otherwise be scarcely thought of, on account of the usual expensive apparatus. Diagrams, with full particulars may be had on application to the Patentee, JAMES HARRIS, Hanwell, Middlesex

PLANTING the GROUNDS of SUBURBAN RESIDENCES, CEMETERIES, &c. to produce immediate effect.—The undersigned have a most extensive STOCK of ORNAMENTAL TREES & SHRUBS, fit for present planting, some of which are 20 feet high, and may be removed with perfect safety. They comprise all the leading decorative plants employed in ornamental gardening, either as screens against unsightly objects, or for shrubberies and single ornamental lawn plants. May be inspected, and prices obtained on the ground, which is 3 miles from Hyde-park corner.—R. GLENDINNING, Chiswick Nursery, London.

AN ACCOUNTANT, of ability and experience, undertakes to MAKE UP ACCOUNTS in arrear, and keep the books of builders, contractors, tradesmen, and others posted upon very low terms. First-rate references to character, &c. given.—Address, S. V. Office of "The Builder."

IMPORTANT NOVELTY in ORNAMENTAL FLOORING.—The LONDON PARQUETRY beg to inform architects and all persons engaged in building, that they are now manufacturing, in addition to their well known Parquet Floors and Borders, Patent-Wall Decorations, &c. a highly useful and elegant kind of Floor—viz. the new PARQUET-ETTO FLOOR,

in waincoat walnut, satin, pine and their woods at one shilling to fifteen-pence per foot superficial according to quantity desired.

The London "Parquetry's" Annual Circular, containing the important correspondence on "Parquetry," from the *Builder's Weekly Reporter* is now ready, and will be forwarded with sketches, estimates, &c. on receipt of a written application, accompanied by outline of the locality referred to.

For the convenience of persons residing in the City, orders are likewise taken at Mr. HOBNES, 31, Gracechurch-street.

LONDON PARQUETRY, WHITEFRIARS.

BONUS.

THE DIRECTORS OF THE

STANDARD LIFE ASSURANCE COMPANY request attention to the advantage of joining the Company before the 15th of November next, when the books will be closed for the current year, and the lists of Policies completed for 1856, with reference to the right of participation at future Divisions of Profits. Such Policies will rank for Five Years' Bonus in 1861, and will secure One Year's additional claim for Profits at each future Division over later Entrants.

EXAMPLES OF BONUS ALREADY DECLARED.

LONDON, 82, KING WILLIAM-STREET.

CHAIRMAN OF THE BOARD

The Right Honourable the Earl of Aberdeen.

ORDINARY DIRECTORS.

Thomas H. Brooking, esq. 13 New Broad-street.
John Griffith Frith, esq. Adams Frith.
Alexander Gillespie, esq. 4, Billiter-court.
John Scott, esq. 4, Hyde-park-street.
Frederick Hamilton, esq. 9, Cowsy-square

THE STANDARD LIFE ASSURANCE COMPANY was established in 1825, and its progress has been most successful. During the ten years from 1845 to 1855, the Assurances effected amounted to upwards of Four and Half Millions sterling; and during the year from 1854 to 1855 alone, the New Assurances amounted to upwards of £600,000; being the LARGEST BUSINESS transacted in Great Britain during that period by any Assurance Office

The LARGE FUNDS which the Company have accumulated are invested on the security of Land and in Government securities, and these securities are subject to investigations by professional gentlemen at intervals of five years. Such an investigation took place last year, when the Committee reported that "the whole of the Investments are of the very best and safest description, and they have no hesitation in stating their belief that there is not one of them which would not be accepted as a security if it was now proposed to the Board for the first time."

The INCOME of the Company is about a Quarter of a Million sterling.

The position of the STANDARD, and its whole terms and conditions, are such as to give it the strongest claims on public support.

WILL. THOS. THOMSON, Manager.
H. JONES WILLIAMS, Resident Secretary.

LONDON. EDINBURGH.

3, MANSION-HOUSE-PLACE, LONDON, AND 6, BERKLEY-STREET, BIRMINGHAM.

NEW PATENT INVENTIONS FOR STABLE REQUISITES.

AWARDED A PRIZE AT THE PARIS EXHIBITION, AND PATRONISED BY THE ENGLISH AND FRENCH GOVERNMENTS.

COTTAM and HALLEN, of Winsley-street,

Are the original inventors of the PATENT ENAMELLED MANGER, WATER-TROUGH and WROUGHT-IRON RACK, united to an iron top-plate, and forming one complete and useful fixture having Cottam's Patent Noiseless Holder-Bottle and Chain-Rein attached, the ball of which is taken to the back of the manger, and works with ease and freedom up or down the guide-bar. Cottam's new Patent Seed-Box, of galvanized sheet iron, is an important addition to the above fittings, being simple in construction, light and durable, promotes cleanliness, and is economical in its results. Also, the Patent Saddle and Harness Bracket combined, which can be used with great advantage where space is an object, as it can be turned up out of the way when not in use.

Improved Harness Rollers, for preserving the shape of the harness, and preventing its cracking. Patent Loose-Box Fittings, Neap and Durable Corn-Bins.

Improved Surface-Drain, with safety covers, Sanitary Traps, and every article for the harness-room and stable, kept in stock, plain, galvanized, and enamelled. Iron Gates, Fencing, Hurdles, &c.

The new Illustrated Catalogue for 1856, and estimates gratis, upon application to

COTTAM AND HALLEN, 2, WINSLEY-STREET, OXFORD-STREET.

STEVENS AND SON,

ENGINEERS,

IRON AND BRASS FOUNDERS AND MANUFACTURERS;

CONTRACTORS

FOR THE

ERECTION OR ALTERATION OF GAS-WORKS FROM TWENTY LIGHTS UPWARDS,

With Buildings, Mains, Meters, Service-Pipes, Lamp-Posts, Lamps, and Gasfittings

WATERWORKS FOR THE SUPPLY OF TOWNS,

WITH BUILDINGS, STEAM-ENGINES, PUMPS, MAINS, SERVICES, &c.

Gas Stoves for Heating Churches, Chapels, Lecture Halls, and Public Buildings of all kinds; these have been recently fixed at New College, Oxford; St. George's Catholic Cathedral, Southwark; and numerous Churches, Chapels, &c.

Gas Cooking Stoves and Ranges on the most improved principles.

GAS-FITTING IN ALL ITS BRANCHES.

GAS CHANDELIERS OF ALL SIZES, IN BRASS OR IRON, FROM TWO TO TWO HUNDRED LIGHTS.

DEVICES FOR GAS ILLUMINATION.

IMPROVED REGISTERING TURNSTILES FOR TOLL-BRIDGES, EXHIBITIONS, PUBLIC GARDENS, BATHS AND WASHHOUSES, &c.

These Turnstiles have been selected for the Entrances of the Great Exhibition, New York.

PATENTEES OF THE SEMAPHORE RAILWAY SIGNAL.

Signals for communication between Guard and Engine Driver. Railway Stores and Lamps of every description.

DARLINGTON WORKS, 16 to 19, SOUTHWARK-BRIDGE ROAD, LONDON.

VENTILATING STOVES! SUSPENSION STOVES!—Approved by thousands of purchasers, and recommended as the cheapest, cheerfullest, most healthy, and most economical for churches, chapels, halls, schools, workshops, counting-houses, libraries, &c. Prospectuses, with prices, sent post-free.—DEANE, DRAY, and CO. Stove Range, Ironmongery and Furnishing Warehouse, London-bridge.

HEATING BY  HOT WATER.

JOHN WEEKS and CO. King's-road, Chelsea, HOT WATER APPARATUS MANUFACTURERS of buildings of every description, and of the most recently improved construction, can be effected by warmed by Hot Water. JOHN WEEKS and CO. can give numerous references of Churches, Dwelling-houses, Warehouses, &c. &c. where they have fixed their Hot Water Apparatus. Also to be seen in extensive operation at their Premises, King's-road, Chelsea.

BATHS and HOT-WATER APPARATUS. J. TYLOR and SONS' ILLUSTRATED CATALOGUE of BATH WORK, &c. to be had on application. Establishment for the Public open DAILY for Hot and Cold Baths, Manufactory, Warwick-lane, Newgate-street, London.

DR. ARNOTT'S SMOKE-CONSUMING GRATE.

Will this Grate be universally used?

Its advantages over every other consist in—

1. A saving of 50 per cent in fuel.
2. Its being a cure for a Smoky Chimney.
3. Its not requiring one half the attention of an ordinary fire.
4. Its being perfectly safe.

A Prospectus, with a Second Series of Testimonials, just issued, from all parts of the country, will be sent on application to P. EDWARDS, SON, and CO. 32, Pall-street, Oxford-street.

GURNEY'S WARMING APPARATUS, for CHURCHES PUBLIC BUILDINGS, and PRIVATE HOUSES.—This Apparatus is a modification of that invented by Sir Goldsworthy Gurney, and now used by him for warming the House of Commons and Houses of Parliament. It is constructed so as to be available for private houses, churches, and large buildings. It is simple, inexpensive, and powerful; the fuel may be coal, coke, or gas; combining the latest improvements with economy of fuel, to temper and warm air for respiration, well, and at the same time, with its natural hygrometric break.—For further particulars apply to Mr. WOODCOCK, 5, Bessborough-gardens, Pimlico, who is fully authorized, and is empowered to grant licenses for agencies under the patent.

ECONOMIC COOKING-STOVE.—DEANE, DRAY, and CO. recommend with confidence their IMPROVED COOKING STOVE to the notice of those who seek cheap in first cost, simple in construction, easy of management, capable of doing a large amount of work with a comparatively small consumption of fuel, and is manufactured in sizes suitable for either a small family or large establishment. Also their new tender department, for Dining, Drawing, and Bed-room use; where may also be obtained engravings with prices, or they will be forwarded free by post. DEANE, DRAY, and CO. Opposite the Monument, London-bridge. Established A.D. 1700.

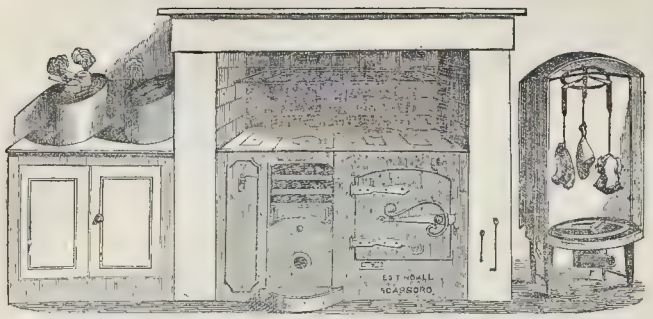
COLLINGE'S PATENT HINGES.—Manufacturers, CHARLES COLLINGE and Co. 81 and 83, Bridge-road, Lambeth, where a great variety are always on view for church, park, railroad, coachhouse, and other gates and doors of large and small dimensions, a ton weight moving with these hinges as easily as a wicket. Ornamental hinges, adapted for drawing-rooms, &c.; doors fitted with them may be removed and replaced in an instant. Rising and self-locking spring hinges, and surface or flush hinges, at moderate prices. None genuine unless marked "Charles Collinge, Patent, Lambeth." Plain and ornamental cast and wrought ironwork for building and other purposes. Engines, machinery, patent axle-trees, sugar mills, &c.

A PRIZE MEDAL for SUPERIOR LOCKS was awarded to J. H. BOOBBYER at the Great Exhibition of 1851, who invites the attention of Builders, &c. to his Stock of Ironmongery, Brass Foundry, Nails (wrought and cut), Copper and Zinc; Patent Locks of all descriptions; China, Glass, and Wood Furnitures of all kinds, with Patent Shifting Spindles; Dr. Arnott's Ventilator, as much admired, &c. &c. &c. &c.

J. H. BOOBBYER late STUCHI and BOOBBYER), established nearly 30 years, for the supply of Goods from the best Manufactories, at the lowest prices.

14, Stanhope-street, Clare-market, London.

PARKIN AND MARSHALL,



GENERAL MERCHANTS, AND MANUFACTURERS OF

TABLE CUTLERY, PEN and POCKET KNIVES, SCISSORS, RAZORS, ELECTRO-PLATED WARES, FILES, SAWS, EDGE and JOINERS' TOOLS, AUGURS, STEEL, &c. &c.

TELEGRAPH WORKS, SHEFFIELD.

OFFICES—{ NEW YORK—71, JOHN-STREET. BOSTON—35, KILBY-STREET, E.S. MELBOURNE—94, COLLINS-STREET EAST.

CORPORATE MARK "XLALL."—Granted by the Cutlers' Company, 1789.

Messrs. PARKIN and MARSHALL have also pleasure in stating that they are appointed Sole Wholesale Agents for the Sale of the undernamed Articles, manufactured by,

MR. ENOCH OLDFIELD TINDALL, IRON WORKS, SCARBOROUGH, viz.:—

TINDALL'S PATENT PORTABLE MANGLES, WASHING AND WRINGING MACHINES, NAPKIN PRESSES, COOKING RANGES, LAUNDRY STOVES, SANATORY TRAP AND GRATE, CHAFF CUTTERS, OAT, BARLEY, MALT, AND LINSEED MILLS, BEAN MILLS, OILCAKE BREAKERS, PORTABLE SAW-MILLS, TURNIP CUTTERS, CULTIVATORS, PLOUGHS, HARROWS, &c. &c.

THE PATENT COOKING RANGES AND ROASTERS are now amongst the most complete and inexpensive before the Public, and are rapidly supersoning the antiquated Ranges of our country.

THE IMPROVED LAUNDRY STOVE will heat Fifteen Flats at once, occupies only 12 inches in space, is removable from one room to another, and will be found invaluable in Public Hospitals, Infirmaries, Laundries, and Private Families.

E. O. T.'S SANATORY GRATE AND TRAP is now acknowledged to be the best and most secure from effluvia (as well as not being liable to choke, and readily cleaned) that has been introduced.

THE MANGLES AND WRINGING MACHINES have been introduced into the Royal Household, most of the Public Laundries, and also into many thousand Private Families, who bear testimony to their efficiency and superiority over all others.
Prize awarded for Mangles by the Yorkshire Agricultural Society, at Rotherham, August, 1856.

THE OAT BRUISERS AND CHAFF CUTTERS, like the above, combine cheapness with the greatest simplicity of construction, and only need to be tried to be appreciated. They effect great saving, and should be in every stable.

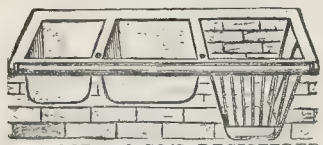
N.B.—E. O. TINDALL is the Sole Licensed Manufacturer for the North of England of **BUSHE'S** celebrated ROOT PULPER and SHEEP TURNIP-CUTTER.
Illustrated Catalogues per post, on receipt of twelve stamps.

TYERMAN'S PATENT HOOP-IRON BOND,

FOR BUILDING PURPOSES.

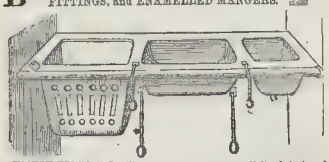
ADOPTED BY SEVERAL DEPARTMENTS OF THE GOVERNMENT.

TARIFF OF PRICES beyond the current Price of Hoop-iron.



Gauge.	In. wide.	Per 1,000 ft.
No. 16	.. 1¼ ..	7s. 0d.
15	.. 1½ ..	7s. 6d.
15	.. 1¾ ..	8s. 0d.
15	.. 2 ..	8s. 6d.
15	.. 2½ ..	9s. 6d.

THE PATENT BOND (which is prepared from the ORDINARY HOOP IRON, by notching it at intervals of 1¼ inches) is now being extensively used in the Iron GOVERNMENT WORKS, DOCK BUILDINGS, BANKS, ASYLUMS, BRIDGES, VIADUCTS, PRISONS, ENGINE-HOUSES, and MANUFACTORIES, as well as in other PUBLIC and PRIVATE WORKS, in London and in all parts of the kingdom.



Sole Manufacturers—THOMAS PERRY and SONS, Highfields Works, Bilston.
London Depôt—ST. ANN'S WHARF, EARL-STREET, BLACKFRIARS.

PATRONISED BY H. R. H. PRINCE ALBERT.

S. HOOD and CO.'S REGISTERED STABLE-FITTINGS, with FRONT REVOLVING ROLLERS, plain or enamelled, GIRDERS (cast and wrought-iron), COLUMNS, Sash-Weights, Rain-Pipes, Eaves-Gutters, variously moulded. Ornamental Rain-Pipe Heads, of Gothic and other designs, and all castings connected with buildings, in London time, and at country prices.
CASTINGS WAREHOUSE, 68, UPPER THAMES-STREET.

BARTON'S PATENT SAFETY STABLE FITTINGS, and ENAMELLED MANGERS.

THESE FITTINGS will be found to possess all the latest and most important improvements, and are of the best manufacture. All kinds of Stable-furniture in stock. Iron Hurdles, Gates, Fencing, Tomb-railings, &c. New illustrated Catalogues forwarded on receipt of two postage-stamps.—JAMES BARTON, Ironfounder, &c. 370, Oxford-street, London.

LIGHTNING CONDUCTORS.—R. S. NEWALL and CO. Patentees of the Copper Rope Lightning Conductor, supply Lightning Conductors, with the point and all staples complete for fixing, at one shilling the foot. R. S. NEWALL and CO.'S Patent Copper Rope Conductor is being applied by architects, engineers, and scientific men in all parts of the world.
COPPER and IRON CORD for WINDOW SASH-LINES.
OFFICES, Gateshead-on-Tyne.

NEW PATENT MACHINE for MORTISING and TENONING HARD or SOFT WOOD and BORING WOOD or IRON.

House and Coach Builders, Joiners, Cabinetmakers, and others, doing similar work, are invited to call at the Patentees', POWIS, JAMES, and Co. Wholesale Builders and Cabinet Makers, Ironmongery Establishment, 98, Watling-street, City, and see in action this very simple, powerful, and expeditious machine, which is the only one yet brought out, for performing these three separate kinds of work by one machine; and as it is self-feeding, it does not require any skill or care in using like the older inventions introduced. It can either be worked by a boy, or made to go by steam power.

P.S. Steam Engines and Machinery contracted for.

MACHINERY for SAWING, PLANING, MOULDING, &c.

SAMUEL WORSSAM and CO. beg to call the attention of Contractors, Shipbuilders, proprietors of Saw-Mills, and others, to their improved Inventions and Adaptations in Saw Frames and Benches, Koller and Chain Planing Machines, Endless Saw Frames, and all other kinds of Machines, for Sawing, Planing, Groving, and Moulding Wood. They have constantly on hand machinery, either wholly or partly made, so that they can at all times on short notice supply them. S. W. and CO. beg to state that they have hitherto confined their attentions to this sort of machinery, and have had the honour of supplying some of the most distinguished companies, ship builders, and contractors in the world with their machines, for home and foreign use. One of their Saw Benches, and also a smaller one, with Boring Apparatus, may be seen at the Machinery Department, Crystal Palace.—A descriptive Catalogue, with Drawings, may be had on application to SAMUEL WORSSAM and CO. Engineers, &c. King's-road, Chelsea, London.

TO BUILDERS, CARPENTERS, CABINET-MAKERS, &c.

JOHN DALE, 18 and 19, Chiswell-street, Finsbury-square, respectfully invites the above Trades to the inspection of his immense stock of ironmongery, which cannot be surpassed in variety, quality, and cheapness by any house in London.

Elliptic Stoves, double backs, 3½d. per inch, and upwards.
Register Stoves, 5d. 6d. 7d. 8d. and 9d. per inch.
Self-acting Ranges, with circular ovens and back boilers, best wrought bars and bright fittings:—
3 ft., 3l. 16s.; 3 ft. 6 in., 3l.; 4 ft., 3l. 15s.
3-feet Cottage Ranges, with ovens and back boilers, 32s. each.
3-feet self-acting ditto, ditto, 34s. each.
Air Bricks, 4s. per doz.
Best Fine Cut Clasp and Rose.

1½	1¾	2	2½	3	3-in. & larger.
16s. 6d.	16s. 6d.	15s. 6d.	15s. 6d.	13s.	14s. per cwt.

And every material required in the building, bell-hanging, upholstery, and brass-foundry trades on the most reasonable terms.
Lists of Prices had on application at the Warehouse, or by letter prepaid.

JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS.

J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior tone, truer in form, and at less cost than has heretofore been accomplished.
Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any size, note, weight, singly or in peals.
TUNED BY MACHINERY.
Stocked and wheeled ready for fixing. Old Bells recast or taken in exchange.
MUSICAL HAND-BELLS tuned to the Chromatic Scale, with improved Clappers, and pegged on a new system, which give superior tone and facility for ringing.

TO MANUFACTURING CHEMISTS, PLUMBERS, BUILDERS, &c.

ANDREW CLARK and COMPANY, PLUMBERS,
THE BEAR GARDEN LEAD WORKS, SOUTHWARK,
Sole Manufacturers of Delbruck's Patent Autogenous Soldering Apparatus, invite the attention of Manufacturing Chemists to their Patent method of

UNITING LEAD TO LEAD WITHOUT SOLDER.

Leaden Chambers, or any leaden vessels, made or repaired by this process, making them complete, without the introduction of any foreign metal.
PLUMBERS and BUILDERS can be SUPPLIED with SHEET LEAD and PIPE, cut to any dimensions, and EXCHANGED for OLD LEAD, on the LOWEST TERMS.

IRON FOUNDRY, Harrow-street, Lant-street, Southwark.—W. R. BARTLETT, manufacturer of Girders, Columns, Cantilevers, Railing, and Newel Bars, Iron Coping, Panels, Tomb Enclosures, Area Gratings, Sash Weights, &c. Also Fly and other Wheels, Riggers, Pinions, Engine and Lathe Castings; Forge Backs, Furnace Bars, Kilns, Pans, Pipes, Tank Plates, and other Castings, to patterns or drawings.

TO IRONMONGERS, BUILDERS, &c.

PATENT WROUGHT-IRON WELDED TUBE for GAS; galvanised ditto for water; high-pressure cocks, &c. Manufacturers of Dr. Arnott's Improved Ventilators.
HULETT and CO. 35, High Holborn.

The Builder.

VOL. XIV.—No. 717.

SELDOM has such an opportunity been afforded to architects to distinguish themselves as is offered by the invitation for designs for the concentration of public offices, and the erection of buildings for the Government between Whitehall and Westminster Abbey: never was so much anxiety manifested by those in power to commence a series of improvements which should tend to make London one of the most beautiful cities in the world. And it must not be imagined because we differ in some particulars, that we are not grateful to Sir Benjamin Hall for the prospect which is opening. It is because we would have it a success, redounding alike to his credit and the glory of the country, that we broach our objections. Mr. Hunt, too, has spared no pains, and is entitled to our warm acknowledgments for an anxious desire to secure a good result. Nevertheless, we must continue to object to the determination as to the site and arrangement of two of the principal buildings, before obtaining designs for the general scheme. One effect of the Government "instructions" beyond those already urged, arising from the demarcation of the ground, and the attempt at precision as to two of the offices, is to shut out entirely suggestions for combining the offices into one general building, or combination of attached buildings. We do not give very great importance to the point that there would be saving of expense by the erection of one building, nor to that of a possible saving in messengers' departments and other minor divisions or adjuncts to the chief offices; because, in a great structure, there is no escape from the *multiplication* of conveniences; and all that is really gained appertains rather to the advantage of communication under cover, than to saving of time. The principal offices, even now, if ill lodged, are, except the War Office, pretty close to one another: and what seems mainly wanted is more room for each, and accommodation for other departments, such as the several commissions. We, however, repeat, that it was worth while to leave the competitors unfettered, to apply their skill to the working out the problem in the best way that might present itself to them,—though affording them better means of studying the general principles of the distribution of Government offices than they have at present.

The mode in which the barracks' competition was taken up by the competitors in that case would have served to show what it was the Government interest to get made the direction of efforts in the present instance. In every group of apartments, or group of buildings, the first step in *ichnographic* distribution is to fix on the centres of the system, and to place the other parts of the scheme in due relative position, and all parts of subdivisions in similar relation to their centres. Thus, as we pointed out at the time of the competition referred to, whilst some of the competitors then made the parade-ground the *focus* or key-note of their system, others had chosen the commanding officer's quarters, others a covered drill-court, and so on. Each of these proposals was not equally desirable; but they generally afford us the allusion required to explain what is the proper and logical way of going to work on the plan of any building which is to answer its intended purpose. Now, by restricting their view of required accommodation to two of the intended offices, and as to these offices, by directing floors, dimensions, and positions, where they should rather have supplied information as to the working of official business, the Government seem to us to have shut themselves out from receiving plans of the very character which they most require. Having regard to any public object, it has been far too much the custom to treat architects as mere mechanical aids, not gifted with the faculty of discerning the requirements in special classes of buildings,—and in this architects have too much acquiesced. But in truth, there is really nothing that requires so much of special study, and so clear a knowledge of things apparently non-architectural, as the matter of plan: each class of building, and in trades each separate calling, requires its specially designed structure,—and so much so, that architects might with advantage devote themselves, more than they do, to such special classes of building. Now the Government require to draw the special study of architects to their mode of conducting official business—assuming this to be good: and then the next step to be made to and not by the Government should follow in the submitting of the proposals for practically working the business out, so far as it is dependent upon *structural* arrangement. We can make no attempt now to decide what should be centres of radiation in the plan of offices, whether they are under one roof or several roofs: but we do observe in glancing through the particulars of accommodation required in each of the two offices for which complete sets of drawings are wanted, that there are general reception-rooms, libraries, messengers' rooms, telegraph offices, printers' rooms, office-keepers' and house-keepers' rooms, repeated in different buildings, and in different parts of the same building, and which are distributed, up and down stairs, on no system of labour-saving that we have as yet fathomed. The arrangement, as defined, may be good; but it would have been better to leave both these details and the general plan to be suggested, rather than, by imposing restrictions, prevent the furnishing of something better.

With reference to the general plan, even after the above expressions of opinion, some observations of a different character may here be offered. The plan supplied, "No. 2, showing the river Thames, with the leading thoroughfares," &c. is to, perhaps, an unnecessarily large scale; but it does not take in the area of London which the competitors will have to consider. No scheme for the distribution of the offices will be complete without it is accompanied by the most careful consideration of the means of communication across the river, and these must be viewed with reference to the direction of the Westminster-bridge-road at its further end, the convergence of *routes* at the Obelisk, and even the proposed street from the London-bridge station. We do hope, however, this will result in the completion of Westminster-bridge in its present site. Again, the *level* of the Thames embankment, a matter by no means easy to decide, it will be desirable to pay some regard to. Thus, to treat the case as it deserves, the remodelling of the plan of *London*, rather than of the small area of "Plan No. 2," will have to be considered.

Our attention has been called to an apparent incorrectness in the plan No. 2, in the neighbourhood of Westminster Hall. One correspondent says:—

"Why are not the Law Courts on the west side of Westminster Hall shown on the said plan as now existing? Though no architect will wish to interfere with Sir Charles Barry's building, the Law Courts will probably be considered by some competitors for design No. 1, and as such, especially for foreign architects, should be accurately delineated on that plan. In the number of the *Builder*, September 3rd, 1853, St. Stephen's porch, south of Westminster Hall, is drawn 40 feet wide; while, on the Government plan, it is shown no less than 135 feet wide. The Government plan also shows a block of building in the re-entering angle west of St. Stephen's porch, not now existing: the large octagonal turret at the north-west angle of the Law Courts is also shown too far south in reference to Westminster Hall, and the block of building shown north of the Law Courts one would not suppose to be meant to indicate an open shed and uncovered latrines. The whole of the Law Courts and St. Stephen's porch are evidently drawn too far south in reference to Westminster Hall, and as in Sir C. E. Trevelyan's evidence, relative to the consolidation of the public offices, mention is made to provide for the Courts of Law at Somerset House, and it may appear to many that this block of building interferes with the approaches, as well as being an ugly projection to the Palace, an accurate plan of this portion is very desirable."

It will be best that competitors should look to the ground itself where practicable.*

Respecting the site, a correspondent of one of the newspapers has urged the claims of Victoria-street. That locality, however, would be less central, especially having regard to the facilities of communication which there are by water. Our objection is not to the part of Westminster chosen, but to the attempt to define the site rigidly, or rather as to the *doubt* which after all is left, even as to the value and meaning of the red line.

It is quite obvious that a considerable addition should be made to the 352,000 superficial feet which are the sum of the accommodation named as required for all the offices. Only 30,000 feet of the 352,000 appear to be given to departments which are of the nature of commissions; and if the numerous minor departments which it must be a chief object to concentrate are accommodated, we shall probably be under the figures in taking three times 30,000 as nearer the item. So that we should then get an area of 412,000 superficial feet. But, were the Horse Guards and Admiralty, Whitehall, to be provided for, we should make the total 520,400 superficial feet, or say, adding a fourth 30,000 feet, 550,400 superficial feet. Now, we presume the "approximate area required" refers to the building area, and that in calculating the ground wanted, addition must be made for the courts, as well as the streets. Taking the precedent of the Houses of Parliament, there the courts and the river terrace would appear to amount to somewhat less than a fourth of the building area; but these proportions are very greatly altered by taking into consideration a portion of surrounding street of adequate width, say 40 feet, when we are brought to the conclusion that, to any total superficies of *building* area of large dimensions, an addition of two-thirds of it should be estimated and made—to allow for the internal courts and surrounding streets. The courts of the Houses of Parliament are of course of ample dimensions,—and less might be sufficient in many cases. Taking our number 550,400 superficial feet for the building area of all the Government offices, and adding to it two-thirds for courts and streets, we get the number 917,332 superficial feet for the whole area. If the site bounded by the red line were to be adhered to, it would be ample for all the offices, seeing, as it appears to us, it *exceeds* a million superficial feet, by the number 35,000. In the case of the Foreign Office and War Department, together, 96,000 superficial feet are set down as wanted, which, adding as before, the large proportion, two-thirds, would give 160,000 feet as the ground required, whilst the yellow tint marks out 176,000 feet. Thus, it must be admitted there would be *space* for the two buildings, without the designs of different competitors interfering with each other. The west end of the ground, or that next the park,

* We have been asked what is meant precisely by "Light Indian Ink," in which the drawings are to be made, and whether this expression will include sepia. The term appears to have been used in the instructions to architects competing for the Houses of Parliament in 1835. Some of our readers, who remember whether or not sepia drawings were exhibited on that occasion.

which is proposed for the Foreign Office, would certainly be best, having regard to the official residence; but the site next the Parade would have been appropriate for the War Department.

We should be glad, however, if even now the whole subject of the competition could be reconsidered, with a view to a fresh announcement, in terms calculated to call forth the exertions of architects, in a form better calculated to serve the object of the Government. Failure will probably result from the attempt to take, at one and the same time, steps which are properly sequential, and from hurrying on to a decision where the simple *data* of the case have been allowed no chance of entering into the apprehension of competitors. For ourselves, we protest, in time, that we will not hold failure as in any way conclusive against the architects of England, and their ability to provide "some building worthy of the metropolis." We recollect no previous autumn in which so many competitions have been in hand: those called the younger members of the profession, in whom no small portion of the talent of the profession resides, can hardly do themselves any justice, even if they can compete at all, in the short period between this date and the 20th of March; and we hope, therefore, that the memorial which is about being presented from the Architectural Association will be treated with the consideration that it deserves.

LAMBETH PALACE.

All who travel on the "Silent Highway" know the venerable weather-beaten towers and the other picturesque clumps of buildings which, surrounded by a high wall, form Lambeth Palace. They are comparatively few, however, who have had the privilege of passing through the Tudor gateway into the palace itself, and as the Surrey Archæological Society were, by the kindness of the present archbishop, to hold a meeting there on Friday, October 31st, to examine the various matters of interest which it comprises, we have made an opportunity to give sketches of some parts of it. Passing through the entrance, we find ourselves in a courtyard, so to speak, of considerable size, rendered pleasant by flower-beds. The inside of the gate-house, which is a large and massive structure of red brick, ornamented with vitrified diamond patterns, is partly covered with ivy. On one side is the library, founded by Bancroft, which contains a large number of valuable books and manuscripts. The exterior of this is in that mixed style of bright red brick and white stone facings, with pedestals and globes and other decorations, peculiar to the time of Charles I. or a little before. The inside of the library, with its plain wooden roof and bookcases projecting at intervals, shows how difficult it has been, even in this large space, to find accommodation for the valuable contents. In this case, as well as in some other libraries, such as those at the Guildhall and Sion College, it is to be regretted that but few students are generally to be met, in a great measure owing to a belief on the part of many who would avail themselves of such libraries, that it is difficult in the first instance to obtain admission, and afterwards that, although great civility is shown by the custodians, visitors are viewed to some extent as intruders, giving trouble which would otherwise be avoided.

The late archbishop, Dr. Howley, did much for the comfort of his successors, by building a suite of apartments in the Tudor style, and took care to preserve and restore the ancient portions. The "guard-room," with its picturesque wooden roof, is hung round with the full-length portraits of past archbishops. The chapel, in the Early English style (built between 1244 and 1270), has been restored; the Purbeck marble pillars have been cleaned of whitewash, and a new roof put up. The windows are filled with diapered stained glass, and the ashes of Archbishop Parker (1575) placed in a prominent part, and suitably inscribed: the stalls and other carved woodwork of this chapel are of a light colour, and do not harmonise well with the general aspect of the building; the walls, too, being at present destitute of monuments or other decorations, are thrown out by the rich colour of the windows into grey masses, which offend the eye. The restoration of the chapel was the last of Dr. Howley's works at Lambeth Palace; and while the men were fixing the armorial bearings over the entrance shown in the engraving, the intelligence of his death was brought.

From the chapel, through the doorway referred to, we pass into a square apartment of considerable size: the roof is covered with panels, enriched with carvings of some beauty; in the centre is a massive post, also of wood; and the other door shown in the engraving leads to the Lollards' Tower. In this place is a primitive sort of spiral staircase, of wood, with a stout rope instead of handrail, which leads to various mysterious passages, in which are chambers of quaint appearance. After ascending to a considerable height the staircase becomes darker and narrower; and mounting several steep steps, we come to a small door, so thick and heavy that it is with difficulty it can be made to turn upon its hinges. The woodwork is clamped with iron, "within and without;" and just beyond this is another door, equally strong. In the latter there is a small peep-hole, which, at a comparatively recent date, has been covered by an iron plate. Pushing this door open, we are inside what is called the prison. This small apartment, which is situated at the top of the tower shown in one of the engravings, is lined with thick planks of wood, and with its two little windows looks like a portion of some weather-worn ship. On the planks which are within reach are several inscriptions of painful interest, intermixed with crosses and other devices. Fixed into the walls there are eight iron rings, to which prisoners may have been chained. Through the narrow windows there is seen between the branches a pleasant peep of the river, on which the steamboats are passing rapidly along, and the old abbey of Westminster, nearly hidden by the Houses of Parliament. The whistle from the neighbouring railway station reminds one of the change of times, and, looking with mingled feelings at the carved records on the walls, and feeling thankful that opinion is freer now than formerly, we wend our way towards the garden. Before we go out, however, it may be worth while to mention that the crypt engraved is of the same date as the chapel, and extends completely below it. This is an interesting fragment of ancient London which has not been very accessible.

After the meeting, we may have an opportunity to say a little more.

THE ARCHITECTURE AND SOCIAL CONDITION OF ENGLAND IN THE MIDDLE AGES.*

In reflecting on the condition of the people during this period, one cannot but feel that it is one of the characteristics of the present day to run into extremes, and one phase of this extravagance is shown in the enthusiastic manner in which everything relating to time past is spoken of. It is doubtless a pleasant thing to carry oneself back to the days long since gone, and conjuring up an earthly paradise of chivalry and honour, valiant knights and fayre ladies, revel therein, till we believe in the creations of our imaginations; but, this is a kind of amusement tending to substitute fancy for reality, to lead our minds astray, and to undervalue the happiness we enjoy in living at a time when personal freedom is guaranteed to all men, as opposed to that period when the only right was that of the strongest. It appears to me to be a mistake to believe that, because men builded fair churches, they were necessarily virtuous and happy, that they had all the knowledge that was good for them to know, and that all the discoveries of modern times are at the best but negative gain.

With this view, therefore, a few moments may be usefully spent in some slight, but, I hope characteristic sketches, indicative of a state of things not so harmonious as is often believed. During the reign of the Conqueror, the whole state of the country was, of course, so disorganised, that it would be difficult to form any fair opinion of the social condition; but, during the reign of William Rufus, things became a little more settled, and then the general principles of Norman, or thoroughly feudal, government showed themselves in full force,—that is to say, the high and mighty oppressed and cruelly used all parties who came under their power. The "Saxon Chronicle" says distinctly, "things followed their usual course, and the royal officers, worse than robbers, pillaged without mercy the granaries of the farmer and the goods of the trader." The tradesmen and artificers were, at the will of the lord, compelled to perform any work that might be imposed, as was exemplified by Vidamme di'Omfreville, who seized the property of the English because they refused to build his castle without payment of wages, in some shape; and the king himself set so little store by law, that he, by force of arms, compelled men to labour at the Tower of London and the erection of his Hall at Westminster. Again quoting from the work before named, "the provinces to which these labours were assigned were cruelly tormented: each year that passed was heavy and full of sorrow, by reason of the vexations without number and the multiplied tributes." Whenever the king moved from place to place, instead of his presence being the assurance that the laws (such as they were) were carried out, it would appear that his passing through the country was rather a curse than a blessing, for that it was the custom of his attendants to ravage the country far and near, and what they could not consume they compelled the owners to carry to market and sell for their profit: in fact, their outrages were so great that had they been in an enemy's country they could not by possibility have been more atrocious, and in many cases so great was the fear entertained of a visitation from royalty, that the inhabitants at the first intimation of the king's approach forsook their homes and took shelter in the most remote forest glades.

It may be said that this is a view of society taken during the reign of a weak and bad monarch; but let us turn to Henry I. and see if any improvement can be discerned. Henry had the name of the "Saxon" given him by his Norman followers, probably because he was suspected of some affection for the great body of his subjects, and also because Matilda, his queen, was a Saxon; but from contemporary history, one would be puzzled to find any example of very strong favouritism for the people he was named after. The *Chronicle of Peterborough*, taking a few detached lines, will give an idea of the state of the nation, and show the general amelioration as we must presume it to have been.

"The year 1105 was awfully miserable on account of the loss of the harvest and by the severity with which the tributes were levied. 1110 was worse from the same cause and the addition of a dowry for the king's daughter, which was exacted by the king. And later, when money was wanted to carry on the war with Robert, Duke of Normandy, a great tax was laid on, and the collectors were guilty of the most brutal violence towards the Saxon citizens and farmers: they destroyed the dwellings of those who were poor, and as to those who had property, false accusations were prepared against them, the accused dared not appear, and in consequence of non-appearance when cited, the property was confiscated."

During the reign of Stephen we should hardly expect much social happiness, but everything we can imagine would fall short of that which is described by a quotation from a contemporary, made by Sir James Macintosh. He says, "In this king's time all was depression and evil and rapine. Against him soon rose rich men: they had sworn oaths, but no truth maintained: they were all foresworn, and forgetful of their troth. They built castles, which they held out against him. They cruelly oppressed the wretched men of the land with castle work. They filled the castles with devils and evil men. They seized those whom they supposed to have any goods, men and labouring women, and threw them into prison for their gold and silver, and inflicted on them unutterable tortures: some they hanged up by the feet, and smoked with foul smoke;

some by the thumbs, or by the beard, and hung coats of mail on their feet. They put them into dungeons with adders, snakes, and toads. Many thousands they wore out with hunger. This lasted the nineteen years that Stephen was king, and it grew continually worse and worse. They burned all the towns: thou mightest go a day's journey and not find a man sitting in a town or an acre of ground tilled. Wretched men starved of hunger: to till the land was to plough the sea."

As might have been expected from the genius of Henry II. some improvement took place even in extortion. Instead of seizing anything he wanted, "*vi et armis*," he proceeded in a way rather more courteous, though equally efficacious in raising supplies. His usual custom was, after having caused a list of the richest burgesses in the various cities to be prepared, to summon a number before him on a certain day. The honour of being admitted to an audience with majesty was then granted: the summonses admitted neither of excuse nor delay: they appeared before the throne in small parties, for it would seem that Henry was rather averse to demonstrations and monster meetings. When, however, they came, it was signified to them, through an interpreter, what was the sum required, and then they were directed to forfeit one-tenth of their estate as valued by the property-tax commissioners of the time being. The disobedient were by parental care of government lodged at the public expense till all was paid. It is singular, as showing the position of the conquered with reference to the conquerors, "the twice 10,000 for whom earth was made," that while they were honestly and fairly dealt with, the Saxons and Jews were maltreated in a precisely similar way, and, indeed, were on the same footing.

These few early examples will serve to show the state of our countrymen during the four reigns immediately after the Conqueror: they then gradually improved, but yet the arbitrary spirit apparent in all their proceedings was a long time in being eradicated. Long after the time I have just been mentioning, this legal-sounding document appears as under the authority of Edward III.: — "Know, all men, that we have charged William of Walsingham to take, in our City of London, as many painters as he may require, and to put them to work in our hire, and to keep them at such work as long

as he may require them, and if any one is found rebellious to this order, he is to be arrested and kept in prison until the orders to the contrary are given." An order of the same kind is extant, charging the officers of the palace to take a certain number of individuals who were agreeable in their persons, and competent players and singers. Travellers of the fourteenth century were amazed at the number of serfs in England, and the excessive harshness of their condition, compared with those on the Continent. Even so late as 1380, all men who were called "bonds," that is to say, the agricultural labourers, were slaves both in persons and goods, obliged to pay a heavy demand for the small estate which supported their families, not having the power to abandon that portion of the earth without the permission of their landlords, for whom they were compelled to perform any labour without wages of any kind. They could be sold by their masters with their houses, their cattle, the utensils of labour, and their children.

The system of making a hundred responsible for the conduct of any of its members, introduced into England by Alfred, and continued to a certain extent during the Middle Ages, hardly seems to have answered the intended end, for robbery, and examples of confederation of robbers for mutual protection seem to have been the most prevalent offences. In the time of Henry III. it was complained that the castles belonging to great men were in many cases no better than dens of thieves, especially in Hampshire, where they were so powerful that the judges dared not find any one guilty, and the king himself complained that when he travelled, they plundered his baggage, drank his wine, and treated him with contumely. It was a common thing for even the highest of the land to be retained by the bold knaves until a ransom was paid. Peter King, of Jerusalem, who visited England in 1363, was robbed on the highway of his money and baggage. And the robbers were not all so good-natured as Robin Hood, as may be judged from a motto which a famous one had embroidered on his coat,—"I am Capt. Warner, commander of a troop of robbers, an enemy to God, without pity, and without mercy." The laws for the prevention of crimes were good for the age, but who could enforce them? for on the one hand was the temporal power of the wicked by means of this confederation, and on the other the corruptness of the judges, which became so glaring, that in 1280 they were tried by a Parliament in Westminster, found guilty, and fined a sum equal to 1,000,000*l.* of our money, and the Chief Justice of the Common Pleas having been found guilty of inciting his followers to commit a murder, and protecting them afterwards, was condemned to be hanged. William, of Malmesbury, writing, in 1320, says, "that there is not one of the King's ministers or judges who does not receive bribes, and very few who do not extort them."

During the most brilliant period of English architecture, belief in astrologers, necromancy, and all the usual handmaidens of imaginative ignorance reigned supreme: no man engaged in any undertaking without consulting the stars; and though, doubtless, there were men who had imbibed more enlightened ideas, yet as they possessed but little means of communicating what they had learned, their knowledge died with them, or whatever learning they had was empirical, for although we can hardly conceive the possibility of any opposition to the inductive principles of modern science, yet during the Middle Ages they were either unknown or despised in their application to physical learning.

In Italy, the sumptuous churches, glowing with the masterpieces of sculpture, mosaics, and painting, that are the boast of the world, were mostly done in a state of society unequalled for profligacy and unusual corruption. Petrarch, in a letter to a friend, describes the Papal court in his time as follows:—

"What I tell you is not from hearsay, but from my own knowledge and experience. In the city there is no piety, no reverence or fear of God, no faith or charity, nothing that is holy, just, or humane. Why should I speak of truth, where not only the houses, palaces, courts, churches, and the thrones of popes and cardinals, but the very earth and air seem to teem with lies? A future state, heaven, hell, and judgment, are openly turned into ridicule as children's fables. Good men have of late been treated with so much contempt and scorn that there is not one left amongst them to be an object of their laughter."

And now let us turn to consider a little of the domestic economy of our forefathers, and see if the fancies in which some writers have indulged about the hospitable plenty and comfort that always reigned in the houses of the worshipful of the land are warranted by the facts of the case. The roast beef of old England, "the very fame of whose name has grown into our being," was positively unheard of: the only use that beeves were of was undoubtedly to salt and boil, and bread was a great luxury, not in common use even by the nobles; and as to the nut-brown ale, what could it have been before the time of Henry VII. when hops were first introduced into this country? The records of the Percy family, in the time of Henry VII. show the extreme coarseness of the mode of living: and an extract or two from the household book of that famous family will give a better idea of the manner in which the most famous noble of the time lived than anything else I know of. The permanent household numbered 166 persons, and the average of guests was 50; and the whole of the washing for these 216 persons was for one year 10*s.* a sum probably equal to 10*l.* in the present day, most of which was for the chapel linen. From Midsummer to Michaelmas was the only time they indulged in fresh meat, and the instructions say, "My lord has on his table, for breakfast, at seven in the morning, a quart of beer and wine, two pieces of salt fish, six red herrings, four white ones; and, on flesh days, half a chine of beef or mutton boiled." At dinner, men ranking as knights had a table-cloth, which was washed once a month; and as they had no napkins, and the fingers were extensively used in feeding, this portion at least of their linen must have been in a delightful condition. Until the thirteenth century, straw was the bed of kings; and before that date the king and his family slept in the same chamber. The first change was to throw a coverlid over the sleeper, then another was used, and the persons undressed, their linen being substituted for blankets. Beatrice says she would "as lief sleep in the woollen," which shows, I think, that such a thing was done even in Shakspeare's time. The use of nothing but coarse dirty woollen next the skin, seldom changed, and the heavy, exciting nature of the highly-salted food, on which all lived, of course tended to produce those diseases for which hospitals were founded in this city, as in most others. Dogberry, in "Much Ado about Nothing," says that he had assisted in perfuming a musty room; a passage which, the commentators say, alludes to a custom rendered necessary by a total abstinence from brooms, brushes, and soap and water.

It would be easy to continue these sketches to show how, with the providential discovery of printing, knowledge became extended and accessible. Men began to think, and liberty and freedom, after many struggles, were established. Then domestic buildings in like manner improved with increasing civilization, and doubtless tended to promote it.

But it is to be regretted that with these increasing personal comforts, the house of God was often left desolate, and His temples neglected. The study of antiquities was thought to be "an idle thing," and the dealers in pots and pans were laughed at by Pope, and sneered at by Swift, and the wits of the day.

I cannot do more than refer with extreme gratification to the existence of a better state of things, nor can I venture to describe how that was brought about. All I can commend to the present meeting is to associate with the study of antiquities the sentiment of infinite gratitude to Divine Providence for our personal and political advantages as a people, and, not the least, for that principle of veneration for "the place where His honour dwelleth," which is one of the most satisfactory features of the times. In this spirit, then, I venture to urge this meeting to pursue those studies which connect the present with the past, and enable us, for all that has gone before, whether morally or intellectually, to learn lessons for the future.

To those of my hearers who wish to study the subject of domestic architecture, I cannot do better than refer them to the works of my much-esteemed friend, and your visitor, Mr. J. Britton, who was the first to call attention to the subject, and to whom the architect, the antiquary, and the archæologist are so much indebted.

THE HISTORY OF THE PANORAMA.

The inventor and original proprietor of the Panoramas in Leicester-square, was Mr. Robert Barker. In connection with some particulars of his son, Mr. Henry Aston Barker, who died on the 19th of July last, Mr. G. R. Corner has favoured us with the following account of the invention.

Mr. R. Barker, who had invented a mechanical system of perspective, and taught that art at Edinburgh, where he was resident, was walking one day with his daughter (the late Mrs. Lightfoot) on the Calton-hill, when, observing her father to be thoughtful, Miss Barker asked him what was the subject of his thoughts. He replied, that he was thinking whether it would not be possible to give the whole view from that hill in one picture: she smiled at an idea so contrary to all the rules of art; but her father said he thought it was to be accomplished by means of a square frame fixed at one spot on the hill: he would draw the scene presented within that frame, and then shifting the frame to the right or left, he would draw the adjoining part of the landscape: and so going round the top of the hill, he would obtain the view on all sides: and the several drawings being fixed together and placed in a circle, the whole view might be seen from the interior of the circle, as from the summit of the hill.

This idea he forthwith put in execution, and drawings were made by his son, Henry Aston, then quite a youth, of Edinburgh, from the Calton-hill, with Holyrood-house in the foreground.

But the greatest difficulty remained. The drawings being made on flat surfaces, when placed together in a circle the horizontal lines appeared curved instead of straight, unless on the exact level of the eye; and to meet this difficulty Mr. Barker had to invent a system of curved lines peculiarly adapted to the concave surface of his picture, which should appear straight when viewed from a platform at a certain level in the centre.

This difficulty, with many others of a similar nature, which may more easily be imagined than described, having been surmounted, Mr. Barker exhibited his picture—first in the Archer's Hall, Holyrood, and secondly in the Assembly-rooms, George-street, New Town, Edinburgh, and afterwards at Glasgow.

So much was thought of the discovery of its being possible to take a view beyond the old rule of forty-five degrees, that Mr. Barker was induced to take his invention to London, where he waited upon a Scotch nobleman with whom he was acquainted (I believe Lord Elcho, son of the Earl of Wemyss), and who was so greatly pleased with the plan, that he encouraged Mr. Barker to paint and exhibit pictures in London, and even assisted him in the most essential manner,—by an advance of money.

Thus encouraged, Mr. Barker, after exhibiting his view of Edinburgh in the spring of 1789, in a large room at No. 28, Haymarket, determined to exhibit a picture of London, for which the drawings were made by Henry Aston Barker, from the top of Albion Mills, near the foot of Blackfriars-bridge, on the Surrey side. The scene on the Thames was the Lord Mayor's procession by water to Westminster on the 9th of November. These drawings were afterwards etched by H. A. Barker, and aqua-tinted by Birnie, and published in six sheets, 22 inches by 17.

This view was more than half a circle, and was exhibited in the year 1792, in a rough building at the back of No. 28, on the eastern side of Castle-street, Leicester-square, where Mr. Barker then resided.

In the year 1793 Mr. Barker took a lease of a piece of ground in Leicester-place and Cranbourne-street, where he erected the large exhibition-building in which the Panoramas have

been ever since, and are still, exhibited. The large circle is 90 feet in diameter, and the small upper circle is constructed within it, being supported by the centre column. It was opened in 1793 with a view of the Grand Fleet at Spithead.

As a good name was considered essential to the success of the novel experiment on the public taste, Mr. Barker applied to his classical friends, who furnished him with the very expressive and appropriate name of *Πανοραμα*.

Mr. Barker's Panorama was not, however, without rivalry, even in its early days: Mr. Robert Ker Porter (afterwards Sir Robert), painted and exhibited at the Lyceum three great historical pictures,—of the storming of Seringapatam in 1799, of the siege of Acre, and of the battle of Alexandria, March 21, 1801. The printed descriptions and outline sketches of Seringapatam and Alexandria are now before the writer. These three pictures were three-quarters of the circle. He afterwards exhibited at the same place a great historic and panoramic picture of the battle of Agincourt, which picture he presented to the corporation of London, and it is still in existence, we can hardly say preserved, at Guildhall.

In the year 1802, Mr. Barker's eldest son, Thomas Edward Barker, who was not an artist, but had been an assistant to his father in the Panorama, and Mr. Ramsay Richard Reinagle, afterwards R.A. who had painted at the Panorama for Mr. Barker, entered into a partnership, and erected a rival panorama-building in the Strand.

In Knight's "London," vol. vi. p. 283, it is said that the process of painting the panoramas is distemper, but that is an error, except as to the original picture of Edinburgh and that of London: the panoramas are oil paintings, and the canvas has been used for several pictures, one being painted over the other as long as it would last, except some of the pictures of the small circle, which, after having been exhibited in London, were sold for exhibition in the provinces.

After much patient energy and perseverance, Mr. Barker, ably assisted by his son Henry Aston, succeeded in establishing the Panorama in the favour of the public; and at his death, which happened on the 8th of April, 1806, at his house in West-square, Southwark, at the age of sixty-seven,* he left a comfortable provision for his widow and family.

Henry Barker continued to be the chief assistant of his father in the Panoramas until his father's death in 1806, when, being his father's executor, he took the Panorama into his own hands, and by his eminent artistic taste and skill in his particular branch of art, by his energy, perseverance, and good judgment in selecting and placing before the public what was agreeable to them, he succeeded not only in paying off some incumbrances which had been left by his father, but in realizing the handsome provision made by his father's will for his mother and sisters, and making a moderate and well-merited provision for himself and his own family.

Mr. Barker frequently travelled, to take his own drawings for his pictures, which were always remarkable for faithfulness and truth. His first journey was in 1799, to Turkey, where he took the drawings for the Panorama of Constantinople, which was exhibited in 1802. A picture from the same drawings was exhibited by Mr. Burford in 1829. These drawings were engraved and published in four plates.

Henry Barker went to Paris, and drew a panorama of it during the Peace of Amiens. He was on that occasion introduced to, and noticed by, Napoleon, then Premier Consul, by whom he was addressed as Citoyen Barker.

The naval victories at the commencement of this century afforded admirable and most popular subjects for the Panorama, and Henry Aston Barker's knowledge of nautical matters, and accurate representation of shipping, &c. attracted the attention, and obtained for him the friendship, of Nelson, who was much pleased with the pictures of his victories of the Nile and Copenhagen. He was first introduced to Nelson by Sir William Hamilton, at Palermo, in 1799; and was kindly received and treated by him at Copenhagen, where he went in 1801 to take drawings for a picture of the Baltic.

The Peninsular campaign also furnished admirable subjects for pictures of the battles of Salamanca, Vittoria, Badajos, and others, of which Mr. Barker presented such able and spirit-stirring representations to the British public.

The drawings for these pictures were made chiefly, if not entirely, by Mr. Burford; but Mr. H. A. Barker went to Malta, where he made drawings of that port, exhibited in 1810; of which the writer has a vivid recollection, being the first Panorama he ever saw. He also went to Elba, where he renewed his acquaintance with the Emperor Napoleon, by whom he was graciously received. And after the battle of Waterloo he visited the field, and went to Paris, where he obtained from the officers at head-quarters every necessary information on the subject of the battle.

A set of eight etchings by Mr. J. Burnett, from Mr. Barker's original sketches of the field of battle, were printed and published. His drawings of Gibraltar were also published in two large sheets.

He went to Venice with Mr. J. Burford, to take views for a Panorama, which was exhibited in 1819.

His last grand Panorama was the coronation procession of George the Fourth: exhibited in 1822.

The Panorama of Waterloo was very successful. It had been painted on an older picture, but was not painted out, being laid by and re-exhibited some years later, and was even then so attractive, that it hung on the walls until, from decay, it fell from its fastenings, and was removed piecemeal.

The rival Panorama in the Strand was purchased, in 1816, by Mr. Henry Barker and the late Mr. John Burford, who paid a considerable sum to Mr. Reinagle, and secured an annuity to Mr. R. E. Barker and his wife for their lives, as the price of their interests in the Strand Panorama, which Mr. Barker and Mr. John Burford then kept open in partnership; Mr. Barker retaining to himself the Panorama in Leicester-square. But the Panorama of Waterloo had, fortunately, been so successful as to give Mr. Barker the opportunity, which he then required, of retiring from the labours and anxieties ever attendant on exertions to please the public; and in, or previous to, 1826, he transferred the management of both Panoramas to Messrs. John and Robert Burford, who had been the able and much esteemed assistants of himself and his father for many years.

Mr. John Burford dying, however, in 1827, was succeeded by his brother, Mr. Robert Burford, the present able and indefatigable proprietor of the Panorama in Leicester-square, which still continues its interest and attraction for the public, although the rival exhibitions of the Coliseum and the Diorama in the Regent's-park have not been able to hold their ground.

* See *Gentleman's Magazine*, vol. lxxvi. p. 389.

STEEL AND MALLEABLE IRON FROM PIG.

THE BESSEMER AND UCHATIUS PATENTS.

The evidence as to Mr. Bessemer's process is still as contradictory as ever, and we would have refrained from further remark on the subject in the meantime, till the muddle of conflicting evidence should settle and clear a little; but in justice to Mr. Bessemer, we quote a few of the only remarks by himself which have come under our notice since he read his paper to the British Association at Cheltenham. This we feel all the more inclined to do, that he intimates that he has not, and will not, become a party to any newspaper correspondence on the subject, "relying wholly on the truth prevailing against all evil report, and awaiting patiently the effect upon the public mind of those commercial proofs that are day after day accumulating and carrying conviction to the minds of all practical men."

The remarks alluded to were addressed to a gentleman connected with the Liverpool Polytechnic Society,—namely, Mr. C. F. Salt, the secretary, who had intimated to Mr. Bessemer that a discussion on the subject of his process was going on at the meetings of the society, and that any remarks of his own which he might choose to make would be read to the members.

In reference to an alleged adverse experiment reported to have been made at the Mersey Iron and Steel Works, Mr. Bessemer says,—

"I feel bound to mention the honourable way in which Mr. Clay, of the Mersey Iron and Steel Works, wrote to me, and expressed his surprise at seeing in print that the rolling of a small piece of iron at their works was called "an experiment to test my plans," and at once offered to write to the papers to say that what had been done at the Mersey Iron Works afforded no proof whatever for or against my invention, and could not properly be considered as an experiment. I, however, declined his kind proposal, because I have not, nor will I become a party to any newspaper correspondence on the subject."

At the close of his communication to Mr. Salt, Mr. Bessemer says:—

"As promoters of science, I doubt not that the members of your society will be pleased to hear that ample proofs will soon be afforded of the utility of my invention, by its commercial working in several establishments; licenses for the whole duration o my patents having been already purchased, by eminent houses in the iron trade, to the extent of 130,000 tons annually. I enclose you a correct sectional sketch of a railway bar, which may be seen at the office of our firm. It was rolled direct from a 10-inch square ingot, having only passed through the rolls fourteen times. The metal was not previously piled, or in any way previously wrought; and notwithstanding the extremely difficult section, not the smallest portion of the flange was torn up. To render the fabrication of this form of rail practicable on the whole plan, twice-rolled iron must be used to form the flange, and 10s. per ton extra is being paid for them in consequence. My process has also been applied to the manufacture of tin plates with the most complete success. You are, doubtless, aware that charcoal iron is used by the trade at an extra cost of several pounds per ton, the best puddled iron failing to produce the requisite toughness. I enclose a small portion of some sheets rolled from one of my ingots. They are much thinner than are ever required by the trade, in order to show the extraordinary malleability and toughness of what has been called my 'burnt cast iron.'"

Mr. Salt handed round the specimen alluded to, which, says the *Liverpool Journal*, in reporting the proceedings, was of extreme tenacity, and as pliable as paper. He concluded by saying that whatever decision the society might come to, it was evident that Mr. Bessemer was not afraid to meet the question.

Another new process for the production of steel from pig iron is now dividing the public interest and attention with that of Mr. Bessemer, namely, that of Captain Uchatius, engineer-in-chief of the Imperial Arsenal at Vienna. An experimental trial of this process was recently exhibited at the Albion Engine Works, Blackfriars-road, in presence of numerous spectators, by Mr. Charles Lenz, co-partner of Captain Uchatius, and is favourably reported in some of the daily papers. From the account of it in the *Morning Post*, it appears that crude iron was converted into steel of increased weight in course of less than three hours. The ingot was not then tested, but is said to have had every external evidence of being perfect in quality. It was to be forwarded to the steel works of Messrs. Spencer and Son, at Newcastle-upon-Tyne, to be tilted into bar steel for further tests. Meantime an ingot of the new steel, said to have been made a few days previously in presence of several eminent scientific men, was tested, and declared to be of excellent quality. Tools made by Messrs. Rennie out of another ingot are said to have possessed all the qualities of fine English cast steel.

The process of Captain Uchatius is, like that of Mr. Bessemer, exceedingly simple, though of a different nature. The pig iron is first granulated and then mixed with oxygenating materials, such as sparry iron itself, the oxygen in which combines with a portion of the carbon of the pig, which carbon is thus liberated in the gaseous form, while a small per-centage of the sparry iron is even converted into metal, and added to the mass of steel thus produced.

During the proceedings, it is said, much approbation was expressed by all present of the simplicity and rapidity of the new process, as well as of the quality of the specimens of steel

shown, and hopes, it is added, were expressed, more especially by the railway engineers there, that so valuable a discovery would be immediately made available—its importance in reducing the cost of steel being unquestionable, as applied to the innumerable new uses it would inevitably be turned to in preference to iron—the expense for steel tyers, axles, piston-rods, shafts, and other important working parts of machinery being estimated as not exceeding the price now paid for first-class iron, whilst in durability and strength there is no comparison.

Surely some result of first-rate importance to the world at large will ere long come out of all these promising novelties.

FOREIGN INTELLIGENCE.

The Dresden Museum—begins to exercise a mighty, increasing attraction on the great artists and art-amateurs of Germany; and during the last weeks, men, like Schnaase, Förster, Gerhard, and others, have visited it, to witness the grand effect produced by well-known masterpieces, seen in a novel arrangement and a new light. This, again, imparts activity and spirit to the *ateliers* of the living. Professor Reischel has completed, of late, the great Göthe and Schiller groupe, destined for Weimar. It is quite in keeping with his renowned Lessing statue, but more colossal and more satisfactory on account of the great contrast of characters plastically represented. M. Reischel proceeds now on two new works—a monumental statue of Maria Weber, which will be placed near the theatre, Dresden; and a splendid Quadriga, for one of the castles of Germany. Professor Hähnel has completed a statue, which has received general applause in both the exhibitions of Dresden and Berlin—viz. one of Raffaelle, whose chaste and pensive character of form, as well as the fine and careful execution, makes it a remarkable work of art. This noble statue is an improved copy of that made in sandstone, which stands on the southern entrance of the New Museum of Dresden, being placed in juxta-position with one of Michelangelo, of the same artist.

Dürer Album.—This fine art-production, published at Nüremberg (12 parts, and 36 fols.), is intended for rendering again the fine wood-engravings of Dürer, which have become most rare by the lapse of time. Kaulbach and M. Kreling have made the selection, and superintend the execution of the modern artists.

Rome.—The *Palazzo Rondanini*, made ever to be remembered by Göthe's Biography, is undergoing extensive repairs. The *largest* palace, however, of the holy city, is "Le Isole Britanniche," at the intersecting angle of the Piazza di Popolo, and the Via Babuina, to the left of the Corso.

Increase of Villas on the Continent.—The stretching forth of railways even in the most retired nooks of the continent, hitherto hardly known to the tourist and amateur, causes also the erection of villas in the finest localities. The Villa *Weinburg*, on the Swiss bank of the Bodensee, deserves notice. It is situate at that angle of the mountains where the Rhine carries its waters into the sea, and is surrounded by luxuriant plantations of vine, fruit, and fig-trees. The old Villa Weinburg has been now united with the Sternburg, situated somewhat higher up, by a colonnade and verandah, affording the finest views up to the very centre of the great Swiss Alps.

Canton de Vaú.—It is peculiar that the building of a railway should have given rise to actual political demonstrations. Still so it is: the Vaudois say that they will oppose the building of the Oron line, "with their last dollar and their last man." The building of the railway by an armed intervention and protection is spoken of.

Meteorological Observations—are now made in France regularly, in fourteen different localities, and the data communicated daily to Government, and to the Astronomical Observatory of Paris. These places are Dunquerque, Mezières, Strasburg, Clermont-Tonnerre, Paris, Havre, Brest, Napoleon-Vendée, Limoges, Montoban, Bayonne, Avignon, Lyons, and Besançon.

Munich.—M. Sattler's Cosmoramas.—These pictorial illustrations have excited a deal of interest in Germany, and are said to be superior to anything hitherto seen. Even the choice of scenery is very fortunate. The little rock-temple of Ipsambul, on the Nile, whose oblique yellow rocks of sandstone, transected horizontally by red seams, are lighted up by a lurid, mystic sun, act enticingly on every beholder. Much praised also is the representation of St. Saba, near Jerusalem, whose perpendicular rocks, reaching both upwards and downwards, present a hardly sufficient space for the many monasteries which are built in it, like nests of pigeons. Many other views are of equal interest.

Meeting of German Artists.—At the end of last month, the long-announced meeting of the *Bildenden Künstler Deutschlands*, took place at Bingen, on the Rhine. One of the first results of the deliberation was, that next year a *general* German art-exhibition should take place, for which, preliminarily, Berlin, Dresden, Dusseldorf, Frankfort, Munich, &c. were designed. It was further resolved, that deputations of all German art-schools and art-circles (*Kunst-Schulen und Kunst-Kreisen*) should meet, even the next spring, as a preparatory general assembly, and that this committee should also have the direction of the exhibition. Frankfort-on-the-Maine, the Free German city, was elected by general acclamation as the place for the first general art-exhibition to be held.—The painter, M. Müller, spoke on the little protection German art-works enjoy with reference to being pirated by unprincipled publishers, and demanded that the legislature should interfere in their behalf.

THE LATE CHEVALIER CANINA, ARCHITECT.

It is with deep regret that we have to announce the death, on his way home to Rome, of the Commendatore Canina, who so recently paid a lengthened visit to this country, to direct the commencement of the works of internal decoration at Alnwick Castle, which his Grace the Duke of Northumberland had confided to his care, in conjunction with Mr. Salvin. He died at Florence, on the 17th of October last, of congestion of the brain. His decease will be a great loss to the archæological world, as his whole life had been devoted to the study of classical antiquities, which he had illustrated by most important works. His researches in Etruria, and his more recent discoveries on the Appian way, are of great value, and he had in contemplation other large undertakings of no less consequence. We hope shortly to be able to give more precise particulars of this learned author, who was a corresponding member of the Royal Institute of British Architects, and the first foreigner on whom the Royal Gold Medal of that body was conferred.

TOMB OF THE DUKE OF EXETER IN ST. KATHARINE'S, THE REGENT'S-PARK.

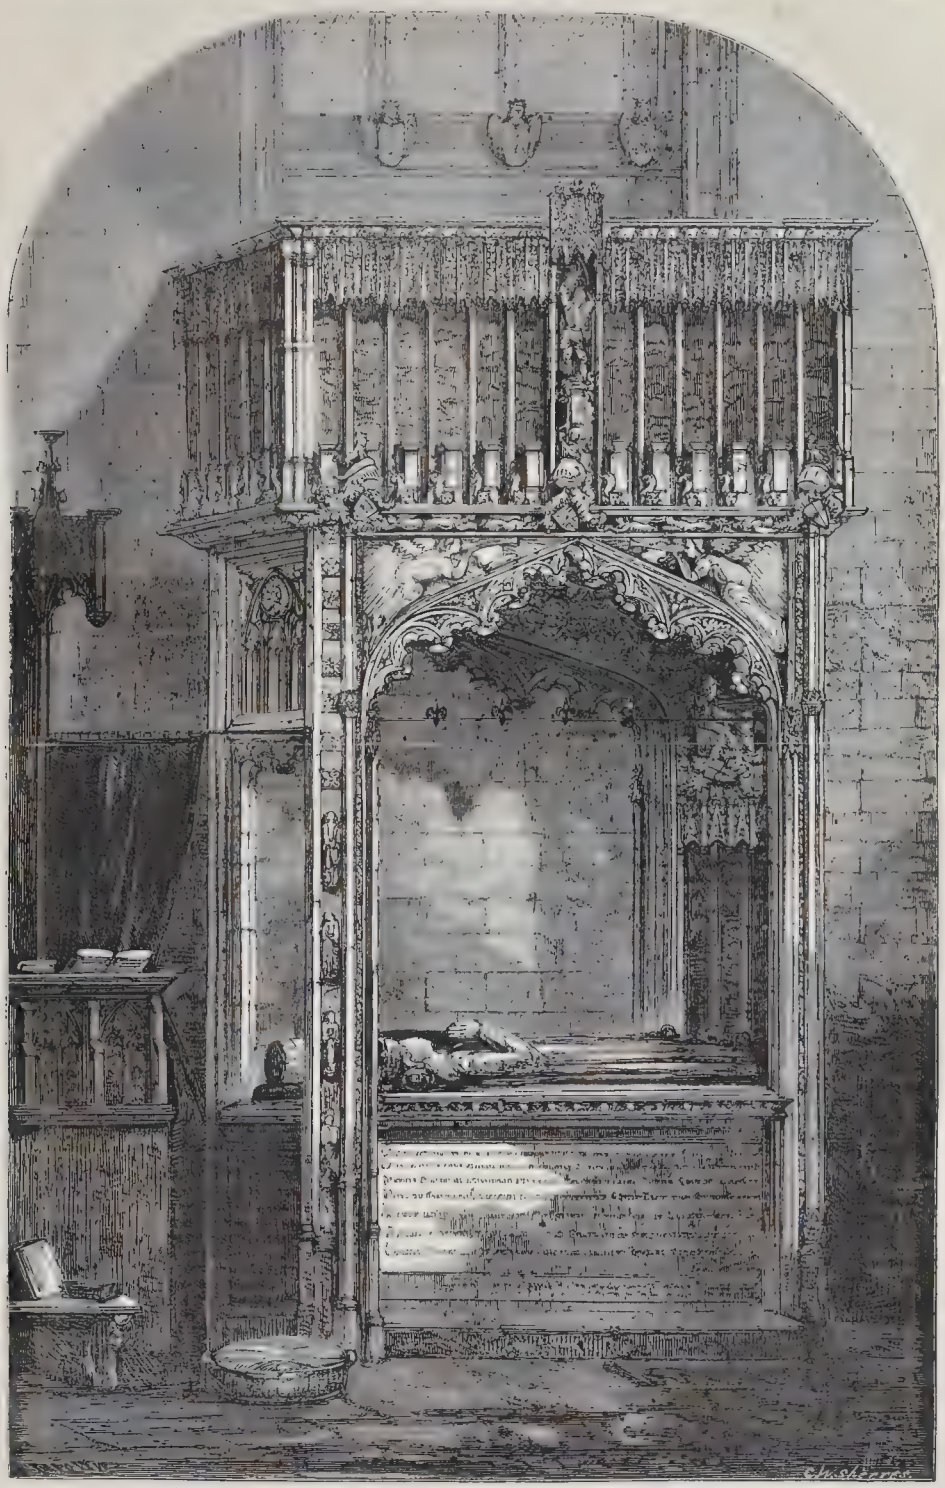
Most of our London readers doubtless know that to the north of the Coliseum there is a modern church in the Gothic style, with its grassy quadrangle, surrounded by gabelled houses and a school. It is, however, comparatively few who are aware that inside this church, built in a new neighbourhood, there are some relics of Old London, which are well worth a visit.

As far back as the reign of King Stephen, in 1148, an hospital dedicated to St. Katharine was founded and established near the Tower of London by Queen Matilda. This continued to flourish for a time, and was suppressed, but was re-founded on the same site, with endowment, in 1273. The establishment continued for many years to enjoy the patronage and benefactions of several queens of England. The mastership is in the gift of the Queen *Consort*;—if there be no such person, the Queen Dowager. In the year 1825-6, the old church of St. Katharine, by the Tower, and the hospital, were removed, to make way for the St. Katharine's Docks. By the direction of George IV. the present site was secured, and the buildings were erected in 1827, under the superintendence of Mr. Poynter, the architect. Some of the relics of the old church were removed, and amongst them the fine tomb which in its present shape is the subject of our engraving.

It formed part of a chantry chapel, and an engraving in Gough's "Sepulchral Monuments" indicates the advanced state of decomposition at which it had arrived. The chapel was, of course, annihilated with the old church, and Mr. Poynter saved all that it was possible to bring together again, and did the best he could with it. Out of Westminster Abbey it is unequalled by any similar structure remaining now in London. On the base is inscribed the following:—

"This monument was erected in the Collegiate Church of St. Katharine, near the Tower, to the memory of John Holland Duke of Exeter, Earl of Huntingdon and Ivry, Lord of Sparr, Admiral of England, Ireland, and Aquitaine, Knight of the most noble order of the Garter, and Constable of the Tower. He died the V. of August, M.CCCCXLVII. Also, to the memory of his two wives, viz.: Anne, daughter of Edmund Earl of Stafford, by whom he had issue Henry Holland, the late Duke of Exeter of that surname, who married Anne, sister of King Edward the Fourth, and died without issue; and Anne, daughter of John Montacute, Earl of Salisbury, by whom he had issue one daughter, mother to Ralph Nevil, third Earl of Westmoreland." Below is engraved,—

"These remains, having been carefully removed from the original place of interment, were deposited in this chapel, as were those of the other persons whose monuments and gravestones were transferred to it from the Collegiate Church aforesaid."



A good general idea of this fine tomb may be gathered from the engraving: the details, however, require examination. In some parts along the mouldings are well-designed groups of sporting subjects,—"Reynard" and the goose, monkeys in chains, and other quaint devices. The shields of arms and crests are coloured and gilt. The effigies represent the Duke, one of his wives, and his sister.

The old wood pulpit from St. Katharine's is also preserved, and is a curious example of the elaborate carved work of the sixteenth and seventeenth centuries: in the panels are bas-relief views (two views of old St. Katharine's), which are cut in defiance of all rules of perspective: it is, however, well worthy of preservation, as a characteristic example of a peculiar style of art. Some of the carved seats, similar to those in Henry the Seventh's Chapel in Westminster Abbey, have also been saved; as have also some of the corbels formed by crowned angels, bearing shields. These, with additions, have been arranged round the present church, with the arms and dates of the reigns of the English queens from Matilda's time. The organ, of about the reign of George the Second, has also been preserved; as well as some of the old monuments, one of which is so characteristic of the style of epitaph fashionable at the time of its composition, that we are tempted to give it. The inscription is on a *gold* plate within a frame.

"Here dead in part whose best part ne'er dyeth,
A benefactor, William Cuttinge, lyeth;
Not deade if good deedes could keepe man alive,
Nor all deade, since good deedes doe men revive.
Gonvile and Kaies his good deeds men record,
And will, no doubte, his praise for them afford:
Saincte Katrins eke neer London can it tell:
Goldsmythes and Marchant Taylers know it well.
Two Country's towns his civil bounty bleste,
East Dereham and Nortonfitzwarren West:
More did he then this table can unfold,
The worlde his faime this earth his earth doeh hold."

"He deceased ye 4 daie of March, 1599."

COVERED WALKING-PLACES.—"J. B. N." asks whether an eligible spot could not be found in the heart of London (say some west-end square, Berkeley-square, or the purlieus of May-fair, having a large frontage in Piccadilly), that might be converted into a locality like that of the Palais Royal, with its shops, galleries, *restaurants*, *cafés*, walks and shaded trees, fountains, *cabinets d'aisance* (so much wanted in the great thoroughfares of London), with a part of it covered over with glass, with a view to exercise on a rainy day? He says,—"This plan would answer better than planting trees all over London: it would be sure to answer, and pay well. A hint in your paper might start a limited liability company having these objects in view."

TOMB OF THE DUKE OF EXETER; ST. KATHARINE'S, IN THE REGENT'S-PARK.

CHURCH-BUILDING NEWS.

Harlaxton.—The church of St. Mary and St. Peter, at Harlaxton, near Grantham, is an ancient building, with tower and spire, side aisles, nave, and chancel. Time and inattention had made considerable inroads into its walls and roofs: in fact, the decayed state of the timber and bulged walls would not admit of a repair; and had it not been for the munificence of George Gregory, Esq. of Harlaxton Manor, destruction must have been the consequence; but that gentleman gave directions for the roof to be taken off, and replaced by one of new English oak, covered with lead; also for the walls, buttresses, porch windows, and battlements, to be restored, defraying the whole cost, nearly 1,700*l.* The work has been executed by Mr. John Wilson, of Grantham, according to the original design in the mouldings, &c. The whitewash, so prevalent in village churches, has been, as far as practicable, scraped off, and the surface of beautiful circles and columns once more exposed to view. An unsightly gallery has been taken away. The roof is supported by carved corbels. The porch, pinnacles, and crosses, are new. The stone used is from the original Ancaster Quarries, of which stone, we are told, the church was built, some five hundred years since, and which is now at the base in a perfect state of preservation. Drainage and ventilation have had the effect of removing the damp and offensive smell so frequently complained of in village churches: the drainage has not been done, as is often the case, by making a channel, but by an effectual under-drain that receives the water from the roof, and takes it entirely out of the churchyard.

Tiptree (*Essex*).—The consecration of St. Luke's church, Tiptree-heath, took place on Friday in week before last. The edifice partakes somewhat of the Norman style. It is built of red brick, the windows being dressed with Caen stone, and it has a rather peculiar appearance. Internally, the appearance is more singular still, the arched pillars which support the roof being of variegated brickwork. The roof is vaulted. At the chancel end of the church is a painted window, representing the birth, baptism, crucifixion, resurrection, and ascension of the Saviour. The window is the gift of Mrs. Burney, wife of Archdeacon Burney. The erection of the church has occupied about twelve months, and the architect was Mr. Ewan Christian. The site was presented by Lord Verulam, and the cost of the erection, which is about 2,000*l.* has been defrayed by subscriptions, the Venerable Archdeacon Burney, Mr. Mechi, Mrs. Gee, and Mr. C. J. Round, each subscribing the sum of 100*l.* It is contemplated to build a parsonage and school houses. The church will accommodate about 500 persons, and the sittings will be all, or nearly all, free.

Portland.—The foundation stone of a new chapel, for the Independents of this place, was laid on 14th ult. The chapel will be 54 feet by 41 feet, with deep front gallery: side galleries may be added when necessary. It will afford accommodation for 500 persons. A school-room will be added, which can be thrown open in time of service by the removal of a sliding partition. The rebuilding of the chapel will cost about 400*l.*: towards this sum about 75*l.* only have as yet been raised, chiefly among the congregation, and the working men have given an amount of labour, in addition to which they are contributing fourteen shillings weekly by pence. The English Chapel Building Society have promised 50*l.*

Exmoor.—A new church lately erected at Simonsbath, Exmoor, was consecrated on Saturday before last. A whole town, says the *Taunton Courier*, is rising on this secluded spot.

Glanogwen (*Penrhyn*).—The new church which has just been erected, at the sole cost of Col. the Hon. E. Douglas Pennant, M.P. in the village of Glanogwen, has now been consecrated. The edifice consists of a tower and spire, nave and chancel, with side aisles, and a vestry, and is calculated to accommodate about 700 persons. It is in the Early Decorated style, of beginning of fourteenth century. The walls are of gray stone, excavated on the spot. The door and window dressings, and the external dressed stonework are of Stourton stone. The internal stonework is from the Bath quarries. The whole of the chancel fittings are of oak. The pulpit is of stone panelled and carved. The chancel aisles intended for children are separated from the chancel by open screens, of light character. The whole of the windows in the chancel are filled with quarry glass having ecclesiastical devices upon them, and coloured borders: they were executed by Mr. Lavers, of London. The roofs are open, and of Baltic fir, stained and varnished, and the plaster between the rafters is coloured blue. The tower is at the south-west corner of the nave, and is surmounted by a spire 100 feet high. The principal entrance is by a south porch. The extreme length of the church is 111 feet within the walls, width, 45 feet. The architect is Mr. T. H. Wyatt, of London, under whose direction the works have been carried out by Mr. Ebenezer Thomas, of Menai-bridge, builder. Mr. Benmore has acted as clerk of the works. The cost has been about 6,000*l.*

Coventry.—Mr. Apsley Pellatt, M.P. recently laid the foundation-stone of a Baptist Chapel, on a site in St. Michael's churchyard, Coventry, at the corner of Hay-lane. The new edifice will be the Decorated in style, and is calculated to accommodate 660 persons (on ground-floor and in galleries). The cost will be about 3,000*l.* The architect is Mr. James Murray; and the builder, Mr. George Taylor, both of Coventry.

Higham Ferrers.—The church here has, we understand, been surveyed, with a view to restoration, and we hear that a plan has been prepared estimating the cost at 3,225*l.*

Leeds.—A monument to the memory of the late Mrs. Blesard has been placed in St. Mark's Church, Woodhouse, Leeds. The monument, which has been executed in Caen stone, is in the Perpendicular style of architecture, and is erected under the north-east window of the church. The design consists of one sepulchre arch, enriched with double foliated hanging tracery, the spandrils filled in with foliage, and the monogram, "S. B." with deep-moulded jambs and arch-mould, with ornaments and scriptural text. The spandrils above the arch are filled in with cut diaper work, the whole being surmounted with an enriched cornice and Tudor flower. The buttresses at the sides are diapered, with niches and crocketed canopies, terminating with a carved capital and angels in a kneeling attitude. The base of the tomb, where the recumbent figure is usually placed, is filled in with quatrefoil panelling and scriptural text—on the edge of the moulding. In addition to the tomb, the window above has been appropriated as a memorial window, in connection with the monument. The window contains three main lights. The lower subject is "The Last Supper," Our Lord being the chief and central figure, with St. Peter and St. John at either side, the remaining space being filled in with the other Apostles. The seat upon which Judas sat is overturned and fallen in front. The table (the form of which is taken from an early example by Giotto in Padua), runs through the whole, and connects all together. The subject of the upper part is "Our Lord blessing little children:" the chief figure is surrounded by groups of little children, with female figures at the sides bringing children to Our Lord, and the Apostles looking on. The whole is within ornamental canopies. The upper tracery of the window is filled in with angels, the emblem of St. Mark, and the initial letters of the lady to whom the memorial is erected. The background of the subjects are in both cases diapered. The monument has been designed by Messrs. Dobson and Chorley, of Leeds, architects; and the whole has been executed by Mr. Mawer. The stained glass window is the work of Messrs. M. and A. O'Connor.

Otley.—The foundation-stone of a New Connexion Methodist chapel was recently laid in this town. The site for the chapel and schools is in Westgate, on the Burley-road. The building has been designed by Mr. J. T. Fairbank, of Bradford, and will consist of school-rooms for 250 children, and a chapel capable of seating 400 persons. The style of building will be Grecian, with two Ionic columns in front, and a flight of steps leading to the chapel from the road. The ceiling of the chapel will be partly carved, and enriched with panels and mouldings. Stone will be the principal material used for building. The total cost will be 1,200*l.* One-half of the whole cost will, it is anticipated, be raised before the completion of the building.

Shotley Bridge.—It may be remembered that the new Roman Catholic Church, which had just been completed on one of the highest points of Shotley-hill, was almost totally destroyed during a severe hurricane in February last. It is now being rebuilt, upon an entirely new plan, from the designs of Mr. Archibald M. Dunn, of Newcastle, architect, and the contract is taken by Messrs. Gibson and Stewart, and Messrs. Wait and Howard. The new designs include a tower and spire; and more than the usual precautions, we are informed, are being taken to strengthen the walls and roofs, &c. which the great exposure of the situation renders necessary to prevent the possibility of such a calamity occurring again.

North Shields.—The laying of the foundation-stone of the United Presbyterian Church, North Shields, took place on Monday before last. The new church will occupy an area of 76 feet by 50 feet, in Northumberland-square, and will afford accommodation for 660 persons. The front portion of the building, which is about 34 feet high, says the *Shields Gazette*, is to be of an ornamented Roman character, with six inserted Doric columns, the angles terminating with pilasters and an entablature, finishing with a balustraded battlement, and having circular windows between the columns, with imposts and archivolts; the whole standing on an ornamented rustic basement and door case. The entrance to the chapel is in the centre, with a staircase on each side leading to a gallery. The chapel will be heated by hot air. The façade will be built with Prudham stone. The building is designed by Mr. John Dobson, of Newcastle, architect, and the contract for completing the whole of the work is let to Messrs. James and Matthew Robson, of North Shields, builders.

Guernsey.—The general cemetery at the Foulon is in progress. The site contains thirteen vergées of land. Over the entrance will be an archway, with ornamental iron gates, and railing on either side. On the north entrance will be the entrance lodge. The chapel will be nearly on the summit of the ascent. It is to be in the Early Pointed style of Gothic architecture, with a bell-turret, terminating in a spire. A triplet window, with simple tracery, is proposed for each end of the chapel, and two-light windows are to be in each of the sides. The roof internally will have arched principals, which, with the fittings, will be of deal, stained. The architects are Messrs. Poulton and Woodman, of Reading, who have recently been the successful competitors in preparing plans for cemeteries at Windsor and Basingstoke, and for a church at Dorchester. The contractors are Mr. Edward Hart for the chapel, lodge, and entrance, and Mr. James Duquemin for the laying out and enclosing of the land. The aggregate contracts for these works amount to upwards of 1,200*l.* The contractors are under an engagement to have the whole completed in nine months.

PROVINCIAL NEWS.

Watford.—The inauguration of the new corn exchange here took place on Wednesday in last week. The work was commenced in May, 1855, by a company, who had subscribed 4,000*l.* in 400 shares of 10*l.* each; it having been decided that a first-class hotel should form part of the scheme, and that for this purpose the Essex Arms and adjoining property should be purchased, and the corn exchange be there erected, and the hotel be partially reconstructed. Mr. Murray, of Coventry, the architect, superintended the work, which was finished in March, 1856. Circumstances, however, prevented the public inauguration of the building until last week. The corn exchange adjoins the inn, being separated from it by the gateway, and connected with it by a passage or gallery which crosses the gateway, and leads directly to the apartment built a few years since for the Watford Lodge of Freemasons. There are side entrances to the exchange from the gateway. The front entrance is from the High-street. The corn-exchange hall has a spheroidal roof with side-roof

lights. On one side there are a few offices for the larger merchants, and at one end a room used for refreshments when the hall is occupied by public assemblies. Above are billiard-room and committee-room. The cost of the erection of the exchange was 1,200*l.* The remainder of the capital has been expended in the purchase of the property and the improvement of the hotel.

Lindfield.—For a small place like Lindfield, says the *Brighton Herald*, a very important work has been undertaken. New national schools have just been completed, at an outlay of 1,630*l.* and a rectory adjoining is in course of erection, to be worth 3,000*l.* The lay purchaser of the tithes is causing the rectory to be built close to the church, and he offers to sell it to the parish, together with thirteen acres of land, for 1,500*l.* (half its value) provided that sum can be raised by May, 1857. To the same source the parish owes the National Schools, just completed; and which are to be purchased by subscription, on like advantageous terms. They are, like the rectory, in the immediate neighbourhood of the church, and the three buildings harmonise in the general character of their architecture, which is Gothic. The schools are of the decorated middle period. The building comprises three rooms, one for boys, one for girls, and a third, detached, for infants. The dimensions of the two first rooms are 40 feet by 20 feet; those of the latter, 25 feet by 18 feet. In height, all are similar—to the eaves, 12 feet; to the roof ridge, 24 feet. The roof is open, the oak of the chief woodwork being visible; the interspaces covered with plaster. There is a moveable partition between the boys' and girls' schools, which will admit of their being thrown into one room, for lectures or meetings. Each room is designed to accommodate 100 children: about 178 infants can be admitted. The population of Lindfield is only 1,900. The walls are of stone drawn from the neighbourhood, Paxhill, with dressings of the fine white Scames-hill. The roof is tiled; but without being glaringly red. It is surmounted by an ornamental bell-turret. One doorway leads to the entire building. The architect is Mr. J. Clarke, of London.

Ryde.—The plan for giving increased accommodation and enlarging the Town-hall of Ryde, was laid before the Market Committee on Tuesday before last. It is estimated to cost between 500*l.* and 600*l.* and was approved by the committee, who are to recommend it for adoption.

Plymouth.—The National and Infant Schools for the parish of Charles having long been found far too limited, the supporters of the schools have determined to try to remove the inconvenience by the erection of additional schools. Messrs. Damant and Reid, the architects, prepared the plan, which the Council on Education approved of, and a contract was entered into with Messrs. Finch and Pethick, builders, for the execution of the work. The site chosen is in a field at the northern part of the borough, called Magdalen-park, or Charlestown. The building will be in the simple Gothic style. There will be two rooms in the school, one of which will be 79 feet by 18 feet, and the other 68 feet by 18 feet; and they are calculated to accommodate 300 boys: the class-room will be 18 feet by 16 feet. These rooms and the class-room will form two sides of a square, one front facing the north and the other the east. The estimated cost of the erection, independent of fittings, is 1,365*l.* of which 1,065*l.* have already been subscribed, leaving 300*l.* still to be raised. The foundation-stone was laid on Wednesday before last.

Worcester.—On Monday last the local Board of Health were to meet to authorise a mortgage on the rates for 10,000*l.* wherewith to commence the drainage and waterworks for this city. By that time the sewerage contract was to be signed. If it was found necessary to borrow the whole 40,000*l.* says the *Worcester Chronicle*, which it will not be, even then the amount of principal and interest to be repaid each year would only amount to 2,600*l.* which it would only require a tenpenny rate to defray; and that a large income will be derived from the water-supply is certain. The population has greatly increased within the last five years, houses are in great request, and trade generally is brisk.

Bristol.—The committee appointed by the Bristol town-council to select a site for the new lunatic asylum have agreed on the purchase of 18 acres of land near Fishponds Church. The price agreed on is 120*l.* an acre. It is probable that four or five acres more will be added.

Liverpool.—The shore north of the Huskisson Dock, says the *Albion*, swarms with labourers, who are proceeding rapidly with the construction of a new dock of 14 acres, a lock 100 feet wide and 500 feet long, and a square basin at the north end of the lock. The works are in an advanced state, and will probably be completed in less than twelve months. There are two 80 feet entrances from the south end of the new dock into the Huskisson Dock, the division being made by an island, on which a monster iron bridge, 204 feet long, will work on what is technically called a "live ring," or its own centre, so that both entrances will be opened or closed with one operation. The masonry is under the superintendence of the Messrs. Hartley. The excavating is in the hands of Messrs. Brassey and M'Cormick.

Seacombe (Liverpool). — The school-room erected in connection with the Wesleyan body resident in Seacombe was opened on Thursday in last week. The room is 65 feet long by 22 feet wide, and is calculated to accommodate 150 persons. There is an infants' school on the south side. It is 45 feet long by 18 feet wide, and is calculated to contain 100 infants. The play-grounds of the school are divided by the infant-school. The whole is covered by an open-timbered roof of stained and varnished pine. The edifice is in the Gothic style, from a design by Messrs. Hay.

Sunderland.—The new lighthouse erected on the South Pier, Sunderland, from designs by Mr. T. Meik, C.E. has been put in operation. One peculiarity in the construction is, that it can be removed should any alteration at the pier call for its being shifted.

THE IMPROVEMENT OF THE KINGDOM.

MANY of our counties have not a decent town in them, and are almost in as primitive a state as when they were formed some centuries since. The improvement of the country generally, and the increase of the smaller towns, is an object much to be desired, as the metropolis and the manufacturing districts are over-populated,—every available space being filled with buildings, to the exclusion of air and the space sufficient for exercise. In Scotland and the agricultural districts the population is comparatively scanty: they do not bear a fair proportion of the increase, which they could do by forming societies upon the limited liability system for improving the towns and public buildings, aided by the principal contractors and builders of the country, and the local gentry, railway directors, and the public authorities; not upon the present system of merely erecting long lines of brick and mortar streets, without the least taste or ornament, but after the most approved designs of English and continental architects, including the latest improvements, with plenty of space and cheap railway accommodation. It is not necessary to make every town as large as London or Manchester, but were many of our towns that have a population of less than 10,000 increased so as to accommodate that number, and one here and there within a circuit of fifty miles of London to 50,000 (Brighton only within that distance having that number of inhabitants), a better distribution of the population would be made, and they would enjoy many advantages that large towns only possess.

An increase of the population would be a great benefit were our institutions more perfect and employment more general, so that they could be better distributed throughout the country, and the many thousands that are in great distress or filling our prisons might, were they instructed as well as others, not only keep themselves from want, but from the vicious habits that idleness promotes. At present there is no system in the improvements: some parts having an excess of population, there being no attraction to draw them to the less improving and thinly-populated districts, an equalization of the population would not be desirable. What we require is, greater improvement generally throughout the country, with easy and cheap means of access, and at least one handsome town of not less than 10,000 inhabitants in every county.

When the last return of the census was made, Rutlandshire, which is half the size of Middlesex, had only 23,000 inhabitants, with two small towns, and is still without any sort of newspaper; and Wiltshire, which is most favourably situated for improvement, had less inhabitants than upon the previous return; nor has Huntingdonshire, although of the same age as the other counties, arrived at sufficient importance to require a local journal. There are many other counties in which the inhabitants go to bed early because they have nothing to do, and where old maids and bachelors hoard their tens and hundreds of thousands to leave behind, instead of, like good Christians and British subjects, employing them to benefit their fellow creatures.

H.

THE WORKS AT WESTMINSTER ABBEY.

A CORRESPONDENT, referring to our recent note of doings in Westminster Abbey, asks how far the restoration in progress on the north side of the Abbey, externally, is in keeping with the rest of the building The writer. says,—"That more particularly alluded to is a feature on the tops of the new buttresses, like a small dog-kennel, while the old buttresses are surmounted by a pinnacle."

The buttresses, terminating in a form like a small dog-kennel, as our correspondent expresses it, are those which were restored some time ago, under Mr. Blore: it is to the buttresses on which men are now at work that the pinnacles are being restored: these are of later date (fifteenth century) than those Mr. Blore restored, which is considered a sufficient excuse for reverting to what the present architect imagines to be the right form. The one pinnacle which has been completed may not strike all as a particularly beautiful specimen, but we may be sure it has not been determined on without due thought and research. Sir Christopher Wren unfortunately left very little of the old work to assist to a right decision.

THE GUIDES IN WESTMINSTER ABBEY.

WITH reference to a recent article in the *Builder*, my attention was particularly drawn to that portion of it relating to "The manner of showing the Abbey" to the public, from which it may be inferred, that if visitors to the Abbey were permitted to ramble about among the tombs of our kings and queens without a guide, as they are in Poets'-corner and the nave, greater satisfaction would be given than by the method now pursued, viz.,—that of "their being conducted by a guide through that portion of the Abbey called the Chapels." Permit me, therefore, to offer my opinion by way of reply, having been myself a guide to the tombs in Westminster Abbey for more than fifteen years, during which period it has been my duty to conduct many thousands of persons through the chapels. I say many thousands, from the circumstance of my having taken a peculiar interest in my position as guide, and curiosity having led me to number my companies from day to day, as I took them through,—I found at the expiration of ten years that I had conducted, to view the tombs of the regal dead, more than a hundred thousand souls, and I think, of almost all nations upon the earth; the contemplation of which has often afforded me matter for thought and reflection, and has emboldened me thus to address you on the subject. I need hardly say that, during such a period of time, much of the general feeling of the public visiting the Abbey must have developed itself to my mind as an attendant at such a place of almost overwhelming importance; and I am prepared to assert, that a large majority of visitors to the tombs, if left only for a few moments in a chapel by themselves, would be anxiously inquiring, "Where is the guide?" and of this we had ample proof during the season of the Great Exhibition of 1851. At that time we (the attendants) were placed in the various chapels (as now advised by the *Builder*), and, although the tombs were not actually "ticketted," still there were plans of all the chapels, and large cards descriptive of the monuments, placed in abundance in all directions throughout the chapels; notwithstanding which, many were the complaints, because there was "no guide?" and almost incessant solicitations for some one to describe the monuments "in the usual way," were being made by the masses

who resorted to the Abbey at that memorable time; whereas, on the other hand, numerous, indeed, have been the verbal testimonies which I and others of my fellow-guides have had from our respective parties, expressive of their satisfaction after having passed through the series of chapels. Believing therefore, as I do, on the ground of long experience, that the present system of "showing the Abbey," so far from being objectionable, on the contrary meets with the approval of by far the greater portion of persons who visit this pile of antiquity and greatness; I sincerely trust that you will favour me with space for these few remarks in your interesting and valuable paper.

LUKE BERRINGTON.

THE BUILDERS' BENEVOLENT INSTITUTION DINNER.

THE ninth anniversary festival of this valuable institution, founded for the purpose of granting pensions and giving relief to aged and decayed members of the building trades, was held on Wednesday, at the London Tavern. Mr. Alderman Lawrence, the president, took the chair, and was supported by Mr. Alderman Cubitt, M.P. Mr. Alderman Rose, Professor P. L. Simmonds, Mr. Myers, Mr. G. Bird (the treasurer), Mr. Couzens (the founder), Mr. G. Smith, Mr. T. Piper, Mr. Weston, Mr. Pilcher, Mr. G. Godwin, Mr. J. Higgs, Mr. G. Gregson, Mr. F. Meakin, Mr. Snooke, Mr. J. Gardiner, Mr. J. Bird, Mr. G. Head, Mr. J. Harvey, Mr. J. Thorn Williams, Mr. Mathews, Mr. T. Stirling, Mr. W. Todd, jun. Mr. J. Blashfield, and other influential members of the building trade. The usual loyal toasts having been proposed and responded to,—

The Chairman gave "Prosperity to the Builders' Benevolent Institution," and in the course of his remarks stated that he was proud to see so many present on this, the first time he had been among them on such an occasion. There were many present who could testify even from among their own friends to the great vicissitudes of the building profession; and such were the drawbacks and difficulties that attended the building trade, that no one could tell who might be the next to want the aid of this, one of the best institutions in this metropolis. Such being the case, he called upon them, who now had the means, to come forward, and by their annual subscriptions make this one of the foremost of those charitable institutions which are the boast and the glory of this great country.

Mr. Alderman Rose returned thanks for the Army and Navy in a stirring little speech, and

Mr. Thos. Piper proposed the health of the President genially and well.

Mr. Alderman CUBITT, M.P. in replying to the toast of "The Patrons of the Institution," said that although the charity had only been founded for a short period, he might say that it was now firmly established. It had taken root, and he was happy to see that it was growing up rapidly, and he hoped that it might flourish and live as long as that great metropolis might last. He had been told that there were 16,000 names in the "London Directory" of persons connected with the building trade, and if they would only come forward and subscribe but a little they would be the means of raising the Institution to the highest pinnacle of success. It was a source of much gratification to see so many young men present on that occasion, as a denial to the often repeated assertion that the young men of the present day were less earnest than those of old.

Mr. Couzens, in replying on behalf of the Vice-presidents and Trustees, said that although the charity was, he was glad to say, going on prosperously, yet money was required for the building fund. Another election of candidates was to take place in a few days, and if they would only subscribe liberally, the directors would be enabled to take in a larger number than had been announced.

The Chairman gave the toast of "The Architects and Surveyors," coupling with it the name of,—

Mr. Godwin, who, in replying, spoke of the builders of this country, well-informed and powerful, as a body heretofore unexampled, and urged that the number of subscribers should be much larger than it was. He still looked for the union of several similar societies, including masters, foremen, and operatives, into one large Builders' Benevolent Institution.

The Chairman next gave "The Brighton Branch of the Institution, the Chairman, Directors, and Hon. Secretary."

Mr. Joseph Bird, in returning thanks, directed attention to the claims of the institution for public support. He was glad to announce, in reference to the building-fund, that one gentleman had given the ground, another the bricks, another the cement and lime, and he thought he might say that there was a gentleman present who would slate the building for them. All that was now wanted was for some one to present the timber, and do the carpenters' and joiners' work.

Some other toasts followed, and Mr. A. G. Harris (the secretary) read the list of subscriptions, which amounted to 330*l.*

Mr. G. Bird, in replying to the toast of "The Treasurer," said he was surprised at the low amount that had been announced, and he really must say it was a disgrace to the builders that a larger sum had not been subscribed: it ought to have been 3,330*l.*

Let us hope that it may be made up during the year. The dinner passed off very pleasantly.

THE BOARD OF WORKS DRAINAGE SCHEME.

MR. LESLIE has lodged a protest against the scheme determined on, for thirteen reasons, including the following:—

"Because I believe that the plan B is a direct violation of the Metropolis Local Management Act; inasmuch as the sewage and filth of the metropolis will avowedly flow back into the metropolis, and to a far greater extent than is on the plan avowed.

Because plan B involves the necessity of two monster cesspools, the one on the Kent side, being only five-eighths of a mile by land, and not one mile by water measurement, distant from the boundary of the metropolitan area.

Because I believe that the expenditure in plan B is of the most exceptionable character; comprehending between the junction of the middle and high level sewers for Middlesex, at the East and West India Dock Railway, and the monster cesspool at the outlet in Essex, at Halfway-Reach, 78,380 feet, in double and triple lines of iron flat-bottomed sewers, the whole of which are to be out of the ground, and exposed to expansion and contraction from varying atmospheric temperatures, and still further to the effects of frost and thaw.

Because plan B includes four separate pumping stations.

Because I believe that macadamized roads, scrapings, and mud from the streets and land-surface drainage, are not sewage; and that by the 135th section of the Metropolis Local Management Act, the sewers therein directed to be made and completed by the 31st day of December, 1860, are expressly for sewage only.

Because I believe that ponding back this extraordinary mixture by tide-locked outlets at Halfway-reach for at least eight hours in every twelve hours, is not the proper method to improve the sanitary condition of the metropolitan population, which is the great and leading feature of the Metropolis Local Management Act.

Because I believe that plan B, by withdrawing the rain-water, and all the surplus house supply waters, which by existing sewers now fall into the Thames on both banks, from Putney and Fulham all through the metropolis eastward, and carrying those waters in costly channels down to Halfway-reach, will, by depriving the river of so much of its present scouring power, occasion deposits in the pool, and be greatly injurious to the commerce and navigation of the Thames.

Because, by the enormous expenditure of 3,300,206*l.* carried by Mr. Deputy Harrison's amendment on Mr. Wilkinson's motion on the 22nd instant, instead of thereby benefiting Woolwich and Plumstead, we shall not only inflict a serious injury on those places in the metropolis, but also upon the inhabitants of Erith, Dartford, Greenhithe, Northfleet, and Gravesend, all of whom might have been most materially benefited, and the people's highway of the river Thames most materially improved if the Surrey and Kent line had been taken as the main discharge of the sewage of the metropolis."

THE MANCHESTER EXHIBITION BUILDING.

CONSIDERABLE progress has been made with the building for the Manchester Exhibition of Art Treasures in 1857. The central arch of the front is nearly completed. Some decoration is to be introduced into several of the windows. The two end windows of the transept will be of floriated design in iron; and before each window there will be a screen of iron of similar pattern on the outside, to act as a break to the force of the wind: this screen will be stayed from the main building. The design for these windows is by Mr. E. Salomons. The strengthening framework is also a suggestion by this gentleman. The placing of the pillars is proceeding rapidly. The roof principals are semi-circular: they are sent from the contractor's works in sections, which are riveted upon the ground. Those for the great hall, which are 56 feet span, are composed of double sheets of iron, riveted with T irons at each edge, giving to each principal a depth of 16 inches. In the centre of the great hall there will be no trusses to the principals: the ridge principals for the side aisles, 24 feet span; and the semi-circular ones, for the picture galleries, 48 feet span, will be trussed. The pillars are 24 feet apart. The roof principals will be only 12 feet apart in the great hall; one being placed upon each couple of pillars, and one between them upon an ornamental bracket cast on the girder. The two lines of external standards will be only 8 feet apart; and the sheets of corrugated iron being of that length, with the corrugations running horizontally, there will be no perpendicular lines of sheet joinings between the pillars.

The design and details for the railway station have been finally settled. On the south side of the building, and almost parallel with it, a platform 800 feet long will be erected, of which 500 feet will be covered, and it can be extended. The length of the platform will accommodate thirty-five carriages. The platform will be covered with a simple girder roof of 24 feet span. To connect the exhibition building with the platform, a corridor will be erected in a line with the east end; or, perhaps, more strictly speaking, there will be an extension of the front of the building for this corridor. It will be a continuation of the brick front with the same kind of windows as in the front of the building. The corresponding wall of the corridor on the other side will be an ordinary ornamental brick wall. The ordinary girder roof will cover the corridor, which, according to the local *Courier*, from which we quote, will be 12 feet wide. The railway station will be erected by Messrs. Young and Co. for the railway company, from designs by the architect, Mr. Salomons.

The plans for the refreshment-rooms and other necessary adjuncts to the Exhibition have not yet been definitely approved by the committee.

From the rapidity with which the pillars are raised, and the fact that all the necessary materials are now upon the ground, a very few weeks, it is believed, will show that the building will be erected within the time originally specified.

As a precaution against damage by fire, the ground space is divided into patches 12 feet wide, by brick walls, varying in height with the fall of the ground; while other walls run lengthwise on each side of the great hall.

Mr. J. B. Waring has been appointed by the committee to collect and arrange the Museum of Byzantine, Mediæval, and Renaissance Art, consisting of carvings in wood and ivory, metal work and jewellery, keramic art, and tapestry.

RECENT PATENTS.

TOLHAUSEN, A. An improved machine for boring and other cutting operations in stone and other mineral substances of similar character. (A communication.) Dated Jan. 25, 1856. (No. 196.)—Claims: 1. The combination of a screwed socket and nut, or their equivalent, a base piece, and a collar or other suitable shoulder on the boring bar, whereby the power applied to the nut, or equivalent to move the boring bar, and feed the cutter to cut in an upward direction, or outwards from the inner extremity of the hole, and the resistance of the stone to the action of the cutter, are made to keep the bar and its appendages steady, and a cumbrous frame is rendered unnecessary. 2. The application of a cutter to the boring bar in such a manner that it may be drawn entirely into the bar. 3. Arranging the cutter to swing from a bearing within the boring bar, and to work through, and slide upon a bearing in a slot in a rod, which slides longitudinally through the boring bar, or what is equivalent, arranging it to swing from a bearing attached to a rod, which slides longitudinally through the boring bar, and to work through and slide upon a bearing in a slot in the bar.

Brooman, R. A. Improvements in machinery for boring and excavating. (A communication.) Dated Jan. 7, 1856. (No. 55.)—This invention consists of certain machinery whereby earth, stone, and rock are bored and excavated: the *débris*, or parts dug out, are deposited out of the track of the machine; and the machine is made to propel itself forward, all these actions being simultaneous, and communicated from the same prime mover.

Pockson, J. Improvements in the construction of roofing and other tiles. Dated January 21, 1856. (No. 159.)—This improvement consists in forming tiles in two distinct parts, one called the upper, the other the under tile. The under tiles are constructed so that when cut in cross section they present the form of a V: the upper tile is made in the same way, but is exactly the reverse when cut in cross section, representing the form Λ. When in use, the upper tile lies over and covers the junction of the adjacent sides of the two under tiles. They also have a projecting band on their under surface, to attach them to the tile lath.

Jarvis, C. and T. D. Clare. A new or improved oven or kiln to be used in the manufacture of coke and pottery, and for heating and drying generally. Dated January 7, 1856. (No. 52.)—The patentees construct ovens or kilns in which the heated air or flame from a furnace is made to circulate around a lining or cistern, in which the coal to be coked, or matters to be heated or dried, are contained. They also connect a number of these ovens or kilns together, so that the heated air and flame from the first shall pass through the whole.

Bakewell, T. H. Improvements in ventilating, warming, and cooling rooms and other places. Dated January 15th, 1856. (No. 110).—Several new plans or principles originate under this and a former patent

of the patentee. 1. The forcing power in combination with extraction applicable both to warming and cooling rooms, changing air, &c. 2. The mode of providing a small heated place, whether tube or otherwise, through which the air may be forced or drawn, for the purpose of heating it. 3. The plan of forming a chilling tube or other cold space through which the air may be either drawn or forced, for cooling apartments in summer, and certain uses for the assistance of art and science. 4. A mode of combining other elements of air by introducing certain odours, gas, and various purifying powers, in order to separate or destroy the effect of impure or contaminated particles of air, too minute to be visible, but sufficiently powerful to be injurious.

Squires, W. W. Improvements in preventing the bursting of pipes and tubes for conveying liquids. Dated January 17, 1856. (No. 132).—Claims: 1. The adaptation of a described small air-tap and of the air-valve below the stop-cock; also, a mode specified of drawing off or "letting on" water or other liquids, by means of valves or flaps actuated by levers and wires or communicators. 2. A grooved or tubular opening to the stop-cock, forming an improved stop-cock. 3. A perforated plug or valve, with suspending wire working within a tube. 4. A perforated plug or valve with the tube attached. 5. The attachment of air tubes, as specified, for admitting air to tubes or pipes for conveying liquids.

FREEHOLD *versus* LEASEHOLD.

At Gizeh we gaze marvel-fill'd
On pyramids, wondrous with mystery;
And we blush for the gimcracks we build,
Which will never perplex future history.
Our place-brick and road-drift metropolis,—
Zinc, compo, and like false pretences,—
One-half ever ready to topple is,
And t'other's not worth the expenses.

Had Carnac, or Thebés, or Luxor,
Been built upon sixty-year leases,
Would Egyptians have built of such muck, sir,
That long since had tumbled to pieces?
I wot, such were likely their case,
And now they had not lived to moulder;
So away with the short building-lease,
Saith a stanch-building franchised freeholder.

ABERDEEN GRANITE.

THE TOTTENHAM BOARD OF HEALTH.

I HAVE observed in your paper of to-day (25th), a communication from my friend, Mr. Fullagar, whose assumption is quite correct, that I did not address my letter to you on the subject of the Tottenham Sewage Works, in my official capacity as chairman of the Local Board of Health. Our local differences can but little interest you: yet, as the report of the Parish Committee *v.* Local Board of Health, has been transmitted to you, I beg the favour of your also receiving a subsequent address of the Local Board to the parishioners. This will, I think, satisfy you that, though the new Water-Works (carrying out by the Local Board for the sole purpose of remedying an, on all hands, admitted want), are strongly opposed by some of the parishioners, the proceedings of the Local Board are not so objected to by the majority as is asserted.

W. WARNE.

THE TREES IN LAMBETH.

MY indignation was aroused on hearing of a notice from our vestry, ordering the parishioners to cut and mutilate their trees, and thereby spoil what little appearance of the country we possess. Now, it is the more general opinion, that their time would have been much more advantageously employed had they been arranging measures for adding to the beauty of our public roads, by planting rows of plane-trees at the edges of the footpaths, wherever the width of the roads would allow, such as in the Kennington-road, from the Asylum to the Horns at Kennington, and again from Newington Church all up the Clapham-road, as far as the parish reaches in those roads. These would, in a few years, form fine avenues and be an ornament to that part of the parish. Only look at the fine effect of those few plane-trees at the edge of the pavement in Piccadilly, near Park-lane.

Our French neighbours adopt this plan, but to our shame our authorities have not arrived at that state of civilization and taste: if they had, our roads and entrances to London would have been far more elegant than at present.

Our Lambeth authorities seem to delight more in such dilapidated buildings, stenches, and all sorts of nuisances, as may be found at the water-side, between Lambeth-palace and Vauxhall-bridge; otherwise steps would have been taken, before this time, to have had a handsome terrace erected on the site of such rubbish; and being opposite to a clear space on Millbank, it would have been one of the most desirable places of residence near the metropolis, and with a handsome row of plane-trees, this terrace would have been found a delightful promenade for the inhabitants of this part of the parish.

R. M. W.

Miscellanea.

THE LONDON CITY WATER-SUPPLY.—From a report to the City Sewers Commission, by their engineer and surveyor, Mr. Haywood, it appears that although for many years the New River Company, the only one which has pipage within the City, has afforded water gratuitously for public purposes; that in the belief that it would continue to be gratuitously given, the commission have arranged the means of cleansing their sewers, &c.; and that this was done with the full knowledge and co-operation of the company; that, with regard to public halting-places, a supply was many years since undertaken, to be given at a nominal payment of 5s. each per annum; that from time to time this has been repeated until sixty-nine such places have been erected, which are almost wholly dependent upon water for being maintained in a wholesome and decent condition; nevertheless, the New River Company now give notice of their intention to charge, in future years, at the rate of 6d. a thousand gallons for all the water that may be required for public purposes; that rate of charge being the very highest which, by their Act, they can make, and the same as they charge to brewers and large consumers, who, it may be assumed, make profit by the use of the water they buy. The supply to the Sewers Commission will thus, as estimated by Mr. Haywood, cost no less than about 2,000*l.* per annum, otherwise a serious check to the progress of sanitary improvement must ensue. A correspondent, "Aqua," referring to this procedure on the part of the Water Company, suggests that, for such purposes as those for which the City Sewers Commission chiefly require water, and for many other similar purposes, amongst the general public, it would be advisable to form a Thames Water Company, through whose pipes a plentiful supply of unfiltered or partially filtered water could be supplied to all, at a cheap rate, so that the New River Company, being freed from anything like unremunerative supply, could be fairly called upon, not only to reduce their own prices, but to give a much more plentiful supply to the City at large than at present. There is no question, however, that where one system of pipes is sufficient, a single company can supply the article at a cheaper rate than any two could do; and that double pipage in such case would be so much capital sunk or thrown away.

A METROPOLITAN STEAM WASHING COMPANY.—The works of this new company are situated at Wharf-road, City-road. The patent, it seems, is that of Messrs. J. Wallace and Co. of Glasgow, originally taken out for bleaching, but subsequently applied to washing. The privilege has been sold, it appears, to Messrs. Cockran and Co. bleachers, for four years, at about 3,000*l.* a year. The dash-wheel forms the leading feature in the process. The patent has been taken for the union of steam with the dash-wheel. Each wheel is divided into four compartments, and each compartment holds 100 shirts: the 400 shirts are washed in thirty minutes. The diameter of the ordinary wheel is 6 feet and a half, but those for blankets are 9 feet, and will hold twenty-five blankets in each compartment: these are cleansed also in about thirty minutes. The shaft is hollow, admitting simultaneously the supplies of steam, soap, and soda, but by different pipes. Each wheel makes twenty-one revolutions in a minute, and the goods enclosed have two falls on each revolution, making forty-two falls per minute. The weight washes the goods. The company propose to wash for laundresses at so much per pound weight. There are drying and laundry rooms also on the premises, and Manlove's drying or rinsing apparatus is at work there.

ROYAL INSTITUTE OF BRITISH ARCHITECTS.—At the first ordinary general meeting of the session, to be held on Monday evening, the 3rd of November, a communication will be read from His Grace the Duke of Northumberland, being a description of the works executed and now in progress at Alnwick Castle, Northumberland, prepared by the late Cavaliere Canina and Mr. Salvin.

VICTORIA-STREET, CLERKENWELL.—I beg to call your attention to the dangerous condition the City Improvement Commissioners have allowed the roadway of this never-to-be-formed street to remain in, as I find on inquiry of a parish official that the matter rests entirely with them. The roadway is a slough of about one foot to eighteen inches deep in mire and mud.

A CLERKENWELLER.

*** Preparations for paving it are understood to be in progress.

OXFORD ARCHITECTURAL SOCIETY.—At the first meeting held in the Society's rooms, Holywell, on Wednesday, October 22, the Rev. J. E. Millard, B.D. of Magdalen College, in the chair, the report of the committee was read: it reviewed the principal architectural works carried on in Oxford during the Long Vacation. The Hon. H. C. Forbes then read a paper, urging that whereas the poor, who from their greater numbers ought on this ground alone to meet with as much or greater consideration than the rich, are much less thought of, and, indeed, in some churches their presence seems almost ignored; and that "the simplest way to meet this evil and to remedy this defect, seems to be to make our churches entirely free, and to have all the sittings in the area of our churches appropriated to the laity, unreserved in any sense, open in short and free to the first comer, the only desirable restriction being, perhaps, that men and women should not be mixed together, but sit on the different sides of the nave respectively." Mr. Parker was in favour of free but appropriated seats, considering other arrangements unsuited to the habits and character of the English.

RAILWAY TRAFFIC RETURNS. — Great Western, week ending October 19, 30,193*l.* 8s. 10d.; corresponding week last year, 28,755*l.* 18s. 6d. Lancashire and Yorkshire, 22,436*l.* 7s. 2d.; last year, 20,136*l.* 5s. 6d. Manchester, Sheffield, and Lincolnshire, 10,028*l.* 2s. 8d.; last year, 9,206*l.* 9s. 10d. Shrewsbury and Birmingham, 1,850*l.* 2s. 9d.; last year, 1,490*l.* 2s. 3d. Edinburgh, Perth, and Dundee, and Scottish Central, 6,437*l.* 12s. 9d.; last year, 5,958*l.* 11s. 4d. Grand Trunk of Canada, week ending September 27, 5,553*l.* 5s. 10½d.; last year, 4,920*l.* 3s. 6d. Midland Great Western (Irish), week ending October 19, 6,032*l.* 4s. 1d.; last year, 3,441*l.* 19s. 8d. Belfast and Ballymena, 1,049*l.* 7s. 5d.; last year, 854*l.* 10s. 6d. Belfast and County Down, 278*l.* 13s. 7d.; last year, 276*l.* 7s. 4d.

RELICS FROM TROY.—Some interesting relics from ancient Troy, Dardanus, and the neighbourhood, are now at the Patent Carving Works in Belvidere-road, Lambeth.

THE SHAKSPEARE PROPERTY AT STRATFORD-ON-AVON.—The trustees of the new fund of 2,500*l.* given by Mr. John Shakspeare for the completion of the preservation and separation of the house at Stratford-upon-Avon, in which Shakspeare was born, have just purchased the two properties, one on each side of the house in Henley-street, known as "Banke's property," for 1,000*l.* and "Warden's property," for 450*l.* During the ensuing spring and summer the trustees will apply the rest of the money in their hands to the further accomplishment of the object in view.

NORMAN DOMESTIC ARCHITECTURE.—An archæological discovery has been made in pulling down a house in Hatter-street—originally Heathen-street, Bury St. Edmund's. Behind the masonry enclosing a fire-place was found an open hearth, with stone jambs of what the local *Post* says is undoubted Norman in character, carrying a mantle-tree of chesnut, in excellent preservation, but of a later date. There is also a fine framework of moulded oak girders and joists for the floor above. The form of the jambs is a triple shaft, with square members between them: the capitals are cushion-shaped, with some remains of the conical ornament, and there is a trace of fresco-colouring. The height of the jambs is about 5 feet, the width of the opening 7 feet, and the funnel of the chimney of the same size gradually contracted.

TELEGRAPHIC COMMUNICATION WITH AMERICA.—Arrangements, it is said, are being made for the formation of a company to lay down across the Atlantic a line of telegraphic communication upon the principles patented by Mr. Thomas Allan, of Edinburgh. This new rope is described as differing entirely from all other sub-marine ropes, combining considerably increased conductibility and strength with such a diminution in weight that the entire cable to connect England with America may be conveniently carried in one vessel. A rope on this principle can be laid down, it seems, at a cost not exceeding 200,000*l.*

MATERIAL FOR MODELLING.—Allow me to ask, through the medium of your paper, whether there is any composition that a sculptor could use wherein he could model his subject at once, without the expense, trouble, and labour of afterwards casting his model in plaster. At the present time this becomes a serious consideration to many artists who might be disposed to compete for the Wellington monument in St. Paul's. If there should not be such a composition, would it not be a good subject for a premium at the Society of Arts? The composition should be nearly white, and not liable to crack when dry.

A SUBSCRIBER.

*** Mr. Hiram Powers, the American sculptor, has more than once described his mode of modelling at once in plaster of Paris, so as to avoid the trouble and cost of moulding.

PROJECTED SHIP CANAL FROM SHOREHAM TO LONDON.—A company is in course of formation for the transport of vessels of whatever tonnage, by means of canal, directly to or from Shoreham and London, thereby avoiding the risk, danger, and expense at present attached to vessels having to go round the Foreland. The number of vessels yearly lost or seriously injured in the Downs, off the Foreland, or on the Godwin and Margate sands, is considered as of itself a sufficient warranty for an undertaking like the present. The loss to Lloyds of property alone exceeds annually a million sterling. The only difficulty in the way of the proposed scheme appears to be the entrance to Shoreham Harbour, but this, it is said, is not insuperable. It is intended to extend the pier half a mile out to sea, and there will then be water enough for vessels of the largest burden to enter, 18 feet being the minimum, and 35 feet the maximum depth of water. There are, it is said, no other engineering difficulties in the way of cutting the canal, and a line of railway is intended to run along its side for towing by locomotives.

ALLEGED NEW DISCOVERY NEAR THE MOSQUE OF OMAR AT JERUSALEM.—The Rev. Mr. Bellew, in a letter from Jerusalem, in the *Times*, last week, states that while investigating, as far as the Pasha's permission and the prejudices of his servants allowed him, the interior and precincts of the Mosque of Omar, and the supposed site of the Temple of Solomon, he accidentally discovered, on the extensive level grassy platform, set with olive-trees, which stretches between the four localities of the Mosques of Omar and El Aksa, the "Beautiful Gate," and the south-eastern corner of the city walls, a small opening in the ground where an arch had recently fallen in, revealing a vault beneath, and that on examining the whole of this platform of olives minutely, he became satisfied that the entire area from the Mosque El Aska to the "Beautiful Gate," is one mass of vaulted chambers, showing that the vast platform, which can only be compared to that of Baalbec, is artificial. The series of foundations and archways, he also remarks, to which these vaults belong, comprise enormous blocks of stone and cyclopean pillars, only to be matched by those at Palmyra and at Baalbec. Mr. Fergusson, in a subsequent letter to the *Times*, expresses his opinion that the vaults referred to by Mr. Bellew are no new discovery; that they are the same as those already recorded in Mr. Catherwood's plans and details; and he regrets that the work of this latter gentleman (who perished some years since in the *Arctic* steamer) has not yet been published, but suggests that it might be so if sufficient interest were shown on the subject. In reply to Mr. Fergusson, Mr. Bellew, who had, meanwhile, come home from Jerusalem, reiterates his assertion, that he is not even yet aware that the vaults to which he refers have ever been discovered till now by any European but himself, and he intimates his knowledge also of those really before discovered and recorded by Mr. Catherwood.

ARCHITECTURAL ASSOCIATION.—At a meeting of the members of the Association on the 17th ult. a memorial to Sir Benjamin Hall, asking for an extension of time for sending in the designs for the proposed new Government offices, moved by Mr. C. Gray, and seconded by Mr. Herring, was determined on. A paper on "Vale Crucis Abbey" was read by Mr. R. Druce, wherein he urged the value of a little carving put in the right place, when funds are small. An interesting conversation followed.

THE LONDON SATURDAY CONCERTS.—Under this title the first of a series of twelve concerts was given on Saturday last at the St. Martin's Hall, which, although clashing somewhat with the "Concerts for the People" already established, we willingly welcome. Mr. Stammers, under whose management they are, has got together rather a stronger company than is ordinarily found at concerts of the moderate cost of these: Madame Zimmerman, Remenyi, the violinist, and Distin, the trumpet-player, are among the soloists. Special mention must be made of the Orpheus Glee Union, by whom some charming specimens were rendered of this elegant style of music.

FALL OF TOWER IN THE BURY NEW-ROAD, MANCHESTER.—Some local discussion is going on as to the cause of this disaster: Messrs. Crowther and Bowden were called in by the committee to inquire into the cause of it, and it is complained that their report has not been made public. One commentator in the Manchester *Guardian* says,—"The committee, in giving their report, admit that the foundations were put in without forethought or any reasonable precautions, and 'the construction having been arranged with the utmost regard to economy,' 'became seriously affected by the irregular settlement, and the quality of the work, as executed, was not such as to withstand their united influences.'"

THAMES TUNNEL.—During the week ending 25th October, 18,789 passengers passed through the tunnel, and paid 78*l.* 5s. 9d.

ARRIVAL OF THE SOULAGES COLLECTION OF ITALIAN ART.—A number of noblemen and gentlemen, representing almost all the great interests of art and manufacture in the metropolis and the provinces, have just imported into this country, at their own risk, M. Soulages' collection of Italian art of all kinds, bronzes, pottery, furniture, &c. The collection arrived safely last week from Toulouse. It is celebrated as possessing unique examples of the works of the great artists of the sixteenth century, M. Angelo, Pisani, Cellini, Maestro Giorgio, &c. The purchase has been made, as our readers have already heard, on the understanding that the collection should be offered to the Government at its cost, and that, if declined, it should be sold by public auction, and any surplus applied to promote art. It will be forthwith exhibited to the public for criticism, and when public opinion has been obtained, the offer of sale will be made to the Government.

SECOND REPORT ON STATE OF SHOREDITCH.—The second quarterly report on the sanitary condition of Shoreditch, by Dr. Barnes, the medical officer of health for the district, has just been printed for the vestry. It states that important progress has been made in improving the sanitary state of many parts of the parish, by filling up cesspools, repairing drains, ventilating, paving, whitewashing, &c. and increasing the water supply and storeage. The existence of underground tanks for storeage is deprecated, and their contents shown to be very foul and unwholesome. The prevalence still of typhoid fever is noted, the excess in Shoreditch beyond the average elsewhere throughout the metropolis being as thirty-five to twenty-eight. The report contains various tables, showing the state of epidemic and other diseases in the district for the quarter ending 27th September last.

NEW PARK FOR GLASGOW.—The committee of the City Council, appointed to inquire as to a site for a public park on the south side of the river, have reported that they have obtained an offer of a very eligible property, containing 143 acres, for 30,000*l.* and unanimously recommend the acceptance of the offer.

ST. ALBAN'S ARCHITECTURAL AND ARCHÆOLOGICAL SOCIETY.—The general meeting of this Society was held on 15th ult. Archdeacon Grant, D.C.L. in the chair. After some official and other proceedings, Mr. John Evans, F.S.A. read a paper on "Jewish Coinage," and the Rev. R. Gee, rector of Abbott's Langley, one "On the Curiosities of Heraldry," showing the connection between heraldry and architecture, and the circumstances in which many coats of arms originated.

PARIS IMPROVEMENTS.—The works of the Louvre, it seems, are to be suspended. The exterior walls will be completed, but the interior, with its proposed decoration, will be left to be carried out under more favourable auspices.

THE PROPOSED NEW ROUTE WEST AND EAST THROUGH SOUTHWARK.—A meeting of the inhabitants of the parish of St. Saviour's, Southwark, was held on 23rd ult. in the vestry-room, to consider the plan of Mr. Irving, approved by a committee of the Metropolitan Central Board of Works, and now before that Board, for the formation of a line of street from High-street, Borough, to Blackfriars-road, where a junction would be effected with Stamford-street. The meeting was numerously attended, and several plans were discussed, Mr. Eli Richards ultimately moving a resolution to the effect that the line of new street from London-bridge to Blackfriars-road be as near as may be the line laid down on the plan submitted by Mr. Taylor (which runs along by the wall of Barclay and Perkins's brewery from nearly opposite the church at London-bridge, instead of from the south side of York street, as on the plan of Mr. Irving, sent to the meeting from a member of the Central Board's committee). An amendment was moved by Mr. Tomkins, to the effect that the plan proposed of opening a new street from the south side of York-street, and taking down all the houses between it and Red Lion-street, would be prejudicial to the trade of the locality; and that the taking down of the houses between Red Lion-street and the Town-hall be recommended to the consideration of the Metropolitan Board. The amendment was lost, and Mr. Richards's motion carried by a large majority of the meeting assembled.

[ADVERTISEMENT.]

27 and 28, Bishopsgate-street, Aug. 1st, 1856.

GENTLEMEN,—After twelve years' experience of your Patent Iron Revolving Shutters, I have much pleasure in testifying to their great superiority over all others; and if I were to put in a new front to-morrow, I should most decidedly give them the preference.

I am, Gentlemen, yours, &c.
ROBERT ALEX. ROONEY.

Messrs. Clark and Co. 15, Gate-street, Lincoln's-inn-fields, Engineers.

[ADVERTISEMENT.]

CHUBB'S FIRE-PROOF SAFES are constructed of strong wrought iron, and the Detector Locks, which secure them, are gunpowder proof. Among recent instances of the security they give to their contents from fire and thieves are:—

Messrs. W. Jones and Sons, Cotton-mills, Manchester. Offices totally destroyed by fire, all the papers preserved in a Chubb's Safe.

Fire at Manchester, Sheffield, and Lincolnshire Railway. Secretary's and other offices burnt, the papers and a large number of bank notes preserved in a Chubb's Safe, although, from the intense heat, the knobs and handles of the safe were melted.

MANCHESTER. — Total destruction of Messrs. Rylands and Son's Warehouses. A large Chubb's Safe (had twelve years previously) in the midst of the flames for fourteen hours, the books and papers were uninjured by the fire.

GUNPOWDER DEFEATED.—Daring attempt to blow open a Chubb's Safe with gunpowder, in the countinghouse of Mr. Blair, Millgate, Manchester, completely unsuccessful, though the force of the explosion moved the safe from its position.

GUNPOWDER DEFEATED.—Another attempt on a Chubb's Safe, with gunpowder, in the offices of Messrs. Nicholson and Co. Cousin-lane, London, proved futile, although the thieves had first used crowbars. The money, deeds, and bills were all found perfectly secure.

Reference to the respective firms as to the correctness of these statements is permitted.

THE LATEST GUNPOWDER DEFEAT.—In the burglary at Mr. Harrison's offices, near Walsall, on 11th instant, six men attempted to blow open the iron safe with gunpowder, but the lock, which was one of Chubb's Patent, resisted their efforts. It is only right to state that the safe itself, which was afterwards broken open with a sledge-hammer, was not of Messrs. Chubb's manufacture, but merely a common one. — (See *Wolverhampton Chronicle*, October 15, 1856.)

Complete Illustrated Price Lists of Chubb's Safes, Detector Locks, Cash and Deed Boxes, sent on application.

CHUBB and SON, 57, St. Paul's Churchyard, London.

TENDERS

For mansion at Sutton, in Surrey, for Mr. William Cooper. Mr. William Reddall, architect:—

TO CORRESPONDENTS.

"C. F. M." (we have no reason to doubt the correctness of our information. Tenders for part of the work for the Lewisham Board were advertised for last week; and the *working* drawings are now before the Deptford Board).—"W. R."—"Block-Plan" (a *block-plan* shows merely the outline of the building or other object represented in plan).—"Thoughtful Worker" (oil on stonework dries out and becomes inoperative. It is not required for good stone, and will not save bad).—"B. H." We shall always be glad to receive the information offered).—"C. S."—"T. B."—"J. B. W."—"J. E."—"C. P."—"J. S." Southampton (we shall be glad to see the drawings).—"*Finem Respice.*"—"J. P. W."—"J. M."—"*Florent Maestas.*"—"R. B. E."—"A. B." Southwark (send us the particulars).—"W. S."—"F. R."—"E. R. B."—"H. H. R."—"R. L. S." (thanks).—"¼ Scale."—"J. B."—"C. H. W."—"R. F. S. Y." (it is not an accepted term)—"F. T. M."—"Plasterer."—"G. W. S."—"F. C."—"Esperance."—"Economist."—"Knutsford" (next week).—"T. C."—"A. S."—"C. B."—"W. A."—"J. F. P."—"Insure the Bridges."—"A Surveyor" (the process named would, we have no doubt, be successful. Lime-water would be much cheaper, but might not be so effectual).—"Common Sense" (a larger number of trees would not flourish).

"*Books and Addresses.*"—We are forced to decline pointing out books or finding addresses.

BATH, PORTLAND, and ROMAN CEMENTS.—The London and West of England Cement Company can offer to the Trade the best natural HYDRAULIC CEMENTS at reduced prices. The Company particularly recommend the best quality of their Bath Cement for all modelling cornices, decorations, &c. as having all the qualities requisite for an interior cement, and being quite unaffected by extremes of weather. The Company also supply BLUE LIAS LIME, lump and ground, which will carry more sand than any in the market.—Communications to be addressed to the General Offices, 53, Old Broad-street, London; to Mr. MONUMENT, 4, Caroline-place, City-road; to Mr. TIMEWELL, the Depôt, 9, North Wharf-road, Paddington; or to the Works, Dunball, Bridgewater.

SOUTHAM BLUE LIAS LIME DEPOT.
Glazed Stoneware Sewage Pipes
Brick, Lime, and Cement Merchants,
TATHAM and CO.
14, South Wharf, Paddington.

PORTLAND and BATH CEMENTS.
TATHAM and CO.
14, South Wharf, Paddington.

PARIAN CEMENT, reduced in price 25 per cent. This article is valuable for inside stucco, and especially for skirtings, for flooring on brick arches, &c. It takes paint in a few hours after its application on walls or laths, is without efflorescence, and may be papered in a couple of days. A finer quality forms a beautiful Scagliola, with any admixture of colours.—Manufactured by FRANCIS, BROTHERS, Cement Works, Nine-elms, London.

CEMENT.—ROMAN and PORTLAND CEMENTS, and PLASTER of PARIS, manufactured by C. J. HILTON, can be had in any quantity, wholesale and retail, at his wharf, 6, Upper Thames-street, London; and also at the manufactory, Faversham, Kent.—N.B. These Cements supplied for shipment, on advantageous terms.

THE PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs. ROBINS and CO. to WHOM THE PRIZE MEDAL WAS AWARDED, in 1851, are prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them, for all the purposes to which Cement is applicable. Orders received at Great Scotland-yard and at the Works.

PORTLAND CEMENT WORKS, NORTHFLEET, Kent.—KNIGHT, BEVAN, and STURGE, Manufacturers only of first-class quality, for the home and foreign trade. Portland Cement is manufactured at these works with especial reference to its destination, whether for stuccoing, brickwork, blocks for breakwaters, tidal work, or otherwise.—London Wharf, Belvedere-road, Lambeth.

PORTLAND and BATH CEMENT.—FULLWOOD THOMPSON and CO. request the attention of Merchants and Contractors to the quality of their Portland and Bath Cements, manufactured on an improved system, securing regularity of strength and colour, and at a less cost than is attainable by most other makers.
These cements set under water in a few minutes, and are not affected by extreme heat or cold.
FULLWOOD THOMPSON & CO. will be happy to send prices and samples in reply to application by post. They deliver free into the Bristol and Exeter Railway Company's trucks at their works, or free on board in the Port of Bridgewater.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL. — Light, Dark, and Portland Cements equal to any made. Manufacturers also, and Dealers in Plaster, Paris White, Maids, Hair, Lime, Laths, Slates, and Slate Slabs, Fire-bricks, Grindstones, Cement Chimney-tops, ditto Vases, Ridging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Portoloano.

JOHNS and CO.'S PATENT PERMANENT STUCCO WASH (perfectly non-absorbent), STUCCO, CEMENT, STUCCO PAINT.—CLARK and BEDINGFIELD, Manufacturers, Grand Surrey Canal Bridge, Old Kent-road Office, 4, George-yard, Lombard-street.

PORTLAND and ROMAN CEMENT.
PLASTER of PARIS
Manufactured by J. M. BLASHFIELD, at Millwall, Isle of Dogs.
Warehouse, No. 1, Wharf, Paddington-basin
11, George-yard, Lombard-street, City

ELMLEY CEMENT WORKS.—ROMAN and PORTLAND CEMENT of the first quality, manufactured on the above works. Also STOCK and KILN-BURNT BRICKS, hand moulded and machine made, for shipment or otherwise.—Apply to G. BOOTH, Agent, as above.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not vegetate in damp situations. Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements read at the Institute of Civil Engineers, to be obtained from the Makers, JOHN BAZLEY WHITE, and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

ATKINSON'S CEMENT, so long known and esteemed in London for plastering purposes, is a quick-setting Cement, that requires no colouring.—Sold exclusively by JOHN BAZLEY WHITE and BROTHERS Millbank-street, Westminster; and Seel-street, Liverpool.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER, for internal uses. These well-known hard Stuccoes dry quickly, and can be painted upon within a few days.—Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

CHARLES RICHARDSON, 3 & 6, SOUTH-WHARF, PADDINGTON BASIN, COWLEY and UXBRIDGE CANAL.
PORTLAND, ROMAN, AND OTHER CEMENTS, TAMWORTH GLAZED SEWAGE PIPES.
BLUE VITRIFIED BRICKS, COPINGS, PIPES, &c.

3 & 6, South Wharf, Paddington.
NOTICE.
CHARLES RICHARDSON takes the earliest opportunity of informing Engineers, Architects, Contractors, and others, that he is now bringing GREAVES'S BLUE LIAS LIME per the Great Western Railway from Harbury to Bull's Bridge and Paddington, from whence it can be delivered alongside any part of the river Thames, canals, or railway stations in London the day after it is burnt and ground, in any quantity, and at a great reduction in price.
All applications for prices and terms will meet with prompt attention.
N.B. Please observe the lime is ground at the works, not in London.

BLUE LIAS LIME.—Messrs. GREAVES and KIRSHAW having completed their Works on the Birmingham and Oxford line of the Great Western Railway, at Harbury, are now prepared to supply LUMP and GROUND LIME of the best quality, direct from the kilns, to all the Stations on the Great Western Railway.—Greaves's Blue Lias Lime.—Portland, Bath, and Lias Cement.—Works, at Harbury, Stockton, and Wilmcote.—Office, at Warwick.

HUBBUCK'S PATENT WHITE ZINC PAINT,
The Permanent White of the Ancient Artist.
HUBBUCK and SON, the Original Manufacturers, are enabled, by their process, which is patented, to supply Pure White Zinc Paint at the price of White Lead. Neither heat nor chemical chimes act upon it. It is entirely free from any poisonous or pernicious property. Those direful maladies paralysis and painters' colic, will be altogether avoided. The Powdered White Zinc may be had for grinding in Oil, and where it is used with Size, Varnish, &c. To prevent the prejudice against Zinc paint, which the adulterated article must otherwise produce, it is now sold by the Wholesale Paint-dealers in Original Packages, each cask stamped, HUBBUCK—LONDON PATENT, and when so marked, the quality is guaranteed. THOMAS HUBBUCK and SON, the Original Wholesale Manufacturers, Paint and Varnish Works, opposite the London Docks, London.
N.B. OLD ZINC AND ZINC CUTTINGS BOUGHT TO ANY EXTENT FOR REFINING.

COLES, SHADBOLT, and CO. CEMENT and PLASTER MANUFACTURERS, LIME BURNERS,
Brick, Tile, Drain-pipe, Deir Lath, and Fire Goods Merchants
ST JAMES'S and THORNHILL WHARFS, Caledonian-road, London.

BLUE LIAS LIME.—CHAS. NELSON begs to offer to consumers a supply of Blue Lias Lime direct from his Quarries, Warwickshire, the quality of which has been tested by several of the largest building firms in the metropolis and approved by them; and those who have favoured C. N. with their orders during the last three years have always expressed themselves satisfied with his system of weighing or measuring the lime. When the lime is delivered by boat, the master has instructions to produce (on demand) the canal measurement, by which the purchaser may know the exact weight delivered.—Orders addressed to the London Depôt, 16, South Wharf, Paddington, J. D. BLYTH, Sole Agent, will have immediate attention.—Quarries and Manufactories, Stockton, near Southam, Warwickshire

DAVIES and NORMAN, CROWN WHARF, GREAT SCOTLAND YARD.
ROMAN and PORTLAND CEMENTS.
LIME BRICKS, TILES, SLATES, DRAIN GOODS, &c.
STONEWARE PIPES, PANS TRAPS, &c.
A Liberal Allowance to the Trade.

NOTICE.
SOUTHAM HYDRAULIC BLUE LIAS LIME.
WILLIAM OLDHAM begs to inform those parties requiring genuine Hydraulic Blue Lias Lime, that he is prepared to deliver the best quality ground and lump into boats at the DEVIZES Wharf. Address, WILLIAM OLDHAM, Blue Lias Lime and Cement Works, Southam

GREY STONE LIME WHARFS, 12, UPPER GROUND-STREET, Blackfriars Surrey side, 7, NORTH WHARF-ROAD, Paddington.
WILLIAM PETERS begs to inform the trade he is in a position to supply the best GREY STONE LIME in any quantities from the above wharfs, or per barge direct from the kilns.
Large Grey Stone, or Grey Chalk, free on board at Works, 1s 4d per ton.
Small ditto ditto, 4d per ton.
Barges loaded in a few minutes.
Would-be-thought Grey Stone Lime Works, on the Medway, near Rochester

CHADWICK'S CEMENTS.—To Railway and Dock Directors, Builders, and Waterworks Companies, Coal-Mine Proprietors, Builders, Contractors, &c.—JOHN CHADWICK, Manufacturer of the Patent Selenitic Roman and Portland Cements, is prepared to enter into contracts with any of the above branches that may favour him with their orders. The advantages to be derived from the above Cements, manufactured by J. C. over all others, are their extraordinary hydraulic properties.—Samples and references may be had on application either at the Works, Ashton Newcross; or the Warehouse, 3, Broomstreet, Shude-hill, Manchester.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Parlours, and Drabs, of good and sound quality, constantly on sale at H. DODD'S Brickfields, which are only a quarter of an hour's walk from the City. H. D. earnestly requests purchasers in favour him with a visit, in order to inspect his stock, and to judge for themselves.
Main Place, Hackney, N. Stocks at Place Bricks also on sale. These bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing.
Apply to HENRY DODD and CO. at the Countinghouse, Hoxton Brickfields, Grange-walk, near the Rosemary Branch, Hoxton.
N.B. Lights—Second Pit Sand of a good quality constantly on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand.

THE BEST HERTFORDSHIRE MALM SECONDS;
THE BEST WHITE SUFFOLK and RED FACINGS:
WHITE SUFFOLK PERFORATED BRICKS;
DITTO RED BURNING BRICKS.
Also COWLEY and KENT STOCKS, in any quantities.
J. EASTWOOD and SONS, Belvidere-road, Lambeth; and Surrey-canal-bridge, Old Kent-road, Surrey.

BRICK-FIELDS, QUEEN'S-ROAD, PECKHAM, SURREY
(Within a short distance of the five bridges).
THE BEST MALM CUTTERS, SECONDS, PICKINGS, and PAVIORS, in any quantity.
Also, STOCKS, of FIRST QUALITY.
J. EASTWOOD and SONS, Belvidere-road, Lambeth.

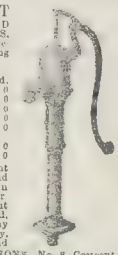
BRICKS of all kinds (clamp-burnt or kiln-burnt), Lime, Chalk, Chalk Rubbish for brick-making, Flints for building and pottery work, Foundry Loam, Wotting, Whiting, Sand for salphalte, Land Drain Pipes, Paving Tiles, Pipes, Gas Soil for brick-making, &c. &c. sent by barge from Messrs. MELSON and CO.'S works at Grays, Essex, to any part of the Thames, the various canals, the river Lea, &c. or by railway station on the London and Southend and Eastern Counties lines, or any railway connected with them. Vessels of 500 to 600 tons can load alongside the wharf at Grays. Also, Flint and Lime, and Marble and Tunbridge Wells Sand. Direction

R. RICHARDS and CO.
PUMP MANUFACTURERS and ENGINEERS.

Pumps in Wrought and Cast Iron and Brass, cored by machinery, and fitted in the best possible manner, suitable for excavators, roads, brickmakers, farms, gardens, stables, liquid manure, ships, barns, well-sinking, &c. adapted for any depth. Hydraulic Pumps for deep wells.

PUMPS ON HIRE.

Pumps of any size, single or double barrel, up to double 18-in. diameter, kept ready for use at reduced prices.

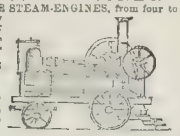


N.B The above can be worked either by hand, horse, or engine power.

Iron Pails 48s. per doz. painted.
Ditto .... 48s. per doz. galvanized.

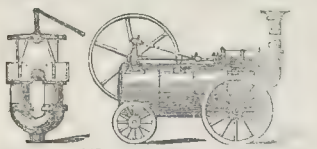
Upper Ground-street, Blackfriars Bridge, Surrey Side.

WARNER'S PATENT VIBRATING STANDARD PUMPS.—PATENT CAST-IRON PUMPS, for the use of farms, cottages, mansions, tanks, and wells of any depth not exceeding 30 feet.



Diameter of Barrel.	Length of Barrel.	£ s. d.
2½ in.	short 1 ft. 7 in.	Fitted for lead, 1 10 0
2½ „	long 3 3	gutta percha 1 14 0
3 „	ditto 3 3	or cast iron 2 3 0
3½ „	ditto 3 6	flanged pipe, 2 12 0
4 „	ditto 3 6	as required, 3 3 0
5½ „	short, with 15 feet of lead pipe attached, ready for fixing	2 14 0
5½ in.	long ditto ditto	2 18 0

The short-barrel Pump is very convenient for fixing in situations of limited height and space. For the supply of coppers and sinks in wash-houses with soft water from under-ground tanks, or in hot, forcing, and plant houses; they may be fixed, when desired, under the stage. May be obtained of any Ironmonger or Plumber in town or country, at the above prices, or of the Patentees and Manufacturers, JOHN WARNER and SONS, No. 8, Crescent, Jewin-street, London.—Every description of Machinery for Raising Water, by means of wheels, rams, deep well pumps, &c. Also, Fire and Garden Engines, &c. &c.—Engravings sent on application.



CONTRACTORS' STEAM-ENGINES.—TO BE LET, on HIRE, or for SALE, several NEW and SECOND-HAND STEAM-ENGINES, of various powers, suitable for contractors' work generally.—Apply to Messrs. RAWLINSON and HALL, Engineers, Surrey Iron Works, Blackfriars Road, where they may be seen.

STEAM PUMPING ENGINES.—PATENT PORTABLE STEAM-ENGINES, from four to ten-horse power, always ready to let on hire, by the week or month, for pumping, sawing, pile-driving, raising materials, &c. &c.

Contracts taken for pumping any quantity of water.

JAMES BURTON & SONS,
Engineers and Contractors,
Johnson's-place, Holland-street,
Southwark, London.

PORTABLE STEAM-ENGINES and PUMPS kept in Stock for Hire at reduced Prices. R. RICHARDS and CO Pump Manufacturers and Engineers, Upper Ground-street, Blackfriars-bridge (Surrey Side).

TRAVELLING STEAM-ENGINE, WANTED (second-hand), about 15-horse power. Also a second-hand HORIZONTAL ENGINE, of about the same power.—Apply to Mr. WM. SISSONS, 8, Station-terrace, Hull. State full particulars.

TO CAPITALISTS, BUILDERS, and BRICKMAKERS.—TO BE SOLD, by private contract, a FIVE-HORSE POWER STEAM ENGINE, of seldom-worn machinery used for the purpose of brickmaking. Also, TO BE LET, a valuable BRICKFIELD, at a rent and royalty, situate at Deptford, Kent, near to estates on which buildings are being rapidly erected.—For further particulars, apply to Messrs. WIRE and CHILD, Solicitors, 3, St. Swithin's-lane, City.

VENTILATION.—PURE AIR.

With single pulley, from 6s. each; with leading pulley, from 8s. 6d.

These Ventilators are arranged that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants; and as they are placed in the external wall, their action is not impeded when the house is closed for the evening, at which time a constant supply of fresh air is much required.—EDWARD HEARS, sole Manufacturers, 196, Blackfriars-road, and 117, Union-street, Borough; and of all respectable ironmongers, builders, &c.

SMOKY CHIMNEYS.—TWO YEARS' TRIAL, and PERFECT SUCCESS of SUTERS PATENT WIND-GUARD, in curing the most inveterate Smoky Chimneys, induces the Patentee to recommend all persons suffering from that nuisance to try one.

Price 10s.

To be had of Ironmongers and Builders, and of the Patentee, at his Office, 65, Fenchurch-street.

SALT-GLAZED STONEWARE, FIRE-CLAY, AND TERRA-COTTA WORKS,

NEAR BARNSLEY, YORKSHIRE.

The Proprietor, E. B. BEAUMONT, manufactures every description of STONEWARE for drainage, building, sanitary purposes, and for every manufacturing purpose, also white, brown, and salt-glazed fire-clay goods, in any quantities. The pipes are wrought by Spencer's Patent Machine, by which tube and socket are one, without a manipulated joint, and rendered the more compact by high pressure; and as every improved apparatus has been made available to secure the highest excellence with great economy of labour, these goods are put upon the market at a considerable reduction from the prices charged by others at all approximating in quality, while their extensive and well-assorted stock on hand is always sufficiently large to promise for works of the greatest magnitude.

THE TRADE LIBERALLY TREATED WITH.

Price-lists and Diagrams sent free on application,—
At the WORKS .....To Mr. WM. FORD Darfield Fire-clay Pottery, near Barnsley.
In LIVERPOOL ....To Mr. JOHN SIDDALL, 39, Shaw's-row.
In MANCHESTER...To Mr B CONSTERDINE, Hunt's bank.
In GLOUCESTER....To Mr S WILKINS, Westgate Wharf, telegraph.
In LONDON .....To Mr. J. D JONES, 27, Bucklersbury; and Goods Depot, No. 4 Warehouse, King's-cross (Great Northern Railway).

BENJ. FOWLER & CO. WHITEFRIARS-STREET, FLEET-ST.

DURABILITY of GUTTA PERCHA TUBING. Many inquiries having been made as to the durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in giving publicity to the following letter:—From SIR RAYMOND JARVIS, Bart., V.C.N., R.E., I.S.L. of WIGHT.—Second Testimonial.—"March 10th, 1852.—In reply to your letter, received this morning, respecting the Gutta Percha Tubing for Pump Service, I can state, with much satisfaction, it answers perfectly. Many Builders, and other persons, have lately examined it, and there is not the least apparent alteration in the first laying down, now several years, and I am informed that it is to be adopted generally in the houses that are being erected here."

N.B. From this Testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.

THE GUTTA PERCHA COMPANY, PATENTEES, 18, WHARF-ROAD, CITY-ROAD, LONDON.

Also, for Sale, a Quantity of Cocoa Matting for Churches, at greatly reduced prices.

Apply to H. PIGGOTT, 115, Fore-street, City.

TALL'S PATENT TELESCOPIC BLIND-ROLLER—The want of the above, which has so frequently formed an obstacle in house letting, is now met by the Patent Roller and Fixings, which may be changed to any window; the ease and rapidity with which it is fixed and unfixed, its impossibility to warp, durable qualities, and extremely low price, make it one of the most useful inventions yet offered to the public. The blind, &c. can be removed and changed in one minute by the most inexperienced person, with an accuracy never before attained. It is affirmed by practical men that in a short time the present wooden roller will cease to be used, so great is the demand already guaranteed. May be had whole sale of the Patentee, No. 1, Well-street, Blackfriars-road; Messrs. DEANE, DRAY, and CO. London-bridge; Messrs. KERRIC, HAMPTON, and CO. Agents for Patent Articles, 64, Strand.

WINDOW BLINDS.—FULLER, BROTHERS, Manufacturers of every kind of Inside and Outside WINDOW BLINDS, warrant of the best materials and workmanship, at the lowest possible prices. Builders and the Trade supplied. A list forwarded on application.—39, Charlotte-street, Blackfriars-road; and at Sydney, New South Wales.

WINDOW BLINDS.—TYLOR & PACE, Window Blind Manufacturers, 104, New Bond-street, and 3, Queen-street, Cheapside, London, submit the following PRICES of WINDOW BLINDS, which they can recommend as being made in the best manner:—Venetian blinds, per square foot, 9d.; best holland blinds, on rollers, 6d.; best ditto, on spring rollers, 9d.; gauze wire blinds, in mahogany frames, 3s.; perforated zinc blinds, in ditto, 1s. 10d.; outside blinds of striped cloth, 2s. Transparent blinds in great variety. Engravings, with prices and discounts to builders and the trade, forwarded on application, post free.

AMERICAN OILSTONES, superior to all other Oilstones for sharpening Edge Tools. Can be cut to any shape or size. AMERICAN OILSTONE DUST, 2s. 6d. per lb. Patentee of the Engineers' Ratchet Drilling Brace, from 21s. each.—JOSEPH FENN, Tool Manufacturer, 165, Newgate-street, London.

Albemarle street, Nov. 1856.

LLOYD'S MARBLE WHARF, Thames-bank, Pimlico, adjoining Vauxhall-bridge.—Italian Statuary, Veined, Sicilian, Dove, Sienna, and other Marbles, for Sale, at import prices. A resident manager on the wharf at all hours.

BUILDERS, ARCHITECTS, AND MASONS.

MARBLE. — The ITALIAN MARBLE COMPANY beg to call the attention of Architects, Builders, and Others connected with the trade, to their large and well assorted STOCK of VEIN SICILIAN, and other MARBLES. The liberal system of business adopted by this company, the superior quality of their marble, and their very moderate scale of prices are combined, to form an inducement to buyers. An inspection is solicited at the Depôt Bridge Wharf, Millbank, adjoining Vauxhall-bridge, where no other persons are authorised to sell except Mr. Baxter, Wharf Foreman, or the undersigned.
WILLIAM W. BONNIN, Secretary.

MARBLE WORKS by PATENT MACHINERY, Commercial-road, Pimlico, London. THOMAS JACKSON begs to draw the attention of the public to the most extensive stock of Chimney-Pieces in the Metropolis; consisting of a selection of upwards of two hundred, and manufactured by steam power from the finest Italian and other marble, and with that careful attention to the details and finish so necessary in good and durable work. The Stock consists of elegant Drawing-Room Chimney-Pieces in Statuary Marble; bold, massive Chimney-Pieces, in Black, Black and Gold, Bardilla, Sienna, Verd Antique, Brocatella, Dove, St. Ann's, and Serpentine Marble, suitable for Dining-Rooms, Libraries, Vestibules, and Entrance-Halls; and a great variety of others in Veined, San Juan, Emperor's Red and Amber Marble, for Boudoirs, Breakfast-Rooms, best and secondary Bed-Rooms, &c.; also, Monuments, Tombs, Tablets, and Pedestals for Busts and Statues, and Slabs for Cabinet Work, &c.; the whole executed from the most classical designs, and in all the varieties of the finest Italian and British Marble, at the lowest remunerative prices.

BRAMLEY FALL! BRAMLEY FALL! On account of greater facilities than possessed by any one else, TRICKETT and PERKIN are prepared to supply in any quantity BRAMLEY FALL STONE, at greatly reduced prices, having opened the extensive quarries in the Hawksworth Cutting, on the North-Eastern Railway, near Horsforth. The stone is of the same quality as the well-known Old Bramley Fall and Horsforth Quarries, but has the advantage of being of a lighter and more uniform colour. The North-Eastern Railway Company have put sidings in on both sides of the railway. Powerful cranes are fixed, so that the stone can be got to any size, and the stone being loaded in the quarries on the railway-trucks, can be forwarded the same day to any part of the kingdom, or supplied in London river or Selby or Hull, in any quantity. For particulars apply to JOHN TRICKETT, Stone Merchant, Hendingley, near Leeds, or to SAMUEL TRICKETT, Victoria Stone Wharf, Isle of Dogs, London.

BANGOR WHARF, King's-road-bridge, Camden-town.—STRINGFIELD and COOPER, late W. W. Rawlins, beg to call the attention of Builders and others to their stock of Bangor slates, lasts, plaster, Roman, Portland, and Keene's cement, blue lias, Dorking and chalk lime, plasterers' hair, Yorkshire plain, pan, and ridge tiles, glazed sewer pipes, closet-pans, and traps, Welsh fire-bricks, gravel and shells for garden paths, ballast, sand, &c Materials landed, wharfed, and carted.

QUARRY WORKED STONE.—Architects, Masons, and Builders would effect a great SAVING in cost by ordering their paving, landing, cills, copings, imposts, quoins, curbs, and other stones, worked to templates, rough, square or spandril, from the quarries ready worked for fixing Experienced foremen are kept, and the stone is clean worked, and carefully packed or stowed, and delivered direct in one bottom by vessel or railway truck —Prices and every information given on application, accompanied by plans or sketches, to SAMUEL TRICKETT, Stone-dresser, Isle of Dogs, or to JOHN TRICKETT, Hendingley, Leeds, Yorkshire.

TO CONTRACTORS AND OTHERS.

YORKSHIRE PAVINGS, LANDINGS, STEPS, COPINGS, CURBS, SILLS, SINKS, and CHANNELS; Hare-hill, Robin Hood, Park Spring, and Gaypit, in Blocks. Headstones, or Slabs; Purbeck Paving, Sinks, Curbs, Rickstones, Pitchers, and Squares; Cattness Flags, Fire-stone, Newcastle and Bilston Grindstones; Portland Stone in Blocks, Landings, Slabs, &c; Darley Dale, Caen Stone, Bramley Fall, Bath, Hood Hedstone, Purbeck, and other Block Stones. Valentia Slate Slabs, Bangor Slates, Cornish, Aberdeen, Guernsey, and other Granites; Marble, in Block and Slabs, supplied from the Wharfs, Millbank-street, City Basin, and Deptford; also direct from the quarries by vessel or rail.—Address, FREEMAN'S WHARF, 37, Millbank street, Westminster.

RANSOME'S SILICIOUS STONE.—All kinds of ARCHITECTURAL EMBELLISHMENTS executed in this beautiful and indestructible material, at prices not exceeding the ordinary cements Full particulars furnished on application to Mr. FRED. RANSOME, Whitehall-wharf, Cannon-row, Westminster; or Patent Stone Works, Ipswich.

GATES and GEORGE, CAEN, AUBIGNY, and GENERAL STONE MERCHANTS.
CAEN WHARF, HOTHERHITHE, LONDON.

CAEN and AUBIGNY STONE.—P. FOUCARD, Stone Merchant and Quarryman, Carges shipped to order from Caen or Aubigny. Contracts taken for any quantities, Depôts: Granite Wharf, East Greenwich, Lett's Wharf, Waterloo-bridge. Office: 246, High-street, Southwark, near the Townhall.

MARKET-WHARF, REGENT'S-PARK-BASIN.—WEST-END DEPOT, for Yorkshire Paving, Portland and Derby Stone. Bangor Slates, Slabs, &c. Also Bricks, Lime, Cement, Plaster, Tiles, Sand, and Fire Goods SCOLES and WOOD invite the attention of Builders, Masons, and others, to their Stock as above, where everything will be charged at the lowest prices. Headstones, Ledgers, Steps, Landings, &c. cut on the shortest notice. Country orders promptly attended to

STONE! STONE! STONE! — To the TRADE.—The cheapest place in London for Portland and Bath Stone, Yorkshire Landings, Steps, Curb, Paving, Scaffold Slab, Granite Pitching and Curb, Guernsey and Aberdeen Granite of every other description of stone, at JOHN KNIGHT and SON'S, Devon Wharf, Mile-end. York tooled paving, 3½. 6d per 100 feet; slab for hewths, 4d. per foot sup.; slab for chimneys, 2-piece, 4d per foot sup.; 8 by 3 window-sills, 6d. per foot run; 13 by 3 coping, 8d. per foot run; box chimneys (any opening), 8s. 6d. each. Terms cash on delivery.

TO BUILDERS, MASONS, and OTHERS. TO BE SOLD, about 500 Tons of ABERDEEN GRANITE, in large or small quantities, at Brunswick Wharf, Brunswick-street, Agar-town. Also, 600,000 new STOCK BRICKS, lying in the Brickfields at the top of Gifford-street, Caledonian-road. 5 or 6 Chaldrons of excellent ASHES and BREEZE, lying in the Fields as above.—For particulars apply to Mr. C. STARKEY, 15, York-road, King's-cross.

GRANITE.—The Welsh Granite Company, Carnarvon, supplies Pitching or Paving Sets of this Material to order. The Sets, which have for several years been extensively used in Manchester, Bristol, Leeds, and other large towns, combine in a higher degree than any others, the qualities of roughness in wear and durability. The stone is also well adapted for foundation courses, plinths, &c. for public buildings and for mill-stones.

GRANITE.—King William and Nelson Monuments, Plinth and Steps of the Royal Exchange, and Terraces at the Crystal Palace.—Supplied by the Haytor Company under Royal Charter.—For terms, apply to Mr. C. HOAR, Haytor Granite Office, 4, Millbank-row, Westminster.

GRANITE.—The Cheesewring Granite Company, Liskeard, Cornwall. London Agents—TREGELLES and TAYLOR, 54, Old Broad-street. Manager—JAS. J. TRATHAN, Liskeard This Granite is selected for the New Westminster-bridge.

JOHN BAZLEY WHITE and BROTHERS, MARBLE MERCHANTS, MILLBANK-STREET, WESTMINSTER. Marble of all kinds and of best quality, in block and slab, Marble mortars, &c.

BATH STONE OF BEST QUALITY.

RANDELL and SAUNDERS, QUARRYMEN AND STONE-MERCHANTS, BATH.

List of prices at the quarries and depots, also cost for transport per ton to any part of the kingdom, furnished on application to Bath Stone Office, Corsham, Wilts

SLATE.—An assortment of the best BANGOR ROOFING SLATE ON SALE, at Bridge-wharf, Millbank.—Apply to Mr. GEORGE BAXTER, Foreman.

SLATE.—The Bangor Royal Slate Company have now on hand a LARGE ASSORTMENT of ROOFING SLATES blue and green, of the usual sizes, which they are prepared to supply on the usual terms, for shipment from their depôt, at Bangor, or to transmit by railway. Also Slabs of all sizes.—Orders to be addressed to Mr. EDWARDS, Manager, Royal Slate Quarries, Bangor.

PARIS EXHIBITION. — ENAMELLED SLATE.—TWO FIRST-CLASS MEDALS!—Mr. MAGNUS is the only exhibitor whose productions received this double honour; also the Prize Medal at the Great Exhibition of 1851, and the Medal of the Society of Arts in 1846. This beautiful material, handsomer and more durable than marble, is now finding its way into palaces, into the mansions of the nobility at home and abroad, into the highest class of public buildings, as well as into humbler dwellings. The cost is immeasurably below that of any other production that can at all compete with it. It is applicable to a variety of useful and ornamental articles, too numerous to be separately specified. Among the chief are chimney-pieces and ornamental stoves for all apartments; plain and exquisitely decorated slabs for the tops of loo-tables, chiffoniers, consoles, &c.; baths, baptistries, altar-tablets, pilasters, columns, vases, pedestals, and brackets; wash-stand tops, billiard tables, linings to halls, vestibules, and dairies.—Price lists can be had on application to Mr. MAGNUS, 39 and 40, Upper Belgrave-place, Pimlico.
N.B. Plain slate work executed from a single article to the most extensive contracts, for home and abroad.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now made of very large dimensions and of superior quality. They have been used at the British Museum, National Gallery, Bethlem Hospital, various Lunatic Asylums, the Ordnance Works, Model Prison, Pentonville, and other Penitentiaries; Malting Floors in Bedfordshire and Hertfordshire, Breweries, the Race Stand at Brighton, Portsmouth Barracks, and are kept in stock in large quantities by Messrs. FREEMAN, Millbank-street; and at Messrs. Brabv's, Belvidere-road, where terms may be obtained.

ROOFING SLATES, or COVERING, or SLATE CISTERNS, SINKS, SLABS, or SLAB WORK. T. B. HANSFORD, being part owner of an extensive quarry, is actually enabled to supply the above at price considerably lower than the usual quotations, but his friends, and the trade generally, may rely on first-class materials and workmanship. 12-inch slate paring, 45d. per foot super.—Trenuiga-wharf, Ratcliff-cross.

O. M'CARTHY, CARMAN, and SAND and CEMENT MERCHANT, Whitefriars Wharf, Whitefriars, Fleet-street, City. Sand, from above or below bridge, delivered by the yard or per barge. Ballast screened or unscreened, by the yard or per barge. Stocks, lime, and old bricks. Dry rubbish delivered per barge, in any quantity, alongside the Thames

ASPHALTE.—GERVASE FOOTTIT TRINIDAD ASPHALTE WORKS, ROTHERHITHE, LONDON. Established 1838.—TRINIDAD, SEYSSEL, and BRITISH ASPHALTES, manufactured by Steam power, laid down in the best manner, or supplied in any quantity. Information for using it sealed with material Post-office orders or reference in London promptly attended to Estimates given for every kind of the above work.

ASPHALTE, FOREIGN and BRITISH, for FLAT ROOFING and every description of PAVING, especially in damp situations.
FROM 2s. 9d. PER SQUARE YARD.
Country Builders supplied with Asphalte for footings and barn floors, with instructions for using it.
Apply to JOHN PILKINGTON, Poloneeau and Limmer Asphalte Office, Monument chambers, 14, Fish-street-hill, London.
N.B. Importer of the PURE ROCK ASPHALTE, from the LIMMER Mines in Hanover.

BUILDER'S BUSINESS WANTED.—Any party wishing to dispose of an old-established JOBBING BUSINESS, in or near the City, where six or eight men are constantly employed, and which could be improved, can hear of a purchaser by sending particulars addressed to G. C. 5, Kent-terrace New Cross-road, Deptford.

TO CARPENTERS, BUILDERS, &c.—A BUSINESS TO BE DISPOSED OF as above, situated a few miles east of London; for stock, implements, goodwill, &c. together with three leasehold houses, price 450l. nett. The stock can be separated from the purchase, and a part of the purchase remain unpaid, if preferred, to suit the convenience of parties; but it is requested by the proprietor, that none but such as are in want of a business will apply.—Direct to G. A. R. at the Office of "The Builder."

TO BE DISPOSED OF, an old-established BUILDER'S BUSINESS, with a good Jobbing connection Coming in the selling Stock-in Trade, Goodwill, &c. 6 or 7l. The whole of the money not required at once.—Apply to Mr. C. BROWN, West-cross place, Hammersmith

IRON FOUNDRY and STOVE GRATE MANUFACTORY, JERSEY.—TO BE DISPOSED OF, a small and lucrative BUSINESS, established more than 30 years, in Jersey, and now in full operation. The original proprietor retired on an independence realized 12 years ago, in favour of his son, who has recently deceased, an event in consequence the business is for disposal. It presents a most eligible opportunity to any young man possessing a knowledge of the trade. No goodwill is required. The stock, trade, and patterns, sold —Apply to Messrs. FULLER and HORSEY, Billiter-street, London.

SALES BY AUCTION.

TO ENGINEERS AND OTHERS.

MESSRS. FULLER and HORSEY will SELL by AUCTION, on TUESDAY, 11th NOVEMBER, 1856, and following days, at ELEVEN o'clock each day, on the PREMISES, the Atlas Works, Rotherhithe, unsurpassed Southern effects. At previously disposed of by private contract, of which due notice will be given, the MACHINERY and TOOLS of the ATLAS WORKS, including a large and powerful self-acting boring machine, drilling-machine, ten very powerful lathes, for engine turning and screw-cutting, vices and benches, steel tools, four smiths' forges, a large assortment of engineers' and smiths' tools, two steam engines, and boiler, shafting, and gearing, screwing apparatus, a valuable collection of new patterns, in wood and iron, stores of iron, and numerous other effects. At the same time will be SOLD, the LEASE of the PREMISES, comprising a substantially-built factory, of two floors, the upper story used as a fitting-shop, turnery, and store-room. The lower floor used as an erecting shop, turnery, engine house and smith's shop, a workmen's dining-room, stable-yard, a convenient residence, and offices, held on lease for a term of twenty-six years, at a rent of 80l. per annum.—The Premises may be viewed till the sale, and the Machinery on Monday previous. Particulars and catalogues may be had on the Premises, and of Messrs. Fuller and Horsey, 13, Billiter-street, City.

KIRKBURDY WOOD and STOCKING-GREEN, Railwaster, near Saffron Walden, Essex (70 BEARS sold by AUCTION).

MESSRS. NOCKOLDS and KING, upon the PREMISES, at TEN o'clock, on FRIDAY, NOVEMBER 7, 1856, about 340 OAK TIMBER TREES and 200 Oak Poplars, as now lying in Kirkburdy Wood and on Stocking-green, by the side of the road leading from Walden to Radwinter. The trees are of good quality, long lengths, and well worthy the attention of builders, coachmakers, and others. Six months' credit will be given upon approved security on all purchases over 40.—May be viewed by applying to the Railster at Wills Alle and New House Farms, Radwinter; of whom catalogues may be had; also at the Office of the Auctioneers, Saffron Walden.

TO TIMBER MERCHANTS, BUILDERS, CABINET-MAKERS, CONTRACTORS, AND OTHERS.

MR. MARSH has received instructions from the proprietor to submit to PUBLIC SALE on the PREMISES, Philpot-street, Commercial-road East, on TUESDAY, the 11th NOVEMBER, at ONE o'clock precisely, Twelve Loads superior Quebec Birch, Five Loads Dry Ash Plank, Five Loads Dry Hornbeam Plank, Two Loads Dry Live Oak, Three Loads Dry Sycamore Board and Plank, 3,000 feet Dry Mahogany Boards and Plank, with Pine Plank. Floor Boards and other Goods, more particulars of which will appear in catalogues.—May be viewed two days prior to Sale.—Catalogues had of W. Cooper, Esq. 13, George-street, Mansion-house; and of the Auctioneer, Philpot-street, Commercial-road East.

EAST-STREET, WALWORTH.—To GOVERNMENT CONTRACTORS, BUILDERS, BUILDING MATERIAL DEALERS, and OTHERS

MR. PEAKE is directed to SELL by AUCTION, on the PREMISES as above, on THURSDAY, NOVEMBER 6th, 1856, at TWELVE o'clock, without the least reserve, TEN BUILDERS' CARTS, three dobbin carts, twelve sets thill harness, four axle-engines, four ringing-engines, large quantity of rain-pipes, traps, and bends, new rye-grass, wheeling planks, 100 battens, fir timber, about 15 cwt. nails, bar and rod iron, 1,000 sacks various, quantity of new iron, useful ironmongery, zinc, stove, and a variety of materials.—May be viewed the morning of sale, and catalogues obtained of Mr. Peake, Builders' Auctioneer, 44, Tooley-street, Southwark.

TOWER.—SALE of STORES.—By order of the Secretary of State for War.—TO BE SOLD, by PUBLIC AUCTION, in the TOWER, on WEDNESDAY, 5th of NOVEMBER, 1856, at ELEVEN o'clock, in the forenoon precisely, the following STORES, lying at the Victoria (London) Docks, viz. Blankets and Rugs, Sheets (cotton and linen), Waterproof Sheets and Coats, Hospital Clothing, Great Coats, Belts and Pouches, and pair Meadow Mat 1, containing about 2 acres; also two other Residences, with Gardens, and two enclosures of Land, Victoria Docks.

MESSRS. FAREBROTHER, CLARK, and LYE are instructed by the proprietor (removing to his estate in Hertfordshire), to sell at GARRAWAYS, on WEDNESDAY, NOVEMBER 12, at TWELVE (unless in the meantime an acceptable offer be made to purchase the whole, or to rent the large residence and 18 acres of land), the following very valuable FREEHOLD ESTATES, situate within three miles of London between Stockwell and Tulse-hill, and comprising Stockwell Lodge, a spacious family residence, replete with comfort, and upon which a very large sum has been expended within a few years in additions of new reception-rooms, &c. standing in its own beautiful grounds, with lawn, kitchen garden, hot and green houses, conservatory, shet of water, stabling, farm-yard, and about 18 acres of park-like meadow land, ornamented with timber and plantations, and for many years the favourite residence of Henry Smith, esq., and in the undisturbed possession of this portion of the property may be had. The adjoining freehold residence, with its lawn, pleasure-grounds, kitchen garden, paddock, and stabling, with about 4½ acres of land, in the occupation of John Gladstone, esq., at the very low rent of 200l. per annum. Also two capital houses and gardens, fronting Stockwell lane, one in the occupation of Edward Foley, at 31l. per annum, and the other on lease to Mr. Palmer, at 60l. per annum, two lodges let at 40l. per annum, and two enclosures of meadow land, with extensive frontage, adapted for building purposes. Particulars and plans may be had of C. G. C. Oriel, Esq. Solicitor, 36, Alfred-place, Bedford-square; at Garraway's; and at the Offices of Messrs. Farebrother, Clark, and Lye, Lancaster-place, Strand.

Important to Railroad Contractors, Timber Merchants, and Others.—Tunbridge Wells, Frant, Robertsbridge, and Etchingham Stations, South-Eastern Railway.

MR. GEORGE NEWMAN is instructed to SELL by AUCTION, without any reserve, in about ten days from the present date, about 600 good SCOTCH and LARCH FIR and DEECK SLEEPERS; also a large quantity of FENCING, in excellent condition, and now lying at the above-mentioned stations.—Further particulars in a future advertisement. Auction, Estate and Valuation Offices, Tunbridge Wells, and Hastings.

LORDSHIP LODGE, TOTTENHAM.—Valuable Building Materials.

MESSRS. NORTON, HOGGART, and TRIST have received instructions to SELL by AUCTION, on the PREMISES, Lordship-lane, half a mile from the Hornsey Station on the great Northern Railway, and 1½ mile from Tottenham Station on the Eastern Counties Line, on TUESDAY, NOVEMBER 11, at TWELVE, the valuable BUILDING MATERIALS of Lordship Lodge, with the stabling, coach houses, vinery, and buildings, comprising upwards of 2,000 superior stock bricks, large quantity of excellent timber in roofs, floors, and partitions, flooring battens and boards, mahogany and other doors with plate-glass sashes, frames and fittings, elegant Italian marble and other chimney-pieces, about seven tons of lead in gutters, ridges, and flats, lead and iron lift-pumps, mahogany water-closets, stoves, ranges, cupboards, and other fixtures, stone portico, York and pebble paving, coach-house gates, posts and rails, iron palisades, and other fencing, the vinery with large iron pipes and hot water apparatus, and other effects.—May be viewed the day previous to the sale.—Catalogues had at the Inns at Hornsey, Tottenham, and Edmonton; and of Messrs. Norton, Hoggart, and Trist, 62, Old Broad-street, Royal Exchange.

SALES BY AUCTION.

WELL-SECURED GROUND-RENTS AND VALUABLE LEASEHOLD RESIDENCE

MESSRS. BEADEL and SONS are instructed to SELL by AUCTION, at the MART, Bartholomew-close, London, on TUESDAY, NOVEMBER 11th, 1856, at TWELVE o'clock, in lots, NINEPEEN valuable GROUND-RENTS, well secured upon ten houses in Upper Berkeley-street West: No. 14, Great Cumberland-place, Hyde-park; and Nos. 1, 2, 3, and 4, Cumberland-mews, producing 183l. 4s. per annum, for an unexpired term of thirty-two years; also an improved rent of 52l. 8s. per annum, arising from capital leasehold premises, No. 15, Norfolk-street, Park lane, with coach-house and stable in Hamyard, in the rear, for an unexpired term of twenty and a half years from Lady-day last.—Particulars and conditions of sale may be obtained of Messrs. Lee and Bolton, Solicitors, 2, Broad Sanctuary, Westminster: at the Mart; and of Messrs. Beadel and Sons, 25, Gresham-street, London.

NEW WINDSOR ESTATE. — Valuable BUILDING LAND TO BE LET, in Plots for first and second class Villa Residences, with Stabling, which are much needed in this beautiful locality. The situation is the finest in or near Windsor, abutting on the Park and Long Walk, and commanding a splendid view of the Castle. Within ten minutes' walk of the Great Western and fifteen minutes' walk of the South-Western Railway Stations. Advances can be had by responsible parties.—For particulars apply to Mr. WILLIAM SIM, Architect and Surveyor, 3, Danes-inn, Strand.

FREEHOLD LAND, Land-tax and Tithe Redeemed. — TO BE LET, on Building Lease for Ninety-nine Years, One Plot on each side of Eden Villa, Milton road, Stoke Newington, 34 feet front by 104 deep; One Plot, 21 feet front, 200 feet deep—houses let on both sides, near the Oak Tavern, in Oakfield road, Anerley, Surrey, near the Crystal Palace; One Plot, 46 feet frontage, 110 deep, in Grenville-row, adjoining the Gardens in Hanley-road, Horsey-rise; One Plot, 37 feet front, 113 deep, in Saxon-road, Coborn New road, Bow—a house built on the same side, on the other the gardens of Sarah Grange; One Plot, 16 feet front, 118 deep, in Leytonstone-road, Essex, opposite Bunney's Nursery, and adjoining a row of six houses, all let.—Apply to F. J. WEIGHTMAN, of Eden Villa, as above.

FREEHOLD BUILDING LAND.—TO BE SOLD, together or in two lots, TEN ACRES, with frontage to good newly-made roads of nearly 4,000 feet, exclusive of the second frontage of eighteen corner plots, close to a station, four miles from the City, well suited to a land or building society. Price moderate.—Apply to D. B. SLADEN, Esq. Solicitor, 9, King's arms-yard, Moorgate-street, City.

VALUABLE FREEHOLD LAND, EAST BARNET. — TO BE SOLD by PRIVATE CONTRACT, about THIRTY ACRES (in separate fields or plots), of FREEHOLD BUILDING LAND, finely situated in the vicinity of the Great Northern Railway station, and admirably adapted in every respect for building purposes, having extended frontages upon the high road on each side of the railway, and also upon newly-formed roads. The situation is noted for its salubrity, scenery, and facility of communication with London. — For further particulars, apply at Mr. THYNNE'S offices, 11, Great George street, Westminster.

FREEHOLD LAND TO BE LET, on the River Thames, between the river and the Victoria Docks, being very near the dock entrance, on BUILDING LEASES for ninety-nine years. This land has not only the advantage of river frontage, but it is bounded on the land side by a branch of the Eastern Counties Railway, into which sidings may be made.—Plans of the property may be seen, and particulars had of Mr. JOHN OAKLEY Land Agent and Surveyor, 60, Doughty-street; and of Messrs. KINGSFORD and DORMAN, Solicitors, No. 23, Essex-street, Strand.

FINCHLEY.—LAND fronting the Regent's Park-road, and East-end-road, TO BE LET on Building Leases for ninety-nine years, with power of enfranchisement. Plots from one to four acres for large villa residences; smaller plots for semi-detached houses, and plots for shops in the village. Apply to W. A. BOULNOIS, Esq. Architect, 8, Waterloo-place, Pall-mall; or to Messrs. BARKER, BOWKER, and PEAKE, 1, Gray's-inn-square.

FREEHOLD LAND TO BE LET, on Building Lease for ninety-nine years. Money advanced to respectable parties. Freehold Land to be Sold for building purposes in eligible situations.—Apply at the Offices of Messrs. MORGAN and PHIPSON, Architects, 3, Danes-Inn, St. Clement's, Strand.

TO BUILDERS.—TO BE LET, on advantageous terms, TWELVE PLOTS of BUILDING LAND at Chelsea, in a first-class position, with 18-feet frontages.—Apply to J. SHEPPARD SCOTT, Architect, &c. 16, New Broad street, City.

BELSIZE-PARK, HAMPSTEAD.—A portion of this PARK will be LET on BUILDING LEASES to respectable builders. There are bricks on the ground, and the roads and sewers are completed. Money, if required, would be advanced on mortgage.—Apply to Mr. WILLIAM THOMPSON, Architect, 3, Conduit-street West, Westbourne-terrace.

BRICK and TILE YARD and LAND, for Villa Residences.—The Branchlife Estate, near Worksop, situate on the Manchester, Sheffield, and Lincolnshire Railway.—TO BE LET, from FIFTEEN to TWENTY ACRES of excellent BRICK CLAY, from 19 to 14 feet thick, which has been tested and found to be superior to any other in the vicinity. A lime quarry is in full work on the estate, producing lime of the very best quality. Arrangements might probably be made for working the lime and the brick clay together. A tramway runs from the north of the estate to the main line on the south and the Chesterfield and Cromwell Canal also passes through the estate, and they immediately adjoin the brick clay, so that every facility for transport, and establishing a first-rate brick and tile yard is thus afforded. Much of the land is highly suitable for villa residences. It runs on the north side of the estate, abutting out of sight the lime quarry; commanding a southern aspect, and beautifully picture que panoramic views over the four ducal estates by which it is surrounded, and is always well supplied with game. Every encouragement will be afforded to a builder who would take land for villa residences. Shireoaks Station adjoins this estate, which is only three miles from the improving town of Worksop, and fifteen miles from Sheffield.—Permission to view and make trial of the clay, and further particulars, may be obtained of BRODHURST and HODDING, Solicitors, Worksop.

BUSINESS PREMISES.—WANTED, by the Advertiser, PREMISES suitable for a Carpenter and Builder; West-end preferred.—Apply by letter to L. H. No. 19, Mitre terrace, Downham road, Kingsland.

SPARE ENGINE POWER.—WANTED, for a temporary purpose, a LIGHT ROOM, with Two to Three Horse Power, within ten minutes' walk of the Royal Exchange. Apply, by letter, to R. Messrs. Hooper and Cull's, 13, Lombard-street.

London: Printed by Charles Wyman, of 13, Hunter-street, Brunswick-square, in the Parish of St. George, Bloomsbury, Printer, at the Printing-office of Cox (Brod) & Wyman, 74 & 75, Great Queen-street, Lincoln's-inn-fields, in the Parish of St. Giles-in-the-Fields; and published by the said Charles Wyman, at the Office of "The Builder," 1, York-street, in the Parish of St. Paul, Covent Garden, all in the County of Middlesex.—Saturday, November 1, 1856.

DEPARTMENT of SCIENCE and ART TRAINING SCHOOL, Kensington Gore South.—The Classes for Mechanical, Engineering, and Architectural Drawing, &c. for the Autumn Session, HAVE NOW COMMENCED. Fees—Morning Class 4l.; Evening, 2l. per session.

THE CENTRAL SCHOOL of ART for TRAINING TEACHERS, and for the PUBLIC, OPENED at the new Premises, at Cromwell-road, Kensington Gore South, on MONDAY, the 3rd of NOVEMBER. Prospectus may be obtained on application personally, or by letter.

NORMAN MACLEOD, Registrar.

NOTICE.—All Public Schools for the Instruction of the Poorer Classes may obtain an allowance towards providing Examples, &c. for teaching Elementary and Mechanical Drawing, by applying by letter to the Secretary of the Department of Science and Art, Cromwell-road, Kensington, London, W.

NORMAN MACLEOD, Registrar.

COMPETITIONS.

TO ARCHITECTS.—The Directors of the Berwick Corn Exchange Company (Limited) invite Architects to furnish DESIGNS for a new CORN EXCHANGE, with Committee Rooms, &c. for the town of Berwick. Sketches of ground-plan and other particulars may be obtained from the undersigned; but it is desired to leave architects unfettered as far as possible, not only as to general design, but as to the internal arrangements of the proposed building. There will be awarded for the design which shall be adopted (with the subsequent selection of complete specifications), the sum of 40l.; and for the design next most approved of, 16l.; and these designs shall become the property of the Company. With each design must be lodged an estimate of the cost of carrying it into execution. Designs intended for competition must be lodged with the undersigned on or before the 1st JANUARY next.—By order of the Directors,

STEPHEN SANDERSON, Secretary.

Sandgate, Berwick, November 4, 1856.

BOROUGH of SUNDERLAND.—SEWERAGE WORKS.—To PLUMBERS, SANITARY ENGINEERS, and OTHERS.—The Corporation of the Borough of Sunderland, being now engaged in carrying out their Sewerage Works, are anxious of adopting the most approved WATER-CLOSETS in connexion with these Works; they therefore offer a PREMIUM of FIVE POUNDS and THREE POUNDS respectively together with the recommendation of the Council, for the two water-closets, which, in their opinion, are best suited for the Borough.—Specimens, complete with all cisterns required and ready for attaching to the main, with the price affixed, are to be forwarded, free of charge, on or before the 10th of NOVEMBER next, to WILLIAM CROZIER, Esq. C.E. Borough Engineer, of whom any further particulars may be known.

By order,
WILLIAM SNOWBALL, Town Clerk.

Sunderland, October 23, 1856.

COMPETITIONS.

STOKE PARK ESTATE COMPANY.—To IRONFOUNDERS and OTHERS.—WANTED DESIGNS and ESTIMATES for about One and a Half Miles of WROUGHT-IRON HURDLE FENCING, 4 feet high; to include Seventy-two 9-feet Gates, to work double. The estimate to include fixing in the ground. Tenders to be sent sealed to Mr. M. H. BROWN, Surveyor, 12, High-street, Coventry, on or before the 17th of NOVEMBER, 1856.—This advertisement will not be repeated.

CONTRACTS.

NOTICE to BUILDERS and CONTRACTORS.—ORDNANCE WORKS.—The Commanding Royal Engineer of the Dover District hereby gives Notice, that sealed TENDERS will be received at the Office of the Director-General of Contracts, Pall-mall, London, on or before SATURDAY, the 15th day of NOVEMBER, 1856, from persons desirous of CONTRACTING for WORKS to be EXECUTED in improving the Fortifications at Dover Castle. A specification of the works to be executed may be seen by persons fully competent to undertake the work (none others need apply), and Specifications and forms of Tender obtained at the Royal Engineer Office, Dover, between the hours of TEN and FOUR o'clock, from SATURDAY, the 1st of NOVEMBER, to FRIDAY, the 14th of NOVEMBER, 1856, Sundays excepted. The party whose Tender may be accepted for the work will be required to enter into a bond, with two eligible securities, jointly and separately, to be bound under a penalty of 3,000l. for the due performance of the contract. Tenders for the above work to be addressed to the Director-General of Contracts, Pall-mall, London, and endorsed "Tender for Works at Dover Castle."

N.B.—The War Department reserve to themselves the right of rejecting the whole or any of the Tenders.

Royal Engineer Office, Dover, October 13th, 1856.

NOTICE to BUILDERS.—The Commanding Royal Engineer of the London District hereby gives Notice, that sealed TENDERS, addressed to the Director-General of Contracts, will be received at the War Department, Pall-mall, on or before the 29th NOVEMBER next, for ERECTING the BARRACKS at the Forcing ground, Kensington. Plans may be seen, and printed schedules and forms may be obtained, at the Royal Engineer Office, 11, James-street, Pimlico, between the hours of ELEVEN and THREE o'clock, from the 10th to the 28th NOVEMBER next, inclusive; but the War Department reserves to itself the right of rejecting the whole or any of the Tenders.

11, James-street, Pimlico, October 25th, 1856.

CONTRACTS.—WAR DEPARTMENT.—To BUILDERS and CONTRACTORS.—The Commanding Royal Engineer of the Aldershot District hereby gives Notice, that sealed TENDERS will be received by the Director-General of Contracts, War Department, Pall-mall, London, until TWELVE o'clock on FRIDAY, NOVEMBER 21, 1856, from parties willing to Contract for the TAKING DOWN, REMOVAL, and RE-ERECTION of the POLICE ESTABLISHMENT at Aldershot Camp, within four weeks from the notification of the acceptance of the Tender. Plans may be seen, and specifications and forms of Tender obtained, on application at the Royal Engineer Office, on and after the 13th instant. The War Department reserves the right of rejecting the whole or any of the Tenders.

Royal Engineer Office, Aldershot, Nov 5, 1856.

TO CONTRACTORS, BUILDERS, IRONFOUNDERS, POTTERS, and OTHERS.—The Board of Works for the Wandsworth District are desirous of receiving TENDERS separately for each parish, for the CONSTRUCTION of Tee undermentioned SEWERS, and other Works in connexion therewith, viz.:—

Yards lineal	
In the parish of Putney ..	236 of 3 feet 9 inches by 3 feet 6 inches.
Do. do. ..	885 of 3 feet 3 inches by 3 feet.
Do. do. ..	814 of 12-inch pipe.
Do. Streatham ..	138 of 3 feet by 2 feet.
Do. Tooting ..	760 of 3 feet 9 inches by 3 feet 6 inches.

And also (in separate Tenders for each of the parishes of Battersea, Clapham, Putney, Streatham, Tooting, and Wandsworth) for the various JOBBING WORKS in repairing and making good to sewers and gullies, for the term of one, two, or three years, at the option of the Board. Also (for LAYING PIPES, at Four-pence PER LINEAL YARD,

CONTRACTS.

TO BUILDERS and CONTRACTORS.—Builders wishing to TENDER for the various WORKS required to be done in the ERECTION and COMPLETION of a FREE METHODIST CHAPEL, to be built at Spalding, in Lincolnshire, may see plans and specifications, and obtain every particular, by applying between the hours of TEN a.m. and FIVE p.m. at our Offices on and after the 10th day of NOVEMBER, to the 29th inclusive, and at the Bank of Messrs. Spalding, from the 1st to the 22nd of NOVEMBER inclusive.
HELLAMY and HARDY, Architects and Surveyors.
Offices, 3, Baldgate, Lincoln, October 7, 1856.
N.B. The Trustees do not pledge themselves to accept the lowest Tenders.

PARTIES willing to ESTIMATE for FINISHING the PLASTERING of TWELVE HOUSES, and taking a house as part payment, may have the particulars by applying at the office, on or before the 12th inst. at 24, Regent-terrace, Maldon-road, Haverstock-hill. None but responsible parties need apply.

PARTIES willing to ESTIMATE for JOINERS' WORK of several HOUSES can have the particulars by applying at the office, on or before the 12th inst. at 24, Regent-terrace, Maldon-road, Haverstock-hill. None but responsible parties need apply.

HALIFAX CORPORATION GAS-WORKS.—The Mayor, Aldermen, and Burgesses of the Borough of Halifax, are prepared to receive TENDERS from competent persons for MANUFACTURING and DELIVERING several hundred tons of CAST-IRON PIPES and APPENDAGES. Copies of the specification, with a form of Tender, and the probable quantities required thereto, may be obtained, on application to Mr G. W. STEVENSON, the Borough Engineer; and the Tenders may be delivered to me at my office in the Town Hall, Halifax on or before THURSDAY, the 20th day of NOVEMBER next ensuing—By order,
EDMUND MINSON WAVELL, Town-clerk.
Halifax, 4th October 1856.

METROPOLITAN BOARD of WORKS.—To BUILDERS, CONTRACTORS, and OTHERS.—The Metropolitan Board of Works hereby give Notice that they will be ready, on THURSDAY, the 13th inst. to receive sealed TENDERS in triplicate, who may be willing to contract for the CONSTRUCTION of BRICK SEWERS, 3,269 feet in length, or thereabouts, with other WORKS in connection therewith, in Pembridge and Kensington-gardens, and other places, Kensington, in the county of Middlesex, and for the maintenance of such works complete, according to the plans (to be seen at the Board's Offices), sections, and specification of the works, together with the form of tender, contract, and other particulars obtained at the Office of the Board, No. 1, Greek-street, Soho-square, between the hours of NINE a.m. and FOUR p.m. until THURSDAY the 13th inst. Tenders, addressed to the Metropolitan Board of Works, must be delivered at the Office of the Board, before FOUR o'clock on that day, and no Tender will be received after that hour. The Board do not bind themselves to accept the lowest or any Tender, and the party whose Tender shall be accepted will be required to provide two approved sureties for the due performance of the works.
E. H. WOOLRYCH, Clerk of the Board.
No. 1, Greek-street, Soho-square, November 4th, 1856.

TO CONTRACTORS.—SOUTH WALES MINERAL RAILWAY.—The Board are prepared to enter into a CONTRACT for the CONSTRUCTION of the entire RAILWAY and WORKS from the Bute Docks, near Cardiff, in South Wales, to the Head of the Vale of Glyncorrwg, a distance of about Thirty Miles. Specifications in place, and sections may be seen at the Offices of I. K. BRUNEL, Esq. 18, Duke-street, Westminster, and after the 20th instant. Tenders addressed, "Tender, South Wales Mineral Railway," to be addressed to the secretary, at the Offices of Messrs. BAXTER, ROSE, and NORTON, 3, Victoria-chambers, Westminster, on or before the 24th day of NOVEMBER next. The Directors do not bind themselves to accept the lowest Tender.—By order,
Oct 17, 1856. ROBERT PARSONS, Secretary.

PATENTEES OF THE SEMAPHORE RAILWAY SIGNAL.
Signals for communication between Guard and Engine Driver. Railway Chairs and Lamps of every description.
DARLINGTON WORKS, 16 to 19, SOUTHWARK-BRIDGE ROAD, LONDON.

FLAVEL'S PRIZE KITCHENER.

The only Kitchen Range which obtained a Prize Medal and special approbation at the Great Exhibition, 1851.

These Ranges are strongly recommended for their simplicity of construction and their economy and cleanliness in use.

The top forms a Hot-plate, and the open fire removes many of the objections which are felt to close Ranges.

They are made in all sizes, from 3 feet to 18 feet in width, suitable for large or small establishments.

They are admirably adapted for the Cure of Smoky Chimneys.

NEW PATENT INVENTIONS FOR STABLE REQUISITES.

AWARDED A PRIZE AT THE PARIS EXHIBITION, AND PATRONISED BY THE ENGLISH AND FRENCH GOVERNMENTS.

COTTAM and HALLEN, of Winsley-street,

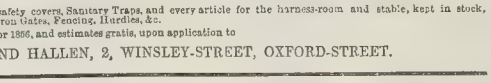
Are the original inventors of the PATENT ENAMELLED MANGER, WATER-TROUGH, and WROUGHT-IRON RACK, united to an iron top-plate, and forming one complete and useful fixture, having Cottam's Patent Noiseless Halter-Guide and Collar-Rein attached, the bait of which is taken to the back of the manger, and works with ease and freedom up or down the guide-bar. Cottam's new Patent Seed-Box, of galvanized sheet-iron, is an important addition to the above fittings, being simple in construction, light and durable, promotes cleanliness, and is economical in its results. Also, the Patent Saddle and Harness Bracket combined, which can be used with great advantage where space is an object, as it can be turned up out of the way when not in use.

Improved Harness Holders, for preserving the shape of the harness, and preventing its cracking. Patent Loose-Box Fittings, cheap and Durable Corn-Bins.

Improved Surface-Drain, with safety covers, Sanitary Traps, and every article for the harness-room and stable, kept in stock, plain, galvanized, and enamelled. Iron Gates, Fencing, Hurdles, &c.

The new Illustrated Catalogue for 1856, and estimates gratis, upon application to

COTTAM AND HALLEN, 2, WINSLEY-STREET, OXFORD-STREET.



TYERMAN'S PATENT HOOP-IRON BOND,

FOR BUILDING PURPOSES.

ADOPTED BY SEVERAL DEPARTMENTS OF THE GOVERNMENT.

TARIFF OF PRICES beyond the current Price of Hoop-iron.

Gauge.	In. wide.	Per 1,000 ft.

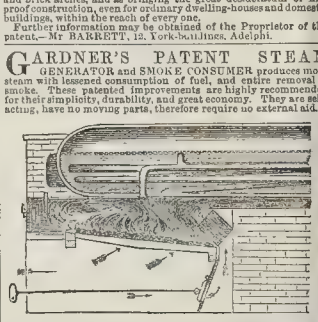
J. H. BOOBBYER (late STURCH and BOOBBYER), established nearly 200 years, for the supply of Goods from the best Manufactories, at the lowest prices.

14, Stanhope-street, Clare-market, London.

FIRE-PROOF CONSTRUCTION.—FOX and BARRETT'S PATENT.

This improved system of fire-proof construction has been most extensively adopted, and its application has been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private.



The system combines ECONOMY, with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.

The floors and roofs are formed by a combination of joists of wrought or rolled iron with concrete; so constructed that each floor becomes in effect a beam of artificial stone, with ribs of iron in the structure possessing great strength and rigidity, and forming a fire-proof foundation adapted to receive a finished surface either of the ordinary flooring-boards, or of cement, asphalte, tiles, slate, or other material.

Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, as superseding the necessity for cast-iron girders and brick arches, and as bringing the great desideratum of fire-proof construction, even for ordinary dwelling-houses and domestic buildings, within the reach of every one.

Further information may be obtained of the Proprietor of the patent,—Mr BARRETT, 12, York-buildings, Adelphi.

GARDNER'S PATENT STEAM GENERATOR and SMOKE CONSUMER produces more steam with lessened consumption of fuel, and entire removal of smoke. These patented improvements are highly recommended for their simplicity, durability, and great economy. They are self acting, have no moving parts, therefore require no external aid.

They are applicable to all Furnaces, Locomotives, Marine Engines, Ovens, Pottery and other Kilns, Common Fire, Kitchen Ranges, Hall and Hot-air Stoves.—Application to be made to the PATENTEE, 24, Norfolk street, Middlesex Hospital; to Messrs. BURRIDGE and HEALY, 118, Dorset-street, Fleet-street; or to Z. D. BERRY, Albion Works, Wilton-road, Pimlico.

Testimonials, &c may be seen upon application.

REVOLVING SHUTTERS.

MESSRS. CLARK AND CO.

OF 15, GATE-STREET, LINCOLN'S-INN-FIELDS,

WILL SHORTLY BE PREPARED TO SUPPLY THEIR NEW PATENT REVOLVING SHUTTERS, MANUFACTURED IN THE BEST POSSIBLE MANNER, AND WARRANTED, AT A VERY GREAT REDUCTION OF PRICE.

Brass Sash-bars, Stall-board Plates, and every description of Metal Work connected with Buildings. Testimonials and Prospectuses forwarded.

TO ARCHITECTS, BUILDERS, CONTRACTORS, AND OTHER CONSUMERS OF GLASS.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th of an inch thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th or 4 lbs. is now universally used for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, MILLS, MARKET HALLS, BATHS AND WASH-HOUSES, FACTORIES, WORKSHOPS, SHIP-BUILDING SHEDS, AND OTHER EXTENSIVE BUILDINGS.

By a carefully prepared Estimate, it has been ascertained that FOUR-FIFTHS of the ROUGH PLATE, or non-transparent Glass, consumed in the United Kingdom in 185 was manufactured by HARTLEY'S PATENT—thus affording the most incontestable evidence of its superiority over every other article of the kind, and as being the only description of Glass suitable for the purposes above named. It combines size and strength with economy of cost, and is manufactured in sizes expressly for RIDGE and FURROW ROOFS, giving a SPAN of TWELVE FEET, at a price not exceeding, weight for weight, that of Common Crown Glass. Its non-transparency renders BLINDS UNNECESSARY, and no scorching occurs in Greenhouses glazed with it; hence the preference given to this Glass for all Horticultural purposes.

For further particulars, apply to

JAMES HARTLEY AND CO. SUNDERLAND; AND PURFLEET WHARF, EARL-STREET, BLACKFRIARS, LONDON.

Sole Manufacturers of Lockhead's Patent Perforated Glass for Ventilation.

*** *Hartley and Co.'s Glass Tariff Newspaper will be forwarded gratis, on application.*

FIXTURES for COUNTING-HOUSE, SHOP, or OFFICE. Mahogany counters, desks, part top, small counter, pollard at one end, 2 flaps size to fit ... any top of theirs, 2 ... desks, and 2 feet of ... drawers, with ... books, &c. ... Brunswick-street, Brunswick square.

REMOVAL.—BUNNETT and CO. Engineers and Patentees of Revolving Iron Shutters, Metal Sash-bars, &c. Deptford, Kent, have REMOVED their London office from No. 2, Lombard-street, to No. 11, QUEEN-STREET, CHEAPSIDE (near Cannon-street), where all communications connected with the Town Department are requested to be addressed.

JAMES MILLS (late Shop Foreman to Messrs. Lawrence and Sons), JOINER to the TRADE, 7, Princes-street, Stamford-street, Lambeth, shop-fronts, fittings, staircases, &c. Well-seasoned materials and superior workmanship, at the lowest possible prices. A quantity of doors and sashes always in stock.—By enclosing a sealing-stamp, a full list of prices will be returned. Workshops, 110, Brandon-st

A MODERN SHOP-FRONT in mahogany and plate-glass (elliptic heads) return end (left hand), with shutters, stall-board, &c. complete, for 13 feet 9 in. opening.—Apply, W. COX, Carpenter, &c. 15, Houghton-street, Clare-market.

IMPROVED REVOLVING SHUTTERS. FRANCIS KICKABY and DUNN are now enabled to offer the above at the following reduced prices:—IRON SHUTTERS, double riveted, with ... cut worm gear, complete, at 4s 6d per foot. WOOD SHUTTERS, with worm gear complete, at 3s 6d. per foot. Machine-drawn Brass Sash Bars and Stall board Plates made to any design.—84, Gray's-inn-lane, Holborn.

WOOD LETTERS FOR SHOP FRONTS, &c

J. ROBKE,

3, Bishop's-walk, Lambeth, two minutes' walk from Lambeth-pier.—Established many years.

TO ENGINEERS, RAILWAY COMPANIES, MILLOWNERS, &c.—VULCANIZED INDIA RUBBER for all kinds of Steam and Hot-water Joints, is now becoming indispensable in Engineers' Establishments.—J. L. HANCOCK begs to offer the following Articles, which, from many improved from the Original Patent Process for such manufactures.

FOR ENGINEERS.—Vulcanized Rubber Washers; Valves for Air-pumps, &c.; Engine Packing, in Sheet, Rings, or Ropes; Pump Buckets, any size, solid; Hose Pipes, made to sustain any amount of pressure required for fire engines.

FOR RAILWAY PURPOSES.—Buffer and Bearing Springs, Tires for Trucks, Carriage and Van Covers, Hose Pipes of improved make, for Engine and Tender, Conducting Hose of any required strength; Valves and Clacks made any size to order, Gauge-glass Rings and Compound Packing for Steam or Hydraulic.

FOR MILLS AND FACTORY USE.—Vulcanized Rubber Driving Bands, any length, width, or thickness, Rubber Washers of all sizes, Door and Machine Springs, Gas Bags, Portable Gas Bags, and Leather Hose.

Air-Beds, Cushions, Bolsters, and Mattresses, of all sizes; Driving Bands and Stockings. Any article of the above made to pattern or size.

All orders punctually attended to, addressed JAMES LYNE HANCOCK, Vulcanized Rubber Works, Swell road, London.

DURABILITY of GUTTA PERCHA TUBING.—Many inquiries having been made as to the Durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in giving publicity to the following letter from SIR RAYMOND JARVIS, Bart., VENTNOR, ISLE of WIGHT.—Second Testimonial.—"March 10th, 1852. In reply to your letter, received this morning, respecting the Gutta Percha Tubing for pump service, I can state with much satisfaction, it answers perfectly. Many Builders, and other persons, have lately examined it, and there is not the least apparent difference since the first laying down, now several years, and I am informed that it is to be adopted generally in the houses that are being erected here."

N.B. From this Testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.

THE GUTTA PERCHA COMPANY, PATENTEES, 18, WHARF-ROAD, CITY-ROAD, LONDON.

FOR HIRE, a SPACIOUS TENT, adapted for the Laying of Foundation Stones for Public Buildings &c.

Also, for Sale, a Quantity of Cocoa Matting for Churches, at greatly reduced prices.

Apply to H. PIGGOTT, 113, Fore-street, City.

PAPIER MACHE, COMPOSITION, CARTON PIERRE, AND CEMENT WORKS.

WHITE AND PARLBY

Beg to respectfully to inform Architects, Builders, and Decorators, that they are prepared to execute in the above materials, all internal or external decorations, at exceedingly moderate prices. They solicit attention to their varied ENRICHMENTS of every description for the interior and exterior of houses, Private Buildings; also to their Stock of Glass Mouldings, Bosses, Ornamental Cornices, Trusses, Brackets, and every requisite for the various and complex purposes of Gilding, of which they have an extensive assortment executed in the highest style. They also manufacture their Patent Composition for DECORATIVE SHEATHING, and have steam and Shop Fitting

GILDING FLOWERS in great variety, ready for immediate use, always on hand, at prices lower than any hitherto offered.

ARCHITECTS' DESIGNS CAREFULLY EXECUTED, AND ORNAMENTS EXPRESSLY MODELLED (IF REQUIRED).

SPECIAL DESIGNS MADE FREE OF EXTRA CHARGE.

WHITE AND PARLBY, 4, RATHBONE-PLACE, LONDON.

PAPIER MACHE AND CARTON PIERRE WORKS,

49, RATHBONE-PLACE.

GEORGE JACKSON AND SONS

Beg the attention of Architects, Builders, Decorators, and the trade in general, to their large assortment of Panels, Trusses for Ceilings and Cornices, in the Gothic, Elizabethan, Italian, Renaissance, Louis XIV. XV. XVI. and many other styles, also to their Ample Facilities for executing, Chandelier Pipes, Mouldings of all Sizes, and to their varied Selection of Centre Flowers for Ceilings, Gothic Bosses, Trusses, Column and Pedestal Caps, all executed in the highest style of Art.

The large and well-arranged Premises of GEORGE JACKSON AND SONS, in consequence of Drawing and Pressing now being carried on entirely by Steam Power, have had the Entrance to the Premises much widened, thereby enabling them with greater facility to execute the most extensive orders at the shortest notice, and to direct notice to that branch of their business.

The Illustrations exhibited represent the large variety of Glass Frames, Tables, Cornices Screens, Candelabra, &c. To further extend their works, and by recent additions of Steam power and machinery, they have been enabled to offer very superior advantages in materials and speed, while for design, quality, relief, and finish, they flatter themselves they stand unrivalled

DESIGNS MADE FOR ANY WORKS.

PAPIER MACHE AND CARTON PIERRE WORKS, 49, RATHBONE-PLACE, LONDON.

Just published, a large Quarto Work of their ENRICHMENTS, with dimensions for reference.

THE GRAMMAR OF ORNAMENT,

By OWEN JONES.

BEING A SERIES OF THREE THOUSAND EXAMPLES, FROM VARIOUS STYLES, EXHIBITING THE FUNDAMENTAL PRINCIPLES WHICH APPEAR TO REIGN IN THE COMPOSITION OF ORNAMENT OF EVERY PERIOD.

ONE HUNDRED IMPERIAL FOLIO PLATES.

Drawn on Stone by F. BEDFORD. Printed in Colours by DAY and SON.

Now publishing, in Twenty-five Numbers of Four Plates each, price 14s. each. Part XIX. will appear Oct. 15; Parts XX. and XXI. Nov. 1; Part XXII. Nov. 15; Part XXIII. Dec. 1; and Parts XXIV. and XXV. Dec. 15.—The Work when complete will consist of

Chapter			Plates.
"	I.	The Ornament of Uncivilized Savage Tribes	4
"	II.	" Egypt	8
"	III.	" Assyria and Persia	3
"	IV.	" Greece	8
"	V.	" Persia	4

"	XVIII.	" the Elizabethan period		3
"	XIX.	" the Italians		6
"	XX.	A series of Leaves drawn from Nature as Models of Ornament		10
				100

The Author will endeavour in the several chapters to define the apparent origin, and trace the development of the several styles of Ornament. He will proceed to ascertain the laws which govern the production, both of such works as are to be admired, and which will further attempt in the 20th chapter to show how, bearing in mind those general laws which he finds applied by the workers of nature and man, we may hope to find inspiration, as they yet go forward, and, whilst availing ourselves of the experience of all time, may be enabled to produce works in harmony with our own more advanced position in the history of the world.

The collection of this vast amount of material has been the labour of many years. On the eve of giving it forth to the world the Author fully feels the difficulty of the task he has undertaken; he trusts it may not be considered that, in the execution of this work, he has engaged in any way with the decorative arts, will have before them an amount of material which does not elsewhere exist in any such convenient form, and in the use of which it will be his end as far as in him lies to assist them.

N.B. The Letterpress, with many Wood Engravings, will appear complete with the last Part of the Work on Dec. 15.

Published by DAY and SON, LITHOGRAPHERS to the QUEEN, 6, GATE-STREET, LINCOLN'S-INN-FIELDS.

BUILDINGS and MONUMENTS, Modern and Mediæval; being Illustrations of the Edifices of the Nineteenth Century, and of some of the Architectural Works of the Middle Ages.
By GEORGE GODWIN, F.R.S.
Fellow of the Royal Institute of Architects, &c. Editor of "The Builder," and Corresponding Member of several Societies.
With numerous Engravings.
Published at the Office of "The Builder," 1, York street, Covent-garden.

Third Edition.

THE BUILDER'S FRIEND,
Price One Shilling.
Office of "The Builder," and of all Booksellers.

BY HER MAJESTY'S ROYAL LETTERS PATENT, the ARCHIMEDIAN VENTILATOR; the most effectual remedy for smoky chimneys ever offered to the public. The vast superiority of this apparatus over every other contrivance for the same purpose, consists in possessing, besides all the advantages against the latter, the valuable power of creating a draught up the chimney by mechanical means.—To be had from Messrs. HALL, Edmonton, and Hedderwick Candle Town, and of all respectable Ironmongers and Zinc Workers throughout the kingdom.

WINDOW BLINDS.—To BUILDERS.—A great advantage in the letting or selling of houses will be to have them fitted with TALL'S PATENT TELESCOPIC BELTED HOLLANDS, which can be changed to any window of any width, while the price does not exceed that of the common wooden roller.—J. TALL, Patentee and Manufacturer, 1, Webber-street, Blackfriars-road.

WINDOW BLINDS.—TYLOR & PACE, Window Blind Manufacturers, 104, New Bond-street, and 3, Queen-street, Cheapside, London, submit the following PRICES of WINDOW BLINDS, which they can recommend as being made in the best manner. Venetian blinds, per square foot, 9d.; best holland blinds, on rollers, 6d.; best ditto, on spring rollers, 9d.; gauze wire blinds, in mahogany frames, 3s.; perforated zinc blinds, in ditto, 1s. 10d.; outside blinds of striped cloth, 2s. Transparent blinds in great variety. Engravings, with prices and discounts to builders and the trade, forwarded on application, post free.

PAPER HANGINGS! PAPER HANGINGS!! PAPER HANGINGS!!!—Builders, the Trade, Country Dealers, and others, will find an immense STOCK and unique variety of all classes of PAPER HANGINGS, at W. CROSBY'S MANUFACTORY, 32, Lowther Arcade, Charing-cross, London. Splendid new designs, both in machine and block printing, not to be surpassed by any house in England. Patterns sent for approval in town or country. Cheapest house for panel decorations. Terms Cash.

PAPER-HANGINGS.—The CHEAPEST HOUSE in London for every description of PAPER-HANGINGS is ROBSON'S WHOLESALE WAREHOUSE, 32, GREAT PORTLAND-STREET, Oxford-street, where you can select from the LARGEST and MOST EXTENSIVE Assortment in the Kingdom. THIRTY PER CENT. CHEAPER than any other house in the trade. Builders, Decorators, Upholsterers, and large consumers will do well to visit this establishment.

MORTGAGE.—5,000*l.* to be advanced upon good FREEHOLD SECURITY—land or buildings—Apply to Mr. R. J. WOODCOCK, Architect, Adelaide-chambers, Gracechurch-street, City.

ROYAL POLYTECHNIC.—Next Monday Evening, the first night at Eight, Mr Pepper will lecture on the Chemistry of the Breakfast Table, also on "The Bessemer Process of Making Iron and Steel," every Morning at Three, and Tuesday, Wednesday, and Friday Evenings at Eight. Mrs. Mary E. Webb, a coloured native of Philadelphia, U.S. will deliver a Dramatic Reading of "Hiawatha," next Thursday Evening, the 13th, at Eight. N.B. Mrs. Webb is the lady who read before her Grace the Duchess of Sutherland, at Stafford House. Mr. Robertson, assisted by Leicester Buckingham, Esq. will read "Life in the West," illustrated by Dissolving Views, painted by J. Harvey, Esq. every Morning and Evening, at a Quarter past Four, and a Quarter past One. Most beautiful Large Wax Figures, illustrating the Pathology of Mexico, now increased by a curious model of the Siamese Twins—admission to the whole, 1s.—The new lecture "on the Chemistry of Fireworks," will be repeated next Wednesday, the 12th, at Three and Eight.

The Builder.

VOL. XIV.—No. 718.

ON Monday last, the 3rd inst. there was a considerable muster at the Royal Institute of British Architects to inaugurate the new session, one result of which has been the receipt by us of two or three letters complaining as usual of the want of room, and the mode in which the seats are placed, as imposing pains and penalties on long legs. The Council are still seeking for better premises; but have not yet hit upon the right.

Professor Cockerell, R.A. took the chair, and a list of donations was announced, including a portion in continuation of Dr. Lepsius's great work on Egypt, being the ninth delivery, from the King of Prussia; vols. 5 and 6 of "Gli Edifizj Antichi Dei contorni di Roma," from the late Commendatore Luigi Canina; Mackenzie's "Architectural Antiquities of the Collegiate Chapel of St. Stephen, Westminster," from the Commissioners of H.M. Woods and Works; and a portion of the "Grammar of Ornament," from the author, Mr. Owen Jones.

We should mention, too, a medal in bronze, struck in memory of the late Abel Blouet, architect; presented by Madame Blouet, who, it seems, has endowed the French Architectural School with 1,000*l.* for the provision of a periodical prize. The "Grammar of Ornament," let us take the opportunity of saying, promises to be an admirable and important work.

The evening was to have been appropriated to a description of the works now in progress at Alnwick Castle, for the Duke of Northumberland, in the design of which Signor Canina had assisted, but in consequence of his untimely death, Professor Donaldson had drawn up a memoir of the lamented archæologist, the reading of which and the statements that followed occupied so much of the time at the disposal of the meeting, that it was not thought desirable to do more than introduce the subject, by a description of the ancient castle: the account of the new works and proposed decorations will be brought before the next meeting. When the memoir had been read, the chairman bore eloquent testimony to the value of Canina's continuous and most fruitful labours: and Mr. Ashpitel, who had examined Rome under his guidance, spoke at some length to the same effect. We shall best please our readers by printing Professor Donaldson's graphic memoir *in extenso*.

Let us simply add, as respects the Institute, that arrangements have been made for several papers on important topics, and that there is every reason to expect a stirring and valuable session.

A BRIEF MEMOIR OF THE LATE COMMENDATORE CANINA, ARCHITECT.

WHEN I undertook to bring before you the important subject of the description of the works, now carrying on from the designs of Mr. Salvin and the Signor Canina, at Alnwick Castle, the seat of his Grace the Duke of Northumberland, I little thought that our feelings were to have been saddened by the recent intelligence that we have received, of the decease of the Commendatore, our honorary and corresponding member, who has taken so great a part in these interesting alterations, and under the influence of whose living spirit I had thought that my words would have been uttered.

But he is no more! having died of congestion of the brain, at Florence, on the 17th of last month, as he was returning to Rome after a lengthened stay in England. A considerable portion of his sojourn here he had, by the special invitation of the duke, passed within the hospitable walls of Alnwick, which he had visited in order to put into operation certain works for the internal decorations that he had designed for his Grace, and the last three weeks he had lived under my own roof as my old friend and guest. Just before he left my house, he put into my hand a letter, of which the following is a translation:—

"Bolton-gardens, Russell-square,
"22nd September, 1856.

"To T. L. Donaldson, Esq.

"Honorary Secretary of Foreign Corrrespondence to the Royal Institute of British Architects.

"Most valued sir, and beloved friend,—

"From your own house I have to make the request, that at the first meeting, which will be held by the R. I. B. A. you will present vols. v. and vi. of my work upon the 'Antique Edifices of Rome, and its Campagna,' of which publication, relating to the edifices of the city, the first four volumes have already been transmitted, and which, together, complete the entire work. This, not only by its fulness, but also by the importance of the monuments illustrated therein in all their architecture, may, perhaps, deserve distinct consideration, and that especially from being entirely executed by a not lazy artist, who only seeks to promote the study and progress of the best and most improved kind of architecture. Particularly anxious to act with the greatest possible concurrence in the views proposed by his Grace the Duke of Northumberland, and animated by the same desire, I beg to submit to the judgment of your distinguished Institute, some of the principal perspective drawings of the internal decorations which his Grace is about to have executed in his castle at Alnwick. He has in pursuance of this intention, arranged that they should be sent to be exhibited at one of the first meetings, accompanied by a description drawn up by myself. These drawings have been made in a masterly manner by the architect, Montiroli, whom I recommend to your artistic institution. You were so good as to come to Alnwick in August last, and to examine carefully the proposed internal decorations. You will therefore be able, where necessary, to give more minute particulars of the work; as will also my most honoured friend, Professor Cockerell, who accompanied you on that occasion.

My object in the exhibition of these drawings is not limited to the wish of merely making known what has been decided to be carried out at Alnwick Castle, but to promote a more extensive application in England of that kind of noble decoration which was the result of the studies made by our masters at the revival of the fine arts, in Italy especially, upon the most ancient monuments of Rome, and from which circumstance this style became at once noble, and adapted to modern uses. To this general scope and purpose are particularly directed the intentions of his Grace, and worthy of consideration is the following paragraph in the last letter, which I received from Alnwick, dated yesterday:—"I pray you to present my best compliments to Professors Cockerell and Donaldson, and to assure them how sensible I am of their kindness in taking such a deep interest in this subject, which I hold to be of national importance, that is to promote a more extensive system of artistic instruction in England in that style of decoration." And the nation, as regards architecture, being well represented by the distinguished professional men composing the R. I. B. A., that body will be able authoritatively to promote the noble intentions of the duke, as will also other influential personages, already known by their patronage of the fine arts. I seize with pleasure the opportunity thus offered to me of renewing the expression of my sentiments, and of the deep esteem and consideration which I entertain for the members of the Institute, to whom I beg you will present them, and believe me, my dear sir, your most devoted friend and servant,

L. CANINA"

This letter shows the generous motives by which he was animated; by a sincere respect for the Institute, to which he was anxious to present a complete series of his works; by the desire to communicate to them, as representing the arts in this country, a statement of the principles which guided him in carrying out the views of the princely owner of Alnwick; and by that deep love of architecture, which was one of the moving principles of his existence, and which he wished to diffuse wherever he went, and widely as his influence existed.

I am at this moment not in possession of any authentic details connected with his early life and studies. I can only relate what I learned from himself casually from time to time, while we were together, and my own impressions derived from his works. He told me that at the time I was in Rome pursuing my studies, between 1818 and 1822, he was engaged with Vasi, the eminent publisher, who wrote various guides of Roman antiquities, and of Rome itself. The name of Vasi is justly celebrated, as well from his Itinerary, as from being attached to very large and fine views of St. Peter's at Rome, which convey better than any other representatives of that stupendous monument, an adequate idea of its vastness and majesty. The drawing and execution of these plates are perfect.

The first important work of Canina, as an author, appears to be his History of Ancient Architecture, divided into the three series of Egyptian, Greek, and Roman, the second edition of which consists of three folio volumes, of 705 plates, and nine volumes of text, in 8vo. In this collection he presents the reader with illustrations of all the then known remarkable monuments of antiquity, derived from every authentic source, with remarkable patience and judgment, and the text forms a most valuable *résumé* of all that has been written by various ancient authors upon this special subject. It thus affords a very complete source of reference to those whose studies are turned upon the history of ancient monuments.

About the year 1842, he visited Turin, where he remained three months, and being invited to give his ideas upon a proposed new church, to be erected on the site of that of St. John, in that city, he availed himself of the opportunity to develope at considerable length his opinions of the proper form of a Christian church, which he conceived to be that of the Early Christian Basilica, like that of St. Paul's without the walls, at Rome; not that he intended to adopt the type throughout every minute detail, but to assume that form as the basis. Moved by this great predilection of his, the Signor Canina, under the auspices of his Majesty Carlo Alberto, King of Sardinia, published in 1843, a folio volume, which reviews the history, distinctive form, properties, and decorations of the ancient Roman Basilicas. He discusses the various theories to which the obscure description of Vitruvius has given rise. He then reviews in detail the several examples of the Early Basilicas, analyzes the several parts with their various uses, and not confining his illustrations to Rome, but extending his inquiries to the individual erections of Constantinople, Ravenna, Aix la Chapelle (ancient *Aquisgrana*), Pavia Milano, Palermo, Venetia; and at the end he illustrates, in several plates, his own application of the principles which he had discussed, to the proposed Church of St. John, for which he had prepared a design in the Christian Basilica style, with a large peristyled court in front.

I must confess that, valuable as I consider his learned researches on the subject to be, I cannot concur with him in his conclusions, for I do not consider the Christian Basilica a form adapted to a church; it is meagre in its effect, producing an impression not at all equivalent to its size and cost. In the course of his text, he alludes to a very curious authority for the disposition of a church at that time, and the names of the several parts: it is St. Paulinus, who in his poems and in his letters to Severus, refers most frequently to these matters, and particularly describes the Basilica of St. Felice, at Nola, of which city he was bishop, and the church of which he rebuilt in A.D. 402. (*Paulinus, Poemata, Natalis decimus.*)

Canina next devoted his studies to the immediate edifices of ancient Rome and the Campagna, and published four volumes of plates illustrating the former, and two devoted to the Campagna, which were followed by a folio volume of nineteen plates, as a topographical *exposition* of ancient Rome. He then entered upon the investigation of the important monuments of the Roman Forum—a subject which had been distracted by the contentions of the rival systems of French, German, and Italian antiquaries, and which had caused a strife, that set all the archæologists by the ears.

The drawings of this admirable production show more of purity of style, profounder knowledge of the disposition of ancient monuments and larger ideas than any previous one of our author. He differed materially from the German school in his conclusions, making the length of the Roman Forum extend from the capitol towards the Coliseum. The text accompanying these plates is a most valuable collection of the authorities who have treated on the subject.

His next work was a topographical plan of the Campagna of Rome, full of profound research.

From these he next turned his attention to Jerusalem, in a folio volume entitled "Researches upon the Architecture of the Ancient Jews and of the Temple of Jerusalem," and then resumed his Roman studies by a folio work of fifty-three plates upon ancient Tusculum, detailing the villas, the Forum, the theatre, and other antiquities which still remain upon that classic site; and always by his descriptions throwing new light upon the manners and customs of the ancients in reference to their edifices. This work was undertaken under the auspices of the Queen Dowager of Sardinia, to whose family Tusculum belongs.

But his researches were now to take a more remote epoch, and to seek for illustrations in a field which has since, within the last twenty years, been so fruitful of evidence of the history of the earlier inhabitants of Italy; and which have brought to light antiquities, such as cities, city-walls, tombs, vases, and other curious objects, dating prior to the foundation of Rome itself.

The city of Veii has its folio volume of forty-five plates, meant only for private distribution, and prepared at the expense of the Dowager Queen of Sardinia, already alluded to. Ancient maritime Etruria is described and demonstrated, with its monuments, in four folio volumes and 136 plates.

These works introduce us into arts, buildings, and other monuments revealing influences of Greek origin, and developing a school anterior to the earliest of any of the Roman buildings.

Our indefatigable author next published a folio volume of forty plates upon domestic architecture, applying the most graceful forms of all ancient people to modern uses. Thus carrying out his great endeavour to throw as much of the ancient taste as he possibly could into the various productions of modern times, he sought to influence the mechanical arts, so as to lead to a revival of the antique forms, dispositions, and proportions.

His last, and it may truly be called, his "Opus magnum," consists of two folio volumes, containing the results of his excavations on the old Via Appia for a distance of six miles from the walls of Rome to Boville, with the announced intention of soon continuing his publication from Boville to Ariccia, and which, doubtless, he would have fulfilled, had he been spared to complete his grand scheme. Many of you will recal the vivid manner in which our vice-president, Mr. Tite, on his return from Rome in 1855, described at one of our meetings the impressions produced on his mind, when, in company with Canina, he visited the successful results of his labours on the Via Appia. The tombs, the paved road, the mile-stones, the villas, the circi, the amphitheatres, the Fora, and other important edifices, which the encumbered ruins, pile upon pile, were made to yield to the labour and intelligence of our friend, of a scale little inferior to those, so well known to all of us, in Rome; not less rich in decoration, nor less novel in design — a mass of fresh inscriptions to illustrate still further ancient customs and ancient history. Such are the subjects of these two volumes among the most important of modern times. The same plate shows, in one part, the shapeless masses of brick or tuffo work, which were above the surface, or the mounds formed of overthrown fragments. In the other part of the sheet are revived the several monuments restored by the intelligence of the author and his assistants, with their marbles, their columns, their sculptures, and their domes; and one seizes, as by inspiration, a conception of glories and splendour, of which the dreary Campagna had hitherto seemed to present no idea.

I have alluded thus cursorily to twenty-four folios of plates, and to ten or twelve of closely-written 8vo. volumes of text; but these are not the only fruits of his laborious researches and fertile imagination. He published an enlarged supplementary edition of "Desgodetz," and wrote numerous very important papers, which are inserted in the "Annali dell' Instituto Archeologico" of Rome. While in England, I placed before him my series of illustrations of antique medals, and he then mentioned the intention to compile a work on the architectural medals which represent the monuments of classic Rome, a subject which he had hitherto not treated with the weight that it deserved, his representation of medals attached to his plates, being very loosely, and in some instances very inaccurately rendered by his draughtsmen. He had it also in contemplation to collect the materials for a treatise on the ornamental parts of the domestic architecture of the ancients. Some of the fragments that he had disinterred on the Via Appia, an accurate study of the paintings of Pompeii, with their fantastic representations of villas, alcoves, and slightly-proportioned columns, and other similar airy features, and the frescoes of the Thermæ, at Rome, with various remains in the Roman museums on the bas-reliefs, and the contemplation of the component parts of the candelabra that Piranesi had put together, compiled from antique fragments, produced the conviction on his own mind that the Romans allowed a license of form and proportion in their domestic art quite distinct from the severer rules of monumental architecture; nay, opposed to it. He conceived that from these *indicia* he could construct a perfect system of domestic decoration, at once light, plastic, graceful, and reasonable; and it was a great source of delight to him to find such a system constructively and actually carried out in the Crystal Palace at Sydenham. Much as he disapproved, and with justice, of the total absence of artistic taste evidenced in its design, yet he visited it twice, with the express object of more definitely realizing in his mind the ideas which had hitherto been floating in it on that subject, without being able to conceive a precise natural mode of structural application, which the Crystal Palace seemed to offer. The development of this notion would have been a curious exercise for his ingenious mind, and we might have been taught by it to set greater store by the endless facilities which iron, in its application to edifices, affords, relieving us from the shackles of severe art, to revel, not unreasonably, yet freely and untrammelled, in all the flights and fancies that the most poetic imagination could conceive, and justified by the precedent which antiquity itself offered.

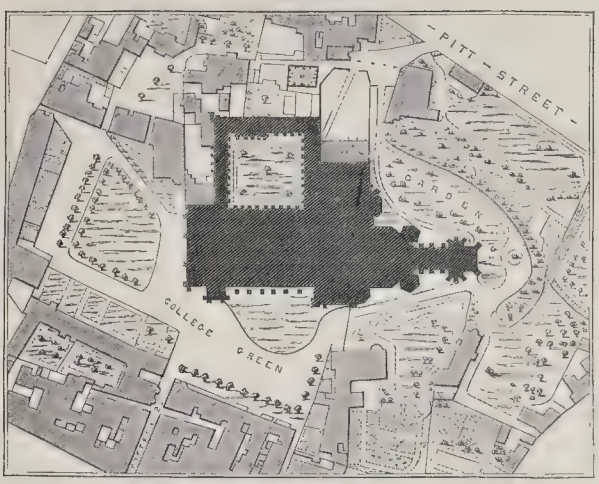
The Commendatore Canina had travelled much throughout Europe, and had studied on the sites themselves the monuments of Sicily and Greece proper. His recent visit to England was the second that he had made to this country. His researches and labours were appreciated by many princes and sovereigns, and he was decorated with a profusion of orders of various countries. But the distinction which he valued most was the position he held as director of the Museum of the Capitol, and the title of Commendatore, which ranked him among the forty nobles of Rome. This gave him just pride, as did also the Royal Gold Medal conferred upon him by this Institute in 1849, with the approval of her Majesty and Prince Albert.

Like Piranesi, and other Roman authors, he had the whole of the branches of publication carried out in his own house, in the Via Gregoriana. The type of his text was composed and carried through the press under his own roof: one room or more was occupied by draughtsmen and engravers; another contained the presses by which the engravings were printed; and, with the exception of one or two works, all were prepared and published at his own expense.

He was of early habits, rising while in England at five or six o'clock in the morning, and immediately setting himself to work pen in hand. He was punctilious in his correspondence, and obliging in his disposition. He undertook the engagement for Alnwick from no sordid object or intention of gain, but merely, as he took a formal occasion to assure Mr. Cockerell and myself, with the express and declared intention, full of generous disinterestedness, to carry out the wishes of the Duke of Northumberland for the promotion of art, and to do justice to his patron and friend, the Cardinal Antonelli, by whom he was introduced to his Grace. He was very susceptible of criticism and opposition of opinion, and deeply resented the strictures of the German *litterati*, who disputed his scholarship, and the critiques of the French, who called in question his taste. He was not free from the superstitious sentiments common to many of his countrymen, and, from an intuitive dread of consequences, would never allow his portrait to be painted, nor his bust to be modelled. By a friendly stratagem, I induced him to visit Messrs. Maull and Polyblank's photographic establishment, and, after much persuasion, prevailed upon him to permit his likeness to be taken, as one of the notabilities of the day. But it did violence to his feelings, and, to avert the "*malocchio*," he arranged (as he thought unobservedly) the fingers of his right hand, as a charm against the evil consequence that he feared,—a presentiment which the sad event of his death so soon after almost seemed to realise. The photograph faithfully represents the serious character and deep thoughtfulness of the scholar, but his expressive features, however, in moments of familiar and social relaxation, were often lighted up by a most pleasing smile.

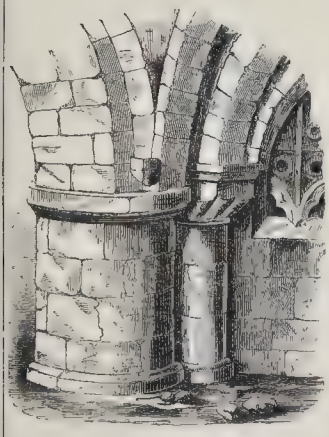
His decease will produce a great void in Rome, where his acquirements and judgment were fully valued. His opinion was a high authority on all matters of classic archæology, and many an artist recognises in him a judicious adviser and patron. He was naturally reserved and slow to form friendships, being distrustful of the depth of quick attachments; but, when once a friend, he continued so firmly and warmly, and thought no personal exertion or sacrifice too great to serve those he valued.

He was truly a giant in the archæological and architectural literature of classic antiquity; and, however various may be the opinions of men upon his erudition and taste, all must agree that he had great acuteness of perception on antiquarian subjects, and a very enlarged acquaintance with ancient art, for which he had the most supreme veneration, as also for the works of the masters of the fifteenth and sixteenth centuries. Although occasionally influenced by certain deep prejudices, particularly in regard to mediæval art, yet he has rendered essential service in the elucidation of the history of architecture. He has abridged the task of future labourers in that field of research, and has left a body of information and instruction in his numerous tomes far beyond that produced by any other previous scholar. It would be difficult to find any more earnestly and disinterestedly devoted than he to the highest and noblest principles of our art.



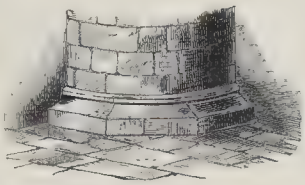
And it is a striking and touching coincidence, that Canina and Braun, the leaders of the rival systems of the two schools of archæological research at Rome, the Italian and the German, should have died within a few weeks of each other; and thus left the field open to other, but it would be bold to say to abler or more zealous minds.

THOS. L. DONALDSON.

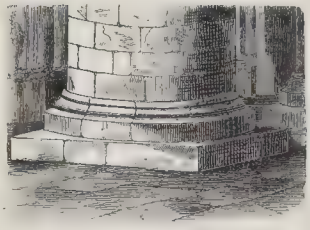


FOREIGN INTELLIGENCE.

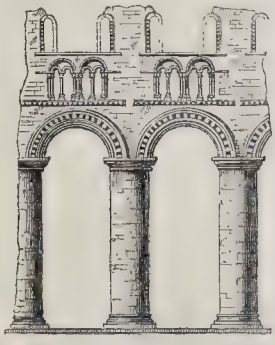
Italy: Palladio, &c.—M. Magrini has published several interesting memoirs on the principal architectural monuments of Vicenza, but his work on Palladio has become little known out of Italy. It is entitled "Memorie;" Memoirs on the Life and the Works of Andrew Palladio, together with the series of twenty-seven of the Writings of the same Architect. By Abbate Antonio Magrini. Padua, 1855. 8vo. —In Verona Conte Orti Manara is constantly active, and amongst his writings on the buildings and antiquities of that city, is a late Memoir on the Antiquities of Sermione. The Central Commission for the preservation of architectural monuments has connected itself with the Museums of Vicenza, Padua, Verona, &c. whereby especially the dilapidation and exportation of art-works of the Italian *Nationality* is to be prevented.



GLOUCESTER CATHEDRAL.



Plan, showing Approaches and Improvements at the East End.



Circular Casing and Relieving Arches (the Abacus of Pier is seen above the cylindrical column).

Modern Base, now removed.

Base, as Restored.

Remains of first Church, with the later Additions removed.

As it now is.

THE IMPROVEMENTS AT GLOUCESTER CATHEDRAL.

During the last two or three years considerable alterations have been made in the immediate vicinity of Gloucester Cathedral, and the restorations, both of the interior and exterior of the fabric itself, have been gradually progressing.

The east and north sides of the edifice are now entirely opened to view by the removal of the College-school playground, and by the sacrifice of a considerable portion of the Canons' garden. The plan we give shows the present arrangement of the adjacent ground, laid out in walks and drives, in lieu of damp and dirty yards, kitchen gardens, dilapidated old houses, walls, and trees, which, by preventing any proper current of air, always kept the lower portion of the building in a damp state. This garden, from which the Cathedral can be most satisfactorily seen, is, by the kindness of the Chapter, open to the public from early in the morning until sunset.

An immense quantity of soil has been removed from the building itself, in some parts 3 feet in depth, and the whole space has been thoroughly well drained. So long ago as 1846, the conductor of this Journal, at the Gloucester Congress of the British Archæological Association, drew attention to the damage that was accruing from the accumulated earth, and urged its removal, so that we regard with interest the fulfilment of the recommendation.*

The crypt, some time since filled with rubbish and dirt of all kinds, damp, and excessively dark, from the windows having been blocked up to prevent the soil and water coming in from the outside, with one chapel entirely closed up with bones, and the general appearance, and atmosphere, such as to forbid, rather than invite an entrance, has now been thoroughly cleaned out: the bones have been buried: a great accumulation of soil has been removed, and the original levels of the floors exposed, excepting in the centre part, which, on account of the rising of water, cannot, it is said, be lowered. The windows have been opened, and glazed, in two instances, with old painted glass, which, from time to time, has been found in the Cathedral,—in closets, and elsewhere.

The old tiles, also, which have been found in the excavations that have been made, are laid down in one of the chapels.

The whole of this work has been carried out with care, and with a desire to lose nothing of the old character, without any attempt to put the various parts in their primitive state of repair, but with a view only to their preservation.

The various effects of light and shade, as now seen in the crypt, are peculiarly fine; and the arrangement and construction of the piers and arches can be readily understood; from which it is evident that great alterations have, from time to time, been made. The large semi-circular columns against the walls, though of great antiquity, are not parts of the original structure, but are casings in which are inclosed the former and smaller piers; and the ribs springing from their capitals are built *under*, and with a view to support the groins.

* At the evening meeting of the second day, Mr. Monckton Milnes, M.P. in the chair, Mr. Godwin, after reading a paper by Mr. Repton on some architectural peculiarities in the Cathedral, said,—"that he had the greatest respect for those placed in authority, and he almost felt that a society had hardly any business to come into a town to find fault; but he was afraid that by strangers too cautiously acting upon that principle, and from persons on the spot being restrained by feelings of delicacy from alluding to matters which must come under their observation, parties who had the government and care of important public buildings went on, from year to year, till at last they found out that the buildings were falling into ruins; and, surprised at the fact, they might then say that this would never have happened if persons had warned them of it, so that proper steps might have been taken to prevent it in time. It was with the greatest respect, then, that he begged to solicit the attention of the authorities to the state of Gloucester Cathedral, being quite satisfied that unless some proper supervision was exercised, and some professional architect occasionally consulted, hereafter considerable expense would be entailed which might now be saved. He hardly liked to go into particulars, but he would point out that a great injury was being done to the fabric by the enormous accumulation of earth that had taken place all around the old building, but which might be more especially observed on the south side of the cathedral entering from Westgate-street. There, from 8 to 10 or even 12 feet of earth had accumulated against the walls of the building, and was quietly but most assuredly perpetrating the ruin of the structure. He trusted this warning would be received in the spirit in which it was thrown out: this noble cathedral did not belong to Gloucester merely, nor to England merely, but to all the world, and all the world was interested in its preservation."—"*Transactions of the British Archæological Association, at its Third Annual Congress, held at Gloucester, August* 1846."

The chapels in the crypt were all used as places for divine worship, as in each there are the remains of altars and piscinas.

The centre portion of the crypt, which can now be seen without artificial light, is worthy of attention. It is divided by two rows of small columns from which spring groined arches, carrying the floor of the choir above. The bases and capitals of these columns are much out of level, falling considerably from west to east, and from north to south; and the bases themselves are about 2 feet below those of the piers in the aisles.

The changes effected in this part of the edifice have served to make it one of the most interesting and picturesque features of the Cathedral. We shall give a view of it in another number.

The last work undertaken, and just brought to a completion, is the restoration of the nave, which has consisted chiefly in the removal of the coats of white and yellow washes from off the stonework, and in the renewal of such stones as, from the effects of fire, were too dilapidated to remain.

In proceeding with this work, several matters worthy of remark presented themselves. The vaulting shafts were found to be of marble. They are now polished, and form a very striking feature.

The bases of the large piers were discovered to be modern, and were evidently placed against the piers at the same time that the nave was paved (in the reign of George III.), as they rested on the paving itself. The original level of the nave floor was 10 inches lower than at present, and the base, as now seen, stood on a square pedestal. On this lower level there is yet existing the remains of an encaustic tile floor. The bases were renewed at that time, doubtless on account of their dilapidated condition, caused by fire, the same which produced so much decay in the lower part of the piers themselves, and from which the red tint arises, which gives the oolite at first sight the appearance of red sandstone. The fire alluded to occurred prior to the erection of the present vaulting by Abbot Foliet. The bases are now all restored, according to the old example.

On the large piers remains of painting were found, but so mutilated as to be unintelligible, excepting in one instance, which appears to have been monumental, and is an interesting example of its kind.

The vaulting shafts, with their capitals and bases, the bosses in the roof, and some few of the mouldings and strings, had remains of painting upon them, sufficient to indicate the original arrangement of the colours.

The actual remains of the Norman work in the nave were, during the recent restorations, readily traced when the whitewash was removed. The small arches in the clerestory are now very distinct, as seen in the engraving.

One painted window, a copy of the old glass, has just been put up in the clerestory by Messrs. Hardman.

The scheme, mentioned in the *Builder* some months back, for filling the cloisters with painted glass, is steadily progressing.

We need only add, that the various works have been done under the direction of Mr. Frederick S. Waller, architect.*

MEETING OF THE SURREY ARCHÆOLOGICAL SOCIETY IN LAMBETH PALACE.

The meeting of this society, mentioned in our last, proved very successful, in spite of the very bad weather, which rendered "Bishop's-walk" a river of slush (more shame to the Lambeth authorities for allowing it to be so), and when the Bishop of Winchester took the chair there were more persons present than the ancient "Guard Chamber," described in our last, could accommodate.

The Bishop made a very pleasing introductory address, and some routine business having been transacted,

Mr. W. H. Black read a "Brief Account of the Manuscripts and Records in Lambeth Palace;" and also a paper on the "Title of the Palace and Manor of Lambeth." Mr. Black was enabled to produce all the more curious works which he described. The most ancient of them was a manuscript copy of a book of Aldhelm, Bishop of Sherborne, composed in the eighth century, and entitled "De Virginitate." The writing itself of this copy is, in the opinion of Mr. Black, from the pen and hand of the famous Alcuin. Another rare literary treasure is a superb Arabic copy of the Koran, once the property of Tippoo Saib, and which came into the possession of the English at the capture of Seringapatam. It is said to have been written about 400 years ago, and has been pronounced the "finest Koran of Asia." We may notice among the other portions of this interesting collection a number of wills, one of which is that of the poet Gower. In the second paper, Mr. Black traced the exchange of Lambeth, or "Lamb Hythe," by the then diocesan of Canterbury, the monks and bishops of Rochester, for the manor of Darent, in Kent, on the 7th of April, 1195.

Mr. Stockham Flower having read,—"Some Passages in the Life of Archbishop Laud;" the Rev. Charles Boutell then read a paper descriptive of the principal objects of interest in the palace, of which the following is an abstract:—

Lambeth, or Lambithe, before the Conquest, formed part of the estate of Goda, sister of Edward the Confessor. It was granted to Rochester Priory by her second husband, Eustace, Earl of Boulogne, and ultimately confirmed to that house by William I. and Rufus. An exchange was subsequently effected between Rochester Priory and the Primate, for the purpose of enabling the latter to build a suitable residence for himself and his successors. A monastic establishment was in existence at Lambeth from a very early period; and here, from the same early period, the Primates had their London lodging, and here they performed many of their most important duties. It subsequently became their fixed residence. The exchange with Rochester, which brought Lambeth under the complete control of the Archbishops of Canterbury, was effected during the primacy of Archbishop Richard, the successor to Becket; and it is probable that the necessary works for erecting the archiepiscopal residence were commenced either by Richard himself or by one of his immediate successors—Baldewyn, Hubert Walter, or Stephen Langton. It is on record that Archbishop Boniface (the seventh from Becket), in consequence of a somewhat decided misunderstanding with the Prior of St. Bartholomew, was enjoined by the Pope, by way of penance, to erect a palace for himself and his successor at Lambeth. He greatly enlarged the edifice which his predecessors had constructed. Archbishop Chicheley, the munificent founder of All Souls' College, Oxford, built very considerably: the well-known Lollards' Tower was erected by him; and he also rebuilt or repaired the great hall. Archbishop Stafford, who succeeded Archbishop Chicheley, also made considerable and important additions, particularly to the stables and adjoining buildings. The great gateway was the work of Archbishop Morton, whose rebus it bears: it was built on the site of a decayed ancient one. Archbishop Cranmer and Cardinal Pole also made additions; and in 1610 Archbishop Bancroft founded the library. Archbishop Abbot in later years added to the books, and Archbishop Sheldon, besides further additions, arranged the entire collection. In his will, Archbishop Abbot mentions that the founder of the library was Bancroft.

Various details as to the respective works of the several primates were then given, and the chapel and its crypt were pointed out as the earliest existing portions of the pile of buildings. The collection of archiepiscopal portraits having been also described, and the works erected by the late Primate noticed, the members and visitors proceeded, under the direction of Mr. Knyvett and Mr. Boutell, to inspect the chapel, library, and Lollards' Tower.

The crypt, of which we gave a view in our last (page 591), was not opened. Our sketch probably shows the reason.

The bareness of the interior of the chapel was strongly felt. It affords an admirable object for appropriate decoration, and might be made into a minor *Sainte Chapelle*. The glass in the windows is not pleasing.

On returning to the Guard Chamber, Mr. W. W. Pocock read a paper, of which we give an abstract:—

ON SOME ROMAN REMAINS DISCOVERED AT WALTON-ON-THE-HILL, SURREY.

Though not equal to the splendid works found at Bignor, in Sussex, and Woodchester, in Gloucestershire, the discoveries already made on Walton-heath are amongst the most considerable relics of Roman magnificence yet brought to light within the county of Surrey, and form but a small portion of what probably have still to be uncovered. They are situate towards the southern verge and highest point of the heath, which, geologically considered, forms a portion of the southern vein of the chalk basin in which London is situate, Epsom-downs and Box hills being contiguous portions. It lies in the crow's flight from London to Chichester, and in a direct line from Richborough, the Rutupiæ of the Romans, to Walton-on-Thames, next which they first crossed, and built their first bridge over the Thames.

"Chichester, probably the Regnum of Antonimus, was, in the time of that emperor, reached from London through Winchester and Clausentum, or Southampton. But at a later date the road from Chichester ran by Bignor and Pulborough, in Sussex, to Oakwood, in Surrey, by Ockley and Anstie Bury Camp to Dorking, where it crossed the river not far from the church, and through the greater portion of this distance it still remains under the name of Stane-street. From Dorking it must have run towards London through Wallington and Streatham, either over Mickleham-down or Walton-heath; the road over which latter, still in use, has a very Roman aspect." This south-eastern portion of our island was the first reduced by the Romans, and Cogidunus was by Claudius made king of at least a portion of the reduced territory, the seat of his kingdom being at Chichester.

The Romans occupied Surrey extensively: Brayley, in his history of the county, enumerates twenty-six distinct localities in which their remains are found, and to these he might have added many more. In 1772 a brass figure of Esculapius was found on Walton-heath, together with bricks, tiles, and a portion of a flue. A large earthwork, supposed to be the prætorium of a Roman camp, was still discernible in 1808. The masonry, till lately remaining, consisted of foundations (principally of flints) of walls, apparently about 1 foot thick, running about 3 feet deep, the pavements being about 1 foot below the adjoining surface. They "extend over a space of not more than 40 yards square, but a very little removal of surface soil reveals abundant remains of Roman fictilia at very considerable distances around." Several pavements have been found formed of coarse tessellæ, 1 inch or 1½ inch square, and one ornamental one about 21 feet square, the design being a central circle containing an urn and enclosed in a square, surrounded by four semicircles and four squares, the latter disposed at the angles, and the whole included within a square formed by a bold and unique border. "In general outline it greatly resembles one found in Dyer-street, Cirencester, some eight years ago, the whole of the interior of which consists of a circle and parts of circles within a square framework. But the introduction of the central and angle squares in the Walton design give such an admixture of straight lines and curves as produce a force and character of expression the other does not possess. In absence of representations of living forms, and in paucity of colours, it is inferior to many found in various parts of the country, but in beauty of outline, severity of taste, and boldness of handling, it is equal to any. It is to be regretted that it was executed in so perishable a material that removing or preserving it uncovered seems quite out of the question."

By far the greater portion of the cubes employed were only sun-dried, of two separate colours, one light and the other dark brown: some few were cubes of chalk and the remainder

* Mr. Waller has recently published "A General Architectural Description of the Cathedral Church of Gloucester" (Day and Son Gate-street, Lincoln's-inn-fields), containing some photographic view of the building, and a number of interesting lithographed details.

portions of broken red Samian pottery. The general size was half-an-inch square.

Pliny, who intimates these pavements originated among the Greeks, and were employed by them for covering their flat houses, informs us they were introduced among the Romans by Sylla, and hints they suggested "a large portion of the mural and other decorations that followed. With this agrees sufficiently what Vitruvius remarks, that the pavements formed the most important part of the internal embellishments." When employed on the ground-floor, the situation almost invariably selected for the rooms of entertainment, they were either formed on the solid ground, which was well rammed, and frequently covered with a foundation of concrete, and always of pounded brick, or else on piers at short intervals, covered with tiles to support the concrete foundation. Their winter apartments, and in these northern climes all their better rooms, when floored with these pavements, were constructed with these hollow floors, called suspensuræ, and with less accuracy hypocausts, the object being to pass fire or heated air under them for warming the apartment by means of furnaces adjoining.

The pavement in question was formed on the solid ground, with but a slight foundation of pounded brick, and we may therefore conclude this was not a principal apartment, but probably a tablinum, or entrance-hall, especially as almost adjoining it is a large excavation, 60 feet by 25 or 30 feet, abounding with remains of the materials peculiar to the construction of suspensuræ, and which we may, therefore, safely conclude was the site of some of the principal rooms. If, therefore, the tablinum was of the size and character indicated by this pavement, the whole structure, if in keeping with it, must have been on a scale of magnificence inferior to none of the Roman dwellings yet known in this country.

A coin of Antoninus Pius, fragments of pottery, glass, and iron, all defective, have been found, and a portion of lead which had dropped as it melted, leading to the conclusion the building had been destroyed by fire. The various tiles and bricks exhibit precisely the same features as those found in other parts of the country.

After a communication by Mr. W. H. Hart, "On the History of the Manor of Hatcham," and one from Mr. G. R. Corner, "On two Deeds executed by Elias Ashmole, for the Conveyance of his House in South Lambeth," the meeting separated.

SANITARY ACCOMMODATION FOR AN ARMY IN THE FIELD.

Military reform seems to be the order of the day. So long as change is improvement, no one ought to object. But there may be change without improvement; and our military rulers should recollect that wholesale copying from continental patterns will not, in all cases, insure improvement. England cannot hope to rival continental nations in massing numbers of men, but she may fairly and reasonably expect, out of her superior race of men, and greater wealth, to produce a more perfect army; and, by due forethought and care, place and maintain her smaller number to the best advantage. Crimean experience ought to have inculcated sound wisdom; but if some of the changes spoken of are carried out, we fear the results will not be improvements. The French and the Sardinian armies used *tents d'abri*. We hear it said the British army is to have *tents d'abri*. On sanitary grounds, we most earnestly hope not. A *tent d'abri* is such a tent as three soldiers carry, in addition to their arms, clothing, and ammunition,—a few jointed sticks, and portions of canvas, which piece up into a dog-kennel form, or an inverted V (Λ), extending some 5 feet in length. Under such a covering or tent, three men may creep, but only to poison each other with foul air. Better let each man have a thin sheet, or sheets of oiled silk or Macintosh to lie on, and to cover him, and so breathe the free air, untainted by human lungs. If our generals admire *tents d'abri*, because continental armies use them, let them test the sanitary results before adopting them; and, if there is any truth in the assertion that "air uncontaminated by human lungs is necessary to health," we shall never place soldiers where their own breath must inevitably be their poison. Clothe men in good woollen garments, let them have sound shoes, proper food well cooked, a warm blanket, and add to these necessaries a light pillow-case sort of Macintosh cover (not close at the sides) to protect the body from the wet ground; and, with the knapsack for a pillow, men will have more chance of health, sleeping with the face exposed to the open air, and the lungs capable of taking uncontaminated breath, than under *tents d'abri*. The marching load will be lighter, and the beneficial uses greater. Bivouacing can only be the occasional work of an army: lengthened occupation involves quarters: *tents d'abri*, like the old man to Sinbad, are, to the soldier, a permanent marching load; and, in use, each such tent becomes a poison generator. We must reiterate:—Avoid introducing any change which shall expose our army to such influence The French and Sardinian armies used *tents d'abri*: the French and Sardinian soldiers suffered from fever to a terrible extent. Foul air generates fever,—a lung-tainted air the most deadly form of fever. Therefore all means should be taken to avoid exposing our men to such forms of contamination.

An army in the field must have shelter; and, as we have explained, if the men are to have health they must breathe fresh air. Tents and huts should be of the best possible material and most perfect construction, to give protection and secure warmth with ventilation. The ordinary bell-tent is only second to the *tent d'abri* in mischief: under such a cover men poison each other, and in winter are starved, in summer scorched. We write from experience and not from theory. Bell-formed tents should not be used, but the Indian marquee, of double material. Either side or ends, or both, of such tents, can be raised so as to form an open veranda, giving protection from the sun, and free ventilation. We have, however, a suggestion to offer to our tent-makers. Cannot they combine hut and tent, so as to have means of temporary shelter, portable and warm? Let clean pine battens be got out, such as are used for Venetian window blinds: let these be mounted or fixed on canvass or cloth (like Swiss or German mats and kettle-holders), so that they will roll and strap for carriage. Tents and huts may be constructed of such material, which shall be portable, waterproof, and warm: there must be a light portable framing; the whole fitting and screwing in sections, so as to form tents or huts larger or smaller, as may be required. Metal-guarded eyelet-holes may be formed, and cords may be used as for tents and marquees. In all cases the sides and ends should admit of being lifted horizontally, so as, in fine weather, to open the inner space to fresh air, and give shelter at the same time. The timber and cloth combined will give lightness with great strength, facility for packing, and in use will resist the transmission or the radiation of heat. Glass for light may be combined with the timber and cloth. Pins, screws, or cords should alone be used, and not nails, in fixing.

THE COLUMN WHICH SUPPORTED THE GOLDEN TRIPOD OF THE TEMPLE OF DELPHOS, NOW AT CONSTANTINOPLE.

Some excavations are at present being made on the Square of Astuseïdan, the ancient Hippodrome, where now stands the Mosque of Achmed, built by the spoils of the *Spina* and the *Carceres*. They have for object to discover the foundations of *three* monuments—the Egyptian obelisk, which Theodore the Great erected in the year 390, after his victory over Maximian; the high pyramid, which is connected with the name of Constantine Porphyrogenet, and which the Turks have despoiled of its gilt copper plaques which it was once covered with; in fine, of the serpentine column of the Temple of Delphos, 2,335 years old. The base of these three monuments is now entirely uncovered, and walls like those which surround the temples of the Roman *Forum* support the earth heaped around, and permit a free view of the monuments. The column of the Temple of Delphos is formed by the windings of three serpents, made of copper. It must have been much higher in its original condition, but its present height is about 7 mètres. Its top was formerly composed of three serpents' heads, which supported the golden tripod. Tradition says, that one of these heads was severed by a blow of the sword by Mahomed II. The two others were stolen in 1700; but an *Ulema* says, that they are still secreted amongst the lumber of the Mosque of Ste. Sophia. This column was conveyed from Delphos to Constantinople, by Constantine the Great, as an ornament for the *spina* of the great Circus, when that population of statues, those immense stores of columns, of obelisks and rare marbles, were barbarously destroyed by a then barbarous and uncouth people. There existed two *versions* relative to this serpentine column: one considered it as a talisman for the charming of serpents, erected by Apollonius of Thyana, as an imitation of the bronze serpent erected by Moses in the desert; the other ascribes to this monument a nobler, purely religious origin—an opinion confirmed by the *inscription*, discovered only of late. Herodotus, Diodorus Siculus, Zosimus, Sozomenes, Eusebius, Cornelius Nepos, and other authors have mentioned this once ornament of the Temple of Delphos; and Pausanias (*Phocica*, book i.) says clearly, that in his time the column still existed, but that the King of Phocida had taken away all that was of gold. The inscription is in the old Eolian dialect.

LECTURES AT THE ARCHITECTURAL MUSEUM.

The course of lectures now in progress of delivery at the Architectural Museum, by the Rev. Mr. Boutell, are strictly elementary, and consist of descriptions of the actual contents of the Museum, accompanied with references to the edifices from which the casts have been taken. The lecturer further points out whatsoever appears to claim special attention, whether in the Museum collections, or in various buildings, and insists on the importance of a widely extended, as well as careful, system of architectural study.

In the two lectures already given, the subject has been carried on to the close of the thirteenth century.

Special attention has been directed to the fine collection of casts from the Triforium of Notre Dame, Paris, which has lately been added to the Museum; also to the casts from Venice, deposited by Mr. Ruskin; and to the sculpture of the thirteenth century as exemplified at Lincoln, Salisbury, and Westminster Abbey. In giving a detailed account of the Early English work in Worcester Cathedral, the lecturer animadverted strongly upon the works now in progress there.

BLACKBURN TOWN-HALL.

The council-chamber at the new Town-hall was occupied by the council last week. The style of the building is Italian. It covers, within the boundary walls, an area of nearly 2,600 square yards. The west or entrance front is 120 feet long, and 62 feet high to the top of the parapet; the ground-floor being rusticated with plain dressings to the windows and entrance-gates. The first-floor has Corinthian columns between the windows supporting the cornice. Over the cornice is an attic, the panels of which are filled with festoons of fruit and flowers. Above the cornice of the attic is a perforated parapet or balustrade, and at its angle the chimneys are grouped together, and rise to the height of 71 feet from the flagging. The windows of the first floor have enriched dressings, the grouped ones at each end of the front having also large balconies carried on moulded consoles. The other fronts are of a plainer character, that towards the Market-place having a Doric portico over the magistrates' entrance-door. The police-office and prisons are at the east end of the building, the entrance to the prison-yard being under a rusticated gateway. On two sides of the building is an open area, giving light to the basement, and inclosed by a solid stone parapet. On the ground floor, the vestibule is 49 feet 6 inches by 36 feet. On its right is a news-room, 51 feet by 37 feet. On the left, and occupying a corresponding space,

are the council-room, 51 feet by 24 feet, the town-clerk's office, and muniment-room. The ceilings of the vestibule, council-chamber, and news-room, are deeply panelled. Behind the vestibule, and separated from it by a corridor 9 feet wide, is the police-court, 54 feet by 35 feet, and 26 feet high, lighted by a glass dome, 12 feet in diameter. On one side of this court is the mayor's parlour, 25 feet by 18 feet; a smaller police-court, 36 feet by 24 feet; clerk's office, attorneys' and other rooms; and on the other side are the public entrance to the large court, and rooms for the clerks connected with the business of the court. On the east side are the police-office and the prison, containing eighteen cells. The first floor is reached by two stairs, one from each end of the corridor behind the vestibule. One of these stairs is 23 feet by 12 feet, and gives access to the first floor, and also to the various floors on the north side of the building. The other, or principal staircase, is 24 feet square, the steps being 7 feet clear length, and the balustrade of stone, and leading to the large room and rooms connected with it on the first floor. The walls of this staircase are to be finished with scagliola pilasters. The west front is wholly occupied by a large room or hall, for public meetings, 114 feet long by 50 feet wide, and 34 feet high, giving an area of more than 600 square yards, thus affording sitting room for more than 1,200 persons, or standing room for 3,600 persons. There are other rooms on this floor connected with the large hall. Two of them are 44 feet 9 inches by 24 feet 6 inches, and 25 feet by 18 feet respectively, and are each 19 feet high. In the second and third floors are the borough surveyor's office, the keeper's house, &c. On the north side there is a house for the superintendent of police. In the basement are the offices of the collectors and inspector of nuisances, rooms for the police, cellars for the warming apparatus, &c. There are also two towers, containing ventilating shafts, each 80 feet high. To secure the confidence of large assemblies, the stairs are all made of stone: there are four large outlets from the large assembly-room, and the corridors, passages, &c. are fire-proof. Mr. Patterson is the architect of the building.

PROVINCIAL NEWS.

Banbury.—The prospectus of the Banbury New Corn-Exchange Company has been issued, from which it appears that the capital is to be 5,000*l.* in 1,000 shares of 5*l.* each, deposit 1*l.* per share, and that the building is to be erected on Corn-hill. A second company is being registered, as but too usual in such cases. This latter reasonably states that they wish to afford an opportunity of selecting a site and a building best adapted for the purpose in view. They add, "It is believed that a site can be secured at about half the cost of that which is now attempted to be forced on the public, and which will embrace double the space of that site, and consequently supply much greater accommodation." It is a pity such differences were not obviated, as they tend to diminish the chances of either scheme being realized.

Cheshunt.—A new school, on the British system, has been recently erected here by voluntary contributions, in front of the Dissenting Chapel in Cheshunt-street. The building, which will accommodate about a hundred scholars, was opened on Monday in last week.

Hertford.—On the subject of local changes and improvements, the *Hertford Mercury* says, —The works of the Hertford and Welwyn Railway are proceeding rapidly in the neighbourhood of Hertford. The foundations over the Lee near the Priory are laid, and the works near the Porthill-road are also in an advanced state. The permanent way is ready for traffic for about four miles, the rails having been laid down. The foundations of the new bridge over the River Lee, at the entrance to Hartham from the Priory Farm, are also completed, and the excavations for the new dock, close to the same spot, have been made. The sewage works of the New River Company are also in a state of forwardness. The cast-iron drainage-pipes, for the auxiliary sewer from Cowbridge, have been carried under the bed of the river, to the east of the Priory Farm. The channel for the new sewer through the King's Mead is also cut. The sewerage works are progressing in the rear of St. Andrew's-street, where the River Beane has been diverted into a new channel, and the old bed of the river is in course of being filled up. In a little time Hertford will be so changed in its aspect that we shall hardly know it. Docks, railway bridges, new water-courses, sewers, and deodorizing works are changes which "the oldest inhabitant," we dare say, never expected to see.

St. Leonard's-on-Sea.—The St. Mary Magdalen National Schools, St. Leonard's-on-Sea, which have been very recently completed from the designs of Mr. Teulon, and have been carried out by Mr. J. Howell, builder, Hastings, have been formally opened. The Rev. W. W. Hume's exertions in connection with the liberality of the Dowager Lady St. John, have been mainly instrumental in the erection of this large edifice. The building is in the Middle Pointed style of architecture, with schools, class-rooms, and teacher's residence adjoining, of native bricks, laced with black bricks, and Caen stone dressings, which gives to the whole an ornamental appearance. The school-rooms are 40 feet by 17 feet 6 inches, and are divided by a moveable screen, with open timber roofs, wrought and stained. The cost of the building has been 2,300*l.* The site for the same was given by Mr. Eversfield.

Liverpool. — It is proposed to build a new workhouse for the West Derby Union. At a meeting of the local guardians, on Wednesday in last week, Mr. Pitts, after referring to the overcrowded state of the workhouse, moved "that a special committee be appointed to inquire into the best means to be adopted with a view to obviating the difficulty referred to." He would suggest the propriety of abandoning the present workhouse, and erecting a new one in a rural district of the union, with a farm of, say a hundred acres of land, attached to it. He thought the requisite quantity of land, 100 acres, might be had for 10,000*l.* and he believed a building capable of accommodating a greater number of inmates than the one now in existence might be built for 20,000*l.* He was also prepared to say that, if the farm were properly worked, a clear profit of 1,500*l.* a-year might be realised from it. This would be a considerable relief to the ratepayers, and if the new workhouse were erected, the Government might be induced to buy the present hospital for a barracks. An amendment was moved to the effect, that the further consideration of the subject be deferred for three months, and was ultimately modified to a recommendation that the subject be referred to the visiting committee, and carried by eight to six.

Another "Hartlepool." — It is intended shortly, says the *Northern Express*, to lay out the whole of the ground at the west side of the large lake, running in the direction of the village of Hart, as building sites for villa residences, &c. The plans are already made. The town will be called "Middle Hartlepool."

North Shields.—The opening of the Sailors' Home at North Shields took place on Tuesday in week before last, in the presence of the Duke of Northumberland and an immense concourse of spectators. It is erected on the New Quay, at a cost to the Duke of about 8,000*l.* The building is 83 feet 6 inches by 95 feet, four stories in height, and built of chiselled ashlar masonry. The style is Roman-Ionic. The ground-floor story is rusticated with circular-headed windows, filled with plate-glass. The two stories above have Ionic pilasters and caps, with entablature, and an attic story surmounts the whole. The arrangement of the ground-floor of the building consists of a marine board-room, shipping-master's office, and seamen's waiting-room, entry-offices, cooking kitchen, superintendent's rooms, washhouse and laundry, bath-room, and other conveniences. The several floors above are arranged and fitted up with sixty berths for seamen, and accommodation for ninety more when required; also rooms appropriated for schools, a dining-hall, smoke-room, and superintendent and servants' rooms, &c. The sleeping berths are heated with hot water, and ventilated, and the whole establishment lighted with gas. The design (originally made by Mr. B. Green), has been carried out by Mr. John Green, of Newcastle, architect. The site was also presented by the Duke of Northumberland.

Aberdeen.—This city, it is said, is about to become one of the principal military depôts in the country, new barracks being contemplated for the accommodation of 2,000 soldiers, and a place for ball practice of 900 yards in length. ——A meeting of gentlemen favourable to the erection of a new Music-hall in Aberdeen, or the adaptation of the Public Rooms to that purpose, was lately held in the Council Chamber, the Lord Provost in the chair. At present there is no hall in Aberdeen of a size sufficient to warrant the risk of bringing hither musical performers of the highest class. A statement was read, showing that a new hall of the size and kind required could be erected for about 5,000*l.* A committee was appointed to consider the several plans detailed, or any others that may be suggested, with power to call in the assistance of architects or surveyors, and to report to a future meeting.

STAINED GLASS.

Angmering.—The whole of the stained glass in the church here, it appears, was executed by Messrs. C. and A. Gibbs, of New-road. One window was the gift of a lady, and another the gift of the rector, the Rev. Henry Reekes. All the others were executed for Mr. W. G. K. Gratwicke, of Ham House, Angmering.

Upper Tooting.—A memorial-window has been recently erected in the east end of the north aisle of Trinity Church, Upper Tooting. The design is in the Decorated style of painted glass, to harmonise with the architecture of the church. In the three lower openings, three subjects are introduced—the Nativity of our Lord occupying the centre, and the Baptism of our Lord and the Last Supper the side openings, these last representing the Institution of the two Sacraments. All the subjects are placed upon a rich polished ground, surrounded by a running border, the effect of this deep colouring being to give a greater contrast to the panels containing the groups. In the lower part of the centre opening, beneath the subject there represented, the armorial bearings of the family are introduced, and a memorial inscription runs along the bottom of the window. In the head of the window, *Agnus Dei* is introduced as the peculiar symbol of our Lord, and is placed upon a deep ground, surrounded by a rich border, to carry up the colouring in the lower portion of the window. The borders, drapery, and foliage, &c. have been drawn, we are informed, from the best existing examples of decorated glass; and, in the subjects, the only deviation from the old treatment has been to introduce more correct drawing, instead of the distorted and ill-drawn figures generally met with in specimens of old painted glass. The colours introduced into the window are principally those obtained by Mr. Winston, and one or two other scientific persons, who have analysed the best specimens of old coloured glass, and the result of their investigation now enables artists to obtain colours nearly equal to the best samples existent of ancient glass; the various tints of the several colours being now largely made by Messrs. Powell, of Whitefriars. The window is erected to the memory of Mrs. Elizabeth Henry Butterworth, of Upper Tooting, by a near relative; and the artist, by whom it has been executed, is Mr. George Hedgeland, of Lisson-grove.

Wantage.—A large stained-glass window has been inserted at the east end of the chancel of Wantage Church, the restoration of which is in progress. The cost of the window has been defrayed by a subscription raised shortly after the death of the late Mr. William Trinder, for providing some memorial of the deceased. The style of the stone work, which is new, is of the Early Decorated period. The window was designed by Mr. Street, the diocesan architect, and executed by Mr. Hardman, of Birmingham. The figures represented are St. John, St. Paul, St. Peter (to whom the church is dedicated), and St. Andrew; the Incarnation of Our Lord, and His Crucifixion.

Bromyard.—The new east chancel window of Bromyard Church has now been filled with stained glass, the design being effigies of the

four Evangelists, in niches, upon a geometrical pattern, on which are emblazoned their symbols and other devices. In the centre quatrefoil of the tracery is the Dove descending, and on either side are the sacred monograms of Jesus and Alpha and Omega. This window has been erected by voluntary contributions. The glass was designed and executed by Mr. G. Rogers, of Worcester.

Nottingham.—A stained-glass window has been placed in the central compartment at the east end of St. John's Church, Leen-side, in this city. Looking from the interior of the church, the first or left-hand lancet contains two medallions, illustrating the life of our Lord—namely, the lower one the birth, and the upper one the crucifixion. The former comprises a group, and the latter only a single figure. The expense of this light has been defrayed by subscription, and its object is expressed, in the inscription at the bottom, to be as a tribute of affection to the Rev. John Montagu Valpy, A.M. the incumbent. The central compartment contains three medallions, exhibiting subjects connected with the life and ministry of St. John the Baptist, to whom the church is dedicated—namely, St. John preaching repentance, baptizing Christ, and pointing to our Saviour as the Lamb of God. It was placed in the church as a private memorial, in memory of John Bradshaw, and of Ruth his wife, by their youngest son. The third or right-hand light contains two medallions, corresponding in size and style with those in the left-hand compartment. The lower subject consists of a group of figures, comprising the angel and the Marys at the sepulchre after the resurrection; the angel pointing upwards. The upper design contains a figure, representing our Lord ascending. The origin of this part of the window is given in the inscription as being to the memory of John Clarke, who was drowned in the Trent, 26th of June, 1856, dedicated by his employers and fellow-workers. The windows have been painted by Mr. Clutterbuck, of Stratford, Essex.

Wilburton.—The church of this parish has had a stained-glass window erected at the east end, as a memorial to the late Miss Pell, by the Hon. Lady Pell and other members of this family. The two principal subjects are the Crucifixion and the Ascension. The artist was Mr. Ward, of Soho.

Whitby.—The east window of Grosmont church, consisting of five lancet lights, has just been filled with stained glass, in memory of the late Mr. H. Belcher, through whose exertions the church, school, and parsonage were erected, and an endowment provided. The subjects in the centre light are the Crucifixion, Resurrection, and Ascension of our Lord, on one side His Baptism, and on the other the Last Supper, with the symbols of the four evangelists; while in the remaining two are represented the visit of the women to the sepulchre on the morning of the Resurrection, and our Lord with the two disciples going to Emmaus. Along the foot of the window is the inscription. The window has been executed by Mr. Barnett, of Leith, and the expense defrayed by the joint contributions of many of Mr. Belcher's friends.

NEWHAVEN CHURCH, SUSSEX.

In the course of the late excursion of the Sussex Archæological Society, to Newhaven and Denton, Mr. M. A. Lower read some notes on the churches of both those localities. Newhaven is a rising place: it was here, it will be remembered, that Louis Philippe landed after the revolution that drove him from the throne of France. Mr. Lower said of the church here:—

At a period when a feeling in favour of church restoration is widely prevalent, it is most desirable to collect memoranda concerning our old churches, previously to their undergoing that process. Posterity may like to know what any parish church was like antecedently to the great changes in form, arrangement, and decoration, which are now going forward; but without some records of this kind, it will, in many cases, be hard to judge what portions of the edifices have been removed, altered, or retouched. Far be it from me to condemn the prevailing desire to enlarge and adorn these temples of the Most High, or even, upon sufficient authority, to restore them to their ancient condition. But it is the duty of every true antiquary to protest against much of what is called restoration, but which is too often rather a destructive than a conservative measure. I am sorry to say that instances are not rare, even in archæological Sussex, in which ancient features have been so tampered with, that it will henceforth be hard to decide what is original and what is merely imitated; and, without exemplifying my remark, lest I should be thought to offend against charity, I will simply observe that more injury has been done to Sussex churches within the last fifteen years, by the application of zeal without knowledge than has accrued from the neglect of centuries, or the whitewashings and other beautifications of a thousand churchwardens of the old school. If I might be permitted to make a practical suggestion on this subject, I would say to the gentlemen officially concerned with parish churches everywhere—"If you are not conversant with mediæval architecture, be careful before you remove a single stone, or even before you call in the aid of your architect, to consult some experienced antiquary who knows your church and has studied its minutest features. Such a person will generally have a keener perception of what ought to be retained than the professional church builder, who is not unfrequently biassed by his own views of the beautiful and structurally convenient, to say nothing of the flights of fancy and the violent anachronisms in which some of that fraternity occasionally indulge.

These remarks have not been called forth by any proceedings connected with this locality. Of the two churches brought under our notice to-day, one stands much in need of restoration; the other has been partially rebuilt, without the injury of a single ancient feature.

Of the *history* of Newhaven Church little is known. Newhaven is a comparatively modern name, having originated within the last three centuries, and since the river Ouse has been made to debouche here instead of, as formerly, at Seaford. The ancient name of the parish (Meeching), though clearly of Saxon origin, is not mentioned in Domesday Book. The place must, however, have been of some little importance in Norman times, since the church clearly belongs to that period. * * * * * *

In Bishop Bower's Visitation, 1774, the following account is given of "Meeching, alias Newhaven Rectory. Patron, the king. Rector, Ezekiel Bristed, A.M. of Aberdeen, in Scotland: instituted 1694. Church and chancel in good repair without, but the walls, floor, and some seats of both very nasty and indecent within; the communion-table indifferent, but the cloth bad; a small silver chalice and cover, and pewter plate, pretty good; the pulpit and desk very dark; the pulpit cloth and cushion scandalous! no carpet for the communion-table; the surplice, Bible, and common prayer-book in good order; the steeple and one bell the same; two other bells lost many years ago; no chest nor poor box; the chancel repaired by the rector; parsonage-house, &c. in good order; families, forty-nine, no Dissenters, no Papists. Value in the king's books, 8*l.* 8*s.* 4*d.* discharged from first fruits. Divine service and sermon by the rector; the Holy Sacrament administered at the three solemn festivals and at Michaelmas. Communicants, about fifteen. Nine acres of glebe."

The church at that period was extremely small, consisting, besides the tower and apse, of a nave only. Subsequently, it was considerably enlarged in the worst possible taste. Quite recently, as you are aware, it has undergone a thorough renovation.

The only ancient portions of the building are the tower and a very small semicircular apse attached to its eastern side. The Rev. J. L. Petit, in his account of this church, in the *Archæological Journal* (vol. vi. p. 138), observes that it is "almost, if not quite, unique, as an English specimen of a tower with an eastern apse immediately annexed to it without the intervention of any other chancel." He adds, "the arrangement is common enough on the continent." Though I have a great *penchant* for continental churches, I cannot boast of a large acquaintance with them, and the only one I have seen in this respect like Newhaven, is at Yainville, in Normandy, on the right bank of the Seine, between Duclair and Jumieges. This I encountered quite unexpectedly in a summer excursion during the present year; when at a sudden turn of the road I involuntarily exclaimed, "Why, here's Newhaven Church!" As a matter of course I sketched it; and having subsequently taken a sketch of Newhaven from the same point of view, one may, on inspection, easily note the extraordinary points of resemblance—the same corbelled band beneath the eaves, the same double belfry window in each face of the tower, and the same flat buttressed, semicircular apse, with the same diminutive eastern window. There are, however, some points in which the Norman and the Sussex church disagree—yet so strong is the general likeness of these sister edifices that there is no great stretch of probability in assigning them both to precisely the same epoch, if not actually to the same architect, in the twelfth century.

I may observe here that both Mr. Hussey, in his account of this church, and Mr. Dawson Turner, in his notice of Yainville, describe the towers as "central," which appears to me to be an incorrect use of terms. In general effect the towers of both churches stand, not in the centre, but at the east end of the buildings, and I need not inform the people of Newhaven of the Irish sailor's joke, that their church sails "stern foremost." Since I have mentioned Yainville church, it may be interesting to remark that the apsis of that building, with its peculiarly high-pitched roof, so strongly resembles the upper portion of the much debated round towers of Ireland, that Mr. Turner concludes that the latter were "undoubtedly of Norman origin."

CHURCH-BUILDING NEWS.

Thaxted.—Some restorations of a portion of Thaxted church, lately effected, are peculiar in character. It was found that, from the immense weight of the tower and spire, the stonework of the great western door had become in a very dangerous state, and that it would be necessary, in order to carry out a reparation, that some very careful shoring should be resorted to. The matter was accordingly placed under the management of Mr. Erswell, of Saffron Walden, builder, and, by the aid of needle shoring, the whole of the stonework has been renewed and refixed; and a new tracery-headed window is in course of preparation, and will shortly appear over the western entrance.

Hendon.—The rural church of All Saints, Hendon, in the Hampstead Heath vicinity, has recently been erected, together with a parsonage and schools. The plan of the church comprises a nave, 70 feet long by 30 feet broad, and a chancel, 22 feet long by 17 feet broad, with a recess for the organ. The nave is so designed that large transepts can be added, as well as aisles. The height to the top of the roof is 46 feet, and there is a bell-turret, covered with oak shingle. The style is Decorated Gothic. The fittings are of deal, stained and varnished. The chancel is paved with Minton's tiles, and the east end painted. The present accommodation does not exceed 350 sittings. Mr. Talbot Bury is the architect. The requisite funds, except 900*l.* to 1,000*l.* which remained to be supplied, were raised by the incumbent (Rev. W. H. Shore) and Mr. Joseph Hoare.

West Kington (Wilts).—The church of West Kington has been rebuilt and re-opened. The rebuilding was conducted by Mr. G. W. Gabriel, of Bristol, architect. The church, dedicated to St. Mary, stands on an eminence overlooking the secluded village. It has been entirely rebuilt, with the exception of the tower at the west end, the upper portion of which is of a later style of architecture than the body of the church, and forms a conspicuous object for many miles. The church is in the shape of a Greek cross, the nave, transepts, and chancel being nearly of equal length, and has been built on the old foundations, in the Early English style of architecture. The old high pews have been removed, and their space occupied by square-headed, low, open benches of stained deal, varnished. The roof is of deal, stained, and formed with interlacing rafters, with braces at the intersection of the transept: it is restored to its original pitch, and covered with the stone tiles of the neighbourhood. The nave is paved with Peake's metallic tiles, and the chancel with Minton's encaustic tiles. The chancel is separated from the nave by a low, open screen, in lieu of the high carved oak screen, which was found too decayed to be replaced, and is fitted up with open traceried stalls, and carved poppy-heads, with a platform for a harmonium on the south side, and sacristy on the north. The east window is a triplet, with freestone arches and detached Purbeck marble shafts inside, filled with stained glass, by Bell, of Bristol, and is the gift of a parishioner, the centre compartment representing the Crucifixion of our Saviour, with St. Mary and St. John in the side lights. The south-east window of the chancel (a doublet) is also filled with stained glass by the same artist. There is also a small single-light window in the south side of the chancel, filled with stained glass, by Mr. Bell, and the gift of the architect: it is to the memory of

Bishop Latimer, some time rector of this parish. The old pulpit, from which the great Protestant champion and martyr preached, has been carefully restored and replaced at the north-east angle of the nave. The old western gallery and vestry have been removed, and the tower arch, which is a lancet, the imposts enriched with dog-tooth ornaments, restored to its original height: the west window of the tower is lengthened, and thrown open to the body of the church. The church will accommodate, as restored, about 380 persons. The restoration will cost about 800*l*.

Weston-Super-Mare.—At a recent meeting of the building committee of the New Independent Chapel, out of seven designs sent in from three architects, one of a Gothic character was selected, having a spire, and calculated to seat from 500 to 600 persons, with school-rooms, &c. "The plans were examined and discussed," says a contemporary, "ere the names of the architects were known, and on the opening of the envelopes it was found that the one selected was by Messrs. Pritchett and Sons, the father and brothers of the respected minister."

Wells.—The restorations in St Cuthbert's church, Wells, are proceeding, chiefly under the superintendence of the churchwarden, Mr Willmott. The two unsightly galleries which formerly stood, or rather were suspended, between two of the pillars at the eastern end of the nave, have been removed, and a considerable portion of the new seats are already fixed. It is, we believe, intended to complete the new seating of the church as far as the western side of the two transepts; and this, with the removal of the pulpit to a position further eastward, will more than exhaust the present restoration fund.

Highbridge.—The foundation-stone of a new church was laid at Highbridge, in the parish of Burnham, on Wednesday week. The expense of erection is being defrayed by Miss M. A. Poole, daughter of the late Mr. Ruscombe Poole, of Bridgwater. The new church will be dedicated to St. John the Evangelist. The architect is Mr. Norton, of London (the architect also of St. Audries' church and Bedminster church). The contractor is Mr. Palmer, of Weston-super-Mare. The edifice is to be completed by Lady-day, 1858.

St. Audries (Somerset).—St. Audries' Church has been rebuilt, at the expense of Sir A. A. Hood and Sir P. Acland, barts. The church is in the Early Decorated style, with a tower at the west end of the north aisle, having a turret capped with a small spirette, and surmounted with a gilded cross and vane. The edifice is conspicuously placed at the head of the Quantock range: it occupies the same spot as the old church, and is in fact an enlargement of the same plan, and comprises a nave with north and south aisles, the attached tower at the west end of the north aisle serving as a baptistry, the east end forming an organ-chamber and vestry, with a south porch as the principal entrance. The material used is Doulting stone, both inside and out, for the arches, windows, and facing of the walls, which are built of solid blocks of hewn sandstone, from the neighbouring parish of Sampford Brett. The parapets are pierced with tracery. In the interior the columns supporting the arches are monolithic blocks of Babbicombe marble, polished. The stone corbels are carved in foliage, birds, &c. by Mr. Farmer, of London. The roofs are open timbered, high pitched, and with carved cornices. The whole roof is of solid English oak, grown on Sir Peregrine Acland's estate at Fairfield. The pews, which are of the same material, with carved bench-ends, are all low, and calculated to seat about 250 persons. The pews, pulpit, reading-desk, reredos, and chancel-stalls, were made and carved in tracery and foliage, by Mr. Davis, of Taunton. The baptistry has a groined roof in stone, and the approach from the nave is under an acute arch, similar arches being introduced at either end of the north aisles, viz. the baptistry and organ-chamber, thus giving an appearance of length to that side of the church. The font basin is octagonal, and of Devon marble, supported on eight pillars of Cornish serpentine, and a base of Plymouth black marble, polished. In this part of the building is a small stained glass window, typical of baptism, by Messrs. Hardman, of Birmingham. The subjects in it are Moses passing through the Red Sea, and John baptising the Saviour in the Jordan, with the figures of angels in the upper lights. There are two stained glass windows in the chancel chapel, filled with figures of the Virgin and Child, and St. Etheldreda, under canopies; and the east window of two lights—subject, the Annunciation—the Angel Gabriel in one light, and the Virgin in the other, with the Spirit, as a dove, descending, under canopies formed of lilies. The side chancel window represents the Incredulity of St. Thomas, and the Ascension of our Lord, the presentation in the Temple, and our Saviour preaching on the Mount. The eastern window has the Crucifixion occupying the whole three lights, and Agnus Dei surrounded with a choir of angels. It is the gift of Sir Peregrine Acland, as a memorial of his late wife. All these windows have polished marble shafts. The stained glass was furnished by Mr. O'Connor, of London. The other windows throughout are filled with Powell's diapered quarries, with coloured borders. The covering of the roof is composed of slabs of Bath stone. The floor and passages of the nave are laid with Minton's tiles, and the chancel with Minton's encaustic tiles. The steps internally are of polished Plymouth marble, and those outward are of granite: the copings of the roof are all surmounted with stone crosses. Underneath the church, as much stone (about 1,000 tons) has been used as sufficed for the whole superstructure, in giving solidity and permanence to the foundation, and forming catacombs for the Acland, Hood, and St. Aubyn families, with a small space for the family of the rector. The church is heated with hot air throughout, on the plan of Mr. Haden, of Trowbridge. Mr. Norton was the architect. The plumber's work was by Mr. Sydenham, of Taunton. The Doulting stonework was by Messrs. Wall and Hook, near Stroud: the other was executed by the workmen employed on the estate, under the personal supervision of Sir P. Acland.

Hadley.—This village, of 1,200 persons, is situated about a mile from the parish church of Wellington. It was therefore determined to make an attempt to erect a church in the village. The requisite sum was raised, and a church has been built, and consecrated. Messrs. Nevett, of Ironbridge, were the builders employed. The church is built upon a piece of rising ground at the eastern extremity of the village, adjoining Wombridge parish. It is in the Early English style, of brick, with dressings of Grinshill stone. There is a stone spire of about 60 feet high, at the west end, with one bell. The roof is covered with blue tiles and ornamental ridge tiles. There is a small porch, with oak door. The interior is very plain, and the open stalls are of stained deal, and varnished. The east window is plain, with the exception of a bordering of ruby glass, presented by Mr. Getley, of Hadley. At the west end is a gallery. A small octagonal vestry, approached from the chancel, is placed on the south side. The roof is open timbered. There is accommodation for nearly 300, and the greater portion of the sittings are free. The architect is Mr. Owen, of Southsea.

Shrewsbury.—The new Roman Catholic Church, Shrewsbury, was opened on Wednesday in last week. It is called the Church of our Lady of Help and St. Peter of Alcantara. A cardinal, four bishops, and forty of the clergy assisted at the opening. The edifice has been erected mainly through the liberality of the late Earl of Shrewsbury. It is built from the designs and under the superintendence of Mr. E. W. Pugin. It has been raised upon the town walls, and therefore occupies a prominent site. The church has been built by Mr. Wullon, of Wolverhampton, and the cost will be about 4,000*l*. The foundation was laid with considerable trouble by reason of the strata of sand which lay at a short distance from the surface. For the same reason one part of the design had to be abandoned. It was originally intended to have a tower and spire on the south side of the west end, the height of which when completed would have been nearly 300 feet; but owing to the state of the ground it was found that there would not be sufficient foundation to support the superincumbent mass. The church, however, has been completed without the spire. The style of architecture is Gothic, of the Early Decorated period. The ground plan consists of nave, aisles, two confessionals, chancel, Sacramental chapel, and sacristy, connected with the residence of the officiating priest by a cloister. The exterior is of white freestone. There is a clerestory, the windows of which are triangular. The west-end gable is surmounted by a bell-turret, on which is placed a gilt ornamental cross. The roof is covered with dark blue tiles, and ornamental crest. Ornamental crosses are fixed at the apex of the roofs of the nave and chancel. The west door is approached by two flights of steps. The archway of the principal door is enriched with carved capitals to the pillars. The seats are open, and of stained wood. The east window is of stained glass. The centre figure represents the Virgin (the patroness of the church) with her Son. On the right hand are St. Winefred and St. James; on the left, St. Charles Boromeo and St. Peter of Alcantara. Messrs. J. Hardman and Co. of Birmingham (who are at present filling in the windows of the Houses of Parliament with stained glass), supplied the window. The ornamental iron work is by the same firm. The floor of the chancel is laid with encaustic tiles, and the roof is open timbered work—plain as yet, but intended to be highly decorated. The reredos behind the altar, commencing from the floor, is relieved by the insertion in the wall of blue and yellow encaustic tiles, from Minton's. It is divided into four compartments—containing Scriptural subjects—two on each side of the tabernacle. In the left compartments the subjects are, the Annunciation and the Nativity of our Lord; on the right, our Lord at the Marriage Feast changing water into wine, and the Crucifixion. Each of these compartments is fixed upon a pedestal, underneath which are placed blue and white encaustic tiles, of the *fleur de lis* pattern; and over each is a Gothic canopy, decorated with finials and two angels playing musical instruments. In the spandrils is a kind of red amber marble, which throws out the carving. The tabernacle in the centre has a canopy with pinnacles and finials. There are four angels in this canopy, which rises to a considerable height. The whole is worked in Caen stone, of which also the altar is composed. It is the workmanship of Messrs. Lane and Lewis, of Birmingham. At the west end is placed a font, also in Caen stone, and by the same firm as the reredos and altar. The length of the nave of the church is 69 feet; breadth, 28 feet; aisles 11 feet wide.

Eastwood (Notts).—The foundation-stone of the new church of St. Mary, at Eastwood, before noticed, was laid on Friday before last. The church is to be erected on the old site. It will be in the Early Decorated style, with open timber roof, and calculated to seat 800 persons on the ground-floor. It will consist of nave, 72 feet 6 inches, by 24 feet 6 inches; chancel, 31 feet 6 inches, by 24 feet 6 inches; with north and south aisles, 72 feet 6 inches, by 13 feet 6 inches each; the extreme length from east to west being 130 feet, and the extreme width 60 feet. The north aisle being carried forward, will form an organ chamber and vestry. The edifice will be surmounted by a square tower of three stories, 112 feet high to the top of the stair turret. The architect is Mr. Robert Barber, and the builder, Mr. J. Fisher. The estimated cost, as we have said, is 4,200*l*. of which sum about 1,000*l*. are still deficient. A substantial repast after the stone-laying was prepared by the committee for the workmen, upwards of forty in number, the contractor occupying the chair.

Over Tabley.—St. Paul's church, Over Tabley, which was destroyed by fire in February last, having been restored on a plan furnished by Mr. Salvin, was recently re-opened.

Waterloo.—The foundation-stone of a new Wesleyan chapel was laid in the village of Waterloo, near Liverpool, on Friday in last week. The works are now in progress. The building is being carried out by Mr. J. Sanders, of Liverpool, builder. Mr. A. Lea is clerk of the works. The design of the building was furnished by Mr. James Wilson, of Bath, architect. The building covers an area of nearly 3,000 square feet, and is 36 feet wide by 62 feet long, ex-

clusive of class-room, porch, &c. The style is Gothic, of the early decorated period, with high pitched gables and roofs, which are in one span throughout, with ornamental crest at ridge, and a moulded corbel table at eaves, with grotesque spout-heads. The front gable, towards Bath-street, is pierced with a five-light traceried window, with moulded joints and mullions. Two buttresses, surmounted by small pinnacles, are on either side of this window. The sides are divided into five bays, with two-light traceried windows in each, with a porch in the second bay from the front nearest Bath street, and a class-room in the last bay on the opposite side. Internally, the roofs are open timbered, stained, and varnished. The accommodation is for about 350, in open pews.

Heywood (*Manchester*).—The ceremony of opening a new Roman Catholic chapel, dedicated to St. Joseph, was celebrated on Sunday, the 11th ult. by the Roman Catholic bishop of Salford, with pontifical high mass. The building is in the Transition style of Early English, and consists of lady chapel and nave. It is 86 feet by 35 feet clear, and will seat 800 people. The architect was Mr. W. Nicholson, of Manchester, and the contractor Mr. Thomas Tully, of Strangways, Manchester. In the lady chapel there is a stained glass window, by Messrs. Edmundson and Son, of Manchester. The subject is St. Joseph and the Virgin, under canopies, from designs by the architect.

Barwick.—The old church of All Saints, at Barwick-in-Elmet, near Leeds, after undergoing some renovation and alteration, has been reopened. A new and high-pitched roof has been erected, and the high square pews have been replaced by open benches, those in the nave of deal, and those in the chancel of oak. The walls and stonework have been stripped of whitewash, and replastered. The west arch has been thrown open, and a new organ, by Messrs. Foster and Andrews, of Hull, has been placed under it, showing the window over it. The ancient characteristics of the church have been preserved, as also the east window, of Decorated style. The improvements have been effected by the efforts of the Rev. C. A. Hope, the rector, aided by the contributions of his parishioners and the neighbouring gentry. The alterations have been made under the superintendence of Mr. G. F. Jones, of York, architect. The contractor was Mr. Brown, also of York.

Greenock.—A new chapel has been erected at Ardgowan, near Greenock. It is in the Decorated style of architecture, and has been built for Sir Michael Robert Shaw Stewart. Mr. Henderson, of Edinburgh, was the architect. The large east altar window has been filled by Messrs. C. and A. Gibbs with rich stained glass, suited to the style of architecture: there are seven subjects in the window from the New Testament, and thirty-seven pieces of tracery, all fitted with appropriate emblems and foliage.

Drumcrée (*Armagh*).—The church of Drumcree, near Portadown, in the diocese of Armagh, has been reconsecrated. The building, as described by the *Belfast Newsletter*, is of the Early English style (the thirteenth century), of very simple character. It consists of a nave, with clerestory, side aisles, chancel, and robing-room. It affords accommodation for 500 persons on the ground floor, and there are no galleries. The building is 99 feet 6 inches in length, by 49 feet wide. The masonry is of basalt stone, from a quarry in the neighbourhood, with Scotch sandstone dressings. The roofs are open, and the timber-work is stained and varnished. The aisles are divided by cut-stone circular columns, and arches, with moulded caps. The pulpit, reading-desk, and pews, are all executed in Baltic fir, stained and varnished. The east window, side windows of chancel, and quatre-foils in gables, are filled with stained glass, as also a memorial window, erected by Mr. E. E. Atkinson, of Dublin. The floor of the chancel is laid with Minton's tiles. The old tower has been furnished with new windows, &c. in keeping with the new building; and the spire with weatherwings, to give it the character of a broach spire. An entrance pier and gate, with yard wall, have been also erected, and a house for the sexton, in keeping with the style of the church, has been erected by the parishioners. The designs and plans for the church were furnished by Mr. Joseph Weiland, architect to the Ecclesiastical Commissioners, and carried out under the superintendence of Mr. Wm. Fullerton, the diocesan architect. The building was erected by the firm of Messrs. Hugh Henry and Son, at a cost of nearly 3,000*l*.

TO OLD FREEMASONRY.

Stoop from your blissful realms, old glorious men!
Whose shades still float among the cool aisled aisles,
And wander, with our thoughts, in aged piles.
Can ye not open to our dazéd ken
Gone forms of loveliness? Behold! again
Base toes have martiall'd, in their subtile wiles,
An Art-less army: even now their files
Stand in your hallow'd foot-prints! Then, oh! then,
We call, in anguish, through the distant old
(Who, else, are nothing when we know you not),
Striving for ends that, long time since, were held
As passing lovely! Must ye be forgot!
Shall borrow'd sameness meet us as we roam,
And England bow before imported Rome?

Was it for this great olden deeds were done?
Was it for this ye wander'd thro' the land,
Raising new beauties with unselfish hand?
To be all else but worship'd! Are there, on earth, none
So blest but something steals athwart the sun,
Which, unassisted, ripens to an end
The boy-dreams of the heart that, growing, tend
To emulate the past? Your race is run;
And glories thicken in the wake of years,
Making your unknown memories a light
To cheer the gather'd darkness of our fears!
Say, is there nothing now; no more delight?
Never! Oh! say not that to Pagan climes
We yield the majesty of bygone times!

Shall we not strive to keep your greatness green?
Must the star wane, the reverential few
Resign their glories to a soul-less crew?
Must we not be again what ye have been?
Now false taste flourishes, and panders mean,
Do sell their names to fortune. Oh! renew
The beautiful again. Mayhap, to you
Boy-dreams are palpable; yet have you seen
The bright moon darken'd by a passing cloud,
And felt the small stars pining for her light.
Thus do we pine, the while abortions shroud
Old God-like splendours in perpetual night.
Can there be hope? Yes! truth must still survive:
Ye mighty dead, I hear ye whispes, "Strive."

J. F. F.

HEREFORD IMPROVEMENT.

We see by a local paper that the Hereford cattle-market and sewerage have been executed, and the accounts finally wound up, at 450*l*. under the contract sum.

The cattle-market, which covers an area of four acres, fitted up with cattle and sheep pens, and a shed 640 feet long, and 24 feet wide, covered with corrugated galvanized iron, was opened on the 19th ult.—the tolls received on that day being 95*l*.

The sewerage was completed on the stipulated day named in the contract. About 600 houses have been connected with the main sewerage during the execution of the works: about 200 houses are deriving pure water from the new waterworks. The water is pumped, by a 20-horse engine by Messrs. Simpson and Co. from the river Wye into a reservoir 103 feet above the river level, and capable of holding four millions of gallons. It is afterwards filtered in two filtering-beds before it enters the main.

The contract amount for the whole of the works was 22,000*l*. The works were begun in May, 1855, and the inhabitants already feel and appreciate the beneficial effects of these sanitary works. It is estimated that the cattle-market tolls and water-rate will pay the interest on the money borrowed for constructing the works.

Mr. T. Curley, of Hereford, was the engineer, and Mr. Wm. Moxon, of Dover, the contractor.

METROPOLITAN BOARD OF WORKS.

DEPUTATION TO SIR BENJAMIN HALL.

On Wednesday last a deputation from the Metropolitan Board of Works waited on Sir Benjamin Hall, at the office of Public Works, with the amended drainage scheme, lately adopted by the Board, and plans of other improvements, for Sir Benjamin's approval.

The engineer, Mr. Bazalgette, was required by Sir Benjamin to enter at great length into the details of his plan, and to explain how it was that a scheme (plan B) already to some extent condemned by the Board (if the reports in the daily press were correct), was now presented for his approval. The subject, he at length said, should have his best and most speedy attention.

The plan for improvements at Covent-garden was then submitted by Mr. Marrable to Sir Benjamin, who said he had very serious complaints to make against the Board, for not having much sooner given their attention to these improvements, and for now bringing before him plans as to which he was called upon to decide at once, that notices might issue by the 15th instant: it was really too bad, he declared; and indeed, on the whole, it would appear that the deputation was considerably snubbed. The Southwark improvements were another subject, Sir Benjamin said, on which he felt it his duty to talk to the deputation most seriously, and he then recapitulated what he had done, and what the Board had not done, and reiterated his opinion that it was really "too bad." Finally, Sir Benjamin said that if the plans were sent to him on Monday, he would put aside other business and attend to the subject, but hoped such delays would never again occur.

SANITARY CONDITION OF KNUTSFORD.

The inhabitants of this rural town are suffering much inconvenience from the imperfect draining of the streets, and the consequent unhealthy state of their dwellings. During the present week several respectable families have been in a high state of alarm at the sudden sickness of their children and domestics. The medical gentlemen called in have reported that the air in the houses, which enters through the private sewers, is of a very poisonous character, and threatens fatal results unless something of a sanitary nature be instituted without delay by the constituted authorities. See, for confirmation, the Macclesfield *Courier and Herald* of October the 18th.

In the majority of cases, the air enters direct into the houses from the openings in the sewers in the public streets, as was the case in the instance here more particularly alluded to, where the poisonous gases entered a dwelling at 8 yards' distance from the sewer opening, and caused the almost immediate sickness of four children, two of whom were thrown into convulsions, and the two others seized with sickness and purging and accompanying feverish symptoms, the sickness being also experienced by others of the household.

In addition to the account you lately gave of our sanitary state and doings, I beg to state that our Nuisances Committee was composed of twelve (not eleven), exclusive of the surveyor of the highways. Six, as stated by you, resigned in disgust at the meeting. Five others, I now add, equally disgusted, refuse longer to act, so that there are left but two of the body, Mr. Swinburne, the chairman of the Board of Guardians of the Altrincham Union, and Mr. Joshua Hewitt, *ex officio* member, and the surveyor of the highways. C.

THE LIVERPOOL LIBRARY AND MUSEUM COMPETITION.

At the monthly meeting of the Liverpool town council, on the 30th ult. a report was submitted to the effect that the design of "Con Amore," without the sculpture, could not be executed under 30,000*l*. or 32,000*l*. and that of "Alma" under 76,000*l*. in its present condition, or 57,000*l*. reducing it to the condition of other plans, and what that means we do not exactly understand. It will be remembered that these are the two designs to which the council were recommended by the committee to award the first and second prizes; but the consideration of the question had been adjourned for the purpose of ascertaining whether either of them could be carried out for the sum of 20,000*l*. the amount stated in the advertisement. The proceedings on Thursday include a letter from Mr. W. Brown, M.P. urging the council to adopt the design of "Con Amore," and stating his willingness, in that case, to give an additional 6,000*l*. as a donation, if the council would meet the difference. The chairman of the Library and Museum Committee moved that the first prize of 150*l*. be awarded to "Con Amore," and the second prize of 100*l*. to "Alma." This proposition was adopted on a division; but the question as to the adoption

of the design was left to the consideration of the new council.

That grave injustice, likely to prove a serious hindrance to the improved administration of competitions, has been done, none can question. The committee throw the blame on the sixteen selected competitors, and say that not one of the sixteen designs could be carried out for the stipulated sum. They ignore the fact that the initial injustice is to be referred to their own first selection from the 115 designs originally submitted.*

THE LIVERPOOL WELLINGTON TESTIMONIAL.

I SEE by the advertisements, that the committee of the Liverpool Wellington Testimonial propose to erect a statue upon a column to commemorate our hero.

Since this barbarous impalement of our celebrities seems likely for some time hence to disgrace us, in spite of all that common sense and common taste can urge against it, I have thought that our sculptors might save themselves much trouble and expense by associating in the production of a well-considered and properly conventionalised model for a bronze dummy, which, as any figure will answer as well as another, or as none, when so stylated, might, when duly labelled with the name of the worthy it is proposed to honour, be hoisted to its post out of sight, and there permanently do duty on his behalf. The terms on which castings for such occasions might be had could be easily arranged by the combining artists.

ECONOMIST.

LIVERPOOL ARCHITECTURAL SOCIETY.

AT the third meeting of this society, held on the 29th ult. Mr. Huggins in the chair, attention was drawn to the opening of the "Architectural Exhibition" in December next.

Mr. Picton stated that a few weeks ago he had an opportunity of inspecting the new town-hall at Leeds, designed by Mr. Broderich. Externally, it was not so imposing as St. George's Hall, but internally it was a work of equally great merit. The laying of it out was equal to anything he had ever seen, and superior to their own hall in that respect. Mr. Horner agreed with what had been said by Mr. Picton.

A paper was then read "On the Liverpool Building Act," pointing out what were considered to be its inconsistencies and weaknesses, with the view of inducing the society to memorialize the town council to consider the desirability of amending it.

A discussion ensued, but the determination was adjourned for a fortnight.

Mr. Picton said there might be some ambiguity in Acts of Parliament, but in the attempt to attain perfection he was afraid they would complicate the thing and plunge into a series of blunders which they had no conception of. In proof of this, he referred to the Metropolitan Building Act, which was far more stringent and oppressive than their own. They had got King Log, and he did not oppress so much; but if they got rid of him they would have King Stork to oppress them far more.

INSTITUTION OF CIVIL ENGINEERS.

PREMIUMS.

THE Council of the Institution of Civil Engineers have awarded the following premiums for papers read during the session 1855-56:—

1. A Telford medal and a Council premium of books to Mr. John Murray, for paper "On the Progressive construction of the Sunderland Docks."

2. A Telford medal to Mr. Heppel, for paper "On the relative Proportions of the Top, Bottom, and Middle Webs of Iron Girders and Tubes."

3. A Telford Medal to Mr. Henry Robinson, for paper "On the Past and Present Condition of the River Thames."

4. A Telford Medal to Mr. C. R. Drysdale, for paper "On Steep Gradients of Railways, and the Locomotives employed."

5. A Telford medal to Mr. F. M. Kelley (New York, U.S. America), for paper "On the Junction of the Atlantic and Pacific Oceans, and the practicability of a Ship Canal, without Locks, by the Valley of the Atrato."

6. A Council premium of books to Mr. G. Herbert, for paper "On the Construction of Buoys, Beacons, and other Stationary Floating Bodies."

7. A Council premium of books to Mr. Evan Hopkins, for paper "On the Vertical Structure of Primary Rocks, and the general Character of their Gold-bearing Varieties."

8. A Council premium of books to Mr. Heinke, for paper "On Improvements in Diving Dresses and other Apparatus for Working under Water."

9. A Council premium of books to Mr. J. Baillie (Vienna), for paper "On the Application of Volute Springs to the Safety-valves of Locomotive and other Boilers."

10. A Council premium of books to Mr. W. Kemble Hall (U.S. America), for paper "On the Causes of the Explosions of Steam Boilers."*

* We are asked to notice that the decision as to an exhibition or not of the rejected sketches will remain open another week.

THE ARCHITECTURAL ASSOCIATION.

BYE-LAWS SUGGESTED BY THE INSTITUTE OF ARCHITECTS.

AN ordinary meeting was held on the 31st of October last, when the following letter from the honorary secretaries of the Royal Institute of British Architects was read, enclosing the following draught addition to the Bye laws, now under consideration by the Council, with a view to its submission to a special general meeting, either as it stands, or with such modifications as may be thought fit:—

"The Council may, from time to time, admit to the library and museum, and to the ordinary general meeting (subject to such regulations as the Council may from time to time make), such persons as they shall approve, who shall be satisfactorily shown to them to be engaged in the office of an architect, either in the study of architecture, or in its practice in such office, or partially as principals. Such persons to pay an annual subscription of one guinea, but to have no right to interfere in the affairs of the Institute: and they are to be called 'Graduates of the Royal Institute of British Architects.'"

Regulations made by the Council in pursuance of the above Bye-law:—

"Every person desirous of being admitted under the last mentioned bye-law must be proposed agreeably to the form No. VIII. in the Appendix, wherein must be inserted his Christian name, surname, description, the office in which he may be engaged, the nature of his engagement, as pupil, assistant, or part principal, and his usual place of residence; and this form must be subscribed by him, and, at least, three fellows, associates, or graduates, or any three of them, who shall testify their personal knowledge of them.

The recommendation of every such person must be delivered to the secretary, who shall submit the same to the Council; and if they shall see no objection, the recommendation shall be signed by the chairman of the Council, and be read at the first subsequent ordinary meeting, and hung up in the room; and at the following ordinary meeting, the candidate shall be balloted for by all the graduates then present, in the same manner as in the case of the election of fellows and associates; provided, nevertheless, the Council shall have the power of admitting six graduates in the first instance, without the previous submission of the names to the ordinary meeting, and without ballot.

When a person is elected a graduate, one of the secretaries shall immediately inform him of his election by letter: and he shall not be considered entitled to the privileges of a graduate until he shall have signified his acquiescence in the election.

Every person elected a graduate shall pay his first annual contribution within two months of the day of his election, otherwise his election will be void.

With a view to encourage practical studies, fellows, associates, and graduates shall be invited to attend on certain evenings to be fixed by the Council, intermediate to the ordinary meetings of the Institute, for the purposes of mutual improvement, the communication of information, reading essays, &c., of making sketches on subjects to be arranged at such meetings, a selection of which sketches shall be publicly exhibited on the ensuing ordinary meeting.

The Council to have the power of allotting the sum of 10*l*. 10s. annually, or such sums as they may direct, for the purchase of premiums to be awarded to those whose sketches shall be deemed to possess the greatest merit; the persons submitting sketches to be the judges.

It shall be lawful for the Council, or any seven members thereof, concurring in a vote at a meeting specially summoned, to declare that the admission of a graduate shall be cancelled; and thereupon notice of such resolution shall be given to him, or left at his place of residence, as specified in the form No. 8, and he shall accordingly cease to be a graduate.

No graduate is to introduce any person whatever into the rooms of the Institute. Every graduate shall conform to all such rules and regulations as may from time to time be made by the Council for the use and preservation of the property of the Institute, and for the conduct and proceedings of the graduates."

The following resolution was then proposed by Mr. Gray, seconded by Mr. Herring, and carried unanimously:—

"That the Committee be empowered to consider the letter from the Secretaries of the Royal Institute of British Architects just read, and to embody an answer to the same in the letter which they are to submit for the consideration of the members at the general meeting to be held on the 14th of November next."

Mr. Wigley then delivered an interesting address upon "Mediæval Architecture in Palestine," which was illustrated by plans and photographs.

* The first meeting of the new session will be held on Tuesday, November 11th, when a paper by Mr. D. K. Clark, "On the Improvement of Locomotive Stock," will be read and discussed.

CLOTHWORKERS' HALL, LONDON.

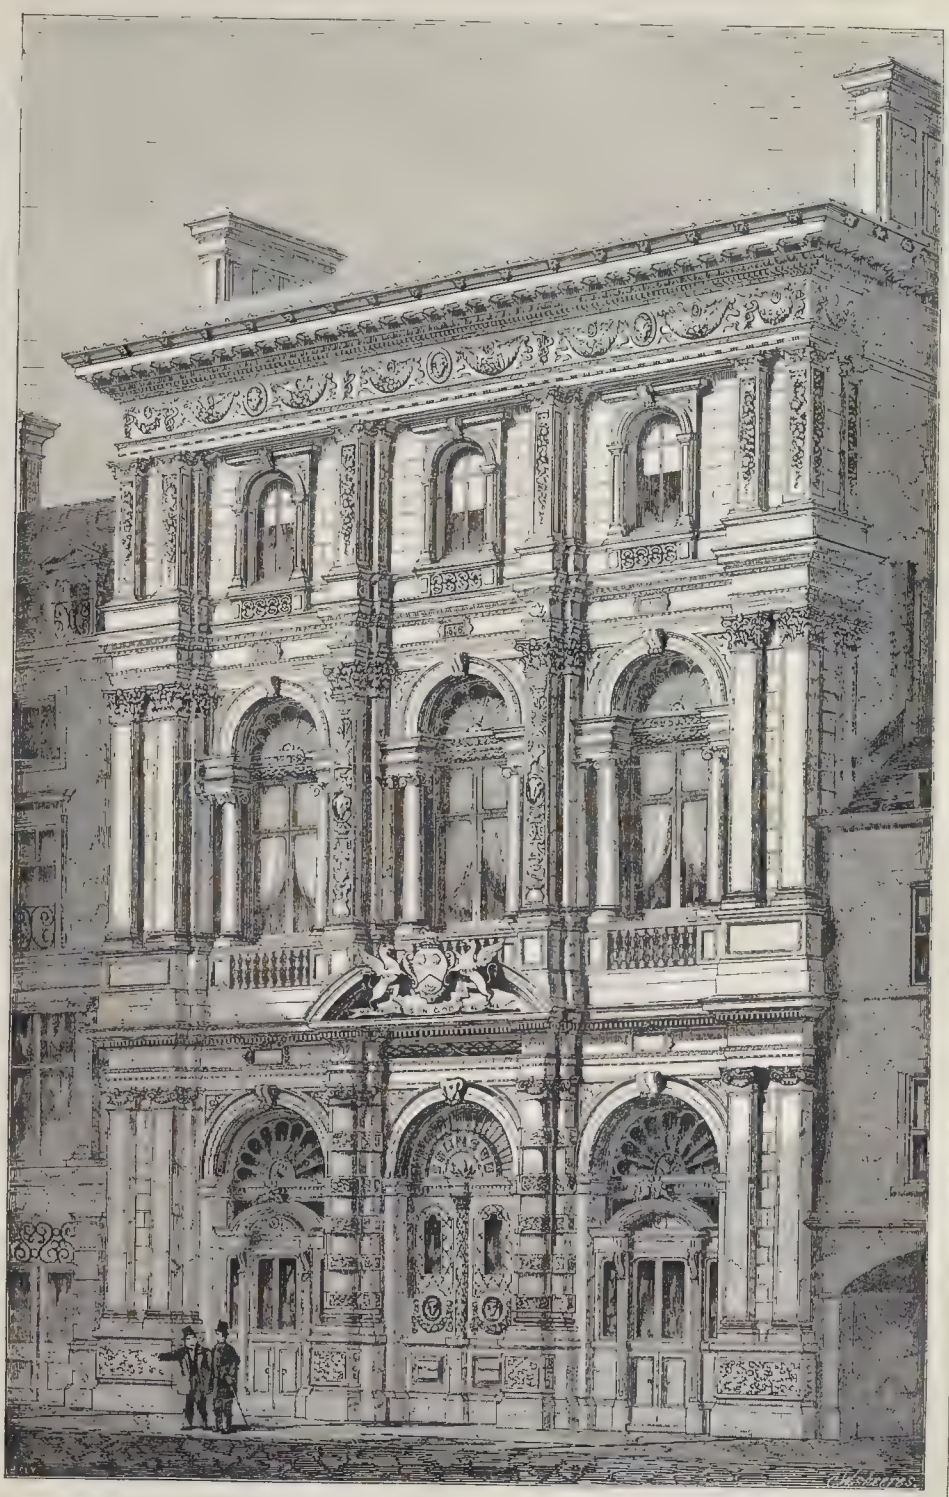
THE Company of Clothworkers are about to erect a new hall on the site of their now destroyed old one, on the east side of Mincing-lane, Fenchurch-street, and our engraving represents the entrance front of it, which has been designed and is about to be carried out by Mr. Samuel Angell. Samuel Pepys was Master of the Company in 1677, and presented a handsomely chased silver cup and cover, still in the possession of the Company. The clothworkers stand the twelfth on the list of the twelve great companies of London. To quote Mr. Timbs's "Curiosities of London,"—"The clothworkers were originally incorporated by Edward IV. in 1482 as shermen (shearers), and were united with the fullers in 1528 by Henry VIII. the conjoined fraternity being then named clothworkers. James I. incorporated himself into the clothworkers, 'as men dealing with the principal and noblest staple wares of all these islands, woollen cloths.' Among their pageants is that of Sir John Robinson, Lord Mayor 1662-3, 'reviving the true English and man-like exercise of wrestling, archery, sword, and dagger;' when, at his mayoralty feast in Clothworkers' Hall, he entertained the King, Queen, and Queen-mother, the Duke and Duchess of York. The hall was in part destroyed by the Great Fire: 'but strange,' says Pepys, 'it is to see Clothworkers' Hall on fire these three days and nights in one body of flame, it having the cellars full of oyle.' The *Gazette* of Sept. 8, 1666, announces the Fire to have stopped near Clothworkers' Hall. The list of the Company's charities is remarkable for its number of anniversary sermons and lectures, and for its bequests for blind persons. The Company's Almshouses (now at Islington) were originally in Whitefriars, on part of a garden belonging to Margaret Countess of Kent, held by her of the prior of that friary.

Howes relates that James I. being in the open hall, inquired who was Master of the Company; and the Lord Mayor answering 'Syr William Stone,' to him the King said, 'Wilt thou make me free of the clothworkers?' 'Yea,' quoth the Master, 'and thinke myself a happy man that I live to see this day.' Then the King said, 'Stone, give me thy hand; and now I am a clothworker.'"

The ground-floor of the new building will be principally devoted to offices and for the business departments of the company, reserving a fair proportion for that important appendage to civic halls—a kitchen. The *piano nobile* will be occupied by the livery-hall and court and livery drawing-rooms.

The hall will be 80 feet in length by 40 in width, and 40 high, approached by a spacious staircase surmounted by an octangular pendentive dome.

The front in Mincing-lane, represented in our view, is intended to be of Portland stone.



BUILDERS' CLERKS.

I FULLY echo the sentiments of "¾ Scale," and beg to add that many of us commence business at six in the morning, having, of course, to rise at five o'clock, and do not leave till eight in the evening.

Now, sir, what time have we for improvement, or self-culture? If I sit down to read, I fall asleep; and if I attend a lecture, I feel the same, though I often attempt it at the risk of rising late in the morning. As a class of intelligent men, I think we ought to receive some consideration: we are not machines, though we now merely live to work and sleep, spending our lives like a horse or dog.

Pray, sir, use your powerful pen among the building trade, and get us the Saturday half-holiday. It has been proved easy of accomplishment, by adding three hours extra labour over the other five days of the week; and if our large firms would make an attempt, all others would follow; and I think I can see a great moral revolution as the result.

¾ SCALE.

CLOTHWORKERS' HALL, LONDON.—Mr. Samuel Angell, Architect.

THE ÆSTHETIC PRINCIPLES OF ARCHITECTURE.

Architecture is a branch of the fine arts which in this country was long left to slumber in the backgrounds of science, and its principles, which have such an innate tendency to elevate the mind, are but little understood. It has been left to those whose fortunes and position in life have enabled them to study *in respublica scientiæ*; an extraordinary genius appearing once now and then on the world's stage, and, like the large comets, astonishing us by their lustre and then disappearing; but, as Shakespeare says, "the works of good men live after them;" so their works still exist, the wonder and admiration of all intellects. England, as a nation, may be said to know little of architecture; and, for a long time prior to the time of Inigo Jones, it was in a very degraded state; but he arose and trimmed the lamp: then the devastation caused by the Great Fire of London gave scope to the genius of Wren.

Although, perhaps, no country in the universe is in any way equal to our own, in respect of being dotted thickly over with miserably inartistic though happy homes, lying like gems set about with the poetry of external nature; yet there are a few here and there in which some degree of architectural talent has been displayed; and, like the evening star, they light up, and throw a halo round, the surrounding atmosphere; and let us hope to see the higher impulse of architectural genius expressed in the erection of still more beautiful and sylvan retreats.

People seem to think of architecture as if it referred only to bricks and mortar, or abstruse mathematics, comprising simply crooked problems.

> "Surely the time shall come
> When this fine overplus of might,
> No longer sullen, slow, and dumb,
> Shall leap to music and to light."

So sang the prophetic voice of the poet, and he has lived to see the shaking amongst the dry bones. Our archæological societies are teaching us to look behind the broken column and the ruin, and there see the genius from whence such divine conceptions emanated, and which could impress itself into a material form.

In the garden of architecture, so cheering a spot to the lover of the history of our earth, reposes all that is beautiful in science, where the lofty mind of man, aspiring towards heaven, has left its noble impress,—where we may obtain a glimpse of bygone nations, whose history is imprinted with an indelible hand on the stones, truly verifying the poet's assertion—

> "Sermons in stones, and good in every thing."

Let us then take courage: "with a heart for any fate," let us arise and be doing, remembering the immortal destinies of man, and the hopes that are ever surging our hearts and rising upward:—

> "Build on in hope, with pillar, dome, and tower,
> Not for the present, but a distant hour.
> Brief is the span of life: the builder eyes
> His deep-thought plan, and sees the walls arise;
> Anticipates the whole, and then expires
> Ere half accomplished. Yet his genius fires
> The lasting pile. Not men, but nations too,
> By such defy oblivion."

It concerns all to know the most interesting features of architectural beauty. Those æsthetic principles of architecture which enable us in our travels to see something more than beautiful scenery, and which in this England of ours is especially valuable from the many relics of antiquity still left us, and *in summa excellentia* to see living poetry in "those wrecks of another world whose ashes still are warm," those fallen arches and arch-crushed columns and choked-up vaults, or in those beautiful and heaven-aspiring pinnacles and spires, that flash in the sunlight like a meteor, and which seem to give us glimpses of that glory never to be forgotten; telling us, like gleams on a sunset sea, what once hath been.

> "The architect
> Built his great heart into those sculptured stones,
> And with him toil'd his children, and their lives
> Were builded with his own into the walls
> As offerings unto God."

Things inanimate are possessed of life: the old ruin and grey relic of antiquity pleading haughtily for glories gone, speak in voices which most people hear not: they are like eternal lamps in the bright city of God; but,—

> "Vanish'd is the ancient splendour,
> And before my dreamy eye
> Wave those mingling shapes and figures,
> Like a faded tapestry."

What we can see of the remote past through the deepening shades of time is as of some great unknown sea, on which some solitary ship is afloat, whose course we can but dimly trace through the clouds which every way gather around her.

How truly has it been said (in the "Seven Lamps of Architecture"), "How cold is all history, how lifeless all imagery, when compared to that which the living nation writes, and the uncorrupted marble bears! How many pages of doubtful record might we not often spare, for a few stones left one upon another! The ambition of the old Babel-builders was well directed for this world. There are but two strong conquerors of the forgetfulness of men, Poetry and Architecture; and the latter in some sort includes the former, and is mightier in its reality: it is well to have, not only what men have thought and felt, but what their hands have handled and their strength wrought, and their eyes beheld." This is the grand æsthetic principle of architecture, the concatenation of the world-history written in imperishable characters on the uncorrupted marble, so that all may behold, and seeing learn if they will, "the primal art of man."

Thus in all time, from the monolithic column to the trilithons of Stonehenge, from the propylea of Pericles to the fantastic Alhambra, we behold the same spirit of beauty—the same eternal æsthetic principles of architecture. Let us for a moment go back to the origin of these principles, and we shall find that they may be traced even to the expulsion of man from Paradise. When he thus became exposed to the vicissitudes of wind and rain, of sunshine, fierce as it doubtless was, and cold in all its intensity, to which, among the floral bowers of Paradise he had been unaccustomed, and looking back and seeing the gates of his former home shut for ever against him, and round about him the "wide, wide world," in all the glory of its freshness, then did the new knowledge he had gained of good and evil thrust with irresistible force into his soul, the thought of what he had lost and what he had gained, and his distress gave birth to the hut; not, let it be remembered, the unseemly wigwam, or the grovelling thing of mud we generally think of with the word hut. No! the infancy of humanity had not degenerated to the level of the North-American Indian or the Esquimaux. Was he not fresh from Eden? Did he not remember what he had lost, and would he not endeavour in some sort to get at least a semblance of his former abode? Here, then, his primal want was supplied, and it contained in itself the elements of the beautiful, and the genius of man here first expanded itself into a material form.

F. E. D.

THE UNJUST INCOME-TAX.

As Editor of the *Builder*, which has for so many years watched over the interests of the trade, do let me call your attention, and ask for your assistance, in exposing the very unjust way in which our property is dealt with under that jumble of inconsistencies and inequalities, and legalized plunder and robbery, the Property and Income Tax Act.

In the first place, sir, contrary to the old and equitable principle of the poor-rate, we are taxed on the *gross rent*, from which nothing is allowed to be deducted for repairs, although it must be quite obvious to every practical person that repairs constitute a heavy deduction from rent before it can be considered as income. I know the Government, with characteristic dislike to thought and trouble, object that frauds might be committed were pleas for individual reductions permitted. This seems plausible. Were the Government, however, inclined to do us justice, nothing could be simpler than to enact that a certain per centage, easily determined, should be in all cases deducted from the gross rent to get at the net or taxable income. A per centage of this kind might not meet every individual case in any one year, but on an average of years, would at least offer a fair approximation.

Our second grievance under the income-tax, is the house-tax, seeing, that though nominally a charge on the tenant, it is in reality an additional 2½ and 3½ per cent. income-tax levied exclusively on house proprietors. Why I say house proprietors pay the house-tax is, that the landlord in letting his property, must ask just so much less rent as the tax amounts to, or the tenant will reckon it as so much additional rent. If he agrees to take the premises with the tax, it is quite evident he would give the same amount as rent merely, were the tax not in existence. Another point is also quite evident, that the proprietor of property letting for 20*l.* a-year and upwards also pays to the Government 2½ to 3½ per cent. more than the owner of house property of the same value which happens to be in the shape of tenements under 20*l.* a-year.

A Country Builder.

P.S. I see an association has sprung up in London, to attempt to reduce the amount of the tax to 7*d.*: could they accomplish their object, that would be a substantial benefit, and I most heartily wish them success.

WHO IS TO BLAME FOR BAD PLASTER WORK?

Having read the remarks in your valuable Journal upon bad plaster ornaments, may I be allowed to ask the above question, *Who is to blame?* the man who styles himself a plasterer, or the architect? I think it is often the latter.

I have been in the habit of visiting several architects' offices, and have seen them busily employed in getting up very highly-finished drawings for plaster ornaments, and have tendered for the execution of the same, putting such prices as I have thought would pay me for the labour required, believing the architect would require the work to be finished, according to the specification, in "the very best and most workmanlike manner;" with a farther provision, "the architect to have the power to discharge any man off the work that he may think is not capable of doing the work he is employed on."

I have seen at these very jobs cast-work almost *blind*, as it is termed, and the very same men attempting to do the work, who, only a few months before they styled themselves plasterers, were carrying the hod as labourers at different jobs under the same architect.

May I again ask the question, who is to blame?

A Plasterer, who has served his Time.

FALL OF AN ARCH AT THE ART-TREASURES EXHIBITION, MANCHESTER.

One of the small side arches of the main entrance facing Stretford New-road, which was on the eve of completion, fell, on Friday in last week, killing one man and injuring seven others more or less severely.

At the inquest held on the body of the deceased workman, Mr. Dredge, the engineer, as representing the contractors, Messrs. Young and Co. was examined, and stated that he considered the rain and wind of the previous night as the immediate cause of the accident. The outside wall of the arch was 1 foot 10 inches thick, he believed, where it gave way. Bonding timbers were to have been placed in had not the accident occurred. It was intended to have placed purlins between the arch and the inner wall, to give stability to both. The timber was being prepared for this purpose, and would have been in that day had not the walls fallen. There were no tie-beams above the joists: in consequence of the inner wall not being sufficiently high there could be no tie-beams. Had the two walls been carried up simultaneously, and tie-beams introduced, it would have given additional stability to the building, but with the materials used, and the proportions of the two walls, he considered that tie-beams were not necessary, because the pans which were being placed in as the wall progressed would act as ties. The arch itself was bonded with hoop iron. There were props supporting the centres, and to the best of his belief there were diagonal props. His instructions to the men were to use the best materials. They had used Yorkshire lime in preference to Buxton, because it sets more rapidly at this season of the year.

Mr. E. Salomans, the architect to the committee concurred with Mr. Dredge as to the immediate cause of the accident, as did Mr. William Moody, the master builder. The architect also said that perhaps the rapidity with which the work had been done, and the necessity of the time for the erection of the building being so limited, may have tended to the result, partly from the mortar not having had time to set. He thought the plan adopted in this building was quite sufficient without tie-beams. His firm impression was, that there were, as was intended, angular spurs inside the arch, only leaving a height of 11 feet above where the spurs or "struts" reached to. He never had used, and never would use, permanent bond timber, as he considered it useless, and entirely dis-

approved of it. Tie-beams would have increased the strength, but were considered superfluous.

Mr. Moody said that fire-bricks, seconds, and common bricks had been used in the construction of the arch. The white face brick was set in Buxton lime. There were four spurs used for staying the arch when he left it on the previous night, two outside and two inside; the feet of which were bolted to pieces of wood in the ground. These spurs were again supported by a cross-brace and uprights. It was intended that the spurs should have remained until the arch was completed, and tied with the purlins to the other. Where the wall broke it was about 20 inches thick. Had the arch been finished in the morning, and the centre slackened in the afternoon, so as to allow the arch to feel its own weight a little, it might have stood the wind. Having been so recently keyed in it was not proper to do so before that day.

After deliberating about twenty minutes, the jury returned a verdict of "Accidental death."

ARCHITECTURAL "STEREOGRAPHS."

The chief engraving in the *Builder* of the 18th ult. namely, a portion of the interior of St. James's Hall, at large, happens to have the singularity of being almost completely *stereographic* (if I may use the term), mainly from the accuracy with which the two windows, &c. below, and the two sections of the roof ornaments above, have been drawn and engraved, so that the stereoscopic effect comes out almost perfectly by simply bringing the eyes into the right focus, as indicated in my previous communication on this subject; and this, too, in a way that no ordinary stereoscope can display, the engraving in question being far too large for admission as a slide. The accidental circumstance of this engraving being stereographic, suggests the possibility of the occasional adoption of a novelty in the *Builder*, namely, what may be called the architectural "Stereograph," especially were it possible, as I think it is, for the majority of your readers to acquire the knack of calling forth the stereoscopic effect without any stereoscope. The advantage of the stereograph to enable one to judge of architectural effect is very obvious, and the instance in point proves it even to be possible to produce an architectural stereograph of a building not yet realized in the solid. Indeed, from their geometrical exactitude, it must be much less difficult to stereograph architectural designs in this way than almost any others. Freed from the trammels of the stereoscope, there is scarcely a limit to the adoption of stereographic engravings in illustrated journals, as a new feature, developing a new faculty and a new pleasure. Such engravings would, of course, be copies of photographs taken from the round or the solid reality; but here we have, as I have noticed, in the engraving of St. James's Hall, a nearly perfect stereograph, taken from no round, and no photograph. The circumstance is certainly suggestive, and no publication would be so well adapted as the *Builder* to lead the way to such a novelty as the stereograph, whether engraved or photographed. As observed, however, there is *a condition* implied (though not an absolutely indispensable one, as I shall show), namely, the possibility of at least a majority of its readers acquiring, without much trouble, the knack of throwing the eyes into the right focus for the purpose of seeing the third or stereoscopic picture made up of the two composing the stereograph. It may be worth while, therefore, to say a little more on this subject. I have already remarked, that the ordinary expression, "crossing the eyes" (or "squinting," in fact), is an erroneous though rather a natural one to use, as that most likely to lead the ordinary reader to make a successful attempt at the requisite process; but, with the aid of Sir David Brewster, who, since my last, has explained this very process in a new publication called *The National Magazine* (No. 3, for 18th October), I shall now endeavour briefly to show how the eyes ought to be set, in order to bring out the stereoscopic effect without any stereoscope. There are, in fact, two modes of doing this, as Sir David remarks, the one by simply looking, as it were, *beyond* the stereographic pictures, to an imaginary point between as well as beyond them; and the other by in like manner directing the eyes to a similar point *nearer* than the stereographic surface. In the latter instance the stereoscopic picture appears of considerably smaller dimensions, as well as closer to the eyes, than the stereographic ones. In the former it is decidedly larger, as well as apparently more distant, and on the whole is far more beautifully and correctly brought out than the other, and preferable to it in all respects. Unfortunately, however, Sir David says, that the distant view is more difficult to see than the near one; yet it was the distant one that first, and as it were even involuntarily, struck in upon my sight; and, in the simple way in which I have taught others to apply a card on edge between the two stereographic pictures, it was also the larger and more distant that always appeared. I can now readily call forth, and keep steadily in view, either of them; but the near one, not the distant, was the more difficult to realise in my case. It is to be hoped, therefore, that by help of the card (or the open hand even), it will be found that the faculty of seeing the best of the two kinds of stereoscopic pictures without any stereoscope will not be limited to "Mr. Claudet and some others," as observed by a writer in the *Times* (to whom your publication of my last communication seems to have suggested the publication of his own remarks on this subject). The fact that your correspondent, "I. W." when induced, for mere convenience sake, to try it, found little difficulty in acquiring the habit of viewing the stereoscopic effect without any stereoscope, as well as the circumstance that, except in one or two instances, I have as yet found little difficulty in teaching it to others, seems to corroborate the idea that the faculty is *not* limited to a few, but is general, if not, indeed, with a little patience, readily acquirable by all who possess the use of both eyes. The adoption of the stereograph, however, in illustrated journals, need not depend entirely on the previous acquisition of this faculty or habit; for a modification of the stereoscope itself, I dare say, could be easily and cheaply adapted to the purpose of viewing the stereoscopic effect of stereographs, printed or photographed on the leaf of a journal, however large.

There are one or two peculiarities in the stereoscopic effect of the *Builder's* engraving of 18th ult. which are worthy of notice. The two sides of the view not being separated as two stereographic pictures usually are, in producing the third, or stereoscopic, harmonise and unite with it so well as to form, in all, a threefold repetition of roof ornament and of windows, shafts, &c.; and a new effect is even brought out which the architect did not design; for the slender shaft or pillar in the middle, which in the engraving is represented as running up along the wall and close to it, and then spreading out fan-like into the ornamental detail of the roof, comes forward, away from the wall altogether, and appears running up in front of the gallery or corridor, causing the ornamental roof, which it seems to carry, also to appear as if quite detached from the outer wall, and to be somewhat like a roof within a still higher roof. On the whole, the stereoscopic property of this engraving is certainly remarkable, if accidental, for a certain slight difference of a specific character, as well as a general similitude in the stereographs, appears to be requisite to the stereoscopic effect, and it almost seems as if this must have been purposely arranged in this case, only the effect is in some respects a little defective, though in the general features so wonderfully complete.

In regard to the remark of "I. W." as to the high price of stereographs, I entirely sympathise with him: it is, indeed, a pity that we cannot have them a little cheaper. When the printing-press is brought fully to bear upon this interesting branch of art, however,—as it even now seems in the way of being, if advertisements as to a new process in connection with which Mr. Roger Fenton's name appears may be trusted,—it is to be hoped that good stereographs will become much cheaper than they now are, more especially if the polychromatic process also can be applied or adapted to them: meantime I find that a great variety of French and other stereographs can be had at very reduced prices in a shop a few doors west of Somerset House, in the Strand. For excellence, as well as variety, however, Sir David Brewster—the perfecter of the stereoscope itself—recommends those of the Stereoscopic Company in Cheapside and Oxford-street.

J. E. D.

WHAT SETS HOUSES ON FIRE?

In a communication to the *Morning Advertiser*, Mr. F. B. Thompson treats of this subject, and after pointing out various ways in which spontaneous combustion may take place, especially by the action of water in connection with other substances, states that so long ago as July, 1804, the learned chemist, Bartholdi, presented to the French Institute an elaborate paper on spontaneous combustion, in which its origin was accounted for in ten different ways, namely;—1. Considerable friction. 2. Action of the sun. 3. Disengagement of caloric from non-combustible to combustible bodies. 4. Fermentation. 5. Wool, cotton, &c. mixed with oil. 6. Boiling linseed oil. 7. Torrefaction of vegetable substances. 8. Disengagement of phosphoretted and sulphuretted hydrogen. 9. Wet charcoal. 10. Contact of charcoal with combustible detonating bodies.

Surely, adds Mr. Thompson, it behoves every one, upon reading this list, to look around him in order to detect if possible any source of danger such as is here indicated; and I do believe that beneficial results would follow if the various insurance offices would take the trouble to circulate amongst their customers a brief list of precautions, with a signification that attention thereto might prevent, in case of accidents, any trouble as to the payment of claims.

There is one point in Mr. Thompson's important communication, however, of which we would wish to make a brief note, as it is a pity that, by any misunderstanding, the danger, great enough in all conscience, as this last year, with its stereotyped "cause unknown" of numerous fires, has singularly proved, should be anywise exaggerated, especially as regards that apparently but not really very innocent and harmless *extinguisher* of fires,—water. Mr. Thompson says "water is capable of oxydizing everything, and it cannot part with its oxygen without at the same time liberating an equivalent proportion of hydrogen," which he characterizes as "the most inflammable gas in existence." Now, as to the power of water to oxydize everything, and so inevitably to liberate its inflammable hydrogen, water is *not* decomposable by everything, even though it were indubitable that it can oxydize everything: in many cases water does oxydize without being decomposed at all or liberating any of its inflammable and dangerous hydrogen: in such cases, in fact, it only acts as a solvent and holder of the oxygen of the atmosphere with which, and not with its own oxygenous neutralizer and fixer of its inflammable hydrogen, it oxydizes many things. It is a very erroneous inference, therefore, that because water oxydizes everything, therefore everything is capable of setting free its dangerous hydrogen. Indeed, there are very few substances (comparatively to "everything") that *are* capable of evolving so dangerous an element as hydrogen from water. Nevertheless—and over and above the direct power of a few simple elements, such as potassium—when *two* elements come together, one of which is, at one and the same time, combustible, and also capable of seizing the hydrogen, while its fellow lays hold of the oxygen, the one will but too readily cause danger by running off with the incendiary hydrogen, while his confederate so assists him by holding down the oxygen. In such cases there is, indeed, danger, but not *necessarily* so where water only oxydizes by acting as an air solvent without being itself decomposed.

NEW GOVERNMENT OFFICES COMPETITION.

No one will doubt for a moment the wisdom of the stipulation contained in the "conditions" for the new Government Offices competition, that the drawings are all (both perspective and geometrical), to be tinted in "light brown Indian ink" (which term I presume includes the use of sepia). But surely it will not be just to those who would depend partly, or perhaps principally, on polychromy for effect, to be deprived of the only means of showing it. Some arrangement, by which architects intending the use of coloured material, may be enabled to make apparent their intention, certainly seems most desirable; and now that petitions are being sent to the authorities for extension of time, is the moment for urging this subject.

C. M. M.

I hope soon to see by your columns that the requisite Parliamentary notices have been given to the tenants of ALL the houses on the proposed site, both within the red line, and, as has been suggested, of those in the immediate vicinity, the FREEHOLDS of all of which should be purchased by the Government at *once*, leaving the tenants to be removed as the buildings progress, so that in cases where the leases have only short terms to run, these leases might be allowed to expire. Unless this course be adopted, the freeholders will be likely to grant fresh leases to their tenants (and probably at increased rents), with a view to greater compensation. The sites for the Foreign and War offices might, however, I think, be cleared during the next summer, if the Act were obtained early in the session.

AN INTENDING COMPETITOR.

LIQUID GLUE.—SHELL-LAC.

I HAVE read with interest Mr. Mulholland's excellent letter in the *Builder* for October 25th, and quite agree with his views on the subject of Mr. Cook's patent. A solution of shell-lac in spirit, simple, or mixed with other resins, has long been used for cements and varnishes; but, unlike your correspondent, I cannot see what danger is incurred in preparing it. For my own use, I make the "liquid glue" thus: having introduced the requisite amount of "shell-lac" (not powdered) into a tall, wide-mouthed bottle, add methylated spirit until its surface is level with the top of the shell-lac: sixty hours will perfect the solution, if the bottle is well corked and shaken occasionally; but if the solution is required for immediate use, the bottle must be immersed to the neck in hot water, and its contents stirred until homogeneous. Of course the "liquid glue" can be made of thicker or thinner consistency by varying the proportions of resin and spirit.

It is, I think, among the things "not generally known," that if a rather thin solution of good "orange shell-lac" be laid evenly upon a perfectly clear surface of *tin*, or other bright metal, when *perfectly dry*, the article will present an appearance similar to brass or lacquered goods, but of, in my opinion, a better tint. From three to five coats are required, which should be applied with a soft brush.

The hard, transparent film thus given will protect metal from the action of water, and tin cans, &c. may thus be rendered as durable in this respect as copper. As must be sufficiently evident, this process is by no means an expensive one.

WENTWORTH L. SCOTT.

ELECTION OF DISTRICT SURVEYOR FOR ST. MARY'S, NEWINGTON, &c.

THE Board of Works, at their meeting on Friday, the 31st ult. proceeded to elect a surveyor for the district of St. Mary, Newington, the central division of Lambeth, and the northern division of Battersea, under the Metropolitan Building Act. The following are the names of twenty-seven candidates who went to election, with the number of votes recorded in their favour:—

Hart, 8; Markham, 3; Tarring, 18; Hesketh, 18; Stock, 23; Lower, 3; Jarvis, 20; Stephenson, 4; Benham, 2; Gritten, 10; J. Billing, 11; Leddiard, 6; Lewis, 4; Bramwell, 1; J. H. Taylor, 26; Lett, 1; Johnson, 14; Parsons, 22; Badger, 2; Legg (D.S.), 8; Ridley, 2; G. Legg, 26; Cole, 12; Blore, 4; C. Barry, 9; Burford, 1; Barnett, 23.

The list was then reduced to the six highest on the poll. The votes were taken five times over, the lowest on the list being omitted each time, with the following result:—J. H. Taylor, 19, 23, 21, 20, 24; G. Legg, 18, 21, 18, 19, 14; Parsons, 18, 21, 19, 16; Stock, 15, 13, 15; Barnett, 13, 12; Jarvis, 12. And then, by a substantive motion, Mr. J. H. Taylor, the late district surveyor of Tottenham, dispossessed by the Building Act of 1855, was elected to the office.

"PROJECTIONS" UNDER METROPOLITAN BUILDING ACT.

The District Surveyor of Bermondsey v. *Norton.*—In this case, heard at the Southwark Police Court, the complaint was, that Norton "did make a certain projection from the building, No. 49, Long-lane, Bermondsey; the said projection extending beyond the general line of fronts in a certain street (to wit) Long-lane aforesaid, such projection not coming within the exceptions permitted by section 26 of the Metropolitan Building Act, and not having the permission of the Metropolitan Board of Works to such extension."

The projection is 11 feet square and 8 or 9 feet high, and consists of six rafters, framed into a plate at each end; the upper plate, or pitching-piece, resting on two iron brackets screwed to the frieze of the shop front, and the lower, or raising plate, resting on two posts standing in sockets let into the ground. On the rafters a tarpauling is stretched, and secured to hooks. The projection is wholly on the fore-court of the house.

At the hearing, on the 21st October, the district surveyor having explained the nature of the projection, and put in a drawing of it, and pointed out that it was considered by him contrary to the 26th section, rule 5, of the Act, the magistrate, Mr. Burcham, adjourned the case to the 25th October, and in the meantime inspected the projection and the localities.

On the 25th, the magistrate, after reading the 143rd section of the Metropolis Local Management Act, relating to buildings on fore-courts, and the 26th section of the Building Act, decided that the construction was a projection within the meaning of the Act, notwithstanding the argument of the builder that it was moveable, and had actually been taken down in less than half an hour; but he said, it would be difficult to convince him that it extended beyond the general line of fronts in the street.

The district surveyor urged the importance of the question submitted for the magistrate's judgment; and the attention which the subject of projections was receiving from the public, and from the Metropolitan Board of Works at every weekly meeting. He then argued that the general line ought, in this case, to be taken to coincide with the fronts of the main buildings in the block of buildings between Weston-street and West-place, which fronts were in a straight line from which there was but one slight projection on the ground story, at the other or western end of the block. That this was the rule upon which the official referees acted in interpreting a similar term under the late Act, and that this alone would afford protection to the neighbouring houses, which, in this instance, were dwelling-houses; to the occupiers of which, as a general rule, such a projection would be a great annoyance.

The magistrate said that the words of the Act were—"The general line of fronts in the *street*," not in any separate *block of buildings* in the street. He found the fronts of the buildings in Long-lane so irregular, that he did not see how he could settle any general line. Eastward of the building in question he found some main buildings as far in advance as this projection, and westward, a potato-stall and another shop were built forward up to the street itself; and that the projection in question did not advance beyond the line of these buildings.

The district surveyor said, that if the magistrate overruled his view of the general line being to be taken as the fronts of the buildings in the block, he must yet submit that the general line could not be deemed to fall in with a line stretched from the buildings the magistrate referred to eastward of this projection, to the projections he mentioned westward, a distance of more than 100 yards (really 133 yards), without touching any front at all, and crossing two streets. That even across this extreme distance, if a line were stretched upon the fronts of the main buildings, it would pass through the middle of the projection, and leave part of it extending beyond it; and it would extend still more so, if the line were made to touch other fronts in any intermediate points which would be fair in the magistrate's judgment.

The magistrate said, that he could not take upon himself to determine a general line in a street in which the fronts of the buildings are so irregular; and he declined to make an order, inasmuch as he could not consider the projection to be without all doubt beyond the general line. He therefore dismissed the summons.

THE DECORATION OF ST. GEORGE'S HALL, LIVERPOOL.

INTERNAL PAINTING.

ONE of the competitors in the Liverpool Library and Museum Competition deserves, I think, credit for the system of colouring intended for the interior of his building, and which was indicated by the sections,—a mode of decoration under any circumstances right, but when, as in this case, carved or constructed ornament could not be afforded, it had the additional advantage of being also the most economical. It strikes me as being singular that, whilst we have so many exteriors in the Classical styles, no attempt (excepting what has been lately done at the British Museum) has been made to carry out a characteristic style of coloured decoration in the interiors of our buildings. I was much struck, on lately visiting St. George's Hall, by, what I consider, the desecration of that fine building in its internal finishing. Outside, all is in character befitting the municipal hall and courts of justice of a great town,—noble, substantial, and truthful: inside, you see everywhere mockery and sham. No attempt has been made to sustain the character of the exterior by appropriate and truthful decoration,—materials being what they seem to be, and *paint*, where used, appearing as paint. The south entrance-hall is painted or papered to imitate granite: the corridors above on first floor are painted and beaded to imitate wainscot; whilst an immense sum has been thrown away in the New Concert-room in the same tasteless way, the walls being there grained in imitation of a great number of "fancy woods," with a vast amount of gilding—the latter being the "decorator's" unfailing resort, in the absence of taste, to produce a fine effect. But what, perhaps, is worst of all, is, that in *the* Hall the splendid polished *granite* columns are surmounted by capitals of *plaster*, painted for what I suppose is intended as an imitation of bronze. So long as they remain they convey a deep reproach. M.

IS A CIRCLE SEEN IN PERSPECTIVE AN ELLIPSE?

IN your review of Mr. Burchett's "Perspective" a few months ago, you remarked that this statement (page 78), "the student will do well to bear in mind that a circle seen in perspective is not an ellipse," betrayed a slip in knowledge of conic sections; and your remark produced an inquiry by many of the masters and students of Marlborough House concerning the truth of the statement. The book in which it occurs is by the head master of the Art Training School at Marlborough House, and is the text-book upon which all the examinations for certificates are conducted. The result of the inquiry before referred to is in my own mind a conviction that a circle seen in perspective *is* an ellipse; and this belief is shared by many of my fellow-students; but there are also many others who cannot realize the fact, and who believe in the Department's text-book. Now, if these men's faith on this subject was confined to their own practice, it would be hardly worth while to question its soundness; but such is not the case, and it is an alarming truth that a circle is put in perspective by means of the diameter and diagonals of a circumscribing square, and as a consequence, that a circle in perspective is not an ellipse,—I say it is an alarming truth that this doctrine is taught in the Training School for Masters at Marlborough House, and by the masters of every school of art in London. The book also, as being published with the Department's authority, must be received as the standard work on its subject by every school of art throughout the kingdom.

For these reasons, and without any ill-feeling toward those who believe what they have been taught, or toward the authority which has compelled them to believe it, but for a simple love of and desire for truth, I request you to set this matter at rest.

I am aware that as the doctrine which contraverts this statement is a modern one, the *onus* of proving its truth clearly rests with its originator, but this is, perhaps, expecting too much from one in authority.

ONE OF THE DEPARTMENT'S CERTIFICATED MASTERS.

*** Our correspondent attaches rather too much importance to the results which may arise from inculcating the error in question; but we will give the demonstration asked for.

SANITARY OPERATIONS IN LIVERPOOL.

FROM the report of Mr. James Newlands, C.E. the borough engineer, for 1853-56, it appears that in the three years 564 sewers have been constructed, in length 26 miles 182 5-6th yards, at a total cost of 53-634*l.* 15s. 9d.; and that 1,740 new gullies have been constructed, and yet the average quantity per annum of soil removed from all the gullies, old and new, is only 1,206 loads, while in 1850 the number of loads was 4,411. This diminution, it is remarked, is due to the better construction of the gullies. The report further states that 24,416 premises in the borough have been drained between the time the Sanitary Act came into operation, in July, 1854, and the 1st of March last; while the number of premises drained in the same period in the out-townships has been 2,057, being 1,500 more than the number drained under the old Act in sixteen months. During the three years sixty-four streets, of an aggregate length of 7,985 yards, have been paved by the Health Committee, and twelve streets, of the aggregate length of 1,457 yards, by the owners of the land. Since the introduction of the system of paving the streets with square sets, 289,904 superficial yards of Macadam and boulder paved roads have been converted into set paved streets, with large channel stones and granite curbs. The plan of using blocks of wood, in alternate courses, had been tried in Great Howard-street, but the wood speedily became depressed below the general surface. The quantity of flagging of footpaths laid in the three years has been 50,534 superficial yards. The Kilrush flagstone is stated to be the best that has been used. The cost of the recent re-numbering of the houses is set down at 875*l.* 5s. 9d. The cost of the scavenging staff in the year 1855 was 12,477*l.* 9s. 6d.; and for the last nine years the total cost has been 101,270*l.* 12s. 5d. Eleven of the large lamp-pillars, on raised platforms (from designs by Mr. Newlands) have been fixed in various localities in the past few months, and others are to be put up.

IRISH NEWS.

Dublin.—The dedication of the church or chapel of St. Joseph, erected in connection with the asylum named after the same saint, was performed on Wednesday week by the Papal Archbishop of Dublin. The institution of St. Joseph is one for the maintenance of aged and virtuous women. The church is in the modern Italian style of architecture. A large room, originally designed as a kind of vestibule to the church, which is separated from it by three arches, corresponding with the triple arches at the other extremity behind the altar, has been fitted up to accommodate a large portion of the congregation, and may now be looked upon as a permanent part of the church. The side walls present the appearance of a series of latticed arches, those on the right opening into a wide corridor, where it is proposed that the choir shall hereafter be placed. Over the latticed arches are stained-glass windows, three on each side. The ceiling, which is square, has deep panellings, the stucco of which is relieved with gilding, and from the centres of the panels are suspended a sanctuary lamp and two lustres. Above the altar is a copy, full size, of Murillo's picture of the Immaculate Conception, in the Louvre. There is also a full-length picture of St. Bridget, painted by a Maltese artist, and presented by the Right Hon. R. M. O'Ferrall. It is hung at the extreme end, opposite the altar. Of the six win-

dows, those next the altar on either side contain symbolical objects, such as the Lamb and the Cross, the sacred heart of Mary, the heart of St. Joseph, &c. On the next pair are represented, in three medallions on each window, the "Presentation of the Blessed Virgin in the Temple," the "Espousals," the "Annunciation," the "Nativity of our Lord," the "Epiphany," and the "Purification," with border work and mottoes; and, finally, on the two farthest from the altar are similar medallions, representing "St. Joseph warned by the Angel," the "Flight into Egypt," the "Return from Egypt," the "Finding of our Lord in the Temple," the "Interior of Nazareth," and the "Death of St. Joseph." These, and other windows, have been executed in Dublin by Irish artists. The tabernacle of the high altar is carved and gilt. On either side of the high altar are life-size figures of angels in an attitude of adoration; and beneath the altar is a group in plaster, representing Mary, the Mother of Jesus, weeping over His dead body. Behind the side altars stand figures of the Virgin and of Joseph, her husband, and in niches high above them there are figures of the archangels Gabriel and Raphael. The general tone of colour in the church is a mellow white. Over the vestibule is the principal dormitory of the asylum, which opens into the church by an arched window, latticed to correspond with the latticed arches below. This dormitory is used as the infirmary, whence the sick in their beds assist at Mass. In the porch are busts of the pope, Dr. Beytagh, &c.

Bannow (Wexford).—The Roman Catholic church at Bannow, county Wexford, has been opened. This church was commenced about twelve years ago, but owing to the death of Mr. Thomas Boyse (brother of the Rev. Richard Boyse, of Halkin-street, Belgrave-square), who was the principal contributor, combined with the famine and the emigration of parishioners occurring shortly after, it was not completed until week before last. The church is described to us as being a neat building, with bell-tower. There are three stained-glass windows: the large one is divided into compartments, containing the Evangelists. Bannow, adds our informant, is the birth-place of Mrs. S. C. Hall. The decorations are by Mr. Hughes, of Wexford.

Wexford.—The fine old Franciscan Church at Wexford is now undergoing a thorough repair, under the direction of Mr. Byrne, of Dublin, architect. Tenders are under consideration for the erection of a bell-tower about 80 feet high. Mr. Richard Pierce is clerk of works, and Mr. P. O'Connor the contractor for the repairs.

Cork. — The examination of the works of the students of the Cork School of Art by the inspector of the Department of Science and Art, took place on the 22nd ult. and resulted in the award of fourteen medals and sixteen honourable mentions, among ninety-nine works exhibited. Nine prizes were also awarded for examinations in perspective, geometry, and freehand drawing among thirty competitors. On the evening of Friday, the 24th ult. the prizes were distributed to the successful students by the Mayor of Cork, in the Athenæum, when upwards of 800 of the citizens were present, and the performances of a military band gave variety to the entertainment. The committee took advantage of the occasion to collect together some of the best specimens of art from private collections in the neighbourhood, and objects of *vertu* and antiquities, which form so attractive and interesting an exhibition that the committee intend to keep it open for a fortnight.

RECOLLECTIONS OF AN OLD TREE IN CLERKENWELL.

It is the fate of all things—man, tower, tree,
To stay their time on earth, and then decay.
HERBERT.

At the corner of Cobham-row and Coldbath-square, there has stood from time immemorial a noble horse-chestnut tree, which for some time past has exhibited no signs of vitality. Seasons have gone their round, and no green leaves, blossoms, or fruit appeared on any of its branches; until, at last, "What good is it?—cut it down: why cumbereth it the ground?"—and a once familiar tree lives only in our recollections.

Often have we sported beneath the wide-spreading branches of this patriarchal tree, at times and in season gathering from the ground a store of its nuts, and wishing they were edible and not so bitter to the taste. Oft, too, has our rest been broken, when the stormy wind agitated its branches with a mighty rushing noise; and sometimes have we started in our waking dreams when the pale moonlight was streaming through the window-panes, and the dancing shadows of its leafy boughs appeared spectre-like on yonder wall.

Some years ago a fine bough that hung low was lopped off, and the amputated part covered by a sheathing of lead, to prevent a renewal of its growth. More recently the bark was stripped from the trunk, and the smooth surface thus exposed made available by the bill-stickers for the display of their broadsheets damp from the press.

The height of the tree was between 70 and 80 feet, and the girth of the thickest part of the bole little less than 7 feet. It has been sawn down within a few feet of the ground, and serves, at present, the base use of an area gate-post.

Local history tells us that this was one of a grove of trees that once grew here in the extensive grounds of that ill-fated nobleman, Sir John Oldcastle, afterwards Lord Cobham, a great Reformer, and who, poor fellow! by the barbarous inhumanity and persecuting spirit of the age in which he lived, was hung in chains as a heretic, and roasted alive in St. Giles's Fields, in the year 1418, for his noble advocacy of the doctrines of Wyckliffe and an alleged conspiracy against the government of that redoubtable monarch, the hero of Agincourt, Henry V. His family mansion became a tavern, known as Sir John Oldcastle's Tavern; subsequently a Small-pox Hospital, specially for the reception of patients in the incipient stages of that disease, and such as caught it naturally. The building was afterwards reconstructed, and continued to be used as an hospital till 1795, when the charity was removed to the chief establishment at King's-cross. At a later period the property passed into the hands of the Countess of Huntingdon's connection, when the hospital building was converted into private dwelling-houses, which yet remain on the north side of the thoroughfare well known as Cobham-row.

W. J. P.

COMPETITIONS.

Congregational Church, Weston-super-Mare.—Seven designs for this building were received and examined by the committee: and one, marked "Labor et Spes," was selected, which was found to be by Messrs. Pritchett and Sons. The chapel consists of nave and aisles, and will seat about 600 persons. The spire will be about 100 feet high, and the style adopted is Late Decorated.

Notices of Books.

Elementary Course of Geology, Mineralogy, and Physical Geography. By Professor ANSTED. Second Edition. Van Voorst, Paternoster-row. 1856.

Advanced Text-book of Geology, descriptive and industrial. By DAVID PAGE, F.G.S. Blackwood and Sons, Edinburgh and London. 1856.

To the engineer, the architect, and the artist these two excellent treatises are of special value. They are both written for just such readers and students as the younger members of these professions and others to whom geology constitutes a specially useful study. Great efforts have been made to give them a popular and generally attractive form, and not to overload them with fact and detail, at least in an unsystematic shape. Professor Ansted's work is the larger and more comprehensive of the two, and the present edition has been considerably improved, by curtailments in some parts and extension in others. The "descriptive" portion has been mostly re-written, so as to afford a fresh sketch of this department of the subject, showing its present state. The "practical" portion is largely increased, and now constitutes something like a complete sketch of this important part of the subject, beginning with much valuable instruction and remark on the application of geology to engineering and architecture. To the importance of the subject to these professions we need scarcely now advert, having already on various occasions done so: neither need we enter more fully into Professor Ansted's valuable contributions thereon, the readers of the *Builder* having already had the benefit of the professor's extensive knowledge of subjects connected with it, at some length, in our own pages.

It is certainly true that great works may often be satisfactorily enough completed without the aid of geology, but unquestionably a knowledge of its deductions confers a certainty and security not otherwise obtainable.

"We have seen a tunnel," says Mr. Page, "carried through the wet and highly-inclined strata of a hill where every foot had to be arched with brick or stone, while the deviation of a few hundred yards would have carried the same through rock-masses, where not an inch of building would have been necessary. In ignorance of the limits of a coal-field, we have seen a railway carried along the outskirts, to which every coal proprietor has to lay down miles of tramway, more than the half of which would have been saved had the engineer had the necessary knowledge to have adopted a central course. The strata of the London, Hampshire, and Paris basins are now so well known to geology, that artesian wells can be sunk with certainty to this or that stratum; and so with every other district whose strata have been mapped and generalized by the geologist. Again, in deciding upon the collecting-field for the water supply of large towns, a knowledge of the rocks of the area is indispensable, so that deleterious mineral ingredients may be avoided, new lines of springs tapped, and waste by subterranean fissures and faults prevented."

But all this, as we have said, is now very well known to engineers and architects, and geological works constitute a standard contribution to the multifarious libraries of both professions: we thus quote the author more for the purpose of bringing him personally as it were to the recollection or notice of younger students, while recording the advent of his new publication, than with any other view. We may at same time remark, that it is not to engineering and architectural students and to builders alone, amongst our varied readers, that geology is useful, but also to the artist generally, and the landscape gardener, the surveyor, the landscape painter, and others.

In the preface to his "Advanced Text-book," Mr. Page briefly indicates his purpose in the issue of the series to which this new treatise belongs. As it is with every science, he remarks, so is it with geology: let an outline be given of its leading features, that the beginner may arrive at some notion of its purport and bearings: let this be followed by the details; and the details by the higher reasonings and philosophy of its problems. The present volume is that which gives the details. Yet the volume is carefully kept from being overloaded even with these, so as to disgust the learner, and retard his progress. What the author has aimed at, is the production of readable manuals for self-instruction, as well as class-books for schools,—treatises, which in their readableness, will embue the student with the spirit and methods of geology rather than cram him with its provisional or other details. This author's new volume, like Professor Ansted's "Elementary Course," appears to be a decidedly valuable contribution to the study of the interesting and important science of which it treats.

VARIORUM.

"THE Churches of Essex, architecturally described and illustrated," by Mr. George Buckler, architect (Bell and Daldy, 186, Fleet-street), has now reached the Seventh Part, which contains accounts of South Weald Church, Writtle Church (All Saints) Chelmsford Hundred, and St. Runwald's, Colchester, with illustrations and plans.——"A (full) Report of the Proceedings at the Ceremony of laying the Foundation-stone of the St. Thomas Charterhouse New School Building" in Golden-lane, by Mr. Gladstone, M.P. has been published in the form of a tract by Messrs. Longman and Co. In the course of the address of Mr. Gladstone (officiating for the Marquis of Lansdowne), the Hon. ex-Chancellor made impressive allusion to the moral *debt* which the west of London owes to the east. "He who builds a square or builds a street of palaces in the west end of London," he remarked, "builds along with it, and virtually calls into existence, other streets filled with the dwellings of tradesmen, and other streets again in the same neighbourhood, or not very remote, filled with the dwellings of labourers who wait upon these tradesmen, and are employed with them: the quarter of Belgravia builds the quarter of Bethnal-green." This, he observed, constituted the foundation of that great debt of which he spoke, and some slight beginning of a sense of responsibility in the west, with reference to the demands and necessities of the east, was now being felt.——A lively and entertaining lecture, by the Rev. A. B. Sutor, curate of St. Dunstan's in the West, on "The Worthies of St. Dunstan's," has been published, by

request, by Messrs. Bell and Daldy. Here we have introduced to us some of the more notable denizens of St. Dunstan's within the last two or three hundred years,—the exiled preacher and persecuted ecclesiastical reformer, Tyndal,—the talented and eloquent vicar of St. Dunstan's, Dr. Donne,—his friend and fellow-parishioner, "honest, yet meek, Isaak Walton, the master of anglers and one of the choicest of writers,"—his successor, the quaint, stern, and consistent Mr. Praise-God Barebones, a man somewhat misrepresented by old prejudices,—the banking Childs and Hoares,—and though last not least, immortal Sam, of Bolt-court.——"The Difficulties of the Metropolitan Drainage Question solved by the Sewage Works of Leicester," is the title of a pamphlet by Mr. W. F. Cooke, just issued by W. H. Smith and Son, of the Strand. It also contains "Extracts from Mr. Bazalgette's report, and a map of the proposed drainage to Barking-creek. The example set by Leicester is certainly a spirited and instructive one, and, as we have said, well merited the personal attention of the members of the Metropolitan Board; but whether it be capable of entirely *solving* the metropolitan drainage question remains to be seen: we are hardly prepared to go that length as yet.——A "Guide to the Caterham Railway, near Croydon, in Surrey, and to the Country around it," by Mr. Thomas Wright, of Brompton, the antiquary, has been published by J. R. Smith, of Soho-square. This is a vicinity interesting to us, on account of the prospect there is of its becoming one of those sites of improved dwellings for the higher class of Metropolitan *employés*, which arrangements with the railway companies having termini in the Metropolitan outskirts render possible. It seems that even already annual railway tickets at 7*l.* for first-class and 5*l.* for second-class are being issued to persons building houses on the property of the Caterham Railway Company, and we hear that Sir S. M. Peto, and some of the London bankers and merchants, have selected several hundred acres on this line for the erection of country residences for their clerks. The Caterham estate itself, we observe, is to be sold by auction, by Messrs. Norton, Hoggart, and Trist, at the Mart, on the 20th inst. There is abundance of building stone, brick-earth, lime and gravel, it appears, on the estate, and we hope to see, some of these days, a goodly display of improved dwellings for the jaded industrials of London reared in that vicinity.——The first part of the *National Magazine*, has now been issued by the (limited) company, in the Strand, who have associated themselves with its destinies. One useful feature in it is a chapter on Homes, and their improvement, with illustrations, which usually concludes each weekly number. The literary matter of this new periodical promises fairly, but would it not be well not to attempt so much in the way of illustration for so small a sum as twopence? We should rather have it with even one decidedly good engraving, than half a dozen "chops." It is impossible to give so much as is aimed at for so little, without merging into the usual sickening mediocrity, if the product merits even to be so called.——The "Hand-book of Zoology," by J. Van Der Hoeven, translated by the Rev. W. Clark, is a large and laborious work, in two volumes, one of which only has as yet been issued by the publishers, Messrs. Longman, and merits a more special and fuller notice than such a subject, however interesting to our readers as well as to others, is entitled to receive in the *Builder*. It is likely to form a standard book for reference, more than for cursory perusal, from the scientific and formal, yet interesting and instructive, way in which it is arranged.

The Essex County Surveyorship.—At the Essex Quarter Sessions, recently held, the question of a successor to the late Mr. Hopper was discussed, when it was suggested by one of the speakers that what they required was a practical man who understood building, and who would stand between them and the builder—not an architect nor a surveyor! Ultimately it was resolved to refer the matter to a committee which was named for the purpose, Mr. Burn, who had acted in the place of Mr. Hopper during his last illness, to continue to act till next session.

Miscellanea.

Essex Archæological Society.—On Thursday, the 30th ult. a meeting of this society was held at St. Osyth, the Rev. J. H. Marsden in the chair. The report read showed the finances to be in an improving condition. The chairman read a paper upon St. Osyth Priory; and a description of the wall paintings in Hadleigh church, Essex, was given by Mr. Cutts, who read a communication from a gentleman who had greatly interested himself in these remarkable relics. The remains of the old Priory were made available for the inspection of the visitors. The large rounded gateway, usually said to be of Norman workmanship and design, and respecting the date of which doubts had existed in the minds of former visitors, was made the subject of an opinion, by Mr. C. F. Hayward, who said that the Decorated style did not always infer a pointed arch; that the mouldings and the shafts (not isolated) of the gateway were of the Decorated period; and that the capitals of the pillars were verging upon the Early English sayle. Mr. C. H. Hayward gave a description and history, illustrated by photographs from Florence, Venice, and Rome, of inlaid stone-work, referring to the chequered facing of the Priory, as an illustration of how locality developed different architectural designs and deeds from a common and general idea.

Improvement of Lambeth.—I quite agree with the remarks of your correspondent, "R. M. W." in your paper of the 1st, respecting "The trees in Lambeth," and I would recommend the vestry to make more arrangements for the improvement and embellishment of our public roads: at the same time I do not agree with him in thinking that "our Lambeth authorities seem to delight in such dilapidated buildings, stenches, and all sorts of nuisances as may be found at the water-side, between Lambeth Palace and Vauxhall-bridge." It must be borne in mind that between Lambeth Palace and Vauxhall-bridge, dirty as it may appear, a great trade is carried on, which employs some thousands of workpeople; and, however disposed the authorities might be, they could not take such steps as "R. M.W." points out, without almost entirely changing the whole character of the locality. Nevertheless, I fully admit the desirability,—yea, the necessity of energetic steps being taken for its improvement in every possible way.—L. W.

Report on Alleged City Gas Nuisance.—At a court of City Sewers Commission, last week, the committee upon general purposes reported on this subject, recommending that the Commissioners lay the whole of the evidence and documents in the case before the Lord Mayor and Court of Aldermen, that they may direct such steps to be taken in the case as they may be advised. This the committee state as their recommendation after having consulted both the City solicitor and the solicitor to the Commission, which gentlemen, in a communication addressed to the committee on the subject, say,—"If upon a deliberate consideration of all the facts and circumstances brought under your notice, you disbelieve the evidence upon which the complaint is founded, we advise you to dismiss it altogether. If, on the other hand, were you sitting as a grand inquest, you would think the complaint sufficiently substantiated to warrant its being put in the course of trial, we are of opinion that it should be done by means of an indictment for a nuisance at common law," but that "applying the ordinary rules of legal construction to this case, we have great doubts whether the summary jurisdiction created by the Nuisances' Removal Act, and the other modern statutes to be read *in pari materia* with it, can be made applicable to gas-works: at any rate, these modern remedies for nuisances affecting the public health and comfort are an addition to, and not in substitution of, the common law."

The "Patent Elevator."—As one of the oldest subscribers to your valuable publication, I beg to address you on the subject of the "Patent Elevator," described in the *Builder*, and to inform you that several years ago the idea struck me that the principle of the "Lazy Tongs" might be applied for the purpose of a fire-escape. I then made a model (which I have now in my possession) precisely similar to that now patented, with the exception of a difference in the method of raising it, and showed it to Mr. Braidwood, the superintendent to the London Fire Brigade, with the view of patenting it. His observation prevented my doing so, as he stated that a similar model was then in the Polytechnic Institution, and was not considered so good as the fire-escape in use. I also showed it to a celebrated architect, who strongly recommended me to introduce it to the public for the purposes of the builder, decorator, &c.

D. Pennino.

*** The invention has also been claimed for another gentleman. A third correspondent, Mr. Telford, says there is an engraving of a similar "Elevator" in the *Mechanics' Magazine*, vol. II. p. 65 (1829).

Submarine Railways.—Mr. L. Coddé, of Paris, has invented a system of submarine communication, which he thus describes:—I employ iron tubes from 15 feet to 18 feet in length, 4 inches in thickness, and 18 feet in diameter, and which, when united together, form a single continuous tube, in which the railway is to pass. The tubes are provided internally at proper intervals with joints. To prevent water from entering the tubes when being sunk and previous to their junction, the extremities of the tubes are closed with iron plates, about ½ inch in thickness, screwed or bolted to the joints. The plate of the one tube is concave, and that of another convex; by which arrangement, when the tubes are united, the plates fit into each other completely, and the tubes being screwed or bolted to the joint, the interior of the tubes becomes hermetically closed. When all the tubes are united together, communication is opened through the whole length of the railway by removing the plates: the rails are then laid down by the ordinary means. Other arrangements are also described.

Science in the Workshop.—The first of two lectures on this interesting subject was lately delivered to the Coventry Institute, by Mr. Henry Gore, in St. Mary's Hall, Coventry. The lecturer, in course of his remarks, alluded to the superiority of Britain over other nations. That superiority, he said, was due in a great measure to her almost unlimited supply of fuel and raw materials for manufactures; but surrounding nations were bestirring themselves, were using the means placed at their disposal by recent improvements; and if England kept her position in future, it would only be by means of intellectuality in her artizans. It was necessary to educate that class so that they might know how to deal with raw material with the least possible expenditure of time and material. Instead of being particularly anxious that the children of artizans should be acquainted with the foreign roots from which words in their various languages were derived, the continental nations put them through a course of industrial instruction, and it would be well if the same course were pursued in this country. He came from Leeds, and he might tell them a very important fact. Much of the cloth sold in that neighbourhood as being manufactured there, was, in reality, made by the Austrians! and it was only fifteen years since that trade had been introduced into Austria. Having made reference to instances of a similar kind with reference to Bradford and Belgium, and the progress that foreign countries were making in manufactures supposed to be exclusively English, the lecturer said that he only threw out the hint because he was convinced that in proportion as the artizans were taught the science of common things, they made good workmen; and he was compelled, however reluctantly, to admit that, during the last five years, France, Prussia, Belgium, and Austria, had made almost more progress than had our own country since the introduction of steam. Now what would be the position of England in a few years if they did not at once take this bull by the horns?

The Half-holiday for Workmen.—I have watched with considerable interest the efforts making to secure a half-holiday by the operatives in the building trades. The men do not propose to have this half-holiday at their own expense: who, then, is to pay? The argument that they will do as much work in five and a half days as in six days, is simply ridiculous. Builders, as the pages of the *Gazette* unfortunately testify, are of all the tradesmen in this country the least able to bear any fresh burden. I grieve to say that a foolish and unwarrantable competition, which the public seem to insist on and encourage, has reduced the profits of the trade till it is almost impossible to live by it; that where one master succeeds to a competency, a hundred fail. With few exceptions, indeed, builders are poor men, and cannot afford to pay for holidays. The question then is—are the public prepared to pay? If I must judge from the amount of grumbling that almost invariably takes place when the bricklayer or mason present their "day bills," I should say, emphatically, no! Who ever pays an account to a joiner without alleging that the work has come to far more than he expected? and in very many cases these complaints are accompanied with severe strictures on the ability and industry of the operative. Who ever gets in estimates for a house but it comes to far more than he intended to spend, while the builder is very often asking even less than the work can be done for? I cannot, with these facts staring me in the face, believe that the public are prepared to pay. Suppose Mr. A. has a bricklayer engaged the first four days of the week, and the same workman works from Friday morning till Saturday at noon for Mr. B.: will Mr. A. be satisfied to pay for the half-holiday, or will Mr. B. who is unfortunate enough to have the man in his employment at the time, be content to pay? How will the architects, who are so jealous of builders' "day bills," arrange such an anomaly?

A Master in the Building Trade.

THE TIMBER TRADE.—From the Liverpool circular of Messrs. Duncan, Ewing, and Co. it appears that since 1st February the supplies to this port of North American colonial wood have been brought in 251 vessels, tonnage 194,983: during same time last year there arrived 209 vessels, tonnage 238,594. The average in the four years previous was 217,943 tons. From the North of Europe fifty-two vessels, 16,732 tons of wood laden, have arrived; whilst for the like time last year, twenty-eight vessels, 7,762 tons, arrived; the average of four years being 15,498 tons. The active demand for both timber and deals has been somewhat checked by the state of the money market, coupled with the advanced period of the year, when there is usually a curtailment of building operations. The supply of square timber in the aggregate has been about equal to an average, but of deals considerably short of an average.——At Lossiemouth, in the north of Scotland, a cargo of red wood and square timber was recently put up to auction, and the whole was speedily sold at an average price of about 1s. 5d. to 1s. 5½d. per cubic foot.

SILICATE STARCH.—An invention of some general interest and curiosity is beginning to attract attention in Lancashire. It is a discovery by Mr. Leigh, of Manchester, surgeon and analytical chemist, of a substitute for the *size* hitherto made from flour, and used to an enormous extent in the manufacture of cotton cloth. This substitute is a silicate of soda, or preparation of sand and soda. It is calculated that a saving of 25 to 50 per cent. will be effected by the adoption of this instead of flour size, whilst the quantity of flour which will be set at liberty for the purpose of food, should it become generally adopted, will be equal, it is thought, to about, 3,000,000*l.* to 3,500,000*l.* worth per annum,—a hopeful redeliverance of the staff of life to its more legitimate purposes; but it is a sad circumstance, revealed in the recent agitation against adulterators of articles of food, that flour itself is often adulterated with just such silicates, and is but too likely to be so now, we fear, more than ever. The adaptability of soluble silicate of soda as starch, or size, will be obvious to all who know that with water it forms a gelatinous mass not unlike solution of gum, and the only wonder is that the discovery or suggestion of Mr. Leigh was not long since made and practised.

MONEY REMITTANCES BY ELECTRIC TELEGRAPH.—To afford facility to the public for the rapid remittance of sums of money, the Electric and International Telegraph Company have organized a branch of their establishment for that purpose. Money deposited with the company will be advised by telegraphic order, and be paid out to the parties named in the order, in accordance with the conditions printed on the company's forms. The towns between which these remittances can now be made are;—"From London to Liverpool, Manchester, and Newcastle-upon-Tyne; from Birmingham, Bristol, Dublin, Edinburgh, Exeter, Glasgow, Hull, Leeds, Liverpool, Manchester, Newcastle-upon-Tyne, Plymouth, Portsmouth, Sunderland, and York, to London.—By order, J. S. Fourdrinier, Secretary." Thus, by a sort of natural necessity, the new "Mercury," the swift "Messenger," while he holds in one hand the magical *transporting* wand, in the other grasps *the purse*. These money remittances by telegraph are, doubtless, the beginnings of a great system which is likely to supersede post-office remittances,—we trust with safety equal to its swiftness.

APPLICATION OF MACHINERY TO AGRICULTURE.—The effect of the Exhibition of 1851 upon the sale, throughout England, of agricultural implements, has, it seems, been remarkable. Taking alone the firm of Messrs. Clayton and Shuttleworth, of Lincoln, Mr. E. Denison reports that during 1851 they sold 140 portable steam-engines; in 1852, 243; 1853, 284; 1854, 363; 1855, 491; so that, during the four last-named years, the firm had sold 1,320 engines, equal to 8,701 horses' power. Each of the several agricultural machine-makers reported that since 1851 the sale of such machinery had steadily increased. In 1851 the average of the engines sold was five horses' power, but the average of those now sold is seven horses' power; and the export of machinery to the continent has been constantly increasing. In Norfolk, Lincolnshire, and elsewhere, these portable engines are much used. The machine most patronized by landholders in some districts is the tile-pipe draining machine; and none, it is said, has produced a greater revolution.

PATHS IN ST. PANCRAS.—Let me call attention to the infamous and dangerous condition of the footway in and near the Northumberland Arms, Bagniggewells-road: there is a sudden dip or fall of about 18 inches to a lower level—the whole reflecting little credit on the parochial authorities under "the Act for the *better* local Management of the Metropolis." The remark applies in a modified degree to the whole pavement between King's-cross and Acton-street.—A SURVEYOR.

THE GREAT CENTRAL GAS CONSUMERS' COMPANY.—The eleventh half-yearly meeting of the shareholders of this company was held on Friday last, in the London Tavern, the meeting being very numerous, when a dividend of 8 per cent. was declared; and the chairman announced that Mr. Croll, being dissatisfied, and having intimated that he should throw up his contract, and the directors also being dissatisfied, the contract with Mr. Croll to supply gas of a certain illuminating power at 1s. 9d. per 1,000 cubic feet, with 0½d. per candle in addition for every candle supplied whenever the shareholders have received their 10 per cent. or out of the surplus fund, would come to an end at the end of the seventh year, of which six had already expired. Some talk took place as to a rumoured claim to an immense amount which Mr. Croll had made, or meant to make, upon the company. The chairman stated that Mr. Croll had made no special claim, and that he had been regularly settled with. Mr. Croll was present, and spoke of some claim he had, that he "might not be deemed as quietly acquiescing in the chairman's statement."

IRON MANUFACTURE.—Mr. W. Clay, of Liverpool, has specified an improvement in manufacturing wrought iron: his invention consists in taking crude or cast iron, or fine metal, in the melted state, and reducing it to a granular form in water; or by letting it fall from any convenient height through a perforated plate, whereby it will be divided into small particles; and, by descending through an atmosphere charged with oxygen gas, the divided molten metal will, during its passage through the air, be decarbonised, or partially decarbonised. Mr. Clay also proposes sometimes to charge the atmosphere with an additional dose of oxygen, or some other decarbonising gas. The particles of molten iron, after falling from a height through the air, may be allowed to fall into water below, whereby the decarbonisation is carried still farther.——Mr. J. G. Martein, whose inventions have been so frequently spoken of in connection with Mr. Bessemer's iron-making process, has just filed the specification of a further patent for improvements in the manufacture of iron. This new invention, as described in the *Mechanics' Magazine*, from his own specification, "consists in using or applying certain materials to the liquid iron thus subjected" (that is according to his former patent) "to the action of air or steam, for the purpose of purifying, or assisting in the purifying, of the iron; and I use or apply those materials to the iron, in the liquid state in which it comes from the furnace, in such manner that they shall become blended with or disseminated through the metal, so as to act upon every part of it, as far as practically may be." Among the materials used are chlorine, when the metal contains sulphur, manganese, &c. when it contains "silicate" [query silicon]; and oxydating substances, such as spathose ore and manganese, &c. for the purpose of assisting in the decarbonization of the metal. The last claim appears to be nearly identical with that of Captain Uchatius, engineer-in-chief of the Imperial Arsenal of Vienna, as described by us on 1st inst.

INAUGURATION OF FRANKLIN'S STATUE, AT BOSTON, U.S.—This event took place on the 17th ult. The statue is the result of a subscription of the citizens, amounting to nearly 10,000 dollars. It is of bronze, 8 feet high, after a model by Greenough, the sculptor, also a native of Boston. The pedestal consists of three pieces of verd-antique marble, from Roxbury, Vermont: it stands on a granite base; so that the feet of the statue are 10 feet from the ground. The inauguration was celebrated by a public procession, and the route was by many sites associated with Franklin's name and fame;—the old printing-office where he worked as an apprentice to his brother; the old tallow-chandler's shop where he made candles; his birthplace, Franklin-street, and the monument previously erected to his memory, &c. The new monument occupies a site in front of the City Hall. Amongst the relics carried in the procession were the old Franklin press, and a printer's frame, or case-staud, once occupied by Benjamin Franklin.

BLANDFORD CEMETERY.—The Bishop of Salisbury has long refused to consecrate this new cemetery, because the Burial Board would not comply with his request that a communion table and rail be placed in the Episcopal Chapel. A correspondent says,—"It may perhaps not be uninteresting to some of your readers to learn, that a temporary table and rail were placed in the chapel, and that the portion of the cemetery appropriated to the Church of England was consecrated by the bishop, on Thursday, the 30th ult. and the table and rail removed again from the chapel the same day." The two chapels are nearly alike, in the Early Pointed style of Gothic architecture, built of local rag stone, with Bath stone dressings. The cemetery contains four acres: a wide road separates the consecrated from the unconsecrated ground.

CELLAR-PLATES.—The slippery time—winter—is fast approaching us. Our cellar-plates are generally very dangerous to walk on at that season: all the various ones in use have some fault or other. I send you a suggestion for one I think free from the objections at present in force. It is that there shall be two; the under one within to be of glass—the thick opaque kind; the upper, level with the pavement, to be of stone, in open cross-bar form. Thus, we should have light in the cellar and safety to the street passenger. In the latest one I have seen in use, the framework is of iron filled in with glass: this gives light, but it also gives danger, for glass is as slippery as the old iron plates were. Rough paving-stone is about the least slippery substance we can select,—and by an *open* stone plate at the surface, and one of glass directly under, I think the desired object would be attained.—A THOUGHTFUL WORKER.

FOG IN GREEK-STREET.—SIR: I was out on business a considerable time the other evening in the fog; and, always wishing to improve on circumstances, I observed nothing moving on but very slow coaches, such as I remember to be usual fifty years ago. It was from their having to move in a fog of not their own creating. But seeing this brought me to compare it with the slow coaches in the City Guildhall, dubbed the Metropolitan Board of No Works, I thought of their groping their way through the fog of their own creating. The slow coaches of that Wednesday evening were to be admired: their caution was necessary, because the fog they were in was not of their own seeking, whereas the metropolitan slow coaches have themselves created their fog to fumble in for their own amusement, to the great injury of others.—S. P. X.

THE SCOTTISH NATIONAL MONUMENT TO WALLACE.—From a statement made at a recent public meeting in Stirling, it appears that upwards of 2,000*l.* have now been collected towards the fund for the Wallace monument. Large sums are said to be expected from England and Ireland, America and Australia.

TERMINATION OF THE MASONS' STRIKE AT NEWCASTLE-UPON-TYNE.—The masons who have been so long on strike for a half-holiday had a meeting on Thursday week, when it was agreed that they should commence work again on the same terms as before. They had stood out about three months.

[ADVERTISEMENT.]

CHUBB'S FIRE-PROOF SAFES are constructed of strong wrought iron, and the Detector Locks, which secure them, are gunpowder proof. Among recent instances of the security they give to their contents from fire and thieves are:—

Messrs. W. Jones and Sons, Cotton-mills, Manchester. Offices totally destroyed by fire, all the papers preserved in a Chubb's Safe.

Fire at Manchester, Sheffield, and Lincolnshire Railway. Secretary's and other offices burnt, the papers and a large number of bank notes preserved in a Chubb's Safe, although, from the intense heat, the knobs and handles of the safe were melted.

MANCHESTER. — Total destruction of Messrs. Rylands and Son's Warehouses. A large Chubb's Safe (had twelve years previously) in the midst of the flames for fourteen hours, the books and papers were uninjured by the fire.

GUNPOWDER DEFEATED.—Daring attempt to blow open a Chubb's Safe with gunpowder, in the countinghouse of Mr. Blair, Millgate, Manchester, completely unsuccessful, though the force of the explosion moved the safe from its position.

GUNPOWDER DEFEATED.—Another attempt on a Chubb's Safe, with gunpowder, in the offices of Messrs. Nicholson and Co. Cousin-lane, London, proved futile, although the thieves had first used crowbars. The money, deeds, and bills were all found perfectly secure.

Reference to the respective firms as to the correctness of these statements is permitted.

THE LATEST GUNPOWDER DEFEAT.—In the burglary at Mr. Harrison's offices, near Walsall, on 11th instant, six men attempted to blow open the iron safe with gunpowder, but the lock, which was one of Chubb's Patent, resisted their efforts. It is only right to state that the safe itself, which was afterwards broken open with a sledge-hammer, was not of Messrs. Chubb's manufacture, but merely a common one.—(See *Wolverhampton Chronicle*, October 15, 1856.)

Complete Illustrated Price Lists of Chubb's Safes, Detector Locks, Cash and Deed Boxes, sent on application.

CHUBB and SON, 57, St. Paul's Churchyard, London.

BREACHES OF CONTRACT BY WORKMEN.—A return moved for by Mr. M'Mahon, M.P. shows that in 1855 there were 2,345 persons summarily convicted and committed to prison in England and Ireland for breach of contract in neglecting work or leaving service, against 3,215 in 1854. Of these 2,345, 1,541 were convicted and imprisoned in England, 109 in Wales, and 695 in Ireland. In 1854, 2,427 were convicted in England, 102 in Wales, and 686 in Ireland.

TENDERS

For the erection of a pair of cottages and a pair of villas on the Stratford estate of the Temperance Permanent Land and Building Society. Mr. William Ellison, architect:—

ADVERTISEMENTS.

WOLSTON'S TORBAY IRON-PAINTS, warranted to stand the action of the Atmosphere, Steam, Gases, Noxious Vapours, Damps, and Salt Water; also intense heat without blistering. These Paints have been tested for five years on Her Majesty's Dockyards, and two Official Reports made thereon, which testify that 6lbs. of Wolston's Torbay Iron-Paint will effectually cover as much surface as 12lbs. of either White or Red Lead, and that they resist atmospheric action better than Lead Paints. For all Public Works, Galvanized and other Iron Roofing, Fencing, Shipping purposes (Wood or Iron), Stucco and Cement Fronts, economy and durability will be secured. To Builders and Painters, for all priming purposes, the saving will be immense. Manufactured at the TORBAY IRON-PAINT and ORE WORKS, Brixham, Devon, London Depôt, Chamberlain's Wharf, Lettersons or orders addressed to Mr. WOLSTON, at the Works, or No. 34, John-street, Bedford-row, will have immediate attention.

IMPORTANT TO BUILDERS.

REGISTERED CAST-IRON CHIMNEY-HOPPER and CHIMNEY-BAR COMBINED, ensuring a perfect formation of the Flue, and rendering smoky chimneys impossible. One trial will cause their adoption in every building. Price from 8s. 6d. each, according to size.
IRON GIRDERS and COLUMNS to MODEL or DRAWING.
IRON PIPES and connections for gas, water, and liquid manure.
RAIN-WATER PIPE and EAVE GUTTERS, at wholesale prices. Also, O.G. Gutters, Sash-weights, STABLE FITTINGS, pumps, tomb railing, cattle and pig troughs, and COLUMNS with caps and bases, and every kind of Lindley castings, in stock, at LYNCH WHITE'S Iron Wharf, Upper Ground-street, London, near Blackfriars-bridge.

BUILDER'S CLERK.—A highly respectable, middle-aged Gentleman, accustomed to the routine of a builder's office, an efficient penman and accountant, wishes for an ENGAGEMENT as above, or in any other capacity where the above qualifications, added to steadiness and integrity, are deemed desirable. The most satisfactory references can be given.—Address, S. T. V. Office of "The Builder."

FOREMAN GLASS-CUTTER.—WANTED, in a Window-glass Warehouse at the West-end, a FOREMAN GLASS-CUTTER. He must be thoroughly conversant with the crown, sheet, and plate glass trade, and able to make out his invoices and estimates. Security will be required.—Apply first by letter to R. A. Office of "The Builder."

MR. S. D. DARBISHIRE takes this mode of informing those gentlemen to whom he has not written, that the situation advertised for in the last number of "The Builder" is filled up.—Pendlebury, Nov. 7, 1856.

WANTED, immediately, TWELVE good CARPENTERS.—Apply at the New Farm Buildings, Shrubus Castle, near Tetsworth, Oxon.

WANTED, a MAN, who thoroughly understands the PRACTICAL WORKING of CARTON PIERRE. The engagement will be for the country. Letters, stating terms and where last employed, to be addressed to A. B. 15 Oldham-street Liverpool.

WANTED, TWO good MARBLE MASONS who can carve and cut letters.—Apply to JOSEPH B. ROBINSON, Carving Works, Derwent-street, Derby.

TO CARPENTERS.

WANTED, a respectable Man, about 35 or 40 years of age. He must be a good workman, and of active business habits.—Address by letter in own handwriting, stating where last employed, to R. A. Office of "The Builder."

TO ARCHITECTS.

WANTED, immediately (in the country), an ASSISTANT, thoroughly competent to prepare all requisite drawings, specifications, set out quantities and to undertake the superintendence of works generally. The applicant must state terms and furnish satisfactory references and testimonials as to ability and general character.—Address, A. A. Mr. Henry Ingledew's Stationer, 73 Bond-street, Leeds.

TO BUILDERS, &c.

WANTED, by a respectable middle-aged Man, an ENGAGEMENT as MEASURING and ESTIMATING CLERK, or BUILDER'S BOOK KEEPER, either wholly or partly. Unexceptionable references.—Address, C. C. No. 6, Hall-street, Arlington-street, New North-road.

TO BUILDERS' CLERKS.

WANTED, by a respectable Firm in the County of Oxford, a good and efficient CLERK, who is thoroughly understands Builders' Book-keeping, taking out quantities, and is a fair draughtsman.—Address stating age, terms, and reference, to X. Y. Z. Post-office, Banbury.

TO GLASS STAINERS.

WANTS EMPLOYMENT, a LEAD GLAZIER; can manage stainers' kilns, and make colours.—Address, S. W. Office of "The Builder."

TO MASTER MASONS AND BUILDERS.

WANTED, EMPLOYMENT as FOREMAN or WORKING FOREMAN, by an active, middle-aged Man, in the STONE business. Good reference. Address, J. H. 10 Little Ebury-street, Ebury square, Pimlico.

TO BUILDERS AND HOUSE-PAINTERS.

WANTED, constant EMPLOYMENT, by a Young Man, in the above line. Age, 22. Wages not so much an object as constancy. A good trade-man.—Address, J. P. 24 Brown-street, Edgware-road.

TO BUILDERS AND PAINTERS.

WANTED, a SITUATION, by an experienced Man, as FOREMAN of PAINTERS, &c. Can assist in grairing, measuring work, make out contracts and bills.—Satisfactory references.—Address, H. M. 73, Mount-street, Westminster-road, Lambeth.

TO PLUMBERS AND BUILDERS.

WANTED, a SITUATION as JOBBING PLUMBER; has had some experience in water-closet work, and can fill up his time at painting and glazing.—Address, Y. E. No. 24, Rawstorne-street, Goswell-road.

TO BUILDERS AND PAINTERS.

WANTED, by the Advertiser, a SITUATION as GRAINER; would fill up his time painting. Wages not so much an object as permanent work. Good references can be given.—Address, X. Y. Z. 16, King's-road, Homerton.

TO BUILDERS AND MASTER PAINTERS.

WANTED, by a Young Man, who well understands his business, constant EMPLOYMENT as PLUMBER, PAINTER, and GLAZIER. Can turn his hand to paperhanging if required. Wages, one guinea per week.—Address, P. P. G. 24, Stanmore street, Caledonian-road.

TO CIVIL ENGINEERS AND SURVEYORS.

WANTED, by a Young Man, an ENGAGEMENT as DRAUGHTSMAN. He has been employed on extensive town surveys; is a good plotter, and under stands surveying and the use of the Theodolite.—For testimonial, &c. apply to F. F. Mr. Coope's, Queen-street, West Bromwich, Staffordshire.

TO MASTER MASONS, &c.

WANTED, by an experienced steady Man, aged 40, a SITUATION as a LETTER CUTTER, and to make himself generally useful as a Monumental Mason, &c. Wages not so material as a permanent engagement. Understands drawing and colouring.—Address, C. B. 16, Margaret-street, Upper North-street, Poplar, London.

TO ARCHITECTS, SURVEYORS, AND BUILDERS.

WANTED, a RE-ENGAGEMENT, as GENERAL FOREMAN, or CLERK of WORKS, by an experienced practical, energetic Man, who is a good draughtsman, and accustomed to superintend building operations.—Address, A. B. 9, Beckley-street, New North road, Hoxton. Country no objected to.—N.B. Good testimonials.

TO BRICKMAKERS OR WHARFINGERS.

WANTED, a SITUATION, to SUPERINTEND a BRICKFIELD or WHARF; understands the management of a brickfield in all branches. No objection to town or country. Good references.—Address, S. S. 4, Key's-terrace, Hammersmith.

WANTED, a SITUATION as CLERK of WORKS, or otherwise, by a Young Man, aged 23; he can draw, specify, estimate, measure up works, keep builders' books, and make out accounts, superintend works, and has worked with the carpenter's tools; he was last engaged at a gentleman's country mansion as clerk of works.—Address, P. K. Office of "The Builder."

TO BUILDERS.

WANTED, for a respectable Youth, aged 19, a SITUATION as JUNIOR ASSISTANT. Has had four years' experience in a London Office.—Address, Z. Z. Z. Office of "The Builder."

WANTED, a SITUATION, as ENGINE-DRIVER and STOKER, a competent, steady Young Man, of good character and recommendations. No objection to the country. Address, J. H. 5, York-place, High-street, Hoxton.

WANTED, constant EMPLOYMENT, by a Young Man as BENCH-HAND, in suburbs of town. Moderate wages required. P. A. Post office Kennington cross.

TO ARCHITECTS AND SURVEYORS, OR BUILDERS.

WANTED, by a Young Man, aged 25, a SITUATION as CLERK to either of the above. Is well acquainted with the general routine of both offices. A good draughtsman. Has been accustomed to superintend workmen and measure up work; also to book-keeping and builders' accounts. Good references can be given.—Address, B. R. care of Mr. G. Wallis, 8, Pleasant-row, Old Kent-road.

TO BUILDERS AND PLUMBERS.

WANTED, by a good workman, a CONSTANT SITUATION, with good wages, as PLUMBER, GRAINER, GLASS and BOARD WRITER, with a knowledge of the other branches of the business. Town or country.—Apply, by letter, Y. W. 21, James-street, Lynn, Norfolk.

TO CONTRACTORS, BUILDERS, AND TIMBER MERCHANTS.

THE Advertiser, who has been extensively engaged in business as a builder, wishes an APPOINTMENT where a trustworthy and practical person is required, or in an old-established concern as JUNIOR PARTNER. References to architects of eminence, and security.—Address, T. P. W. Messrs. Gilbert and Co. 14, Old Bond street.

TO ARCHITECTS, SURVEYORS, AND BUILDERS.

THE Advertiser, having some spare time at his disposal, will be happy to afford ASSISTANCE to the above in preparing working plans, specifications, &c. Charges moderate.—Address ALPHA, Office of "The Builder."

TO ARCHITECTS AND BUILDERS.

THE Advertiser, a Gentleman accustomed to preparing finished and working drawings, specifications, making estimates of cost, setting out and directing works, &c. &c. desires immediate EMPLOYMENT, either in an Office or as Clerk of Works.—Apply, X. Office of "The Builder"

TO BUILDERS, ARCHITECTS, &c.

THE Advertiser, who has served five years with an Architect, wishes for EMPLOYMENT with a BUILDER or ARCHITECT; can make working drawings, is a good accountant, and would devote two years for improvement at small remuneration; has good reference for ability and integrity. Address, J. B. W. care of Mr. Broomhead, 36, Swinton-street, Gray's-inn road.

TO ARCHITECTS, SURVEYORS, AND BUILDERS.

THE Advertiser, a good DESIGNER in ECCLESIASTICAL ARCHITECTURE, and the various other styles, OFFERS HIS SERVICES to the above, to undertake drawings at his own residence or their offices. Designs furnished, together with working drawings and details, &c. and perspectives made and coloured.—Address, L. X. Wilson's Library, Kentish town.

SITUATION WANTED, by the Advertiser, aged 27, under an Architect, Builder, or Contractor. He is experienced in the usual duties of the Office, a fair draughtsman and accountant, and is customed to superintend work.—Address, J. B. C. Mr. Cook's, Maiden-lane, Covent garden.

TO CONTRACTORS.

A GENTLEMAN, who has had the management of extensive railway works, waterworks, and other contracts as CONTRACTOR'S AGENT, is desirous of a similar ENGAGEMENT, or as GENERAL SUPERINTENDENT of WORKS. He is thoroughly acquainted with all kinds of works, materials, labour, prices, &c. and can furnish the most unexceptionable references and testimonials. Would probably not object to go abroad.—Address, Mr. B. Laburnum Villa, South Lambeth-road, London.

TO BUILDERS AND OTHERS.

A STEADY and experienced STAIRCASE HAND, who has just finished several first-class houses, is desirous of a further ENGAGEMENT, either in the town or country. Has no objection to find materials for one, two, or more houses.—Good reference can be given.—Apply T. W. 31, Aldersgate-street, City.

TO ENGINEERS, MACHINISTS, ARCHITECTS, LEVELLERS, SURVEYORS, &c.

A YOUNG ENGINEER, well versed in Mathematics, Physics, and Mechanics, and who has been engaged twice in railway construction, is desirous of obtaining a SITUATION. Very good testimonials.—Apply by letter, stating terms as far as possible, to T. S. 21, Old Compton street, Soho, London.

TO ARCHITECTS AND SURVEYORS.

A YOUNG MAN, now in the office of an architect of eminence, is desirous of a RE-ENGAGEMENT at Christmas. He has been in the profession nine years, is accustomed to prepare finished, working, and detail drawings, a fair colourist, is well acquainted with perspective and the usual routine of an architect's office; age, 24.—Address, Q. P. Mr. T. Ball, 25, Red Lion square, Holborn.

TO ARCHITECTS.

AN ARCHITECT'S ASSISTANT is desirous of meeting with an ENGAGEMENT. He has been nine years in the profession, during which time he has had considerable experience in the duties of an Architect's Office, is a capital draughtsman and colourist, and has been accustomed to preparing working and finished drawings and specifications, taking out quantities, surveying, and levelling.—Address, J. T. 7, Upper Park-street Greenwich.

TO MASTER PLUMBERS, PAINTERS, AND GLAZIERS.

A YOUNG MAN wishes to ENGAGE, for Two or Three Years, as an IMPROVER in the above branches. Wages not so much an object as a good shop, where he may have a good opportunity of learning; can work. If required, as the paper-hanging.—Address, A. L. L. 30, Star-street, Paddington.

TO ARCHITECTS.

AN Architect's Assistant is desirous of a RE-ENGAGEMENT. He is a neat draughtsman, accustomed to the preparation of finished and working drawings, and has had considerable practice in perspective and tinted work.—Address, W. S. care of Mr. Riddalls, 1, Wakefield-terrace, Caledonian-road.

TO ARCHITECTS AND SURVEYORS.

A YOUNG MAN, who has been engaged ten years in the profession, and thoroughly conversant with all the routine of a country architect and surveyor's practice, is open to ENGAGE in town or country. Can furnish good testimonials as to ability and moral character.—Address, P. Post-office, Worcester.

TO PLUMBERS, BUILDERS, &c.

AN experienced PLUMBER, who has just finished a three years' engagement as gentleman's mansion, where he has had the entire management, wishes for a similar ENGAGEMENT, or as FOREMAN, in town or country. The most unexceptionable references will be given.—Address, A. B. Yatton Keynal, near Chippenham, Wilts.

TO LAND AGENTS AND SURVEYORS, AND OTHERS.

A GOOD DRAUGHTSMAN, experienced in making finished maps and plans, is desirous of a RE-ENGAGEMENT, in a Land Agent and Surveyor's office. For specimens and further particulars, address B. B. Messrs. Job, Brothers, and Co. 75, Cannon-street West, City.

PARTNERSHIP. — A gentleman of long standing in the profession, having completed f reign engagements, is desir n of PURCHASING a SHARE of a well-esta blished BUSINESS, either in London or the provinces. Addres L. P care of the Housekeeper, 4, Lothbury City

KELLY'S PRACTICAL BUILDERS' PRICE-BOOK; or, Safe Guide to the Valuation of all kinds of Artificers' Work; with the Modern Practice of Measuring, and an Abstract of the new Building Act for regulating the Construction of Buildings. Revised and Corrected by New Calculations upon the present Value of Materials and Labour. Arranged by an Architect of extensive practice, assisted by several eminent Measuring Surveyors. Illustrated and exemplified by Steel Engravings and numerous Woodcuts Royal 8vo price 8s neatly bound

London: published by T. KELLY, Paternoster-row: SIMPKIN and MARSHALL; and may be had of all Booksellers.

Of whom may be had, New Editions, in Quarto, of the following Practical Architectural Works:—

1. PETER NICHOLSON'S PRACTICAL CARPENTRY, JOINERY, and CABINET MAKING. Revised by TREDGOLD; being a new and complete System of Lines for the Use of Workmen; founded on Geometrical and Mechanical Principles. Ten Parts at 3s. or in boards, 30s.; containing upwards of 120 Steel Plates, and numerous Wood-cut Engravings

2. PETER NICHOLSON'S PRACTICAL MASONRY, BRICKLAYING, and PLASTERING. Revised by TREDGOLD, both plain and ornamental: containing a new and complete System of Lines for Stone Cutting, for the use of workmen: the Formation of Mortars, Cements, Concrete, &c.; which added a variety of new designs for Mural Tablets, Tombs, grave-stones for Cemeteries, &c. &c.; and a description of the various materials employed. Ten Parts at 3s. or in boards, containing upwards of 100 Steel Plates, and numerous Wood-cuts.

3. TREDGOLD and NICHOLSON'S Theoretical and Practical Treatise on the PRINCIPLES of ARCHITECTURE: containing plain and simple Rules for Drawing and Executing them in the purest style; including an historical Description of Gothic Architecture. Illustrated by upwards of One Hundred Steel Engravings, executed by Artists of first-rate talent, including numerous Diagrams, &c. Twelve parts at 3s., or in boards, 40s.

4. DESIGNS for COTTAGE and VILLA ARCHITECTURE; containing Plans, Elevations, Sections, Perspective Views, and Details, for the Erection of Cottages and Villas. By P. H. BROOKS, Architect. Beautifully engraved on steel, with Description, Bill of Building, and Estimate of Materials. Twelve Parts at 3s.; or in boards, 39s.

5. DESIGNS for PUBLIC BUILDINGS, consisting of Plans, Elevations, Sections, Perspective Views and Details of Churches, Chapels, Schools, Almshouses, Gas Works, Markets, and other Buildings for public purposes. 6. THE HOUSE DECORATOR and PAINTER'S GUIDE: containing a series of Designs for Decorating Apartments with taste, and suited to the various styles of Architecture. By H. W. and A. ARROWSMITH, House Decorators to her Majesty. Ten Parts, at 3s.; or in boards, 32s.

7. THE HOUSE PAINTER, or DECORATOR'S COMPANION, containing a complete Treatise on the Art of House Painting, Graining and Marbling; regarding the Origin of Colour, the Laws of Harmonious Colouring, the Manufacture of Pigments, Varnishes, &c. By W. M. HIGGINS, Esq. Accompanied by actual Specimens of Hand-brush Graining and Marbling. Ten Parts, at 3s. or in boards, 32s.

THE ENGINEERS' and MECHANICS' ENCYCLOPÆDIA. A new and enlarged edition, comprehending Practical Illustrations of the Machinery and Processes employed in every description of Manufacture of the British Empire. Illustrated by upwards of 2,000 Wood Engravings. By Dr. LARDNER, Civil Engineer, &c. Leading principles of Mechanism. The Steam Engine developed many of the important facts, since the first publication, in 1836, of the Encyclopædia. The Inventors and Engineers recently made instrumental to the solution and application of the Latter, for, as the value of each was tested by experiment, a description was accordingly prepared. By the selection of new articles, and care in the revision of old ones, this work has been kept systematically enriched; so that it may be regarded as a faithful and faithfully expressing "the existing state of Engineering and Mechanism, adapted to the wants of Practical Men." In two large 8vo. volumes, cloth, lettered, price 20s.

BONUS
THE DIRECTORS OF THE
STANDARD LIFE ASSURANCE COMPANY request attention to the advantage of joining the Company before the 15th of November next, when the books will be closed for the current year, and the Bonus Policies completed for 1856, with reference to the right of participating in future Divisions of Profits. Such Policies will be Fifty Years' Bonus in 1856, and will secure the following additions for Profits at each future Division over the Premiums:—

EXAMPLES OF BONUS AGREED TO BE DECLARED.

Date of Policy.	Sum in Policy.	Bonus Additions to 1856	Sum with Bonus.
15th Nov. 1825	£1,000	£111 0 0	£1,111 0 0
" 1830	1,000	97 4 0	1,097 4 0
" 1835	1,000	82 0 0	1,082 0 0
" 1840	1,000	47 0 0	1,047 0 0
" 1850	1,000	174 15 0	1,174 15 0
" 1856	1,000	64 0 0	1,064 0 0

LONDON, 82, KING WILLIAM STREET.
CHAIRMAN OF THE BOARD
The Right Honourable the Earl of Aberdeen.
DEPUTY CHAIRMAN
Thomas H. Bell, Esq., 18, New Broad-street
John Griffith Frith, Esq. Austin Friars
Alexander Grote, Esq., 31, Threadneedle-street
John Scott, Esq., 1, Hyde-park-street
Sir Anthony Oliphant, C.B.
Francis Le Breton, Esq., 3, Crosby-square
THE STANDARD LIFE ASSURANCE COMPANY was established in 1825, and its progress has been most successful. During the first years from 1825 to 1850 the Assurances effected amounted to upwards of Four and Half Millions sterling; and during the six years from 1851 to 1856 inclusive, the Assurances amounted to upwards of Three Millions sterling, or nearly one-half of all the BUSINESS transacted in Great Britain during that period by any Assurance Office.
The LARGE FUNDS which the Company have accumulated are invested on the security of Land and other Mortgages, and these securities are subject to investigation by professional gentlemen at intervals of five years. Such an investigation took place last year, when the Committee reported that "the whole of the Investments are of the very best and ample description, and they have not the slightest doubt that there is not one of them which would not be accepted as a security if it was now proposed to the Board for the first time."
The INCOME of the Company is about a Quarter of a Million sterling.
The position of the STANDARD, and its wide terms and conditions, are such as to give it the strongest claims to public support.
WILL. THOS. THOMSON, Manager.
H. JONES WILLIAMS, Resident Secretary.
LONDON. EDINBURGH.
82, King William-street. 3, George-street.
Agents in all the principal Towns in the Kingdom.

PATENT SOLID SWISS PARQUETERIE. This beautiful, unique, economical, and elegant material for Floorings, is extensively used in Paris and other continental cities. It is sold into three counties, and a large assortment of specimens and patterns comprising all the parquetteries together with every particulars of its cost and adaptation, may be obtained of Messrs. H. T. HUNT and CO. 2, Cornhill-row, Mansion-House; or of Messrs. ARROWSMITH and CO. 80, New Bond-street.

TO ARCHITECTS.
AN Architect, in an extensive and increasing practice in a provincial town, wishes to meet with a Gentleman well qualified to assist him in the PREPARATION of PLANS for public competition and the general work of his office. Terms very Moderate. No compensation would be given further than an equivalent for all work obtained in competition. As the experiment on both sides should it be deemed of mutual advantage, the advertiser would be willing to enter into terms for a share of his general practice. Address, prepaid, letters A. to A. Z. Graham's Club, King William-street, City, London.

ARCHITECTS, BUILDERS, ENGINEERS, and SURVEYORS, can be IMMEDIATELY SUPPLIED with COMPETENT ASSISTANTS (temporary or otherwise). LETT'S WHARF PATENT SAWING, PLANING, and VENEER KNIFE-CUTTING MILLS, Commercial-road, Lambeth. The Proprietors beg to announce to the Trade that they have completed their new premises, and will be happy to execute all orders entrusted to their care with despatch and punctuality. Wet and dry docks, and powerful cranes for landing goods, combine to render it the eligible mill elsewhere. A large assortment of seasoned prepared flooring, match boarding, &c. &c. always in stock at reduced prices.

A SUBSTITUTE FOR PAINT, AND AT HALF THE COST.
STEPHENS' DYES or STAINS for WOOD. The Patentee extract from a letter the Proprietor has obtained leave to make public:—"Worcester, December 5, 1855. Sir,—I have just finished a new church with your Oak Stain, and I consider it the best adapted for the purpose, being the cheapest and most real wood of any I have ever used.—I am, sir, your obedient servant, "SAMUEL GRIMES, Builder.
"To Mr. Henry Stephens, 54 Stamford-street, London."
Samples and prospectuses free to any part of the kingdom.

TO FRENCH POLISHERS, CABINET-MAKERS, BRASS-WORKERS, &c. — A considerable reduction has taken place in the prices of French polish, white and brown hard spirit varnishes, paint lackers, and fine turpentine. The present price is 6s. 6d. to 7s. per gallon; white French polish, 10s. per gallon; white shellac, 1s. 8d. per lb.; gums, shellacs, and acid at the lowest prices. A net cash list forwarded on application to JAMES SLIPPER, 87, Leather-lane, and 14 and 15, Dorrington-street, Holborn, London.

VENTILATION.—PURE AIR.

Sheringham's Ventilator for the admission of pure air through an EXTERNAL WALL.

With single pulley, from 6s. each; with leading pulley, from 8s. 6d.

These Ventilators are arranged that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants; and as they are placed in the external wall, their action is not improved when the house is closed for the evening, at which time a constant supply of fresh air is most required.—HAYWARD, BROTHERS, sole Manufacturers, 106, Blackfriars-road, and 127, Union-street, Borough; and of all respectable ironmongers, builders, &c

THE LIZARD SERPENTINE COMPANY manufacture and sell in block and slab the beautiful stone now raised from the lower beds of their quarries. Chimney-pieces, Columns, Fonts, and ornamental works on view, at 20, Surrey-street, Strand.

HENRY COX, Manager at the Lizard.
F. W. RUFFLE, Agent in London

MARBLE GALLERIES, 17, Newman-street, Oxford-street.—Mr. ALFRED E. EDWARDS (upwards of ten years with the London Marble Company) has opened the above premises, lately in the occupation of Bailey, the celebrated sculptor, under the firm of EDWARDES, EDWARDS, and COMPANY, with the largest stock of BRITISH and FOREIGN MARBLE CHIMNEY-PIECES, &c. &c. in London. EDWARDES, EDWARDS, and CO. solicit the favour of an inspection of their stock by architects, builders, and others connected with the trade; and beg to assure them that for design, style of execution and price, it will be found unrivalled. Estimates for every description of marble-work.

MARBLE and STONE CHIMNEYS.—THE MARBLE CHIMNEYS of various designs and colours, most of them fixed, are now on view at the Cambridge Hearth Marble Sawing-Mills. The proprietor has again enlarged his workshops, and erected so much improved machinery, as to be not only to compete, but to be able to manufacture more, and consequently cheaper than any house in the trade.
The Trade supplied.

MARBLE.—The ITALIAN MARBLE COMPANY have just landed, and constantly keep an assortment of MARBLE MORTARS and GARDEN VASES of all dimensions. Orders executed for the above, and every description of Italian works of art. Vein and Sicilian marble blocks of all sizes.—Yards at Bridge Wharf, Millbank, adjoining Vauxhall-bridge, to WILLIAM W. BONNIN, Secretary.

TO BUILDERS, MASONS, AND OTHERS.
THE largest STOCK in England of MARBLE in Blocks and Slabs, veined, Birdlip, dove black, black and gold, Sienna, St. Ann's, statuary, serpentine, red antique, &c. Portland, Hardhill, Park Spring, and other stone, in blocks, slabs, landings, York and headstones, Yorkshire paving, granite curb, &c. All goods carefully packed and forwarded to any part of England.—THOMAS JACKSON, Marble and Stone Sawing-Mills, Commercial-road, Pimlico, London.

MARBLE CHIMNEY-PIECES.—The nobility and gentry of the United Kingdom who are building or refitting their mansions are respectfully invited to inspect the most Extensive Collection of MARBLE CHIMNEY-PIECES lately imported from the Continent. They comprise Statuary, Giallo di Siena, Vert Rouge, Dove, Black and Gold, Rouge de Belmont, Bardiglio, and other choice foreign marbles; and are designed with great taste, and executed by first-class artists—On sale, in the show-room of Messrs. EVANS, SON, and CO. King William-street, London Bridge.

MARBLE CHIMNEY-PIECES, and every other description of marble work, supplied to builders and the trade at about HALF the usual selling price, in many instances less than slate. Manufactured by the LONDON and CONTINENTAL MARBLE COMPANY, at their own Quarries in France and Belgium.—Offices and Depôt, 49, Pickett-place, London-bridge.—Estimates given for works to any amount.

LLOYD'S MARBLE WHARF, Thames-bank, Pimlico, adjoining Vauxhall-bridge.—Italian Statuary, Veined, Sicilian, Dove, Sienna, and other Marbles, for Sale, at import prices. A resident manager on the wharf at all hours.

TO BUILDERS, CONTRACTORS, or BALLAST MERCHANTS.—FOR SALE, MALTESE STONE and COMMON BALLAST
50 Tons Maltese Stone, on board steam-ship Sydney.
150 Tons ditto, on board steam-ship Castalia.
200 Tons Shingle and Sand, on board steam-ship Victoria.
Parties desirous of purchasing the quantity in either ship, or the lot, are requested to send offers, the vessels will remain at the Australian Royal Mail Steam Navigation Company's, 76, Gresham House. Purchasers must take the Stone, &c. at their own expense, within a week from their offers being accepted.

YORKSHIRE STONE.—The cheapest place in York hire for all kinds of QUARRY-WORKED STONE, including Spandril Steps, Staircases of all kinds, Bases, Plinths, Cornices, Landings, Sewn Slabs, Heat Stones, &c. &c. is at the ISLAND WHARF and SAWING-MILLS, LEEDS. All kinds of masonry clean worked, ready for hoisting, and carefully packed in railway trucks or vessel, and forwarded direct to any part of the kingdom. For prices, &c. apply to JOHN DANIEL, Stone Merchant, LEEDS; or to ROBERT DANIEL, PIMLICO, LONDON.

TO CONTRACTORS AND OTHERS.
YORKSHIRE PAVINGS, LANDINGS, STEPS, COPINGS, CURBS, SILLS, SINKS, and CHANNELS; Hare-hill, Robin Hood, Park Spring, and Scarby, in Blocks, Headstones, or Slabs; Purbeck Paving, Sinks, Curbs, Rickstones, Pitchers, and Squares; Portland Stone Flags, Flat-tone, Newcastle and Bilston Grindstones; Portland Stone in Blocks, Landings, Slabs, &c.; Darley Dale, Caen Stone, Bramley Fall, Bath, Huddlestone, Parkwood, and other Block Stones. Wilcannia Slate Slabs, Tamar Slates, Cornish, Aberdeen, Guernsey, and other Granites; Marble, in Block and Slabs, supplied from the Wharfs, Mills, and Stores, City Basin, and Depôt Yard, or direct from the Quarries by vessels or rail.—Address, FREEMAN'S WHARF, 25, Millbank-street, Westminster.

YORKSHIRE STONE.—THOMAS TILNEY, Stone Merchant, Tanfield-place, Leeds begs to inform Builders, Surveyors, and Local Boards, that he can supply direct from the Quarries, by water or railway, Paving, Landings, Steps, &c. got out to sizes, on the most advantageous terms.—Prices sent on application.

STONE! STONE! STONE!—To the TRADE.—The cheapest premises for selling for Portland and Bath Stone, Yorkshire Landings, Steps, Curb, Paving, Bedding Slab, Granite Pitching and Curb, Guernsey Broken Road Materials, and every other description of stone, is JOHN KNIGHT and SONS, Devon Wharf, Mineral Yard, Stamford-street, Blackfriars.—Portland stone landings, 6d. per foot run; slab for hearths, 4d. per foot sup.; slab for chimney-pieces, 9d. per foot sup.; 9 by 3 window-sills, 6d. per foot run; 18 by 9 coping, 8d. per foot run; box chimneys, any openings, 8s. 6d. each. Terms cash on delivery.

CHEAP AND DURABLE ROOFING.

By Her Majesty's Royal Letters Patent.

F. McNEILL and CO. of LAMB'S-BUILDINGS, BUNHILL-ROW, LONDON, Manufacturers and ONLY Patentees of
THE PATENT ASPHALTED FELT, FOR ROOFING HOUSES, VERANDAHS, SHEDS, &c.
Patronized by
HER MAJESTY'S WOODS AND FORESTS,
HER MAJESTY'S COMMISSION OF CUSTOMS,
HONOURABLE EAST-INDIA COMPANY,
HONOURABLE BOARD OF ORDNANCE,
HER MAJESTY'S ESTATE, Isle of Wight,
ROYAL BOTANICAL GARDENS, REGENT'S PARK,
And by the most eminent Engineers, Surveyors, and Architects, both of England, Scotland, and Ireland; at whose great national show in Leicester-square, in 1851, it OBTAINED THE PRIZE, for being the best and cheapest article for roofing; also used for under slates at the Royal Agricultural Society's House, in Hanover-square. Its advantages are its low cost, durability, and economy. It is impervious to rain, snow, and frost, and a non-conductor of heat and sound. The Felt can be had in any length, by 33 inches wide. The price is only ONE PENNY PER SQUARE FOOT. Samples, with full directions as to its use, and the manner of applying it, with TESTIMONIALS, some of them of seven years' experience, from Architects, Builders, Noblemen, and Gentlemen who have extensively used it, sent free to any part of the town or country. A Dry-hair Felt, for covering Boilers, &c. is also manufactured, by which a saving of about 25 per cent in fuel is effected. The TRADE are respectfully informed that they can be supplied DIRECT to the FACTORY, as the largest houses of note are supplied with the genuine article, and when by the best suited to their roofing is made are F. McNEILL and CO.'s Manufactories, LAMB'S-BUILDINGS, BUNHILL-ROW. Roofs covered with the Felt may be seen at the Eastern side of the new Vestry Hall, St. Clement's, Clare-market, and other buildings at the New Houses of Parliament.—A Liberal Discount allowed to the Trade.

CAEN WHARF, ROTHERHITHE, LONDON

CAEN and AUBIGNY STONE.—P. FOUCARD, Stone Merchant and Quarryman. Cargoes shipped to order from Caen to any port. Contracts taken for any quantities. Depôts: Granite Wharf, East Greenwich; Lett's Wharf, Waterloo-bridge. Office: 245, High-street, Southwark, near the Townhall.

MARKET-WHARF, REGENT'S-PARK-BASIN—WEST END DEPOT, for Yorkshire Paving, Portland and Derby Stone, Bangor Slates, Slabs, &c. All Bricks, Lime, Cement, Plaster, Tiles, Laths, and Fire Goods SOILES and WOID invite the attention of Builders, Masons and others, to their Stock as above, where everything will be charged at the lowest prices. Headstones, Ledgers, Steps, Landings, &c. cut on the shortest notice. Country orders promptly attended to.

RANSOME'S SILICIOUS STONE.—All kinds of ARCHITECTURAL EMBELLISHMENTS executed in this beautiful and indestructible material, at prices not exceeding the ordinary cements. Full particulars furnished on application to Mr. FRED. RANSOME, Whitefriars Wharf, Cannon-row, Westminster; or Patent Stone Works, Ipswich.

RAWDON-HILL STONE.—Messrs. TRICKETT and PERKIN are prepared to execute orders to any extent for their much admired building Stone. Depôts, where large stocks are kept: No. 3, Stone-wharf, Great-Northern Railway Station, King's-cross; Victoria Stone-wharf, Millwall Docks. Blocks quarried to suit customers for columns, corner lintels, steps, ledges, headstones, cills, &c. Delivered to any part by vessel or railway trucks.
N.B. The Stone which I offer as above, must come into extensive use. I should think it exceedingly suitable for the London market."—I. L. Dubosq, Esq.
Address, JOHN TRICKETT, Headingley, Leeds, Yorkshire, or, SAMUEL TRICKETT, Victoria wharf, Isle of Dogs, London.
N.B. A large quantity of Foundation Landings for sale.

GRANITE.—The Welsh Granite Company, Carnarvon, supplies Pitching or Paving Sets of this Material to order. The Sets, which have for several years been extensively used in Manchester, Bristol, Leeds, and other large towns, combine in a higher degree than any others, the qualities of toughness in wear and durability. The stone is also well adapted for foundation courses, plinths, &c. for public buildings. Sold for 21 Battersea.

GRANITE.—King William and Nelson Monuments, Plinth and Steps of the Royal Exchange, and Terraces at the Crystal Palace. Supplied by the Haytor Company under Royal Charter.—For terms, apply to Mr. C. BOAK, Haytor Granite Office, 4, Millbank-row, Westminster.

GRANITE.—The Cheesewring Granite Company, Liskeard, Cornwall.
London Agents—TREGELLAS and TAYLOR, 54, Old Broad-street. Manager—JAS. J. THATHAN, Liskeard

SLATE.—The Bangor Royal Slate Company have now on hand a LARGE ASSORTMENT of ROOFING SLATES, blue and green, of the several sizes, which they are prepared to supply at the usual terms, for shipment from their depôt, at Bangor, or to transmit by railway. Also Slabs of all sizes. Orders to be addressed to Mr. EDWARDS, Manager, Royal Slate Quarries, Bangor.

SLATE.—An assortment of the best BANGOR ROOFING SLATE ON SALE, at Bridge-wharf, Millbank.—Apply to Mr. GEORGE BAXTER, Foreman.

PARIS EXHIBITION.—ENAMELLED SLATE TWO FIRST CLASS MEDALS.—Mr. MAGNUS is the only exhibitor whose productions received this double honour; also the Prize Medal at the Great Exhibition of 1851, and the Medal of the Society of Arts in 1848. This beautiful material, but sooner and more durable than marble, is now finding its way into palaces, into the mansions of the nobility at home and abroad, into the splendid suites of lodging-houses as well as into humbler dwellings. The cost is unquestionably below that of any other available material at present in use. It is applicable to a variety of useful and ornamental articles, too numerous to be separately specified. Among the chief are chimney pieces and surrounds, mantels for all apartments, tiles, and every richly decorated slab for the tops of tables, sideboards, &c. &c. Also roofing slates, obtuse angles, ridges, hips, valleys, gutters, &c. &c. Other articles are tombs, headstones, columns, vases, pedestals, garden buckets; wash-stand tops, billiard tables, linings to halls, vestibules and dairies.—Price list can be had on application to Mr. MAGNUS, 10 and 11, Upper Belgrave-places, Pimlico.
N.B. Plain slate work executed from a single article to the most extensive contracts, for home and abroad.

LLANGOLLEN SLABS and SLATES. Roofing Slates, Slabs, Sinks, Cisterns, Baths, Filters, Larders, Mangle Rollers, Slate Shelving, Tables, &c.
CISTERNS of LARGE DIMENSIONS for BREWERIES, DISTILLERIES, BLEACHING-HOUSES, and MANURE-TANKS
Cattle-stalls, Pigsties, and Troughs.
Paving for Railway Stations, Malt-houses, Breweries, Balconies, Conservatories, Warehouses, &c.
CHIMNEY-PIECES, Baths, Tombstones, Pedestals, Washing-tubs, Troughs, and every other Article of Slabwork, PLAIN or IN SCULPTURE.
Self-faced Flags for Barns, Outhouses, or Street Paving.
In Stock at Pickle-dock, SEVERAL FINE SLABS of 70 SUPERFICIAL FEET each.
LLANGOLLEN and SLATE COMPANY,
PENTREFELIN WHARF, LLANGOLLEN,
AND 4, WHARF, SOUTH WHARF-ROAD, PADDINGTON.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality. They have been used at the British Museum, National Gallery, Bethlem Hospital, various Lunatic Asylums, the Ordnance Works, Mode, Prison, Pentonville, and other Penitentiaries, Malting Floors in Bedfordshire and Hertfordshire, Breweries, the Race Stand at Brighton, Portsmouth Barracks, and are kept in stock in large quantities by Messrs FREEMAN, Millbank street, and at Messrs Bray's, Belvidere-road, where terms may be obtained.

O. McCARTHY, CARMAN, and SAND and CEMENT MERCHANT, Whitefriars Wharf, Whitefriars, Fleet-street, City. Sand, from above or below bridge, delivered by the yard or per barge. Ballast screened or unscreened, by the yard or per barge. Stocks, lime, and red bricks. Ivy rubbish, delivered per barge, in any quantity, alongside the Thames

CROGGON and COMPANY, Manufacturers of
PATENT ASPHALTE ROOFING,
BOILER, RAILWAY, SHEATHING and INODOROUS FELT,
For Damp Walls, and Lining Iron Houses,
2, DORSET-HILL, LONDON.

ASPHALTE.—GERVASE FOOTTIT TRINIDAD ASPHALTE WORKS, ROTHERHITHE, LONDON. Established 1834.—TRINIDAD, SEYSSEL, and BRITISH ASPHALTES, manufactured by Steam power, laid down in the best manner or supplied ready for use. Information for using it, with material for roofing orders or reference in London promptly attended to.—Estimates given for every kind of the above work.

ASPHALTE, FOREIGN and BRITISH, for FLAT ROOFING and every description of PAVING, especially in connection with
ROCK ASPHALTE, PER SQUARE YARD.
Country Builders supplied with Asphalte for footings and barn floors, with instructions for using it.
Apply to JOHN PHILLIPSON, Polygreau and Limmer Asphalte Office, Melbourne-chambers, 14, Fish-street-hill, London.
N.B. Importer of the PURE ROCK ASPHALTE, from the LIMMER Mines, in Hanover.

BATH, PORTLAND, and ROMAN CEMENTS.—The London and West of England Cement Company can offer to the Trade the best natural HYDRAULIC CEMENTS at reduced prices. The Company particularly recommend the best quality of their Bath Cement for all modelling cornices, decorations, &c. as having all the qualities requisite for an interior cement, and being quite unaffected by extremes of weather. The Company also supply BLUE LIAS LIME, lump and ground, which will carry more sand than any in the market.—Communications to be addressed to the General Offices, 26, Old Broad-street, London; to Mr. MONUMENT, 4, Caroline-place, City-road; to Mr. TIMEWELL, the Depôt, 6, North Wharf-road Paddington; or to the Works, Dunball Bridewater.

SOUTHAM BLUE LIAS LIME DEPOT.
Glazed Stoneware Sewage Pipes.
Brick, Lime, and Cement Merchants,
TATHAM and Co.
11, South Wharf, Paddington.

PORTLAND and BATH CEMENTS.
TATHAM and CO.
14, South Wharf, Paddington.

PARIAN CEMENT, reduced in price 2s per cask. This article is valuable for inside stucco, and especially for skirtings, for flooring on brick arches, &c. It takes paint in a few hours after its application on walls or laths, is without efflorescence, and may be papered in a couple of days. A finer quality forms a beautiful Scagliola, with any admixture of colours.—Manufactured by FRANCIS, BROTHERS, Cement Works, Nine-elms, London.

CEMENT.—ROMAN and PORTLAND CEMENTS, and PLASTER of PARIS, manufactured by C. J. HILTON, can be had in any quantity, wholesale and retail at his wharf, 8, Upper Thames-street, London; and also at the manufactory, Faversham, Kent.—N.B. These Cements supplied for shipment, on advantageous terms.

THE PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs ROBINS and Co. to whom THE PRIZE MEDAL was AWARDED in 1851, are prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes to which Cement is applicable. Orders received at Great Scotland-yard and at the Works.

PORTLAND CEMENT WORKS, NORTHFLEET, Kent.—KNIGHT, BEVAN, and STURGE, Manufacturers only of first-class quality, for the home and foreign trade. Portland Cement is manufactured at these works with especial reference to its destination, whether for stuccoing, brickwork, blocks for breakwaters, tidal work, or otherwise.—London Wharf, Belvedere road, Lambeth.

PORTLAND and BATH CEMENT.—FULLWOOD THOMPSON and CO. request the attention of Merchants and Contractors to the quality of their Portland and Bath Cement, which they manufacture on an improved system, securing regularity of strength and colour, and at a less cost than is attainable by most other makers.
These cements set under water in a few minutes, and are not affected by extreme heat or cold.
FULLWOOD THOMPSON & CO. will be happy to send prices and samples in reply to application by post. They deliver free into the Bristol and Exeter Railway Company's trucks at their works, or free on board in the Port of Bridewater.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL.—Light, Dark, and Portland Cements equal to any made. Manufacturers also, and Dealers in Plaster of Paris White, Mastic, Hair, Lias Lime, Laths, Slates, and Slate Slabs, Fire-bricks, Grindstones, Cement Chimney-tops, ditto Vases, Ridging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Pozzolano

JOHNS and CO.'S PATENT PERMANENT STUCCO WASH (perfectly non-absorbent), STUCCO, CEMENT, STUCCO PAINT.—CLARK and BENGOUGH, Manufacturers, Grand Surrey Canal Bridge, Old Kent-road. Office, 4, George-yard, Lombard-street.

PORTLAND and ROMAN CEMENT.
PLASTER of PARIS
Manufactured by J. M. BLASHFIELD, at Millwall, Isle of Dogs, Warehouse, No 1, Wharf, Prince-street-Bank

31 George-yard, Lombard street, City

ELMLEY CEMENT WORKS.—ROMAN and PORTLAND CEMENT of the first quality, manufactured on the above works. Also STOCK and KILN-BURNT BRICKS, hand moulded and machine made, for shipment or otherwise.—Apply to G. BOOTH, Agent, as above.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not vegetate in damp situations. Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements read at the Institute of Civil Engineers, to be obtained from the Makers, JOHN BAZLEY WHITE, and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

ATKINSON'S CEMENT, so long known and esteemed in London for plastering purposes, is a quick-setting Cement, that requires no coloring, and may be covered directly by JOHN BAZLEY WHITE and BROTHERS Millbank street, Westminster; and Seel-street, Liverpool.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER, for internal uses. These well-known hard Stuccoes dry quickly, and can be painted upon within a few days.—Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

CHARLES RICHARDSON,
3 & 5, SOUTH-WHARF, PADDINGTON BASIN.
COWLEY AND KENT BRICKS,
PORTLAND, ROMAN, AND OTHER CEMENTS,
TAMWORTH GLAZED SEWAGE PIPES
BLUE VITRIFIED BRICKS, COPINGS, PIPES, &c.

3 & 5, South Wharf, Paddington.

NOTICE.
CHARLES RICHARDSON takes the earliest opportunity of informing Engineers, Architects, Contractors, and others, that he is now bringing GREAVES' BLUE LIAS LIME per the Great Western Railway from Harbury, to Bull's Bridge and Paddington, from whence it can be delivered alongside any part of the river Thames, canals, or railway stations in London, the dry ash burnt and ground, in any quantity, and at a great reduction in price.
All applications for prices and terms will meet with prompt attention.
N.B. Please observe the lime is ground at the works, not in London.

BLUE LIAS LIME.—Messrs. GREAVES and KIRSHAW having completed their Works on the Birmingham and Oxford Line of the Great Western Railway, at Harbury, are now prepared to supply LUMP and GROUND LIME of the best quality, direct from the Kilns, to all the Stations on the Great Western Railway.—Greaves's Blue Lias Lime—Portland, Bath, and Lias Cement.—Works, at Harbury, Stockton, and Wilmcote.—Office, at Warwick.

DAMP WALLS.
STENT'S COMPOSITION FOR PREPARING NEWLY-PLASTERED OR DAMP WALLS FOR PAPERING,
Is the result of practical experiments and long experience; it is unfailing in its application. Entire houses have been papered a few days after plastering. In repairs of old plastered walls it is invaluable. A moderate room can be papered for 2s. 6d.
Prepared only by W. J. STENT, Warminster.
London Agents: Messrs. GEO. and THOS. WALLIS, 64, Long-acre. Agent for Ireland: Mr. S. BOYD, 46, Mary-street, Dublin.

HUBBUCK'S PATENT WHITE ZINC PAINT,
The Permanent White of the Ancient Artist.
HUBBUCK and SON, the Original Manufacturers, are enabled, by their process, which is patented, to supply Pure White Zinc Paint at the price of White Lead. Neither heat nor tropical climes act upon it. It is entirely free from any poisonous or pernicious property. Those direful maladies, paralysis and painters' colic, will be altogether avoided. The Powdered White Zinc may be had for grinding in Oil, and where it is used with Size, Varnish, &c. To prevent the prejudice against Zinc paint, which the adulterated article must otherwise produce, it is now sold by the Wholesale Paint-dealers in Original Packages, each cask stamped, HUBBUCK—LONDON—PATENT. And when so marked, the quality is guaranteed THOMAS HUBBUCK and SON, the Original Wholesale Manufacturers, Paint and Varnish Works opposite the London Docks, London.
N.B. OLD ZINC AND ZINC CUTTINGS BOUGHT TO ANY EXTENT FOR REFINING.

COLES, SHADBOLT, and CO. CEMENT and PLASTER MANUFACTURERS, LIME BURNERS,
Brick, Tile, Drain-pipe, Hair Lath, and Fire Goods
ST. JAMES'S and THORNHILL WHARFS,
Caledonian-road, London.
ROMAN CEMENT, made at the above works, may be had fresh from the kilns daily—a great advantage to dealers and sewer contractors, especially in winter time.
PORTLAND CEMENT, of the best quality, strength, and Colour, manufactured in Kent. This cement will carry more sand than any of the Lias Cements, so much of which is now brought into the market, and sold as Portland.
PLASTER of PARIS, direct from the quarries, both coarse and fine, whole-sale and retail.
LIME, Grey Stone, Chalk, and Blue Lias Lime, fresh and well-burnt, a constant and regular supply of which may be had by the barge or yard.
A large assortment of Glazed Stoneware Drain-pipes, of the best Lambeth make; Yorkshire Plain, Pan, and Paving Tiles; Welch Fire bricks, Lumps, and Tiles; Hair and Laths, always kept in stock.
These goods are of the best quality, and sold at the lowest possible prices.
N.B. Shipping orders promptly executed.

BLUE LIAS LIME.—CHAS. NELSON begs to offer to consumers a supply of Blue Lias Lime direct from his Quarries in Warwickshire, the quality of which has been tested by several of the largest building firms in the metropolis and approved by them; and those who have favoured C. N. with their patronage during the last three years have always expressed themselves satisfied with his system of weighing or measuring the lime. When the lime is delivered by boat, the master has instructions to produce or demand the canal ranger's pass, by which the purchaser may know the exact weight delivered.—Orders addressed to the London Depôt, 16, South Wharf, Paddington, J. D. BLYTH, Sole Agent, will have immediate attention.—Quarries and Manufactories, Stockton, near Southham, Warwickshire.

DAVIES and NORMAN, CROWN WHARF, GREAT SCOTLAND-YARD.
ROMAN and PORTLAND CEMENTS,
LIME, BRICKS, TILES, SLATES, FIRE GOODS, &c.
STONEWARE PIPES, PANS, TRAPS, &c.
A Liberal Allowance to the Trade.

NOTICE.
SOUTHAM HYDRAULIC BLUE LIAS LIME.
WILLIAM OLDHAM begs to inform those parties requiring genuine Hydraulic Blue Lias Lime, that he is prepared to deliver the best quality of ground and lump lime, at the Works.—Address, WILLIAM OLDHAM, Blue Lias Lime and Cement Works, Southam.

GREY STONE LIME WHARFS,
32, UPPER GROUND-STREET, Blackfriars (Surrey side),
7, NORTH WHARF-ROAD, Paddington.
WILLIAM PETERS begs to inform the trade he is in position to supply the best GREY STONE LIME in any quantities from the above wharfs, or per barge direct from the kilns.
Large Grey Stone, or Grey Chalk, free on board at Works, 1s. 9d. per ton.
Small ditto, ditto, 4d. per ton.
Barges loaded in a few minutes.
Wouldham-hall Grey Stone Lime Works on the Medway, near Rochester.

CHADWICK'S CEMENTS.—To Railway and Dock Directors, Gas and Waterworks Companies, Coal-Mine Proprietors, Builders, Contractors, &c.—JOHN CHADWICK, Manufacturer of the Patent Lithic, Roman, and Portland Cements, is prepared to enter into contracts with any of the above trades that may favour him with their orders. The advantages to be derived from the above Cements, manufactured by J. C. over all others, are their extraordinary hydraulic properties.—Samples and references may be had on application either at the Works, Ashton New-road; or the Warehouse, 5, Broom-street, Shude hill, Manchester.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Pariors, and Pickings of good and sound quality, constantly on sale at H. DODD'S Brickfields, which are only a quarter of an hour's walk from the City. H. D. earnestly requests purchasers to favour him with a visit, in order to inspect his stock, and to judge of it themselves.
Manufactory, Islington-green, and Pinc. Bricks also in sale. These bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing.
Apply to HENRY DODD and CO. at the Counting-house, Hoxton Brickfields, Grange-walk, near the Rosemary Branch, Hoxton.
N.B. Light-coloured Pickings of approved quality constantly on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand.

BRICKS.—Mr. Rydon having made more than he requires for the builders on his estate, Highbury New-park, would be willing to enter into arrangements with builders and others for supplying first-class STOCK and RED BRICKS on reasonable terms. For particulars, apply at the Estate Office, Bell's Farm, Stoke Newington Green.

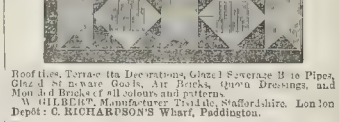
THE BEST HERTFORDSHIRE MALM SECONDS;
THE BEST WHITE SUFFOLK and RED FACINGS:
WHITE SUFFOLK PERFORATED BRICKS;
DEEP-RED RUBBING BRICKS.
Also COWLEY and KENT STOCKS, in any quantities.
J. EASTWOOD and SONS, Belvidere-road, Lambeth; and Surrey-canal-bridge, Old Kent-road, Surrey.

BRICK-FIELDS, QUEEN'S-ROAD, PECKHAM, SURREY
(Within a short distance of the fire bridges).
THE BEST MALM-CUTTERS, SECONDS, PICKINGS, and PAVIORS, in any quantity.
Also STOCKS, of FINE QUALITY.
J. EASTWOOD and SONS, Belvidere-road, Lambeth.

BRICKS.—White and Red Facing Bricks, and hard Clinkers for paving stables, &c. can be delivered by Thames or Eastern Counties Railway at ten per cent under the usual prices.—Apply to W. and W. WRIGHT, Springfield, Essex.

HERMITAGE BRICK WORKS, FULHAM, STOCK BRICKS of superior quality FOR SALE at 20s per Thousand, cash.—Apply to J. JOHNSON, at the Works

BRICKS of all kinds (clamp-burnt or kiln-burnt), Lime, Chalk, Chalk Rubbish for brick-making, Flints for building and pottery work, Foundry Loam, Whiting, Whiting Sand for sulphate, Land Drain Pipes, Patent Drain Pipes, Gas Soil for brick-making, &c. &c. sent by barge from Messrs. MEESON and CO.'S works at Grays, Essex, to any part of the Thames, the various canals, the river Lea, &c. or by rail to any station on the London and Southend and Eastern Counties lines, or any railway connected with them. Vessels of 300 tons can load alongside the wharves at Grays. At MEESON and CO.'S wharf and kilns, Bow-bridge, Stratford, Essex, the above-named articles can also be procured, as well as all kinds of fire goods (both Welsh and Newcastle), Fire-clay, Flare-burnt Lime, and Marble and Temper Lime; and here lime is packed in hogsheads, casks, jars, &c. for exportation.
OFFICE—No. 13, GEORGE-YARD, LOMBARD-STREET.
Letters addressed to Grays Essex, will meet with immediate attention.



TO BRICK, TILE, and PIPE MAKERS. An improving BUSINESS TO BE LET on LEASE.—Inquire, A. B. Forest-hill Station (by letter only), in the first place.

THE PATENT BRICK MACHINE COMPANY invite orders for their IMPROVED MACHINES. One of them is working in a field at Caterham, near Croydon, and arrangements are made with the owner for bearers of a letter from the Secretary, to see it in operation every Thursday and Friday. It is the most simple machine invented. Trains from London-bridge to Warlingham (close to the field), leave at 6 and 9.30 a.m. and 2 p.m.; return at 9.55 a.m. and 5.5 and 7.36 p.m.
HENRY C. MOUNT, Sec.
37, King William-street, City.

BRICKFIELD TO LET, 3½ miles from Town.—Clay for about 14,000,000 of Bricks.—Apply to Mr. C. BROWN, House and Estate Agent, West Croft-place, Hammersmith.

MINTON and CO.'S ENCAUSTIC and other PATENT TILES, for Churches, Entrance Halls, Conservatories, Balconies, &c.; Antique, Geometrical, and Alhambric Mosaics, manufactures of a highly decorative character, and extreme durability. Slabs and Tiles for Fireplaces and Hearths, Curbs for Grates, Door Furniture, White Glazed and Ornamental Tiles for Baths, Dairies, and Kitchen Purposes, may be had, in great variety at their Warehouse, 2, Albion-place, Blackfriars-bridge, London; and at their Manufactory, Stoke-upon-Trent, Staffordshire.

BLUE, RED, and WHITE FLOOR-TILES.

Roof tiles, Terra-cotta Decorations, Glazed Stoneware Pipes, Chimney Pots, Garden Pots, Air Bricks, Quoin Dressings, and Moulded Bricks of all colours and patterns.
W. GILBERT, Manufacturer, Tunstall, Staffordshire. London Depôt: C. RICHARDSON'S Wharf, Paddington.

BEADON'S PATENT IMPERISHABLE GUTTER TILES,
For Spouting Roofs of Houses either old or new, whether of thatch, slate, or tile, and other structures.
See Advt.
J. B. LAWES, 1, Adelaide-place, London-bridge.
This is the cheapest kind of spouting known; for, besides its lower cost, it will last without paint or repair as long as the building itself. It will bear the weight of any ladder; and in case of accident a labourer can repair it. It occupies the room of a large amount of roofing, effecting a great saving in slates, tiles, &c. It is especially applicable to the backs of houses in town, cottages, and agricultural buildings.
Price 4d. each tile of about 13 inches long; stop-ends and outlets, 6d. Any mason can put them up, or, if over 100 feet are required, a man will be sent to fix them at 5d. per foot. This charge to include tiles delivered in Agent's yard, cement, and labour. May be had in London, Gloucester, Bridgwater, and Ruabon.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPÔT for this WARE is REMOVED to No. 21, WHARF, Macclesfield-street North, City-road Basin. Secondly, that the trade term, "Terro-Metallic," is the exclusive right of the Proprietor; and, thirdly, that the "Reasons for the Increase of Price," for the Great Exhibition, make the Manufactories (such as long as "The Pitchers," Tunstall, Staffordshire, as the first of the kind in the world

CONIAM'S PATENT IMPROVED ROOFING TILE. These tiles are light from overlapping each other by a raised edge, which also prevents the drift of rain or snow, and, at the same time, effects considerable saving in timber. To be obtained of C. PHILLIPS, Potter, Weston super-Mare.

PATENT TERRA-COTTA. Tracery for Parapets and Terraces, Mullions, Pinnacles, Moulded Bricks, Coats of Arms, Crests, Label Mouldings, Trees, Crosses, Vases, Balusters, Capitals and Bases of Columns, Jambs, Fresh Bricks, Coping, Kitchen and other Sinks, Chimney Shafts, and Tops, and numerous other Articles, manufactured by J. M. BLASHFIELD, in Patent imperishable Terra-Cotta, at Mill-wall, Isle of Dogs; and sold at No. 1, Wharf, Praed-street, Paddington-basin.

TO BUILDERS AND PLUMBERS.

The attention of the Trade is called to JOHN WARNER & SONS' PATENT VIBRATING STANDARD PUMP,

which is recommended for the simplicity of its construction, and the ease with which it works.

By the introduction of the vibrating standard, the cumbrous carriage and expensive slings and guides are unnecessary, rendering the price considerably less than Pumps made on the old plan.

Beer and Water Engines for raising fluids from a depth not exceeding 28 feet; also, Garden Engines constructed on the same principle.

JOHN WARNER & SONS,
8, Crescent, Jewin-street, London.
Manufacturers and Patentees.

R. RICHARDS and CO.
PUMP MANUFACTURERS and ENGINEERS,

Pumps in Wrought and Cast Iron and Brass, bored by machinery, and fitted in the best possible manner, suitable for excavators, roads, brickmakers, farms, gardens, stables, liquid manure, ships, barges, well-sinking, &c., adapted for any depth. Hydraulic Pumps for deep wells.

PUMPS ON HIRE.

Pumps of any size, singly or double barrel, up to double 12-in. diameter, kept ready for use at reduced prices.

N.B. The above can be worked either by hand, horse, or engine power.

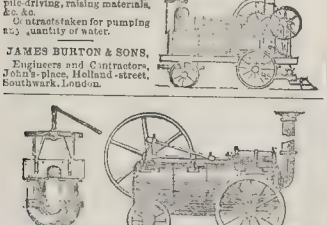
Ditto .... 4s. per doz. galvanized.

Upper Ground-street, Blackfriars Bridge, Surrey Side.



CONTRACTORS' STEAM-ENGINES. — TO BE LET, on HIRE, or for SALE several NEW and SECOND HAND STEAM ENGINES, of various powers, suitable for contractors' work generally.—Apply to Messrs. MIDWIN and HALL, Engineers, Surrey Iron Works, Blackfriars-road, where they may be seen.

STEAM PUMPING ENGINES.—PATENT PORTABLE STEAM-ENGINES, from four to ten-horse power, always ready to let on hire, by the week or month, for pumping, sawing, pile-driving, raising materials, &c. &c.

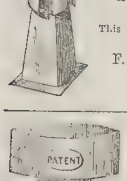
Contracts taken for pumping any quantity of water.

JAMES BURTON & SONS,
Engineers and Contractors,
John's-place, Holland-street,
Southwark, London.

PORTABLE STEAM-ENGINES and PUMPS kept in Stock for Hire at reduced Prices. R. RICHARDS and CO. Pump Manufacturers and Engineers, Upper Ground-street, Blackfriars-bridge (Surrey Side).

FOR SALE, a capital 8-Horse High-pressure Horizontal STEAM-ENGINE, Pipes, &c. complete, and Cornish Boiler, about twelve feet long, and five feet diameter. Also, a nearly new CIRCULAR SAW-BENCH, by W. N. PARSONS, shafting, gear, and 10-foot fly-wheel, &c. To be sold together or separate.—Apply to Mr. BARRINGER, York street, York-road, Lambeth.

STEAM-ENGINE.—FOR SALE, a strong, High-pressure Horizontal Steame engine, of 25 horse power. May be seen by applying to Mr. PORTER, at Cubitt's Works, Grosvenor-road, Pimlico.



GALVANIZED WINDGUARDS.

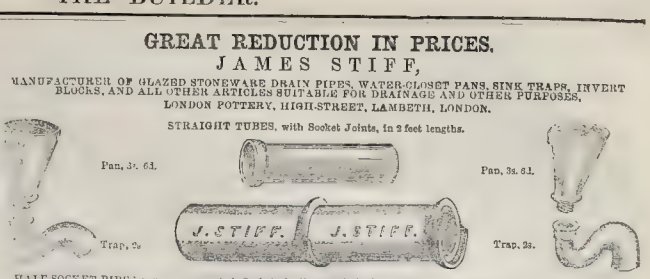
No. 1. 3 feet high, 14 in. by 9 in. bottom, 18s.
No. 2. 4 " " " " " 20s.

A DISCOUNT ALLOWED TO THE TRADE.

This Windguard is highly recommended by the Manufacturers,

F. EDWARDS, SON, and CO.
42, POLAND-STREET,
OXFORD-STREET.

SMOKY CHIMNEYS.—TWO YEARS' TRIAL, and PERFECT SUCCESS of FULL'S PATENT WIND GUARD, in curing the most inveterate SMOKY CHIMNEYS, induces the Patentee to recommend all persons suffering from that nuisance to try one.



Price 10s.

To be had of Ironmongers and Builders, and of the Patentee, at his Office, 63, Fenchurch-street.

TO LIME and CEMENT DEALERS, TILE and DRAIN-PIPE MANUFACTURERS, and OTHERS. A Brick Merchant, having a well-situated wharf fronting the Thames at Hammersmith, where there is an opening for the above local trade, and only requires it for the loading and unloading of bricks, would be happy to treat with any one for LETTING the whole or part, which has every requisite for carrying on a good trade. A timber and sawing yard could be added advantageously. Further particulars of Mr. LLOYD, Brickmaker, Shepherd's Bush, Middlesex.

GREAT REDUCTION IN PRICES.
JAMES STIFF,
MANUFACTURER OF GLAZED STONEWARE DRAIN PIPES, WATER-CLOSET PANS, SINK TRAPS, INVERT BLOCKS, AND ALL OTHER ARTICLES SUITABLE FOR DRAINAGE AND OTHER PURPOSES,

THE BRANKSEA POTTERY,

NEAR POOLE, DORSET.

GREAT REDUCTION IN PRICES OF DRAIN-PIPES.

TO THE METROPOLITAN BOARD OF WORKS, DISTRICT BOARDS, BOARDS OF HEALTH, TOWN COUNCILS, IMPROVEMENT BOARDS, SURVEYORS, AND BUILDERS.

THE BRANKSEA POTTERY and CLAY COMPANY are prepared to supply all descriptions of Glazed Drain-pipes, Bends, Double and Single Junctions, Closet-pans, &c. Also, Terra-cotta Chimney-pots and Fire-bricks of a very superior quality at moderate prices.

N.B. A LIBERAL DISCOUNT TO THE TRADE. A LARGE ASSORTMENT OF GOODS CONSTANTLY ON SALE.

The clay obtained from the pits on the island of Brankseа is of the finest quality, and the goods are manufactured by men of long experience in the trade, with the aid of powerful machinery. The articles offered for sale will be found to bear comparison with the best goods manufactured in any part of England.

A list of prices forwarded free on application to Mr. T. G. BECK, at NEW WHARF, No. 6, Little Abingdon-street, adjoining the New Houses of Parliament; or to Mr. R. PETTS, at the Works, Brankseа Island, Poole, Dorset.

UNDERHAY'S PATENT REGULATOR CLOSETS for constant or intermitting supply, dispense with Cisterns, Service Boxes, Valves, Levers, Cranks, Levers, &c. &c.; much time is saved in fixing, and a better flush of water obtained in use.

Pan, Valve, Self-acting, and Servants' Closets, on this principle, may be seen at the Works. They are very cheap, their efficiency is guaranteed. 5,000 of them have been sold, and no instance of failure has occurred.

These Stool-valves are cheaper, stronger, and more ornamental, than any other Many thousands are in use, and greatly approved of.

Manufactured by CHARLES BOTTEN and SON, Brass Founders, Crawford passage, Clerkenwell, London.

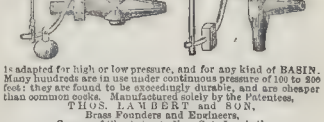
These pipes are made under steam pressure, and burnt to great hardness, and are capable of bearing nearly double the hydraulic pressure of ordinary glazed pipes. The prejudice against red-ware is overcome by this manufacture, and it is well known that good earthenware, UNGLAZED, is the oldest material discovered in a perfect state in Rome, Babylon, Nineveh, &c. &c.

TO WATER COMPANIES AND PLUMBERS.

HIGH-PRESSURE COCKS & CLOSETS.



The Health of Towns Commissioners having recommended the adoption of the high-pressure principle in all towns, WARNER'S HIGH-PRESSURE COCK is recommended as a Cock free from leakage, and applicable for all purposes and situations. Patent Closets and Basins with supply-valve for attaching direct to main pipes without a cistern, cocks, or wire.

LEAD, IRON, and TIN PIPE.

SALES BY AUCTION.

Valuable Waterside Premises on the Regent's Canal, King-land-road, with Cement Kilns, Steam Engines, &c. and an improved Rental of 24l. a year.

MESSRS. EVERSFIELD and HORNE are instructed by the Mortgagees to SELL by AUCTION at the MART, on TUESDAY, NOVEMBER 25, in two lots, the beneficial LEASE of the extensive PREMISES, known as Tuscany Wharf, near the Canal-bridge Kingsland-road, fitted up at a great expense by Messrs. Freen and Co. for the manufacture of cement, but equally applicable for many other purposes. Held for a long term, at a moderate ground-rent; also an improved rent of 24 a year, arising out of a plot of ground opposite Tuscany Wharf.—May be viewed by leave of the tenants and particulars had of Edwin Jennens, Esq. Solicitor, 15, New Boswell-court; at the Mart; and of the Auctioneers, 40, Parliament-street, or Coal Exchange.

TO ENGINEERS AND OTHERS.

MESSRS. FULLER and HORSEY will SELL by AUCTION, on TUESDAY, 4th NOVEMBER, 1856, and following day, at ELEVEN o'clock each day, on the PREMISES, the Atlas Works, Emerson-street Southwark, unless previously disposed of by private contract, of which due notice will be given, the MACHINERY and TOOLS of the ATLAS WORKS, including a large and powerful self-acting boring machine, drilling-machine, ten very powerful lathes, for engine turning and screw-cutting, punching machines, shears, four smiths' forges, a large assortment of engineers' and smiths' tools, two steam engines, and boiler, shafting, and gearing, screwing apparatus, a valuable collection of new patterns, in wood and iron, stores of every description, and numerous other effects. At the same time will be SOLD, the LEASE of the PREMISES, comprising a substantially-built factory, of two floors, the upper story used as a fitting shop, turnery, and store-room. The lower floor used as an erecting shop, turnery, engine house and smith's shop, a workmen's dining-room, stable-yard, & convenient residence, and offices, held on lease for a term of twenty-six years, at a rent of 80l. per annum.—The Premises may be viewed till the sale, and the Machinery on Monday previous. Particulars and catalogues may be had on the Premises, and of Messrs. Fuller and Horsey, 13, Billiter-street, City.

TO TIMBER MERCHANTS, BUILDERS, CABINET-MAKERS, CONTRACTORS, AND OTHERS.

MR. MARSH has received instructions from the proprietor to submit to PUBLIC SALE on the PREMISES, Philpot-street, Commercial-road East, on TUESDAY, the 11th NOVEMBER, at ONE o'clock precisely, Twelve Loads superior Quebec Birch, Five Loads Dry Ash Plank, Five Loads Dry Hornbeam Plank, Two Loads Dry Lime Oak, Three Loads Dry Sycamore Board and Plank, 3,000 feet Dry Mahogany Boards and Plank, with Pine Plank, Floor Boards, and other Goods, particulars of which will appear in catalogues.—May be viewed two days prior to Sale.—Catalogues had of W. Cooper, Esq. 13, George-street, Mansion-house; and of the Auctioneer, Philpot-street, Commercial-road East.

SURREY, Three Miles from London. — Very valuable Freehold Detached Residences, with beautiful Pleasure Grounds, Fish Ponds, and park like Meadow Land, containing about 26 acres; also two other Residences, with Gardens, and two enclosures of Land, very eligible for building.

MESSRS. FAREBROTHER, CLARK, and LYE are instructed by the proprietor (removing to his estate in Hertfordshire) to sell at GARRAWAYS, on WEDNESDAY, NOVEMBER 19, at TWELVE (unless in the meantime an acceptable offer be made to purchase the whole, or to rent the large residence and 18 acres of land), the following very valuable FREEHOLD ESTATES, situate within three miles of London, between Stockwell and Clapham, and comprising Stockwell Lodge, a spacious family residence, replete with comfort, and upon which a very large sum has been expended within a few years in additions of new reception-rooms, &c. standing in its own beautiful grounds and park, kitchen garden, hot and green houses, conservatory, sheet of water, stabling, farm-yard, and about 18 acres of park-like meadow land, ornamented with timber and hedgerow, and for many years in the sole occupation of Henry Smith, esq. The immediate possession of this portion of the property may be had. The adjoining freehold residence, with capital pleasure-grounds, fronting Clapham-park-road, and the stabling, with about six acres, in the occupation of John Gladstone, esq. at the very low rent of 240l. per annum. Also two capital detached residences, fronting Poke-road, one in the occupation of Edwin Harford, esq. at 112l. per annum, and the other on lease to Mr. Palmer, at 60l. per annum, two lodges let at 14l. per annum, and two enclosures of meadow land, with extensive frontage, adapted for building purposes.—Particulars and plans may be had of C. G. C. Oriel, Esq. Solicitor, 36, Alfred-place, Bedford-square; at Garraway's; and at the Offices of Messrs. Farebrother, Clark, and Lye, Lancaster-place, Strand

LORDSHIP LODGE, TOTTENHAM.—Valuable Building Materials.

MESSRS. NORTON, HOGGART, and TRIST have received instructions to SELL by AUCTION, on the PREMISES, Lordship-lane, half a mile from the Tottenham Station of the Eastern Counties Railway, on TUESDAY, NOVEMBER 11, at TWELVE, the valuable BUILDING MATERIALS of Lordship Lodge, with the stabling, coach houses, vinery, and buildings, comprising upwards of 250,000 superior stock bricks, large quantity of slates, excellent timber in the floors, and partitioning, folding doors and sashes, flooring boards, moulding and other deals with plate-glass sashes, frames and fittings, elegant Italian marble and other chimney pieces, about seven tons of lead in gutters, ridges, and flats, lead and iron lifting pumps, cisterns, soil pipes, closets, stoves, ranges, cupboards, and other fixtures, the portico, York and purple paving, greenhouse pates, posts and rails, iron palisades, and other fencing, the vinery with large iron pipes and hot-water apparatus, and other effects.—May be viewed the day previous to the Sale, and catalogues had at the Inns at Hornsey, Tottenham, and Edmonton; and of Messrs. Norton, Hoggart, and Trist, 62, Old Broad-street, Royal Exchange.

WELL-SECURED GROUND-RENTS AND VALUABLE LEASEHOLD RESIDENCE.

MESSRS. BEADEL and SONS are instructed to SELL by AUCTION, at the MART, Bartholomew-close, London, on TUESDAY, NOVEMBER 4th, 1856, at TWELVE, the following VALUABLE HOUSE and GROUND RENTS, well secured upon ten houses in Upper Berkeley-street West; No. 14, Great Cumberland-place, Hyde park; and Nos. 1, 2, and 4, Sumner-place, Brompton, producing 283l. 4s. per annum, for a unexpired term of thirty-two years; also an improved rent of 70l. 8s. per annum, arising from capital leasehold premises, No. 25, Norfolk-street, Park-lane, with coach-house and stables in Ramyard, in the rear, for an unexpired term of twenty and a half years at a low ground-rent.—Particulars and conditions of sale may be had at the Mart; of Messrs. Hearnes, 2, Broad Sanctuary, Westminster, at the Mart; and of Messrs. Beadel and Sons, 25, Gresham-street, London.

LIMEHOUSE.—To BUILDERS, CARPENTERS, and OTHERS.

MR. SITGRAVE will SELL by AUCTION, on WEDNESDAY, NOVEMBER 12, at ELEVEN o'clock, at the PREMISES, St. Andrew's-road and Kirk's-row (both near the Limehouse Church), Limehouse, Middlesex, the Dwelling-houses, Shop, Workshop, Timber-yard, and Premises, known as Nos. 1 and 2, St. Andrew's-road, and Nos. 1 and 2, Kirk's-row, Limehouse, in the occupation of the proprietor, who is going abroad, the STOCK and UTENSILS-IN-TRADE of a builder, comprising 300 new and well-seasoned deal boards, 1½ hogsheads, 400 feet of well-seasoned Norway and Christiansand board and plank, 3,000 feet of mouldings, 1,000 feet of quartering, 20 Portland chimney-pieces, work-benches, barrows, ladders, scale beam, planks, and weights, oak and fir scantling, wheeling planks, two 2-inch cast-iron pumps, a large quantity of firewood, about 6 tons of useful iron, set of chair-cases, a nearly new 4-inch-wheel brick-cart, and a variety of useful materials.—May be viewed one day prior to the sale, and catalogues had in the Premises; Britannia Tavern, Limehouse; New Globe, Mile-end; and of the Auctioneer, at his Rooms and Offices, 28, Leadenhall-street.

SALES BY AUCTION.

TO BUILDERS AND OTHERS.—RUSH-GROVE, WOOLWICH, KENT.

MR. G. HUDSON has received instructions from the Lords Commissioners of the Admiralty, to SELL by AUCTION, upon the PREMISES, adjoining the Royal Marine Barracks, on MONDAY, NOVEMBER 10, 1856, at ONE for TWO o'clock, in lots, the BUILDING MATERIALS and HOUSE FIXTURES of the range of buildings lately occupied by General Crawford together with the Greenhouse, and the surplus materials of the house adjoining; and at the same time will be SOLD, about 2 acres of good stand old plain TURF, now in store, in lots of 5,000 each.—Catalogues may be had at Her Majesty's Dockyard, Woolwich, and of the Auctioneer, Brewer-street, Woolwich.

VALUABLE FREEHOLD LAND, EAST BARNET.—TO BE SOLD by PRIVATE CONTRACT, about THIRTY ACRES (in separate fields or plots) of FREEHOLD BUILDING LAND, finely situate in the vicinity of the Great Northern Railway station, and admirably adapted in every respect for building purposes, having extended frontages upon the high road on each side of the railway, and also upon newly-formed roads. The situation is noted for its salubrity, scenery, and facility of communication with London. — For further particulars, apply at Mr. THYNNE'S Offices, 11, Great George street, Westminster

FINCHLEY.—LAND fronting the Regent's Park-road, and East-end-road, TO BE LET on Building Leases for ninety-nine years, with power of enfranchisement. Plots from one to four acres for the erection of villas, and smaller plots for semi-detached houses, and plots for shops in the village. Apply to W. A. BOULNOIS, Esq. Architect, 6, Waterloo-place, Pall-mall; or to Messrs. BARKER, BOWKER, and PEAKE, 1, Gray's-inn-square.

FREEHOLD LAND TO BE LET, on Building Lease for ninety-nine years. Money advanced to responsible parties. Freehold Land to be Sold for building purposes in eligible situations.—Apply at the Offices of Messrs. MORGAN and PHIPSON, Architects, 3, Danes-Inn, St. Clement's, Strand

BRICK and TILE YARD and LAND, for Villa Residences.—The Braneliffe Estate, near Worksop, situate on the Manchester, Sheffield, and Lincoln-hire Railway.—TO BE LET *from* FIFTEEN to TWENTY ACRES of excellent BRICK CLAY, from 12 to 14 feet thick, which has been tested and found to be far superior to any other in the vicinity. A lime quarry is in full work on the estate, producing lime of the very best quality. Arrangements might probably be made for working the lime and the brick clay together. A tramway runs from the north of the estate to the main line on the south; and the Chesterfield and Stockwith Canal also passes through the estate, and they immediately adjoin the brick clay, so that every facility for transport, and establishing a first-rate brick and tile yard is afforded. Much of the land is highly suitable for villa residences. It rises on the north side of the estate, shutting out of sight the lime quarry; commanding a southern aspect, and beautifully picture-que panoramic views over the four ducal estates by which it is surrounded, and is always well supplied with game. Every encouragement will be afforded to a builder who would take it for villa residences. Shireoaks Station adjoins the estate, which is only three miles from the improving town of Worksop, and fifteen miles from Sheffield.—Permission to view and make trial of the clay, and further particulars, may be obtained of BROADHURST and HODDING, Solicitors, Worksop

FREEHOLD LAND FOR SALE.—Thirteen Acres—situate within 100 yards of the first station on the Woolwich Railway, and within five minutes of London, in a high gravelly soil, and well adapted for building. Twelve acres more adjoining may be had if required. Further particulars may be had by letter to W. H. care of Mr. Richardson's, Chemist, Kingsland

REIGATE, SURREY, within three-quarters of an hour's ride of London.—TO BE SOLD, a very delightful SITE for a RESIDENCE, with Stabling, and about Freehold Land ornamentally timbered, in the finely situate on the southern slope of Reigate-hill, about half a mile from the Reigate town station on the South-Eastern Railway, commanding extensive views, and affording an opportunity for building a house in its favourite locality rarely to be met with. Soil dry.—For particulars, apply to Messrs. PRICE and SONS, Estate Agents and Auctioneers, Reigate and Dorking, Surrey.

NEW WINDSOR ESTATE. — Valuable BUILDING LAND TO BE LET, in Plots for first and second class Villa Residences, with Stabling, which are much needed in this beautiful locality. The situation is the finest in or near Windsor, adjoining the Park and Long Walk and commanding a splendid view of the Castle. Within ten minutes of the Great Western and fifteen minutes' walk of the South-Western Railway Stations. Any plan will be laid by responsible parties.—For particulars apply to Mr. WILLIAM SIM, Architect and Surveyor, 3, Danes-Inn, Strand.

TO BUILDERS AND OTHERS.—High-street, Bromley, Middlesex.

MR. T. S. SMITH has been instructed to LET by TENDER to be sent in by SATURDAY, NOVEMBER 29, 1856, on a building lease for seventy years, about ONE ACRE of valuable FREEHOLD BUILDING LAND, but if not deemed eligible without three plots of land now thereon, known as "Bromley House," near the Bow Railway Station, having a commanding frontage to the High-street of about 300 feet, offering a desirable opportunity for erection of shops and houses, being the only available spot now left for building in the High-street.—May be viewed, and printed forms of Tender and further information obtained of Mr. T. S. Smith, Auctioneer and Surveyor, 44, Lombard street, and Upton, Essex; where a plan may be seen.

WESTON-SUPER-MARE, SOMERSET. The important and valuable "WEST COTTAGE PROPERTY," in the very centre of the town, close to the railway, and the whole entirely fronting the sea, is now offered for SALE. The whole is freehold, with immediate possession.—Plans, &c. of R. G. PHILLIPS, Esq. Westonsuper-Mare

TO BUILDERS. — TO BE LET, on lease, for 75 years, 18 fee FRONTAGES, on the best part of Chelsea, suitable for 10-roomed houses. Arrangement for advances can be made. Also TO BE SOLD or LET, 6 acres of FREEHOLD LAND, at Wick Bridge. Apply to Mr. J. SHEPPARD SCOTT, Architect, 16, New Broad-street, City.

IMPORTANT TO BUILDERS AND CAPITALISTS.

UNITED TRADESMEN'S FREEHOLD LAND SOCIETY.—The leasehold ESTATE at HORNSEY, purchased by the Trustees, consisting of about forty acres, and within three minutes' walk of the station, will next summer be accessible from the City by means of the Metropolitan Railway. Persons desirous of possessing land in this charming and picturesque neighbourhood, can do so immediately by joining this society. Plots, 30l. each; subscription, 2s. per month; at their Office, 61, Savage-Bank, Goldsmith's-place, Hackney-road, on the third Wednesday in each month, from seven until Nine o'clock. Capitalists and others desirous of possessing land at once can do so by application to Mr. J. LAWLESS, 1, Thurlow-place, Hackney-road; or to Mr. DANIELL, Hornsey, and Estate Office, 23, Keppel-street, Russell-square. The ground on the first portion of the estate being the only part on which a tavern can be built, is delightfully situated on the high road leading to Tottenham, and is within two minutes' walk from the Hornsey Station, to be disposed of, with all its privileges, for the sum of 500l.—Apply as above

TO BE LET, large roomy PREMISES, with good Stabling and Carriage Entrance, situated 20, Old-street, St. Luke's.—Inquire as above.

ST. MARY, ISLINGTON.—Vestry Hall.—The Committee appointed by the Vestry of this Parish for that purpose, hereby give Notice, that they are ready to receive particulars from persons who may be willing to DISPOSE of LAND in this Parish, sufficient for the ERECTION of a suitable VESTRY HALL and OFFICES for the business of the Vestry.—Particulars, stating the tenure, extent locality, and amount of purchase-money, to be sent to the Vestry Offices, on or before the 15th day of NOVEMBER instant

JOHN LAYTON, Vestry Clerk.
Vestry Offices, 21, Milner-square, Islington, Nov. 6, 1856.

TO BRICKMAKERS, BUILDERS, and OTHERS. — TO BE LET, or DISPOSED OF, with immediate possession, a BRICKYARD, with building sites, containing 4a. 3r. 20p. close to the Sea, to London, by railway and water. There is an abundant supply of red and white clay (a quantity of which is prepared), the latter capable of making finest white Suffolk facing bricks. Sand chalk and water on the premises. Also plant and every requisite for immediate use. Also TO BE SOLD, cheap, about 200 000 excellent WHITE SUFFOLK FACINGS, SECONDS, and RED BRICKS, loaded rail-barge and railway truck.—For London.—For particulars and specimens, apply to Mr. E. LEVETT, Brentwood, Essex.

COMMODIOUS BUSINESS PREMISES TO BE LET, containing, amongst other conveniences, a large Artist's Studio, lighted from above.—May be viewed on application to the premises, No. 37, Great-street, Leicester-square, and particulars obtained of W. C. REED, Architect, 64, Old Broad-street, City

BLACKFRIARS. — TO MANUFACTURERS.—Excellent Warehouses or Workshops (138 feet by 24), Shop, and Dwelling-house, in Blackfriars, TO BE LET on Lease. Rent, 105l. per annum. For further particulars apply to F. BROUGHTON, Esq. Solicitor, 4, Falcon square, City.

DUNSTABLE.—Eligible and Commodious BUSINESS PREMISES TO BE LET, with convenient Domestic Apartments immediately adjoining, situate in the High-street, having a frontage of 40 feet, by a depth of 124 feet. The Warehouses and Offices (erected not long since) have been built with a view to the Straw Business.—Apply to W. C. REED, Architect, 64, Old Broad-street, London

EXCELLENT large and light WORKSHOPS TO BE LET, in the neighbourhood of the Strand and Covent garden, where steam-power may be erected, if desired.—Apply to Mr. CHARLES COLWILL, Builder, Brydges-street, Strand.

TO BE SOLD or LET, and entered upon immediately, extensive PREMISES, upon which is a steam-engine of 20-horse power, suitable for a mill or an linseed crusher, contiguous to both rail and water carriage.—For particulars, apply to Mr. ABBOTT, 26, Bedford-row, Gray's-inn

TO BE LET or SOLD, a bargain, large COVERED PREMISES, 300 feet in length, very light and dry; the whole of the premises fitted up with gas; with excellent dwelling-house and gateway; suitable for any person in want of a ground-floor. The Premises are situated near the Great Northern Railway, and New Smithfield Cattle Market.—Inquire of J. SPELLER, 49, Bingfield-street, Caledonian-road.

LARGE MANUFACTURING PREMISES, in Park-lane, TO BE LET. Inquire at 121, Long-acre.

TO PAINTERS, DECORATORS, PLUMBERS, &c. — A genuine BUSINESS TO BE DISPOSED OF, offering an opportunity to any one wishing for a good business seldom to be met with.—Apply to Mr. JOHN TROTT, 3, Caroline place, Queen's-Elm, Brompton.

TO ARTISTS.—WANTED, an ORIGINAL PICTURE, to occupy a centre panel in the head of a large and elaborately wrought Bedstead, to be exhibited in the Art Treasures Exhibition at Manchester, in 1857. A premium of 45 guineas will be given to the successful competitor.—Particulars of which may be had on application to RICHARD CHARLES, Cabinet Manufacturer, Warrington, Lancashire.

IMPORTANT to the ENGINEERING PROFESSION.—SAFE and RAPID TRANSMISSION of DOCUMENTS. — Plans, Deeds, Law Papers, Samples, and Articles for private use, &c. forwarded daily at THREE p.m. to all parts of the Continent, with the Mails direct throughout, by the CONTINENTAL EXPRESS PARCELS AGENCY, of which the proprietors are the sole correspondents of the Royal Francais Post-office, the Belgian Government, Railway, and agents of the mail packets between Dover and Ostend. Rates fixed and moderate, tables of which, with every information, to be had at the Office, on application at the Chief Office, 32, Gracechurch-street, London.

N.B. Parcels to be sent the same day must be at the Chief Office by THREE p.m.

TO BREWERS, DISTILLERS, DYERS, MILL-OWNERS, and OTHERS who have Steam engines, and to all who feel an interest in the establishment of baths and washhouses, or who for any purpose may require a plentiful supply of hot water at little expense.—The discharged steam from high-pressure engines, as is well known, with few exceptions is conducted either through the roof into the open air, into a drain below, or into the chimney-shaft, and is consequently entirely wasted; whereas, by means of a noiseless, simple, compact, and comparatively inexpensive apparatus it may be made available for heating water to boiling point in any quantity up to what can be obtained from the consumption of three-fourths of the fuel used in driving the engine. By the use of this apparatus in connection with an engine of one-horse power only, a sufficient supply of hot water is insured for the constant use of from ten to twelve baths, at their minimum rate per session in proportion as the engine increases in power; and wherever engines range from six to ten-horse power or upwards, both baths and wash-houses may with advantage be constructed together. Although preferable, it is not always necessary that the apparatus should be on the same street as the engine, as the water or heat would be lost by a short pipe conveyance of three or four yards. The apparatus has been in use upwards of five years in a large public institution with perfect success, and I can confidently answer for its being adapted for the purpose specified, so that it will render the establishment of baths and washhouses practicably easy in many parishes where they would otherwise be entirely out of the question on account of the great expense. Diagram, with full particulars may be had on application to the Patentee, JAMES BARRIS, Hanwell, Middlesex

PLANTING the GROUNDS of SUBURBAN RESIDENCES, CEMETERIES, &c. to produce immediate effect. The undersigned has a most extensive STOCK of ORNAMENTAL TREES and SHRUBS, fit for present planting, some of which are 20 feet high, and may be removed with perfect safety. They comprise the best and most effective varieties, and upon ornamental gardening either as screens or as single objects, or for shrubberies and single ornamental lawn plants.—May be inspected, and priced obtained on the premises, which is 4½ miles from Hyde park-corner.—R. GLENDINNING, Chiswick Nursery, London.

LONDON: Printed by CHARLES WYMAN, at the Printing Office of Cox (Bros.) & WYMAN, 74 & 75, Great Queen-street, Lincoln's-inn-fields, in the Parish of St. Giles-in-the-Fields; and published by the said CHARLES WYMAN, at the Office of "THE BUILDER," 1, York-street, in the Parish of St Paul, Covent-garden, both in the County of Middlesex.—Saturday, November 8, 1856.

COMPETITIONS.

TO ARCHITECTS and OTHERS.—The Burial Board of the Parish of Castleford, in the Riding of the county of York, are desirous of receiving PLANS, DESIGNS, and ESTIMATES, comprising ground-plans, sections, and elevations for the LAYING OUT, SURVEYING, and FENCING the proposed NEW BURIAL GROUND; and also for TWO CHAPELS and a LODGE, with ENTRANCE-GATES, to be erected and fixed thereon. The site contains four acres, two-thirds of which are to be appropriated for burials according to the rites of the Church of England, and the remainder for burials otherwise than according to such rites. The chapels are proposed to be in one building, divided by a partition wall in the centre; and the road there is, with the lodge, fence wall, and other buildings, and including the sewers and entrance-gates, is not to exceed 950*l*. The Board will award to the author of the best design, in their judgment (subject to the approval thereof by the Bishop of the diocese), the sum of five pounds. The design, for which such premium is awarded, will become the property of the Burial Board, who will return all unapproved designs to their respective authors on application. Competitors must state the amount of architect's charges for furnishing all necessary working drawings, and superintending the works, if the Board should require their services. A plan and section of the ground may be inspected, and further information obtained on application to the Clerk of the Board; or a tracing and full particulars will be furnished on receipt of seven stamps by post-office order or in postage stamps. The designs must be deposited with the Clerk of the Board, free of expense, on or before the 20th DECEMBER next, marked with an emblem, or motto, on the outside, but without any other distinguishing mark; and accompanied by a sealed letter, addressed to the Board, having the same motto or emblem on the outside, and inclosing the name and address of the author or Re order.

THOMAS SYKES, Solicitor, Clerk of the Burial Board.
Castleford, near Normanton, Nov. 12, 1856.

CONTRACTS.

SUSSEX COUNTY LUNATIC ASYLUM. TO BUILDERS.—Notice is hereby given, that the TIME for RECEIVING TENDERS for laundry works, purposed to be erected at the Asylum, near Hayward's Heath, in the County of Sussex, has been EXTENDED to MONDAY, the 1st day of DECEMBER next, on or before which day, therefore, Tenders may be sent in, but after that time no Tender will be received. By order of the Committee of Visitors.

Lewes, 8th October, 1856. WM. POLHILL KELL, Clerk.

CONTRACTS.

NOTICE to ENGINEERS and OTHERS. WAR DEPARTMENT CONTRACT.—The Principal Officers of her Majesty's War Department hereby give Notice that they will receive Proposals from such persons as are desirous of entering into a CONTRACT, from the 28th NOVEMBER, 1856, to 31st MARCH, 1862, for PUMPING WATER for the use of the TROOPS &c and for KEEPING in REPAIR and PRESERVATION the GOVERNMENT WATERWORKS at the Temporary Barracks, Curragh of Kildare, in the Curragh District. The person declared the contractor will have the free use of the existing waterworks for the purposes of this Contract. The Tender to be in a lump sum at per annum, paid for quarterly, and the Contract to be determinable at the end of any quarter after the 31st MARCH, 1858, on either party giving the other three months' notice in writing, after that date, or determinable by the War Department at any period, and at a moment's notice, should the contractor fail in affording the necessary supply of water, or be dissatisfied with the manner in which the service is performed by the contractor. Persons desirous of Tendering for this Contract, will receive every information on application at the Commanding Royal Engineer's Office, Lower Castle yard, Dublin. The existing waterworks may be seen, and letters of Tender, with terms of Contract, and all information obtained, on application at the Royal Engineer's Office, at the Curragh. Approved security to the amount of 400*l* will be required for the due performance of the contract; and the War Department reserve to themselves the right of rejecting the whole or any of the Tenders. The letters to be sealed and addressed to the Inspector-General of Contracts, War Department, Pall-mall, London, so as to be received on or before the 21st day of NOVEMBER, 1856, and to be marked on the outside, "Tender for Pumping Water at the Curragh Camp."

Commanding Royal Engineer's Office, Dublin,
November 8th, 1856.

NOTICE to BUILDERS and CONTRACTORS.—WAR DEPARTMENT WORKS.—The Director-General of Contracts will receive TENDERS for the execution of WORKS for a PORT and BARRACK BUILDINGS, &c. at Les Hommeaux Florains Rocks, Alderney. The Tenders to be delivered on or before THURSDAY, the 27th NOVEMBER, 1856, after which date no Tender will be received. The drawings of the works may be seen, and forms of Tender, with all other required information, may be had at the Royal Engineer's office, Alderney. The Tenders to be addressed to the Director-General of Contracts, War Department Pall-mall, and endorsed, "Tender for Works, Hommeaux Florains Rocks, Alderney."

Royal Engineer's Office, Guernsey, Nov. 4, 1856.

TO CONTRACTORS.—SOUTH WALES MINERAL RAILWAY.—The Board are prepared to enter into a CONTRACT for the CONSTRUCTION of the entire RAILWAY and WORKS, from the Briton Ferry, near Neath, in South Wales, to the Head of the Valley at Glyncorrwg, a distance of about 11½ miles. Specifications and plans and sections may be seen at the offices of I. K. BRUNEL, Esq. 18, Duke street, Westminster, on and after the 27th instant. Tenders, endorsed, "Tender, South Wales Mineral Railway," to be addressed to the Secretary, at the Offices of Messrs. BAXTER, ROSE, and NORTON, 3, Park street, Westminster, on or before the 24th day of NOVEMBER next. The Directors do not bind themselves to accept the lowest Tender.—By order,

Oct. 17, 1856. ROBERT PARSONS, Secretary.

TO BUILDERS, DECORATORS, and PAINTERS.—The House, No. 20, Phillimore place, Kensington, to be REPAIRED according to a specification, to be seen on the Premises, on MONDAY and TUESDAY next. Tenders to be sent on WEDNESDAY, to G. GORDON STANHAM, Esq. Abbots Cottage, North-end, near Hammersmith gate, Architect. The lowest Tender not necessarily accepted.

GLASGOW CORPORATION WATERWORKS.—POSTPONEMENT of TIME for RECEIVING TENDERS for No. 4, or KELTY CONTRACT.—To CONTRACTORS.—The Magistrates and Council of the City of Glasgow, Commissioners under the Glasgow Corporation Waterworks Act, 1855, hereby intimate that they have POSTPONED the TIME for RECEIVING TENDERS for No. 4, or KELTY CONTRACT, as formerly advertised, and that further Tenders will be received, if lodged in the manner and within the period after specified. The works extend from the valley of the Duchray to the top of the Kelty Cundrock, about 4½ miles, and include two tunnels, of 1,175 and 1,148 yards respectively, with various open cuts, varying from 20 to 723 yards in length, and some iron and masonry aqueducts. The plans, sections, drawings, and specifications, will again be exhibited in the Town Hall, for the City of Glasgow, on and after the 25th instant, at the Office of the Engineer, J. F. BATEMAN, Esq. in Manchester; or to Mr. J. H. HILL, Assistant-Engineer, Loch Ardinglas, will point out the line of work. Sealed Tenders for the construction of the works, addressed to the Commissioners, sealed and marked "Tender for Kelty Contract," must be delivered to the Subscriber, Mr. JAMES BOYD, Bridge Chambers, 34, Miller street, Glasgow, on or before TUESDAY, the 18th NOVEMBER current. The Commissioners do not engage to accept the lowest offer.—By order,

JOHN BURNET, Secretary.
Waterworks Office, 82, Miller-street, Glasgow,
1st November, 1856.

RESTORATION of LIMEHOUSE CHURCH.—The Committee for the Restoration of Limehouse Church, are desirous of receiving TENDERS for the MASONRY, PLUMBING, and SLATING WORKS, and for the CARPENTER and JOINER WORKS, and for the PAINTING, GLAZING, and PAPER HANGING, into separate Tenders. The Drawings and Specifications may be seen at Mr. ARTHUR W. BLOMFIELD'S, 54, Great Marlborough street, and at the Vestry-clerk's Office, Limehouse Church. Tenders must be sent in for TEN distinct works, viz.—The Contractor for the Masonry to send in a Tender for the lowest or any Tender.—Dated this 7th day of November, 1856

JOHN DICKEN, Honorary Secretary.

CONTRACTS.

HAMPTON-COURT BRIDGE and WALTON BRIDGE TOLLS.—TENDERS will be received from any person desirous of RENTING the TOLLS authorised to be taken by Act of Parliament for passing over the above bridges, from the first day next to Christmas last 1857, in separate Tenders. Sealed Tenders must be delivered at the Offices of GEORGE DAVIS, Surveyor, Uxbridge, Middlesex, on or before TWELVE o'clock of THURSDAY, the 18th of DECEMBER next. The Proprietors does not bind himself to accept the highest or any Tender.

METROPOLITAN BOARD of WORKS.—To BUILDERS, CONTRACTORS, and OTHERS.—The Metropolitan Board of Works hereby give Notice that they will be ready, on THURSDAY, the 20th instant, to receive sealed TENDERS from parties who may be willing to contract for the CONSTRUCTION of a BRICK SEWER, 2,434 feet in length, or thereabouts, with other WORKS in connection therewith, on the Isle of Dogs, extending from the West Ferry road, eastward, towards the East Ferry road, in the county of Middlesex, and the maintenance of such works in complete repair for the term of twelve calendar months. Plans, sections, and a specification of the works, together with the form of Tender, may be inspected, and other particulars obtained, at the Office of the Board, No. 1, Greek street, Soho square, between the hours of NINE a.m. and FOUR p.m. until THURSDAY, the 13th instant. Tenders addressed to the Metropolitan Board of Works, must be delivered at the Office of the Board before FOUR o'clock on that day, and no Tender will be received after that hour. The Board do not bind themselves to accept the lowest, or any Tender, and the party whose Tender shall be accepted will be required to provide two approved sureties for the due performance of the works.

E. H. WOOLRICH, Clerk of the Board.
No. 1, Greek street, Soho square, Nov 13th, 1856.

ST. MARYLEBONE, NOVEMBER 8th, 1856.—NOTICE to BUILDERS and CONTRACTORS.—CONTRACT for SEWERS.—Notice is hereby given, that the Vestrymen of the Parish of St. Marylebone will meet in the Board room of the Court-house, on THURSDAY, the 20th DAY, the 22nd day of NOVEMBER, 1856, at ELEVEN o'clock in the forenoon to receive TENDERS for a NEW SEWER and REPAIRS to SEWERS, of SOUTH-STREET and MARYLEBONE-LANE, and for the BUILDING of a NEW PIECE of and SOUTH-STREET, in the parish.—Further particulars may be known, and the specification and drawings seen, on application to the Vestry's Surveyor, Mr. ROBERT WALLEN, daily. The Tenders to be sealed and addressed, "Tender for Sewers," and delivered to the Vestry Clerk, before ELEVEN o'clock on the forenoon of the said day of NOVEMBER, and no Tender will be received after that hour. The Vestry do not pledge themselves to accept the lowest or any of the Tenders. The Vestry, on their behalf, to be in attendance at the time for opening the Tenders. The Contractor to find satisfactory security for the performance of the Contract, and to pay the expenses of the bond and Contract.

By order, W. E. GREENWELL, Vestry Clerk.

TO BUILDERS and CONTRACTORS.—Builders willing to TENDER for the various WORKS required to be done in the ERECTION and COMPLETION of a FREE METHODIST CHAPEL, to be built at Spalding, in the county of Lincoln, may see plans and specification, in the every particular, by applying between the hours of TEN a.m. and FIVE p.m. at our offices on and after the 20th day of NOVEMBER, to the 24th inclusive; and at the Baptist School room, Spalding, from the 10th to the 22nd of NOVEMBER inclusive.

BELLAMY and HARDY, Architects and Surveyors.
Offices, 30, Broadgate, Lincoln, October 27, 1856.
N.B. The Trustees do not bind themselves to accept the lowest Tenders.

HALIFAX CORPORATION GASWORKS.—The Mayor, Aldermen, and Burgesses of the Borough of Halifax, are prepared to receive TENDERS from competent persons for MANUFACTURING and DELIVERING upwards of 1,000 tons of CAST-IRON PIPES and APPENDAGES. Copies of the specification, form of Tender, and the probable quantities required, may be obtained on application to Mr. G. STEVENSON, the Borough Engineer, and the Tenders must be delivered at his office in the Town hall, Halifax, on or before THURSDAY, the 20th day of NOVEMBER next ensuing. By order,

EDMUND MINSON WAVELL, Town-clerk.
Halifax, October 30, 1856.

TO BUILDERS, CONTRACTORS, and OTHERS.—Persons desirous of CONTRACTING for the ERECTION of a NEW HOUSE on the PENYRHEWL ESTATE, near Pontypool, may inspect the plans and specification, and obtain other information, on application, personally, to Mr WALKER, the White Lion, Pontypool, or by letter, to the Architects, on and after the 1st instant. The estimates to be sent to the White Lion Hotel, Pontypool endorsed "Tender for New House," and addressed to the Architects, not later than the 28th instant, who will meet the Proprietor and Contractors on the 29th instant, at the above Hotel, to open the Tenders but they do not bind themselves to accept the lowest or any Tender.

BIDDLAKE and LOVATT, Architects, Wolverhampton.

PENMAEN PARSONAGE-HOUSE.—Builders are hereby invited to send in TENDERS for the ERECTION of a PARSONAGE-HOUSE at Penmaen, in the Parish of Rhyn, in the county of Salop, from Plans, Specifications, and Quantities, which may be seen on the premises, and at the offices of Messrs. JONES and HUGHES, Architects, Liverpool, on and after MONDAY next, the 17th instant. Tenders to be sent to Mr. NORTON, at the Offices, 14, Old Boswell-court, London, on or before the 1st of DECEMBER.

[For remainder of Contracts see next page.

CONTRACTS.

TO BUILDERS.—Persons willing to TENDER for the various WORKS in the ERECTION of a CATHOLIC CHURCH, PRESBYTERY, and SCHOOLS, at Hadfield in the parish of Glossop, may see the plans and specifications at the Inn of Mr. Hadfield, from MONDAY, the 24th NOVEMBER to MONDAY, DECEMBER 8th, on which latter day, by TWELVE o'clock at noon, the Tenders are to be delivered, each, at the Office, situate on the Market-road, "Tender for St. Charles Church and Schools, Hadfield." No pledge is given to accept the lowest or any Tender.

WEIGHTMAN, HADFIELD, and GOLDIE, Architects.
Sheffield, November 8th, 1856.

MIDLAND RAILWAY.—The Directors of the Midland Railway are required to receive TENDERS for the ERECTION of GOODS WAREHOUSES, at the Derby Station. The drawings and specification may be seen, and further particulars obtained, upon application at the Engineer's Office, Derby Station, from the 19th to the 25th instant, inclusive, and at the Engineer's Office, Bridge-street Station, from the 26th instant to the 1st DECEMBER, inclusive. Tenders to be forwarded to the Secretary, Way and Works Committee, Derby Station, not later than TEN, a.m. on TUESDAY, 2nd DECEMBER next. The Directors do not bind themselves to accept the lowest or any Tender.—By order,

JOSEPH SANDERS, Secretary.
Derby, 13th November, 1856.

TO ROAD CONTRACTORS and OTHERS. TENDERS are required for the making of ROADS and SEWERS at West Horn, Essex. The Contract Lengths may be seen at Mr. PALMAN'S Office, at present resident, Road-corner. All Tenders to be delivered at Great Jane-street, near Lea, on or before FRIDAY, NOVEMBER 28th, 1856. The Lowest Tender not necessarily accepted.

TO SCULPTORS, MASONS, IRONFOUNDERS, and OTHERS.—The Burial Board of Toxteth Park are willing to receive from parties having for SALE, MONUMENTAL TOMBS, RAILING, or other DEVICE, for ENCLOSING TOMBS or GRAVES. The same to be set up in the Toxteth Park Cemetery at the sender's risk and cost.—For further particulars apply at the Office of the Burial Board, Public Offices, 24, Park-place, Toxteth Park, Liverpool. Nov. 5, 1856.

15	.. 2½	.. 9s. 6d.	

THE PATENT BOND (which is prepared from the ORDINARY HOOP IRON, by bending it at intervals of 3ft inches) is now being extensively used in the leading GOVERNMENT WORKS, Dock BUILDINGS, BANKS, ASYLUMS, BRIDGES, VIADUCTS, PRISONS, ENGINE-HOUSES, and MANUFACTORIES, as well as in other PUBLIC and PRIVATE WORKS, in London and in all parts of the Kingdom.

Sole Manufacturers—THOMAS PERRY and SONS, Highfields Works, Bilston.

London Depôt—ST. ANN'S WHARF, EARL-STREET, BLACKFRIARS.

NEW PATENT INVENTIONS FOR STABLE REQUISITES.

AWARDED A PRIZE AT THE PARIS EXHIBITION, AND PATRONISED BY THE ENGLISH AND FRENCH GOVERNMENTS.

COTTAM and HALLEN, of Winsley-street,

Are the original inventors of the PATENT ENAMELLED MANGER, WATER TROUGH, and WROUGHT IRON RACK, united to an iron top-plate, and forming one complete and unbroken fixture, having Jottam's Patent Noiseless Halter-Guide and Collar-Rein attached, the ball of which is taken to the back of the manger, and, by means of a simple contrivance, works with ease and freedom up or down the guide-bar. Cottam's new Patent Seed-Box, of galvanized sheet iron, is an important addition to the above fittings, being simple in construction, light and durable, promotes cleanliness, and is economical in its results. Also, the Patent Saddle and Harness Bracket combined, which can be used with great advantage where space is an object, as it can be turned up out of the way when not in use.

Improved Harness Holders, for preserving the shape of the harness, and preventing its cracking. Patent Loose-Box Fittings, Heap and Durable Corn-Bins.

Improved Surface-Drain, with safety covers, Sanitary Traps, and every article for the harness-room and stable, kept in stock, plain, galvanized, and enamelled. Iron Gates, Fencing, Hurdles, &c.

The new Illustrated Catalogue for 1856, and estimates gratis, upon application to

COTTAM AND HALLEN, 2, WINSLEY-STREET, OXFORD-STREET.

Signals for communication between Guard and Engine Driver. Railway Stores and Lamps of every description.

DARLINGTON WORKS, 16 to 19, SOUTHWARK-BRIDGE ROAD, LONDON.

TO IRONMONGERS, BUILDERS, &c.

PATENT WROUGHT-IRON WELDED TUBE for GAS; galvanized ditto for water; high-pressure cocks, &c. Manufacturers of Dr Arnott's improved Ventilators. HULETT and CO. 55, High Holborn.

MR. S. EGAN ROSSER, Warming and Ventilating Engineer, &c. (successor to the late Mr. John Sylvester, C.E.) has REMOVED from Great Russell-street, Bloomsbury, to No. 6, CANNON-ROW, PARLIAMENT-STREET, WESTMINSTER.

RADIATING and REFLECTING STOVE. WILLIAM S. BURTON'S NEW REGISTER STOVE combines the most truly brown known principles of both Stephens's and Sylvester's celebrated patent stoves, where it has others equally usable, which are peculiarly its own, and for which a patent has been granted. Its red fire and radiating powers are perfection; its parts simple, and cannot be put out of order, consumes but little fuel, is most cleanly and cheerful in use, while its general appearance, no fender being needed, is most imposing. Prices, complete (kept or stocked), from 3l. 10s., bright, 5l. 5s. and upwards. One may be seen in action in his show-room, which contains such an assortment of fender, stoves, ranges, grates, and general ironmongery, as cannot be surpassed elsewhere, either for variety, novelty, quality of pattern, or exquisiteness of workmanship. Bright stoves, with brassed ornaments, and two sets of bars, 1l. 15s. to 2l. 15s.; ditto, with ormolu ornaments and two sets of bars, 3l. 5s. to 3l. 15s. Bronzed fenders, with standards to match, 2l. 10s. to 11l. 11s.; ditto, with rich ormolu ornaments, 3l. 15s. to 16l. Fire-irons, from 1s. 9d. the set to 4l. 4s.

The late additions to these extensive premises already by far the largest in Europe are now in course of completion, and the entire ELEVEN HOUSES is devoted to the display of the most magnificent stock of GENERAL HOUSE IRONMONGERY (including Cutlery, Nickel Silver, Plated Goods, Baths, Brushes, Turnery, Lamps, Gasaliers, Iron and Brass Bedsteads (of which he does and has the largest assortment in Europe), Bedding, and Bedroom Furniture, so arranged in Sixteen Large Show-rooms as to afford to purchasers a convenience in the selection of goods that cannot be hoped for elsewhere. Illustrated catalogues sent (per post free) 39, Oxford-street; 1, 1a, 2, and 3, Newman-street; and 4, 5, and 6, Perry's-place.

GURNEY'S WARMING APPARATUS, for CHURCHES, PUBLIC BUILDINGS, and PRIVATE HOUSES.—This Apparatus is a modification of that invented by Mr Goldsworthy Gurney, and now used by him for warming the House of Commons and House of Peers. It is substituted so as to be available for private houses, churches, and other buildings. It is simple, inexpensive, and powerful; the fuel may be coal, coke, or gas; combining the laws of conduction and convection of heat, to temper and warm air for respiration, without drying or reducing its natural hygrometric state.—Further particulars apply to Mr WOODCOCK, 30, Basinghall-street, London, who will supply the Apparatus, and is empowered to grant licences for agencies under the patent.

ECONOMIC COOKING-STOVE.—DEANE, DRAY, and CO. recommend with confidence their IMPROVED COOKING STOVE to the notice of the public. It is cheap in first cost, simple in construction, easy of management, and is of a large amount of work with a comparatively small consumption of fuel, and is manufactured in sizes suitable for large or small families. In operation daily in the Stove and Fender department of Deane, Dray, and Co's establishment; where may also be obtained engravings with prices, forwarded free by post.—DEANE, DRAY, and CO. opening to the Monument, London-bridge. Established A.D. 1700.

DR. ARNOTT'S SMOKE-CONSUMING GRATE.

Will this Grate become universally used?
Its advantages exceed every other consult it—
1. A saving of 50 per cent in fuel.
2. Its being a cure for a Smoky Chimney.
3. Its not requiring one half the attention of an ordinary fire.
4. Its being perfectly safe.
A Prospectus, with a Second Series of Testimonials, just issued, from all parts of the country will be sent on application.
F. EDWARDS, SON, and CO. 42, Poland-street, Oxford-street.

NEW GLASS GAS STOVE—NEALL'S PATENT; Unique, Elegant, Efficient, and Inexpensive; price only 30s. This valuable invention combines the important advantages of light and heat, with perfect freedom from smoke or steel forming an ornament to a drawing-room or gentleman's hall, and is equally available for public or private offices.—DEANE, DRAY, and CO. Gas Engineers, London-bridge, Sole London Agents. The trade supplied.

HEATING BY  HOT WATER.

JOHN WEEKS and CO. King's-road, Chelsea, HOT WATER APPARATUS MANUFACTURERS. Buildings of every description, and of the most extensive dimensions, can be effectually warmed by Hot Water. JOHN WEEKS and CO. can give innumerable references of Churches, Dwelling-houses, Warehouses, &c. &c. where they have fixed their Hot Water Apparatus. Also to be seen in extensive operation at their Premises, King's-road, Chelsea.

BATHS and HOT-WATER APPARATUS. J. TYLOR and SONS' ILLUSTRATED CATALOGUE of BATH WORK, &c. may be had on application. Estimates and Plans for Fixing given.—J. TYLOR and SONS, Manufacturers, Warwick-lane, Newgate-street, London.

VENTILATING STOVES! SUSPENSION STOVES! Approved by thousands of purchasers, and recommended as the two best, cheapest, most healthy, and economical for churches, chapels, halls, schools, warehouses, shops, greenhouses, belfries, libraries, &c. Prospectuses, with prices, sent post-free.—DEANE, DRAY, and CO. Stove Range, Ironmongery and Furnishing Warehouse, London-bridge.

CORRUGATED IRON.—A large quantity of CORRUGATED IRON TO BE SOLD, below the market price.—Apply for particulars, to COTTAM and HALLEN, St. Pancras Iron works, London Iron Roofing and Corrugated Galvanized Iron Store Houses, &c. for home and colonial use, on a peculiar construction so as not to require the aid of skilled labour to fix them.—COTTAM and COTTAM, St. Pancras Ironworks, Old St. Pancras-road, London.

IRON CHURCHES, STORES, &c.—For SALE, Substantial Corrugated Iron Stores, Churches, Dwelling-houses, and every description of Buildings, adapted to all climates. Iron Roofs of best kind for all parts of the world. An Iron Church, with fittings complete, for 150 people, for hire or sale.—To view and for further particulars apply to SAMUEL HEMMING, Clift House Works, Bow, London.

JOHN WALKER,
Corrugated Iron Manufacturer, Iron Founder, Iron Roof Bridge, and Portable Building Contractor.
IRON MERCHANT, &c.
Offices and Works—Mill-wall, Poplar, London.

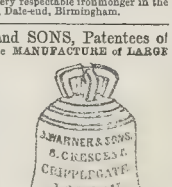
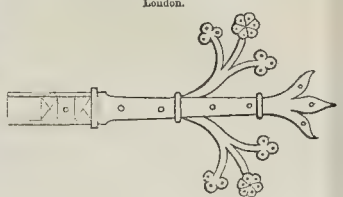
NEW PATENT MACHINE for MORTISING and TENONING HARD or SOFT WOOD and BORING WOOD or IRON.



House and Coach Builders, Joiners, Cabinetmakers, and others, doing similar work, are invited to call at the Patentees', POWIS, JAMES, and Co. Wholesale Builders and Cabinet Makers, Ironmongery Establishment, 26, Watling-street, City, and see in action this very simple, powerful, and expeditious machine, which is the only one yet brought out, for performing these three separate kinds of work by one machine; and as it is self-feeding, it does not require any skill or care in using like the older inventions introduced. It can either be worked by a boy, or made to go by steam power.
P.S. Steam Engines and Machinery contracted for.

IMPORTANT to ENGINEERS, MILLOWNERS, &c.—NORTH WOOLWICH ELASTIC STEAM-PACKING (Canvas and India Rubber), at 1s. 4½d. per pound (Rings, 3d. per lb extra), as supplied to her Majesty's dockyards. CAUTION—None genuine unless stamped, thus—
S. W. SILVER and CO.—Works, North Woolwich.
TESTIMONIALS.
"Commercial Mills, Cornbrook, Manchester, Oct. 6, 1854.
"GENTLEMEN, We have been using almost exclusively, for the last three years, your Packing to our stuffing boxes and steam and water joints, previous to which time we tried all the sorts which came under our notice, but yours we consider decidedly the best and most economical.—We are, yours respectfully,
"JOSHUA SCHOFIELD and Sons."
"King and Queen Iron Works, Rotherhithe.
"London, Nov. 11, 1854.
"GENTLEMEN,—We have tried your Patent Packing for some time in our steam-engines, and also in steam-pipe joints, and find it efficient and economical, and to be much superior to the ordinary hemp packing. It is especially serviceable in the slide valve.—Yours truly, "HOWARD RAVENHILL and CO."
"Works, Deptford, Jan. 29, 1856.
"I have pleasure in stating that the Packing of Messrs. S. W. Silver and Co. has been in use in the various parts of the engines on board the steam-ships of the company, and given every satisfaction. "J. BEARDMORE, Engineer,
"General Steam Navigation Company."
Copies of further testimonials forwarded, on application to S. W. SILVER and CO. Nos. 3 and 4, Bishopsgate-street Within, opposite the London Tavern.

PUNCHING and SHEARING MACHINE.
WANTED, to purchase, a good second-hand Punching and Shearing Machine, to punch and shear a five-eighths plate.—Apply to Messrs. TURNER and CO. King's Lynn, Norfolk.



TO ARCHITECTS and BUILDERS.—HAWKINS'S REGISTERED COPPER and TINNED-IRON SASH-CHAIN is greatly approved for its strength, durability, and facility in running over pulleys; and when worked at its warranted load will be found one of the most useful and efficient inventions for hanging window-sashes of any weight up to 4 cwt. May be obtained from every respectable ironmonger in the kingdom. Manufactory, No. 27, Dale-end, Birmingham.

JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS.

J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior tone, truer in form, and at less cost than has heretofore been accomplished.
Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any size, note, weight, unity or in peals.
TUNED BY MACHINERY.
Stocked and wheels ready for fixing. Old Bells recast or taken in exchange.
MUSICAL HAND-BELLS tuned to the Chromatic Scale, with improved Clappers, and pegged on a new system, which give superior tone and facility for ringing.
The great 16-ton Bell, for the Houses of Parliament, was made by JOHN WARNER and SONS, 1856, under their Patent.

can be obtained of all
ROPEMAKERS, IRONMONGERS, MERCHANTS, FACTORS, and WHOLESALE HOUSES, in TOWN or COUNTRY.
Established 1774.

COMPLETE IMMUNITY from FIRE, THIEVES, and GUNPOWDER.—EDWIN COTTERILL, Inventor, Patentee, and Sole Manufacturer of the Royal Climax Detector Locks. The only locks which have not been picked, and cannot be blown up with gunpowder. Descriptive drawings, with testimonials, and full report of the unsuccessful attempt of Mr. Hobbs to pick the Climax Detector Lock (an ordinary commercial one), at Manchester, forwarded free.—Manufactory of Fire-proof Safes and Chests. Patent Double and Single-Action Door-Springs, &c. &c.—16, Vittoria-street, corner of Regent-place, Birmingham.

MACHINERY for SAWING, PLANING, MOULDING, &c.

SAMUEL WORSSAM and CO. beg to call the attention of Contractors, Shipbuilders, proprietors of Saw-Mills, and others, to their improved Inventions and Adaptations in Saw Frames and Benches, Roller and Chain Planing Machines, Endless Saw Frames, and all other kinds of Machines, for Sawing, Planing, Grooving, and Moulding Wood. They have constantly on hand machinery, either wholly or partly made, so that they can at all times on short notice supply them. S. W. and CO. beg to state that they have hitherto confined their attentions to this sort of machinery, and have had the honour of supplying some of the most distinguished companies, ship builders, and contractors in the world with their machines, for home and foreign use. One of their Saw Benches, and also a smaller one, with Boring Apparatus, may be seen at the Machinery Department, Crystal Palace.—A descriptive Catalogue, with Drawings, may be had on application to SAMUEL WORSSAM and CO. Engineers, &c. King's-road, Chelsea, London.

ESTABLISHED 1817.

14 Girders, 14 ft. long, by 9 in. deep at centre, and 6½ in. at ends, weigh about 6¼ cwt. each.
4 Girders, 13 feet 6 in. long, by 10 in. deep at centre, and 7 in. at ends, weigh about 5¼ cwt. each.
2 Girders, 13 feet long, by 12 in. deep at centre, uniform section, weigh about 18½ cwt. each.
18 Girders, 9 ft. 8 in. long, by 8 in. deep at centre, uniform section, weigh about 3¼ cwt. each.
The above may be seen at Dunfermline Foundry; or any further information obtained, from JOHN WHITELAW, Dunfermline, N. B., who will receive offers for the whole, or any portion. The girders can be tested to the usual extent, according to the size, and certificate of proof furnished.
Dunfermline, October 28, 1856.

TO MANUFACTURING CHEMISTS, PLUMBERS, BUILDERS, &c.
ANDREW CLARK and COMPANY, PLUMBERS,
THE BEAR GARDEN LEAD WORKS, SOUTHWARK,
Sole Manufacturers of Delbruck's Patent Autogenous Soldering Apparatus, invite the attention of Manufacturing Chemists to their Patent method of
UNITING LEAD TO LEAD WITHOUT SOLDER.
Leaden Chambers, or any leaden vessels, made or repaired by this process, making them complete, without the introduction of any foreign metal.
PLUMBERS and BUILDERS can be SUPPLIED with SHEET LEAD and PIPE, cut to any dimensions, and EXCHANGED for OLD LEAD, on the LOWEST TERMS.

FACING FOR BUILDINGS COMPANY—TAYLOR'S PATENT.

BUILDINGS PERFECTLY RESISTANT TO WET WITHOUT ADDITIONAL EXPENSE, OR THE USE OF COMPO,
REQUIRING THE CONSTANT EXPENSE OF PAINTING. EXTERNAL WALLS FACED WITH AN INDESTRUCTIBLE MATERIAL.
STONE-FACED BUILDINGS AT LITTLE MORE COST THAN CEMENT.

No necessity for Iron Cramps and Bond stones, and the Stone Ashlar never injuriously weighted by the settlement of the Mortar joints of the inside Brickwork. The INSIDE of CHURCHES and OTHER BUILDINGS FACED WITH STONE instead of Plastering. Also Dining halls, Lobbies, Staircases, &c. of Private Residences. Room to be had ready for living from the quarries at a small cost for carriage, or prepared at home. Can be used with the ordinary Bricks of any locality, and by the ordinary workman. The CHURCH faced inside and outside in this manner, and the other Buildings at SPRING GROVE, HOUNSLOW, and elsewhere, can be inspected, and all particulars obtained, of

Mr. JOHN TAYLOR, ARCHITECT, OFFICES OF THE COMPANY, 40, KING-STREET, CORNER OF CHEAPSIDE.

TO ARCHITECTS, BUILDERS, CONTRACTORS, AND OTHER CONSUMERS OF GLASS.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th of an inch thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th or 4 lbs. is now universally used for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, MILLS, MARKET HALLS, BATHS AND WASH-HOUSES, FACTORIES, WORKSHOPS, SHIP-BUILDING SHEDS, AND OTHER EXTENSIVE BUILDINGS.

By a carefully prepared Estimate, it has been ascertained that FOUR-FIFTHS of the ROUGH PLATE, or non-transparent Glass, consumed in the United Kingdom in 185 was manufactured by HARTLEY'S PATENT—thus affording the most incontestable evidence of its superiority over every other article of the kind, and as being the only description of Glass suitable for the purposes above named. It combines size and strength with economy of cost, and is manufactured in sizes expressly for RIDGE and FURROW ROOFS, giving a SPAN of TWELVE FEET, at a price not exceeding, weight for weight, that of Common Crown Glass. Its non-transparency renders BLINDS UNNECESSARY, and no scorching occurs in Greenhouses glazed with it; hence the preference given to this Glass for all Horticultural purposes.

For further particulars, apply to

JAMES HARTLEY AND CO. SUNDERLAND; AND PURFLEET WHARF, EARL-STREET, BLACKFRIARS, LONDON.

Sole Manufacturers of Lockhead's Patent Perforated Glass for Ventilation.

*** *Hartley and Co.'s Glass Tariff Newspaper will be forwarded gratis, on application.*

THE SEVRES GLASS COMPANY.

LEGENDRE AND TURPIN'S

WHOLESALE ESTABLISHMENT for the supply of CRYSTAL WHITE SHEET GLASS,
First, Second, and Third Quality;
WINDOW-GLASS, Shades, Moderator Globes, Lamp Glasses, Bottles, and other Articles in White Glass, at
131, UPPER THAMES-STREET, LONDON-BRIDGE.—WORKS: SEVRES, NEAR PARIS.

MARBLE GALLERIES, 17, Newman-street, Oxford-street.—Mr. ALFRED E EDWARDES, (upwards of ten years with the London Marble Company), has opened the above premises, lately in the occupation of the late celebrated sculptor, under the firm of EDWARDES, EDWARDS, and COMPANY, with the largest stock of BRITISH and FOREIGN MARBLE CHIMNEYPIECES, &c. &c. in London. EDWARDES, EDWARDS, and CO. solicit the favour of an inspection of their stock by architects, builders, and others connected with the trade; and beg to assure them that for design, style of execution, and price, it will be found unrivalled. Estimates for every description of marble work.

MARBLE and STONE CHIMNEYS.—150 MARBLE CHIMNEYS of various designs and colours, most of them fixed, are now on view at the Cambridge Heath Marble Sawing-Mills. The proprietor has again enlarged his workshops, and erected such improved machinery, as not only to compete, but is able to manufacture more, and consequently cheaper than any house in the trade.
The Trade supplied.

MARBLE CHIMNEY-PIECES.—The nobility and gentry of the United Kingdom who are building or refitting their mansions are respectfully invited to inspect the most Extensive Collection of MARBLE CHIMNEY-PIECES lately imported from the Continent. They comprise Statuary, Giallo di Siena, Vert Rouge, Dove, Black and Gold, Rouge de Belmont, Bardiglio, and other choice foreign marbles; and are designed with great taste, and executed by first-class artists. On sale, in the show rooms of Messrs. EVANS, SON, and CO. King William street, London-bridge.

MARBLE CHIMNEY-PIECES, and every other description of marble work, supplied to builders and the trade at about HALF the USUAL PRICE, in many instances less than slate. Manufactured by the LONDON and CONTINENTAL MARBLE COMPANY, at their own Quarries in France and Belgium.—Office and Depôt, 3, Crooked-lane, London-bridge.—Estimates given for works to any amount.

MARBLE WORKS by WATER-POWER. TO BE LET, for a term of years, a Marble Works by water-power. The premises are capacious, and contain two water-wheels, double rubbing and polishing beds, three saw-frames, circular rubbing-plate, and complete fixtures for carrying on a large trade. Quarries affording a variety of beautiful fossil black and other marbles in the immediate neighbourhood. There is a good wholesale trade established, and the works are near two railway stations. To a working man possessing a few hundreds this is an opportunity seldom to be met with. Rent of premises, water, &c. 30*l*; price of machinery, &c. 80*l*. Disposed of in consequence of ill-health.—For particulars address A. Y. Z. Post-office, Leek, Staffordshire.

BUILDERS, ARCHITECTS, AND MASONS.

MARBLE. — The ITALIAN MARBLE COMPANY beg to call the attention of Architects, Builders, and Others connected with the trade, to their large and well-assorted STOCK of VEIN SICILIAN, and other MARBLES. The liberal system of business adopted by this company, the superior quality of their marble, and their very moderate scale of prices are combined, to form an inducement to buyers. An inspection is solicited at the Depôt Bridge of Marf, Millbank, adjoining Vauxhall-bridge, where no other persons are authorised to sell except Mr. Baxter, Wharf Foreman, or the undersigned.
WILLIAM W. BONNIN, Secretary.

MARBLE WORKS by PATENT MACHINERY, Commercial-road, Pimlico, London.
THOMAS JACKSON begs to draw the attention of the public to the most extensive stock of Marble Chimney-Pieces in the Metropolis; consisting of a selection of upwards of two hundred and manufactured by steam power from the finest Italian and other marble, and with that careful attention to the details and finish so necessary in good marble work. The Stock consists of elegant Drawing-Room Chimney-Pieces in Statuary Marble: bold, massive Chimney-Pieces, in Black, Black and Gold, Bardilla, Sienna, Verd Antique, Brocatella, Dove, St. Ann's, and Serpentine Marble, suitable for Dining-Rooms, Libraries, Vestibules, and Entrance-Halls; and a great variety of others in Veined, San Juan, Emperor's Red and Amber Marble, for Boudoirs, Breakfast-Rooms, best and secondary Bed-Rooms, &c.; also, Monuments Tombs, Tablets, and Pedestals for Busts and Statues, and Slabs for Cabinet Work, &c.; the whole executed from the most classical designs, and in all the varieties of the finest Italian and British Marble, at the lowest remunerative prices.

LLOYD'S MARBLE WHARF, Thames-bank, Pimlico, adjoining Vauxhall-bridge.—Italian Statuary, Veined, Sicilian, Dove, Sienna, and other Marbles, for Sale, at import prices. A resident manager on the wharf at all hours.

GATES and GEORGE, CAEN, AUBIGNY, and GENERAL STONE MERCHANTS.
CAEN WHARF, ROTHERHITHE, LONDON.

STONE! STONE! STONE!—To the TRADE.—The cheapest place in London for Portland and Bath Stone, Yorkshire Landings, Steps, Curb, Paving, Self-face Slab, Granite Pitching and Curb, Guernsey Broken Road Materials, and every other description of stone, at JOHN KNIGHT and SONS, Devon Wharf, Mile-end. York tooled paving, 38s. 6d. per 100 feet; slab for hearths, 4*l*. per foot sup.; slab for chimney-pieces, 8*d*. per foot sup.; 8 by 3 window-sills, 6*d*. per foot run; 11 by 3 copings, 8*d*. per foot run; box chimneys (any opening), 8s. 6*d*. each. Terms cash on delivery.

TO CONTRACTORS AND OTHERS.

YORKSHIRE PAVINGS, LANDINGS, STEPS, COPINGS, CURBS, SILLS, SINKS, and CHANNELS; Horse-hill, Robin Hood, Park Spring, and Gayby, in Blocks, Headstones, or Slabs; Purbeck Paving, Sinks, Curbs, Rickstones, Pitchers, and Squares; Caithness Flags, Firestone, Newcastle and Bilston Grind-stones; Portland Stone in Blocks, Landings, Slabs, &c.; Darley Dale, Caen Stone, Bramley Fall, Bath, Huddlestone, Park-wood, and other Block Stones. Valentia Slate Slabs, Lancer Slates, Cornish, Aberdeen, Guernsey, and other Granites; Marble in Block and Slabs, supplied from the Wharfs, Millbank-street, City Basin, and Deptford; also direct from the quarries by vessel or rail.—Address, FREEMAN'S WHARF, 27, Millbank street, Westminster.

YORKSHIRE STONE.—The CHEAPEST PLACE in Yorkshire for all kinds of QUARRY-WORKED STONE, in building Spandril Steps, Staircases for all kinds, Breast, Plinths, Cornices, Landings, Sawn Slabs, Head Stones, &c. &c. is at the ISLAND WHARF and SAWING-MILLS, LEEDS. All kinds of masonry clean worked, ready for fixing, and carefully packed, in railway trucks or vessel and forwarded direct to any part of the kingdom.—For prices, &c. apply to JOHN DANIEL, Stone Merchant, LEEDS; or to ROBERT DANIEL, PIMLICO, LONDON.

BRAMLEY FALL! BRAMLEY FALL! On account of greater facilities than possessed by any one else, TRICKETT and PERKINS are prepared to supply in any quantity BRAMLEY FALL STONE, at greatly reduced prices, having opened the extensive quarries in the Hawksworth Cutting, on the North-Eastern Railway, near Horsforth. The stone is of the same quality as the well-known Old Bramley Fall and Horsforth Quarries, but has the advantage of being of a lighter and more uniform colour. The North-Eastern Railway Company have put sidings on both sides of the railway. Powerful cranes are fixed, so that the stone can be got to any size and the stone being loaded in the quarries on the railway-trucks, can be forwarded the same day to any part of the kingdom, or supplied in London riverside Sailing Barges if full, in any quantity.—For particulars apply to JOHN TRICKETT Stone Merchant, Headingley, near Leeds, or to SAMUEL TRICKETT, Victoria Stone Wharf, Isle of Dogs, London.

BANGOR WHARF, King's-road-bridge, Camden-town—STRINGFIELD and COOPER, late W. W. Rawlins, beg to call the attention of Builders and others to their stock of Bangor slates, laths, plaster, Roman, Portland, and Keene's cement, blue lias, Dorking and chalk lime, plasterers' hair, Yorkshire plain, pan, and ridge tiles, glazed sewer pipes, Gloucester, and Yeak, Welsh fire-bricks, paving and chelfs for garden paths, ballast, sand, &c. Materials landed, wharfed, and carted

QUARRY WORKED STONE.—Architects, Masons, and Builders would effect a great SAVING in cost by ordering bases, plinths, templates, sills, corbels, imposts, cornices, copings, steps, staircases of all kinds moulded or plain, square or spandril, from the quarries ready worked for fixing. Experienced foremen are kept, and the stone is clean worked, and carefully packed, dressed, and delivered direct on board vessel or railway truck. Prices and every information given on application, accompanied by plans or sketches, to SAMUEL TRICKETT, Stone-wharf, Isle of Dogs, or to JOHN TRICKETT, Headingley, Leeds, Yorkshire.

CAEN and AUBIGNY STONE.—P. POUCARD, Stone Merchant and Quarryman. Cargoes shipped to order from Caen to any port. Contracts taken for any quantities. Depôts: Granite Wharf, East Greenwich; Lett's Wharf, Waterloo-bridge. Office: 246, High-street, Southwark, near the Townhall.

MARKET-WHARF, REGENT'S-PARK-BASIN—WEST-END DEPOT, for Yorkshire Paving, Portland and Derby stone, Bangor Slates, Slates, &c. Also Bricks, Lime, Cement, Plaster, Tiles, Lasts, and Fire Goods. COALS and WOOD invite the attention of Builders, Masons, and others, to their Stock as above, where everything will be charged at the lowest prices. Headstones, Ledgers, Steps, Landings, &c. cut on the shortest notice. Country orders promptly attended to.

RANSOME'S SILICIOUS STONE.—All kinds of ARCHITECTURAL EMBELLISHMENTS executed in this beautiful and indestructible material, at prices not exceeding the ordinary cements. Full particulars furnished on application to Mr. FRED. RANSOME, Whitehall-wharf, Cannon-row, Westminster; or Patent Stone Works, Ipswich.

GRANITE.—The Welsh Granite Company, Carnarvon, supplies Pitching or Paving Sets of this Material to order. The Sets, which have for several years been extensively used in Manchester, Bristol, Leeds, and other large towns, combine in a higher degree than any others, the qualities of roughness in wear and durability. The stone is also well adapted for foundation courses, plinths, &c. for public buildings and for mill-stones.

GRANITE.—King William and Nelson Monuments, Plinth and Steps of the Royal Exchange, and Terraces at the Crystal Palace.—Supplied by the Haytor Company under Royal Charter.—For terms, apply to Mr. C. HOAR, Haytor Granite Office, 4 Millbank-row, Westminster.

GRANITE.—The Cheesewring Granite Company, Liskeard, Cornwall.
London Agents—TREGELLES and TAYLOR, 54, Old Broad-street. Manager—JAS J STRATHAN, Liskeard
The Granite is selected for the New Westminster-bridge

JOHN BAZLEY WHITE and BROTHERS, MARBLE MERCHANTS.
MILLBANK-STREET, WESTMINSTER.
Marble of all kinds and of best quality, in block and slab. Marble mortars, &c.

BATH STONE OF BEST QUALITY.
RANDELL and SAUNDERS, QUARRYMEN AND STONE-MERCHANTS, BATH.
List of prices at the quarries and depots, also cost for transit to any part of the kingdom, furnished on application to Bath Stone Office, Corsham, Wilts

SLATE.—The Bangor Royal Slate Company have now on hand a LARGE ASSORTMENT of ROOFING SLATES blue and green, of the usual sizes, which they are prepared to supply on the most favourable terms, shipment from their depôt, at Bangor, or to transmit by railway. Also slabs of all sizes.—Orders to be addressed to Mr. EDWARDS, Manager, Royal Slate Quarries, Bangor.

SLATE.—An assortment of the best BANGOR ROOFING SLATE ON SALE, at Bridge-wharf, Millbank.—Apply to Mr. GEORGE BAXTER, Foreman.

PARIS EXHIBITION. — ENAMELLED SLATE. TWO FIRST-CLASS MEDALS!—Mr. MAGNUS is the only exhibitor whose productions received this double honour; also the Prize Medal at the Great Exhibition of 1851, and the Medal of the Society of Arts in 1853. This beautiful material, combined with more durable than marble, is now finding its way into palaces, into the mansions of the nobility at home and abroad, into the highest class of public buildings, as well as into humbler dwellings. The cost is unmeasurably below that of any other production that can at all compete with it. It is applicable to a variety of useful and ornamental articles too numerous to be particularly specified. Among the chief are chimney-pieces and ornamental stoves for all apartments; plain and exquisitely decorated slabs for the tops of loo-tables, chiffoniers, consoles, &c.; barbs for basinettes, altar-tablets, pilasters, columns, vases, pedestals, and brackets; wash-stand tops, billiard tables, linings to halls, vestibules and dairies.—Price list can be had on application to Mr. MAGNUS, 39 and 40, Upper Belgrave-place, Pimlico.
N.B. Plain slate work executed from a single article to the most extensive contracts, for home and abroad

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality. They have been used at the British Museum, National Gallery, Bethlem Hospital, various Lunatic Asylums, the Ordnance Works, Model Prison, Pentonville, and other Penitentiaries; Malting Floors in Bedfordshire and Hertfordshire, Breweries, the Race Stand at Brighton, Portsmouth Barracks, and are kept in Stock in large quantities by Messrs FREEMAN, Millbank-street; and at Messrs Drake's Belvidere-road, where terms may be obtained.

O. M'CARTHY, CARMAN, and SAND and CEMENT MERCHANT, Whitefriars Wharf, Whitefriars, Fleet-street, City. Sand, from above or below bridge, delivered by the yard or per barge. Ballast screened or unscreened, by the yard or per barge. Stocks, lime, and old bricks. Dry rubbish delivered per barge, in any quantity, alongside the Thames.

ASPHALTE.—GERVASE FOOTTIT TRINIDAD ASPHALTE WORKS, ROTHERHITHE, LONDON. Established 1834.—TRINIDAD, SEYSSEL, and BRITISH ASPHALTES, manufactured by steam power, laid down in the best manner, or supplied in any quantity. Information for using forwarded with material. Post-office orders or references in London promptly attended to.—Estimates given for every kind of the above work.

ASPHALTE, FOREIGN and BRITISH, for FLAT ROOFING and every description of PAVING, especially in damp situations.
FROM 3s. PER SQUARE YARD.
Country Builders supplied with Asphalte for footings and barn floors, with instructions for using it.
Apply to JOHN PILKINGTON, Poloneeun and Limmer Asphalte Office, Monument-chambers, 14, Fish street Hill, London.
N.B. Importer of the PURE ROCK ASPHALTE, from the LIMMER Mines in Hanover.

FOR SALE, a capital GRANITE EDGE-STONE RUNNER, with bed stone and shaft complete; also several French Burr Stones.—Can be seen by applying to E. Z. CHRISTIE, Millwright and Engineer, 113, Vauxhall-walk, Lambeth.

THE GRAMMAR OF ORNAMENT,

By OWEN JONES.

BEING A SERIES OF THREE THOUSAND EXAMPLES, FROM VARIOUS STYLES, EXHIBITING THE FUNDAMENTAL PRINCIPLES WHICH APPEAR TO REIGN IN THE COMPOSITION OF ORNAMENT OF EVERY PERIOD.

ONE HUNDRED IMPERIAL FOLIO PLATES.

DRAWN ON STONE BY F. BEDFORD. PRINTED IN COLOURS BY DAY and SON.

"	XX.	A series of Leaves drawn from Nature as Models of Ornament..		10 "
				100

The Author will endeavour in the several chapters to define the apparent origin, and trace the development of the several styles of Ornament. He will proceed to ascertain the laws which govern their composition; both those which are general to all styles and those which are peculiar to each. He will further attempt in the 20th chapter to show how, bearing in mind those general laws which he finds also to pervade the works of nature and returning to her for fresh inspiration, we may yet go forward; and, whilst availing ourselves of the experience of all time, may be enabled to produce works in harmony with our own times instead of blindly following in the footsteps of the past.

To the Plates in Colours, which will form a work of many years' elaborate labour, the Author fully feels the difficulty of the task he has undertaken; he trusts, in a measure, that with this collection artists, and all others engaged in any way with the decorative arts, will have before them an amount of material which does not elsewhere exist in any such convenient form, and to the use of which it will be his endeavour to serve them as a guide.

N.B. The Letterpress, with many Wood Engravings, will appear complete with the last Part of the Work on Dec. 15.

Published by DAY and SON, LITHOGRAPHERS to the QUEEN, 6, GATE-STREET, LINCOLN'S-INN-FIELDS.

DONALDSON, Bolton gardens, Russell-square, Treasurer; or to Mr. WYATT PAPWORTH, 14a, Great Marlborough-street, Honorary Secretary.

WELLINGTON COLLEGE.
THE STATIONERS' COMPANY'S SHEET ALMANAC for 1857, price 2s. will be embellished with a beautiful View of WELLINGTON COLLEGE, from a drawing by Phillips, on a large Royal Sheet, adapted for the counting-house or library.
Published by the Stationers' Company, at their Hall, Ludgate-street; and may be had of all Booksellers and Stationers.

A New Volume of "Things not generally known," nearly ready.
CURIOSITIES of HISTORY, with New Lights. A book for old and young
By JOHN TIMBS F.S.A. Author of "Curiosities of London."
D BOGUE Fleet-street, of whom may be had "Things not generally known" Tenth Thousand, 3s 6d.

SECOND EDITION. TENTH THOUSAND.
Now ready, with Frontispiece and Vignette, in cl oth
THINGS NOT GENERALLY KNOWN, familiarly explained. A Book for old and Young.
By JOHN TIMBS, F.S.A.

"Any one who reads and remembers Mr. Timbs's encyclopædic varieties should ever after be a good tea-table talker, an excellent companion for children, a well-read person, and a proficient lecturer; for Mr. Timbs has stored up in this little volume more knowledge than is to be found in a hundred books that might be named."—*Athenæum*. Just 1.
DAVID BOGUE, Fleet-street.

THIRD THOUSAND.
In a Volume of 800 pages, with a Portrait of the Author from a Painting by T. J. Gullick, price 14s.
CURIOSITIES of LONDON: Exhibiting the most Rare and Remarkable Objects of Interest in the Metropolis; with nearly Fifty Years' Personal Recollections.
By JOHN TIMBS, F.S.A.

"A wonderful little Dictionary of London: there is so much out-of-the-way reading in it, such apt illustration of personal experience, and such a quantity of agreeable illustration, drawn both from books and men."—*The Examiner*.
"Juvenile readers, men of business, and antiquaries, may all profit by the 'Curiosities of London.'"—*The Economist*.
"Valuable and painstaking. We find in it much that is curious, interesting, and new."—*The Press*.
DAVID BOGUE, 86, Fleet-street.

NEW AND CHOICE BOOKS
ALL the best NEW WORKS may be had without delay from MUDIE'S SELECT LIBRARY, by every Subscriber of One Guinea per annum. The preference is given to works of History, Biography, Religion, Philosophy, and Travel. The best Works of Fiction are also freely added.
Literary Institutions and Book Societies supplied on liberal terms
Prospectuses may be obtained on application.
CHARLES EDWARD MUDIE, 510, New Oxford-street, London; and 76, Cross-street, Manchester.

1 Vol. Handsomely Bound. 21s.
BUILDINGS and MONUMENTS, Modern and Mediæval; being Illustrations of the Edifices of the Nineteenth Century, and of some of the Architectural Works of the Middle Ages.
By GEORGE GODWIN, F.R.S.
Fellow of the Royal Institute of Architects, &c. Editor of "The Builder," and Corresponding Member of several Societies.
With numerous Engravings.
Published at the Office of "The Builder," 1, York-street, Covent-garden.

Third Edition.
THE BUILDER'S FRIEND, Price One Shilling.
Office of "The Builder," and of all Booksellers.

This day is published, price 5s. pp. 320.
ADVANCED TEXT-BOOK of GEOLOGY, DESCRIPTIVE and INDUSTRIAL.
By DAVID PAGE, F.G.S.
With Engravings, and a Glossary of Terms.
Lately published, by the same Author,
INTRODUCTORY TEXT-BOOK of GEOLOGY.
Second Edition, with Engravings, price 1s. 6d

"Of late it has not often been our good fortune to examine a text-book on science of which we could express an opinion so entirely favourable."—*Athenæum*
WILLIAM BLACKWOOD and SONS, Edinburgh and London.

Complete in Two Volumes
PROFESSOR JOHNSTON'S CHEMISTRY of COMMON LIFE,
With numerous Engravings on Wood, price 11s. 6d.

"Mr. Johnston's book is a book for the people; there is hardly a fact or a principle that it would not be for the benefit of the richest as well as the poorest to know."—*Athenæum*.
WILLIAM BLACKWOOD and SONS, Edinburgh and London.

On Thursday, the 20th of November, will be published,
THE HOUSEHOLD WORDS ALMANAC FOR THE YEAR 1857. Containing Twenty-eight closely-printed pages, stitched. Price 4d
Household Words Office, No. 16, Wellington street North, Strand. Sold by all Booksellers, and at all Railway Stations.

THE FREEMASONS' MAGAZINE and MASONIC MIRROR for NOVEMBER, 1856, is now ready. Price 1s.
London: HENRY GEO. WARREN, 2, Red-lion-court, Fleet-street; and GEORGE ROUTLEDGE and CO. Farringdon street.

CHUBB'S ILLUSTRATED LIST of LOCK'S FIRE-PROOF SAFES, CASH, DEED, and WRITING BOXES, with their sizes, fittings, and prices, will be sent by post on receipt of two stamps.—Apply to CHUBB and SON, 57, St. Paul's Churchyard, London.

WINDOW BLINDS.—FULLER, BROTHERS, Manufacturers of every kind of Inside and Outside WINDOW BLINDS, warranted of the best materials and workmanship, at the lowest possible prices. Builders and the Trade supplied. A List forwarded on application.—29, Charlotte-street, Blackfriars-road; and at Sydney, New South Wales.

WINDOW BLINDS.—TYLOR & PACE, Window Blind Manufacturers, 104, New Bond-street, and 3, Queen-street, Cheapside, London, submit the following PRICES of WINDOW BLINDS, which they can recommend as being made in the best manner:—Venetian blinds, per square foot, 6d.; best holland blinds, on rollers, 6d.; best ditto, on spring rollers, 9d.; gauze wire blinds, in mahogany frames, 2s.; perforated zinc blinds, in ditto, 1s. 10d.; outside blinds of striped cloth, 2s. Transparent blinds in great variety. Engravings, with prices and discounts to builders and the trade, forwarded on application, post free.

The Builder.

VOL. XIV.—No. 719.

BIT by bit, and this not slowly, the Palace of Parliament, the greatest architectural work of modern times, approaches completion. The pinnacled turrets of the Victoria Tower are being proceeded with rapidly, and by the end of the year the whole outline of this enormous building will be seen. Long may it stand a symbol of the stability, the dignity, the power, and the greatness of the kingdom! The pinnacles measure 70 feet in height from the top of the parapet on the tower, no trifling work of themselves. Viewed from the ground, the man now at work at the crane is little bigger than your hand. Who shall tell — who asks, indeed — how many sleepless nights this structure has cost its architect? Putting aside the question of art, its successful completion in a constructional point of view must be regarded as a great achievement. Had the foundation proved insufficient, had it settled unequally and fallen out of upright, had an arch yielded, or the ponderous groined vaulting slipped, loud of course would have been the outcry,—ruinous, probably, the blame. But disaster being avoided, difficulties overcome, the structure successfully raised, how few stop to appreciate the comprehensive grasp of all circumstances, the prevision, and the varied skill demanded for the result!

The exterior of the Peers' Entrance and offices was represented on a previous page (219, *ante*). The Peers' Staircase is now finished, and we give a view of it in our present number.* It will come into use on the re-assembling of Parliament. Metal gaseliers, not yet determined on, will hang from the crown of each vault. The flooring and the risers of the steps are of tiles.

If we pass up this staircase and gain the Prince's Chamber, the apartment between the House of Lords and the Royal Gallery, we shall find the masons at work there, fixing Mr. Gibson's marble group of Her Majesty between Justice and Clemency against the wall which is immediately at the back of the throne. The Queen is represented as seated on a high pedestal: Justice stands at the foot on her right hand, Clemency on her left. These figures are much too large, and lead one to view favourably the course pursued by the Egyptian sculptors in making the hero or ruler much larger than the surrounding figures. Moreover, the three figures seem scarcely to accord. Putting these objections on one side, the whole group is much too large for the position, and is altogether out of place. It is much to be regretted, and, indeed, will scarcely be believed out of England, that the architect has no voice in determining either the character or position of the sculptural and pictorial decoration of the building: strange to say, he is not even a member of the commission to whom it is entrusted. In the present case the chamber, intended for sculptures and carvings of an entirely different character, is dwarfed, and its congruity is destroyed.

In making these observations, we must not omit to acknowledge the genius and skill shown by the sculptor: the figure of Justice, in particular, is a noble work. It would be better if the two standing figures were removed, and made to take elsewhere an independent position.

In the Peers' corridor, at the other end of the house, one of the panels formed to receive frescoes has been filled by Mr. Cope, R.A. The subject is the Landing of the Pilgrim Fathers it is a picture of great excellence and beauty.

In St. Stephen's Hall, the want of congruity between the building and the sculpture introduced, just now alluded to, is strikingly apparent. The size of the statues destroys the hall, and there is no agreement in sentiment. The last statue put up here, is that of Fox, by Mr. Baily, R.A. a thick, short-legged figure, in modern costume, said to be a good likeness, but agreeing very ill with the locality. It may be anticipated, however, that this incongruity will make itself more and more felt, and that at some future time these statues, many of which are admirable works, will be removed to a more appropriate gallery, and their place will be supplied with sculpture more suitable in size and character.

Passing out through Westminster-hall, where elaborate brass candelabra are being put up, in readiness for the meeting of Parliament, let us go over to the Clock Tower, and look at the great bell now hanging at the foot of it. It weighs 15 tons and 8½ cwt. is 7 feet 10 inches high, 9 feet 5½ inches in diameter, and was cast by Messrs. John Warner and Sons, of Jewin-street-crescent, in the City, under the direction of Mr. E. Beckett Denison, Q.C. It has a considerable thickness of metal in the sound bow, the rim round the mouth of the bell: it is there 9⅜ inches thick. It has come to be called "Big Ben of Westminster," in honour of Sir Benjamin Hall, the Chief Commissioner of Public Works, and has already make some noise in the world, though it has not yet a tongue in its mouth. This appendage, however, arrived while we were looking at the bell on Monday, and is said to weigh 13 cwt. and 26 lbs. The shape of the bell is not a pleasing one, and we must confess that the staring inscriptions to the honour and glory of the casters and others, on the outside of the bell, gave us less pleasure in the reading than some of the quaint lines we have at times puzzled out in ancient belfries, midst the remnants of Jack Daws' nests and the dust of gone-by centuries, nervous lest the clock should strike, but determined nevertheless to bag the inscription. This, however, is a minor consideration (though thousands yet unborn will go up to look at "Big Ben" in his nest); the great point is the tone, and we sincerely hope, and, indeed, have no reason to fear, that this will prove to be all that can be desired. Mr. Denison, in the second edition of his "Lectures on Church Building," a book wherein much cleverness is obscured by more egotism, says:—

"It is a great mistake to suppose that musicians, as such, are the fittest persons to be appointed to judge of the goodness of bells. Unless they are conversant with bells, and know by experience what kind of sound ought to come out of a given weight of bell metal, their opinion is not worth as much as that of many a bell-ringing cobbler, who does not know one musical note from another, but who knows very well the difference between a good bell and a bad one. Musicians, of course, are the persons to judge whether the bells of a peal are in tune with each other. But that is the smallest part of the business; for a set of cast-iron pots might be in as perfect tune among themselves as the finest peal of bells in the world; and moreover, the tune or note of a bell can be altered by cutting, whereas the tone or quality of the sound is incurable if it is bad. Moreover, musicians are very apt to condemn bells which are not of some musical note exactly: which is a piece of pure nonsense: for the names or pitches of the notes are only conventional, and I am told by those who understand such things much better than I do, that what is called in musical slang 'concert pitch' has been raised so much within living memory, that bells and other unchangeable instruments which used to be of the note C would now be called B. So long as the bells are in tune among themselves, and the tone of each bell is good in itself, it does not signify a farthing what their notes may be called; for it is nothing but a question of names after all."

The art of bell-founding appears to have sunk very low of late: the fact of the two principal bell-founders in England having failed in three successive attempts (viz. Messrs. Mears twice, and Messrs. Taylor, of Loughborough, once) to produce a satisfactory peal of bells for the chimes of the Royal Exchange has been brought forward to prove the truth of the assertion. In the Westminster bell a composition with more tin in it than is usual in modern bells has been adopted:—

"The modern bell-founders (writes the author we have quoted) say that it ought to be four of copper to one of tin; and so they put in the metals in those proportions, or as near as they can guess at them. But tin wastes more than the copper in melting, and, moreover, the less tin is put in, the more any given waste alters the proportion; and, therefore, the bell comes out probably about 4½ to one, or even lower (as all these alloys are called high or low, according as there is much or little tin in them). I find that a considerable majority of the French authorities give 3½ to one as the right proportion, and some three, and only one is four to one. And still further, it is found by analyzing a piece of Old Tom of Lincoln, that the tin and a little antimony together are only one-fourth of the whole, or one-third of the copper; and in the old York bell metal also the tin is not one-fourth, but one-third of the copper."

Accidents out of the question, bells are generally cracked by being worn thin where the clapper strikes. "Ben" is to be hung in a manner of which our readers have heard something, so that when worn in one place he may be turned in the stock, and thus offer another part of himself to the clapper. Where the bell is to be placed appears to be still unsettled. Mr. Denison, in a recently published letter, calls upon Sir Benjamin Hall to see that it is hung in the upper part of the cast-iron roof of the clock tower, as otherwise half the sound will be wasted. This would be the best place for it in that respect; but if this requirement was not understood by Sir Charles Barry before the roof was constructed, it may now be difficult to provide the necessary strength.

* See page 27.

SIR B. HALL AND THE METROPOLITAN BOARD OF WORKS.

THE MAIN DRAINAGE SCHEME—SOUTHWARK IMPROVEMENTS.

THE Chief Commissioner, as we expected, has returned the plan for the main drainage of the metropolis submitted to him by the Board, believing it to be at variance with the statute, which says,—"And such Board [the Metropolitan Board of Works] shall make such sewers and works as they may think necessary for preventing all, or any part, of the sewage of the metropolis from flowing or passing into the River Thames in or near the metropolis, and shall cause such other sewers and works to be completed on or before the 31st day of December, 1860."

Sir Benjamin Hall points out in his communication, that up to the 6th of October the Board had always postponed and ultimately rejected the plan they had since submitted. Were we not correct in saying, that "to chronicle such proceedings was simply waste of time and space?"

The chairman, in communicating the reply to the Board, on the 12th, stated his belief, that if a deputation were appointed to consult with the Chief Commissioner, it would be in their

power to arrive at a conclusion on this subject, satisfactory to the Board and to the public. Friday, the 14th, was named to consider the question.

A deputation from the Board went to Sir Benjamin Hall, on Monday, the 10th, with the plan selected by them for the Southwark improvements, when Mr. Thwaites explained the route proposed. The line, he said, begins slightly below the Obelisk, in Wellington-street, at the south corner of York-street, without interfering with St. Saviour's Church, continuing on the north side across Red Lion-street and Counter-street, avoiding the Borough-market, which being corporate property, would be very expensive. It then avoids a clump of almshouses, called the College Almshouses, having a burial-ground and a church in the centre, passing close to Messrs. Barclay and Perkins's brewery, which occupies 11 acres, and which was not touched, as, if it were, the outlay would exceed the cost of the entire thoroughfare. It then passed on to the Southwark-bridge-road, taking off a small part of Messrs. Potts' extensive vinegar works, thence to the north of Messrs. Easton and Amos's ironfoundry, continuing its course to the south-west angle of some other almshouses, and on to a point marked on the plan "B," in the Blackfriars-road, exactly opposite Stamford-street. Although upon the plan, he continued, the street appeared to present a considerable curve, still upon the large scale of its construction it would be scarcely perceptible; but it was absolutely necessary, in order to avoid the enormous expense of trenching upon the valuable properties he had referred to. The proposed width of the street was 70 feet from front to front, with 12 feet footpath on either side.

A second deputation then took the place of the first. The gentlemen comprising this deputation appeared on the part of the inhabitants of High-street, Southwark, and were ushered in by Mr. Harris, member of the Metropolitan Board of Works for the district of Southwark.

The leader of the deputation, Mr. Newsom, said the inhabitants of the Borough were seriously affected by the stoppage of the thoroughfare, which commenced at the narrow part, caused by the projecting clump of houses, commencing with the Town-hall. Instead of the opening for the new street commencing at York-street, they desired that the opening should be lower down to the south, including the removal of the projecting clump of houses, as also the Town-hall. This plan could be carried out at an estimated cost of 41,000*l.* less than the plan proposed by the Metropolitan Board. It was something like Mr. Pennethorne's plan, which was generally approved.

A third deputation followed, with a plan, of which we need say nothing.

The Chief Commissioner has since signified his approval of the road proposed by the Board. It is to be regretted that it is not straighter.

CRYPT, GLOUCESTER CATHEDRAL.

In the notice of the improvements at Gloucester Cathedral, given last week (p. 603), we mentioned the change that had been effected in the *crypt*, under the direction of Mr. Waller, and described its present appearance. The engraving in our present impression will serve to make that account clearer.

AN ACCOUNT OF LONGLEAT, WILTSHIRE.

At the entertainment given here by the Marquis of Bath to the members of the Wiltshire Archæological Society, the Rev. Canon Jackson, of Leigh-delamere, read a very interesting account of this noble domain. Sir Richard Hoare derives the title from *Longa* and *Lata*, long and broad, as descriptive of the valley in which the house is situated. Mr. Jackson thinks differently, and says,—The word *leat* is an old noun, from the Saxon verb to lead, and signifies a water-course or aqueduct. There is near Plymouth an artificial channel of this kind, a celebrated piece of engineering made by Sir Francis Drake, for supplying that town with water, which bears the name of *The Leat*. The word also occurs in old Acts of Parliament. In Scotland, a mill-stream used to be called a mill-*leat*. The changes here have been so great, that it is of course difficult to say what may have been in ancient times, but it is most likely that the stream from Horningsham, which supplies the present garden, was originally used by some long channel for turning a mill.

The oldest document in which the name occurs is in Latin, dated A.D. 1289 (9 Edw. II.), nearly 600 years ago, in which the tythes of the church of Lullington, near Frome, were granted to the priory of "Lange-lete." Here, therefore, its regular history begins.

It was sold to Sir John Thynne in 1540. It was then a very humble place. And now let Mr. Jackson speak for himself:—

A fire having furnished Sir John with an excuse, in or about 1566, he sent for his architect, and gave the order for Longleat.

But who was the architect that he sent for? I am not aware that there is any positive written evidence of any kind, to show who he was. The accounts in the building, with all items of payment, are carefully preserved; but singularly enough, no architect's name appears in them. Tradition, it is true, names the man, and as that tradition has been consistent and uniform, I see no reason why it should be doubted. But before we try to settle that point, or rather, for the very purpose of helping to settle it, it may be useful to inquire for a few moments what style of house architecture had hitherto prevailed in England; and if the new house at Longleat was totally unlike the country houses that had preceded it, how came it to be unlike? how came this novelty of style to be adopted here?

Now the domestic architecture of any country in ancient times would take its character very much from the condition in which that country might be, especially with regard to the personal safety of the inhabitants. When England was torn in pieces by baronial jealousies, and one noble lord went to make a morning call upon another, not to leave a card and ask him to dinner, but to batter his house down about his ears,—in such precarious circumstances, the thicker the walls of the house were, the better for the gentleman on whom the call was made. A man's house is still his castle, *de jure*, in the eye of the law; but in those days his house was his castle, *de facto*. The houses of the nobility were nothing else than fortified dungeons, of which you have some very good examples at no great distance, in the ruins of Wardour, and at Nunney near Frome. The necessity of providing for self-defence became less and less, but the fashion lingered long after the necessity had ceased. Houses were next built in the form, and with much of the appearance, but without much of the real strength of castles. They had tower and gateway, battlement, and moat;—very feudal to look at, but not very strong, and certainly confined and dull to live in. One of the most complete specimens of this kind in England is Haddon Hall, in Derbyshire.

In the reign of Henry VII. these castellated houses were chiefly built with high ornamented gateways, and large projecting windows. I do not recollect any example near us; but the front of St. James's Palace, in London, and of Eton College, may be familiar, and will give an idea of the kind of house alluded to. This style may be described as having been, in the main, what is commonly called the Gothic, the pointed architecture of churches applied to that of houses, in order to take off the prison-like look of the Old English Castle.

We have in Wiltshire the remains of several private houses of gentry which will give a fair notion of what they generally were previous to the time of Sir John Thynne, in 1540. There is, first of all, South Wraxhall House, near Bradford, the property of Mr. Long, of which the oldest parts are thoroughly ecclesiastical. The gateway is of Henry VIII.'s reign—and other parts are of the reign of Elizabeth and James, with modern alterations. Place House, Tisbury, a grange of the Abbess of Shaftesbury, of the fourteenth and fifteenth centuries—ecclesiastical of course—most of the building gone—a gate-house left—the rest now a granary and dairy.

Norrington, in the Hundred of Chalk, an old house belonging now to the Wyndhams, built by the Gawens in the reign of Henry IV. has ecclesiastical windows. At Woodlands, near Mere, and at Potterne (the latter once the occasional residence of the Bishops of Sarum) there are, I understand, vestiges of houses of this class. The Bishop's Palace at Salisbury has some very ancient portions, but it has been so frequently altered by successive prelates, that it is not easy to distinguish which they are. Great Chalfield House, near Bradford, late in the fifteenth century, about 1490, is as good a specimen as we have of the old English manor-house; very collegiate in its appearance, yet having a vestige of the castle style in its moat and gate-house. The prevailing tone of house architecture before the reign of Henry VIII. was certainly ecclesiastical. And this explains in some degree why it is that one is so often told by the farmer's wife, at an old house, "they do say it was once a nunnery, or kind of abbey like." Not that there were such establishments in one-half the places in which they are thus supposed to have been, but the style of building, corresponding with that of nunneries and abbeys, often leads to the idea that they could have been nothing else. Henry VIII. who turned over many new leaves in England, introduced, amongst other changes, a novel style of house building. The style which he patronised (and, with all his faults, a nobler patron of the arts never existed in this country), was the ancient classic architecture of Greece, then lately revived in Italy. Upon the ecclesiastical or Gothic style, now beginning to expire, was engrafted the Corinthian, Ionic, or Tuscan. This is the way in which this kind of architecture is generally described: but it is considered by some to be, after all, a distinct and independent style of itself, of which we have, as yet, no proper history. The first known specimen of it is said to be on a monument in Canterbury Cathedral to Bishop Warham, who died in 1532. Of this novel mixture, Longleat is one of the purest examples. The house has also this peculiarity, that whereas we have, upon the whole, very few examples remaining of any old English mansion in its entire original state, this may be regarded, externally, as a complete specimen of its period. Most houses have been added to and altered; but Longleat, with very slight exception, is the same, as to the exterior, as when it was designed. The balustrades, the cupolas, and statues on the top are not original, but rather later—the present hall-door is also later—but, I believe, with these exceptions, the house has undergone, externally, no material change from the day it was first built. There are the large mullioned windows, of the earlier period of Henry VII.—and of the three stories, the pilasters in the lower one are of Doric character, in the middle Ionic, in the highest Corinthian—the chimneys are also in the form of columns, though, from its pilasters and entablatures, the architecture of the house, when examined, would be pronounced Grecian, or Italian. Still, its general effect and appearance are, after all, very much that of the old English Ecclesiastical. It is not really Ecclesiastical, because there are neither pointed windows nor tracery here: all is square; but the house has the old look, owing to the bold projection of the windows, and the varied outline of the roof, produced by the turrets and lofty chimneys. Observe, by the way, that the eight turrets, on the roof, are not placed at regular intervals, but in some kind of disorder. Perhaps this was done on purpose; the effect being to increase in the mind the idea of magnitude. For where everything is in exact symmetry, and all parts correspond, the eye takes in the whole object, and measures the plan at once, but irregularity leaves the eye perplexed, and more is left to imagination.

This new Italian fashion of Henry VIII.'s reign, was upon the whole adhered to in the reign of Edward VI. and the early part of Elizabeth. We have of this period, in Wiltshire, Littlecott, which retains much of its old character, though altered, and the south front of Corsham House, built in 1583. Longford is also of this date, but it is upon a somewhat eccentric model, borrowed from an island in Denmark. The Longleat style began to decline towards the reign of James I. much fantastic ornament and unmeaning device being introduced; still, during the decline, some very beautiful houses were built, of which we have good specimens in Wiltshire—in the Duke's House at Bradford, Charlton Park, and Stockton House.

Having now described to you in a few words

THE CRYPT, GLOUCESTER CATHEDRAL.

the kind of house that prevailed in England, down to the time of Sir John Thynne, and having shown that he was one of the first to adopt the new fashion, we have now to answer, if possible, the question, who was the architect employed by him? The tradition before alluded to is, that it was built from the design of John of Padua. That has been the constant belief; and, if nothing can be produced to the contrary, there is every reason for adopting it. In favour of it we certainly have these facts: Holbein the painter, and this John of Padua, are the two foreigners generally understood to have been employed by Henry VIII. in introducing the new kind of architecture. Of Holbein's taste in that direction, we have a specimen in Wiltshire, in the very pretty porch, formerly attached to the house, but now erected apart in the gardens of Wilton. But the misfortune is, that about this John of Padua no one is able to tell us anything at all. To use a term now growing much into use, John of Padua is a *myth*. Who he really was, what his family name was, whether he was born or only educated at Padua, what his works were before he came to England, we have, I believe, not a morsel of information. The little that is at present known upon the subject is merely this, that a person of the name was sent for by Henry; was appointed on his arrival, in 1544, to an office, the very title of which was entirely novel, "the deviser of his Majesty's buildings;" and that, by a deed dated in that year, the king assigned to him a certain daily stipend for his services. About three years afterwards (1547) Henry died. But the pension was renewed under Edward VI. by the Duke of Somerset, Protector, who took the Italian by the hand. In 1549 the duke employed him to design his great palace, in the Strand, called Somerset House; not the present building of that name, but the original one long since destroyed. Now old Somerset House, built by John of Padua, is always described as having abounded in ornaments of Roman architecture, and as having greatly resembled Longleat. This being so, does it not in some degree strengthen the ancient tradition as to this house? We find the Italian, architect to the Protector; Sir John Thynne, secretary to the Protector. The duke builds a palace in the Strand; the secretary, a few years afterwards, another near Warminster. Both palaces are in the newly introduced, and therefore highly fashionable, Italian style. The ornaments of the one strongly resemble those of the other. Now, in the absence of all positive proof upon the subject, yet, with this old tradition asserting the fact, and with these points of coincidence to support it, I think it may fairly be put to you, as an archæological jury, now sitting, as it were, on the very body—does not the circumstantial evidence favour the tradition, that Longleat was designed by John of Padua?

There is another nobleman's house in England still remaining, of about the same date as Longleat, and very strongly resembling it. Wollaton House, near Nottingham, built for Sir Francis Willoughby, and now the property of his descendant, Lord Middleton. Mr. Britton, in the 2nd vol. of his Architectural Antiquities, published in 1809 (p. 108), observes of Wollaton, that though the name of its architect is not positively recorded, yet when the general design, in composition and detail, is carefully compared with Longleat, there can be no hesitation in attributing the two buildings to the same artist. Indeed, he adds, "The uniformity of proportion in the pilasters, windows, and architectural ornaments, would lead us to suppose that these parts of the two houses were executed from the same working drawings." The resemblance here spoken of is certainly considerable, not only in the outside, but within; the two halls being very much upon the same model, corresponding very closely in arrangement, construction of roof, and style of screen.

At Wollaton House, two architects are believed to have been concerned. The first was John Thorpe, a person much employed in palatial edifices at that time. The second, his successor, John Smithson, as appears by a monument in Wollaton Church. From the resemblance between Wollaton and Longleat, some have fancied that John Thorpe and John of Padua may have been one and the same person. It was not uncommon for English patrons of art to fit out young men for study abroad; and it is not impossible that one who trudged away from his native village with a knapsack on his back as plain John Thorpe, may, after serving his apprenticeship to the Muses under the genial sun of Italy, have applied revival principles to his own name, and have come back to Old England a fine gentleman, to be thenceforth called Giovanni di Padova. But I am not aware of the slightest ground for supposing that such was the case in this instance. Thorpe is said to have been a native of Norfolk, and seems to have been always called by his English name. Some of his plans have been lately published by Mr. C. J. Richardson, in a work on Old English Mansions. He designed amongst others the following houses:—Theobald's Burghley, Wimbledon, Holdenby, Kirby, and Old Buckhurst.

In the meantime, whilst we have been settling what style and what architect Sir John Thynne shall choose for his new house, we have left him waiting to begin it. I will, therefore, only add upon this point one thing more, which is, that finding no mention of name or payment, or any notice of any kind of any architect whatever, some have said, that after all, Sir John was his own architect. It is hardly probable that this should have been the case in the proper sense of the word: it is not unlikely that having been furnished with designs he worked them out himself, and was his own clerk of the works. His accounts of the building are still preserved here. They commence 21st January, 1567 (which, according to modern reckoning, would be called January, 1568), and continue to 29th March, 1578, during which time rather more than 8,000*l.* had been spent; a sum which, of course, requires to be multiplied considerably to give any approximate notion of the cost in money of our own day.

With so many workmen about, one would fancy that Sir John would not be over well pleased to hear that Queen Elizabeth was coming to pay him a visit. Yet she came, for it is mentioned in the account of her progress in 1575, that she favoured him with her company on her way from Bristol. From Longleat she passed on to pay the like honour to Sir William Sharington, of Lacock Abbey, and subsequently went to Wilton. Queen Elizabeth was no builder of palaces herself: she had no occasion, having inherited a sufficient number from her father. It answered her purpose a great deal better to encourage her ministers to build large houses in which she might go to visit, and half ruin them by the compliment. Sir John Thynne died in 1580, leaving the larger portion of the outside finished, and from the Hall to the Chapel Court inside: no part of the western side seems to have been finished in his time. As to grounds, nothing seems to have been provided, mention being made only of a garden, hop-yard, and orchard, which were probably the old ones of the Priory.

The outer shell of a large house, 220 feet long by 180 feet deep, is certainly something, but by no means all. It is a skeleton, which, to look comely and to serve life's uses and luxuries, requires to be filled up, fattened, clothed, and adorned. These operations Sir John left to his successors. I believe that the building accounts were not continued after the founder's death; but there is a short descriptive summary of the progress and changes which took place under the various succeeding owners. The oak screen and wainscot of the hall were amongst the additions by his son, Sir John. Sir James, the fourth owner, employed Sir Christopher Wren, by whom a principal staircase was made; and a hall door, which, however, was afterwards removed to a school-house at Warminster. The old priory barn, which stood near the south-west corner of the house, was converted into stabling; and the Priory kitchen garden was walled and planted. In 1663, king Charles II. accompanied by the queen and Duke of York, visited Sir James Thynne.

In 1670, the estate came to Mr. Thomas Thynne, made eminent by Dryden, and who was assassinated by Count Konigsmark, and others employed by him, in Pall-mall, on the 12th of February, 1682.

Mr. Thynne having died without children, Longleat passed (in 1682) to his second cousin, Thomas Thynne, of Kempsford, in Gloucestershire, who was immediately created Baron Thynne, of Warminster, and first Viscount Weymouth. This nobleman held the property for thirty-two years, from 1682 to 1714; and, from the chronicle of the alterations in the house, it appears that he had a considerable share in them. The domestic chapel was now finished It was consecrated 19th August, 1684; the sermon (from 2 Chron. vii. 16) being preached by Richard Roderick, B.D. of Christ Church, Oxford, and Vicar of Blandford Forum, Dorset; afterwards printed, with a dedication to his lordship.

Large improvements, in the taste of the age, seem to have been made in the gardens. Indeed, it would almost appear as if the first ornamental garden of any size was made at this time. The style adopted was the Dutch, introduced into England by William and Mary. Lord Weymouth laid out his ground according to the plan shown in the old engraving of the house by Kiproves, and long avenues, with vistas and artificial mounds, were planted: the original *leat* was widened at intervals into fish-ponds, all rigorously angular: flower-beds were described in chequered and geometric figures; the very gooseberry and currant bushes in the kitchen-garden drilled to grow in squares or parallelograms, trimmed up as stiff and stately as lords and ladies at the court of the Hague. From

the front door of the house, a long raised terrace, on a level with the highest step, projected forward to the entrance-gates.

* * * *

From dates, and other circumstances, it would appear that the house at Longleat must now have remained without a resident proprietor for forty years. There was the minority of seventeen years, to May, 1731; and then on coming, or soon after coming, of age, the second Lord Weymouth appears to have forsaken it, and to have lived in an old manor-house in the village of Horningsham. He died at the early age of forty, in 1751, and was buried in Horningsham Churchyard. He was ranger of Hyde-park and St. James's-park. His son, the third Lord Weymouth, was eighteen years old at his father's death. On coming of age, in 1754, he found plenty to do; the garden and ornamental grounds in the Dutch style (as introduced by the first Lord, and as seen in the old print) having fallen, not only into disorder, but wholly out of fashion: the taste for foreign gardens had gone by. For the work of restoration he called in the celebrated landscape gardener of the day; who, from his invariable habit of pointing out to his employers the great capability of their grounds, earned for himself the name of Capability Brown. So great a personage deserves a stately introduction: let Cowper marshal him in.—

> "Lo! he comes:
> The omnipotent magician, Brown, appears:
> He speaks: the lawn in front becomes a lake;
> Woods vanish! hills subside and valleys rise;
> And streams—as if created for his use—
> Pursue the track of his directing wand—
> Sinuous or straight, now rapid and now slow,
> Now murmuring soft, now pouring in cascades—
> E'en as he bids! In circumstance or owner studies
> 'Tis finished; and yet, finished as it seems,
> Still wants—a mine to satisfy the cost."

Obedient to this magical wand, the Dutch formalities disappeared; plants and trees, released from regimental discipline, were ordered to stand at ease, or to take up new positions more agreeable to the principles of English liberty. The great difficulty appears to have been how to manage the water: the natural stream was by no means commensurate with the *grandeur* of Longleat. I do not bestow that epithet on this place without sufficient reason; because the impression produced upon most minds, when the whole view of this house, gardens, and demesne lies under the eye, surveying it from a height, certainly is, that taking it altogether it is the very *beau ideal* of an English baronial residence. John Aubrey (not unhappily) calls it the most august house in England. The natural hills and valleys, the great masses of wood with which the hills have been clothed, the extensive range of park, the command of prospect, and the style of the house itself, produce, altogether, a character of grandeur, which is in this country at least peculiar to Longleat. Mr. Repton justly observes that there is a vast difference between the grand and the great. For example, 4,000 acres with a paling round them, and a cotton factory in the centre, all in the middle of Salisbury Plain, might be great; but nobody would think of calling them grand. Greatness of dimension is one thing: greatness of character is quite another. The two are often confounded; but, though the difference may not, perhaps, be so easy to describe, the eye detects it in a moment. Therefore, to bring the water forward into proportion with all the other features of Longleat was absolutely necessary. The stream itself was nothing but a watercourse, large enough for driving the old Priory mill, but insignificant in appearance when passing through spacious grounds close to a spacious mansion. In the artificial Dutch garden the brook had been enlarged a little into a straight canal and fishponds, as seen in Kip's view; but when these were abolished the problem was how to give greater expansion to the water. Various plans were considered, and the one adopted at a prodigious expense (as Cowper's introduction prognosticates), was to produce the idea of a large river flowing through the demesne, widened by serpentine lines into a lake. The Viscount Weymouth, by whom this alteration was made, was a Lord of the Bedchamber to George III. (1760), master of the horse to Queen Charlotte (1764), and Lord Lieutenant of Ireland (1765). In 1789 he was created Marquis of Bath, and in September of that year he had the honour of receiving, as guest at Longleat, the king, queen, and princesses, with a suite of forty persons.

The words of Mr. Repton, speaking in 1803, apply with equal propriety in 1856. "This magnificent estate, so far from being locked up to exclude mankind from partaking of its scenery, is always open, and visitors are allowed freely to amuse themselves; which circumstance tends to enliven the scene; to extend a more general knowledge of its beauty to strangers; and to mark the liberality of the noble proprietor in thus deigning to share with others the good he enjoys."

THE VENTILATION OF HOSPITALS.

In your number for October 25th, a writer on "The Ventilation of Hospitals" appears to have devoted much study to this intricate subject, and to have weighed all matters connected with it in a masterly and scientific manner. May I be permitted, however, to offer a few observations on the above interesting subject, and to state (on the threshold) that mere scientific disquisition, and theoretical argument, though they be founded on the surest basis, will not suffice to settle the inquiry, and place the matter in a perspicuous and intelligible form. I have been a professional observer of the system of ventilation adopted by our public hospitals, for the last twenty-five years, and I must add, with all courtesy to the writer in question, that he takes merely a scientific, and, therefore, a very partial view of the point under consideration. His expressions are occasionally somewhat vague: thus, he remarks, "The air expired from the lungs has not a temperature sufficiently elevated to raise it even to a couple of feet above the head, without its undergoing diffusion from the combined influence of the law of gases, and of the rapidity with which it parts with its excess of temperature, and the disturbing effects of currents of air, the direction of which is only capable of being partially controlled."

The observation which shortly follows is not borne out by practical experience, viz. that "the admission of direct currents of air is impracticable in this climate during two-thirds of the year. Hence we are driven to scientific means for obtaining such an artificial ventilation as shall compensate, so far as may be, for the loss of natural ventilation."

In these and other remarks which follow, it is evident that your correspondent has not studied the subject *au fond*: in short, he has not "walked the hospitals," as a student in scientific ventilation, for a quarter of a century. I would, therefore, beg to add a few remarks and suggestions to those already made by Mr. Rosser. In the first place, we cannot fail to be struck with the fact, that allusion is rarely made in these matters to the great and main source of a vitiated hospital atmosphere: it is not the expiration of so many cubic feet of deoxidized air per minute, by twenty or thirty inmates of a sick room; neither is it the superadded impure exhalation from the pulmonary surfaces in diseases of the respiratory organs, as in bronchitis, consumption, inflammation of the lungs, &c. &c.; but it is the general noxious malaria which is constantly passing off from the bodies of individuals labouring under some of the severest forms of disease which "flesh is heir to." For instance, a non-professional friend of mine can walk, with perfect impunity, down the centre of our largest wards, but if he converses with the patients, or sits for a few minutes near the beds, he is usually seized with what he terms a "distressing light headache." During the twenty-five years in which I have had the honour of being connected with the Middlesex Hospital, we have had (if I may so say) three distinct systems of ventilation,—that of the old hospital of 1830, that of 1836, and that of 1849. In the last improvement, ventilation has been carried out in a complete and most satisfactory manner. The windows are tripartite, and open inwards from 2 to 8 inches: they are worked upon a semicircular plate by an iron handle and upright rods and slides. The summits of the walls of the new wards are also furnished with a given number of perforated zinc plates, which allow communication with the exterior air, and, excepting in seasons of intense cold, these are rarely all closed. Our walls are composed of non-absorbing surfaces, by means of Parian cement; and we have wholly abandoned curtains to the beds, unless it be in special cases.

By such precautions, those fearful pests of our metropolitan hospitals, erysipelas, gangrene, pyæmia, and fevers, &c. have entirely left our wards, and although we have had a larger share of typhus during the past summer than usually, yet I am thankful to add that there has not arisen a single instance of contagion. Erysipelas and pyæmia, so frequent and fatal in our old hospitals, are now rarely seen in the wards as idiopathic diseases. In short, it may be asserted that where a perfect system of ventilation is adopted by means of external air, with such a position of the water-closet as is met with in our building, there can be no opportunity for any foul air to obtain a "nidus" around the beds: the diffusion throughout the general atmosphere of the ward becomes so complete that, although the windows are closed, the open zinc traps pour in a constant supply of cold air, which feeds the ward fires and carries any foul admixtures up the chimneys.

Our closets are provided with double doors, so that "the pumping action" of a single door is avoided. A lobby exists between each door, and the whole range of closets is extra-mural of the building from the basement upward. The seats are fitted with self-acting flushings for the pan, and the only complaint that is made is of the disagreeable draught from the action of the ward-door when the inner door is improperly fixed open. This may be obviated by adjusting the inner door with self-closing hinges.

In conclusion, therefore, it may be observed that Mr. Rosser's statement that "when an upward ventilation by one or two extraction openings in a flat ceiling is sought to be accomplished, it is impossible to prevent the vitiated air from being disseminated throughout the atmosphere of the ward," must be taken with reserve, for there have been such extraction openings in operation in the walls of our back wings since 1849, and the sanitary influence upon the patients has been most decisive and satisfactory. GEO. CORFE, M.D.

ARCHITECTURAL NOTES IN ANGLESEA.

THE town of Beaumaris seems to have been of no importance before the erection of the castle and walls by Edward I. Anglesea had been held by the English from the year 1277, when the fleet of that nation subdued it with little opposition on the part of the Welsh. Frequent insurrections, however, determined Edward to erect a fortress and keep a garrison in the island; and after the rising of the Welsh under Mudoc, son of Llewellyn, in 1294, it was begun in the same year, and finished two years after. The work is a gigantic one, when the difficulty of transit at the period in which the castle was built is taken into consideration; and it seems doubtful whether modern engineers could erect a fortress of such bulk and solidity in a shorter time, and at the same time attend to the high finish and perfect adaptation of all the various parts, such as are apparent here. The remedy applied by Edward to avert the disturbances and revolts so frequent before the erection of the castle, appears to have been effectual: no more is heard of the town that makes any figure in history till the period of the Great Rebellion, when the castle and town were garrisoned for the king. They were, however, surrendered to the Parliament shortly afterwards with little resistance. On the imprisonment of Charles they were again seized by the Royalists, and again attacked by the Parliamentary forces under General Mytton. On this occasion a more spirited resistance was made. A battle ensued, which, though partly favourable to the Royal troops, ended in their withdrawing within the town. Captain Lloyd, of Penhenllys, of the Royal forces in the town, however, being pressed by the enemy, thought fit to run away, after locking up his detachment in the church. Here they fought manfully, and caused the loss

of many officers and men to Mytton's army. The position of the church is indeed well calculated for defence, as it stands on a rising ground, and overlooks the town wall to the west—the wall serving as an outer defence, while the raised churchyard commands the entire town. Driven from this position, the castle still held out, but was afterwards surrendered on honourable terms. From being in the possession of the Crown, this fortress passed afterwards to the Bulkely family.

The castle, standing as it does in a flat meadow, and very little above high-water mark, is not very conspicuous, as are Conway and Caernarvon Castles; nevertheless, the building itself is even more strongly fortified than these larger buildings. No precaution has been neglected for its security, owing to the natural position being defective for defence. It stands within 100 yards of the beach, at the south-east angle of the town walls, but outside them, and quite detached from them. The moat is very wide, and was formerly connected by a short canal with the sea: in fact, a kind of dock was formed under the castle walls, where vessels could unload stores at the gates: the ring for mooring still remains fixed in one of the towers. A long wall projecting towards the south, pierced by two galleries, and strengthened by two small towers, crosses the moat from the south front, and is evidently intended as a protection for the vessels moored at the gate. The main body of the castle is encircled by a wall, having massive round towers at each angle, beside minor ones at short intervals, while on the north and south sides are strong gate-houses: that at the north has two round towers, corbelled out from square bases, set anglewise, and is very picturesque: the south gate is of very different design, and of fine proportions. A broad square tower projects beyond the wall, its north front being, as it were, opened as far back as the line of the curtain wall, by three lofty recessed arches of pointed form, and the roof of these recesses is formed by ribs following the form of the outer arch. In the centre compartment the gate is pierced through the wall, the arches being about half the height of the arched recess; while in each side compartment is a small sallyport, sufficient to admit only one man at once. Neither of the gate-houses stands in a direct line with the corresponding gates in the main building. The inner building is a paralellogram, 190 feet by 170 feet. At each corner, and in the centre of each side wall, is a huge round bastion, while the north and south ends have each two bastions in the centre, between which are the main gates. The interior is remarkable for the great hall, which stands on the north side, having five windows towards the inner court, which are of a design peculiar to the castles of Edward I. They are very large when compared with the usual proportions of castle windows, the inner arches being segmental pointed, the outer a flattened ellipse. There appear to have been a transome and mullion in the lower half, but no remains of tracery can be discovered, notwithstanding the great breadth of the windows: possibly it may have been framed in wood. Each habitable room has had a large and well-wrought fireplace, of almost identical design, though varied in size. The great hall has two corbelled out from the wall, with a flat lintel and the masonry above, sloped back, till it dies into the wall, near the ceiling. The roof of the hall has been of timber, supported by moulded corbels, rather low down the inner walls, and from their standing at two different heights, probably a superior and inferior set of principals were used to form the roof.

The rooms in most of the round towers have an arch, either pointed, or the segment of a circle, thrown across them, to support the floors and roofs. At the south side of the castle-yard, a similar building to the hall has apparently stood, having like that round staircase turrets at each angle towards the court, but only the foundations now remain. The chapel stands in the centre of the east side, in the round bastion: five narrow lancet windows light it, and its interior shape is semi-octagon, its proportions and appearance being similar to the apse of a church. It is simply groined with chamfered ribs, and in each angle of the chapel stands a clustered pier attached to the wall, and bearing an arch and the groining, the centre of the arch being pierced by a pointed window, but the vast thickness of the wall allows but little light to enter. An arcaded and cusped panelling surrounds the whole of the lower part of the chapel; and on the west side, two panels are pierced, forming a double doorway, entering first a gallery that runs in the thickness of the wall round the castle; and on the other side of this gallery, a moulded arch opens into the courtyard, though there appears to have been originally a suite of rooms of slighter construction on this side of the Castle-yard, as there are the remains of a fireplace in the wall near to the chapel door. Either a wooden gallery, or a low building with a terraced roof, must have run along the east and west sides of the court, as doors from the towers and the chapel open into the court-yard, some 9 or 10 feet from the ground. The masonry of the walls throughout seems to give some evidence of the haste in which the castle was erected, being an irregular mixture of the slaty stone of the neighbourhood with cubical blocks of Penmon stone, but the outer walls seem to have been brought up to one even line above the first tier of loopholes, as though it had first been finished to that height, and made defensible, and afterwards raised to its present height.

The south-west bastion, and a few other portions of the inner building, have cubes of Penmon stone regularly alternated with slaty limestone of darker shade, thus giving a diapered or chess-board appearance to the masonry. It is worthy of note, also, that where a round or elliptical arch is used in the window or door recesses, or inner arches, that the outer arch is pointed, and *vice versa*: thus in the hall the inner arch is pointed, the outer a flattened ellipse. In the mouldings of the chapel, which, unfortunately, are much too delicate for the gritstone in which they are cut, there is a prevalence of chamfers and shallow hollow mouldings, unusual for the period, and the whole of the ornament is formed by tracery and mouldings: no sculptured foliage, heads, or masks are anywhere used. Though Beaumaris Castle may lack the picturesqueness of many others in the principality, it is one of the best preserved and strongest, and in some points more interesting than most others.

Of the town walls there are a few remains. On the west side of the tower, running at right angles with the strait from north to south, stands the largest fragment, and a few hundred yards towards the north stands another fragment, about 30 yards long, running from east to west. There are some faint traces in the old houses a little beyond this that may be the remains of a gate with a projecting barbican. The wall facing the Menai Strait was taken down in 1831 to build the Bulkely Arms Hotel and a terrace of new houses. It joined the west wall by turning towards the north-west, thus cutting off the angle, and forming a portion of an octagon towards the shore. This last-named portion was standing six years ago, but the builders of new houses have been allowed to use it as a quarry, and this summer workmen were busy rooting up the last fragments of its foundations for the sake of the stones. They complained to me of the extreme hardness of the mortar, which tradition says was poured in hot. The wall of the town shows no trace of towers. It is roughly built of large unhewn blocks of stone, but the strength of the mortar makes it very strong. The thickness is about 5 feet, and the parapet is built of the same rough stone, and neither crenellated nor loop-holed: it is much inferior work to the castle. The main portion may be 150 yards long, beginning about 50 yards from the beach, and terminating at the churchyard. A new street is projected, which will destroy this and several other very interesting relics, that ought to be spared if possible.* E. W. C.

Election of Surveyor for District of Newington.—We are asked to mention that the number of votes recorded for Mr. Henry Hart, was nine instead of eight, as stated.

---

* To be continued.

SHOWING WESTMINSTER ABBEY.

In the *Builder* (p. 597, *ante*) was published a communication from Mr. Luke Berrington, one of the guides of Westminster Abbey, in reply to some remarks on the present manner of showing that place. Mr. Berrington states that, during the time of the Great Exhibition, the plan proposed of throwing open the tombs of the kings, &c. to visitors without the attendance of guides was tried, *and it is satisfactory that no complaint of damage seems to have been made.* The writer says, "I am prepared to assert that a large majority of visitors to the tombs, if left only for a few minutes in a chapel by themselves, were anxiously inquiring, 'where is the guide?' and although the tombs were not actually 'ticketted,' still there were plans of all the chapels, and large cards, descriptive of the monuments, placed in abundance in all directions throughout the chapels." Now, these cards are still lying about, and show a rough ground-plan of each chapel; and the position of the various tombs is numbered,—for instance, No. 1. Edward the Confessor's shrine: No. 2. Queen Eleanor; No. 3. Shrine of Henry V.; and so on. Some who visit the Abbey do not understand ground-plans, and others will not take the trouble to look at them; and even to those who do, this reference is by far too brief and uninteresting: if, however, there were placed against each tomb, as recommended, a small tablet on a stand, of good design, not fixed to the monument, on which would be legibly inscribed the date, &c. of the tomb, and a few brief yet well selected particulars of the person who there rests, such notes immediately in conjunction with each object would make the Abbey serve the purposes of a vast and deeply interesting book: the notes would be useful to those not much learned, and also be the means of refreshing the memory of the better informed: and, moreover, the guides or custodians of the Abbey would be at hand in the various places to answer any inquiry. It might also be worth while to translate some of the most interesting inscriptions, which are in Latin, into English, both in the chapels and other parts of the Abbey; for instance, many who read on the plain yet appropriate slab which covers the resting-place of Addison,—

"ADDISON.

No'er to these chambers, where the mighty rest,
Since their foundation came a nobler guest,
Nor ere was to the bowers of bliss conveyed—
A fairer spirit, or more welcome shade;
Oh, gone for ever—take this last adieu,
And sleep in peace next thy loved Montague.

Egerton Earl of Ellesmere.

P. C. 1849. "Born 1672, died 1719."

many of those, we say, who read this English inscription, and who are not Latin scholars, would like to be helped to decipher the inscription on Lord Montague's monument, which is adjoining. The venerable Abbey might be made most useful as a place where the youth of both sexes could learn impressive lessons on the history of their own country, in the presence of the forms, and close to the ashes, of illustrious personages, who have figured in former times; and for this purpose more is required than the half-hour's ramble amongst the tombs with the guides. Hundreds of parents would like to take their families to Westminster Abbey, and, in their own way and with patience, explain the various and interesting particulars connected with the place. Many teachers of schools might also be glad to avail themselves of the opportunity of explaining to their pupils these historical stone records.

Sometimes twenty-five or thirty persons follow the guides like a flock of sheep, and it takes, perhaps, three minutes—it may be not so much—to show the Confessor's Chapel, a thing of picturesque beauty in itself, and abounding in associations. No doubt some of this number are of the description of sightseers who rush up to London for a week and have the whole town to see in that time. In one day they do the Thames Tunnel, the Tower, the Mint, they fly into the docks and bonding-houses, catch a peep at the Lord Mayor in the Mansion-House, Gog and Magog in Guildhall, run through the Rotunda at the Bank, the Royal Exchange, look in at St. Paul's, snatch a hasty dinner, hurry to get in time to one of the theatres, and, as

Pepys says, "so home" in a cab, with head aching and bewildered. This class of persons, no doubt, approve of the most rapid manner of showing monuments, for they do not care so much about the sights as being able to say what they have seen, and to boast "What do you think of that for a day's work?" There are, however, many in each company who would fain ponder amougst the tombs, either for the purpose of learning history, or in the enjoyment of the thoughts and ideas which cannot fail to be suggested even to the heedless.

THE DISCOVERY AT CHRIST CHURCH, OXFORD.

THE OXFORD ARCHITECTURAL SOCIETY.

At the second meeting of this society, held on the 5th inst. the Master of University College in the chair, Mr. James Parker said he had been deputed that evening to describe the curious chamber which had been so recently found during the repairs of the cathedral, and he would mention the four theories which had been suggested respecting it. He had a very effective drawing which Mr. J. Billing, the architect who was so satisfactorily restoring the cathedral, had kindly made, he believed, especially for the benefit of that society.

Immediately beneath the large organ-loft, the builders, in digging a trench for the hot-air pipes, came suddenly upon some masonry which proved to be a stone-built chamber, 7 feet long by 5½ feet wide by 7 feet high. The interior was plastered, with three small incised crosses marked on it, and also some traces of red colour. There was also a small recess, about a foot square, on the north side, and another a little larger on the south side. In one corner there was what seemed to be the springing of an arch either for the vaulting, or as a sort of shoulder to support slabs of stone which might have been the original covering. On the east side it seemed that a great part of the wall was wanting, so that, possibly, there might have been an entrance-doorway upon this side, the jamb of which both the architect and builder thought they could detect. The whole had been covered up, and upon the materials which they possessed, they had now to bring to bear what evidence they could from analogy or history of the original purpose of the cave.

The only similar instances which had been suggested were the crypts of Hexham and Ripon; but in both these cases there were a series of underground chambers, with passages leading to them, so that worshippers might enter and pray before the relics which were placed there. The first theory, then, was, that the subterranean building was a Reliquary Chamber, but the difficulty of access seemed rather to overthrow this theory.

Next it was suggested that, if not used for the exposure of relics, it might have been used for their safe custody, either as a usual receptacle for the costly shrine when not wanted for any ceremony, or for concealing it, with other valuable property, in time of danger. However, to this it may be said, that it would be a very awkward place for the ordinary keeping of the shrine,—and in the last position, viz. at the entrance to the choir, likely to be chosen for a place of concealment.

Thirdly,—He would suggest that it might have been the burial-chamber of St. Frideswide, and he therefore entered somewhat into the history of the present building, which was built by Wimund on the spot where St. Frideswide was buried. This virgin saint had been interred in the church belonging to her own nunnery; but this, as it was of wood—as was usually the case with churches at the time—had been totally destroyed by fire. There was, however, to this theory more than one grave objection, *e.g.*—that there was no room for a coffin to have been placed in this chamber from east to west, as was the customary mode of Christian burial in early times. Also, that the portion of the arch in the corner seemed to prove it to be the work of a period not anterior to the Norman Conquest.

He had still, however, a fourth theory, which he thought it right to mention, though he was not prepared with the arguments upon which it was founded,—namely, that it was connected with an altar tomb or shrine above, and might have been used for the purpose of effecting miracles, as there was room for a man to move about in it, and it seemed to have had originally an entrance, and probably a passage from the east end of the church.

Mr. Bennett differed with Mr. James Parker as to the probability of its being the grave of St. Frideswide. Its position was against it. It was neither near the high altar, nor yet in the centre of the church. It was not in accordance with what is known of sepulture at the time, and besides that, the orientation he considered also much against the theory. At the same time he would say a few words on the theory which Mr. Parker had mentioned last of all. He had seen constantly, on the continent, instances of the exhibition of images of saints at the entrance to the choir; and although he did not find, after a careful examination of the miracles which are recorded to have been wrought at the shrine of St. Frideswide, any notice of moving figures, yet he did find records of many which seemed to depend on a bright halo of light being suddenly and mysteriously thrown round the shrine, which might have been easily effected by any one concealed in such a chamber as this.

THE PURIFICATION OF THE THAMES.

Engineers may inlay the earth with sewers a hundred miles long, but the Thames will not be purified except by the removal of those vast banks of sewage guano which have formed under the noses of our forefathers since the time of Alfred the Great. Talk of Peruvian deposits indeed! Here are millions of tons of solid sewage, which, if it possesses but half the amount of fertilizing quality imputed to it, may at once be sold (*in situ*) by auction to our agriculturists: if it bring but a shilling a ton it would be all profit to our corporation.

It is to these mud-banks, stirred by tide and churned up by a hundred paddle-wheels from morning to night, that the filthy state of the river is entirely due. We cannot suppress steam-boats; but, with the consent of our conservators, we may abolish mud.

I propose, then, that a thousand barges be bought or hired, and twenty thousand strong arms employed to fill them with this "precious stuff." Father Thames will be but too glad to redeem his character by "tiding" it to the wilds of Essex or the marshes of Kent; and let the farmers be thankful and pay for it like Britons when brought to them, or suffer the shame of seeing it thrown into the sea.

If proof of the common sense and truth of these remarks be required, it may be had at a trifling cost, viz. filling a pint pot with Thames water at four o'clock in the morning, and another at four o'clock in the afternoon, at a given spot; then evaporating the water of each, and weighing the dry residuum. The difference of weight of solid matter of the samples will give the sum total of the paddle-wheel influence on the mud-banks before alluded to. E. P.

THE GOVERNMENT COMPETITIONS.

It may be useful to the profession to know, that the remaining sheets of the Westminster detail survey are lying at the office of the Metropolitan Board of Works, Greek-street, Soho-square. The sheet that joins on to the one issued by the Government to architects, contains the entire detail of the new palace, the Abbey, and Abbey precincts, &c. together with all the private property extending some distance up Birdcage-walk. This survey was carefully made by me in the year 1849, for the then Commissioners of Sewers. S. A. Matthews.

DECORATION OF THE LONDON GUILD-HALL, ON THE 10TH, AND THE "SHOW."

According to the newspapers, the ball was fitted up with portraits of the Sovereigns of Europe, and the eastern window had a representation of Peace descending from above encouraging Agriculture and Commerce. On the western window were delineated the arts, poetry, painting, sculpture, music, and architecture, in the centre of which was placed the glass star, and over the gallery, on the south side of the hall, was the now well-known plume of feathers of spun glass.

On either side of the entrance to the lobbies leading to the Council Chamber, stood a golden figure of Plenty, with baskets of flowers on their heads. The first lobby contained Bell's "Eagle-slayer," and a statue of "Genius chained," by Durham.

On the north side of the Aldermen's Court-room, a large temporary conservatory was fitted up, in the centre of which was the statue of Australia, by Bell, backed up with a picture representing Melbourne, painted by Mr. Frederick Fenton. There was also in the Aldermen's room a bust of the Right Hon. the Lord Mayor, by Lough; the statue of Dorothea, by Bell; and the statue of Whittington, by Carew. The representation of the Bayeux tapestry, mentioned by us on a previous occasion, and some other decorations of other years, appear to have performed service in the approaches.

In the "Show," in the morning, the proposal made in this journal some years ago, at the advent of Lord Mayor Musgrove, to improve the character of the pageant, was to some extent followed out by the introduction of some allegorical devices by Mr. Sheriff Mechi, which seemed to excite more interest than any other portion of the procession. These devices consisted of a traction engine and an endless railway, specially adapted for agricultural purposes, drawn by six horses (Boydell's patent); a prize reaping-machine in a car, decorated with agricultural produce from Tiptree-hall Farm, drawn by four horses (Burgess and Key's patent); and a steam plough drawn by two horses (Fowler's patent).

BUILDING ACCIDENTS.

Fall of a Bridge near Darlington.—A bridge, just erected over the Tees at Dinsdale, fell last week while the men were removing the centres from the arches. Two of the men were killed and several severely injured. The bridge was being erected on old stone buttresses, turning upon them four brick arches, three spanning the river, and one land arch on the Durham side, varying from 45 feet to 48 feet span. When the arches gave way, nothing remained but the land arch and the stone buttresses.

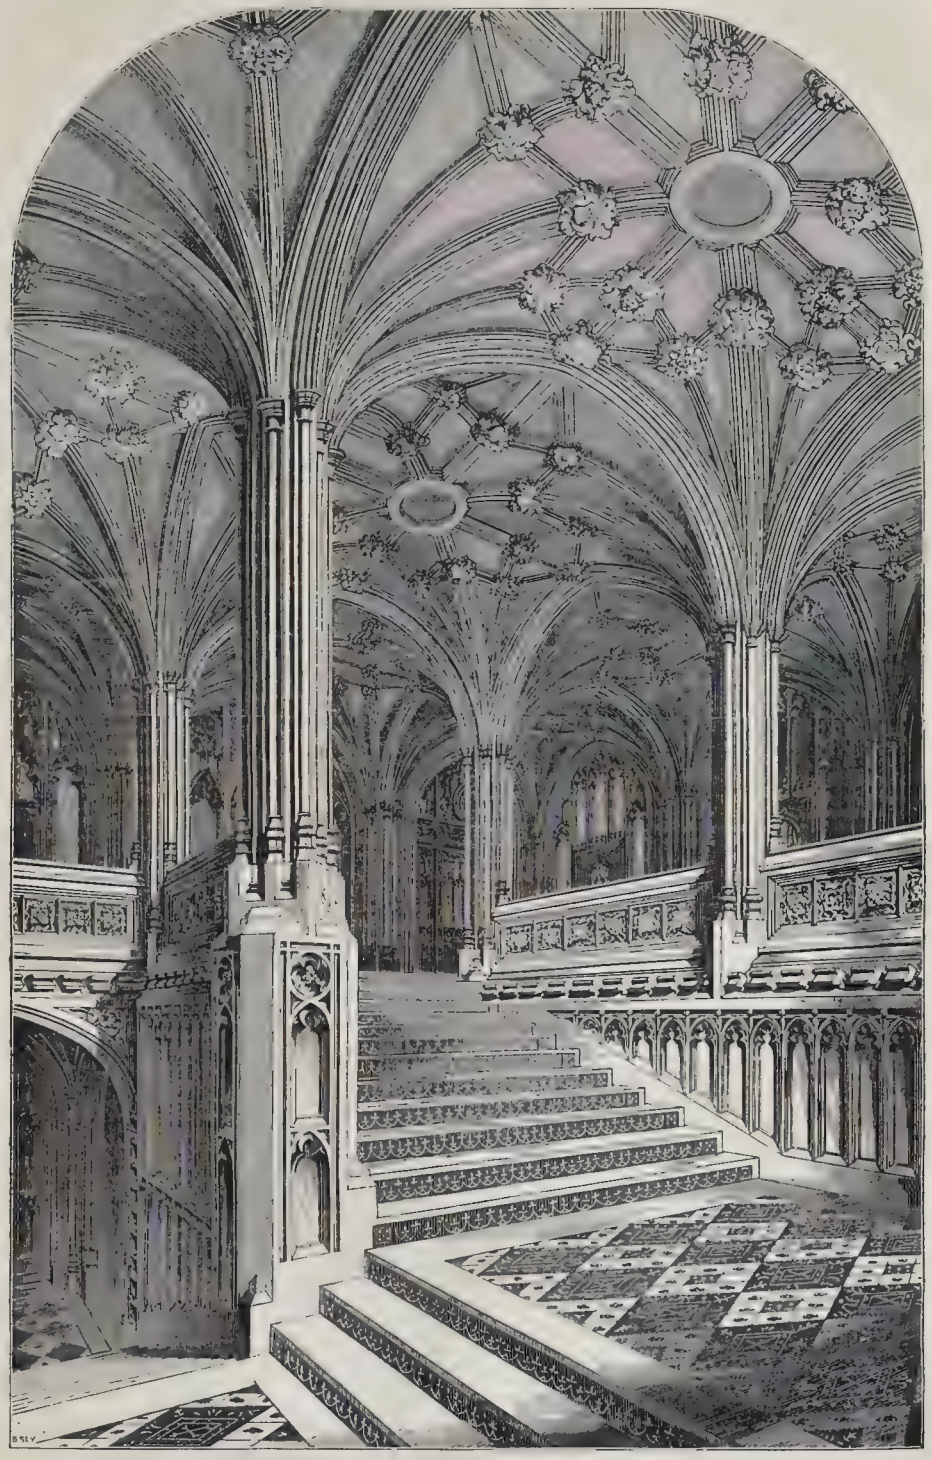
Fall of a House at Longton.—An old house in George-street, close to the gable of which some excavations for a cellar had been brought in close proximity, fell last week, while inhabited by a family of poor people, who all, however, escaped in time.

Fall of Scaffolding near Rochdale.—An accident took place at a new house in course of erection at the Sparth bar, on Thursday in last week. The third story was nearly up, and the scaffolding was so insecurely fixed that just as the men were commencing work it fell down. The planks, bricks, and mortar fell upon the men, and most of them were sadly cut and bruised about the head.

Fall of a Floor in Perth.—In Bridgend, a savings-bank for children has existed for some time, called the Kinnoull Penny Savings Bank. The business was conducted in an old house for cheapness. On Saturday a greater number of depositors than usual were ready with their pennies: when the doors opened, a rush ensued, and down went the floor, accountant, depositors, and all, into the cellar. Happily, no great harm was done, and the savings were all saved.

Fall of a House in Paris.—The inhabitants of the Faubourg St. Antoine were lately alarmed by the fall of a house, in course of erection, in the Passage Richard Lenoir, No. 7. It had already reached the third story, and its present destruction, says *Galignani*, is complete. Under the rubbish were buried six workmen. One had received dangerous wounds, and another expired on the way to an hospital.

THE EARLY WATER SUPPLY OF LONDON.



With reference to your account of the conduits which supplied a part of London thirty years ago, thirty years ago I made some examinations in Lamb's Conduit-street at the northern end, and found some remains of what I take to have been Lamb's Conduit, and which I have every reason to believe still continue in the same state. There were two conduits under the middle of the street, with arched communication, and a doorway into the front area of No. 42, Lamb's Conduit street.

This neighbourhood originally consisted of a fine yellow red gravel, of some 12 or more feet deep, resting on a clay, and appears to have been abundantly supplied with fine water running on the clay, as the many old pumps and receptacles prove. Among these last I may class another construction under the back premises of No. 2, Chapel-street, Lamb's Conduit-street, evidently an ancient conduit, 6 feet wide and 8 feet 6 inches high, built in a chalk-like freestone, with blunt-pointed arch of the same material.

With respect to the conduit in Conduit-street, Hanover-square, the channel which supplied it—a brick sewer-like construction—ran past the fronts of the houses in Avery-row, behind Bond-street. It was partially destroyed some thirty years ago, when the large sewer was rebuilt there, at which time I saw some 30 feet in length of it in very good condition.

Some twenty-five years ago the paving commissioners of St. Andrew's, Holborn, and St. George's the Martyr, caused wells to be dug and pumps to be erected in various parts of these parishes, for supplying the carts for watering the streets, among the rest at the west end of Middle-row, Holborn. The surveyor of pavings under whose directions these wells were dug, told me that the influx of water into the excavation for that well was so great that they could not keep it sufficiently down with the means at command to enable them to carry it so deep as intended. This accords with your notice of the "Old Bourne, a rivulet spring which rose near the Middle-row, not far from the bottom of Gray's-inn-lane." Aquarius.

A Glass Roof for the Post-Office, St. Martin's-le-Grand. — A massive scaffolding in the vestibule of the Post-Office has been raised in order to replace the roof with one of glass. Other alterations are in progress to remove the entire receiving-department to the south wing.

THE PEERS' STAIRCASE, WESTMINSTER PALACE.—SIR CHARLES BARRY, R.A. ARCHITECT.

[See p. 621, in present number.

CHURCH-BUILDING NEWS.

Newark. — The new burial-ground here, though in an unfinished state, has been opened for interments. The ground is about 9½ acres in extent, and is situated on the London road. The chapels are in the Gothic style of architecture, and were designed by Messrs. Bellamy and Hardy, of Lincoln; and built by Mr. J. Whitworth, of Newark. They are erected in the centre of the ground, being united by a lofty arch, under which passes the principal walk, and over it stands a decorated steeple and spire, 80 feet in height. The entrance lodge is of brick and stone. The front palisade and entrance-gates were designed by Messrs. Bellamy and Co. and cast at the foundry of Messrs. Midworth, of Newark.

Norwich.—The completion of the restoration of St. Peter's Church, it seems, is now determined upon, and the nave is to be benched in a similar but less costly style to the chancel benching: 400*l.* have been already contributed, and 200*l.* more are required for this purpose.

Sutton-cum-Lound. — The parish church of Sutton-cum-Lound, near Retford, has been re-opened. Opposite to the springing of the Norman chancel arch, the architect has put a half arch as an abutment in the north aisle, also a buttress opposite the south side of the church. The east window, of the Flamboyant style, has now been restored. Throughout the church there is carried out a high-pitched roof, with carved stone heads, at the springing of each principal. The nave south wall has been cased throughout with new ashlar stone. In the same side of the church the architect has put in two traceried windows in the Perpendicular style. The porch has been rebuilt. The interior fittings are of oak, having panelled heads with poppy-heads, and some old benches have been cleaned and restored, the rest being made of deal stained to assimilate with the others. The flooring is of red deal, the aisles being of rubbed Yorkshire stone, and the chancel is paved with similar stone. The stained glass centre light in the east window is a figure of our Lord seated, and below this the Crucifixion. It was painted by Mr. O'Connor, of London. The edifice has had all its pinnacles, battlements, carved gurgoyles, and cornices, restored. The churchyard was also partly levelled, and the walks widened and laid with gravel. Mr. Arthur Wilson, of Peterborough, architect, was entrusted with the restoration of the church, as well as that of the church and the building of the Rectory-house, at Treswell, near Retford. Mr. William Lee, contractor, Mr. Roberts, joiner and builder, and Mr. W. Welch, plumber, all of Retford, carried out the designs of the architect.

Maidstone.—The vestry of Maidstone have just resolved to purchase, from the Earl of Romney, 20 acres of ground, near Mangravit Wood, for a cemetery. The price they are to pay is 3,775*l.* Plans for chapels, &c. were to be presented at a future vestry meeting.

Guildford.—The cemetery for the town of Guildford was consecrated by the Bishop of Winchester on the 29th ult. The ground contains 4 acres, one third of which is appropriated for the use of the Nonconformists. The chapels are built in the Early Decorated style, being equal in size: the Episcopal Chapel has a bell turret. Godalming stone is employed for the general walling, with Bath stone dressings, to the chapels, and red brick dressings to the sexton's lodge. The total cost, including purchase of land, was 1,900*l.* The works have been carried out under the superintendence of Mr. Robert Wheeler, by Messrs. J. Moon and Son, builders, Guildford. Mr. W. Smith was sub-contractor.

Fosbury (Dis). — Christ Church, Fosbury (Wilts), recently erected, at the expense of Mr. R. C. L. Bevan, was consecrated on 30th ult. by the Bishop of Salisbury. The church is late Middle Pointed, consisting of a nave, ritual chancel, organ-chamber north of the chancel, with vestry and south-western tower. The distinction between nave and chancel is, that the chancel is elevated on a dais, that the timbers of the roof are elaborated, and that the windows differ from those of the nave, the seats being stallwise. The windows are glazed throughout with Grisaille glass, in varied floriations from natural productions, being relieved with colour. There is a considerable number of texts about the church, arranged polychromatically. Externally, the church is of flint; the freestone work of Bath. The windows have discharging arches, alternated with a peculiar glazed brick of the locality and stone. The tower has three stages, the lower forming a porch, the interior of which is in constructive colours, of brick, and the tower is surmounted by a beacon turret, terminating the staircase to the respective stages. A parsonage-house, in the same period, is built in connection. Mr. Teulon is the architect, and Messrs. Fassnidge, of Uxbridge, are the contractors who executed the work.

Bradford.—The old parish church of Bradford, says the *Bath Chronicle*, is at length to undergo some kind of reparation, if not of actual restoration, and the work has already been commenced. The chancel gallery has been removed, the chancel arch restored, and that and the altar flooring raised and newly paved: the high, old-fashioned pews have given place to new low oak stalls; and it is in contemplation to increase the accommodation very considerably by re-seating throughout. A stained eastern window is in course of erection, and other alterations and improvements are contemplated.

Curland (Taunton).—The new parish church of Curland, perhaps the smallest church in the county, says the *Taunton Courier*, was opened for Divine service on Tuesday before last. The new building occupies the site of the old one. It has been rebuilt principally at the cost of the Rev. Prebendary Lance, rector of the adjoining parish of Buckland St. Mary. The church is built of flint, with Ham-hill stone for the windows, &c. It is from a design by Mr. Ferrey, carried out by Mr. Davis, of Taunton. The mason's work was under the superintendence of Mr. J. Billing, of Buckland St. Mary: the glazing was by Mr. Gould, of Chard; the painting and diaper work for the reredos by Mr. A. Stansell, of Taunton; and the tablets containing the commandments, in illuminated characters, by Mr. T. D. Ward, of Taunton. The roof is low pitched, and of stained deal, and at the west end is a small open bell turret. The eastern window (a three-light with medallions), is filled with stained glass: the centre piece is the Crucifixion, and the side lights represent the Agnus Dei, and the Pelican feeding her young. The pews are low and plain: about seventy persons, including children, may be accommodated with seats. The church has been constructed of the old materials, together with those of the old chancel of the church of Buckland St. Mary, from which also the west window, together with four out of the five side windows have been given.

Shrewsbury.—Arrangements are being made for the transfer of the contract for the cemetery works to Mr. Treasure, of Newport. The new cemetery buildings, according to the architect, are being proceeded with satisfactorily.

Lilleshall (Shropshire).—The parish church of Lilleshall has been restored and reopened. Mr. Norton was the architect employed. The south wall has been rebuilt, with new buttresses, and windows in harmony with the general design. The small Norman doorway, marking the original limit of the chancel, has been restored and let into the building. The south porch has been rebuilt with a gabled roof in ornamental carving, and the old doorway has been preserved. In the interior the unsightly western galleries have been removed. The three-light window in the south wall of the chancel has been reconstructed and filled with stained glass by Mr. O'Connor, in memory of Lord Frederic Leveson Gower. The subject is the ascending Saviour in the midst of his disciples. Immediately beneath it is a brass memorial tablet, by Mr. Hardman, of Birmingham, with inscription. The chancel is paved with Minton's encaustic tiles, a present from the manufacturer to the vicar. The communion-table, of carved oak, ornamented, is the gift of Mr. Yates, of Shiffnal, the builder. The open sittings in the chancel, as well as those in the body of the church, are of Christiana fir, stained and varnished. The nave arcade has been pierced by a new arch. The oak roof has been freed from paint and whitewash. The doors are constructed of solid oak, with hinges and decorative scrollwork in iron. The lectern of carved oak was presented by the architect. The apparatus for warmth is that patented by Mr. Haden, of Trowbridge. The tenders sent for the necessary works varied from 1,860*l.* to 1,145*l.*; and the whole amount subscribed towards the restoration was 1,044*l.* 5s. 6d. The stained window, which cost 59*l.* was erected by the unaided contributions of the parishioners. The lancet window, depicting the Good Shepherd, and executed in stained glass by Mr O'Conner, was the gift of Mrs. Ralph, of Hornington Grange, associated with her six sisters, the Misses Iles, of Binbrooke-hill, Lincolnshire. There is still a deficit of 200*l.* The old church accommodated 256 adults, and 120 children: the present provides 530 sittings, 404 free.

Lichfield.—Within these last few weeks workmen have been actively employed in making alterations in Lichfield Cathedral. The principal alteration hitherto effected is the removal of eight walls that filled up eight arches, four on each side of the chancel, at the end nearest the communion-table. The chancel, in consequence, is much lighter: a view of the aisles to the chancel, with the monuments they contain, is also obtained, and the proportions of this part of the structure are brought more fully under the eye. A large window that surmounted the screen separating the nave from the chancel, has also been removed, and it is intended to remove the organ over the screen, which intercepts the view of the roof, from end to end. The walls were erected about fifty years since under the direction of Mr. Wyatt, for warmth; but hot water-pipes are now being laid down. The workmen employed lately discovered, beneath the pavement, a stone coffin, containing a skeleton, the legs of which were covered by a pair of old-fashioned boots: there was no remnant of any other article of apparel, and the boots, except the soles, were much decayed. It is conjectured that the skeleton is that of one of the cavaliers or republicans by whom the cathedral was defended when besieged, during the civil war, by Lord Brooke, or Prince Rupert.

Willenhall.—St. Ann's Episcopal Chapel, just opened, had its origin in a design to raise a school-room, licensed for Divine service. Mr. Henry Jeavons had a strong desire to enlarge the original proposition, by making the structure ecclesiastical in its character and purposes. This gentleman, with subscriptions to no great amount, undertook the whole responsibility of the work, without an architect. The walls are of columnar basalt, obtained from a quarry at Bentley, and the dressings freestone. The edifice is said to be in the Early English style, with porch, nave, chancel, and vestry. Accommodation is provided for 200 worshippers in open sittings, free.

West Derby (Liverpool). — The new parish church of West Derby village has been consecrated. The church is in the Decorated style of fourteenth century, and is cruciform, with a massive tower. Mr. Scott was the architect; Mr. A. Walton acting as his assistant and clerk of works. Mr. Barker, of West Derby, was the builder; and Messrs. Jones and Jump, of Liverpool, executed the joiner's work. The edifice is built of the red sandstone found in the neighbourhood, excepting the interior and ornamental work, which is in white Yorkshire stone. The plan being cruciform, comprises nave, aisles, transepts, north and south chapels, and apsidal chancel. The length of the church is 155 feet, the breadth 60 feet. The tower is 175 feet high. There are seats for 1,200, all plain open benches. The roof is very lofty, and is supported by two rows of pointed arches on massive pillars, slightly ornamented. At each end of the church is an illuminated window. That at the west end is of large size: it has been placed there as a memorial of the late Earl of Sefton, and cost 450*l.*: it was designed and executed by Mr. Wailes, of Newcastle. The leading figures are the four great Prophets, with minor designs, embracing scenes from the Old and New Testaments. The cost of the church is estimated at 12,000*l.* raised by voluntary contributions.

Birkenhead. — The College of St. Aidan, at Claughton Firs, Birkenhead, has been inaugu-

rated by a grand banquet, presided over by the Marquis of Westminster. St. Aidan's College is a theological training-school. The land was purchased from the Birkenhead Commissioners for 9,325*l.* and the building has already had some 12,000*l.* or 14,000*l.* expended upon it. When complete it will form a quadrangle: at present only the principal *façade* and west wing are constructed. The style is the decorated Tudor. The building has three floors above the basement story. There are single residences for seventy-six students in the west wing, besides lavatories, lecture-rooms, and bath-rooms. When the whole of the plan has been completed the college will comprise upwards of 200 residences. The principal lecture-room and dining-hall are at present temporary buildings in rear of the front. To the right of the entrance-hall are the present library and museum of the college. Immediately over the entrance-hall, and occupying the principal portion of the first floor, is the chapel, which will accommodate about 150. The whole of the east end of the front is devoted to the residence of the principal and his family. The architects are Mr. Wyatt, of London, and Mr. Henry Cole, of Birkenhead.

St. Helen's.—A contract has been made by the burial-board with Sir R. Gerard, for land near to Windleshaw Abbey, for a cemetery for the parish, and the board has been authorised to borrow 14,000*l.* to purchase the land and erect the necessary chapels thereon.

Salford.—On Thursday before last the top stone of the spire of the Episcopal Chapel at the Cemetery was set by Mr. J. P. Pritchett, of Darlington, the architect. The spire is 90 feet high, and the spires of the other two chapels will be 80 and 70 feet respectively. The chapels are Episcopal, 36 feet by 20 feet; Protestant, Dissenters, and Roman Catholic, 33 feet by 18 feet each, and will, with the lodge, cost 2,500*l.*

Ennerdale.—The old parish church at Ennerdale, says the *Carlisle Journal*, is to be taken down next year. A new erection in its place will be begun about February, and finished probably about midsummer. The funds are provided by subscription. Mr. C. Eaglesfield is the architect.

Aberlemno (*Brechin*).—The parish church of Aberlemno, says last week's *Montrose Review*, after having undergone extensive repairs and alterations, was opened on Sunday last for public worship. The work is not yet completed. An apparatus for heating it is being erected. The walls have been heightened, Gothic windows inserted, and the roof renewed. The designs and plans were furnished by Mr. Maclaren, of Dundee, architect.

Kildalky (*Meath*).—The consecration of Kildalky Church, county of Meath, took place on 23rd ult. The church has been built by Mr. Sharpe, from the design of Mr. Joseph Welland.

PROVINCIAL NEWS.

Fulbourn.—A glass cylinder, containing one of each of the current coins of the realm, a vellum scroll, with inscription, &c. was lately abstracted from the Cambridgeshire Lunatic Asylum works at Fulbourn, three miles from Cambridge. The stone was laid on the 30th of September, and the thieves, to get possession of the coins, of the value of 2*l.* 1s. 8d. had to remove several layers of bricks, and to lift, by means of leverage, a stone weighing half a ton.

Bristol.—The new West of England Bank, on the Exchange, will be opened, says the local *Times*, for business on the first day of the new year, if not earlier. The paper quoted, in rather a high-flown article on the subject, says, "Marvellous as is its ornamental front, we think the bank interior just as provocative of admiration, with its vestibule or entrance-hall, like a little Temple of the Winds, with circular sides and dome supported on graceful caryatides,—its spacious chambers for directors and its manager's parlour,—apartments fit for financial princes. The wonder of all, however, is the great banking saloon, with its Corinthian pillars and rich roof, as elaborate and gorgeous as moulder and gilder can make it; there being on the ceiling (as some one remarked) a foretaste of the treasures to be stowed away in the cellars. It is a most superb apartment, and, if architectural attraction could reconcile a man to any rate of discount, no customer should ever go away dissatisfied. On the west side of the saloon is a most gorgeous alcove, in which, with rays of a golden glory above his head, the manager sits enthroned, commanding a view of all that is going on in the great banking saloon, while a side door leads him, by a step or two, into that small but awful apartment, destined yet to act like a vapour-bath on many a poor body,—we mean the sweating-room. The subterraneous parts of this pecuniary palace are hardly less interesting than those above. The strength of the underground apartments is very great."

Devonport.—The Keyham tunnel, which is being executed by Mr. Smith, of London, contractor, is now drawing to a close. A passage has been effected between Keyham and the dockyard. The length of the tunnel, says the *Plymouth Times*, is nearly three-quarters of a mile: it passes under Moon-street, Morice Town, continuing its course under the gun-wharf to the dockyard, at a level above the elevation of the highest spring-tides.

Warwick.—The Warwick drainage and waterworks are being proceeded with by Mr. Marriott, the contractor. The tanks in the park and near West-street are finished: pipes are being laid: the filter-beds near Porto-Bello are made, and the engine-house is nearly completed. Foundations have been put in for the water-tower in Market-street.

Stockport.—The corner-stone of the Portwood new bridge over the Goit, leading from Warren-street to Wharf-street, Portwood, has been laid.

Masham.—The inauguration of the Riddell Memorial Mechanics' Institute at Masham took place on Monday before last. The structure is from a design by Messrs. Perkin and Backhouse, of Leeds, architects, and is in the plain Italian style of architecture, presenting three elevations. It consists of a large class-room, fitted up with desks and benches, similar to the National Schools, a reading-room, a library, vestibule and staircase, parlour, kitchen, &c. on the ground floor, and lecture-room 40 feet by 20 feet, and 20 feet high, with ornamental roof and panelled ceiling, a committee-room and ante-room, a room for a museum, &c. on the upper floor. The whole cost has been raised by subscription and bazaar, as a memorial of the late Rev. Thomas Riddell, vicar of the parish.

Dunse.—The new Corn Exchange in New Town-street, Dunse, has been opened. The building has been erected at a cost of 1,100*l.* raised partly by a company of shareholders of 2*l.* 10s. per share, and partly by donations. It has been erected after a design by the late Mr. Cassy, a local architect. The foundation-stone was laid in June, 1855. The exchange is lighted from the roof, which is of stained wood in the interior.

Stow.—A new Town-hall has been erected here, according to the *Border Advertiser*. The ground floor contains, besides kitchen and other conveniences, refreshment-room, and the reading-room and the museum, divided by a sliding partition, and having separate entrances. The hall is 43 feet by 28 feet with open roof of stained wood. It is lighted by four windows, two in each end.

Glasgow.—Messrs. Forgan, Marshall, and Waddell, of this city, have contracted for the Duntreath division of the Loch Katrine Waterworks, at a trifle above 48,500*l.* which, says the local *Gazette*, is below Mr. Bateman's parliamentary estimate. This contract embraces about five miles of country, commencing near the village of Strathblane, and running past the village of Killearn.

Inverness.—The new harbour works at Inverness include the extension of the principal pier 210 feet nearer the town, and the construction of a long embankment from the wooden bridge to the Thornbush Pier. The last of these works has been going on since May 1855, under the superintendence of Mr. Macmillan, who designed the embankment, and Mr. Syme, contractor. The embankment is 1,200 feet long, and from 50 to 150 feet broad. The slope averages about 35 feet in depth, and is formed of masonry, topped with green turf. On the extension of the Old Quay, Mr. Hendry, the contractor, has had a number of men employed all this summer. When completed, the harbour branch of the Inverness and Nairn Railway will be run along the pier. The railway is already within a few yards of the quay.

STAINED GLASS.

Fincham.—Mr. Wilmshurst has just completed and fixed, in the church at Fincham, near Downham, Norfolk, two memorial windows. One represents the Resurrection of our Lord: the other, in memory of John de Fincham (the founder of the church), contains sacred emblems, with inscription and armorial bearings in the tracery, &c. The west window was painted by Mr. Wilmshurst for the same church a short time since, and is filled with figures of the four Evangelists, beneath canopies; various emblems filling the space beneath the figures.

Denton.—A stained glass east window has just been erected in the chancel of Denton church, to the memory of the late Mr. John Lewis Lamotte, brother of the rector. The window consists of three openings, with tracery, and is in the geometrical Decorated style of architecture. In the three principal openings are the figures of St. James, Our Lord, and St. John, on pedestals. Over each figure is a canopy work, the whole being enclosed with a border. Two smaller windows have also been erected north and south of the chancel, representing the Birth and Baptism of Our Lord. These windows are the works of Messrs. C. and A. Gibbs, of London.

Kersal Moor (*Manchester*).—Another painted window has been added to St. Paul's church, Kersal Moor. This church, says the *Manchester Courier*, possesses some of the finest stained glass windows of any ecclesiastical structure in the diocese of Manchester, mostly the gifts of wealthy and benevolent members of the congregation of the rector, the Rev. H. W. McGrath, M.A. The new window is in the south aisle, and is the gift of Mr. John Harding, of Broughton, in memory of his father. It is in the Perpendicular style, and consists of three lights, with trefoil heads, the emblems and tracery being in accordance with the character of the general architecture of the church. The centre light of the window contains the Agnus Dei, and on either side are the emblems of the four evangelists, St. Matthew being typified by an angel bearing a scroll, St. Mark by the lion, St. Luke by the bull, and St. John by the eagle. The borders are composed of oak foliage, and roses, in green, violet, ruby, and blue. The window is the production of Messrs. M. and A. O'Connor, of London.

THE GAS COMPANY OF BUENOS AYRES.

The English newspaper, *British Packet*, published at Buenos Ayres 27th September, 1856, contains a lengthy report from the directors of the Buenos Ayres Gas Company, from which we learn that since May 23rd, 1856, a plentiful supply of excellent gas has been furnished for public use. The average consumption during the month of September, 1856, has been at the rate of 30,000 cubic feet per day: the present gas-making apparatus is sufficient to produce 100,000 cubic feet per day.

In June, 1855, the company's engineer, Mr. Wm. Bragge, concluded the contract with Messrs. Edw. T. Bellhouse and Co. of Manchester, for the buildings, engineer's work, main-laying, and completion of the whole for the sum of 46,955*l.* On the 25th of March, 1856, the city was first publicly lighted with gas; and in the beginning of July the company possessed a complete manufactory, capable of producing and distributing above thirty million cubic feet of gas per annum, with nearly thirty miles of main piping, varying in bore from 12 inches to 3 inches.

The report of the directive commission says,—

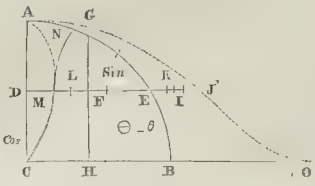
"The contract entered into with Messrs. E. T. Bellhouse and Co. for the erection of the works, has been now completed with very trifling exceptions; and it is an act of justice towards the contractors to record here the due fulfilment of their contract, both as regards the prompt execution of the works and the quality of the materials employed. It is due to their liberality, and the indefatigable activity of our engi-

neer, Mr. William Bragge, appointed superintendent of the works, by mutual consent, that the distribution of gas for public and private consumption was commenced on the 25th of May, and has since continued with uninterrupted regularity."

The gas-making apparatus consists of the following:—Fifty D-shaped retorts, about 8 feet long each, set in beds of five retorts each, the flues descending to an underground main flue; the hydraulic main, 15 inches diameter, with ascension and dip pipes; complete scrubbers and condensers, set perpendicularly; four circular dry lime purifiers, 8 feet diameter, each having five shelves for lime, with a central change valve box, surmounted by a crane swinging round on the centre, so as to lift any of the purifier covers; a large station meter and governor, two single-lift gas-holders, 60 feet diameter and 18 feet deep, on the self-balancing principle; with the necessary valves, connection pipes, &c. The buildings in the establishment are strong and well designed for their purpose, built of the native brick (13 inches by 6 inches by 1½ inch), set in lime mortar. The gasholder tanks are of similar brickwork, but set in cement. The octagonal chimney is built of bricks made in the country, of the English size, 9 inches by 4½ inches by 3 inches. There is an 8-horse steam-engine for pumping, and for turning, boring, grinding, &c. in the workshop; and a complete ironfoundry, with its independent engine, for blowing the cupola, where lamp-posts, brackets, pipes, and fittings, are being cast for the use of the company. Dwellings for the manager, and for the workpeople employed on the works, are being erected.

HOW TO MAKE A FIRE IN A COMMON GRATE WHICH SHALL SAVE HALF THE COAL AND BURN THE SMOKE.

Under the heading as above the *Builder* published, on the 2nd of February in this year, certain rules for arranging the materials in a common fire-grate to accomplish the promise of the heading. As the instructions given have been followed by many, and as the results are reported to be successful (a glow of triumph), it may not be out of place at this time to re-publish the new method of fire-making, with "additions and emendations."



Clean out your grate: cover the bottom with a plate of sheet iron, cut to fit: place your coals in the grate to the level of the underside of the top bar, keeping the larger ones to the front, to prevent waste. Light your fire on the top by means of paper, wood, and coke (the cinders of a previous fire), or any prepared fire-lighting material, and allow it to burn downwards undisturbed. Never poke from beneath; but, if the fire is dull, gently disturb and draw together the upper portion of coal and cinders, allowing the fire to burn gradually downwards.

By this method a pleasant fire is obtained sooner than by lighting from beneath; the smoke is burned; there is neither dirt nor dust underneath the grate, and a warmer fire is obtained with about half the quantity of coals. The plate of sheet-iron is an improvement: but this a correspondent, "E. R." pointed out (p. 150, No. 684). If all the house fires in the metropolis were made and burned on the improved plan, there would be no visible smoke: and think of the saving, by consuming half the weight of coals now used!

There is an old proverb in the West of England, which must now reverse its point. When anything was about to be done stupidly or wrongly, the party concerned was said "to be as bad as the Irishman, who, in laying a fire, put the coals in first, and wood on the top." It has been said the plan is Irish, fires having been lighted from the top in "Old Ireland" "time out of mind." If this is so, Paddy has been right for once. Robert Rawlinson.

Colour in Slating.—A good effect is often the result of accident: being short of green slate, and not wishing to use that horribly cold blue, I intermixed the red Bangor in stripes, allowing the green slate to predominate: the effect is *very* good. The *light* colour should always begin and be deeper, the *dark* end the roof. The course ran 5 green, 3 red; 4 green, 3 red; 4 green, and 3 red.—Somerset.

THE TRISECTRIX AND THE CUBITRIX, TWO NEW MECHANICAL CURVES.

Describe a quadrant A B C. Draw the sine D E; bisect D E in F. Draw the sine G F H.

Make F I = chord E G, E J = 2 E I, E K = ⅓ E J, D L = ⅓ D E, L M = E K, and the chord E N = E M.

Then the point N trisects the arc A E, and M is a point in the trisectrix A M C.

Make the arc A E = three times arc A N, E M = chord E N, D L = ⅓ D E, E K = L M, and E J = 3 times E K.

Then E J is as the cube of E M. and J is a point in the cubitrix A J O.

$$ME = 2\,(\sin.\tfrac{1}{3}\theta),\quad EJ = (2\,(\sin.\tfrac{1}{3}\theta))^3.$$

By the construction—

(1.) $\sin.\frac{1}{3}\theta = \frac{1}{2}\sin. + \frac{1}{2}(((1-\frac{1}{4}\sin.^2)^{\frac{1}{2}} - \cos.)^2 + \frac{1}{4}\sin.^2)^{\frac{1}{2}} - \frac{1}{2}\sin.)$.

(2.) $\cos.\frac{1}{3}\theta = (1-(\sin.\frac{1}{3}\theta)^2)^{\frac{1}{2}}$.

By differentiating (1)—

(3.) $\cos.\frac{1}{3}\theta = \cos. + \left(\frac{-\frac{1}{4}\sin.\cos.}{(1-\frac{1}{4}\sin.^2)^{\frac{1}{2}}} + \sin.\right)((1-\frac{1}{4}\sin.^2)^{\frac{1}{2}} - \cos.) + \frac{1}{4}\,si.\,co.\,((1-\frac{1}{4}\sin.^2)^{\frac{1}{2}} - \cos.)^2 + \frac{1}{4}\sin.^2)^{\frac{1}{2}}$.

$-\frac{1}{2}\cos.$

By putting into these three forms the extreme values of sine and cosine, viz.—sine = 1, cosine = 0, and sine = 0, cosine = 1, it is seen that (2) and (3) are identical, and consequently that (1) is true; otherwise we must suppose that the general formula of differentiation $\frac{dy}{dx} = \frac{df(x)}{dx}$ may be true for the extreme values of x and y, and untrue for the intermediate ones, which is absurd.

The construction was suggested by an approximation published in the *Mechanics' Magazine*. vol. lxiii. p. 564, col. 2. J. P. W.

THE ANCIENT BELL-STEEPLE OF WORCESTER CATHEDRAL.

At the anniversary meeting of the Worcester Diocesan Architectural Society, recently held, Sir T. Winnington read the following paper on the Clochium or Ancient Bell-Steeple of Worcester Cathedral:—

The object of this association has hitherto been to illustrate the architectural remains of edifices that either wholly or partially exist at the present time, to describe them in detail, and reconstruct, as far as conjecture or analogy will permit us, the original design and intention of their founders. I now propose very briefly to call your attention to a building, of which no trace (as far as I am aware) is now existing, but which has been rendered familiar to local antiquaries by the ancient documents that describe it in the fullest detail, and the drawings it is our good fortune to possess of its form and structure. I allude to the clochium or leaden steeple of the Worcester Cathedral, and will for that purpose make use of the elaborate description contained in the "Observations on Worcestershire, by Mr. Nathaniel Tomkins," a manuscript in my possession:—"The leaden spire, anciently called ye Clochium, was the belfry until the year 1374, when the tower of the church was finished. It consisted of an eight-sided base of stonework, of height even with the embattlements of the church, viz. 60 feet. It was placed so near the church that there was only space between for processions. The diameter of the base of stone was 60 feet; the thickness of the walls 10 feet; the spire of lead above the base of stone in height to the weathercock 50 yards, and the entire height with the stonework and spire 70 yards from St. Michael's churchyard. The weathercock was on a level with the neat spire of St. Andrew's Church, in Worcester; but St. Andrew's Church standing upon a little lower ground, its weathercock is from the ground 77 yards, or 231 feet. That which most amazed beholders was the excellency (in this spire) of the contignation of such massive timber, all of which being Irish and unsawed, polished only with the axe, not having one sawed side. 'It was the design,' says the enthusiastic writer, 'of no ordinary Vitruvius: for all dimensions the like is not perhaps in Europe.' The bells were but five, as we perceive by the frame and stocks whereon they hanged, which were left in the place when the bells were gone. They were of equal weight and tone with those at York, viz. 6,600 lbs. the biggest, and unison with an open pipe of 25 inches long, but in the apprehension of some men the double thereof, the greatness of the sound deceiving their judgment in the tune." Mr. Tomkins then proceeds to compare the bells with some that at that period existed in the Palace Yard at Westminster, as well as others in the cathedral churches of Exeter and Lincoln, and makes use of mechanical terms relating to their sound and quality, which, as I do not profess myself competent to explain their meaning, I have purposely omitted. It would, indeed, require a scientific lecture on music fully to comprehend this portion of the manuscript. Mr. Tomkins then goes on to describe the great gatehouse, the lavatory, dormitory, with many other portions of the cathedral and its precincts. From the description I have just quoted it will appear that the clock, or rather bell steeple, was a building of no ordinary importance, both in structure and elevation, the latter exceeding the central tower of the cathedral (from the description, though it hardly appears to do so in the drawings), and rivalling the spire of St. Andrew's; I mean the ancient spire, measuring 231 feet, now replaced by its elegant and taper successor, which exceeds it in height by about 15 feet, but probably far beneath it in architectural beauty. We have reason to believe that this bell steeple was erected by St. Wulstan, who, while prior of the church, before his episcopacy, between A.D. 1052 and 1062, built a tower for the bells, probably the base on which the spire was raised. It survived the removal of the bells, or possibly a portion of them only 273 years; for we learn that in the year 1647 the leaden steeple adjoining St. Michael's Church was pulled down, and the materials sold for 617*l.* 4s. 2d.; the principal part of which was given to repair several churches in the county, damaged in the civil wars. Dodderhill had 80*l.* Castlemorton, 80*l.* and the rest in proportion. In a pen-and-ink drawing of the cathedral, executed somewhere about 1670, in the Dineley MSS. the basement of this tower is represented, in only one story, much less elevated than the battlements of the church as heretofore described, probably the remnant of the destruction in 1647. Fuller, in his "History of Abbeys," has given a rhyming translation of the Latin inscriptions on the bells in this steeple, which is quoted in Green's "History of Worcestershire." The detached belfry, though not a general, has been far from an unusual feature in the ancient cathedral and conventual churches of this realm: the towers of the original Norman churches being for the most part low, and of lantern construction, rendered some other contrivance necessary for the bells. At Chester, parallel with the west front, and a short distance to the north, stands a massive square tower, 120 feet in height, the upper story octagonal, flanked with small turrets. At Salisbury formerly stood a tower, multangular in form, surmounted like that in Worcester by a leaden spire, with walls and buttresses similar to the Chapter-house and cloisters, and a single pillar of Purbeck marble in the centre, supporting the bells and spire with its leaden covering. Abbot Lichfield's tower, at Evesham, built in the latest period of Pointed architecture, stands in a line with the north transept of the destroyed Abbey Church. There is a tradition also of one adjoining Tewkesbury Abbey: other instances probably exist; nor is the detached steeple uncommon in parochial churches: we have numerous examples in England, particularly in the eastern counties, and not unfrequently, but in a ruder form, in the county of Hereford. The round towers of Ireland, with their much disputed origin and

antiquity, invariably attached to religious edifices or their remains, claim some analogy with this subject. Nor must we forget the campanile of the Lombard churches in Italy, with their fine proportion and exquisite details of brick and marble, so well known to all admirers of ecclesiastical architecture, which, too, form some contrast to the single and rude edifices of northern Christianity, one of which we have attempted to describe in this paper.

DOVER.

The extensive works at the Castle, contracted for by Mr. Diggle last year, in repairing old and building new batteries, have just been completed. The excavations for the foundations of the officers' quarters have been finished by Messrs. Lee and Lavers, who have shifted upwards of 100,000 cubic yards of chalk from the inside to the outside of the castle walls. There is an extensive slip of earth and consequent destruction of a retaining wall at the foot of it near this work, and appearances of similar ones around. Mr. Moxon has been declared the successful competitor for the new officers' quarters at about 40,000*l.* some people say, to be erected from the designs of Mr. Salvin, in the mediæval style.

The works going on at the western heights, in raising the barracks, draw to a close: these likewise are being carried out by Mr. Moxon.

The works at the Dover end of the East Kent Railway have been commenced by the sinkage of a shaft for a tunnel under the western heights, which will bring the terminus of the new line right into the middle of the town, and close on the harbour. The Breakwater, a gigantic work, goes on slowly but surely. The sea made fearful havoc in this locality last month, destroying several engine-sheds and part of the up line of the South-Eastern Railway, and doing damage to the sea groins.

TENDERING FOR GLASS.

It is a frequent source of complaint, that glass manufacturers and dealers are often applied to for estimates in language so ambiguous, that no definite foundation can be laid whereon to base their calculations. Architects and builders frame their specifications in this same style, speak of best seconds crown, as if they were thinking of bread, and often specify weights and sizes incompatible with the manufacture. To-day I have to estimate for a large quantity of window glass for a public company. The specification is thus:—"Glass flattened slabs, best thirds, in plates, about 40 inches by 30 inches, ⅛ inch thick." Now, of course, we ask what kind of glass is meant? Why, flattened slabs of course. But flattened slabs are crown, and will not cut a square 40 inches by 30 inches; neither can flattened slabs be made ⅛ inch thick.

Again, presuming flattened sheet is required, what thickness is wanted? Again we have the reply, one-eighth: but if you look on a trade list, which is supplied gratuitously by any respectable glass dealer, no mention is made of one-eighth; but the sheet-glass is distinguished as to thickness, by its weight in ounces, as 15oz. 21oz. 26oz. or 32oz. to the foot super. We now come to the last question—What quality? Why, best thirds, of course—don't you see it written down so? Will you or any one else explain what is meant by *best thirds*? We have best, seconds, thirds, fourths, and horticultural qualities. From these remarks you will see that a plan which is adopted by this company to ensure correctness is, by the ambiguity of the terms employed, calculated to defeat its own object. Suppose I estimate for thirds quality, and my neighbour imagining best thirds means seconds, and estimates so, he, of course, *cæteris paribus*, will lose. Again, if I estimate for 32 oz. as one-eighth, and my neighbour for 26oz. I do not think I should be troubled with a reply to my quotation. In short, if I estimate for twelve and my neighbour for six, no comparison can be fairly and properly instituted. Vitreus.

BAD PLASTER CAST-WORK.

As a remedy against bad plaster work, I beg to suggest a plan which I know to have been adopted by the architect of a princely mansion not far from Buckingham Palace, during the whole of the time it was in progress. On each of his full-size drawings for the plaster ornament was stated "To be thoroughly understood." After being modelled to his satisfaction, it was got into plaster and sent to him for approval: if satisfied, he sent it as a specimen to his clerk of the works at the building, for him to keep in his possession, in order that the whole of the work, when fixed, should be equal to the specimen he had, which he did not fail to carry into effect all through the work. It is well known that, with most of the builders, quantity is everything, and quality not much thought of. If a man does his work too well he is discharged, perhaps by a foreman who knows but little about what he is talking of, and is only noted for his ignorance and abuse, and prefers having an Irish hawk-boy or labourer to a man who does his work as it ought to be. Surely, if architects were more generally to interfere, such a state of things would not long exist. By so doing, they would be conferring a benefit which it would be impossible to appreciate too highly. If plaster cast-work is done as it ought to be, it will equal, if not excel any other description of ornament.

A Practical Man.

RECENT PATENTS CONNECTED WITH THE BUILDING TRADES.*

Taylor, J.—*An Improvement in Constructing and Facing Walls.* Patent dated from Feb. 14, 1856. No. 383.—The facing material is made into slabs, each with a flange or projecting rib at the back (which is not new). A wall is constructed of brick-work, concrete, and the facing slabs or tiles. In constructing a wall only the brickwork is run up, leaving headers projecting at intervals (on the side to be faced) which support the flanges or ribs of the facing slabs: concrete is poured in to fill up the space between the facing slabs and the brickwork, the concrete resting on the flanges, and aiding in bonding the brickwork with the slabs.

Schwartzkopff, L.—*Improvements in Apparatus for Raising Mud and Soil from the Bottoms of Rivers and other Waters.* Dated Feb. 9, 1856. No. 350.—A centrifugal or rotary pump is fixed on board a vessel, with a steam-engine for working the same. From the pump descends a suction-pipe arranged so as to admit of its lower end being moved to and fro. The lower end is fitted with an instrument which, on being moved with the pipe, stirs the soil at the bottom of the water, and soil together with some water is continually raised by the pump.

Chance, J. T.—*Improvements in Furnaces used for Flattening Glass.* Dated Feb. 1, 1856. No. 283.—In this invention the beds on which the glass is flattened and cooled are placed each on a frame consisting of two parallel bars or rails connected together. These bars or rails rest on and are carried by the upper surfaces of rollers, which move on two parallel fixed rails. The rollers for each bed are kept correctly in position in respect to each other by a frame and axles, and they are kept correctly on the fixed rails on which they move by flanches or grooves to the peripheries of the rollers, or to the rails on which they move.

Howard, J.—*Improved Apparatus for making Moulds for Castings.* Dated Feb. 5, 1856. No. 313. *Claims.*—1. The use of a sliding-rod or mandril, or its equivalent, for carrying up the pattern through the moulding-plate into the mould box or flask, and withdrawing it therefrom when the operation of moulding has been effected. 2. The use of moulding-plates, constructed as described, for sustaining the moulded sand, and allowing of the withdrawal through them of patterns of which the wheel and plough-frame are the type. 3. A general arrangement of apparatus described.

Cowper, C.—*Certain Improvements in Impregnating Wood with Preservative and Colouring Materials, and in Apparatus for that purpose.* (A communication.) Dated Feb. 14, 1856. No. 388.—This invention comprises—1. Completely enclosing the wood in a vessel into which the liquid is introduced, and connecting one end of the piece of wood by means of a plate with the exterior of the vessel, and causing the liquid to be pressed upon with a greater pressure than that to which the aforesaid end of the piece of wood is exposed; by which means the liquid is caused to percolate through the wood, and at the same time to press the end of the piece of wood against the aforesaid plate. 2. Completely enclosing it in a close vessel, and connecting a plate to one end of the piece of wood, as described, and then passing the liquid through the wood in both directions alternately. 3. Certain apparatus for carrying the invention into effect.

Muratori, C.—*Improvements in the Waterproofing of Hangings or Ornamenting Stuffs.* Dated Feb. 11, 1856. No. 352.—This invention consists in coating cloths, &c. for making them waterproof, with a composition which prevents dampness penetrating them, and, being of a drying nature, is adapted to the ornamenting of them by printing, painting, &c. so as to render them applicable to the decoration of apartments. The composition is composed as follows: 100 parts in weight of Palermo white, ground or triturated either with white or drying oil purified, and five parts of litharge.

Bergner, T.—*Embossing Veneers, so as to represent Carvings in Wood.* (A communication.) Dated Feb. 5, 1856. No. 311.—This invention consists in placing veneers between dies, one of which (the matrix) has its surface formed to the desired pattern, and the other (or plate die) having cavities corresponding to the projections of the matrix. One or both dies are moderately heated, and the veneers between them submitted to a considerable pressure. The hollows on the back of the veneer are afterwards filled up with any plastic substance.

Thomas, G. C.—*An Improved Method of Hardening and Tempering Steel.* (A communication.) Dated Feb. 5, 1856. No. 307.—This invention consists in hardening, tempering, and restoring steel, by applying to it, when heated, a finely pulverised compound of chloride of sodium, bichromate of potash, and prussiate of potash. For ordinary purposes the proportions should be 21 parts of the chloride of sodium, 8 of bichromate of potash, and 8 of prussiate of potash.

* From the *Mechanics' Magazine* and other sources.

Notices of Books.

Table of Quarter-Squares of all Integer Numbers up to 100,000. By Samuel Linn Laundy, A.I.A. Layton, 150, Fleet-street. 1856.

This laborious table appears to have been carefully calculated, checked, and printed. The author states that it was entirely calculated in duplicate, the types set up from one of the workings, and the proofs read from the duplicate, and after correction stereotyped and again read by duplicate, the printing being ultimately taken from the corrected stereotypes. The table comprises about 200 pages in imperial octavo, and by it the product of two factors may be found by the aid of addition and subtraction alone for all integer numbers up to 100,000. Its utility to the architect and civil engineer in estimating superficial and cubical quantities, and to the surveyor in the admeasurement of land, we need not advert to. The author is not the first who has computed a Table of Quarter-Squares, but the great extension given to the table in the present volume constitutes a decided advantage, giving it a power ten times greater than Voisin's, and five times greater than Merpaut's, and supplying the means of operating directly upon all factors of five digits.

The Treasury of Geography: designed and commenced by the late Samuel Maunder, and continued and completed by William Hughes, F.R.G.S. London: Longman and Co. 1856.

This new volume, of upwards of 900 pages of close but clear print, forms a most comprehensive and inestimable treasury of geographical information, physical, historical, descriptive, and political, comprising a succinct account of every country in the world. It is preceded by an introductory outline of the history of geography, a familiar inquiry into the varieties of race and language exhibited by different nations, and a view of the relations of geography to astronomy and the physical sciences. The late professor of geography in the College for Civil Engineers, Mr. Hughes, appears to have done the late Mr. Maunder's idea of the work great justice, and he has succeeded in embuing it with that popular and peculiar interest for which his predecessor in such tasks has become so well known. The mass of miscellaneous knowledge and information brought to bear upon such a work, and here condensed in a most readable and entertaining form, must have been immense, and may well have constituted the favourite study for many years of its able continuer and completer, Mr. Hughes. The volume is, besides, well illustrated with maps and engravings.

Miscellanea.

Monument to the late Marquis of Londonderry.—A meeting of the Londonderry Memorial Committee was held on Friday week, in Belfast, to consider the tenders for the execution of the work. It was found that the plan of Mr. Boyd, of Belfast, which received the first prize, and that of Mr. Barr, of Newry, which obtained the second, could not be carried out. The committee adopted the tender of Mr. Lanyon, and entrusted the execution of it to Mr. Hugh Dixon, of Newtownards, who engages to complete it at 2,000*l.* A building committee was then appointed to arrange and superintend the work.

THE NORWICH ARCHÆOLOGICAL SOCIETY.—The quarterly meeting of this society was held on Thursday in last week, at the Guildhall, Norwich. A paper was read by the Rev. J. Gunn, on the derivation of the names of parishes, &c. in Norfolk. Mr. Harrod exhibited a sketch of a discovery of a perforated buttress that had been recently made at the east end of the Dutch Church. The president, Sir John Boileau, introduced the subject of the "Manchester Art Exhibition." If any of the members, he said, knew of any old rood-screens or altar-pieces which were available for the exhibition, they would be doing good service to the effort which was about to be made, by sending information to Mr. Scharfe. Mr. Harrod trusted that no existing rood-screens would be taken to pieces for that purpose, a sentiment in the propriety of which we entirely concur. There must be plenty of detached fragments in the county, he remarked, amply sufficient for the object of the exhibition. The president thought it would be wrong to take down what were up in their proper places, but where they were used for pew-backs, or in similar positions, there could be no harm done.

CAMBRIDGE ARCHITECTURAL SOCIETY.—The first meeting of the above society for the term was held on Wednesday, October 29th. In the absence of the president, the chair was taken by the Rev. W. M. Campion, of Queen's College. The secretary read a paper on the Church of the Holy Spirit, at Wisby, in Gottland, which he had visited during the long vacation, prefaced by a sketch of the history of the island. The paper was illustrated by a series of lithographs, drawn by a Danish architect. The church is of a peculiar construction, being an octagon, of two stories, with an octagonal aperture in the roof of the lower church, opening to that above. Its date is about 1200 A.D. The Rev. G. Williams, of King's College, then gave a short account of the progress of Church Restoration in Germany, particularly with reference to the Cathedral of Cologne, and the Church of St. Gereon, in the same city.

KILKENNY ARCHÆOLOGICAL SOCIETY.—The November meeting of this ever-increasing association was held at Kilkenny on Wednesday in last week, when fifteen new members were elected and various presentations made and communications of interest received or read. Amongst the latter was one on "Ardmore Round Tower, county of Waterford," by Mr. John Windele, of Cork; and others on the Woods and Fastnesses and on the Scandinavians in ancient Leinster, by a member of the society.

PROPOSED NEW FOOT BRIDGE OVER THE THAMES AT RICHMOND.—The executive committee of the Conservative Land Society have taken measures for the construction of a new foot-bridge across the Thames, as an appendage to the present railway-bridge, and a direct communication between Richmond, Isleworth, and the society's property at St. Margaret's. Mr. George Morgan, the architect and surveyor to the society, has prepared a plan, with access at the Middlesex and Surrey ends by light spiral staircases, without injuring the design of Mr. Pennethorne. The project has received the sanction of the South-Western Railway Company, and of the corporation of London as conservators of the Thames. It now requires the assent of the Woods and Forests, inasmuch as the spiral staircase on the Surrey side would touch the property of the Crown.

IN LEICESTER-SQUARE, an example of work in the Early Decorated style, is approaching completion. It forms an extension of Messrs. Seal and Co.'s bank. The front is of Anston stone, with Purbeck marble shafts to the jambs of the openings and the angles. The internal mahogany fitting, and likewise the stone and wood carving, are too highly finished. The architect is Mr. John Billing; the builder, Mr. Thomas, of St. John's-wood.

THE CHARTERED GAS COMPANY.—At the half-yearly meeting of this company, Mr. Benjamin Hawes, governor, in the chair, the report stated that the balance of profit for the half-year was 22,052*l.* 10s. 9d. against 20,419*l.* 14s. 3d. for the corresponding period of last year, enabling the directors to recommend a dividend at the rate of 7*l.* per cent. per annum, free of income-tax. The report was unanimously adopted, and the dividend declared.

"STUDENTS OF THE ACADEMY."—Sir,—Can you inform me, through the medium of your paper, the requirements that are necessary to become a student of the Royal Academy? I have inquired at the Academy, and the porter could not inform me.

AN ARCHITECTURAL PUPIL.

*** An architectural design and drawing from plaster must be first submitted to the keeper, together with a letter from some person of repute, giving assurance of the moral character of the applicant. If the drawings are approved, the candidate is required to make a design and a freehand drawing of ornament within the walls of the Academy, from which the Council decide on his application for admission.

THE IRON TRADE.—This trade is by no means in a promising or active state at present. In the South Staffordshire and East Worcestershire districts some ironmasters, who can do so, have resolved to blow out furnaces and reduce their make, and the question of an acknowledged reduction of price has even been under consideration. The trade is equally dull at Liverpool, where Welsh and Staffordshire makers are said to have already conceded reductions ranging down to 20s. per ton in some brands of the latter make of iron. The Scottish pig-iron market is in upward movement, and not so slack.—Mr. Bessemer is already dragged into Chancery with his patent,—not by his best known rival Mr. Martien, but by Mr. Birch, manager of the Bowling Ironworks, who maintains that an invention of his, already patented and in use for eighteen months, is identical with that of Mr. Bessemer. This process, which is thus alleged to have stood the test of eighteen months' practice, is described as the conversion of pig into malleable iron by a single process, so that this grand impracticability must be supposed to have been actually in every-day progress, while clever fellows were proving its impossibility. We know nothing personally, however, of the merits of Mr. Birch's process. The patent of Capt. Uchatius, we hear, has passed into the hands of the Ebbw Vale Iron Company, who must have satisfied themselves of its importance and utility. The Uchatius steel is said to have been found to be an excellent material for rails.—The iron trade in France appears to be growing in importance. Both home production and importations have considerably increased of late.

INAUGURATION OF THE MANCHESTER MECHANICS' INSTITUTE BUILDING.—Lord Palmerston favoured with his presence a meeting of the members and friends of the Manchester Mechanics' Institute on Thursday in last week, for the purpose of inaugurating their new building; and the reception with which he was greeted by the 3,000 or 4,000 persons assembled was of the most enthusiastic and flattering character. Mr. Oliver Heywood, the president of the Mechanics' Institute, occupied the chair; and the Premier was accompanied to the platform by Lady Palmerston, the Earl of Wilton, Sir Benjamin Heywood, the Mayor of Manchester, the Mayor of Salford, Mr. Brotherton, M.P. the Dean of Manchester, and other gentlemen of local influence and position. Lord Palmerston addressed the meeting at some length, in a style suited to the occasion; and took the opportunity of highly complimenting the Institute on the magnificence of their new building. The objects and purposes to which it is to be devoted naturally led his lordship to expatiate at some length on knowledge and instruction. The first object of instruction (he remarked) ought to be that which we have been told is the meaning of education—to teach a man how to live; and, to teach a man how to live, his attention ought first to be directed to that pursuit to which he means to devote himself through life. There, indeed, he should drink deeply, and there he should endeavour to perfect his knowledge; but ought he on that account not endeavour to enlarge his mind, to extend his views, and obtain information on other matters not connected with the business of his profession? But we are told you will make him a mere smatterer in knowledge. Better be a smatterer in knowledge than ignorant and uninstructed. There are many lines of information which it is most essential for a working man to pursue, but from which, were it not for institutions such as this, he would be hopelessly excluded.

MEAKIN'S DOMESTIC FIRE-ESCAPE.—In Bridge-street, Blackfriars, several experimental trials have been made with a new fire-escape, invented by Mr. Meakin, of Baker-street. The apparatus was fixed to the centre window of the third floor, 40 feet in height. By pulling a handle connected with a continuous wire, an alarm-bell is set in motion, with a powerful ring, sufficient to awaken the inmates and the immediate neighbourhood. The same act frees two coils of strong galvanised wire rope, which, in their descent, uncoil, and disclose two metal handles. These secure communication with the street, when a telescopic basket may be immediately attached and run up to the top windows.

APPROPRIATION OF SEWAGE.—I beg leave, in addition to the suggestion of "O. P" as to the sewage question, to hint that the question,—which is the best way of employing sewage manure, and, in particular, which is preferable, solid or liquid manure, should be referred to some of our leading agriculturists. Can any manure be deodorised without losing a great deal of its agricultural value, and by what process? How far will the commercial value of sewage manure compensate the trouble and expense of carriage to a certain distance beyond the precincts of the town? In what proportion is sewage manure to be distributed in the neighbouring districts; or in other terms, in what districts will it be specially useful? These suggestions have been neglected as yet, I believe.

W. O'BRIEN.

CORN EXCHANGE, DEVIZES.—Now that the tenders are opened, and the very unsatisfactory fact forced on the committee, that Mr. Hill's plan cannot be done for his estimate, and some 400*l.* beyond it, we look to you as the defender of those that are shabbily treated, to publicly say a few words on the matter. Why did the committee resolve to adopt Mr. Hill's plan in preference to that by Mr. Phipps, which had met with their approbation, at the first two or three meetings? It is asserted that it was not his former plan, modified or amended, that was produced, but an entire new design, far more elaborate than his first, and having in it several fresh forms of arrangement. Mr. Hill almost guaranteed his design at 1,500*l.* The committee have borrowed money from the corporation already, and now talk of endeavouring to collect 400*l.* more, which seems extremely unfair to all the competitors.—LOOKER-ON.

INSTITUTION OF CIVIL ENGINEERS.—On the 11th inst. the session was commenced, Mr. Robert Stephenson, M.P. president, in the chair, by the reading of a paper by Mr. D. K. Clark, "On the Improvement of Railway Locomotive Stock," which had been read in abstract at the last meeting in May before the recess, and had been subsequently printed and circulated amongst the members. The discussion was opened, and it was announced that it would be continued throughout the whole of the next meeting (the 18th).

THE ART TREASURES BUILDING AT MANCHESTER.—Another of the men, Bernard Farley, having died from the late accident by the fall of part of the front of the Art Treasures building on the 31st ult. an inquest was held before Mr. Herford, the borough coroner, to inquire into the circumstances. After hearing the evidence of Mr. Crowther, architect, and that of Mr. Foster, an extensive builder, the jury found a verdict of "Accidental death;" but expressed an opinion that the arch was too light in construction, and that the accident might not have happened if due care had been taken in staying the work while in progress. In the course of the inquiry, Mr. Ashton, a member of the executive committee, who, with Mr. Edmund Potter, another member, was in attendance, said that the evidence just given by the architect agreed on the whole with the conclusion to which the committee had come after an investigation made for their own satisfaction, but he wished to state that, on the ground simply of the limited time allowed for rebuilding the arch, and the state of the weather not admitting of so much brickwork being done over again with certainty, the committee had resolved to pull down the other two arches, and to erect three of iron in their places. This would also meet the views of any one who might suppose that there was possibly an instability about the brickwork, which the executive committee did not believe was the case. He said the resolution to erect the façade of iron and glass had been carried in the committee before Farley's death, and the whole building would now, therefore, be of iron, placing the security of the whole beyond doubt.

COMPLETION OF THE TYNEMOUTH SEWERAGE WORKS.—From a report made by the local Public Health Act committee to the town council of Tynemouth, it appears that "while the extent of the works actually executed considerably exceeds the original estimate, the total cost, 12,500*l.* including materials still on hand, falls short of the estimated cost of the whole works, as stated in Mr. Rawlinson's report to the council, dated October, 1854." The council are therefore, as might be expected, highly satisfied with the result; and, while confirming the report, have voted their cordial thanks to Mr. Rawlinson "for his comprehensive report on the completion of the main sewerage works of the district, and the ability shown by him in his plan and estimate, and also for the attention paid by him and his assistants, Mr. M'Kie and Mr. Lawson, in the execution of the works." The council at the same time voted their "best thanks to Mr. Hugh M'Kie, for the attention and ability shown by him in the discharge of his duties as resident engineer, in superintending and directing the execution of the main sewerage works of the district. Also that a bonus of 100*l.* be given to Messrs. Travis and White in substitution of all amounts claimed by them for extras of their contract for the main sewerage works, and in consideration of their having completed the works within the time contracted for." The report of Mr. Rawlinson was also ordered to be printed.

"ADDITIONS, ALTERATIONS, AND REPAIRS."—Will you explain to your readers and the public generally, that although notice is not necessary to be given in case of "a necessary repair not affecting the construction" of a building, in the case of a "repair affecting the construction" of any building, such notice is necessary. Many very vague ideas are created by the word repair: in some cases, the rebuilding almost *in toto* is called a repair.

A DISTRICT SURVEYOR.

MANUFACTURES ABROAD.—In your impression of the 8th inst. I observe a notice of a lecture delivered by me a few days ago at Coventry. In one of the sentences a slight error occurs, which I trust you will allow me to correct. I am reported to have said, "that I came from Leeds, and that much of the cloth sold in that neighbourhood as being manufactured there was in reality made in Austria, and it was only fifteen years since that trade had been introduced into Austria." What I did say was, "that much of the cloth sold as coming from that neighbourhood, and as being manufactured there, was in reality made in Austria and other parts of Germany. Such a trade, fifteen years ago, would have been impossible." In making these remarks, I was alluding to the lessons to be learnt from a comparison of the goods sent from the same localities, as displayed in the Great Exhibition of 1851, and then in that of Paris in 1855. I was endeavouring to show that the rapid improvement which was taking place in certain manufactures on the continent was mainly to be attributed to the practical character of the system of education adopted in their schools. Permit me to thank you for having noticed my poor efforts in the cause of artizan education. I learnt the rudiments of science at the *carpenter's bench*, and I sincerely hope the day will come when SCIENCE will be substituted for rule of thumb in every branch of industry throughout our land.—H. GORE.

THE "FLAT PRESSURE PROCESS" OF STEREOTYPING.—Mr. James Hogg, of Edinburgh, the publisher, has patented a new process intended to supersede the stucco and the paper process of stereotyping, by means of a composition of various ingredients in a finely pulverized state, and forming a substance of the consistency of putty, which, by gentle pressure, after smoothing the surface, takes an accurate impression of the types, and is dried by slight heat on hot plates partly while still in contact with the types. A saving of 50 per cent. in the waste of types is thus, it is said, effected, and the stereotyping metal can be safely heated to a proper pitch so as to ensure a sound article, while the matrices themselves can be preserved as readily as can stereotyped plates at present.

BATHS AND WASHHOUSES.—It is stated that the aggregate receipts at thirteen establishments in the metropolis, from January to December, 1855, inclusive, amount to 24,526*l.* 7s. 2d. In corresponding period of 1848 (two establishments) were received 2,806*l.* 5s. 1d. showing an increase, in 1855, over the corresponding period of 1848, of 21,630*l.* 2s. 1d.

ALUMINIUM.—This light and elegant metal begins, it appears, to come into more general use, at least in France. The eagles which surmount the colours of the army, hitherto made of copper gilt by galvanism, are now made in aluminium, thus lightening the weight of the flag by nearly 2¾ lbs. Aluminium is more sonorous than bronze, and is consequently brought into use for musical instruments. Spoons and forks, drinking-cups, &c. have also been formed of it. The weight of the new metal is about one-fourth that of silver. Fine silver being worth 225f. the killogramme and aluminium 300f. a piece of the latter equal in size to a kilogramme of silver will only be worth 75f. instead of 225f. Thus an article which, in silver, would cost 50f. would be only 16f. in aluminium.

THE TEMPLE OF MOYNESS AGAIN.—We deeply regret, says the *Forres Gazette*, to be informed that some weeks since a party, among whom were the lord of the manor, the Earl of Cawdor, and Mr. Stuart, of the Archæological Society of Edinburgh, visited the site of the dilapidated temple, and caused several excavations to be made in the ground: they were rewarded by finding an urn in the centre of the displaced causeway; but the trenched up ground is left open, rendering the destruction now as complete as can well be imagined. Hundreds of travellers, it adds, have visited the Moyness Temple since our first notice of it. Hundreds more will regret to find its rocking-stone split into fragments; the remaining boulders overturned; the centre causeway torn up, and the site seamed with the unmannerly burrowing of barbarous relic-hunters.

ARCHITECTURAL LIBRARIES.—It has struck me that the student of architecture is under one disadvantage peculiarly his own. To become a true architect a man must read. Now, books on architecture are not only so expensive as to be beyond the reach of most young men, but, from their peculiar character, being uninteresting to the general reader, are seldom to be met with in our public libraries, and thus the young architect is deprived of his necessary food. I have thought that this evil might be remedied by the formation of "Architectural Libraries:" a small annual subscription from the various architects and their clerks, together with the loan or gift of books not in present use by their owners, would soon accumulate a very useful fund of knowledge, which, under proper regulations, might be of service to a large number.

LECTOR.

STEAM PILE-DRIVING MACHINERY.—Mr. Robert Morrison, of Newcastle-upon-Tyne, has patented a machine or apparatus for driving piles by the direct action of steam, by which two or more rows of piles may be driven simultaneously without the necessity for any lateral or transverse movement being imparted to the pile-driving mechanism, and consequently the expense of driving temporary piles and erecting platforms for the machine to traverse laterally upon from one row of piles to another is obviated. The *Mechanics' Magazine* says,—According to this invention one, two, or more steam cylinders and driving-rams are employed, according to the number of piles to be driven at one time, the distance between such cylinders and rams corresponding to the width between the centres of the rows of piles. As fast as each pile in a row is driven the machine is traversed forward between the rows to the next piles, and so on, until the whole of the piles in each row are driven. The driving-rams are made solid, and the pistons are forged or cast in one piece therewith. A stuffing-box is fitted on to each end of the cylinders, and the driving-rams work through both the stuffing-boxes, which thus serve as guides without the necessity for any other means of steadying them during working. The small steam-engine which it is proposed to employ for raising the cylinders after they have done their work, and hoisting fresh piles to deposit under the rams, is an inverted trunk-engine, the lower end of the trunk being flattened to such an extent as will balance the weight of the piston trunks and connecting rod.

BUBBLE "ASSURANCE" COMPANIES.—Under the title "J. W. Howell's Bubble of the 'General Industry Life and Fire Assurance and Sick Fund Friendly Society' burst, by George Cruikshank," this gentleman has published a brief tract, in which, in his usual trenchant way, he demolishes one of those numerous bubbles which have of late been blown by needy, speculating, and but too often positively dishonest characters. In the present instance, Mr. Cruikshank was himself *hooked* in the first place, *pro bono publico*; but the clever "projector" found, at length, that he had caught a tartar and not a gudgeon, and the result is indicated in the title of the tract. Mr. Cruikshank pledges himself to endeavour, next session of Parliament, to get an Act passed making it a criminal offence to use names without consent in prospectuses of new companies. On the introduction of the Bill for this very desirable Act, the gentleman whose manœuvres shall have more especially led to its preparation, *may* have an opportunity of justifying himself in Parliament (or else not), since it appears that, being anxious to have more than one string to his bow,—that is his fishing-rod,—he was lately, at one and the same moment, a candidate for the borough of Sligo on the one hand, and for the somewhat less ineligible office of "Inspector of Nuisances" to a metropolitan parish, at 30s. a week, on the other; so that should he succeed in obtaining a seat in Parliament by next session, he may have it in his power either to forward Mr. Cruikshank's objects, or to frustrate them, as may seem meet to the hon. member for Sly-go, as Mr. C. seems to be naturally inclined to call him.

INSURE THE BRIDGES.—What may appear to be impossibilities must not always be taken as such. About forty years ago I was in my apprenticeship, and was not then a great lover of labour. My foreman used to tell me if I did not alter I should never set the Thames on fire. I have not altered in this respect; but I still expect, through the drowsiness of the Metropolitan Board of No Works, without any great effort of labour, to set the Thames on fire. Very little water remains now in it, and the various gases and foul filth will soon get rid of the little remaining water, and then blazes will play most beautifully along it.—S. P. X.

[ADVERTISEMENT.]

27 and 28, Bishopsgate-street, Aug. 1st, 1856.

GENTLEMEN,—After twelve years' experience of your Patent Iron Revolving Shutters, I have much pleasure in testifying to their great superiority over all others; and if I were to put in a new front to-morrow, I should most decidedly give them the preference.

I am, Gentlemen, yours, &c.
ROBERT ALEX. ROONEY.

Messrs. Clark and Co. 15, Gate-street, Lincoln's-inn-fields, Engineers.

TO CORRESPONDENTS.

"*British Vulcanite*"—Our correspondent, "C's." endeavours to convert a waste material to a useful purpose are meritorious, but he somewhat misapprehends our object in pointing attention to the limited resources of nature for the production of vulcanite, as we have occasionally done, and hence to the desirability of extending these limits by the artificial production of caoutchouc itself, by a transformation of bituminous or other substances which, chemists know, have been found to be capable of producing a tough gum, in certain circumstances, very like caoutchouc, and probably a special experimental inquiry might lead some talented chemist to the discovery of a substance not only like but in all respects *identical* with india-rubber, and cheaply producible from an abundant or inexhaustible source.

(the names of glass painters most employed are constantly appearing in our pages).—"J. B."—"Mr. M'L."—"J. D."—"Mr. Powell" (letter having appeared elsewhere, it is unnecessary for us to insert it).—"An Unemployed G E."

"*Books and Addresses.*"—We are forced to decline pointing out books or finding addresses.

ADVERTISEMENTS.

PARTNERSHIP.—A gentleman of long standing in the profession, having completed foreign engagements, is desirous of PURCHASING a SHARE of a well-established BUSINESS, either in London or the provinces.—Address, L. P. care of the Housekeeper, 4, Lothbury, City.

TO BUILDERS' CLERKS

A CLERK is REQUIRED in the OFFICE of a LONDON BUILDER. He must have considerable experience in making up accounts, taking out quantities, and measuring extra works.—Address, C. J. Office of "The Builder."

TO SURVEYORS AND BUILDERS' CLERKS.

A JUNIOR CLERK is WANTED by a Builder in London. He must be a good and expeditious writer, and accustomed to accounts.—Address, stating full particulars, age, and salary required, to J. M. Office of "The Builder."

TO PARENTS AND GUARDIANS.

A BUILDER and HOUSE AGENT, has a VACANCY for a respectable YOUTH, as IN-DOOR APPRENTICE, where he will be treated as one of the family. Apply to J. J. C. 8, Great Cumberland-street, Marble-arch.

TO WORKING GAS-FITTERS, MECHANICS, and SMITHS.—The Malvern Improvement Commissioners require a FOREMAN, to reside on their Gas-works, rent free. He must be a mechanic, competent to manage the works, to repair the gas and water sluice cocks and hydrants, a fair smith, able to repair the working tools, and to lay and make all repairs to the gas and water services and mains. He must be able to read and write, as he will have to keep the time sheets. All applications to be made, by letter, by the 29th NOVEMBER inst. stating wages expected, and give references as to ability and honesty, addressed to JOHN SKEY, Esq. Clerk to the Town Commissioners, Great Malvern, Worcestershire.

WANTED, an active, steady, practical MAN, as FOREMAN in an Engineer's and Founder's Establishment. He must be a good general mechanic; have a thorough knowledge of smith's and founders' work, and be able to make working drawings, take out quantities, &c.—Apply to BUNNETT and CO. Engineers, Deptford, Kent.

MARBLE WORKERS.

WANTED, a steady, energetic MAN, well acquainted with sanding and polishing marble work for making chimney-pieces.—Apply, by letter, to T. C. Office of "The Builder."

TO ARCHITECTS' ASSISTANTS.

WANTED, by a London Architect, a Person thoroughly competent to undertake CHARGE of an OFFICE. Must be a neat and thoroughly practised draughtsman, with a good knowledge of making out specifications, &c. &c. State the amount of salary required, and address, post-paid, to E. W. W. Post office Tottenham-place, Tottenham-square.

WANTED, an ASSISTANT, by a Land-agent, Surveyor, and Auctioneer, practising in the country, who must be experienced in the general routine of the business, and a fair draught-man. Security for 200*l.* will be required.—Address, X. Y. Z. Post-office, Watford, Herts. fully describing qualifications, and stating age and salary required.

WANTED, a Person to Manage a Private GAS WORKS. He must be a good smith, as he will be required to do what smithwork may be necessary on the premises. Wages 30s. per week. Good references required, both for character and proficiency.—Address, by letter only, to G. W. Messrs. Smith and Elders, Booksellers, Dorchill.

TO BUILDERS.

WANTED, by a Practical Man, aged 36, a SITUATION as FOREMAN, either in town or country. Good reference can be given where last employed.—Address, A. B. 41, Arlington-street, New North road.

TO BUILDERS, PAINTERS, AND PAPERHANGERS.

WANTED, by a Young Man, a SITUATION as PAINTER, GLAZIER, and PAPERHANGER. Can do writing or graining. Is a handy man generally. Wages, 18*s.* per week. This is worthy of attention.—Address, A. B. 8, Anne-street, Pentonville hill.

TO CIVIL ENGINEERS AND SURVEYORS.

WANTED, by a Young Man, an ENGAGEMENT as DRAUGHTSMAN. He has been employed on extensive town surveys; is a good plotter, and understands surveying and the use of the theodolite. For testimonials, &c. apply to F. F. Mr. Coope's, Queen-street, West Bromwich, Staffordshire.

TO BUILDERS

WANTED, a SITUATION, by a Young Man who can make fair and working drawings and specifications, take out quantities, &c. He is a good builder's accountant, and can superintend works. Good references. Salary very moderate.—Address, A. B. 66, Bemerton-street, Caledonian-road.

WANTED, a SITUATION as ASSISTANT in an ARCHITECT'S OFFICE, by one who has been articled to an eminent surveyor, and can give satisfactory testimonials. Salary moderate.—Address, E. V. City News-rooms, 54, Cheapside.

TO BUILDERS AND OTHERS.

WANTED, by a Young Man, aged 20, a SITUATION as CLERK in a BUILDER'S OFFICE; he can write a good hand, copy drawings, and is willing to make himself generally useful. Three years good character from last employer. No objection to the country.—Address, 108, Post-office, Lisle place, Eaton-square, London.

TO BUILDERS.

WANTED, to ARTICLE a YOUTH to the BRICKLAYING for THREE YEARS. To finish learning his trade. A small premium will be given.—Address, Mr. KELSEY, 20, Goodge-street, Tottenham-court-road.

TO MASTER PLUMBERS AND BUILDERS

WANTED, by a Young Man, aged 26, EMPLOYMENT as PLUMBER'S LABOURER.—Address, D. P. 16, Little Bath-street, Leather-lane, Holborn.

TO CONTRACTORS, ARCHITECTS, AND BUILDING SURVEYORS.

WANTED, by a Young Architect, who has acted three years as Clerk of Works, OUT-DOOR EMPLOYMENT in superintending works, measuring, or in any other capacity affording a good opportunity for further improvement. Has a good practical knowledge of building operations, and will be well recommended by present employer. Salary, 35s. per week.—Address A. B. 231, Oxford road, Manchester.

WANTED, by the Advertiser, a SITUATION as CLERK in a Timber Merchant's Office, or Salesman in a Retail Timber and Deal-yard. Writes a good hand, and is quick at accounts.—Address, G. H. 63, Lucas-street, Commercial-road East.

TO CARPENTERS AND BUILDERS.

WANTED, by a Young Man who has just completed his apprenticeship, an ENGAGEMENT as an IMPROVER. Has been accustomed to hence-work. Wages not so much an object as a good shop. No objection to the country.—Address, J. T. No. 3, New Kent-road.

TO SAW MILL PROPRIETORS

WANTED, EMPLOYMENT, as SECOND HAND at MOULDING or PLANING MACHINE by a steady industrious Young Man, who can make himself generally useful in a Mill.—Apply by letter, pre-paid, to Y. Z. 62 Richard-street, Commercial-road, East.

TO CARPENTERS AND JOINERS.

WANTED, by a respectable Young Man, who has served his time to the above trade in London, a PERMANENT SITUATION. Moderate wages will be accepted. Address, P. W. 63, Chiswell-street, Finsbury.

WANTED, a SITUATION, by an experienced Man, as FOREMAN of CARPENTERS or JOINERS. Address, J. B. 31, Nicholl-square, Hackney-road.

TO BUILDERS AND OTHERS.

WANTED, by a respectable Young Man, a SITUATION as CLERK, TIMEKEEPER, FOREMAN, or to MANAGE a small BUSINESS; is acquainted with the practical part of the trade, and has been upwards of three years in the office of his present employers, to whom reference can be made.—Address, A. Z. Post-office, Brighton.

TO ARCHITECTS, &c.

WANTED, a SITUATION for EVENING EMPLOYMENT, by an ARCHITECT'S ASSISTANT; he is fully qualified to undertake any office work, such as perspectives, working or fair drawings, taking out quantities, writing specifications, &c.—Address, F. B. Charing-cross Post-office.

WANTED, EMPLOYMENT, as CARPENTER and JOINER. The advertiser is an efficient workman, aged 36. Wishes to get into a respectable shop, or could act as FOREMAN, in a small shop. He is a moderate draughtsman. Has no objection to any part of England.—Address, A. H. Office of "The Builder."

TO CARPENTERS AND BUILDERS.

WANTED, by an Improver, a SITUATION in a CARPENTER'S SHOP, a Young Man, of quick business like habits, 20 years of age. Can have good testimonials from last employer. Wages no object.—Address, W. C. 3, Lower Queen-street, Lower-road, Islington.

WANTED, EMPLOYMENT, by a Youth, aged 18, who has been 2½ years at the Plastering &c.—Wages, 12s. per week. Good character. Address, Y. X. Office of "The Builder."

TO ARCHITECTS AND SURVEYORS.

THE Advertiser is desirous of an ENGAGEMENT in the office of a London Architect or Surveyor; is a good designer and draughtsman, and practically acquainted with building generally.—Address, G. B. Peterson's, 18a, Robert-street, Grosvenor-square.

TO BUILDING ESTATE OWNERS and OTHERS.—The Advertiser, having had fourteen years' experience in the department of a Solicitor's Office, where the management of several Building Estates in and near London has been conducted, wants a RE-ENGAGEMENT, at a liberal salary.—Address, A. B. care of Mr. Walters, News-agent, Bell-yard, Temple-bar.

TO ARCHITECTS AND SURVEYORS.

THE Advertiser, having had experience in the surveying branch of the profession, a neat draughtsman, and well acquainted with the general routine of an office, is desirous of an ENGAGEMENT with an ARCHITECT and SURVEYOR.—Address, A. B. care of Mr. Douglass, News Agent, 16, Little Knight Rider-street, Doctors'-commons.

THE Advertiser is desirous of a RE-ENGAGEMENT as ESTIMATOR, or in a builder's establishment, where the general office duties are confined to one person. Unquestionable references as to character and ability.—Address, C. C. No. 6, Hall-street, Arlington-street, New North-road.

TO ARCHITECTS AND SURVEYORS.

THE Advertiser, accustomed to making plain and perspective drawings, with a general knowledge of quantities, is desirous of a SITUATION as above.—Address, R. M. 71, St. John's wood-terrace, St. John's-wood.

THE Advertiser is desirous of obtaining a RE-ENGAGEMENT as CLERK to a BUILDER, CONTRACTOR, or ARCHITECT. Experienced in the usual duties, a fair draughtsman, and accustomed to superintend work. Aged 27.—Address T. M. Cook's, Maiden-lane, Covent-garden.

TO LANDLORDS, HOUSE AGENTS, AND OTHERS

EMPLOYMENT WANTED by a handy Man, who can do Jobbing, Plastering, Whitewashing, Painting, Glazing, Paper-hanging, Set Stove, and do other jobbing work, and willing to make himself generally useful, and study the interest of his employers. Wages, the Guinea per week.—Direct A. B. No. 18 L. ndon-street Caledonian road, Islington.

BUILDER'S CLERK.—A highly respectable, middle-aged Gentleman, accustomed to the routine of a builder's office, an efficient penman and accountant, wishes for an ENGAGEMENT as above, or in any other capacity where the above qualifications, aided by steadiness and integrity, are deemed desirable. The most satisfactory references can be given.—Address, S. T. V. Office of "The Builder."

TO PAINTERS, BUILDERS, &c.

A FIRST-CLASS WRITER would undertake a permanent SITUATION in a respectable house (country preferred). Has no objection to assist in the grainings. Terms moderate.—Direct, post-paid, to A. B. 131, Holborn-hill, London.

TO ARCHITECTS.

AN ARCHITECTS ASSISTANT is desirous of meeting with an ENGAGEMENT. He has been nine years in the profession, during which time he has had considerable experience in the duties of an Architect's Office, is a capital draughtsman and colourist, and has been accustomed to preparing working and finished drawings and specifications, taking out quantities, surveying, and levelling.—Address, J. T. 7, Upper Park-street, Greenwich.

TO ARCHITECTS

AN ASSISTANT (aged 22), desires an ENGAGEMENT, either permanent or temporary, to assist in competition. Under-stands the preparation of working and highly-finished drawings; good writer and artistic colourist, with a knowledge of perspective and versed in office-work generally.—Address, P. P. 2, Halifax-street, Peckham.

TO MASTER PLUMBERS, PAINTERS, AND GLAZIERS.

A YOUNG MAN wishes to ARTICLE himself, for Two or Three Years, as an IMPROVER in the above branches. Wages not so much an object as a good shop, where he may have a good opportunity for improvement. Good references given as to character and sobriety. Can work, if required, at the paper-hanging.—Address, A. L. L. S. 20, Star-street, Paddington.

TO ARCHITECTS.

AN Architect, in an extensive and increasing practice in a provincial town, wishes to meet with a Gentleman well qualified to assist him in the PREPARATION of PLANS for public competition and the general work of his office, for one year. No remuneration would be given further than an equal share of all work obtained in competition. At the expiration of the period, should it be deemed of mutual advantage, the advertiser would be willing to enter into terms for a share of his general practice.—Address, giving references, &c. to A. Z. Gresham Club, King William-street, City, London.

TO GENTLEMEN, BUILDERS, AND OTHERS.

A BRICKLAYER and a CARPENTER and JOINER, having 160 dozen of scaffolding, are ready to CONTRACT for the ERECTION and FINISHING of any class HOUSE or HOUSES, or any works, labour only. Good references can be given.—Address, J. and G. prepaid, care of Mr. Cannell, Confectioner, 3, King-street, Hammersmith.

A YOUTH wishes to obtain a SITUATION in a Builder's Establishment where his time would be partly employed at the bench, and partly at the counting-house, if required to take working drawings. Salary not so much an object as an opportunity of improving.—Apply or address to F. G. 14, Henrietta-street, Brunswick-square.

AS RESIDENT CLERK of WORKS, and Head Carpenter in a Nobleman's Family, or Public Works, a Young Man, who practically understands all the branches of Building, &c. &c. Having lived many years in the above capacity with a family of distinction, to whom high reference can be given. Address, pre-paid, to A. M. A. 34, King-street, Soho, London.

TO COUNTY ARCHITECTS.

AN ARCHITECT, of considerable experience, capable, if required, of taking the entire direction of an office, and of works in progress wishes to obtain an ENGAGEMENT with a County Architect. Satisfactory references will be given.—Address, T. M. Office of "The Builder."

TO ARCHITECTS.

A GOOD DRAUGHTSMAN, who is accustomed to make fair and working Drawings, and has had experience in practical details and construction, will undertake drawings at his own residence, or at their Offices. Terms moderate.—Address, A. Z. 30 No 66 Cheapside, City.

TO ARCHITECTS.

A FRENCH GENTLEMAN, Fellow of the Imperial School of Paris, who is a first-class draughtsman and colourist, and is thoroughly conversant with Classic and Modern Arch tecture and Art, has published an Architectural Work, is desirous of JOINING an ENGLISH ARCHITECT, either permanently or for the completion of pressed for Public Offices.—For further particulars and references, apply by letter to Mr. W. BLACKETT 68, Lancaster's-buildings, London.

A YOUNG MAN, who served five years to an eminent Architect, and has since been in the employ of gentlemen of eminence, is now desirous of EMPLOYMENT wherever attention is required, or where he could turn his ability as to working plans drawing and architectural knowledge.—Letters to A. W. 24, Wilmington-square.

TO CIVIL ENGINEERS AND ARCHITECTS.

A YOUNG MAN wishes for an ENGAGEMENT in an office of the above. Can make finished and working drawings, take out quantities and has a tolerable knowledge of surveying and levelling.—Address his letter to C. L. care of Mr. D. Fosse, 24, Broad-street Buildings, City.

TO LAND SURVEYORS AND CIVIL ENGINEERS.

A RESPECTABLE YOUNG MAN wishes to obtain a SITUATION as an ASSISTANT to a Land Surveyor or Civil Engineer. Understands surveying, levelling, &c. Has no objection to the country or to go abroad. Salary not so much an object as a permanent situation.—Address, W. B. 34, Bennett-street, Portman-square, London.

A Nexperienced practical CLERK of WORKS is open to a RE-ENGAGEMENT.—Address, W. P. care of Mr. Atkinson, 20, Lambeth-road, Southwark, London.

TO ARCHITECTS, SURVEYORS, &c.

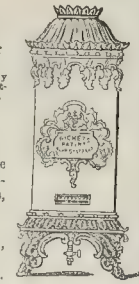
A GENTLEMAN, an ARCHITECT, experienced in the preparation of fair and detail drawings, draughting specifications, measuring quantities, measuring up works, and preparing accounts, and other duties of an architect's and surveyor's office; also has been accustomed to set out works, and the direction and superintendence of workmen, and is well acquainted with every branch of the building trade, desires an immediate ENGAGEMENT, at a moderate remuneration.—Address X. Y. Z. Office of "The Builder."

A PRACTICAL CARPENTER and JOINER wishes a RE-ENGAGEMENT as GENERAL or SHOP FOREMAN, or Superintendent on an Estate. Country not objected to.—Address, ALPHA, 134, East-road, Hoxton. R.R. Unexceptionable testimonials.

TO ARCHITECTS SURVEYORS, &c.

A PRACTICAL MAN, competent to prepare plans, elevations, sectional and working drawings, accustomed to superintend buildings, &c. wishes an ENGAGEMENT in an ARCHITECT'S OFFICE. Would accept a temporary engagement. Country not objected to.—Address, A. B. 9, Buckland-street, New North-road, Hoxton.

A MILLWRIGHT and ENGINEER, of considerable experience, is in WANT of a SITUATION, either as FOREMAN or as MILLWRIGHT, to keep the machinery or engines of any kind in repair. Good reference can be given.—Address to A. B. 113, Vauxhall-walk, Lambeth.



TO BUILDERS AND CONTRACTORS.

A MEASURER, ESTIMATOR, BUILDERS' ACCOUNTANT and a good DRAUGHTSMAN, of many years' experience, is TEMPORARILY ENGAGING to BUILDERS upon reasonable terms.—Address, Mr. WILLIAMS, Office of "The Builder."

A YOUNG MAN, 33 years of age, who has had many years' experience as bookkeeper, is desirous of meeting with EMPLOYMENT, either temporary or permanent, in making up tradesmen's accounts, whether in a small or large way of business.—Address, Y. T. C. Office of "The Builder."

ROYAL POLYTECHNIC.—On Tuesday Evening next, the 18th inst. at Eight, John Leslie, Esq. representative of the Parish of St. George, at The Metropolitan Board of Works, will deliver a Lecture "On London, viewed from the great Charter of sanitary Reform, the Metropolis Local Management Act."

BATH, PORTLAND, and ROMAN CEMENTS. The London and West of England Cement Company can offer to the Trade the best natural HYDRAULIC CEMENTS at reduced prices. The Company particularly recommend the best quality of their Roman Cement for all modelling purposes, decorations &c. as having all the qualities requisite for an interior cement, and being quite unaffected by extremes of weather. The Company also supply BLUE LIAS LIME, lime and ground, which will carry more sand than any in the market.—Communications to be addressed to the General Offices, 7, Gold Broad-street, London; to Mr. MONUMENT, 4, Carlton-place, City-road; to Mr. TIMEWELL, the Depôt, 9, North Wharf-road, Paddington; or to the Works, Dunball, Bridgewater.

SOUTHAM BLUE LIAS LIME DEPOT.
Glazed Stoneware Sewage Pipes.
Brick, Lime, and Cement Merchants,
TATHAM and CO.
14, South Wharf, Paddington.

PORTLAND and BATH CEMENTS.
TATHAM and CO.
14, South Wharf, Paddington.

PARIAN CEMENT, reduced in price 25 per cent. This article is valuable for inside stucco, and especially for skirtings, for flooring on brick arches, &c. It takes paint in a few hours after its application on walls or laths, is without efflorescence, and may be papered in a couple of days. A finer quality for beautiful Scagliola, with any admixture of colours.—Manufactured by FRANCIS, BROTHERS, Cement Works, Nine-elms, London.

CEMENT.—ROMAN and PORTLAND CEMENTS, and PLASTER of PARIS, manufactured by C. J. HILTON, can be had in any quantity, wholesale and retail, at his wharf, 2, Upper Thames street, London; and also at the manufactory, Faversham, Kent.—N.B. These Cements supplied for shipment, on advantageous terms.

THE PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs. ROBINS and CO. to WHOM THE PRIZE MEDAL WAS AWARDED in 1851, are prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes to which Cement is applicable. Orders received at Great Scotland-yard and at the Works.

PORTLAND CEMENT WORKS, NORTHFLEET, Kent.—KNIGHT, BEVAN, and STURGE, Manufacturers only of first-class quality, for the home and foreign trade. Portland Cement is manufactured at these works with especial reference to its destination, whether for stuccoing, brickwork, blocks for breakwaters, tidal work, or otherwise.—London Wharf, Belvedere-road, Lambeth.

PORTLAND and BATH CEMENT.—FULLWOOD THOMPSON and CO. request the attention of Merchants and Contractors to the quality of their Portland and Bath Cement, which their manufacture on an improved system, securing regularity of strength and colour, and at a less cost than is attainable by most other makers.
These cements set under water in a few minutes, and are not affected by extreme heat or cold.
FULLWOOD THOMPSON & CO. will be happy to send prices and samples in reply to application by post. They deliver free into the Bristol and Exeter Railway Company's trucks at their works, or free on board in the Port of Bridgewater.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL.—Light, Dark, and Portland Cements equal to any made. Manufacturers also, and Dealers in Plaster, Paris White, Mastic, Hair, Lias Lime, Laths, Slates, and Slate Slabs, Fire-bricks, Grindstones, Cement Chimney-tops, Glass Vases, Ridging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Pozzolano.

JOHNS and CO.'s PATENT PERMANENT STUCCO WASH (perfectly non-absorbent). STUCCO CEMENT, STUCCO PAINT.—CLARK and BENGOUGH, Manufacturers, Grand Surrey Canal Bridge, Old Kent-road, Office, 4, George-yard, Lombard-street.

PORTLAND and ROMAN CEMENT.
PLASTER of PARIS
Manufactured by J. M. BLASHFIELD, at Millwall, Isle of Dogs.
Warehouse, No. 1, Wharf, Paddington-basin.
11 George-yard, Lombard-street, City

ELMLEY CEMENT WORKS.—ROMAN and PORTLAND CEMENT of the first quality, manufactured on the above works. Also STOCK and KILN-BURNT BRICKS, hand moulded and machine made, for shipment or otherwise.—Apply to G. BOOTH, Agent, as above.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not vegetate in damp situations. • Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements read at the Institute of Civil Engineers), to be obtained from the Makers, JOHN BAZLEY WHITE, and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

ATKINSON'S CEMENT, so long known and esteemed in London for plastering purposes, is a quick-setting Cement, that requires no colouring—sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster; and Seel-street, Liverpool.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER, for internal uses. These well-known hard Stuccoes dry quickly, and can be painted upon within a few days.—Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

CHARLES RICHARDSON, 3 & 6, SOUTH-WHARF, PADDINGTON BASIN.
COWLEY AND KENT BRICKS,
PORTLAND, ROMAN, AND OTHER CEMENTS,
TAMWORTH GLAZED SEWAGE PIPES
BLUE VITRIFIED BRICKS, COPINGS, PIPES, &c.
3 & 6, South Wharf, Paddington.

NOTICE.
CHARLES RICHARDSON takes the earliest opportunity of informing Engineers, Architects, Contractors, and others, that he is now burning GREAVES'S BLUE LIAS LIME per the Great Western Railway from Harbury to Bull's-bridge and Paddington, from whence it can be delivered alongside any part of the river Thames, canals, or railway stations in London the day after it is burnt and ground, in any quantity, and at a great reduction in price.
All applications for prices and terms will meet with prompt attention.
N.B. Please observe the lime is ground at the works, not in London.

BLUE LIAS LIME.—Messrs. GREAVES and KIRSHAW having completed their Works on the Birmingham and Oxford line of the Great Western Railway, at Harbury, are now prepared to supply LUMP and GROUND LIME of the best quality, direct from the kilns, to all the Stations on the Great Western Railway.—Greaves's Blue Lias Lime.—Portland, Bath, and Lias Cements.—Works, at Harbury, Stockton, and Wilmcote.—Office, at Warwick.

HUBBUCK'S PATENT WHITE ZINC PAINT,

The Permanent White of the Ancient Artist.

HUBBUCK and SON, the Original Manufacturers, are enabled, by their process, which is patented, to supply Pure White Zinc Paint at the price of White Lead. Neither heat nor tropical climates act upon it. It is entirely free from any poisonous or pernicious property. Those direful maladies, paralysis and painters' colic, will be altogether avoided. The Powdered White Zinc may be had for grinding in Oil, and where it is used with Size, Varnish, &c. To prevent the prejudice against Zinc paint, which the adulterated article must otherwise produce, it is now sold by the Wholesale Paint-dealers in Original Packages, each cask stamped, HUBBUCK—LONDON—PATENT. Any article so marked, the quality is guaranteed. THOMAS HUBBUCK and SON, the Original Wholesale Manufacturers, Paint and Varnish Works opposite the London Docks, London.
N.B. OLD ZINC AND ZINC CUTTINGS BOUGHT TO ANY EXTENT FOR REFINING.

BLUE LIAS LIME.—CHAS. NELSON begs to offer to consumers a supply of Blue Lias Lime direct from his Quarries in Warwickshire, the quality of which has been tested by several of the largest building firms in the metropolis and approved by them; and those who have favoured C. N. with their patronage during the last three years have always expressed themselves satisfied with his system of weighing or measuring the lime. When the lime is delivered by boat, the master has instructions to produce (on demand) the canal company's pass, by which the purchaser may know the exact weight delivered.—Orders addressed to the London Depôt, 36, South Wharf, Paddington, J. D. BLYTH, Sole Agent, will have immediate attention.—Quarries and Manufactories, Stockton, near Southam, Warwickshire.

DAVIES and NORMAN,
CROWN WHARF, GREAT SCOTLAND-YARD.
ROMAN and PORTLAND CEMENTS,
LIME, BRICKS, TILES, SLATES, FIRE GOODS, &c.
STONEWARE PIPES, PANS TRAPS, &c.
A Liberal Allowance to the Trade.

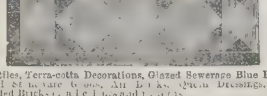
NOTICE.
SOUTHAM HYDRAULIC BLUE LIAS LIME.
WILLIAM OLDHAM begs to inform those parties requiring genuine Hydraulic Blue Lias Lime, that he is prepared to deliver the best quality of ground and lump, into boats, at the Works.—Address, WILLIAM OLDHAM, Blue Lias Lime and Cement Works, Southam.

GREY STONE LIME WHARFS, 12, UPPER GROUND-STREET, Blackfriars (Surrey side), 7, NORTH WHARF-ROAD, Paddington.
WILLIAM PETERS begs to inform the trade he is in a position to supply the best GREY STONE LIME in any quantities from the above wharfs, or per barge direct from the kilns.
Large Grey Stone, or Grey Chalk, free on board at Works, 1s. 9d. per ton.
Small ditto, ditto, 4d. per ton.
Barges loaded in a few minutes.
Wouldham-hall Grey Stone Lime Works, on the Medway, near Rochester.

CHADWICK'S CEMENTS.—To Railway and Dock Directors, Gas and Waterworks Companies, Coal-Mine Proprietors, Builders, Contractors, &c.—JOHN CHADWICK, Manufacturer of the Patent Lithic, Roman, and Portland Cements, is prepared to enter into contracts with any of the above branches that may favour him with their orders. The advantages to be derived from the above Cements, manufactured by J. C. over all others, are their extraordinary hydraulic properties.—Samples and references may be had on application either at the Works, Ashton New-road; or the Warehouse, 5, Broomstreet, Shadehill, Manchester.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings, of good and sound quality, constantly on sale at H. DODD'S Brickfields, which are only a quarter of an hour's walk from the City. H. D. earnestly requests purchasers to favour him with a visit, in order to inspect his stock, and to judge for them elves.
Malm Place, half-washed Stocks, and Place Bricks, also on sale. These bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing.
Apply to HENRY DODD and CO. at the Counting-house, Hoxton Brickfields, Grange-walk, near the Rosemary Branch, Hoxton.
N.B. Light-coloured Pit Sand of a proved quality constantly on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand.

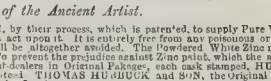
BRICKS.—Mr. Rydon having made more bricks than he requires for the builders on his estate, Highbury, New-park, would be willing to enter into arrangements with builders and others for supplying first-class STOCK and RED BRICKS upon advantageous terms.—For particulars, apply at the Estate Office, Dell's Farm, Stoke Newington Green.



THE BEST HERTFORDSHIRE MALM SECONDS;
THE BEST WHITE SUFFOLK and RED FACINGS:
WHITE SUFFOLK PERFORATED BRICKS;
DEEP-RED RUBBING BRICKS.
Also COWLEY and KENT STOCKS, in any quantities.
J. EASTWOOD and SONS, Belvidere-road, Lambeth; and Surrey-canal-bridge, Old Kent-road, Surrey.
N.B.—Lime, Cement, Slates, Fire-bricks, &c. and all kinds of Building Goods.

BRICK-FIELDS, QUEEN'S-ROAD, PECKHAM, SURREY
(Within a short distance of the five bridges).
THE BEST MALM-CUTTERS, SECONDS, PICKINGS, and PAVIORS, in any quantity.
Also, STOCKS, of FIRST QUALITY.
J. EASTWOOD and SONS, Belvidere-road, Lambeth.

BRICKS.—White and Red Facing Bricks, and hard Clinkers for paving stables, &c. can be delivered by Thames or Eastern Counties Railway at ten per cent. under the usual prices.—Apply to W. and W. WRIGHT, Springfield, Essex.



BRICKS of all kinds (clamp-burnt or kiln-burnt), Lime, Chalk, Chalk Rubbish for brick-making, Flints for building and pottery work, Foundry Loam, Whiting, Whiting Sand for ashpluite, Land Drain Pipes, Patent Drain Pipes, Gas Soil for brick-making, &c. &c. sent by barge from Messrs. MEESON and CO.'S works at Grays, Essex, to any part of the Thames, the various canals, the river Lea, &c. or by rail to any station on the London and Southend and Eastern Counties lines, or any railway connected with them. Vessels of 500 to 600 tons can load alongside the wharves at Grays. At MEESON and CO.'S wharf and kilns, Bow-bridge, Stratford, Essex, the above-named articles can also be procured, as well as all kinds of fire goods (both Welsh and Newcastle), Fire-clay, Flare-burnt Lime, and Marble and Temper Lime; and beer in casks in hogsheads, casks, jars, &c. for exportation.
General Office—No. 12, GEORGE-YARD, LOMBARD-STREET
Letters addressed to Grays, Essex, will meet with immediate attention.

BLUE, RED, and WHITE FLOOR-TILES,

Roof-tiles, Terra-cotta Decorations, Glazed Sewerage Blue Pipes, Glazed Stoneware Gas and Jointing Pipes, Chimney-pots, and Moulded Bricks, of all kinds and patterns.
W. GILBERT, Manufacturer, Tividale, Staffordshire. London Depôt: C. RICHARDSON'S Wharf, Paddington.

COLES, SHADBOLT, and CO. CEMENT and PLASTER MANUFACTURERS, LIME BURNERS.
Brick, Tile, Drain-pipe, Hair Lath, and Fire Goods Merchants.
ST. JAMES'S and THORNHILL WHARFS, Caledonian-road, London.

BEADON'S PATENT IMPERISHABLE GUTTER-TILES,
For Spouting Roofs of Houses either old or new, whether of thatch, slate, or tile, and other structures.
SOLE AGENT,
J. B. LAWES, 1, Adelaide-place, London-bridge.
This is the cheapest kind of spouting known; for, besides its lower cost, it will last without paint or repair as long as the building itself. It will bear the weight of any ladder; and in case of accident a labourer can repair it. It occupies the room of a large amount of roofing, effecting a great saving in slates, tiles, &c. It is especially applicable to the backs of houses in town, cottages, and agricultural buildings.
Price 4d. each tile of about 12 inches long; stop-ends and outlets, 6d. Any mason can put them up, or, if over 100 feet are required, a man will be sent to fix them at 5d. per foot. This chance to include tiles delivered in Agent's yard), cement, and labour. May be had in London, Gloster, Bridgwater, and Roxby

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 21, WHARF, Macclesfield-street North, City-road Basin. Secondly, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietor; and, thirdly, that the "REPORTS OF THE JURIES," page 581, of the Great Exhibition, rank the Manufactories known so long as "The Tileries," Tunstall, Staffordshire, as the first of the kind in the world.

PATENT TERRA-COTTA.
Tracery for Parapets and Terraces, Mullions, Pinnacles, Moulded Bricks, Coats of Arms, Crosses, Label Mouldings, Friezes, Trusses, Vases, Balusters, Capitals and Bases of Columns, Paving, Facing Bricks, Coping, Kitchen and other Sinks, Chimney Shafts and Tops, and numerous other Articles, manufactured by J. M. BLASHFIELD, in Patent imperishable Terra-Cotta, at Mill-wall, Isle of Dogs; and sold at No. 1, Wharf, Pmed-street, Paddington-basin.

TO ROAD CONTRACTORS and OTHERS.
To be had, gratis, a quantity of HARD COKE, either by barge or cart—Apply to WILLIAM WINN, Curtain-road, Shoreditch.

DOULTON'S TERRA-COTTA CHIMNEY-TOPS,
TWO SHILLINGS EACH,
TWO FEET HIGH, AS SKETCH.

H. DOULTON & CO.'S
CHIMNEY-TOPS
ARE OF A STONE COLOUR,
AND ARE
QUITE IMPERISHABLE.
Some were erected in London Thirty Years ago, and are now as sharp and perfect as when first made.
About Forty different Patterns are kept in Stock, Drawings and prices of most of which will be sent on application to
HENRY DOULTON & CO. High-street, Lambeth.

GALVANIZED WINDGUARDS.
No. 1. 3 feet high, 14 in. by 9 in. bottom, 18s.
No. 2. 4 " " " " " 30s.
A DISCOUNT ALLOWED TO THE TRADE.
This Windguard is highly recommended by the Manufacturers,
F. EDWARDS, SON, and CO.
42, POLAND-STREET,
OXFORD-STREET.

SMOKY CHIMNEYS.—TWO YEARS' TRIAL, and PERFECT SUCCESS of DUFF'S PATENT WIND-GUARD, in curing the most inveterate Smoky Chimneys, induces the Patentee to recommend all persons suffering from that nuisance to try one.
Price 10s.
To be had of Ironmongers and Builders, and of the Patentee, at his Office, 65, Fenchurch-street.

WOLSTON'S TORBAY IRON-PAINTS, warranted to stand the action of the Atmosphere, Steam, Gases, Noxious Vapours, Damps, and Salt Water; also intense heat without blistering. These Paints have been tested for five years in the Navy, and by Railway and Engineering Companies, which testify that by the use of Wolston's Torbay Iron Paint will effectually cover as much surface as 14 lbs. of either White or Red Lead, and that they resist atmospheric action better than Lead Paints. For all Public Works, Ironwork and other from Roofing, Fencing, Shipping, Bridges, Wood or Iron, Stucco and Cement Fronts, Stoney and Sandstone will be found the Best Paints for all priming purposes, the saving will be immense. Manufactured at the TORBAY IRON-PAINT and ORE WORKS, Brixham, Devon; London Depôt, Chamberlain's Wharf. Letters or orders addressed to Mr. WOLSTON, at the Works, or No. 34, John-street, Bedford-row, will have immediate attention.

WIRE and CHILD, Solicitors, 9, St. Swithin's-lane, City.

STEAM-ENGINE.—FOR SALE, a strong, High-pressure Horizontal Steam-engine, of 35-horse power. May be seen by appointment to Mr. PORTER, at Cubitt's Works, Grosvenor-road, Pimlico.

DURABILITY of GUTTA PERCHA TUBING.—Many inquiries having been made as to the Durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in giving publicity to the following letter:—FROM SIR RAYMOND JARVIS, Bart., VENTNOR, ISLE of WIGHT.—Second Totton-road, Hursley, Oct., 1852.—In reply to your letter, received this morning, respecting the Gutta Percha Tubing for Pump Service, I can state, with much satisfaction, it answers perfectly. Many Builders, and other persons, have lately examined it, and there is not the least apparent difference since the first laying down, now several years, and I am informed that it is to be adopted generally in the houses that are being erected here."

N.B. From this Testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.

THE GUTTA PERCHA COMPANY, PATENTEES, 18, WHARF-ROAD, CITY-ROAD, LONDON.

BENJ. FOWLER & CO. WHITEFRIARS-STREET, FLEET-ST.

CHEAP, LIGHT, AND DURABLE ROOFING.

CROGGON'S PATENT ASPHALTE ROOFING FELT, has been extensively used and pronounced efficient, and particularly applicable for warm climates.

1st. It is a non-conductor.—2nd. It is portable, being packed in rolls, and not liable to damage in carriage.—3rd. It effects a saving of half the timber usually required.—4th. It can be easily applied by any unpractised person.—5th. From its lightness, weighing only about 2 lbs. to the square of 100 feet, the cost of carriage is small.—6th. Under slate, metal, or tiles, it is a most effective non-conductor.

CROGGON and CO.'s PATENT FELTED SHEATHING, for Covering Ships' Bottoms, &c., and deadening Sound.

DRY HAIR FELT, for Covering Steam Boilers, Pipes, &c., preventing the radiation of Heat, saving 35 per cent. of Fuel.

Samples, testimonials, and full instructions, on application to CROGGON and CO. 2, DOWGATE-HILL, LONDON.

TO ENGINEERS, RAILWAY COMPANIES, MILLOWNERS, &c.—VULCANIZED INDIA RUBBER for all kinds of Steam and Hot-water Joints, is now becoming indispensable in Engineers' Establishments. J. L. SALT-GLAZED STONEWARE, FIRE-CLAY, AND TERRA-COTTA WORKS,

NEAR BARNSLEY, YORKSHIRE.

The Proprietor, E. B. BEAUMONT, manufactures every description of STONEWARE for drainage, building, sanitary purposes, and fancy ware, from clays which have been subjected to the most searching analyses, and proved to be of the most tenacious and indissoluble qualities. The pipes are wrought by Spencer's Patent Machine, by which tube and socket are one, without a manipulated joint, and rendered the more compact by Bain-pressure; and as every improved apparatus has been made available to secure the highest excellence with great economy of labour, the goods are put upon the market at a considerable reduction from the prices charged for others at all assimilating in quality, whilst the stock on hand is always sufficiently large to provide for works of the greatest magnitude.

PIPE TRADE LIBERALLY TREATED WITH.

Price lists and Diagrams sent free on application,—

At the WORKS.....To Mr. WM. FORD, Darfield Fire-clay Pottery, near Barnsley.
In LIVERPOOL.....To Mr. JOHN LIDDALL, 39, Shaw's-row.

PRIZE MEDAL, CLASS 2.

HIGH-PRESSURE VALVE COCKS.—

LAMBERT'S PATENT.

These Cocks have, during the last five years, been extensively and most successfully used in many Towns under continuous high pressure, varying from 100 to 300 feet; their efficiency and durability is by experience established.

The Equilibrium Ball-valve is simple and certain in its action, and is cheaper than the common Cocks now in use.

Enamelled iron, self-acting, and other closets, upon economic arrangements, suitable for public buildings, cottages, asylums, &c.

THOMAS LAMBERT and SON,

Brass and Iron Founders, Short-street, New-cut, Lambeth.

TO WATER COMPANIES AND PLUMBERS.

HIGH-PRESSURE COCKS & CLOSETS.

The Health of Towns Commissioners having recommended the adoption of the high-pressure principle in all towns, WARNER'S HIGH-PRESSURE COCK is recommended as a Cock free from leakage, and applicable for all purposes and situations. Patent Closets and Basins with supply-valve for attaching direct to main pipes without a cistern, cocks, or wire.

LEAD, IRON, and TIN PIPE.

JOHN WARNER and SONS, Manufacturers, 8, Cresent, Jewin-street London.

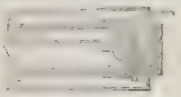
TO WATER COMPANIES, LOCAL BOARDS OF HEALTH, AND OTHERS.

LAMBERT'S NEW VALVE COCK,

For Preventing Waste of Water.

It is constructed that it cannot be left open accidentally or wilfully, and further it will at each action deliver a specific quantity, and under the same pressure this quantity will never vary.

It is peculiarly adapted for closets, self-acting or otherwise.



Price, complete for high pressure, 15s. 6d. each.

" low " 12s. 6d. "

THOS. LAMBERT and SON, Patentees and Manufacturers, Founders and Machinists, Short-street, New-cut, Lambeth.

VENTILATION.—PURE AIR.

Sheringham's Ventilator for the admission of pure air through an

EXTERNAL WALL.

With single pulley, from 6s. each; with leading pulley, from 6s. 6d.

These Ventilators are arranged that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants; and as they are placed in the external wall, their action is not impeded when the house is closed for the evening, at which time a constant supply of fresh air is most required.—HAYWARD, BROTHERS, sole Manufacturers, 181, Blackfriars-road, and 117, Union-street, Borough; and of all respectable ironmongers, builders, &c.

SALES BY AUCTION.

Valuable Water-side Premises on the Regent's Canal, Kingsland-road, with Cement Kilns, Steam Engines, &c. and an improved Rental of £97 a year.

MESSRS. EVERSFIELD and HORNE are instructed by the Mortgagees to SELL by AUCTION, at the MART, on TUESDAY, NOVEMBER 25 in two lots, the Free-hold LEASE of the extensive PREMISES, known as Tuscany Wharf near the Canal-bridge Kingsland-road, fitted up at a great expense by Messrs. Freen and Co. for the manufacture of cement, but equally applicable for many other purposes. Held for a long term, at a moderate ground-rent; also an improved rent of £42 a year, arising out of a plot of ground opposite Tuscany Wharf.—May be viewed by leave of the tenants, and particulars had of Edward Jenkins, Esq. Solicitor, 13, New Boswell-court; at the Mart; and of the Auctioneers, 40, Parliament-street or Coal Exchange.

SURREY, Three Miles from London. — Very valuable Freehold Detached Residences, with beautiful Pleasure Grounds, Fish Ponds, and pasture Meadow Land, containing about 28 acres; also two other Residences with Gardens, and two enclosures of Land, very eligible for building

MESSRS. FAREBROTHER, CLARK, and LYE are instructed by the proprietor (removing to his estate in Hertfordshire), to SELL at GARRAWAYS, on WEDNESDAY, NOVEMBER 19, at TWELVE (unless in the mean time an acceptable offer be made to purchase the whole, or to rent the large residence and 16 acres of land), the following very valuable FREEHOLD ESTATES, situate within three miles of London, between Brook-hill and Clapham, and comprising Stockwell Lodge, a spacious family residence, replete with comfort, and upon which a very large sum has been expended within a few years in additions of new reception-rooms, &c. standing in its own beautiful grounds, with lawn, kitchen garden, hot and green houses conservatory, sheet of water, stabling, farm-yard, and about 18 acres of park-like meadow land, ornamented with timber and plantations, and for many years the favourite residence of Henry Smith, esq. The immediate possession of this portion of the property can be had. The adjoining freehold residence, with its lawn, pleasure-grounds, kitchen garden, paddock, and stabling with about six acres, in the occupation of John Gladstone, esq. at the very low rent of £90 per annum. Also two capital houses and gardens, fronting Stockwell-lane, one in the occupation of Edwin Harford, esq. at 112l. per annum, and the other on lease to Mr. Palmer, at 64l. per annum, two lodges let at 40l. per annum, and two enclosures of meadow land, with extensive frontage, adapted for building purposes.—Particulars and plans may be had of C. G. C. Uniel, Esq. Solicitor, 36, Alfred-place, Bedford-square; at Garraway's; and at the Offices of Messrs. Farebrother, Clark, and Lye, Lancaster-place, Strand.

RUGBY.—Valuable Freehold Land, close adjoining the town; very eligible for building purposes.

MR. W. H. HEWITT has received instructions from the Trustees for Sale, to SELL by AUCTION, at the EAGLE HOTEL, Rugby, on THURSDAY, NOVEMBER 27th, at TWO for THREE o'clock precisely, in lots, a valuable FREEHOLD ESTATE, consisting of nearly forty acres of excellent meadow land, most eligibly situate close adjoining the town of Rugby, and extending from the Dunchurch to the Bilton-road It is peculiarly eligible for building purposes, as it commands fine views over the surrounding country, and is within the limits of the Rugby School. The whole is at present in the occupation of excellent tenants at low rents, amounting to about 190l. per annum. May be viewed, and particulars, with plan of the estate, had at the Place of Sale; the Hen and Chickens, Birmingham; the Bath Hotel, Leamington; of Messrs. Bell, Steward, and Lloyd, Solicitors, 49, Lincoln's-inn-fields, London; of Messrs. Harris, Sons, and Hubbard, Solicitors, Rugby; and at the Auctioneer's Offices, 11, Hart-street, Bloomsbury-square, London.

To BUILDERS, BUILDING SOCIETIES, and OTHERS.—Valuable Freehold Building Land, Residence, &c. (tithe free), with immediate possession, at Hersham, Surrey, within five minutes' walk of the Walton Station, on the South-Western Railway

MESSRS. CHURCH and SON are directed to OFFER for SALE, by PUBLIC AUCTION, at the MART, opposite the Bank of England, on THURSDAY, NOVEMBER 27th, 1856, at TWELVE o'clock, in three lots, TWO very valuable PLOTS of FREEHOLD BUILDING LAND, and a substantial brick-built and convenient arranged Freehold DWELLING-HOUSE, with range of outbuildings adjoining, and large garden in the rear, desirably situated on the high road from London, about half a mile from Hersham, 3 from Walton, and within five minutes' walk of the Walton station on the South-Western Railway. Lot 1 comprises a Plot of Land at the corner of the high road and the road from Walton to Hersham, with a building frontage of about 333 feet, and an average depth of 264 feet, or thereabouts. Lot 2, a Plot of Land at the opposite corner of the same road, with a frontage of about 495 feet, and an average depth of 274 feet, or thereabouts; and Lot 3, a substantial brick-built Residence, fronting the road from Walton to Hersham, containing seven rooms, all necessary offices, with chaise-house, stable, and large well-stocked garden enclosed with walls, in the rear, of the estimated annual value of 42. The land is well adapted for the erection of semi-detached houses, the soil is good, and an abundant supply of water can be obtained at a trifling expense. It is surrounded by excellent roads and ornamental park-grounds. The commanding situation, at the intersection of two wide roads, thus affording large building frontages, together with its continuity to the railway station, particularly recommend it for building purposes.—Particulars and conditions of sale, with plans annexed, may be obtained of Messrs. Burchall, Dalrymple, and Drake, Solicitors, 16, Parliament-street, Westminster; at the Mart; and of the Auctioneers, William-street, Woolwich.

16, HATTON-GARDEN, HOLBORN.—The extensive Town Stock of Plumbers' and Sanitary Ware, also Fixtures, &c. Absolute Sale, by order of Messrs. Penman, Brown, and Co. who are dissolving partnership, and giving up their present Premises.—To BUILDERS, PLUMBERS, PAINTERS, and OTHERS.

MESSRS. GREEN and SON, will SELL by AUCTION, on the PREMISES, as above, on THURSDAY, 20th NOVEMBER, at TWELVE, the extensive town STOCK of PLUMBERS' and SANITARY WARE, including pan closets, plug basins, hopper and servants' basins, valve and ship basins, urinals, closet cups and handles; also beer machine handles, forks, knives, sets of jugs, bells, butter dishes, &c. The fixtures and effects comprise a builder's cart, mahogany desk, stands, counters, drawers, matting, chairs, directory, &c. Notice.—Approved bills at exchange, at three months' date, will be taken from purchasers of stock for 20l. and upwards, or 3½ per cent discount allowed for cash. May be viewed the day prior and morning of sale. Catalogues had on the Premises; at the Auctioneers' Offices, 18, Hatton-garden; and at their Sale Rooms, 44, Farringdon-street, City.

ADJOINING the HARRY the EIGHTH, Mile-end-road. To FARMERS, CARPENTERS, BUILDERS, and OTHERS.

MR. F. HALL will SELL by AUCTION, on the PREMISES, as above, on WEDNESDAY, NOVEMBER 19, 1856, a large assortment of excellent BUILDING MATERIALS, removed from the City for improvements; comprising plate glass sashes, four and six-panel front doors, panelled partitions, linings, marble chimney-pieces and other chimney-pieces, hearths; register and other stoves, capital oak and fir joist rafters, and ceiling joist; also upwards of 100 squares of flooring-boards, twenty stacks firewood, and numerous other items. May be viewed; and catalogues had on the Premises, and of the Auctioneer, Mr. F. Hall, Chester-street, Kennington.

Valuable Building Materials, Upper Holloway.

MR. F. HALL has been favoured with instructions to SELL by AUCTION, on TUESDAY, NOVEMBER 18th, 1856, at the Yard, near the Crown, Upper Holloway, the very excellent MATERIALS of Six modern Houses, comprising all the timbers of floors and roofs in Deal joist, 9" by 3", principal rafters, 9" by 4", ceiling joists, 8" by 3", purlins, and other timbers, 4" by 4" and 4" by 3", 2,000 feet of 4" and 3" cut and wrought bricks, 2,000 slates, 2,000 feet of 1" and 1½" deal boards, 2,000 feet of lath, 2,000 feet of 1" and 1½" deal battens, 2,000 feet of 1" and 1½" deal battens, 2,000 feet of 1" and 1½" deal battens

COMPETITIONS.

TO SURVEYORS and ARCHITECTS.—

The Burial Board for the Parish of Watford, in the county of Hertford, are desirous of receiving within five weeks from the date of this Advertisement PLANS, DESIGNS, SPECIFICATIONS, and ESTIMATES, comprising ground plans, sections, and elevations for Fencing in a Field (called Old Fields), in the parish of Watford, Herts, leaving sufficient space for a footpath on the west side thereof, commencing at and running from the public highway or carriage road at or near Coney, otherwise Colney Butts, at the south-west corner of the said field to a footpath on land of the Earl of Essex at the north-west corner of the said field; for Erecting Two Chapels, one on the consecrated, and the other on the unconsecrated portions; a Reading-room; Sexton's House with Board-room; and for Laying out the Land as and for a Burial-ground, with a sufficiency of roads and of pathways to afford access to the graves), and to mark every grave space. The Board will not bind themselves to employ or engage the person whose plans, designs, specifications, and estimates, or any or either of them may be approved, but in case he should not be employed or engaged, the Board will pay him a premium of Ten Guineas for the same, when they shall become and be the absolute property of the Board. The Board will not pay any charge or expense for preparing, and they will not bind themselves to accept or approve any plan, design, specification, or estimate. A plan of the land is deposited with the Clerk, and may be seen at his office at Watford at any time between the hours of TEN and FOUR in the day time, till within two days of the expiration of the time hereby limited. All plans, &c. to be sent by PRIDE. "The Clerk of the Burial Board," at Watford (free of expense), on the day the five weeks will expire, and those not approved will be returned free of expense in such way as the owner may request.

Watford, 20th November, 1856.

TO ENGINEERS, IRONFOUNDERS,

BUILDERS, &c.—The Corporation of Sandwich are about to ERECT a NEW SWING BRIDGE over the River Stour, at Sandwich, Kent, in place of the old bridge. Competent persons, willing to undertake the work, are therefore invited to furnish Plans, Estimates, &c. for such Bridge, either of Iron or Wood; the estimate to cover the total cost of fixing the new bridge complete for traffic. The Corporation do not bind themselves to act upon, or pay any remuneration for any such plans, estimates, &c. which are to be sent in to the Town-clerk, marked "Tender for Bridge," on or before the 15th day of DECEMBER next.—Further information, if required, may be obtained of the Town-clerk.

CONTRACTS.

TO BUILDERS.—Persons willing to

TENDER for the various WORKS in the ERECTION of a CATHOLIC CHURCH, PRESBYTERY, and SCHOOLS, at Hadfield, in the parish of Glossop, may see the plans and specifications at the Estate Offices, in Glossop, from MONDAY, the 24th NOVEMBER, to MONDAY, DECEMBER 8th, on which latter day, by TWELVE o'clock at noon, the tenders are to be delivered, sealed, at the offices aforesaid, and endorsed, "Tender for St. Charles Church and Schools, Hadfield." No pledge is given to accept the lowest or any Tender.

WEIGHTMAN, HADFIELD, and GOLDIE, Architects.

Sheffield, November 8th, 1856.

MIDLAND RAILWAY.—The Directors of

the Midland Railway are prepared to receive TENDERS for the ERECTION of a GOODS WAREHOUSE, at the Bristol Station. The drawings and specification may be seen, and further particulars obtained, upon application at the Engineer's office, Derby station, from the 18th to the 25th instant, inclusive, and at the Engineer's Office, Gloucester Station, from the 26th instant to the 1st DECEMBER, inclusive. Tenders to be forwarded to the Secretary, Way and Works Committee, Derby station, not later than TEN, a.m. on TUESDAY, 2nd DECEMBER next.—The Directors do not bind themselves to accept the lowest or any Tender.—By order,

JOSEPH SANDERS, Secretary.

Derby, 13th November, 1856.

TO BUILDERS.—The Guardians of Bethnal-

green, London, are desirous of receiving TENDERS for BUILDING an ADDITIONAL WING to the UNION ESTABLISHMENT, near Victoria Park. Plans and particulars may be seen on application to Mr. E. N. CLIFTON, Architect, No. 8, Gresham House, Old Broad-street, City. The Guardians do not bind themselves to accept the lowest, or indeed any Tender. Those builders who may feel inclined to submit Tenders for the proposed building, are requested to meet at Mr. CLIFTON'S Office aforesaid, on SATURDAY next, at TWELVE o'clock at noon, when every information on the subject matter in question will be afforded accordingly. Dated this 18th November, 1856.—By order,

ROBERT BRUPTON,
Clerk to the Board of Guardians of Bethnal-green.

CONTRACTS.

NOTICE to BUILDERS and CONTRAC-

TORS WAR DEPARTMENT WORKS.—The Director-General of Contracts will receive TENDERS for the execution of WORKS for a PORT and BARRACK BUILDINGS, &c. on Lee Hommemeux Floraine Rocks, Alderney. The Tenders to be delivered on or before THURSDAY, the 27th NOVEMBER, 1856, after which date no Tender will be received. The drawings of the works may be seen, and forms of Tender, with all other required information had at the Royal Engineer's office, Alderney. The Tenders to be addressed to the Director-General of Contracts, War Department Pall-mall, and endorsed, "Tender for Works, Hommeaux Floraine Rocks, Alderney."

Royal Engineer's Office, Guernsey, Nov. 4, 1856.

NOTICE to BUILDERS and OTHERS.—

WAR DEPARTMENT CONTRACT.—The Principal Officers of her Majesty's War Department hereby give Notice, that they will receive PROPOSALS for the following CONTRACT, viz.: For COATING the ASPHALTED ROOFS of SIX HUTS with TAR, &c. and keeping the same in repair and clean, from date of acceptance of Contract until the 25th JULY, 1857, at the temporary Barracks, Curragh of Kildare. Persons desirous of tendering for the same will receive every information on application at the Commanding Royal Engineer's Office, Lower Castle yard, Dublin; and at the Royal Engineer's Office at the Curragh, and may obtain letters of Tender, with the terms of contract. The letters of Tender to be sealed, and addressed to the Under-secretary of State for War, "The Director-General of Contracts, War Department, London," so as to be received on or before the 28th day of NOVEMBER, 1856, and to be marked on the outside, "Tender for Work at the Curragh Camp."

Commanding Royal Engineer's Office, Dublin,
13th November, 1856.

TO GAS CONTRACTORS and IRON-

FOUNDERS.—Notice is hereby given, that TENDERS are required for the ERECTION of GASWORKS, and Lengths of about Thirty Miles of Main in the City of Bangor, North Wales. Tenders to be given for the supply of the Ironwork Materials, and the Foundation of the Works separately. Drawings and specifications to be seen at the Offices of Messrs. BRIGHTMAN, Engineers, Essex-street, Strand, London, on and after 21st of NOVEMBER. Tenders to be sent to the same address on or before the 2nd NOVEMBER.

TO CONTRACTORS.—SOUTH WALES

MINERAL RAILWAY.—The Board are prepared to enter into a CONTRACT for the CONSTRUCTION of the entire RAILWAY and WORKS, from the Briton Ferry Road, South Wales, to the Head of the Valley at Glyne rowe, a distance of about 11½ miles. Specifications, plans, and sections may be seen at the Offices of I. K. BRUNEL, Esq. 18, Duke-street, Westminster, on and after the 27th instant. Tenders, endorsed, "Tender, South Wales Mineral Railway," addressed to the Secretary, at the Offices of Messrs. BANKES, HORNE, and NORTON, Clerk's-court, Westminster, on or before the 24th day of NOVEMBER next. The Directors do not bind themselves to accept the lowest Tender.—By order,

ROBERT PARSONS, Secretary.

Oct. 17, 18.6

TO BUILDERS, CONTRACTORS, and

OTHERS.—Persons desirous of CONTRACTING for the ERECTION of a NEW HOUSE on the PENYRHEWL ESTATE, near Penpont, may inspect the plans and specifications, and obtain all other information, on application personally, to Mr. WALKER, the White Lion, Pontypool, or by letter, to the Architects, on and after the 10th instant. Estimates to be sent to the White Lion Hotel, Pontypool, addressed "Tender for New House," and addressed to the Architects, not later than the 28th instant, who will meet the Proprietor and Contractors on the 2nd of DECEMBER, at TWO o'clock p.m. at the above Hotel, to open the Tenders, but they do not bind themselves to accept the lowest or any Tender.

BIDLAKE and LOVATT, Architects, Wolverhampton

CLERKENWELL.—The Vestry of this

parish will meet at the Vestry-hall, Upper Rosoman-street, on WEDNESDAY, the 3rd of DECEMBER next, at TWO o'clock in the Forenoon, to receive TENDERS and to contract for ERECTING a new PUMP, with the requisite apparatus thereto, in Amwell-street. The specification may be seen and particulars obtained, between the hours of TEN and FOUR daily, at the Vestry-hall. Where Tenders sealed and directed "Tender for Pump," must be left on or before TUESDAY, the 2nd day of DECEMBER.

THOS. CROMWELL, Clerk.

PENMAEN PARSONAGE-HOUSE.—

Builders are hereby invited to send in TENDERS for the ERECTION of a PARSONAGE HOUSE, at Penmaen, in the parish of Mynyddyslwyn, near Newport, Monmouthshire. The plans and specifications can be seen on application to the Rev. REES JONES, at Myrtle grove, Blackwood, Newport, from MONDAY next, the 17th instant. Tenders to be forwarded to Mr. NORTON, Architect, 24, Old Bond-street, London, on or before the 1st of DECEMBER.

TO BUILDERS.—BOROUGH of WAL-

SALL. The Town Council of the Borough of Walsall, acting as the Burial Board, are prepared to receive TENDERS for the ERECTION of TWO CHAPELS, ENTRANCE LODGE, and ENTRANCE to the new Cemetery for the said Borough, according to Plans and Specifications which may be seen at the Town Clerk's Office, Bridge-street, Walsall, on and after MONDAY, the 24th of NOVEMBER, instant. The Board do not pledge themselves to accept the Lowest or any Tender, and the Contractor will be required to enter into a Bond with one or more sufficient sureties for the due satisfaction of the Board, for the due performance of the Contract. Sealed Tenders, endorsed "Tender for Cemetery Buildings," to be sent to the Town Clerk's Office on or before TUESDAY, the 2nd day of DECEMBER next.

SAMUEL WILKINSON, Jun. Town Clerk.

Walsall, November 13th, 1856.

[*For remainder of Contracts see next page.*

CONTRACTS.

TO BRICKMAKERS, SCAVENGERS, and OTHERS.—The Crown Estate Paving Commissioners do hereby give Notice, that they are ready to receive TENDERS from parties willing to contract for the REMOVAL during the year 1857, of the DIRT, CINDERS, and ASHES from the houses, buildings, and premises under their jurisdiction in that respect. Forms of Tender and further particulars may be obtained on application to me here, where Tenders, according to such forms, sealed, addressed to the Crown Estate Paving Commissioners, and endorsed "Tender for Dust," are to be left, at or before THREE o'Clock on WEDNESDAY, the 3rd day of DECEMBER, 1856.

FRANCIS ADAMS, Clerk to the Commissioners.

1, Whitehall place, Nov. 17, 1856.

MARBLE. — The ITALIAN MARBLE COMPANY have just landed, and constantly keep an assortment of MARBLE MORTARS and GARDEN VASES of all dimensions. Orders executed for the above, and every description of Italian works of art. Veins and Sicilian marble in blocks of all sizes — apply at Bridge Wharf, Millbank, adjoining Vauxhall bridge, to WILLIAM W. BONNIN, secretary.

TO BUILDERS, MASONS, AND OTHERS.

THE largest STOCK in England of MARBLE in Blocks and Slabs, veined, Bardilla, dove, black, black and gold, Sienna, St. Ann's, statuary, serpentine, verd antique, &c. Portland, Hareshill, Park spring, and other stone, in blocks, slabs, landings, and headstones. Yorkshire paving, granite curb, &c. All as desired, packed and forwarded by any part of England. THOMAS JACKSON, Marble and Stone Sawing-Mills, Commercial-road, Pimlico, London.

MARBLE GALLERIES, 17, Newman-street, Oxford-street.—Mr. ALFRED E. EDWARDS, (towards of ten years with the London Marble Company), has opened the above premises, lately in the occupation of Bailey, the celebrated sculptor, on lease for the firm of EDWARDS, EDWARDS, and COMPANY, with the largest stock of BRITISH and FOREIGN MARBLE CHIMNEYPIECES, &c. &c. in London. EDWARDS, EDWARDS, and CO. solicit the favour of an inspection of their stock by architects builders, and others connected with the trade; feeling sure to secure them that for design, style of execution, and price, it will be found unrivalled. Estimates for every description of marble work.

MARBLE and STONE CHIMNEYS.—15 MARBLE CHIMNEYS of various le ness and colours, most of them fixed, are now on view at the Cambridge Heath Marble Sawing-Mills. The proprietor has again enlarged his workshops, and erected so much improved machinery, so as not only to compete, but is able to manufacture more, and consequently cheaper than any house in the trade.

The Trade supplied

MARBLE CHIMNEY-PIECES.—The nobility and gentry of the United Kingdom who are building or refitting their mansions are respectfully invited to inspect the most Extensive Collection of MARBLE CHIMNEY PIECES lately imported from the Continent. They comprise Statuary, Giallo di Sienna, Vert Rouge, Dove, Black and Gold, Rouge de Belmont, Arcadia, and other choice foreign marbles, and are designed with great taste, and executed by first class artists. On sale, at the show rooms of Messrs. EVANS, SON, and CO. King William-street, London-bridge.

MARBLE CHIMNEY-PIECES, and every other description of marble work supplied to builders and the trade at about HALF the USUAL PRICE, in many instances less than slate.—Manufactured by the LONDON and CONTINENTAL MARBLE COMPANY, at their own Quarries in France and Belgium. Office and Depôt, 3, Crooked-lane, London-bridge. Estimates given for works to any amount.

LLOYD'S MARBLE WHARF, Thames-bank, Pimlico, adjoining Vauxhall-bridge.—Italian Statuary, Veined, Sicilian, Dove, Sienna, and other Marbles, for Sale, at import prices. A resident manager on the wharf at all hours.

TO SPECULATORS. — Any Person who would JOIN in WORKING a valuable QUARRY, and act as Agent in London if desired, would find it a most remunerating speculation. The only capital would be machinery, which would cost some 2 or 3 hundred pounds. The stone and all bare of the best quality, and will pay 50 per cent. on the outlay. The stone is heavier than granite, and fit for every sort of ornamental work, such as chimney-pieces, monuments &c. &c. The lime-kilns now at work will prove all the expenses. Guarantee against losses.—Address, MAJOR, Office of "The Builder."

EDGE-RUNNER or CRUSHING-MILL for SALE, with bed-stone and shaft, all complete, suitable for grinding lime, chalk, plaster, &c. Several FRENCH BURR STONES, and one superb 4-cut-opening TURNING LATHE.—Apply to C. T. CHRISTIE, Millwright and Engineer, 113, Vauxhall-walk, Lambeth.

STONES, GRANITES, SLATES, &c.—W. and J. FREEMAN supply the various British and Foreign Stones, Cornish and Aberdeen Granites, in scappled blocks or worked to specification. Also, the usual quarry worked articles of flags, landings, &c. direct from the quarries to Liverpool, Hull, or any of the outports (for exportation or otherwise), or rail to any part. Office and Show-room. Stocks of each description always ready for immediate delivery from their Wharfs, Millbank-street, Citt-road Basin, and (adjoining Commercial Docks) Deptford.—Office, 27, Millbank-street, Westminster.

RAWDON-HILL STONE.—Messrs. TRICKETT and PERKIN are prepared to execute orders to any extent for their most admired Building Stone. Depôts where large stocks are kept No. 3, Stone-wharf, Great-Northern Railway Station, Battle-bridge; Victoria Stone-wharf, Millwall, Poplar. Blocks quarried to suit customers for columns, cornices, landings, steps, lintels, templets, slabs, &c. Delivered to any part by vessel, railway, &c.

"This stone when better known, must come into extensive use I should think it exceedingly suitable for the London market."

C. L. Dresser, F.G.S.

Address, JOHN TRICKETT, Headingley, Leeds, Yorkshire; or, SAMUEL TRICKETT, Victoria-wharf, Isle of Dogs, London.

N.B. A large quantity of Foundation Landings for sale.

GATES and GEORGE, CAEN, AUBIGNY, and GENERAL STONE MERCHANTS, CAEN WHARF, ROTHERHITHE, LONDON.

STONE! STONE! STONE! — To the TRADE.—The cheapest place in London for Portland and Bath Stone, Yorkshire Landings, Steps, Curb, Paving, Self-face Slab, Granite, and all kinds of Rough Stone, Broken Road Materials, and every other description of stone, at JOHN KNIGHT and SONS, Devon Wharf, Mile-end. York-tooled paving, 8s. 6d. per 100 feet; slab for hearths, 4d. per foot sup.; for chimney-pieces, 8d. per foot sup.; 8 by 3 window-sills, 6d. per foot run; 13 by 3 coping, 6d. per foot run; box chimneys (any opening), 8s. 6d. each. Terms cash on delivery.

CAEN and AUBIGNY STONE.—P. FOUCARD, Stone Merchant and Quarryman. Cargoes shipped to order from Caen to any port. Contracts taken for any quantities. Depôts: Granite Wharf, East Greenwich; Lett's Wharf, Waterloo-bridge. Office: 246, High-street, Southwark, near the Town-hall.

MARKET-WHARF, REGENT'S-PARK-BASIN.—WEST-END DEPOT, for Yorkshire Paving, Portland and Derby Stone, Bangor Slates, Slabs, &c. Also Bricks, Lime, Cement, Plaster, Tiles, Laths, and Fire Goods. SCOLES and WOOD invite the attention of Builders, Masons, and others, to their Stock as above, where everything will be charged at the lowest prices. Headstones, Ledgers, Steps, Landings, &c. cut on the shortest notice. Country orders promptly attended to.

RANSOME'S SILICIOUS STONE.—All kinds of ARCHITECTURAL EMBELLISHMENTS executed in this beautiful and indestructible material, at prices not exceeding the ordinary cements. Full particulars furnished on application to Mr. FRED. RANSOME, Whitehall wharf, Cannon-row, Westminster: or Patent Stone Works, Ipswich.

GRANITE.—The Welsh Granite Company, Carnarvon, supplies Pitching or Paving Sets of this Material to order. The Sets, which have for several years been extensively used in Manchester, Bristol, Leeds, and other large towns, combine in a higher degree than any others, the qualities of roughness in wear and durability. The stone is also well adapted for foundation courses, plinths, &c. for public buildings and for mill-stones.

GRANITE.—King William and Nelson Monuments, Plinth and Steps of the Royal Exchange, and Terraces at the Crystal Palace—Supplied by the Haytor Company under Royal Charter. For terms, apply to Mr. G. HOAR, Haytor Granite Office, 1, Millbank-row, Westminster.

GRANITE. — The Cheesewring Granite Company, Liskeard, Cornwall.

London Agents—THOMELIES and TAYLOR, 64, Old Broad-street. Manager—JAS J. TRATHAN, Liskeard.

This Granite is selected for the New Westminster-bridge.

JOHN BAZLEY WHITE and BROTHERS, MARBLE MERCHANTS, MILLBANK-STREET, WESTMINSTER.

Marble of all kinds and of best quality, in block and slab. Marble masons and

BATH STONE OF BEST QUALITY.

RANDELL and SAUNDERS, QUARRYMEN AND STONE-MERCHANTS, BATH.

List of prices at the quarries and depots, also cost for transit to any part of the kingdom, furnished on application to Bath Stone Office, Corsham, Wilts.

WESTMORELAND SLATES.—TO BE SOLD, a bargain, about Fifteen Tons.—For price and further particulars apply to J. J. Glassock, Bishops Stortford.

SLATE.—The Bangor Royal Slate Company have now on hand a LARGE ASSORTMENT of ROOFING SLATES, blue and green, of the usual sizes, which they are prepared to supply on the usual terms, for shipment from their depôt, at Bangor, or to transmit by railway. Also Slabs of all sizes.—Orders to be addressed to Mr. EDWARDS, Manager, Royal Slate Quarries, Bangor.

SLATE.—An assortment of the best BANGOR ROOFING SLATE ON SALE, at Bridge-wharf, Millbank.—Apply to Mr. GEORGE BAXTER, Foreman.

PARIS EXHIBITION. — ENAMELLED SLATE. TWO FIRST CLASS MEDALS.—Mr. MAGNUS is the only exhibitor whose productions received this double honour; also the Prize Medal at the Great Exhibition of 1851, and the Medal of the Society of Arts in 1854. This beautiful material, handsomer and more durable than marble, is now finding its way into palaces, into the mansions of the nobility at home and abroad, into the highest class of public buildings, as well as into humbler dwellings. The cost is immeasurably below that of any other production that can at all compete with it. It is applicable to a variety of useful and ornamental articles, too numerous to be separately specified. Among the chief are chimney-pieces and ornamental stoves for all apartments; plain and exquisitely decorated slabs for the tops of lavatory tables, chiffoniers, consoles, &c.; baths, baptistries, altar-tablets, pilasters, columns, vases, pedestals, and brackets; wash-stand tops, billiard tables, linings to halls, vestibules, and dairies. Price-lists can be had on application to Mr. MAGNUS, 39 and 40, Upper Belgrave-place, Pimlico.

N.B. Plain slate work executed from a single article to the most extensive contracts, for home and abroad.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality. They have been used at the British Museum, National Gallery, Bethlem Hospital, various Lunatic Asylums, the Ordnance Works, Model Prison, Pentonville, and other Penitentiaries; Malting Floors in Bedfordshire and Hertfordshire, Breweries, the Race Stand at Brighton, Portsmouth Barracks, and are kept in stock in large quantities by Messrs. FREEMAN, Millbank-street; and at Messrs. Brabys, Belvidere-road, where terms may be obtained.

O. M'CARTHY, CARMAN, and SAND and CEMENT MERCHANT, Whitefriars Wharf, White friars, Fleet-street, City. Sand, from above or below bridge, delivered by the yard or per barge. Ballast screened or unscreened, by the yard or per barge. Stocks, lime, and old bricks. Any rubbish delivered per barge, in any quantity, alongside the Thames.

CROGGON and COMPANY, Manufacturers of PATENT ASPHALTE ROOFING, BOILER, RAILWAY, SHEATHING and INODOROUS FELT, For Damp Walls, and Lining Iron Houses, 2, DOWGATE-HILL, LONDON.

ASPHALTE.—GERVASE FOOTTIT TRINIDAD ASPHALTE WORKS, ROTHERHITHE, LONDON. Established 1834.—TRINIDAD, SEYSSEL, and BRITISH ASPHALTES, manufactured by Steam power, laid down in the best manner or supplied in any quantity. Information for using forwarded with material. Post-office orders or reference in London promptly attended to.—Estimates given for every kind of the above work.

ASPHALTE, FOREIGN and BRITISH, for FLAT ROOFING and every description of PAVING, especially in damp situations, FROM 2s. 9d. PER SQUARE YARD.

Country Builders supplied with Asphalte for footings and barn floors, with instructions for using it.

Apply to JOHN PILKINGTON, Poloneeau and Limmer Asphalte Office, Monument-chambers, 14, Fish-street-hill, London.

N.B. Importer of the PURE ROCK ASPHALTE, from the LIMMER Mines in Hanover.

AUSTIN'S IMPERIAL PATENT SASH and BLIND LINE can be obtained of all IRONMAKERS, IRONMONGERS, MERCHANTS, FACTORS, and WHOLESALE HOUSES, in TOWN or COUNTRY. Established 1824.

J. AND RILEY CARR, Bailey-lane Works, Sheffield, Manufacturers of Circular and Vertical Mill-saws, Veneer Segments, &c. Improved Guilleting, Topping, and Engineers' Files of superior quality. Patent Fluting Machine and Moulding Irons of every description.

COOK'S NEW PATENT COMPOSITION.

By Her Majesty's Royal Letters Patent.

TO IRON MANUFACTURERS, SHIP BUILDERS, Engineers, Iron Founders, Owners of Iron Ships and Steamers, Sugar Refiners, Zinc Manufacturers, Paper Makers, Oil-cloth Printers, Manufacturers of Mirrors, &c. By Her Majesty's Royal Letters Patent, COOK'S NEW PATENT COMPOSITION for COATING EXPOSED SURFACES, or SURFACES LIABLE to DECAY, OXIDATION, or DETERIORATION. Cook's New Patent Composition has, without the aid of a single advertisement, established its character as a preventive of Oxidation or Rust on all Metallic Substances,—as a Coating for Roman or Portland Cement, or Brickwork, to prevent their inherent alkali or salt from throwing off the Paint; and for Coating Walls of Rooms previous to Papering or Painting.

From Mr. John King, Builder, Liverpool.

"Saw-Mill, Scotland-road, Liverpool, 21st May, 1856.

Mr. J. E. Cook.—Sir: I had your New Patent Composition applied to the front of my house, which is built of brick, and must state that I never found any coating which answered the purpose at all equal to it; and I feel confident that if its capabilities were generally known it would come into universal use. I may add that it rendered the bricks quite impervious.

Yours respectfully, JOHN KING."

From Mr. Alexander Paterson, jun. Agent for the London and Manchester Plate Glass Company,

"Greenock, March 1, 1856.

Mr. J. E. Cook.—Dear Sir,—I have tried your Composition upon mirrors, and find that it effectually protects them from the effects of wet or damp.—I am, dear sir, yours truly,

ALEX. PATERSON, Jun."

From Mr. John M'Naught, House Painter and Decorator, Greenock.

"Mr. J. E. Cook.—Dear Sir: I had your 'Patent Composition,' applied to the outside of a house which was finished in Roman cement, and which is situated in an exposed part of the sea-coast, and, I am happy to state, with the most favourable results. I may also state that I gave the Roman cement one coat of your composition, and thereafter finished it with two coats of oil paint, in imitati n ashler, and have no hesitation in pronouncing it a first-rate job, there being no appearance of either alkali or salt of any kind coming upon the coating, as is usual in ordinary cases of common oil painting. I have no doubt but when your composition is better known, the use of it must become general.

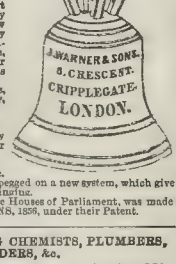
Yours truly, JOHN M'NAUGHT."

Extract from a Letter in "The Builder," from F. G. Mulholland, Esq. the eminent Government Contractor.

"I have used the Composition in Engineering and Architectural Work, and in fact applied it in all ways and for all purposes where such a material was required. In conclusion, I consider the Patent Compound when properly manufactured) so truly valuable for all parties connected with the Building Business generally, that I should at the first have sent you full particulars for insertion in your widely-circulated paper.

(Signed) F. G. MULHOLLAND."

COST for ONE COAT, about 3½d. per SQUARE YARD ONLY.



HART AND SON, IRONMONGERS AND MANUFACTURERS, 53, 54, 55, 56, & 57, WYCH-STREET, STRAND, London.

LOCKS, HINGES, HANDLES, BOLTS, &c. First-class Prize Medal, Paris Exhibition, 1855. Specimens at the Hardware Court, Crystal Palace, Sydenham.

LOSH, WILSON, and BELL, NEWCASTLE-ON-TYNE. Manufacturers of Bar Iron, Railway Bars, Forge and Engine Work, Cast-iron Goods, and STEWART'S PATENT CAST-IRON GAS and WATER PIPES. Office, No. 7, Bise-lane, London.

JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS.

J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior tone, truer in form, and at less cost than has heretofore been accomplished.

Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any size, note, weight, singly or in peals.

TUNED BY MACHINERY.

Stocked and wheeled ready for fixing. Old Bells recast or taken in exchange.

MUSICAL HAND-BELLS tuned to the Chromatic Scale, with improved Clappers, and pegged on a new system, which give superior tone and facility for ringing.

The great 16-ton Bell, for the Houses of Parliament, was made by JOHN WARNER and SONS, 1858, under their Patent.

TO MANUFACTURING CHEMISTS, PLUMBERS, BUILDERS, &c.

ANDREW CLARK and COMPANY, PLUMBERS, THE BEAR GARDEN LEAD WORKS, SOUTHWARK.

Sole Manufacturers of Delbruck's Patent Autogenous Soldering Apparatus, invite the attention of Manufacturing Chemists to their Patent method of

UNITING LEAD TO LEAD WITHOUT SOLDER.

Leaden Chambers, or any leaden vessels, made or repaired by this process, making them complete, without the introduction of any foreign metal.

PLUMBERS and BUILDERS can be SUPPLIED with SHEET LEAD and PIPE, cut to any dimensions, and EXCHANGED for OLD LEAD, on the LOWEST TERMS.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not congregate in damp situations. Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements read at the Institute of Civil Engineers, to be obtained from the Works, JOHN BAZLEY WHITE, and BROTHERS, Millbank-street, Westminster, who prepare one quality only f Portland Cement.

ATKINSON'S CEMENT, so long known and esteemed in London for plastering purposes, is a quick-setting Cement, that requires no colouring.—Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster; and Seel-street, Liverpool.

KEENE'S and PARIAN CEMENTS and PIENCH PLASTER, for internal uses. These well-known hard Stuccos dry quickly, and can be painted upon within a few days. Made and sold by JOHN BAZLEY WHITE and BROTHERS Millbank-street Westminster.

PORTLAND CEMENT WORKS, NORTHFLEET, Kent.—KNIGHT, BEVAN, and STURGE, Manufacturers only of first-class quality, for the home and foreign trade, Portland Cement is manufactured at these works with especial reference to its destination, whether for stuccoing, brickwork, blocks for breakwaters, tidal work, or otherwise.—London Wharf, Belvedere-road, Lambeth.

PORTLAND and BATH CEMENT.—FULLWOOD THOMPSON and CO. request the attention of Merchants and Contractors to the quality of their Portland and Bath Cement, which they manufacture on an improved system, securing regularity of strength and colour, and at a less cost than is attainable by most other makers.

These cements set under water in a few minutes, and are not affected by extreme heat or cold.

FULLWOOD THOMPSON & CO. will be happy to send prices and samples in reply to application by post. They deliver free into the Bristol and Exeter Railway Company's trucks at their works, or free on board in the Port of Bridgewater.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL. - Light, Dark, and Portland Cements equal to any made. Manufacturers also, and Dealers in Plaster, Paris White, Vases, Hyd. Lime, Lime, Laths, Slates, and Slate Slabs, Fire bricks, Grindstones, Percent Chimney-tops, ditto Vases, Ridging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Portlan

JOHNS and CO.'s PATENT PERMANENT STUCCO WASH (perfectly non-absorbent), STUCCO, CEMENT, STUCCO PAINT. — CLARK and BENGOUGH, Manufacturers, Grand Surrey Canal Bridge, Old Kent-road. Office, 4, George-yard, Lombard-street.

PORTLAND and ROMAN CEMENT. PLASTER of PARIS

Manufactured by J. M. BLASHFIELD, at Millwall, Isle of Dogs. Warehouse, No. 1, Wharf, Paddington-basin.

CHARLES RICHARDSON, 3 & 6, SOUTH-WHARF, PADDINGTON BASIN. COWLEY AND KENT BRICKS, PORTLAND, ROMAN, AND OTHER CEMENTS, TAMWORTH, GLAZED SEWAGE PIPES BLUE VITRIFIED BRICKS, COPINGS, PIPES, &c.

3 & 6, South Wharf, Paddington.

NOTICE.

CHARLES RICHARDSON takes the earliest opportunity of informing Engineers, Architects, Contractors, and others, that he is now bringing GREAVES'S BLUE LIAS LIME per the Great Western Railway from Harbury to Bull's-bridge and Paddington, from whence it can be delivered alongside any part of the river Thames, canals, or railway stations in London the day after it is burnt and ground, in any quantity, and at a great reduction in price.

All applications for prices and terms will meet with prompt attention.

N.B. Please observe the lime is ground at the works, not in London.

BLUE LIAS LIME.—Messrs. GREAVES and KIRSHAW having completed their Works on the Birmingham and Oxford Line of the Great Western Railway, at Harbury, are now prepared to supply LUMP and GROUND LIME of the best quality, direct from the kilns, to all the Stations on the Great Western Railway.—Greaves's Blue Lias Lime.—Portland, Bath, and Lias Cements. Works, at Harbury, Stockton, and Wilmcote.—Office, at Warwick

BATH, PORTLAND, and ROMAN CEMENTS.—The London and West of England Cement Company can offer to the Trade the best natural HYDRAULIC CEMENTS at reduced prices. The Company particularly recommend the best quality of their Bath Cement for all modelling cornices, decorations, &c. as having all the qualities requisite for an interior cement, and being quite unaffected by extremes of weather. The Company also supply BLUE LIAS LIME, lump and ground, which will carry more sand than any in the market.—Communications to be addressed to the General Offices, 80, Old Broad-street, London; to Mr. MONUMENT, 4, Caroline-place, City-road; to Mr. TIMEWELL, the Depôt, 9, North Wharf-road, Paddington; or to the Works, Dunball, Bridgewater.

SOUTHAM BLUE LIAS LIME DEPOT. Glazed Stoneware Sewage Pipes. Brick, Lime, and Cement Merchants, TATHAM and CO. 14, South Wharf, Paddington.

PORTLAND and BATH CEMENTS. TATHAM and CO. 14, South Wharf, Paddington.

PARIAN CEMENT, reduced in price 25 per cent. This article is valuable for inside stucco, and especially for skirtings, for flooring on brick arches, &c. It takes paint in a few hours after its application on walls or laths, is without efflorescence, and may be papered in a couple of days. A finer quality forms a beautiful Scagliola, with any admixture of colours. Manufactured by FRANCIS, BROTHERS, Cement Works, Nine-elms, London.

CEMENT.—ROMAN and PORTLAND CEMENTS, and PLASTER of PARIS, manufactured by C. J. HILTON, can be had in any quantity, wholesale or retail, at his wharf, 8, Upper Thames-street, London; and also at the manufactory, Faversham, Kent.—N.B. These Cements supplied for shipment, on advantageous terms.

DAVIES and NORMAN, CROWN WHARF, GREAT SCOTLAND YARD, BLACKFRIARS, PORTLAND CEMENTS, LIME, BRICKS, TILES, SLATES, FIRE GOODS, &c. STONEWARE PIPES, PANS, TRAPS, &c. A Liberal Allowance to the Trade.

THE PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs. ROBINS and Co. to WHOM THE PRIZE MEDAL WAS AWARDED in 1851, are prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured from the finest materials. Cement is applicable to orders received at Great Scotland Yard, or at the Works.

HUBBUCK'S PATENT WHITE ZINC PAINT,

The Permanent White of the Ancient Artist.

HUBBUCK and SON, the Original Manufacturers, are enabled, by their process, which is patented, to supply Pure White Zinc Paint at the price of White Lead. Neither heat nor tropical climes act upon it. It is entirely free from any poisonous or permicious property. Those direful maladies paralysis and painters' colic, will be altogether avoided. The Powdered White Zinc may be had ready ground in Oil, and where it is used with Size, Varnish, &c. To prevent the prejudice against Zinc paint which the adulterated article must otherwise produce, it is now sold by the Wholesale Paint-dealers in Oriental Packages, each cask stamped, HUBBUCK—LONDON—PATENT. And when so marked, the quality is guaranteed. THOMAS HUBBUCK and SON, the Original Wholesale Manufacturers, Paint and Varnish Works opposite the London Docks, London.

N.B. OLD ZINC AND ZINC CUTTINGS BOUGHT TO ANY EXTENT FOR REFINING.

BLUE LIAS LIME.—CHAS. NELSON begs to offer to consumers a supply of Blue Lias Lime direct from his Quarries in Warwickshire, the quality of which has been tested by several of the largest building firms in the metropolis and approved by them; and those who have favoured C. N. with their patronage during the last three years have always expressed themselves satisfied with his system of weighing or measuring the lime. When the lime is delivered on board, the master has instructions to produce (on demand) the canal bargee's pass, by which the purchaser may know the exact weight delivered.—Orders addressed to the London Depôt, 13, South Wharf, Paddington, J. D. BLYTH, Sole Agent, will have immediate attention.—Quarries and Manufactories, Stockton, near Southam, Warwickshire.

NOTICE.

SOUTHAM HYDRAULIC BLUE LIAS LIME.

WILLIAM OLDHAM begs to inform those parties requiring genuine Hydraulic Blue Lias Lime, that he is prepared to deliver the best quality of ground and lump, into boats, at the Works.—Address, WILLIAM OLDHAM, Blue Lias Lime and Cement Works, Southam.

GREY STONE LIME WHARFS, 12, UPPER GROUND STREET, Blackfriars (Surrey side), 7, NORTH WHARF ROAD, Paddington.

WILLIAM PETERS begs to inform the trade he is in a position to supply the best GREY STONE LIME in any quantities from the above wharfs, or per barge direct from the kilns.

Large Grey Stone, or Grey Chalk, free on board at Works, 1s. 8d. per ton.
Small ditto, ditto, 4d. per ton.
Barges loaded in a few minutes.
Wouldham-hall Grey Stone Lime Works, on the Medway, near Rochester.

CHADWICK'S CEMENTS.—To Railway and Dock Directors, Gas and Waterworks Companies, Coal-Mine Proprietors, Builders, Contractors, &c. JOHN CHADWICK, Manufacturer of the Patent Lithic, Roman, and Portland Cements, is prepared to enter into contracts with any of the above branches that may favour him with their orders. The advantages to be derived from the above Cements, manufactured by J. C. over all others, are their extraordinary hydraulic properties.—Samples and references may be had on application either at the Works, Ashton New-road; or the Warehouse, 5, Broom-street, Shude-hill, Manchester.

TO LIME and CEMENT DEALERS, TILE and DRAIN-PIPE MANUFACTURERS, and OTHERS.—A Brick Merchant having a well-situated WHARF fronting the Thames at Hammersmith, where there is an open area for the above local trade, and only requires it for the loading and unloading of its coal, would be happy to treat with any one for LETTING the whole or part, which has every requisite for carrying on a good trade. A timber and sawing yard could be added advantageously.—Further particulars of Mr. LLOYD, Brickmaker, Shepherd's-bush, Mydd esex

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings of good and sound quality, constantly on sale at 1, Dukes Brick Piles, which are only a quarter of an hour's walk from the City. H. D earnestly invites purchasers to favour him with a visit, in order to inspect h's stock, and receive f r estimates.

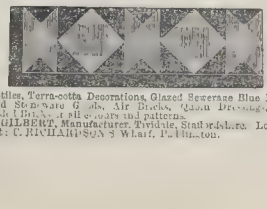
Malm Place, half-washed Stocks, and Place Bricks, also on sale. These bricks are sound, well burnt, and unusually free from chalk, and a very large proportion of the stock being suitable for external facing.

Apply to HENRY DODD and CO. at the Counting-house, Horton Brickfield, Grange-walk, near the Rosemary Branch, Islington.

N.B. Light-coloured Pit Sand of approved quality constantly on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand.

BRICKS.—Mr. Rydon having made more bricks than he requires for the builders on his estate, Highbury, New-park, would be willing to enter into arrangements with builders and others for supplying first-class STOCK and RED BRICKS upon advantageous terms.—For particulars, apply at the Estate Office, Dell's Farm, Stoke Newington Green.

THE BEST HERTFORDSHIRE MALM SECONDS;
THE BEST WHITE SUFFOLK and RED FACINGS:
WHITE SUFFOLK PERFORATED BRICKS;
DEEP-RED RUBBING BRICKS
Also COWLEY and KENT STOCKS, in any quantities
J. EASTWOOD and SONS, Belvidere-road, Lambeth; and Surrey-canal-bridge, Old Kent-road, Surrey.
N.B.—Lime, Cement, Slates, Fire-bricks, &c. and all kinds of Building Goods.



BRICK-FIELDS, QUEEN'S-ROAD, PECKHAM, SURREY
(Within a short distance of the five bridges).
THE BEST MALM-CUTTERS, SECONDS, PICKINGS, and PAVIORS, in any quantity.
Also, STOCKS, of FIRST QUALITY.
J. EASTWOOD and SONS, Belvidere-road, Lambeth.

BRICKS of all kinds (clamp-burnt or kiln-burnt), Lime, Chalk, Chalk Rubbish for brick-making, Flints for building and pottery work, Foundry Loam, Whiting Whiting Sand for ashphalte, Land Drain Pipes, Patent Drain Pipes, Gas tell for brick-making, &c. &c. sent by barge from Messrs. MEESON and CO.'S works at Grays, Essex, to any part of the Thames, the various canals, the river Lea, &c. or by rail to any station on the London and Southend and Eastern Counties lines, or any railway connected with them. Vessels of 500 to 600 tons can load alongside the wharves at Grays. At MEESON and CO.'S wharf and kilns, Bow-bridge, Stratford, Essex, the above-named articles can also be procured, as well as all kinds of fire goods (both Welsh and Newcastle), fire-clay, Flare-burnt Lime, and Marble and Temper Lime; and here lime is packed in hogsheads, casks, jars, &c. for exportation.

General Office—No. 12, GEORGE-YARD, LOMBARD-STREET.

Letters addressed to Grays Essex, will meet with immediate attention.

BLUE, RED, and WHITE FLOOR-TILES.

Roof-tiles, Terra-cotta Decorations, Glazed Sewerage Blue Pipes, Glazed Stoneware Gullis, Air Bricks, Quoin Dressings, and Moulded Bricks, of all sizes and patterns.

W. GILBERT, Manufacturer, Tividale, Staffordshire. London Depôt: C. RICHARDSON'S Wharf, Paddington.

THREE HUNDRED THOUSAND BRICKS and BRICKFIELD, &c. TO BE DISPOSED OF, having a siding to railway at Chadwell-st Mary Station.—Apply to Mr. DEGGLE, Upnor, near Rochester.

TO BRICK-MERCHANTS and OTHERS. Parties willing to SUPPLY about 200,000 BRICKS, near King's cross and will take a part built House in lieu of payment, may be treated with.—Letters, addressed to A. B. Mr. Cliff's, Portland-place, 116, Edgware-road, Paddington, will have immediate attention.

TO FIRE-BRICK and SANITARY TUBE MANUFACTURERS.—TO BE DISPOSED OF, either the entire, or two-thirds of the interest in an established Manufacture of FIRE-BRICK and SANITARY TUBES, which has been advantageously carried on for several years, and admits of considerable extension. The firm have a lease of about seventy-five acres of land abounding in fire-clay of the finest quality; there are sheds and drying-rooms, and other erections adapted to the requirements of the trade; and the machinery is of the most approved description, including Spencer's patent presses. Valuable veins of coals and iron stone, crop out in immediate connexion with the beds of clay. Facilities for carriage by canal, or rail, exist within an easy distance of the works, which are most conveniently situated for the populous districts of Staffordshire. Wiltshire, and Hampshire. There are large contracts on hand sufficient to engage the concern for some time to come to persons of capital, and with a practical knowledge of the manufacture, the opportunity is a most desirable one. Every additional information will be furnished to bona fide applicants.—Apply to Mr. H. L. SYERS, Carleton-road, London.

COLES, SHADBOLT, and CO. CEMENT and PLASTIC MANUFACTURERS, LIME BURNERS, Brick, Tile, Drain-pipe, Hair Lath, and Fire Goods Merchants, ST. JAMES'S and THORNHILL WHARFS, Caledonian-road, London.

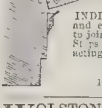
BEADON'S PATENT IMPERISHABLE GUTTER TILES.

For Spouting Roofs of Houses (either old or new, whether of thatch, slate, or tile, and other structures.

SOLE AGENT,

J. B. LAWES, 1, Adelaide-place, London-bridge.

This is the cheapest kind of spouting known; for, besides its lower cost, it will last without paint or repair as long as the building itself. It will bear the weight of any ladder; and in case of accident a labourer can repair it. It requires the room of a large amount of roofing, effecting a great saving in slates, &c. &c. It is especially applicable to the backs of houses in town, cottages, and agricultural buildings.



Price 4d. each tile of about 13 inches long; stop-ends and outlets, 6d. Any mason can put them up, or, if over 100 feet are required, a man will be sent to fix them at 8d. per foot. This charge to include tiles (delivered in Agent's yard), cement, and labour. May be had in London, Gloster, Bridgwater, and Ruby

MINTON and CO.'S ENCAUSTIC and other PATENT TILES, for Churches, Entrance Halls, Conservatories, Balconies, &c.; Antique, Geometrical, and Alhambric Mosaics, manufactures of a highly decorative character, and extreme durability, Slabs and Tiles for Fireplaces and Hearths, Covings for Grates, Door Furniture, White Glazed and Ornamental Tiles for Baths, Dairies, and Kitchen Ranges, may be had, in great variety at their Warehouses, 7, Albion-place, Blackfriars-bridge, London; and at their Manufactory, Stoke-upon-Trent, Staffordshire.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 21, WHARF, Macclesfield-street North, City-road Basin. Secondly, that the trade may not be misled, "TERRO-METALLIC" is the exclusive right of the Proprietor; and, thirdly, that the "REPORTS OF THE JURIES," page 281, of the Great Exhibition, rank the Manufactories known so long as "Peake's Patentees," Tunstall, Staffordshire, as the first of the kind in the world.

PATENT TERRA-COTTA. Tracery for Parapets and Terraces, Mullions, Pinnacles, Moulded Bricks, Coats of Arms, Crests, Label Mouldings, Friezes, Trusses, Vases, Balusters, Capitals and Bases of Columns, Paving, Facing Bricks, Coping, Kitchen and other Sinks, Chimney Shafts and Tops, and numerous other Articles, Manufactured by J. M. BLASHFIELD, in Patent Imperishable Terra-Cotta, at Mill-wall, Isle of Dogs; and sold at No. 1, Wharf, Praed-street, Paddington-basin

TO ARCHITECTS and BUILDERS.—T. TRELOAR, 42, Ludgate-hill, Manufacturer, supplies Cocoa-nut Fibre Matting, Doormats, Brussels, &c. of the best quality, on the most reasonable terms.—Warehouse, 42, Ludgate-hill.

DRAUGHTS of COLD AIR round DOORS, sashes, or cupboard doors and windows, EFFECTUALLY PREVENTED by GREENWOOD'S patent INDIA-RUBBER STOPS, the most simple and effectual method of making air tight joints to joiners' or cabinet work, old or new. These Stops can be had in any length or pattern. Self-acting spring stops, for the hinging of doors.

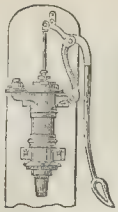
The Trade supplied.

JOHN GREENWOOD, Patentee, 10, Artillery-street West, London-bridge.

WOLSTON'S TORBAY IRON-PAINTS, warranted to stand the action of the Atmosphere, Steam, Gases, Noxious Vapours, Damps, and Salt Water, also intense Heat without blistering. These Paints have been tested for five years in Her Majesty's Dockyards, and two Official Reports made thereon, which testify that the Iron of Wolston's Torbay Iron Paint will chemically coat as much surface as three Pounds of Pure White or Red Lead, and that they resist atmospheric action better than Lead Paints. For all Public Works, Guaranteed and other Iron Roofing, Fencing, Shipping purposes (Wood or Iron), Stucco and Cement Fronts, economy and durability will be secured. To Builders and Painters, for all painting purposes, the season will be commenced, Manufactured at the TORBAY IRON-PAINT and ORE WORKS, Brixham, Devon; London Depôt, Chamberlain's Wharf. Letters or orders addressed to Mr. WOLSTON, at the Works, or No. 34, John-street, Bedford-row, will have immediate attention.

TO BUILDERS AND PLUMBERS

The attention of the Trade is called to JOHN WARNER & SONS'



PATENT VIBRATING STANDARD PUMP,

which is recommended for the simplicity of its construction, and the ease with which it works.

By the introduction of the vibrating standard, the cumbrous carriage and expensive slings and guides are unnecessary, rendering the price considerably less than Pumps made on the old plan.

Beer and Water Engines for raising fluids from a depth not exceeding 26 feet; also, Garden Engines constructed on the same principle.

JOHN WARNER & SONS,
8, Crescent, Jewin-street, London,
Manufacturers and Patentees.

R. RICHARDS and CO.
PUMP MANUFACTURERS and ENGINEERS.

Pumps in Wrought and Cast Iron and Brass, bored by machinery, and fitted in the best possible manner, suitable for excavators, roads, brickmakers, farms, gardens, stables, liquid manure, ships, barges, well-sinking, &c. adapted for any depth. Hydraulic Pumps for deep wells.

PUMPS ON HIRE.

Pumps of any size, single or double barrel, up to double 12-in. diameter, kept ready for use at reduced prices.

N.B. The above can be worked either by hand, horse, or engine power.

Iron Pails 38s. per doz. painted.
Ditto .... 48s. per doz. galvanized.

Upper Ground-street, Blackfriars Bridge, Surrey Side.

CONTRACTORS' STEAM-ENGINES. — TO BE LET, on HIRE, or for SALE, several NEW and SECOND-HAND STEAM-ENGINES of various powers, suitable for contractors' work generally.—Apply to Messrs. MEDWIN and HALL, Engineers, Surrey Iron Works, Blackfriars-road, where they may be seen.

STEAM PUMPING ENGINES.—PATENT PORTABLE STEAM-ENGINES, from four to ten-horse power, always ready to let on hire, by the week or month, for pumping, sawing, pile-driving, raising materials, &c. &c.

Contracts taken for pumping any quantity of water.

JAMES BURTON & SONS,
Engineers and Contractors,
John's-place, Holland-street,
Southwark, London.

PORTABLE STEAM-ENGINES and PUMPS kept in Stock for Hire at reduced Prices. R. RICHARDS and CO. Pump Manufacturers and Engineers, Upper Ground-street, Blackfriars-bridge (Surrey Side).

STEAM-ENGINES for SALE, at the East London Ironworks, Cambridge-road, Mile-end-road. The best and most economical high-pressure horizontal engines always for sale.—Messrs. J. MUSTO and CO. having a large sale for these particular engines, endeavour to keep a stock either finished or in course of erection, which can be seen at their works. Satisfactory reference can be given, and engines of their make inspected at work in several parts of London. Workmanship and materials warranted.

TO CONTRACTORS. — STEAM-DREDGER, STEAM-TUG, and HOPPER BARGES.—TO BE DISPOSED OF, by Private Contract, a powerful STEAM DREDGING MACHINE, in excellent order—length over all, 88 feet, beam 26 feet, fitted with a 30-horse power condensing steam-engine and boiler with two furnaces, buckets, crabs, and every requisite; an iron clinker-built, paddle-wheel STEAM-TUG—length over all, 78 feet, 15 feet beam between paddles, fitted with 30-horse power condensing steam-engine and boiler; Twelve two-room HOPPER BARGES, with chains and crabs; one three-room ditto, and one open Coal Barge.—For further particulars, apply to Messrs PULLER and HORSEY, Billiter-street, City.

SMALL STEAM-ENGINE WANTED.—The Local Board of Health for the district of Croydon are desirous of obtaining a STEAM-ENGINE of 2 horse power, with fly-wheel and drum on the fly-wheel shaft (no boiler is required). Any person having such an engine, either new or second-hand, may send the price and particulars to Mr. THOMAS COX, Surveyor to the Board, Town Hall, Croydon, from whom any necessary information may be obtained.—By order of the Board,
HENRY RICHARDS, Clerk.

Croydon, 20th November, 1856.

WINDOW BLINDS.—TYLOR & PACE, Window Blind Manufacturers, 104, New Bond-street, and 3, Queen-street, Cheapside, London, submit the following PRICES of WINDOW BLINDS, which they can recommend as being made in the best manner:—Venetian blinds, per square foot, 9d.; best holland blinds, on rollers, 6d.; best ditto, on spring rollers, 9d.; gauze wire blinds, in mahogany frames, 8s.; perforated zinc blinds, in ditto, 1s. 10d.; outside blinds of striped cloth, 3s. Transparent blinds in great variety. Engravings, with prices and discounts to builders and the trade forwarded on application, post free.

WANTED, to BORROW £1,000. — The Local Board of Health for the district of Burnham, Somerset, are desirous of obtaining the above sum for the completion of Public Drainage Works, on mortgage of the special district rates, under the provisions of the Public Health Act, 11 & 12 Vict. cap. 63. Parties willing to advance this sum may obtain any further information on application to the Clerk, to whom all Tenders must be sent (stating the rate of interest required, and when the money can be advanced) on or before the 13th day of DECEMBER next. By order of the Board,
ROBERT SALISBURY, Clerk.

Dated Burnham, Somerset, 17th Nov. 1856.

GREAT REDUCTION IN GLAZED STONEWARE PIPES.

STEPHEN GREEN,
IMPERIAL POTTERIES, LAMBETH.

S. G. wishes to call attention to his WHOLE and HALF-SOCKET PIPES, made on the principle of PILBROW'S IMPROVED REBATED SOCKET-END, which fully secures a joint free from obstructions, and meets the demand for removing Pipes at any point.

5s. 6d. each; if fitted with PATENT AIR-TIGHT VALVES, 1s. 6d. each extra.

Also to his IMPROVED REGISTERED CLOSET PAN, with an impervious White Glaze inside, and formed to insure a Flush of Water over the entire Internal Surface. Made with or without STEPHEN GREEN'S PATENT AIR-TIGHT VALVE on the top of the Trap.

N.B. Prospectuses, with Prices and Terms, forwarded post free, as also Prospectuses of STEPHEN GREEN'S PATENT SELF-ACTING FLUSHING CLOSET, complete, with Seat and Riser, &c.

GREAT REDUCTION IN PRICE OF DOULTON'S DRAIN-PIPES.

HENRY DOULTON AND CO.

DRAWINGS AND PRICES MAY BE HAD OF J. COX, AS ABOVE.

KINSON CLAY, POTTERY, AND BRICK COMPANY, LIMITED.

THE PROPRIETORS of the KINSON CLAY WORKS and ESTATE, desirous of further developing the resources of their Property, and of increasing their means of production, have ESTABLISHED a COMPANY under the above title, which has been Incorporated pursuant to the provisions of "The Joint Stock Companies Act, 1856." An ample capital for all present purposes has been subscribed and paid, and a sufficient sum is left in reserve, uncalled up, to provide for an increased trade in all branches of manufacture and supply, with a desire to give dealers and the public confidence in the stability of the undertaking. It is intended to SUPPLY CLAY, and ALL ARTICLES of MANUFACTURE, of the best description, at reasonable prices, and the Proprietors are encouraged, by the experience of the past, to hope for a fair share of the custom of the trade in future. The resources of the Property in every department will be found fully equal to any demand, and purchasers may depend on having their ORDERS PUNCTUALLY EXECUTED.

It is requested that all Communications may be addressed to Mr. PAUL MATHEWS, the Manager, or to Mr. T. W. GREEN, Secretary, at the WORKS; to Mr. F. F. WHITEHURST, at the Company's Depôt, Bromford, Middlesex; or to Mr. JOSEPH COX, at 2 and 3, High-street, Lambeth, London. The late Proprietors gratefully acknowledge the support and encouragement hitherto received.—By order,

PAUL MATHEWS, Manager.
T. W. GREEN, Secretary.

Kinson Clay, Pottery, and Brick Company's Offices, near Poole, Dorset, October 17, 1856.

Also, for Sale, a Quantity of Cocoa Matting for Churches, at greatly reduced prices.

Apply to H. PIGGOTT, 115, Fore-street, City.

TO ARCHITECTS, BUILDERS, CONTRACTORS, AND OTHER CONSUMERS OF GLASS.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th of an inch thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th or 4 lbs. is now universally used for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, MILLS, MARKET HALLS, BATHS AND WASH-HOUSES, FACTORIES, WORKSHOPS, SHIP-BUILDING SHEDS, AND OTHER EXTENSIVE BUILDINGS.

By a carefully prepared Estimate, it has been ascertained that FOUR-FIFTHS of the ROUGH PLATE, or non-transparent Glass, consumed in the United Kingdom in 185 was manufactured by HARTLEY'S PATENT.—thus affording the most incontestable evidence of its superiority over every other article of the kind, and as being the only description of Glass suitable for the purposes above named. It combines size and strength with economy of cost, and is manufactured in sizes expressly for RIDGE and FURROW ROOFS, giving a SPAN of TWELVE FEET, at a price not exceeding, weight for weight, that of Common Crown Glass. Its non-transparency renders BLINDS UNNECESSARY, and no scorching occurs in Greenhouses glazed with it; hence the preference given to this Glass for all Horticultural purposes.

For further particulars, apply to

JAMES HARTLEY AND CO. SUNDERLAND; AND PURFLEET WHARF, EARL-STREET, BLACKFRIARS, LONDON.

Sole Maufacturers of Lockhead's Patent Perforated Glass for Ventilation.

*** *Hartley and Co.'s Glass Tariff Newspaper will be forwarded gratis, on application.*

FACING FOR BUILDINGS COMPANY—TAYLOR'S PATENT.

BUILDINGS PERFECTLY RESISTANT TO WET WITHOUT ADDITIONAL EXPENSE, OR THE USE OF COMPO,

REQUIRING THE CONSTANT EXPENSE OF PAINTING. EXTERNAL WALLS FACED WITH AN INDESTRUCTIBLE MATERIAL.

STONE-FACED BUILDINGS AT LITTLE MORE COST THAN CEMENT.

No necessity for Iron Cramps and Bond-stones, and the Stone Ashlar never injuriously weighted by the settlement of the Mortar-joints of the inside Brickwork. The INSIDE of CHURCHES and OTHER BUILDINGS FACED WITH STONE instead of Plastering. Also Dining halls, Lobbies, Staircases, &c. of Private Residences. It can be had ready for fixing from the quarries at a small cost for carriage, or prepared at home. Can be used with the ordinary Bricks of any locality, and by the ordinary workman. The CHURCH faced inside and outside in this manner, and the other Buildings at SPRING GROVE HOUNSLOW, and elsewhere, can be inspected, and all particulars obtained, of

Mr. JOHN TAYLOR, ARCHITECT, OFFICES OF THE COMPANY, 40, KING-STREET, CORNER OF CHEAPSIDE.

G. FARMILOE and SON, 118, St. John-street, West Smithfield.

PLATE-GLASS.—The THAMES PLATE-GLASS COMPANY'S PATENT GLASS GRATING LIGHTS, for Cellars, Flooring, and Ships' Decks.

The strength of these Lights equals that of iron grating, can be had in sizes to suit the largest or smallest openings: neat in appearance, not slippery to walk upon, and an unobstructed light is obtained.

The chequered Plate-Glass made by this Company is preferred to any other kind of obscured glass, from its crystal and brilliant appearance.

The prices of Plate-Glass have recently been very much reduced. Sash quality scarcely exceeds the price of ordinary sash window-glass.

This Company manufacture Plates of all lengths, up to 20 feet, and by any width not exceeding 10 feet.

Contracts with the trade for Sash quality, are taken by the Thames Plate-Glass company, on the lowest terms—Address to the Secretary, Mr. G. GWILLIAM, Savoy Wharf, Strand.

TO IRONMONGERS AND THE TRADE GENERALLY.

DURABILITY of GUTTA PERCHA TUBING.—Many inquiries having been made as to the durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in giving publicity to the following letter:—FROM SIR RANALD JARDINE, BART., ISLE OF WIGHT.—Second Testimonial.—" March 10th, 1852.—In reply to your letter, received this morning, respecting the Gutta Percha Tubing for Pump Service, I can state, with much satisfaction, it answers perfectly. Many Builders, and other persons, have lately examined it, and there is not the least apparent difference since the first laying down, now several years, and I am informed that it is to be adopted generally in the houses that are being erected here."
N.B. From this Testimonial it will be seen that the COMPOSITION WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.
THE GUTTA PERCHA COMPANY, PATENTEES,
18, WHARF-ROAD CITY-ROAD LONDON

WM. THOS. LINFORD, Sec.
15, Moorgate-street, London.

The Builder.

Vol. XIV.—No. 720.

REGISTRAR-GENERAL'S Reports, pamphlets on improving the dwellings of the labouring classes, reports of the societies both in England and Scotland which have that same end in view, the Report of the Board of Health on the Metropolis Water Supply, a pamphlet by Dr. Snow on cholera and the water supply, with various other cognate publications, have recently accumulated before us and invite attention. Touching the dwellings of the poorer classes, little is to be added to the facts gathered and statements made in these pages and in "London Shadows" long ago. Major-General Tremenheere, in his little pamphlet,* follows precisely the same line of argument, and gives few facts that are not to be found in the latter work, although we must presume it has not fallen under his notice, as it is not alluded to in the list of publications on the subject given by the writer. This, however, is not to be wondered at when we find medical Officers of Health going over the same ground and urging the same views, as if for the first time, wholly unconscious, apparently, of previous labours, although these were widely made known at the time by the whole periodical press of the kingdom.

Major-General Tremenheere, after quoting some account of the condition of courts and alleys in the metropolis, such as we have again and again laid before our readers, says, "the time, it is believed, has now passed for the existence of such extreme cases." Do not let him believe any such thing. The condition of many parts of London is as bad as it ever was. Some parishes are more overcrowded than they have ever been; and the new streets now in contemplation will further increase the evil, unless provision be made in time. The major-general, however, is satisfied that the state of things is quite bad enough, and his main object is to point out that, notwithstanding disadvantages and mistakes, the improved lodgings provided by the Metropolitan Societies have produced a gross rental averaging nearly 10 per cent. on the cost of the buildings, "which [rental], if one-half be taken as the proportion of ordinary current expenses, would leave a very fair return upon the capital expended;" and then he goes on to urge that measures should be adopted to spread these unquestionable benefits, so that their progress may not be left to chance or to the fitful and irregular flow of private capital.

"If," says he, "the application of public money to the drainage of land be justifiable, much more so would it be to the cultivation of better domestic habits amongst the poor, to the saving of human life, by draining, cleansing, and ventilating the narrow spots where so many thousands of our labouring population actually dwell. To what better object could the assistance of the public funds, at a low rate of interest, be lent? Here are three organised societies.

1st. The Society for Improving the Condition of the Labouring Classes.

2ndly. The Metropolitan Association for Improving the Dwellings of the Industrious Classes.

3rdly. The Marylebone Association for Improving the Dwellings of the Industrious Classes.

All have succeeded in effecting to a certain extent an acknowledged good, have the advantage of some years' experience, both in failures and successes, and possess all the requisite establishments for extending their operations, yet are cramped in available funds. What reasonable objection can there be to Government advances being made at a low interest to these societies? As a general rule, such direct aid from the State is, of course, objectionable, but the case is entirely exceptional. Will the Government, or the public, be satisfied that, out of the whole population of London, about 100 families only, of the industrious classes, every year, shall have the benefit of improved dwellings? This is about the proportion in which they have been affected by this movement for twelve years past."

The writer urges that,—"The locality of the late cattle-market at Smithfield is admirably suited for lodging-houses on the new plan, and it would be very desirable that portions of it should be devoted to that purpose. The committee appointed to inquire into the proper appropriation of that site have recommended that it be preserved as an open space; but owing, they say, to the irregularity of its outline, there will be some difficulty in the adaptation of the whole as a place of recreation. A favourable opportunity, which so rarely occurs in the very centre of the metropolis, is thus presented for granting, on moderate terms, building sites for improved dwellings for the labouring classes, who abound in that neighbourhood. In the parish of Clerkenwell, close by, there were, by the last census, 64,705 persons, the great majority of whom were working people with families.

The permanent inhabitants of this part of London consist principally of the labouring classes; all others, whose means admit, having their homes and families in the suburbs. Taking Smithfield as a centre, there is, perhaps, no other part of the world, within so small a radius, where the demand for human labour is so great as there; and, in like manner, there is probably no other spot which stands so much in need of good dwellings for the poor, nor one in which model lodging-houses, on an extended scale, would be so certain of success."

In future erections, the barracks and workhouse style must be avoided. Ordinary houses arranged so that the inhabitants of each floor should find on it all conveniences, and have no interference from the other occupants, would be the most popular.

A number of new model cottages are being erected in the neighbourhood of Paris, near the Abattoir Rochechouart. Twelve are now finished, each containing four lodgings, composed every one of four rooms, to be let at 150 francs a-year a lodging. These are to be devoted exclusively to the use of labouring men and their families, and are to have water and gas supplied by the town: 150 more of these châlets are to be erected in different parts in and about Paris, and already 15,000 applications have been made to the Administration for lodgings in them. Notwithstanding all these attempts to better the condition of the Parisian working classes in this respect, they are but drops of water to the ocean that is required to do real service; and the labourer finds but too often the utter impossibility of satisfying the demand of the landlord, and is frequently driven from the lodging he or she has long found becoming more and more out of the reach of the scanty means the most arduous labour supplies, just at the moment when all other habitations are also put further than ever beyond attainment, and when the winter, with its increased expenses, is at hand. The increase in the rents is enormous, the greatest discontent prevails, and Paris was never in a more dangerous condition than it is at this moment, in consequence of the want of lodgings at moderate cost.

A Supplementary Report, by Mr. W. Fowler, architect, published by the Association for Promoting Improvement in the Dwellings of Labourers in Scotland, contains many useful details and illustrations. The directors cannot too emphatically state that three separate apartments are the least accommodation that ought to be afforded for a proper division of the sexes in a labourer's family. Cottages which have but two rooms for labourers who have wives and children are bars to any social improvement. The directors find "that they cannot profess to give plans for cottages having all the requisites for comfort and social decency at a commercial remunerating per-centage on the outlay of their erection; and they are confident that, where such is insisted on, these humane provisions must to a great degree be sacrificed; but the directors do profess to afford directions for building cottages where a plain style is adopted, which shall embrace all these, and yet yield such a per-centage on the outlay, as, with a corresponding increase in the efficiency of their occupants as labourers, will prove highly remunerating to both landlord and farmer."

The Blue-Book issued by the General Board of Health contains two reports,* one on the Chemical Aspect of the Metropolitan Water Supply Question, by Professor Hofmann, chemist to the Museum of Practical Geology, and Mr. L. Blyth, lecturer on Natural Philosophy at St. Mary's Hospital; the other an engineering report by Messrs. Austin, Ranger, and Dickens, the superintending inspectors of the Board.

From the latter of these reports, as the more extended and professionally important of the two, we shall first glean a few particulars. It may be desirable, however, before dealing with general conclusions, in the outset to recall to mind the various particular sources from which the metropolis is supplied with water.

The old metropolitan water companies were nine in number, but the Plumstead, Woolwich, and Charlton Waterworks have been recently established for the supply of a district comprised within 'the Act for the local management of the metropolis.'

Five of these ten companies take their supplies from the river Thames, namely,—The Chelsea, Grand Junction, Southwark and Vauxhall, Lambeth, and West Middlesex.

The other five companies have the following sources of supply:—

The New River Company's sources remain unaltered. The supply is obtained partly from certain wells and springs in various places, but chiefly from the river Lea, near Hertford.

The East London Company derive their water wholly from the river Lea, but it is now taken from a point considerably higher up the river than formerly.

The Kent Company have for their source the river Ravensbourne, the point from which the supply is drawn being unaltered.

The Hampstead Company, from the first, obtained their small supply from certain ponds and wells, but have more recently been assisted by supplies from the New River and the West Middlesex Companies.

The Plumstead, Woolwich, and Charlton Consumers' Pure Water Company derive their supply from a well and boring sunk into the chalk, above the town of Woolwich.

The Grand Junction, the Southwark and Vauxhall, and the West Middlesex Companies, we may here add, have established their new works on three contiguous plots of land, on the banks of the Thames, at Hampton, and have erected buildings of similar design, which combine to produce an important effect. The mains of these three companies, from Hampton to their several establishments in London, run in parallel direction, as shown on a plan given with the reports, as far as Twickenham; and, at the point

* "Dwellings of the Labouring Classes in the Metropolis," by Major-General G. B. Tremenheere. Knight and Co. Fleet-street.

* Reports to the Right Hon. William Cowper, M.P. President of the General Board of Health upon the Metropolis Water Supply, under the Provisions of the Metropolis Water Act. London, 1856.

of divergence from each other, means of communication between the three have been formed for mutual aid in case of accident or repair.

According to the return furnished by the several water companies in 1850, it appeared that 270,581 houses were then supplied with water, the gross daily quantity delivered having been 44,383,332 gallons. The supply of water to the metropolis has now, it appears, reached the enormous quantity of upwards of eighty-one million gallons per day, *it having been nearly doubled in the short space of six years.* It is furnished to 328,561 of the 340,000 houses which now form the aggregate within the Registrar General's district. Thus, the average daily supply of water for all purposes, which in 1850 was 164 gallons per house, is now, in 1856, 246 gallons per house. The total nominal engine power employed and in reserve is equal to 7,324 horses. The mains and branch pipes for bringing the water from the several sources, and distributing it in the districts, exclusive of the private service pipes, form a total length of 2,086 miles. The filter beds cover an area of upwards of 40 acres. Before the passing of the Metropolis Water Act of 1852, considerably more than half the supply was not filtered: subsiding reservoirs were in such case the only means of clearing the water of impurities in suspension: these are now for the most part employed as well as the filter beds, the total area of subsiding reservoirs in use being upwards of 141 acres in extent. The filtered water is stored in fourteen covered reservoirs, comprising an area of nearly 15 acres, and in four uncovered reservoirs, of not quite 3 acres, which are beyond five miles distance from St. Paul's. The cost of the new works executed under the Metropolis Water Act, 1852, and the recent Acts of the several companies, has amounted to 2,282,824*l.*; making, with the former expenditure, as shown by the returns of 1850, the cost of the entire waterworks of the metropolis *upwards of seven millions sterling.* Even this amount, however, will fall short of the total expenditure; for the intermediate outlays between the former returns and the passing of the new Acts, and the cost of many works in hand, but not yet complete, are not included in this sum.

The result of the investigation by the superintending inspectors is,—

"1st. That the requirements set forth in the commencement of our report, comprising the 1st, 2nd, 3rd, 4th, 14th, and 17th clauses of the Metropolis Water Act, 1852, have, in all essential respects, been fully and satisfactorily complied with by the several companies (the provisions for constant supply not coming into operation until the 1st July, 1857). The new works have not, in fact, been limited to what a bare compliance with those provisions would have fulfilled. Measures have been adopted for the general improvement of the supplies, which evince a proper anxiety on the part of the companies in the discharge of the duties of their position towards the public.

2nd. That having regard to the serious state of contamination to which many of the rivers and streams of the country are being reduced by the drainage operations carried out in the neighbouring towns, and by the direct discharge of the sewage without any means adopted for the prevention of the pollution of the waters,—a condition which is evidenced to the inhabitants of the metropolis by the suddenly increased pollution of the Thames itself at the points whence their water supply has but recently been drawn,—we desire to recommend that early attention be directed to the towns draining into the Thames and its tributaries, and into the Lea and Ravensbourne, above the present sources of supply, so that measures may be adopted with regard to the drainage of those places which will permanently preserve the supply of water to the metropolis in its utmost practicable state of purity."

The report contains a favourable account of the result of Clarke's softening process, as applied at the Plumstead, Woolwich, and Charlton waterworks. "This scientific and ingenious process," it is remarked, "no longer remains in the position of a beautiful theory of the laboratory, of which the practical application is doubtful, it having now been in operation for two years on so large a scale with eminent success and advantage." Some over-estimates of its advantages, however, are pointed out, although the reporters state that there are few cases in which they should hesitate to recommend its adoption.

On the important subject of their second general conclusion, they remark that "whatever amount of pollution the river may now derive from the towns along its banks [bad as it is, we may add], is as nothing to what it will be when drainage works, for which some of these towns are already preparing, will have been carried out." What remedy would be comprehensive enough to meet so tremendous an evil, short of compelling each town to contribute a share of the cost of sewage-tunnels along the whole course of the rivers Thames, Lea, and Ravensbourne, and all the way to the sea, it would be hard at this moment, perhaps, to conjecture.

Notwithstanding the expense to which the Lambeth Company have gone in sending up to Thames Ditton for their Thames water, it appears that the Lambeth water has shown "very little more organic impurity under chemical analysis than the Thames Ditton water, which has been substituted for it:" in other words, the new supply is little better than the old, and is likely to become still worse than it ever was. It appears, however, from the chemical report, that (though such has been shown to be the natural state of the water) the waters supplied to the metropolis now do not contain more than one-half the organic matter which was present in 1851—a circumstance attributable of course to the efforts and works of the companies, and not to the state of the river, which, in fact, seems to be becoming worse and worse in a rapidly increasing ratio.

The ordinary organic pollution of the Thames, Dr. Snow urges,* is not the greatest evil that humanity has to contend with, at least in cholera seasons. He has been at great pains to prove, both on previous occasions, and more especially in his recently published tract on this subject, that while water contaminated with the grossest organic impurities in ordinary seasons, may not display any very glaring or special malignancy, no sooner is that same water impregnated, even to a very small degree, with the peculiar fæcal products of cholera, than those who drink or otherwise use it in a potable shape are liable to be suddenly and violently attacked by the same disease.

In the conclusion of the tract alluded to, Dr. Snow says,—

"It is probable that, when the facts brought to light by this inquiry are sufficiently known, no one will deny the influence of impure water in promoting the mortality of cholera; but it must not be supposed that it is mere impurity of an ordinary kind that causes the disease, for there are innumerable facts to prove that ordinary impurities have no such effect, and that it is only when the specific morbid matter of the disease gains access to the water that cholera is propagated. Thousands of people drank water from their own neglected cisterns, during the late epidemic, as impure as that of the Southwark and Vauxhall Company, without ill effect. An inquiry made by the vestry of St. James's, Westminster, proved that the contents of a cesspool had been percolating for months through the 3 feet of earth which separated it from the pump well in Broad-street; but although hundreds of people were daily drinking the water, and cholera was extending fearfully in many parts of London, only a few scattered cases occurred in the streets near the pump till the end of August, when, a case having happened amongst the persons using the privy connected with the cesspool above mentioned, more than 500 persons were attacked within two or three days.

In the cases in which the cholera poison gains access to a limited supply of drinking water, such as a tank or pump-well, the outbreak it occasions is always sudden, violent, and limited; but when a river is the medium of the propagation of the disease, its progress is more gradual and extended, being diffused amongst the whole population using the water.

It is hardly necessary to remark, that every circumstance which proves the communication of cholera through the medium of water, corroborates the views, explained at the beginning of this paper, regarding its propagation in the crowded houses of the poor; for it cannot be supposed that a morbid matter, which can produce its specific effects after being diffused and distributed through a quantity of water, could fail to act in an undiluted state."

The deaths, the author urges (and as we have before shown from his first book), which occurred in the last epidemical attack of cholera on the south side of the metropolis, "were six times as numerous in the houses supplied by the Southwark and Vauxhall Company as in those supplied by the Lambeth Company," the former supplying the inhabitants with water from the Thames at Battersea, while the latter, by that time, had brought it from Thames Ditton. This difference he ascribes to the especial pollution of the Thames within the metropolitan limits with choleraic virus derived from the metropolitan sewers.

In illustration of a lecture given by Mr. John Leslie at the Polytechnic on Monday last, a notice of which will be found on another page, the lecturer introduced a very remarkable map of London, thrown on the disc from a MS. map prepared by the Registrar-General, showing the average annual mortality of the various districts during ten years (1841 to 50, inclusive), and marking in black colour those parts, mostly bordering the river, where the rate of mortality is highest. Let us say in a parenthesis that this illustration alone will justify a visit to the Polytechnic on Tuesday next, when the lecture is to be repeated. And what did this death-map show? Why, that while in Putney and in the Hanover-square district, the average number of deaths annually in every thousand of the population was 16, and in Dulwich and Sydenham 14 only; in Bermondsey it was 28; in part of Chelsea, 31; in Shoreditch, 33; and in part of Greenwich no less than 47! What more striking evidence could be adduced that there are accidental and local causes in operation tending to shorten life, which causes, as Christian men, as political economists, and as egotists simply striving to save ourselves, it is our paramount and most pressing duty to strive to remove.

* "Cholera and the Water Supply in the South Districts of London in 1854." By John Snow, M.D. Reprinted from the "Journal of Public Health" for October, 1856.

THE PROPOSED DECORATIONS AT ALNWICK.

This subject, discussed at the Institute of British Architects, on Monday evening last, is so important to architects, and so interesting to the public generally, that I trust that a few additional remarks may not be considered misplaced, especially as the solution of the difficulty appears to lie in a different direction from that pointed out by the speakers on that occasion.*

Every one agrees that when the Duke of Northumberland undertook to repair the degradations of preceding centuries, and to restore Alnwick Castle to its former position, he had only one course to pursue, and that he was perfectly right in adopting the baronial style of the

* We shall give an abstract of the paper read at the Institute, and of the discussion that followed, hereafter. Viewing the proposed Roman decorations at Alnwick as a palpably injurious mistake about to be perpetrated at a great cost, we at once give insertion to the following protest, although our own deductions would be different.

middle ages, and was fortunate in selecting an architect so capable of carrying out his views as Mr. Salvin, whose restorations have met with universal approval.

So far, therefore, as the exterior was concerned, there was no difficulty; but when the question arose as to how the interior was to be decorated, the duke paused before adopting the suggestion of his architect, that the Mediæval style should be employed there also, inasmuch as no instance can yet be pointed to in which the Gothic style has been successfully adapted to the refinements and elegancies of modern society, or so as to admit of such art being employed with it as shall be only of the highest and purest class. Mr. Scott and others will, no doubt, dispute this doctrine, but the public are quite clear on the point; and neither at Windsor nor Westminster, nor among any of the hundreds of modern castles and mansions of England can one be quoted which is free from picturesque barbarisms utterly unsuited to modern times. This may be remedied in some future example, but till it is done the duke exercised a wise discretion in hesitating before embarking in so hazardous an experiment.

Having cast off the trammels of the course that at first sight seemed most obvious and rational, his grace was at liberty to choose wherever he pleased; and after mature deliberation he decided that the style of decoration found in the Italian palaces of the sixteenth and seventeenth centuries was the most noble in itself, and most suited to the refinements of modern society. Having fixed on this, he employed a Roman architect to import literally into his Northumberland stronghold the style and decorations of the Farnese or Borghese palaces.

This may have been a "Hobson's choice," but it is certainly a most unfortunate and melancholy predicament for a nobleman to find himself in, and the result must always be so painful a discord, that no one can long remain satisfied with it. You approach the castle through Gothic gateways, flanked by battlemented towers, and every stone, and every association breathes of mediæval England in her noblest and most picturesque period. You pass the threshold, and in one second you are as in a pantomime transferred to an Italian palazzo, where nothing speaks of the locality, or recalls the Hotspurs and Percys of former days. Were there no windows or doorways the illusion might be kept up, but every opening throughout the castle betrays the discord, and tells painfully the tale of the want of art in the present day.

Inigo Jones did exactly the same thing when he replaced the portals of old St. Paul's by a Corinthian portico; but his path was clear, and he hoped to see the whole of the old building cleared away, and replaced by classical forms; but as he left it, it was a counterpart of Alnwick Castle, or, perhaps, a better illustration would be, if an architect were now to propose to add the portico of the Parthenon to the front of Westminster Abbey.

The mistake seems to be, the bringing together two complete and well-defined styles belonging to different ages and countries, and copying each so literally as to produce the illusion that we have before us an example of the style imitated. The discord is obvious, and no even partially successful result has ever yet been obtained by such means.

The true solution, I conceive, would have been to abandon in the interior all direct adherence to any known style, and to introduce into it every elegance and refinement that the skill or taste of modern times could suggest.

I should have proposed to divide the ceiling into panels which should be most suggestive of constructive requirements, and at the same time most pleasing in form: these I would have enriched with such mouldings as were most suitable and appropriate, and would have adorned them with such colours as would have produced the most harmonizing effect, using always the highest and purest style of art available, without reference to whether it approached nearest to the Greek or Gothic type. The walls might have been hung, as is now proposed, with the richest satin; but the patterns should have been the most elegant the looms of Lyons or Italy could produce, and where paintings or sculpture could be introduced they should have been the best of modern times.

There is no incongruity in the art of the fourteenth and fifteenth centuries, as introduced into the cathedrals of the twelfth and thirteenth centuries, notwithstanding its superior elegance and refinement; and there would be as little incongruity in the pure art of the nineteenth being introduced into a castle of the sixteenth century, where it would appear without affectation, as the inevitable result of the change of time, and as, in fact, the goal to which the former style was tending. Each style would correctly represent the age to which it belonged, though differing from each other in the same ratio as the manners and feelings of the present duke do from those of the early Percys.

The furniture, the liveries, the manners and customs of the inhabitants, would all have been in strict accordance with the decorations of the interior, and the obvious common sense of the arrangement would have satisfied every one of its propriety; whereas now, the feudal castle, the Italian palazzo, and the English ducal establishment, are three things no two of which are in accord,—and the obvious connexion between the first and the last is cut across by the interpolation of the foreign element.

At the same time, it may be observed that there is less difference between the highest utterance of any two styles of art than at first sight appears, and when constructive propriety is the basis of decoration, real incongruity is almost impossible; and as the style of the interior must be in perfect accordance with the manners of the inhabitants, there can be no more incongruity in its appearance than in modern lords and ladies inhabiting a stronghold of a feudal baron of ancient days.

Had the noble duke adopted this course, he not only would have saved himself from an expensive mistake, which ninety-nine people in a hundred will certainly condemn, but he would besides have conferred on the arts of his country a benefit which can only be rendered by one of his liberal and enlightened mind, combined with his wealth and exalted position. J. F.

THE ARCHITECTURAL ASSOCIATION AND THE INSTITUTE.

At a meeting on Friday, the 14th of this month, there was a good muster of members and other architects, to discuss the two letters received from the Institute of British Architects (which have already appeared in our pages), one proposing the amalgamation of the two societies, the other enclosing a copy of by-laws, which the Institute proposed to add to their present code, and asking the opinion of the Association upon them. The discussion was kept up till a late hour, those who joined in it expressing themselves as convinced of the goodwill with which the Institute had come forward in the matter; but it was urged that the members of the Association would, if they joined the Institute, have no voice in the management of that society, and that there would be a restraint upon that free discussion which they enjoyed at present, and it was ultimately decided to forward to the Institute a reply, stating that the Association thought it better to stand alone, as there appeared to be sufficient room for the two societies.

The following is a copy of the letter which was decided on:—

Architectural Association, Lyon's-inn-Hall,
November 17, 1856.

To the Honorary Secretaries of the Royal Institute of British Architects.

Gentlemen,—We are instructed by the committee of the Architectural Association to address the following answer to your letter of the 17th of June last, which answer has been approved of at a general meeting of the members of the Association, convened for that purpose, and held on the evening of Friday, the 14th instant.

The committee desire hereby to acknowledge with sincere pleasure the many terms of sympathy expressed in your letter, and, above all, to thank you for the flattering proposal therein contained for the amalgamation of our society with that of the Royal Institute of British Architects.

After mature deliberation, the committee of the Architectural Association, at a meeting held on the 27th of September last, determined unanimously that it would not be expedient to recommend the amalgamation of the two societies, inasmuch as they believed that the interests of the profession would be best served by the two societies retaining their individuality; but in entering upon the consideration of a proposal of such importance to the younger branches of the profession, they were anxious to adopt the most liberal interpretation of your letter, and they therefore felt it necessary to ascertain the general opinion of the members of the Association.

The greatest obstacle to the proposed amalgamation was conceived to be that clause in the charter of the Institute, wherein the several grades of Fellows, Associates, and Students are defined,—whereas the leading principles of the Architectural Association are, "Equality of membership and perfect freedom of discussion." These principles have been found to work with considerable advantage to the society, and the committee saw, by the proposed union, that those who had met for years as equals, and as fellow-labourers in their art, would find themselves divided by distinctions, the justness of which the committee are unable either to appreciate or understand, and the utility of which is very questionable.

With regard to that portion of your letter suggesting co-operation with the Institute, the committee of the Association were most willing to meet your views as far as possible, and discussed the desirability of joining the Institute as a distinct body meeting under the same roof, and participating in the benefits of its library and its meetings; and, although this course appeared to have its advantages, yet it was thought that the independent feeling of our society would be sacrificed, and the present incentive to active exertion on the part of our members be lost, when the identity of the Architectural Association should be in danger of being merged with that of the Institute of British Architects.

In conclusion, the committee have endeavoured to consult the best interests, not only of the members of the Architectural Association, but also of the profession generally; and whilst they sincerely regret that obstacles should exist to prevent the amalgamation proposed, they do hope that the members of the Royal Institute of British Architects will assist the members of the Architectural Association in their sincere endeavours to improve themselves in their art; and also, as far as possible, to bring architecture so prominently before the public, that the art and its professors shall be more understood and respected than has ever yet been done.

The committee desire again to express their grateful thanks for the letter from the Institute, and hope that this answer will be received in the same spirit as must have dictated their letter.

We have the honour to be, gentlemen,
Your obedient servants,
(Signed) T. W. Goodman, } Honorary
James Alfred Bunker, } Secretaries.

Amongst the speakers, were Messrs. Gray, Kerr, Truefitt, Young, Cates, Digby Wyatt, Hayward, Arthur Allom, Papworth, &c. &c. The majority of the members who spoke, wished it to be distinctly understood, that the Association was not merely a body of students, but that it also represented the junior members of the profession. Mr. Digby Wyatt thought that, as they grew older, they would look upon themselves as rivals to the gentlemen of the upper house, however friendly they desired to be at present. The government of the Institute was freely discussed, with goodwill, both by its own members and by those of the Association.

It was announced with respect to the memorial to the chief commissioner for an extension of time for the preparation of designs for the proposed Government offices, that Sir Benjamin Hall had declined to alter the date for receiving designs from native architects, urging that much less time had been given for the designs for the new Houses of Parliament. From architects not residing in the United Kingdom, however, designs will be received up to the 4th of April.

As a member of both the above societies, may I request a corner in your valuable journal to express my dissent, in common with many more, from the answer of the Architectural Association to the admirable letter of the Institute, expressing their desire to render every facility towards the amalgamation of the two societies, and forwarding a draught addition to the by-laws, now under the consideration of the council.

I think it should be well understood that the views therein expressed cannot be taken as the general opinion of the young architects of London, or even of the Association itself. There were but twenty-one voters at the meeting held on the 14th instant, specially called to confirm or annul a letter brought up by the committee, rejecting the proposals of the Institute *in toto*.

Of the twenty-one voters, eight were in opposition, while the Association numbers about 130 members. This reply, therefore, must not be taken for more than it is worth.

The graceful dignity with which the Institute has recognised the efforts of the Association, and the evident desire it evinces to further the ends for which it was constituted; the means it proposes to adopt for the additional convenience and advantage of its younger members; and the healthy tone of its unreserved invitation to join hands with them,—have certainly left the Architectural Association without excuse. Everything that could be done in consistency with the dignity of the Institute and the provisions of its charter has now been done, and the onus lies on the shoulders of the Association, who still persist in maintaining a rival position, most injurious to the true interests of the profession generally—its younger

members especially—disregarding the example of Mr. Tite in the past, and the additional inducements offered by the Institute of to-day.

Without disputing the fact that there is room for reform in the Institute—more particularly with reference to the class of Associates,—yet, let me ask, is it not reasonable to expect that the Institute will be far more ready to hear and to act from the suggestion of the members of its own body, than from antagonistic elements warring against them from without?

If the proposed changes in the charter (though what is wanted has not yet been very clearly defined) would be attended with very considerable expense, will not the increase of its members daily weaken the strength of that argument, and make that a matter of minor importance, which it cannot be said to be now? And must not their divided interests act injuriously to both societies?

But waiving monetary considerations, can the Association offer any such *educational* advantages as those proposed to be given to the graduates of the Institute by the regulations made by the council in pursuance of the new by-law now under consideration? Had the Institute passed these rules without submitting them to the Association, they might have been construed the product of rivalry; but now there is no room left for the accusation. And if the Association is weakened or crushed, it will have but to condemn its own short-sightedness.

Yet, after all that has been said of the exclusiveness of the Institute, what is there to prevent the Associates discussing the merits of any public question affecting the interests of the profession generally? What is there in the present constitution of the Institute that would prevent some or all of the Associates meeting in committee and memorializing the Fellows on any subject they please? What restriction is there now to free and open discussion in the rooms of the Institute? What, except a proper sense of one's own ignorance in presence of superior ability. What is there to prevent the Associates of the Institute from accomplishing all and more than the Association has done?

I thoroughly believe that the present body of Fellows numbers men even more sincerely anxious to raise the character of the profession in its own eyes and that of the world than the most enthusiastic members of the Architectural Association, without their inexperience and precipitancy.

EDWD. COOKWORTHY ROBINS.

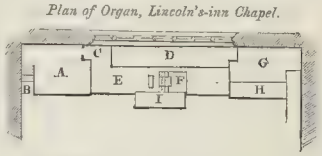
REGISTER OF ARCHITECTURAL DRAUGHTSMEN.

WE would direct attention to an advertisement from the Architectural Association, pointing out that the Register of Draughtsmen and Assistants wanting engagements has been removed to Mr. S. C. Capes's offices, Furnival's-inn, and mentioning that draughtsmen not members of the Association are equally entitled to enroll their names free. Members of the profession requiring assistants will find this register a very useful arrangement.

THE CRYSTAL PALACE.

THE collection of models for works executed by the late Charles Geerts, of Louvain, which will be found near the Byzantine Court, deserves careful study. These are not, as some of our contemporaries have stated, *casts* from his works, but his original models; and we learn that purchasers are sought for them for the benefit of his family. They are remarkable for religious feeling and expression.

This able sculptor, Geerts, who died on the 16th of June, 1855, was born at Antwerp, in August, 1807, so that he had not completed his 48th year: the number of his works is nevertheless very large. His first works, after the completion of his studies, appear to have been the busts which adorn the façade of the new theatre at Antwerp. Soon after, he was appointed professor in the Academy of Louvain. He was early attracted to the study of the religious sculpture of the fourteenth and fifteenth centuries. A scrupulous attention to the detail and ornamentation of the period also distinguished him. His reputation soon spread beyond Belgium, and in England his merit was early acknowledged. In 1847 he was elected corresponding member of the French Academy. Geerts carried the art of carving in wood to high perfection, as exemplified in the stalls he executed for Antwerp Cathedral. His death was deplored by all Louvain, and public homage was paid to the memory of the distinguished artist, who had founded in that town a flourishing school of sculpture. There were no fewer than seventy persons employed in his *ateliers* at the time of his death.



The picture-galleries have been re-arranged by Mr. Mogford. A number of the less important works have been removed, and some few new pictures added, with a manifest advantage. We were glad to hear that the sales during the past season amounted to more than 3,000*l.* and comprised about eighty-five pictures.

THE NEW ORGAN, LINCOLN'S-INN CHAPEL.

As the new organ at Lincoln's-inn Chapel is now complete, and has been opened, perhaps a short description of it may not be uninteresting more especially as it is a fine instrument, although cut up by the west window (20 feet wide) and want of space. In arrangement, it is similar to the organ in Westminster Abbey. It consists of the great organ on the south side, swell and part of pedal organ on the north, the choir being placed in front of the gallery, behind which are placed, sideways, the manuals or keyboard, which arrangement so simplifies the action as to render the touch as light as that of a small instrument, without the aid of the pneumatic apparatus: this, however, is applied in this instance to the draw-stop action, and so allows the composition pedals to be worked with the greatest facility. The principal bellows, about 18 feet long, are placed under the window; and, being the greatest pressure, supply the pedal organ direct, and also the several reservoirs at different pressures, which are placed directly under the respective organs to which they belong. With respect to the case, a different arrangement of the pipes on the north and south side was suggested, but of this the committee did not approve. The pipes of the choir organ have been illuminated as a specimen, in the hope that it will be carried out in other parts of the front. The instrument has been constructed by Messrs. Hill and Son, and contains the following stops:—Great organ, C C to F; bourdon and open diapason, 16 feet; open diapason, 8 feet; gamba, 8 feet; stopped diapason, 8 feet; octave, 4 feet; wald flute, 4 feet; octave quint, 3 feet; super octave, 2 feet; sesquialtra, 3 ranks; trumpet, 8 feet. Choir organ—Salcional, 8 feet; dulcian, 8 feet; gedact, 8 feet; gemshorn, 8 feet; suabe flute, 4 feet; piccolo, 2 feet; cormorne, 8 feet. Swell organ—Bourdon, 16 feet; open diapason, 8 feet; stopped diapason, 8 feet; octave, 4 feet; super octave, 2 feet; sesquialtra, 3 ranks; cornopean, 8 feet; oboe, 8 feet; vox humana, 8 feet. Pedal organ—Open diapason, 16 feet; violin, 16 feet; octave, 8 feet; 5 couplers.

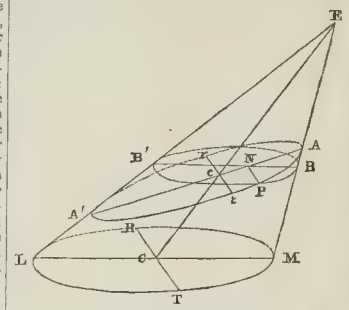
Mr. Thos. C. Lewis was the architect.

Plan of Organ, Lincoln's-inn Chapel.

A. Great Organ.
B. Stairs.
C. Door.
D. Great Bellows, with large pedal pipes over.
E. Loft.
F. Key-board.
G. Swell organ.
H. Pedal organ.
I. Choir organ.

BATHS AND WASHHOUSES FOR THE MIDDLE CLASSES.

SOME time since there was a very humane suggestion for a considerable employment of women in making the delicate machinery of watches. I, too, have a proposition to make which is not altogether disinterested, but which, I think, would benefit scores of poor women. It is the establishment of public washhouses for the middle classes, and the employing the industrious at better wages than they could at all get from those who contract for washing. I have a wife and six children, and it costs me 70*l.* to put out the washing. Now, if my neighbours chose to erect baths and washhouses for the middle classes (united in same building, with the like convenience for the poorer classes), I think the benefits from such arrangements would be largely diffused, and economy carried into many families who have at present no remedy but to submit to the charges of those few who, having spacious drying premises for the purpose, are able to demand one invariable scale of prices, and thus victimize their customers.



I need not say, if my scheme were carried out, that we might have in every district of our parishes self-supporting buildings of good character, conferring not only dignity, but great usefulness in every locality.

ONE WHO THINKS CHARITY MAY BEGIN AT HOME—ALTHOUGH IT SHOULD NOT END THERE.

THE PERSPECTIVE REPRESENTATION OF A CIRCLE IS AN ELLIPSE.

THE truth of the above proposition having been disputed, we propose, at the request of some of our correspondents, to submit to our readers a mathematical demonstration, which we hope will bring conviction to the minds of those who are capable of understanding the subject.

If we draw rays of light from a circle to the eye, they will form the surface of an oblique cone, having the said circle for its base. If, then, a plane (as the picture-plane) intersect this conical surface, the curve formed thereon will not be another *circle* unless the plane happens to be parallel to the base. That it will be an *ellipse* we demonstrate in the following manner, to any person acquainted with algebraic geometry:—

Let LEM be the cone formed as above described, E being the position of the eye, LM the circle of which we require a perspective representation. Let AA′ be the *picture-plane*, and BB′, another section parallel to LM, and which will evidently be a circle also (by sixth book of Euclid). Now, since AA′ and BB′ are in the same plane, therefore NP, which is perpendicular to BB′, is also perpendicular to AA′ (Euclid, book XI.).

Let AN = x, NP = y, AA′ = $2l$, then NA′ = $2l - x$.

By trigonometry, $\frac{NB}{NA} = \frac{\text{Sin. NAB}}{\text{Sin. NBA}} = \beta$ (say);

or NB = NA × β.

So also, $\frac{NB'}{NA'} = \frac{\text{Sin. NA'B}}{\text{Sin. NB'A'}} = \frac{1}{\alpha}$ (say);

or NB′ = NA′ × $\frac{1}{\alpha}$.

Since BB′ is a circle, it follows (Euclid, book VI.) that

$$NP^2 = NB \times NB';$$

$$\text{or, } y^2 = \frac{\beta}{\alpha} \times NA \cdot NA' = \frac{\beta}{\alpha}(2lx - x^2),$$

which is the well-known equation of an ellipse: therefore, the curve APA′ is an ellipse.

The foregoing does not invalidate the method of putting a circle in perspective by means of the circumscribing square and its diagonals and diameters, which is perfectly correct as far as it goes, and if correctly executed will in reality produce an *ellipse*. It must, however, be observed, that if RCT is a diameter of the circle, and at right angles to diameter LM, its projection, *rct*, will *not* be a *diameter* of the elliptic representation, nor will it divide that ellipse into two equal parts. This can readily be proved from the sixth book of Euclid.

A TAZZA OF WORCESTER WARE. — In our notice of the contents of the Ceramic Court, in the Crystal Palace, we were led to offer praise to Messrs. Kerr and Binns, of Worcester, for their praiseworthy and enterprising endeavours to maintain the reputation of the Worcester manufacture. Especial mention was made of their adaptations of the Limoges enamelling upon porcelain. We have since seen a tazza executed by them in this style, which displays admirable drawing, and a beautiful material. To effect such works requires so large an outlay, that the manufacturers cannot hope to be remunerated, unless they secure the sympathy of those in the higher classes who possess art feeling. The details of the tazza, even to the chasing of the raised gold, are perfect.

SEWERS AND THE SMOKE NUISANCE.

A CORRESPONDENT, who signs himself "Mercator," revives a proposition (several times made before),* to take the smoke of domestic chimneys into the sewers, and proposes thus to deodorize the latter. The writer says,—It must be evident to all that, if the smoke from a few large furnaces can be consumed, that emitted by the chimneys of dwelling-houses may be got rid of. The principle that has been successfully employed in the former case would answer equally well in the latter, and by this means the chimneys, which still vomit forth soot and blacks, would yield to science and modern improvement.

The consumption of coals in the metropolis is rated at 3,000,000 tons per annum.† A little more than 2,000,000 tons of these are consumed in private houses, so that they were always the principal cause of the smoke nuisance, and now render themselves doubly conspicuous, since the operation of an Act of Parliament has effectually cured the evil in the factories and workshops.

The great advantages of the proposed amelioration may be thus briefly summed up:—

1. The metropolis would be less exposed to the outbreak of fires, and conflagrations of every kind.

2. The general health of its numerous inhabitants would be materially improved.

3. Cholera and other epidemics, supposed to arise from the prevalence of bad odours, would not appear so frequently, and when they did come, would be less fatal in their effects.

4. The difficult question of ventilation would be solved.

5. Large chimneys not being required, the architect would have a field opened to him for roof-decoration.

6. The unsightly projections in dining-rooms, drawing-rooms, and other chambers, would disappear.

7. Great economy in the consumption of coal would be effected.

8. The householder's greatest pest—smoky chimneys—would be heard of no more.

The afore-mentioned results I propose to achieve, by means of chimneys closed at the top, so that no direct communication with the external air would be presented. The smoke being drawn downwards into the sewers would, in its downward course, carry with it the heated soot, uncontaminated with the moisture of the atmosphere, and would thus present it in the most favourable state to the gas-generating sewerage surface for the absorption of those smells which affect the atmosphere.‡ By coming in contact with the moisture of the sewers and the supernatant gases, the soot at once obtains an increased density, whereby the greater part of it falls on to the surface of the running fluid, leaving the fire under our engine-boiler only a small duty to perform in burning the remainder of the volatilized carbon and noxious gases. The soot enriches the sewers, and renders them valuable for agricultural purposes. It fixes and deposits the volatile salts, retaining in the sewerage its pristine invigorating and fertilizing qualities.

The draught required to draw the smoke into sewers, I propose to create by means of a fan,§ to be worked by a steam-engine, conveniently and ornamentally placed in the centre of a given block of houses.

The draught caused by the action of the fan at the back of the furnace of the steam-engine would draw the vapours from the neighbouring sewers over and through the fire of the furnace, which would be thus made to consume all those unprecipitated portions of carbon and noxious gases inimical to human life. In short, the fan draws the vitiated air from the apartments through the valves, the smoke through the apertures in the chimney conducts them both into the sewer, and then passes them through and over the fire, by which the water that generates the steam for the motive-power of the fan is heated.

The waste steam from the engine might be used to supply warm-water for baths, washhouses, or any purposes to which the poorer inhabitants of the district might turn it with advantage to themselves and the good of the community.

* Especially by Mr. Devey several years ago.

† See Henry Mayhew's "Great World of London." Part I. p. 39

‡ Freshly ignited charcoal will absorb several times its own weight of ammoniacal gas, and coal does the same in due proportion. These are most important facts.

§ The size of the fan behind the engine-fire, or the number of its evolutions, must be increased in proportion to the area to be ventilated.

LONDON AND THE CHARTER OF SANITARY REFORM.

ON Tuesday, the 18th, Mr. John Leslie gave a lecture at the Polytechnic Institution, Regent-street, "On London, viewed from the Great Charter of Sanitary Reform, the Metropolis Management Act," using the telling map of which we have already spoken as his principal illustration. The following is an abstract of the principal points in the lecture:—

The metropolis consists of 78,029 acres, including 3,500 acres of water, equal to 122 square miles, the City of London being rather more than one of the 122 square miles.

	Acreage.	Per Centage. Population.
The Middlesex, or northern side, has	41·6345	73·89
The Surrey and Kent, or southern side, has	58·3655	26·11
	100·000	100·00

The assessable value will be about 12,000,000*l.* sterling, and consequently a penny rate will produce 50,000*l.* At the census of 1851 the total houses occupied and unoccupied, and then building, was 327,391, and the population, 2,362,236. A close approximation, he said, gave eleven millions of tons of water passing up from the sea every flood tide through London-bridge, and fifteen millions of tons passing downward through London-bridge in every ebb tide for the all-wise purpose of preventing deposits by the increased scouring power. He then urged the folly of diminishing this scouring power by abstracting all the sewage and rain waters, and carrying them away together in many miles of costly sewers and miles of flat-bottomed iron sewers allout of the ground, and exposed to every variation of atmospheric temperature and to the effects of frost and thaw, by the former of which the northern sewage may be stopped, and by the latter the metropolis and adjacent country deluged with the filth of the metropolis. He showed that the metropolitan area was nearly five miles longer on the south and Surrey, and Kent side of the Thames, than the Middlesex side, and maintained that the great error was at the basis of all the calculations of plans A, B, C, and D, of the Metropolitan Board of Works. The combination of sewage and rain waters in the same channels increased expenditure in sizes of sewers and pumping establishments, in the following ratio for every twenty-four hours' discharge:—

Sewage and house water	509,926 tons.
Rainwater	529,067 „
	1,038,993

The increase being on the sewage only 103·75 per cent.

Mr. Leslie then read the 135th clause of the great Sanitary Charter, and maintained that the intercepting sewers were to be for sewage only, and to be completed by the 31st December, 1860.

He then showed that the plans of the Metropolitan Board of Works required monster cesspools, to pond back the sewage 9¼ hours in every twelve hours on both sides of the river, and placed in juxta position his estimate of sewage, which he stated was purposely a great exaggeration of the truth: Human excreta, he said, combined with house-water supplies, was a known quantity of daily amount: rain was a known quantity of only 24 inches in a year; and maintained from these facts that it was the extreme of folly to combine the discharge of the two in the same channels, and preferred following nature's laws, to lead the rain into the nearest points of the river to where it fell, in such large, and uncertain, and distant days of each year.

He calculated:—

	lbs.
Human excreta, solid	0·375
„ „ fluid	2 5
Expected water supply of 5 cubic feet to every man, woman, and child of the whole population	311·6
	314 475

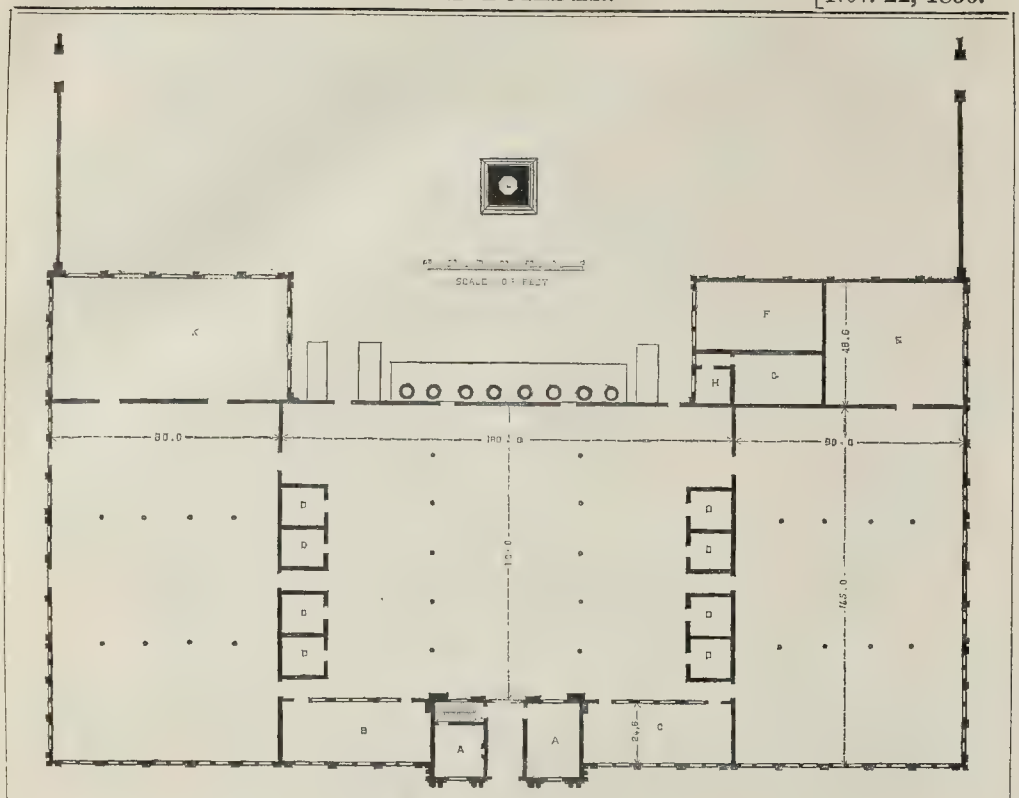
Multiplying this one largely exaggerated quantity, Mr. Leslie said, by what the population is expected to number fifty years hence, in the year 1906, 3,500,000, and the twenty-four hours' discharge would be 491,367 tons, and the discharge from 2,500,000 population would be 350,976 tons.

The lecturer considered that there should be no cesspool reservoirs to pond up the sewage, but the discharge should be constant into deep sea water, and every minute the pumps at the sea end of the sewer should be in action, and then *each* minute's discharge would be—fifty years hence,—12,270 cubic feet; at present, upon the exaggerated estimate, only 8,764 cubic feet. A circular sewer, he said, 10 feet in diameter, with an inclination of 2 feet per mile, would discharge 12,900 cubic feet per minute when only four-fifths full, being 630 cubic feet more than the total discharge from three and a half millions of population in the year 1906. This 10 feet circular sewer, two bricks thick in cement, would take 700 bricks per foot run: of which, with cement and labour, the cost price would be 2*l.* per foot; that he allowed 1*l.* per foot run for digging; 1*l.* per foot run for contingencies and profit to the contractors, and made the total 21,120*l.* per mile.

Thirty-five miles from Putney, through the agricultural counties of Surrey and Kent, would take this sewer into 78 feet 6 inches of sea-water at high water; 8¼ miles by land, and 10⅛ miles by water below Gravesend, benefiting the largest amount of population, there being 47,000 acres on the Kent side below Plumstead, with nearly 50,000 population, the sewage of which would, by this sewer, be kept out of the river, besides the sewage of the whole metropolitan area passing from the northern division in culverts under the Thames.

It is to be repeated on Tuesday, as we have elsewhere mentioned, and we may then have an opportunity to mention some of the other points referred to.

VENTILATION OF ASSEMBLY ROOMS.



A VERY simple method of ventilation adopted at Winchester College School, at the Town-hall at Basingstoke, and several large buildings in Hampshire, by Mr. Sharp, C.E. is found to answer completely, we are told. After the system had been in action the first season at the Winchester College, the head master, Dr. Maberly, said "he scarcely knew what the headache was, but prior to the ventilation being effected he had seldom been a day without it."

The vitiated air is drawn from the building through openings in the ceiling communicating with air-trunks in the roof; these trunks are connected with an upright shaft of metal constructed in the chimney, which is heated by the fire used for warming the building: by this means the air in the shaft is sufficiently rarefied to produce an *upward current*. In the summer season, a small gas-light is burned in the shaft: the gas is lighted at a small door at the bottom of the metal shaft, and produces sufficient draft for ventilation in the summer. Fresh air is admitted through plates of perforated zinc let into the skirting round the room, which are under control by the means of slides: these can be so managed as not to cause an uncomfortable draft; at least so we are told.

ST. MARY'S TOWER, TAUNTON.

THE long doubtful question respecting the restoration or rebuilding of this tower seems at last about to be determined, if we may judge from an appeal now in course of circulation by the churchwardens. It may well be understood that the guardians of this beautiful structure would long hesitate in taking any step whereby the removal of the present tower would be involved, and they have taken pains to ascertain from competent authorities whether it was possible to repair and extensively restore the tower or not. We ourselves strongly incline to the latter course. The recently-appointed churchwardens, determined to resolve upon some mode of action, applied, we are told, to Messrs. Scott and Ferrey again for their opinion; and although it was deemed possible by these gentlemen to effect a partial restoration and repair at a great cost, they thought no thoroughly substantial renovation could be promised, so that the bells might again be re-hung and pealed. Under these circumstances, the authorities have determined (if the requisite funds can be obtained) to rebuild the tower, precisely the same as the present one in design; drawings and measurements, photographs and casts, having been made by Mr. Giles, of Taunton, for effecting this purpose.

The probable cost is put down at 6,000*l.*

PLAN OF SHELL FOUNDRY, ROYAL ARSENAL, WOOLWICH.

THE SHELL FOUNDRY, AND OTHER WORKS, WOOLWICH ARSENAL.

For some time past very considerable works have been going on in the Royal Arsenal, Woolwich, under the direction of Mr. David Murray, who holds the appointment of "Building Engineer," Messrs. Lucas, Brothers, being the builders. To these we have at different times alluded, and in our present number we give a plan of the new Shell Foundry, now approaching completion, and an external view of the central portion of it. It is constructed of red brick and stone. In other parts of the Arsenal, the new Gun Foundry for example, ornamental moulded brickwork has been introduced with very good effect. It will be seen from the plan that the area of the Shell Foundry, roofed in, is very considerable. The height of the chimney is no less than 223 feet 9 inches from the ground. The first brick of this was laid on the 2nd of April, and the last stone of the cap was set by Capt. Boxer, R.A. superintendent of Royal Laboratories, on the 15th of September last. It swallowed up about 290,000 bricks. The foundation of concrete is about 38 feet square and 23 feet deep, with courses of York landings. It is altogether a very excellent piece of work.

The area of the arsenal was about 139 acres until last March, when an addition was made by enclosing 114 acres of the adjoining marshes. A very large portion of the roads has been laid with granite pitching and iron tramways. The gas-works are rapidly approaching completion, and will be put into working order very shortly.

The large iron Ordnance Foundry and Boring Mill are being pushed on with much vigour. A large storehouse has also been finished lately, which has a frontage towards the river of about 235 feet.

The Rocket establishment is completed, and will soon be in an efficient state of working. The Composition establishment has been occupied now some short time. These two last consist of a very large number of detached buildings.

The Clothing establishment, although not in the Arsenal, is being erected under the direction of Mr. Murray, and now makes an imposing addition to the old Field Depôt near the barracks. While the boundary-wall, enclosing the marshes, and detaching the Arsenal from the surrounding property, is rapidly approaching completion: it is about a mile and three-quarters in length.

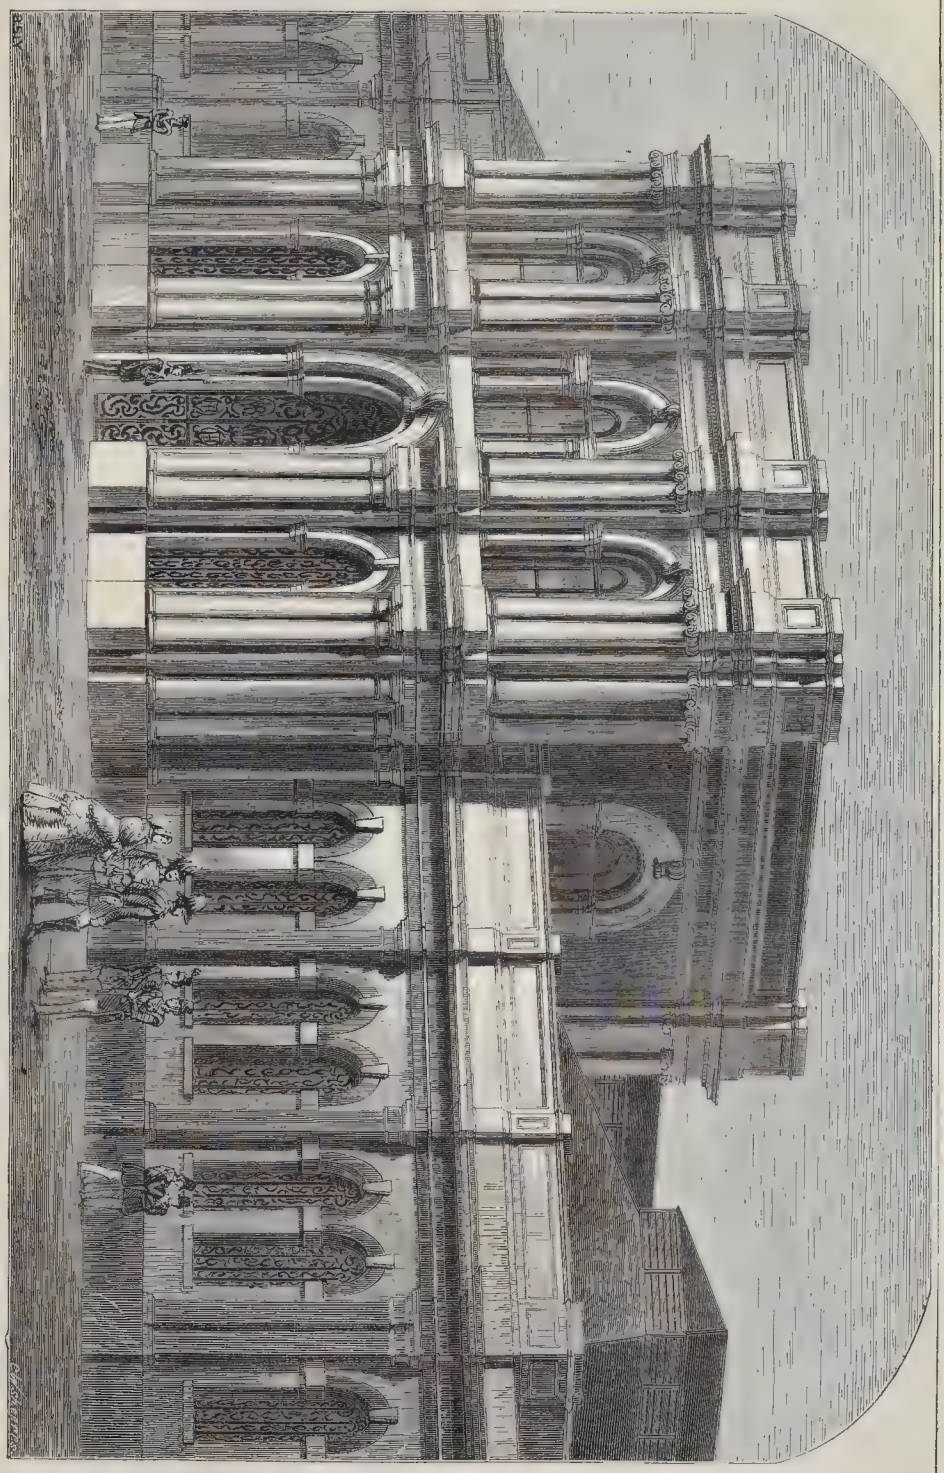
THE "NEW ROAD," LONDON.

At a time when from A to Z, from Stratford to Notting-hill, all are occupied in writing upon the embellishments of our public roads, and on the enlargement of our thoroughfares, permit me to call your attention, and through you the attention of the powers that be, to the *non*-embellishment and the contraction of one of the most important of our metropolitan roads,—"The New Road."

It is in the memory of all that at one time, from Lisson-grove to the Vinegar-yard, this road was flanked on each side by gardens: true, they were hardly kept with the ordinary neatness of English Cockney-gardens, yet, still, gardens they were, and as such admitted the free circulation of air. We have seen the corner-house replace the Michaelmas Daisy by a wooden box and table: we have seen the "Sweet-smelling wall-flower" give place to the "fragrant weed," and the London Pride changed into the Shining Pewter. We have observed the menagerie raise coop upon kennel, kennel upon coop, and the stone lion and stag look with silent contempt on the encaged live-stock. The ladder then raised its head to show the uninitiated how the uppermost coop was placed, and then the cowl crowned the whole. Up to this point, perhaps, little might be said; but the humble repairing tailor, whose sign-board was hid between two of these establishments, now in self-defence must advance his work to the pavement, and hence bricks and mortar. His near neighbour now takes the hint: a shop is built, and over it rooms, according as he is blessed with a family; and thus the gardens give way to irregular unsightly shops.



But the eye is not alone offended: if we glance at the part lying between Tottenham-court-road and Albany-street, we cannot fail to remark the contracted roadway and restricted footpath, in which even now with difficulty the traffic operates. Should this traffic but increase a little, we shall then hear of a deputation to the Board of Works for the enlargement of this part, and then the long bill of indemnities to shopkeepers, demolitions of houses, &c. &c.: all this a little forethought might have prevented, and still may, in part.

King's-cross again is another example; and, indeed, these remarks apply to many other roads entering London, and which should, in my opinion, form the subject of immediate and attentive consideration.

If the taste of the Londoners should turn towards boulevards, perhaps this is the finest site in London for such purpose, and each row of houses offers in itself a fine scope for the improvement of street architecture.

AN UNEMPLOYED C.E.

BARRACK IMPROVEMENTS. — The Government appear to have at last resolved to carry out an improvement, on a small scale, for which we have long contended, namely, the provision of separate accommodation for soldiers' wives. At Chatham, 6,000*l.* are about to be expended in providing separate rooms apart from the single men for married soldiers; and at Preston barracks, we also observe, a number of dwellings of a similar kind are about to be erected.

THE SHELL FOUNDRY, ROYAL ARSENAL, WOOLWICH.—MR. DAVID MURRAY, "BUILDING ENGINEER."

PROVINCIAL NEWS.

South Weald (*Essex*).—The new schools at South Weald, Essex, erected under the superintendence of Mr. Teulon, of London, at the sole expense of the vicar, the Rev. C. A. Belli, have been recently opened. The building consists of a school and school-house. The school runs parallel with the road, with its centre window set in a gable, with a tympanum occupied by a sculpture by Forsyth,—a guardian angel over children. The east and west windows are pointed, with plain tracery. The house which runs back the depth of the school is one story high, having all its rooms on the ground floor. The style is Early Middle Pointed, built in brick with freestone window frames. The east gable is surmounted by an hexagonal bell turret of stone. The interior of the school is of white brick worked with red, in a mosaic. All the arches are in alternated voussoirs of black and red, both internally and externally. The windows are glazed with suitable painted glass, presented by Sir Digby Neave, Bart. and Mr. W. Coope. The works are by Mr. Smith, of North Weald.

Chatham.—The authorities have given directions for plans to be prepared for a new hospital for the use of the troops, which will be built near the huts at Brompton, contiguous to the Casemate barracks.

Devizes.—The erection of the new corn-exchange building is said to be hindered by the fact that all the tenders are considerably above the sum named by the architect, Mr. Hill (viz. 1,500*l.*), as the required amount. The lowest tender was 350*l.* above this estimate, and the highest was between 1,200*l.* and 1,300*l.* in excess. The result is that the project is postponed till additional subscriptions can be obtained.

Weston-super-Mare.—A public meeting was held at the town-hall here, on Tuesday in last week, for the purpose of receiving a report from the committee appointed to examine the several plans for a new town-hall, when the ground-plans and elevations from Mr. Lysaght's designs, which the committee had approved of and recommended out of twenty, were accepted and adopted.

Bridgnorth.—The new market buildings are being completed, and before the commencement of another year will be in use. Mr. R. Griffiths is the architect. At a recent meeting of the town council, the lighting of the hall was taken into consideration, when it was resolved to have a central chandelier with twelve lights, and two others with eight lights each; to be suspended at a height that would not interfere with the line of vision. It was also resolved to have two side bracket lights near the platform. Mr. Griffiths produced a number of designs for the proposed chandeliers; and it was ultimately agreed that the chandeliers be procured from Messrs. Warner and Co. of London, after pattern No. 1, furnished by that firm. The cost of the chandeliers is estimated at about 60*l.* The windows looking into Listley-street Mr. Griffiths was directed to fit up with cast-iron frames and thick glass; one at least of the panes to open for ventilation to the butchers' market.

South Staffordshire.—The South Staffordshire Waterworks are progressing. After some difficulty with the first contractor, says the *Staffordshire Advertiser*, the reservoir at Lichfield is rapidly progressing, under the direction of Mr. J. Boys, the present contractor. The land purchased from the Earl of Bradford for the reservoir at Walsall has been handed over to the same contractor, the first sod of the reservoir being turned by the chairman of the company. The pipes for conveying the water through the district are now being laid down near Walsall. They have been produced by Messrs. Cochrane, of the Woodside Ironworks, near Dudley.

Hereford.—The Hereford cattle-market and sewerage have been executed, and the accounts finally wound up, at 450*l.* under the contract sum. The cattle-market, which covers an area of four acres, fitted up with cattle and sheep pens, and a shed 640 feet long and 24 feet wide, covered with corrugated galvanized iron, was opened on the 19th ult.—the tolls received on that day being 95*l.* The sewerage was completed on the stipulated day named in the contract. About 600 houses have been connected with the main sewerage during the execution of the works: about 200 houses are deriving water from the new waterworks. The water is pumped by a 20-horse engine, by Messrs. Simpson and Co. from the river Wye, into a reservoir of 103 feet above the river level, and capable of holding four millions of gallons. It is afterwards filtered in two filtering-beds before it enters the main. The contract amount for the whole of the works was 22,000*l.* The works were begun in May, 1855, and the inhabitants already appreciate the beneficial effects of these sanitary works. It is estimated that the cattle-market tolls and water-rate will pay the interest on the money borrowed for constructing the works. Mr. T. Curley, of Hereford, was the engineer, and Mr. William Moxon, of Dover, the contractor.

Liverpool.—On Wednesday in last week, it is said, water from Rivington reached Prescott for the first time, and the local *Mercury* states that it is expected that before the next meeting of the council, the water will be brought to Liverpool.

Elgin.—The new Bank buildings in Elgin are now roofed in and slated. "The Royal," says a local paper, is built of polished freestone from the Hospital Quarry, and is in the Doric style, and three stories in height. It occupies the west corner of North-street. The contractor is Mr. Lamb. The North of Scotland Bank is on the site of the Trades-hall. It is built of polished ashlar from the Newton Quarry, and is in the Corinthian order of architecture. It is likewise three stories in height. Mr. F. W. G. Urquhart is the contractor. Messrs. Reid, architects, designed both these buildings.

CHURCH-BUILDING NEWS.

Winwick.—The church of St. Michael, Winwick, has been restored and reopened. It is cruciform in plan. The transept windows have been opened and restored, as also a window on the north side of the nave. The tower arch has been opened and restored, at the west end of the church. The roofs of the nave and transepts are executed in oak and pitch pine, and are copies of the original roofs. The material and workmanship were provided by Messrs. Clarke and Barrett, by whom the restoration of the carcase of the fabric has been executed. The whole of the seating, together with the pulpit, prayer-desk, and font, are new, but the architect has preserved every remnant of tracery which remained of the old seating, and has copied the character of the old seats in the formation of the new. The whole of the internal fittings have been executed by Messrs. Ruddle and Thompson, of Peterborough. Besides the complete restoration of the church, the chancel has been entirely rebuilt. The latter was completed about three years ago, at a cost of 500*l.* laid out by the rector. The cost of the present restoration is about 1,200*l.*; so that the entire cost of the restoration is about 1,700*l.*; and the whole of this amount has been raised by the rector and parishioners, except about 150*l.* and this deficiency has been nearly cleared off by further contributions. The restorations have been carried out under the superintendence of Mr. E. F. Law, architect.

Mortimer (*Reading*).—The new church at Mortimer (West End) has been consecrated. The lord of the manor, Mr. Richard Benyon, of Englefield House, has erected the church, which is capable of accommodating about 200 persons, and has provided also a residence for the clergyman, for whose services the church has been endowed by the same gentleman.

East Molesey.—On the 30th ult. the Bishop of Winchester consecrated the new church of St. Paul, Kent Town, East Molesey, Surrey, which has been erected by Mr. F. J. Kent. The church is built in the Decorated style of Gothic architecture, and will consist, when finished, of a nave, with north and south aisles, chancel, with south organ chapel, and vestry on the north. The steeple will rise from the west end of the south aisle. At present only the chancel and three bays of the nave are erected, the arches being built up with a temporary wall of brick, so as to be capable of further enlargement: the columns of the nave arches are formed of massive blocks of unpolished granite, those of the chancel arch being polished Purbeck marble. The chancel is fitted up with open oak benches, placed stall-wise, and the altar is elevated on three steps. The sill of the south window of the chancel is lowered, so as to form sedilia for two clergymen.

Abingdon.—A vestry meeting was held on Thursday in last week, to receive a report with reference to the contemplated restoration of the tower and spire of St. Helen's church. It has now been determined to proceed with the work immediately. At a vestry meeting held some time since a report of Mr. Street, the diocesan architect, was read and discussed, and, upon the proposition of a ratepayer, it was determined to have the opinion of some other practical person, and Mr. J. H. Stacy was applied to for the purpose, but he declined to undertake the duty. Mr. Wilkinson, a local architect, was thereupon requested to make a report, the reception of which was the business for which the present vestry was called. Both reports were now read, and each recommended the adoption of immediate steps to restore the tower, the east side of which, it appeared, had bulged to the extent of 7 inches, occasioning considerable disorganisation of the fabric; and as it was the feeling of the meeting that the time had arrived when it would be inexpedient to delay the restoration of it, a proposition for a committee to be appointed to examine and select a plan, and proceed to carry it into effect, and lay before a vestry a report of the amount of the contract, was unanimously carried.

Pucklechurch.—The parish church of Pucklechurch was re-opened for divine service on the 4th inst. The old chancel of the church has undergone complete repair, from designs by the late Mr. Carpenter. The seats are all of the same proportions. A new stone pulpit and carved font have been substituted in the room of the others, and the gallery at the west end has been removed.

Tiverton.—The new chapel of St. John, in Pitt portion of Tiverton parish, Devon, was opened for divine service on the 1st inst. The building consists of nave, 43 feet by 21 feet, entered by a porch; chancel and arch, 18 feet 6 inches by 15 feet. The style is geometrical, the roofs open, of oak, that of the chancel boarded. Two bells, from the ruinous chapel which has given place to the new edifice, are hung in a turret at the west end. The walls are of the local stone, with quoins of Hanham stone, and Bath stone dressings. The outlay, aided by the materials of the old chapel, is about 800*l.* raised by subscription amongst gentlemen of the neighbourhood. Mr. Ashworth, of Exeter, is the architect, and the work has been carried out by Mr. Parish, of Tiverton.

Doncaster.—The time, says the local *Gazette*, is rapidly approaching, when the contractor for the rebuilding of the parish church will deliver into the hands of the Building Committee the work, so far as is comprised in the terms and extent of the existing contract. The committee, with the full sanction of the town, commenced the rebuilding of the church upon a scale which could not be entirely completed with the sum then subscribed. Hence, the contract was so arranged and divided, that the work might be stopped as soon as the nave had been carried up to the point where the tower commences—in the event of there not being sufficient funds to proceed with the remainder of the architect's scheme. In about two months from the present time, this stage will be reached. Then, the question will have to be asked—shall the contractor proceed with the second portion of the contract, namely, the tower? Or, for the want of sufficient funds, must the committee be compelled to relieve him from further obligations? In that case, all the arrangements of scaffolding, all the complications of machinery, the experience of workmen, the facilities of conveyance, and a long *et cetera*, will have to be dispersed and rendered comparatively useless; involving an extra cost of 2,000*l.* certain—probably more—whenever the time may come for the work to be resumed. This expensive contingency should be taken into the most serious consideration.

Blackburn.—The design of Mr. T. Oliver, jun.

architect, has been selected by the committee for the new Congregational Church about to be erected at Blackburn, in Lancashire. It will be entirely of stone, and have a tower and spire.

Teviothead.—The new church, which has been erected at the expense of the Duke of Buccleugh, was opened on Sunday before last. The style of the new building is Early English. The plans were furnished by Mr. Cowan, the duke's clerk of works at Bowhill.

Glasgow.—Among the improvements being carried out in connection with the cathedral, is the heating of the nave as adopted some time since in the Choir, or Inner High Church. The cost is estimated at 300*l.*

A HINT ON GLASS PAINTING.

My intention in this letter is to point out certain æsthetical views upon the above-named subject. At present, we are too grotesque and unnatural in the treatment of our subjects. We do not study truth sufficiently. This fact is now acknowledged by painters in oil, and the pre-Raffaelleite school are working upon this hypothesis. I would introduce this pre-Raffaelleitism into glass painting; but of course never attempt, as in the last century, to imitate oil painting, or try to gain the effect of that art, or in any way make the glass painting appear like a picture, but always let the following idea be predominant. The great object is to create a *glass* painting. Let the figures and drapery be natural; the position also. Do not use unnatural colours, and introduce absurdities in the shape of green wings to angels: use the colours of nature, and do not have too many; for, in modern glass, too minute mosaic is a failure; small pieces of red and blue appear at a distance purple; this is, as all know, from the different manufacture of the glass. Modern is even in thickness, the old is uneven: they were not able to manufacture glass of even thickness, and, consequently, from inferior manufacture they obtained those gem-like tints. The chief object to be attained should be distinctness, so that when you view a glass painting at a distance, you may perfectly see each tint and each figure, and thus understand the subject. Those leads, as Mr. Winston suggests, which cannot form outlines, should be hidden by the saddle-bars; and let there be always relief and perspective, as they harmonise with Gothic architecture. We want a new school: at present we are but servile imitators, obtaining all the faults of the old, but none of its beauties: study old glass, but don't copy it, for it did not harmonise with the Gothic architecture, because there was often no relief. Let our new school try to attain this, and they will succeed, if they keep to these leading rules. The old glass paintings were often unnatural, whereas Gothic architecture is truth all over.

Observer.

INQUIRY AS TO FALL OF BRIDGE NEAR DARLINGTON.

A great deal of evidence has been given at the inquest on the bodies of the two labourers, John Goldsbrough and John Wood, who were killed by the fall of the bridge in course of erection at Over-Dinsdale, near Darlington, and the inquest was adjourned from day to day, for four days, in consequence. It is quite impossible that we can enter into all the mass of evidence and opinion offered,* but we must select enough from the more important part of it to give some idea of the grounds on which a verdict of manslaughter was recorded against the inspector of the works.

William Dodds, carpenter, who on 4th inst. was taking out the centre of the arch nearest to the Yorkshire side of the Tees, stated that he observed a crack in the wall between the old work and the new, which led him to suppose that the new work was "dying," and settling from the old work of the abutment. He went through the arch to examine the other side and saw a similar crack, about 6 feet long, and close to the abutment on the Yorkshire side, above the arch. Goldsbrough asked him if he thought the bridge would fall, and he said he thought not. Got upon the bridge on the Durham side and passed along to the second of the four arches,—the first being a land arch. He then saw the fourth arch—the first from the Yorkshire side—fall from the abutment, and give way. The third arch rose up, on the falling of the fourth, and, subsiding, fell,—before the fall of (and while witness was still standing on) the second. The land-arch stood. The old abutment on the Yorkshire side, and the old portion of the three piers which carried the wooden viaduct, did not fall. The arch which first fell was rebuilt while the work was in progress, having given way.

John Howison, bridge-surveyor, county Durham, deposed that he prepared the plans and specifications. The work was taken by Mr. Richard Cail, of Durham, for (he believed) 635*l.* Witness appointed Christopher Turnbull, mason, as inspector. The arch that was rebuilt gave way because the old abutment slipped back against the bank. Means were taken to make the abutment secure, and it had proved to be so. The bridge was private,—the property of the Rev. W. S. Temple. Believed that the weight of the fourth arch, pressing upon the pier, had caused it to lean over towards the Durham side. The fall then took place—the first arch remaining because the pier was thicker, and not so high. It was Turnbull's duty to see that the old abutments and piers would carry the new work. It was not usual to build new arches on old piers. Good bricks and good cement were used. Bad bricks were brought at the commencement, and others were substituted.

William Taylor, foreman of the masons, ascribed the fall of the bridge to the giving way of the foundation of the pier under the fourth arch.

David Kerr, foreman of the bricklayers, agreed with Taylor as to the cause, and also as to the goodness of the bricks and cement.

Ralph Harrison, of Hurworth, cartwright and joiner, deposed that he was dismissed about a fortnight before the fall, because of something he had said as to the bridge coming down. He had mentioned to Turnbull that the fourth arch was giving way. Turnbull asked him what he thought the cause to be, and witness told him that was his look-out. Believed the reason to be the badness of the cement and the wideness of the joints.

Mr. James Trowsdale, of Stockton, contractor, said the arches had not been placed on new solid springing-stones, as specified. The joints in the brickwork were too wide, and the cement had been overdone with sand. These things were in the province of the inspector. In his opinion, the arches fell in consequence; and the piers were fractured in that way, and not by the yielding of the foundation.

Mr. Joseph Stephenson, C.E. was of opinion that the arches fell because a sufficient weight had not been put upon the haunches. The bricks were bad, the cement not good, and the workmanship was very defective. The inspector should not have allowed this. Some cement picked out by witness from the standing arch with his knife crumbled in his hand.

Mr. H. Marshall, acting on behalf of Mr. Cail, said that no blame could be attached to him in any way, Mr. Howison and his inspector having departed from the specifications in omitting the springers.

Mr. George Mason, C.E. Darlington, deposed to departures from the specifications and defective work. The sand, being three quarters loam, was unfit for use. The cement and some of the bricks were not good. Saw nothing to lead him to the conclusion that the foundations had shrunk. Would not endorse the plan. Would not have made such a design himself. It was the inspector's duty to see that the materials and workmanship were good.

Mr. Cail deposed, that he agreed with Hanson, of Musham, for bricks at 21s. 6d. per kiln, and rejected them as bad. The cement was from Erle's—(stated by Mr. Mason to be one of the best houses in the trade). There being an inspector over the works, he naturally expected that he would see to the workmanship being good. On his (Mr. Cail's) part, there was no stint.

Mr. R. Hodgson, of Whitwell, near Sunderland, C.E. said the mortar of the old work was very bad indeed. The old piers, Nos. 1 and 2, were considerably disturbed in the masonry down to the foundation, and the want of substantiality in the work below the offset might tend very materially to produce the falling of the bridge. There was great risk in turning arches on such piers, unless properly built. The standing arch he considered to be fair average work. Erle's cement was unobjectionable. The sand was bad unless the loam were carefully separated. The joints were not particularly thick, and bricks were much cheaper than cement. The engineer was responsible, and then the inspector. The arches were too slight, and in great measure led to the fall of the bridge, together with the want of a through springer course on the top of the piers. The half-rings of the arch were not properly bonded into each other by heading bricks. Would have taken down the piers to the level of the springers, and rebacked the arches entirely with new work. Had known bridges come down entirely from wet weather.

Mr. B. Lawton, of Newcastle, contractor, confirmed Mr. Hodgson's opinion as to the fall; as also did Mr. E. B. Reed, of Newcastle, contractor. The latter said he *could not have built a better bridge for the money:* would not have expected it to fall, but would have seen the architect as to the plan, and have objected to leaving the old piers standing above the springing part: below these, would have had no objection to build such a bridge.

The jury remained in deliberation for four hours, and more than once had to request the assistance of the coroner. Their verdict was in these words:—"The jury are of opinion that the deceased John Wood and John Goldsbrough came by their deaths in consequence of the falling of Over-Dinsdale bridge on the 4th of November, 1856, and that the fall of the bridge was caused by gross neglect on the part of Christopher Turnbull, the inspector of the works, against whom we return a verdict of Manslaughter."

Turnbull was accordingly committed to Durham, to take his trial at the winter gaol delivery. The Foreman of the jury further said: "The jury are also of opinion that blame is due to John Howison, architect of the bridge, and Richard Cail, the contractor, for having deviated from the original plan and specification." The Coroner: But that blame does not, in your opinion, amount to criminal responsibility? The Foreman: Not the slightest.

* A very full report of the greater part of this evidence will be found in the *Darlington Times* of 15th inst together with the summing up by the coroner.

THE RELATIVE VALUE OF LABOUR, SKILLED AND UNSKILLED.

A paper was read by Mr. Chadwick (late of the Central Board of Health), "On the Future of Manufacturers and of Manufacturing Labourers, and the Future of Agriculture and of Agricultural Labourers," at the agricultural section of the recent Congress of Bienfaisance at Brussels, and by the Congress directed to be printed in the Belgian *Moniteur*. In the first part of his paper Mr. Chadwick shows, by statistical evidence, as one of the results of his investigations as a commissioner of inquiry into the labour of young persons in factories, that in the earlier and more rude stages of manufactures, manual labour chiefly was required, but that the general tendency of improvements in machinery and processes is to reduce mere muscular toil, to put more and more of machinery for the economy of labour under one management, and to require a larger proportion of intelligence, skill, and trustworthiness, on the part of the operative—qualities which could only be obtained, and maintained permanently, by improvements in wages and general condition.

In respect to the future of the labouring classes in agriculture in England, it appeared to him to be under influences similar to those which promised favourably for the labouring classes in manufactures.

From particular inquiries which I have made, he continued, in various parts of England, I am assured that in agriculture as in manufactures, wheresoever labour-saving machines have been introduced, or labour-saving improvements in processes have been effected, more labour, of a higher quality, and better paid, has been required. At present, one great practical barrier to improvement in agriculture is the intractability, from ignorance and general low condition, of the labourers.

A quarter of a century ago there were riots, in which labour-saving machines were broken, but better views have now begun to prevail, and labourers have refused to do thrashing work by the flail, because, as they have justly and laudably said, that was work for a machine, which they would not degrade themselves by performing. On the other hand, common agricultural labourers, when they have been allowed to join gangs of Lancashire navvies, and have been "alimented" and seasoned to their tremendous discipline, on their return have astonished the farmers by doing an ordinary day's agricultural work before noon, and by putting their spades on their shoulders and going away for the rest of the day. A noble friend brought down to his estate in Dorsetshire a foreman accustomed to superior labour at piece-work. Judging of what would be his answer, I said to this foreman, "Will you not get this work done cheaply? Here the labourers are got for only 8s. a week." "But they would be dear at 6s." was the reply. "How is it here with your other class of artisans?" I inquired, "your journeyman bricklayers, for example, what sort of workpeople are they?" "Such as from their wages you, sir, would expect," was the answer. "And what wages are these?" "About 12s. per week." "And how many bricks do they lay in a day?" "Not more than between 300 and 400." "And how many do your town bricklayers lay, to whom you pay double wages?" "More than 1,000 a-day!" was the answer.

The most eminent of the "navvies" in England come from the hill districts of sandstone-grit and

granite in Lancashire and other northern counties, where there are favourable sanitary conditions of pure soft water and forced ventilation, and some natural drainage by winds and storms. Their alimentation, too, has been generally good. Some of the leading navvies have represented to me that they consider eleven pounds of meat per head per week as a necessary of life for good work, but I should not accept this as to the species of diet as an absolute dogma, for they themselves have admitted to me that eaters of oatmeal and potatoes (with milk), though in great quantities, have done good work with them: what, however, appears to be certain is, that a superior alimentation at the least is required, though it is by no means the sole requisite, and mental as well as bodily stimuli are needed for the attainment of superior work.

The superiority of a highly alimented and skilled labour has been maintained in every clime. A friend of mine, a civil administrator in India, the Right Hon. Holt Mackenzie, informed me some time ago that he had made a note of the comparative cost of Indian, Chinese, and English labour when he was in India, and that the general result was, "that for some works an English workman, of average efficiency, was equal to several Chinese, and one Chinese equal to several Indians (Bengalese), and this independently of the advantage or disadvantage of the tools employed. And the conclusion I drew," said he, and the conclusion which I too wish now to enforce, "was, that for estimating the cost of labour, or of the work done, there could not be a worse standard than the wages of the labourers."

Much in this instance might be ascribed to climate, but the spectacle has been presented in Calcutta of Lancashire artizans, imported at high wages, doing work there under the shade of umbrellas held over them by Hindoos, engaged at low wages to attend and perform this service. In the course of discussions on the subject with the members of the Congress met here, I have received much confirmatory testimony upon my view of the facts. One member of the Congress, a merchant, informs me that he has had ships built abroad, and also ships repaired in every principal port in the world; but he avows that, notwithstanding the very high wages of our shipwrights, he has found their labour as cheap as any he has elsewhere met with. In respect to agricultural labour, another of our colleagues, a landowner in Poland, who has been some years in England, and who has studied its agriculture, states to me that he found one German labourer equal to two Polish labourers; but that three Polish labourers—and these not serfs—were required to do work equivalent to one average English agricultural labourer. In this extreme difference, however, the difference of tools was included, with the difference of skill and energy. Admirable work is done by Anglo-Saxon men in Canada, and in the United States of America; but I repeat that I do not ascribe the difference of result mainly to race, because, as I have observed, the labour of Englishmen, depressed by maladministration and pauperism, is often as inferior as any other; and because depressed Irish labourers, when put into suitable training and condition, are found, according to the acknowledgment of English labourers, to keep step with the best.

SAFETY FOR BUILDING OPERATIVES.

I KNOW that it is only to utter a truism to say that it is the duty of every man to promote by all the means in his power the safety and well-being of the community; and for this reason I admire the disinterested philanthropy of such institutions as the Royal Humane Society, the Royal Society for Saving Life from Fire, the Life-Boat Society, and others of cognate design. But probably there are few persons more exposed to the risk of severe or fatal accident than the various operatives engaged in the erection of large buildings, or in the decoration or repair of churches and other large interiors; and, notwithstanding the generally very firm and scientific construction of scaffolding, one cannot but remark how needlessly exposed the workmen are to accident by the use of loose boards to work upon, and by the absence of protection on the street side. The suggestion which I therefore venture to make to builders in general is, that a rope-net should, as a matter of course, be stretched across *the front* or that part of the front of every scaffolding on which men are at work, and that a similar net or tarpaulin (unless the boards are bolted or otherwise fastened down) should be securely placed *under* the stage of boards in use, convenient and safe openings being left, or temporarily made for passing up materials. I would recommend also that a rope-net or tarpaulin, or sail, or several, should be invariably secured close under the boards on any extensive scaffolding erected for the decoration or repair of spacious interiors. The precautions described would not cost much, and would probably prevent many serious and some fatal accidents, not only to the workmen themselves, in the event of a false step backwards, or of an ill-secured board, but also to passers-by, from the fall of planks or bricks, or other materials. The records of our hospitals could tell a sad tale of broken limbs and loss of life from accidents in building operations, to say nothing of the destitution of widows and orphan children consequent upon them.

A LONDONER.

METROPOLITAN BUILDING ACT.

Additions, Alterations, and other Work.—In repairs affecting the construction of any external or party wall, the Act renders notice compulsory on the part of the builder. It is obvious that if any portion of such party or external wall be removed or pulled down, so as to render it necessary to rebuild the same, the construction of such wall is "affected" to the extent of such rebuilding. As regards rebuilding, the Act of 1844 made the pulling down of one story, or the extent of one-fourth the surface or superficies of front, a sufficient ground for condemning all other irregular wood partitions or other portions of a building. A most dangerous license is permitted by the present Act, which would allow a six-storied wooden house to be rebuilt in woodwork in the three upper stories, as the Act says one-half is to be measured in cubic contents, and by a subsequent notice the lower portions might also be rebuilt in woodwork. How cubic contents are to be measured is not explained, or whether the removal of roof is decisive on this point. The doctrine of superficial area of a building is far preferable to cubic contents, but the matter referred to is only characteristic of this loosely-drawn Act. The object of this is to explain that a rebuilding is not a repair, and that by the word "repair" is meant only such work as applies to the surface or facing of a wall.

A DISTRICT SURVEYOR.

Fee Case.—An additional story has just been erected, under my superintendence, on a house in Clerkenwell. The district surveyer declined taking the fee for the addition, viz. 1*l.* 3s. 9d. and claimed the sum of 3*l.* 6s. 3d. maintaining a fee was also chargeable for raising party-wall of one adjoining house, and party-wall and chimneys of the other. The raising was in both cases above the roof of adjoining house. The magistrate decided that the district surveyor was entitled only to the fee for the addition, of 1*l.* 3s. 9d. and he had to pay the costs.

W. P. G.

*** We advised the district surveyor to the same effect, before the case went to trial, in our notices to correspondents, October 25th.

Projecting Eaves.—We have just roofed in two houses with projecting eaves. Our ground landlord requests that we shall cement the projecting faces, according to the new Act, section 26. The district surveyor tells us we must cover it with zinc. If we put cement, he will make us alter it. As we have neither time nor money to lose, we appeal to you to settle the dispute between us.

P. and J.

*** It is still a question with some, if simply *covering* the eaves with fire-proof material fully complies with the requirement of the Act in this respect. If we admit, with the magistrate whose decision on this point we recorded some time ago, that it does so, then cement will serve the purpose as well as zinc.

GLASGOW ARCHITECTURAL ASSOCIATION.

ON Thursday in last week, Mr. C. H. Wilson delivered a lecture to the members of the Glasgow Architectural Association, on the subject of Glass Painting. The mechanical appliances necessary for the successful prosecution of the art were first treated of, and described. The lecturer remarked that the very imperfections and coarseness of the material employed by the glass painters of old gave their works a superiority over those of modern artists. The glass now used was too good, and allowed the rays of light to pass so directly through, that the windows were entirely wanting in that richness and solidity which was the distinguishing beauty of old painted windows, the glass of which broke and dispersed the rays of light. When modern glass was used for painted windows, the sun, when it shone upon them, appeared behind as a round fiery ball; while through the old windows the disc of the sun was not visible at all, and the only effect of their illumination by the sun was to increase their brilliancy. If we would have good painted windows, we must manufacture coarse glass for the purpose. Speaking of the three different styles of glass painting—the mosaic, the enamelled, and the mosaic-enamelled—the lecturer commended the British school for generally adhering to the first-mentioned, as the use of enamel so interfered with the transparency of the glass, that the windows so treated resembled a painted blind. This was, however, almost the only praise he was disposed to allow to the British artist, for as draughtsmen and designers they were far inferior to their continental rivals.

TO ARCHITECTS.—COMPETITION.

PRIZE OF FIVE POUNDS! *

Now, knights of the pencil, the compass, and square,
Arm yourselves for a tempting campaign.
Your paper lay down, your colours prepare:
Such a chance you'll not meet with again.

Attend then, I pray, all of ye who may,—
Of paper and pen make selection:
To Tom Sykes write—though him you may'nt like,
Of the ground, for plan and section!

But to him enclose,—or he'll oppose
Your having it, I'll be bound,—
Seven "bob" (the sum tix'd), so stump up like
"bricks,"
The prize to be won is "FIVE POUND."

And mind! you're required, before you're hired
By this fine Burial Board,
To name the rate you're prepared to take,
For attendance at Castleford!

When doubtless they expect to pay
(Oh, who'll be so deluded?)
Some three per cent. on money spent;
The premium (!) included.

Builders likewise, for you there's a prize,
Such as rarely appears in these pages:
For enclosing four acres (what rare undertakers,
To offer such excellent wages)!

Erecting a lodge (be sure 'tis no dodge);
Building chapels and laying down drains;
Keep within bounds, for NINE HUNDRED POUNDS
Is the sum you're to have for you're pains!

Now each of you ought, if you're caught
By this stupendous 'lur'ment,
To ask the Board to further afford
The expenses of your interment.

For you cannot long, be you e'er so strong,
Live on scanty food or raiment,
And you'll scarce procure (of that be sure)
Either by such poor payment.

E. G. B.

* See advertisement in the *Builder*, November 15th, 1856.

A STATUE FOR THE FOUNDLING HOSPITAL.

A TARDY act of justice has placed a statue to the memory of the founder of this hospital, Capt. Coram, on the stone structure, in the centre of the entrance-gates. The work is by Mr. Calder Marshall, R.A.; and the expense of it, comparatively small, has been defrayed by private subscription. The figure, which admirably represents the philanthropist, as handed down to us by Hogarth, is 8 feet high; and, besides being a just compliment to so good a man, will relieve the monotony of a line of low buildings hitherto offensive to the eye. It is executed in Caen stone, and is to our minds very satisfactory. It is to be hoped that the stone has been indurated.

MASTERS AND MEN: THE HALF-HOLIDAY.

HAVING read in your useful paper of November 8th ult. an article on the half-holiday movement, by a Master in the "building trade," you will allow me perhaps, as an operative in the same trade, to make a few observations on the same subject. A diminution of the hours of labour must be regarded as a great boon to the working classes, although I do not think the "half-holiday" would be such a boon as many of my fellow-workmen do. I quite agree with the "Master" about the inapplicability of the rule, and, indeed, I think it would militate against the working man's interest, as I will endeavour to show. For instance, a workman out of employ has a small chance of getting employment on a Friday or Saturday, owing to Saturday being a *short day;* much less chance he would have of getting employment on the latter part of the week if his employer had to give him a *half-day*. I cannot see, except in factories or public works, how such a rule could be applied. There are other objections I could state against the half-holiday, but I forbear on account of taking too much space.

Now, Mr. Editor, I would ask for a diminution of the hours of labour, not as a holiday, but as a necessary means of allowing the working man more time to cultivate the faculties of his mind, both moral and intellectual, and I need not tell you how little time the workman has under the present system for such purposes. It requires him not only to devote the greater part of his time, but a great part of his life, to provide for the necessaries of his existence, and those depending on him; at least the energies of his body and his mind are so much exhausted, that he is totally unfit to pursue any useful study. He may gulp down some light read-

ing, or something of that sort, but he cannot apply his mind to any subject that requires the exercise of thought. If he tries, he invariably feels drowsy, and soon falls asleep over it. But I am trespassing too much on your time. What I would say is this—Why could not our day's labour be fixed at eight hours instead of ten? That, Mr. Editor, would be a great boon to the working man, and I question very much whether either our employers or the public would suffer much by it. With respect to our employers, a sufficient time might be allowed to finish their present contracts before the rule came into operation; and as to the public, I have a very different opinion of it from what the "Master" has, to think it would emphatically refuse it.

ANDREW DAVIDSON, Bricklayer.

INSTITUTION OF MECHANICAL ENGINEERS, BIRMINGHAM.

THE general meeting of the members of this institution was held on the 5th inst. at the house of the institution, Newhall-street, Birmingham; Mr. S. Lloyd in the chair.

The Secretary having read the minutes of the previous meeting, held in Glasgow, the officers and council for the next year were nominated for election at the ensuing annual meeting, and several new members were elected.

The first paper read was a "Description of the Ventilating Fan at Abercarn Colliery," by Mr. E. Rogers, of Abercarn. This is a simple construction of revolving fan, employed for ventilating a coal-pit by mechanical means, instead of the ordinary mode of furnace ventilation. The fan is placed alongside the top of the pit, and is of large size, running at a comparatively slow speed: it is formed of eight vanes, fixed on a horizontal shaft, on the end of which is a crank driven by a small direct-acting steam-engine. The plan of ventilating mines in this manner, by employing large exhausting fans moving at a slow speed, is the invention of Mr. James Nasmyth, of Patricroft, by whom the present fan was designed and constructed.

The next paper was "On the Application of Steam Power to Agricultural Purposes," by Mr. W. Waller, of Lincoln, and formed the continuation of a previous paper on another branch of the same subject.

The last paper was a "Description of a Steam Pile Driver," by Mr. R. Morrison, of Newcastle-on-Tyne. The machine consists of a steam cylinder and piston, carried on an upright framework: the piston-rod itself, being very large in diameter, and of great length, acts as the hammer to drive the piles, being raised by the steam in the cylinder and then let fall on the top of the pile. The whole machine, with steam boiler and engine, is carried on a framework on wheels, which runs along on the top of the piles already driven, as the work progresses, without requiring any additional framing to support it.

After the meeting, Mr. F. Osler, of Birmingham, exhibited a gyroscope of a large size, for the purpose of illustrating the stability of the axis of rotation of a revolving body. A new steam pressure-gauge was also exhibited, by Mr. John Inshaw, of Birmingham.

LIVERPOOL ARCHITECTURAL SOCIETY.

THE fourth meeting of the current session of this society was held on the 12th, at the Royal Institution, Colquitt-street. Mr. S. Huggins, the president, occupied the chair.

Mr. W. H. Weightman, the secretary, announced various donations; and Mr. G. F. Chantrell exhibited an invert for sewers made by Mr. Cliff, of Wortley, near Leeds.

The discussion on the Liverpool Building Act was then resumed.

The Chairman, in opening the discussion, said he could not think that the sources of English law were so corrupt or so impotent as to justify the fears expressed by Mr. Picton at the last meeting. But if they were, when we knew that the Building Act we had was really bad, and that it was in the power of architects and builders to make a better, there would be something cowardly in abandoning the attempt to get another lest we should get a worse one. If they gave a worse one, then it would prove that something else wanted reforming as well as the Building Act. He felt bound to add that he saw no sufficient reason why there should not be a national Building Act, applicable to all towns in the kingdom.

Mr. John Hay said he did not see what necessity there was for a Building Act at all. He had been doing work in Glasgow and Edinburgh, neither of which places had a Building Act, and neither of which felt the want of one. He had also been doing work in London, but, though he had to come under the powers of a Building Act there, he certainly did not find anything so monstrously absurd in that Act as in the Liverpool Act.

Mr. Kilpin defended the Act, advising that they should rather—

> "Bear the ills [or bills] we have,
> Than rush to others that we know not of."

Mr. Picton followed on the same side of the question, and, after some other speakers had addressed the meeting, the proposition that the society memorialise the town council to take measures for obtaining an amended Building Act, was negatived by a majority of nine votes against seven.

COMPETITIONS.

Blackfordby.—The committee appointed to carry out the rebuilding of the chapel of St. Margaret, in answer to their advertisement received about thirty sets of designs, many of which possessed the usual qualification of being in cost far beyond the funds at the disposal of the author. After long consideration, the committee have decided to adopt the design of Mr. Stevens, of Derby, and intend to commence the work early next year. The present very dilapidated chapel is considered to be one of the oldest ecclesiastical buildings in the county (Leicester), its principal feature being its simplicity: it consists of nave and chancel, under one long roof, with bells in a turret at the west end: the windows are of the lancet form, a triplet at the east end, and of the plainest character: the floor has the peculiarity of being formed with a considerable inclination from the east to the west end.

The Liverpool Wellington Monument.—A large number of designs for the proposed monument to Wellington in Liverpool, have been, within the last few days, sent in by various competitors, and are now awaiting the decision of the committee. We trust that the designs will be exhibited to the public for a few days *before* the selection is made; for, although the monument is to be erected by subscription, the public have a vital interest in securing monuments calculated to raise, not lower, the standard of taste.

Liverpool Museum.—We are requested to mention, that the idea of exhibiting the rejected sketches has been given up.

MARINE CEMENTS.

THE following is an abstract of a paper on "The Materials employed in Marine Works," presented to the French Academy of Sciences, by M. Chatoney, engineer of the Ponts-et-Chaussées, and M. Rivot, mining engineer. A favourable report upon it has been made by a committee, consisting of the following gentlemen;—MM. Chevreul, Poncelet, Dufrénoy, and Marshall Vaillant.

Argillaceous or silicious limestone requires much pulverising before being subjected to the heat of the kilns, in order to produce a good quality of hydraulic lime or cement. A thoroughly compact texture, and a sufficient quantity of carbonate of lime at the surface, to protect it against the action of the sea-water, are necessary conditions of stability; but the best chemical composition of the materials can only be determined practically by experiments made almost on the very spot where the works are to be constructed.

Excellent silicious hydraulic lime may be artificially obtained by submitting to a moderate heat a mixture of 70 to 80 parts of pure limestone, and 20 to 25 parts of fine sand or flint; a definite silicate of lime ($Si.\ O^3 + 3\ Ca.\ O.$) which in forming a hydrate takes up six atoms of water. The more intimate the previous mixture of the materials the better.

The argillaceous hydraulic lime produced by burning either natural or artificial mixtures of limestone and clay, is not found to be so well adapted for use. The proportion of 20 to 22 parts of clay to 80 parts of limestone is found, upon the whole, to be the best. When the product contains too large a quantity of free lime, it is found advisable to use rather a clayey sand in mixing the mortar: this renders it more binding, and gives it greater power of resisting the action of sea-water. Too much clay would be very injurious, so that great care should be taken, and special experiments made, wherever this latter plan is adopted.

Cements which set quickly, and are prepared under moderate heat, are always difficult to manage in marine works, as they contain no free lime, and, consequently, their hardness is all that preserves them from the influence of the sea-water. They may, however, be improved by adding a certain proportion of lime, and letting the mixture stand a considerable time.

Natural or artificial cements, well burnt, and containing only a small portion of quicklime, such as those of Parker, the Medina, or the Portland, owe the great solidity which they acquire under water almost entirely to the presence of the hydrosilicate, as $Si.\ O^3 + Ca.\ O. + H.\ O.$ contains less water by half than the corresponding silicate produced in the hydraulic lime or cement, which is burnt at a lower temperature. These are found to answer best for works which are constantly immersed. They would probably not answer so well for those which are exposed on each side to the effects of water at varying heights.

Artificial pozzolana but seldom gives good results. With natural pozzolana fat lime should be used in preference to hydraulic lime, and it is most important to submit the mixture previously to a long soaking in a small quantity of water. This plan is adopted by the Dutch engineers, and tends to account for their remarkable success.

Sea water differs much from fresh water in its effect on different kinds of mortar and cement, not only from the constant and often violent action of the tide and waves, but from the various salts, carbonic and frequently hydrosulphuric acid held in solution.

Sea salt generally retards the setting of mortar and cement: the salts of magnesia exert but little action on free lime, or on the aluminate of lime.

The proportions of carbonic and hydrosulphuric acid vary much in different localities: they exert an action from the first moment of immersion until complete decomposition is effected, or at least till the cement becomes solid and impenetrable. They act first upon the free lime, and then upon the aluminate.

It has been noticed that where shells are very abundant, submarine works become covered with a sort of calcareous coating, which effectually protects them against all further action, and this protective influence of the marine animals may be best imitated by adding to the mortar or cement employed, free lime, in a proportion which must be determined experimentally for each locality.

Particular stress is laid on the following qualities, as essential to the formation of good hydraulic mortar:—

It is essential that the materials should be thoroughly pulverized before mixing, so that the combination may be as perfect as possible.

Sufficient free lime must be present to allow the carbonic acid in the water to combine with it, and form a protective coating of carbonate.

A long soaking of the materials is advisable, in order that the chemical combinations necessary for the ultimate stability of the mortar may take place before it is actually used.

Miscellanea.

THE LATE MR. POWELL, ARTIST.—We have received two communications in reply to some observations on this gentleman in the *Art-Journal*, asserting that the writer is wrong in his estimate of the deceased artist. One of our correspondents says,—"From a knowledge of what the late Mr. Powell's character was, during a considerable period of his life, and up to the time of his death, I feel justified in asserting that he was in no sense dissolute or profligate: he was, on the contrary, of reserved and thoughtful habits, and possessed, I firmly believe, of a mind that held him above the influence of any vicious gratification. It might perhaps be said of him, equally with any other young man, that he did not use to the utmost his opportunities; but so far from his having by a vicious course of life impaired his energies, and, himself, caused his premature death,—while instances might be adduced of his devotion to study having endangered his health,—I without hesitation challenge a support of the former implication." . . . "Among his fellow-students, and all who knew Mr. Powell, his name will never be mentioned but with respect." From observance of the manner in which the *Art-Journal* has been conducted, now, for many years, and of the unwillingness of its editor to give pain, we feel assured that no person will regret more than himself the admission into his pages of aspersions which may be found to be unjust, or more readily seek to remove them. We honestly believe the editor of that journal to be incapable of a wilful injustice either to the living or the dead.

GAS.—The Fareham Gas Company are erecting new gas works at a lower level, and removing from their old works, which stand near the top of a hill. ——At an influential meeting of the subscribers of the New Gas Company at Willenhall, on 4th inst. it was unanimously resolved "That if the Willenhall Old Gas Company reduce the price of gas to 5s. to all the consumers under 10,000 cubic feet, and 4s. 6d. to all consumers of more than that quantity, and insert a clause to that effect in their Bill, the public will withdraw all opposition; the reduction to commence at Lady-day next;" and further, "that in case the above proposition be not satisfactorily arranged within a month from this date, we are prepared to organise the strongest opposition in our power to the company obtaining their Act of Parliament." The Old Company had previously offered to reduce the price of gas to 5s. 4s. 9d. and 4s. 6d. as soon as a revenue of 1,500*l.* should be obtained. The purpose of their proposed application to Parliament is to obtain power to open the streets. The New Company have hitherto failed to carry out their scheme, only about 500*l.* instead of 750*l.* required having been paid up.

GREAT FIRE AT SOUTH METROPOLITAN DISTRICT SCHOOLS, SUTTON.—Nine hundred children (two hundred of them under seven years of age) were suddenly aroused from sleep in the dead of the night, between Wednesday and Thursday last, by the officers in attendance at this great establishment, on a serious alarm of fire, which was raging in the dormitories, and in a brief interval brought down the whole roof of a considerable portion of the building, and the floors beneath, besides one of the water-towers, the workshops, and other departments of the premises. The terror and confusion of such a scene may be imagined, but is beyond description. The appalling danger can only be realized when one keeps in view the deathlike depth of repose in childhood, and the difficulty of restoring the little creatures to the possession of their senses, and to even a glimmering self-consciousness of danger. With the utmost exertions of all in office, it took twenty-five minutes to turn them out, naked, on the lawn, in the midst of severe cold and drifting sleet, from the effects of which, doubtless, many of them will seriously suffer, although soon afterwards huddled into cottages, stables, and station-houses. Why should not the consideration of such possibilities as these have led beforehand to the adoption of as complete a fire-proof construction as could be had in the erection of especially such buildings? As it is, we fear that the narrow and extraordinary escape of so many hundreds of helpless children will but form an additional excuse for leaving such matters to chance and the chapter of accidents, as heretofore. Had not a single nursemaid happened to awake, and to be alarmed by a strong light streaming through a keyhole, all these hundreds of human beings might have continued to sleep till too late, as so many in such circumstances have done.

THE ACCIDENT AT THE MANCHESTER EXHIBITION BUILDING.—We are told that the operative bricklayers of Manchester, not being satisfied with the exculpatory verdict given at the inquest held on the first victim of the accident, and jealous of the honour of their trade, resolved to appoint a committee of their body to report upon the cause of the accident. The deputation inspected the ruins a day or two after the arch fell, and their report agreed in the main with the evidence of Mr. Crowther, architect, as to the imperfect mixing of the mortar, and the general want of care in the construction of such a mass of brickwork. They also inspected the brickwork then going on, and found equal fault with it; and expressed a confident belief that had a competent person belonging to the trade examined the work, he would immediately have put a stop to it. The deputation take exception to a remark made by the town-clerk of Manchester at the first inquest, that such accidents were unavoidable in connection with large works of that kind.

THE IRON TRADE.—In Yorkshire, Derbyshire, and Lancashire, the prospects of this trade are no better than when the state of the trade was last noticed; and in Staffordshire there is still a downward tendency, with talk of reducing wages. The season for many foreign orders has closed.

PRESERVATION OF INSCRIPTIONS.—Allow me to inquire if there be any mode of preserving the character of an inscription on *marble*, where exposed to the inclemencies of the atmosphere. About two years since certain tablets were affixed at the cardinal points to the plinth of a column, the engraved letters on which were coloured with a dark paint: these are now almost entirely effaced. Gilding, when applied to iron, retains its freshness: would it be equally retentive of its condition if applied to marble? or, is there any chemical preparation which would defend the restored characters in all their newness of strength and brightness? A SUBSCRIBER.

WATER-WORKS IN SOUTH AUSTRALIA.—The Local Government propose spending upon the Adelaide water supply the sum of 164,000*l.* The Water-works Commission, according to the *Australian and New Zealand Gazette*, include in their scheme an immense reservoir of eighteen acres in extent, to hold 60,000,000 gallons, to be constructed at an expense of from 13,000*l.* to 14,000*l.* They do not adopt the recommendation of the Legislative Council Committee to store 86,500,000 gallons, on the ground that "there will be a constant supply running into the reservoir from the Torrens." The *Register* thence argues that the only provision for storage required would be two small settling reservoirs for one day's consumption each, and a clear water one of same capacity, into which the water would flow from the filtering bed, and that thus a saving of 10,000*l.* or 12,000*l.* would be effected.

STAINED GLASS IN SCOTT MONUMENT, EDINBURGH.—The stained windows prepared by Mr. Ballantine from the designs of Mr. David Roberts, R.A. are now in their place, in the chamber entering from the first gallery of the Scott Monument in Princes-street-gardens. This apartment occupies the centre of the structure, immediately over the statue of Sir Walter, and was originally designed for a museum or repository of memorials of Scott. There are four principal windows, and the chief architectural ornamentation of the glass consists of Gothic canopies, with mosaic backgrounds, surmounting figures and armorial bearings supported on pedestal pillars, with foliated caps and panelled backgrounds of geometric tracery. The south window has an effigy of St. Giles, the tutelar saint of Edinburgh, habited in abbot's robes of eighth century. The north has an effigy of St. Andrew, the tutelar saint of Scotland. The west contains the arms of Edinburgh. The east has the ancient arms of Scotland. In each window an angel rising over a carved corbel holds a shield, on which the arms of Scott are blazoned, and the four windows are surrounded with labelled borderings, on which are inscribed lines from the "Lay of the Last Minstrel." After the full-sized drawings were made from Mr. Roberts's sketch designs, they were submitted to that artist, who revised the architectural and heraldic details. Mr. James Drummond also, we understand, furnished sketches for the figures of St. Andrew and St. Giles. There are four smaller windows filled in with glass of simple diapering. "The whole of the work," says the *Scotsman* in describing it, "has been executed with artistic skill, combining minute manipulation with breadth of effect. The colours are well secured and harmoniously arranged. Depth of tone and that flickering brilliancy so much desiderated in painted glass have been attained." The chamber will finally, it is expected, be furnished with memorials of Scott. "If the walls and groinings," adds the paper just named, "were decorated with scrolls, badges, and heraldic devices, carrying out the colouring of the windows in the Mediæval style of embellishment, and care taken that any furnishings were of similar character, the effect would be at once unique and beautiful." Externally, the filling up of the many empty niches with appropriate statues, as originally designed, has also yet to be seen to.

WHAT SETS HOUSES ON FIRE?—Your annotation in last week's *Builder*, upon the statement made by me in reference to the liberation of hydrogen from water, dwells upon a point on which, in my necessarily brief communication to the *Morning Advertiser*, I had not the opportunity of expatiating at length; but as it affects an opinion grounded upon an almost microscopical observation of the effects of the decomposition of water in the most minute proportions, I hope you will favour me by allowing me to say that I have reserved the full elucidation of this most important subject, according to my own experiments, for a pamphlet, which is now in the press. Of course, I cannot help entertaining a theory which I believe to be sound; and as it belongs to a class of subjects but little investigated, it is not surprising that my merely aphoristic remarks thereon should *appear* singular. When, however, I publish the facts which led to my conclusions, I have no doubt but that the influence even of infinitesimal decomposition will be accepted, if not as a ground of alarm, at least as a reason for precaution.—F. B. THOMPSON.

THE CEDARS, PUTNEY.—A large block of building, situated at the east end of this estate, is now being finished; and we are informed that the gardens and terraces are intended to be completed this year. There appear to be several hundreds of workmen employed by Mr. Rudkin, who is the contractor for the first portion. Mr. Eppy is the architect. It is estimated that the cost, when completed, will be little short of 25,000*l.*

HIGH PRICE OF LAND.—At a public auction last week of a small portion of land in the Harrow-road, the executive committee of the Conservative Land Society unsuccessfully offered the large sum of 5,000*l.* for less than two acres.

BEDFORDSHIRE ARCHITECTURAL AND ARCHÆOLOGICAL SOCIETY.—The annual public meeting of this society was held on Thursday in last week, Mr. Talbot Barnard, high sheriff, in the chair. Various objects of interest were exhibited, and the meeting was addressed by the chairman. The report regretted that circumstances had caused a temporary suspension of the public meetings of the society, and concluded by urging its claims on the county for an increased degree of support. A paper was read "On Festival Orientation," by the Rev. William Airy. Mr. Wyatt read one "On the Poets Laureate who have lived in Bedfordshire." Mr. Monkhouse read another "On Cold Harbours."

PARLIAMENTARY BILLS FOR NEW WORKS.—Amongst the advertisements of intention to proceed with Bills for new works in the ensuing session of Parliament, are the following:—Victoria (London) Docks.—Extension of time for completion of eastern cut and works; powers to make another cut and entrance thereto; further leases of the new works and present undertaking; power to sell the Steel-yard Estate, and make warehouses elsewhere; and for other purposes:—Swansea Harbour Trust and Swansea Dock Company.—Power to the Swansea Harbour Trustees to purchase and complete the undertaking of the Swansea Dock Company; power to the said trustees to make railways to the docks and harbour at Swansea; power to divert a street called the Strand; power to make dams across certain brooks or streams, and to divert waters of same; and for other purposes:—Victoria Gas Company.—Incorporation of company, with powers to construct gas-works, and to supply gas, &c. within certain parishes in the counties of Essex and Kent; powers to purchase, &c. lands for those purposes; to purchase and maintain, &c. existing works; and for other purposes:—Birkenhead Docks.—Alteration of Works; Construction of new works; and for other purposes.

THE CITY OF THE HUNDRED (TOLL) GATES.—The metropolis of England is the modern Thebes, so far as regards its "hundred gates." It is estimated by the *Globe* that there are literally about one hundred toll-bars by which the metropolis is hemmed in all round, at every point of the compass. "One hundred turnpike-gates," says the *Examiner*, in commentation, "are, in other words, 100 bars to our progress towards all points of the compass—100 interruptions of trade and traffic—100 lets and hindrances to commercial and social intercourse—100 quotidian stoppages on the highway and demands of our purses. The Englishman, and especially the Londoner, must assuredly have 100-horse power of endurance to submit as he does to this century of little persecutions. Multiply the vexation of any one stoppage at any one toll-bar by 100—multiply the product again by the number of people daily stopped and harassed, then multiply the result by the number of days in a calendar year, and you will have a grand annual total of hurry and worry, vexation and molestation, petty taxation and petty tyranny, which, if it could be represented to the eye by any figure or diagram, would be something enormous. The fortifications of Paris are for defence. The circumvallations of London are offence, simply." This intolerable offence we have ourselves not seldom commented on; but even this does not constitute the sum total of such *bars* to *progress*. There are many more closures of thoroughfares besides even the 100 turnpike-gates, to which a quiet and legal, but determined Rebeceaism ought to be opposed. Would that the Welsh blood of our active Home Secretary might only rise to Rebecca heat against the whole system: a sharp and short *Act* from him might very soon make a clean sweep of them.

THE METROPOLITAN BOARD OF WORKS.—The deputation agreed upon attended Sir B. Hall on Thursday, but too late for us to do more than mention it.

STATE OF WORSHIP-STREET POLICE-COURT.—Reiterated complaints have been made to the magistrates respecting the faulty construction and defective arrangements of this court. Amongst the grounds of complaint are the unwholesome state of the atmosphere, arising from imperfect ventilation and other causes, restricted and insufficient accommodation, the badly-arranged position of the dock and witness-box, and the confined condition of the passages and exterior approaches. In reply to remonstrances, it was intimated last week by Mr. Hammill that the subject in question had occupied his attention from the first day he had presided at the court. He had reason to be painfully sensible of the justice of the complaint. The impurity of the atmosphere was sufficiently explained by the fact that a capacious cesspool was situated in the very centre of the narrow courtyard, within a few paces of the side window of the court, and had not been cleansed out, or at all disturbed for nearly twenty years. The press appeared to be the magistrate's only hope of a remedy.

OUR GOVERNMENT OFFICES COMPETITION IN FRANCE.—The *Moniteur* publishes *in extenso* the conditions of the competition which has been opened by the British Government to the architects of all countries, for building an extensive set of Government offices in London, at Whitehall. The document sets forth in detail the dimensions and every other particular by which the plans are to be regulated.

A GOTHIC CASTLE AT CANNES.—The following letter from Cannes appears in the *Union* : — "Lord Ellenborough has purchased for 10,000*l.* the château in the Gothic style of M. Wolfid, at this place. Curious circumstances preceded this purchase. M. Wolfid, who is, it is known, a distinguished amateur in architectural art, drew up himself the plans of the château, and superintended its construction. In visiting the Highlands, M. Wolfid was much struck by a Gothic castle, magnificently situated on the banks of Ben Lomond; and, taking a sketch of it, he determined to erect one exactly like it at Cannes, on the picturesque heights which dominate the Brougham, Temple-Leader, Ormesson, and Borington Villas. The execution was promptly proceeded to, and for eighteen months past the high towers and battlements of the new edifice, which rise majestically, can be seen from a great distance at sea. Lord Ellenborough, who arrived at Cannes a few days ago, was astonished at seeing before him, 300 leagues from his own country, the old mansion of his ancestors in which he had passed his infancy. He immediately proposed, by force of guineas, to drive out the owner. His resolution was carried into effect in the course of a few hours. The noble lord has caused his armorial bearings to be put up everywhere, and he now resides there; but, instead of being enveloped in the fogs of Ben Lomond, its towers, donjon-keep, and battlements are reflected in the azured crystal of the Mediterranean waters." M. Wolfid must be a very great architect, indeed, to have effected all this from his sketch. It sounds like great nonsense.

THE NEW BARRACKS AT KENSINGTON. — The plans and sections for the new barracks at Kensington have been issued by the Government engineer, and may now be seen, we hear, at the engineer's office, James-street, Westminster. The site for the intended barracks, which will be constructed for the accommodation of both cavalry and infantry, is situated on the east of Westbourne-terrace, and between that and Kensington-gardens.

SALE OF FREEHOLD GROUND-RENTS AT CHELSEA. —During the week a sale of property of this description has been held at the Mart, by Messrs. Foster. The leases granted fall in at periods ranging from thirty-two to seventy years, and these with the reversions were sold on an average at twenty-six and a-half years' purchase.

MASKED AND ARMED BURGLARS AGAIN. — A correspondent having read, under the above heading, an account of a burglary in South Staffordshire, another addition to the long list of similar occurrences which have of late startled the public, refers our readers to Capt. Norton's "frictional paper grenade," for house defence, as exhibited and explained at the Crystal Palace, the Polytechnic Institution, the United Service Museum, and elsewhere. A short spout inclining downwards, through a well or window, as represented in the captain's little work on projectiles ["Norton's Projectiles." Hebert, Cheapside], affords a safe and effective means of directing the grenade: it will slide down by its own gravity, till it "comes to the scratch," at the end of the frictional cord, on a level, say, with the faces of the assailants, who will quickly be astonished by a flash of lightning, with a very palpable thunderbolt attached. Should the midnight disturbers have effected an entrance before being discovered, they are even more easily dealt with by means of the grenade.

TENDERS

For new Windsor Cemetery; Messrs. Poulton and Woodman, architects:—

Chapels and Lodge—	
Stacey	£1,610 16 0
Reynolds	1,496 0 0
Sturgis	1,365 16 0

TO CORRESPONDENTS.

Leicester-square.—In a notice of a Gothic building here, in the last number, "the stone and wood carving are to be highly finished," was, by a printer's error, made to read, "are too highly finished."—"E. G. B."—"S. H."(thanks).—"E. C. R."—"W. P."—"R. E. R."—"T. and M."—"Kingscote"—"E. T. L."—"H. P. H."—"King" (declined with thanks)—"Subscriber"—"An Old Cit."—"Alpha" (we prefer not to advise. The trouble taken by him would probably prove useless)—"Torquay" (the velocity proper for a circular saw depends on several circumstances, the quality of the wood, its freedom from moisture, the smoothness desired in the surfaces [information will be found in vol. ii of Holtzapffel's 'Turning and Mechanical Manipulation," p. 783)—"G. W. H. S."—"W. T."—"W. H. jun."—"W. M." (paper has not reached us).—"T. R. S."—"Mr M."—"Blazes."

NOTICE. — All communications respecting *advertisements* should be addressed to the "Publisher," and not to the "Editor;" all other communications should be addressed to the EDITOR, and not to the Publisher.

ADVERTISEMENTS.

BOROUGH of LEEDS.—WANTED, a competent Person to act as ASSISTANT in the Office of Mr. Edw Filliter, Borough Surveyor. He must be well and practically versed in sewering and surveying, have a knowledge of construction, and be a neat and expeditious draughtsman. He will be required to devote the whole of his time to the duties of his office. Salary, 100*l.* per annum.—Applications to be forwarded, accompanied by testimonials, addressed to "The Chairman of Streets and Sewerage Committee, Town-clerk's Office, Leeds," on or before the 7th inst. inclosed "Application for Office of Assistant to Borough Surveyor." The party appointed will have to enter upon his duties immediately.—By order,
Leeds, November 14, 1856. JOHN A. IKIN, Town-clerk.

CLERK of the WORKS. — WANTED, to superintend a church near town. None need apply unless thoroughly used to Gothic church work, and can produce good testimonials.—Apply, by letter only, stating terms and references, addressed T. B. Mr Bleasley, News Agent, 14, Great Marylebone-street. Postage to be paid.

CONSTANT EMPLOYMENT.—WANTED in a DECORATIVE ARTIST'S STUDIO, SEVERAL HANDS, capable of Painting the Human Figure with despatch. Any one used to Scroll Work &c.—Apply, with specimens, between TEN A.M. and FOUR P.M. at 8, Angel-terrace, St. Peter street, Islington.

MARBLE WORKERS.

WANTED, a steady, energetic MAN, well acquainted with sand rubbing and polishing marble work for mantelpiece pieces. Apply, by letter, to T. C. Office of "The Builder."

WANTED, a JUNIOR CLERK, in the office of an Architect, who has an extensive district under the Metropolitan Building Act. He must be able to draw fairly, and have had some experience in the working of the Act. His duties would be probably divided between in and out-door work, and to an honest mind the opportunities for acquiring practical information are unusually great. An Articled Pupil also required in same Office.—Apply to D. S. at Warren's Library, Lead-hall street, Finsbury-square.

WANTED, a respectable business Man, a practical PLUMBER, PAINTER, and GLAZIER, having a knowledge of general repairs, to assist in the management and make himself generally useful. No one need apply who is not willing to devote himself energetically to the business.—Apply by letter in own handwriting, stating terms, &c. to Messrs. HOPKINS and CO. Greek-street, Soho. References required.

TO PLUMBERS.

WANTED, a good PLUMBER, for a constant situation in the neighbourhood of London.—Apply to WILLIAM KELL, Grainer, &c. 6, Queen's-row, Pentonville, any morning from Nine to Eleven o'clock.

WANTED, a competent FOREMAN, who understands the management of workmen, can sketch, and prepare estimates for conservatories, heating and general ironwork.—Apply, stating age, salary, and qualifications, to A. B. Foreman, W. H. Smith and Son's, 1, Eden Quay, Dublin.

WANTED, a TOWN TRAVELLER, in the PAPERHANGING TRADE. Apply by letter only, to Messrs. HODGKINSON and BURNSIDE, 50, Upper Thames-street.

TO SHOP FOREMEN.

WANTED, as WORKING FOREMAN of CARPENTERS and JOINERS, a practical man, thoroughly acquainted with the trade in all its branches, competent to set out work and convert materials to the best advantage. None need apply who have not filled a similar situation.—Address, stating age, wages, and reference, X. Y. Z. Post-office, Wolverhampton.

WANTED, in a Builder's Establishment in the country, a respectable YOUNG MAN, whose time would be partly employed in the office, and partly at the bench, or otherwise to make himself generally useful. Satisfactory references will be required.—Address, A. B. Post-office, Bishops Stortford, Herts.

TIMEKEEPER, STOREKEEPER, &c.

WANTED, by a Young Man, a SITUATION as above, in town or country. Can measure timber, stone, &c. and is a good accountant.—Address, A. B. Office of "The Builder."

TO LAND SURVEYORS, ARCHITECTS, AND OTHERS.

WANTED, by a Young Man, a RE-ENGAGEMENT in either of the above. Understands surveying and levelling. Can draw, colour, and finish plans, &c. Has been engaged in London firms. A moderate salary required. Address, A. Office of "The Builder."

TO ARCHITECTS.

WANTED, by an Architect, who has had great experience in the superintendence of buildings of importance, an ENGAGEMENT as CLERK of WORKS. Unexceptionable references can be given.—Address, C. V. Office of "The Builder."

WANTED, a SITUATION as a good BRICKLAYER or PLASTERER. Can dress fronts down, tile or slate, and set work as per plan. Understands the business, and can be depended upon.—Address, H. H. No. 8, Charlotte-street, Portland-place.

TO BUILDERS AND PLUMBERS.

WANTED, by a steady, married Man, a constant SITUATION as PLUMBER or THREE-BRANCH HAND. Good references can be given.—Address, A. B. No. 6, Draycott-terrace, Chelsea.

TO BUILDERS, PAINTERS, AND GRAINERS.

WANTED, by a Young Man, a SITUATION as OIL GRAINER; can fill up time with writing or painting. Town or country. Address to F. M. at Mr. Jones's, 6, Thanet-street, Burton-crescent.

TO PAINTERS, BUILDERS, &c.

WANTED, by a Young Man, aged 19, a SITUATION as PAINTER and GLAZIER; would act as plumber's labourer. Wages not so much a consideration as a constancy. No objection to the country, or to go abroad. Address, W. H. 24, Seymour-place, Edgware road.

TO ENGINEERS AND MACHINISTS.

WANTED, a permanent SITUATION, by a Young Man, aged 19, who has had four years' experience at the vice and lathe, and can make himself generally useful. Moderate wages will be accepted. Address, A. S. 62, Chiswell-street, Finsbury.

WANTED, a SITUATION by a Young Man who has been for the last five years employed on a Railway Contractor's office on the Continent, where he has had the charge of the sections and plan. He has a good knowledge of the French language, and would have no objection to a situation in a Merchant's office, or otherwise, where such qualifications are requisite. The advertiser writes a good hand, is a fair accountant, can give satisfactory references, and has no objection to going abroad.—Apply J. H. B. Mr. Dilworth's, Newcastle, Staffordshire.

TO ARCHITECTS, SURVEYORS, &c.

WANTED, by a Gentleman who has been brought up in the office of an Architect and Surveyor, a SITUATION as ASSISTANT DRAUGHTSMAN. He has lately been engaged with an Engineer and Surveyor to a Local Board of Health, is also acquainted with mechanical drawing. Salary moderate.—Address, P. F. at Willan's Library, Bold-Street, Liverpool.

WANTED EMPLOYMENT, as CARPENTER and JOINER. The advertiser is an efficient sober workman. Town or Country.—Address, A. C. care of Mr. Turner, School of Design, William street, Wilmington-square Clerkenwell.

TO BUILDERS, PLUMBERS, AND DECORATORS.

WANTED, by the son of a respectable tradesman, that thoroughly understands his business, a SITUATION as PLUMBER, GLAZIER, PAINTER, GRAINER, and WRITER. Town preferred. Aged 20. Good testimonials can be given, having had the care of large jobs.—Address, F. F. STEVENSON, at Mr Smith's, 25, Strand.

TO BRICKMAKERS AND BUILDERS

WANTED, by a thorough Practical Man, a RE-ENGAGEMENT as FOREMAN of a BRICKFIELD; has had the entire management of brick-works for upwards of thirteen years. His work of this season can be inspected.—Address, C. H. at Mr. Osborn's, 60, Fleet-street, Soho.

WANTED, by a CARPENTER and JOINER, a SITUATION, as MACHINIST, in a Builder's Shop. Can work mortising, tenoning, grooving, planing, or most machines. No objection to fill his time up at the bench if required. Age 30.—Direct to F. M. 21, Weston-place, Old St. Pancras road. Satisfactory references given.

TO PLUMBERS AND BUILDERS.

WANTED, EMPLOYMENT, by a General Workman, as PLUMBER LEAD and SASH GLAZIER, PAINTER, and PAPERHANGER. Town or country.—Address, A. B. 24, Tenison-street, Lambeth, Surrey. Good testimonials.—This may be relied upon.

TO ARCHITECTS.

WANTED, by a thorough practical and experienced person, a SITUATION as CLERK of WORKS. Is a good draughtsman, and experienced in town, country, or church buildings. Satisfactory references from Architects and Public Boards.—Address, S. M. P. Office of "The Builder."

TO BUILDERS AND PLUMBERS.

WANTED, a SITUATION, by the Advertiser, who is a first-rate PLUMBER and a good GAS FITTER; if required, could fill up his time glazing.—Direct, M. N. Office of "The Builder."

WANTED, by an experienced, active Man, an ENGAGEMENT as CLERK of WORKS or FOREMAN, having had the general management of building works in town and country.—Address, E. T. 3, Tatchbrook-street, Pimlico.

TO SAW-MILL PROPRIETORS.

WANTED, EMPLOYMENT, as SECOND HAND at MOULDING or PLANING MACHINE, by a steady industrious Young Man, who can make himself generally useful in a Mill.—Apply by letter, pre-paid, to Y. Z. 69, Richard-street, Commercial-road, East.

TO BUILDERS.

WANTED, a SITUATION, by a Young Man who can make fair and working drawings and specifications, take out quantities, &c. He is a good builder's accountant, and can superintend works. Good references. Salary very moderate.—Address, A. B. 35, Bemerton-street, Caledonian-road.

TO BUILDERS, CONTRACTORS, &c.

WANTED, by a Young Man, an ENGAGEMENT. He can measure, take out quantities, superintend work, make working and finished drawings, specifications, survey or level, and is a good accountant. He possesses steady, business-like habits, with integrity of character.—Address, L. M. N. Office of "The Builder."

TO MASTER MASONS, &c

WANTED, by an experienced, steady Man, aged 40, a SITUATION as a LETTER CUTTER and WRITER, both plain and ornamental, and to make himself generally useful as a monumental mason. Wages not so much an object as a permanent engagement. Understands drawing and colouring.—Address, B. A. 16, Margaret-street, Upper North-street, Poplar, London.

WANTED, by a SMITH, lately returned from the East, a SITUATION as WORKING FOREMAN for a railway company or builders. Good references can be given. No objection to any part of the world. Address, post paid, L. E L. Pither's Library, 2, Harrow-road, Paddington.

TO MASTER BUILDERS, PLUMBERS, &c

WANTED, by a Practical Man, a SITUATION as FOREMAN PLUMBER. Satisfactory reference for leaving his late employer, where he has had the sole management of the above with one of our large contractors for upwards of three years. Has an objection to engage to go abroad. Address, T. M. No. 2 Macclesfield-terrace, City-road.

SEWERAGE WORKS

WANTED, by the Advertiser, a SITUATION as PRACTICAL CLERK of DRAINAGE WORKS. Unexceptionable reference as to ability or character can be given. Address, 10 Queen's Head-row, Newington Butts.

TO TRADESMEN AND OTHERS

WANTED, by an experienced Man, who is a good penman, a FEW HOURS' WRITING DAILY. Understands bookkeeping by single and double entry.—Address, S. T. 2, New Rochester-row, Westminster.

TO BRICKMAKERS, QUARRYMEN, AND OTHERS.

WANTED, a SITUATION to SUPERINTEND a BRICK-FIELD or WHARF; understands the management of mark and burning of bricks. No objection to town or country. Can have good references.—Address, A. B No. 4, Key's-terrace, Hammersmith.

TO PLUMBERS AND BUILDERS

WANTED, a SITUATION, by the Advertiser, who is a thoroughly good PLUMBER, and competent to undertake the gas-fitting and fitting-up of hot-water apparatus for heating houses or baths.—Direct to C. W. at Mr. Waylen's, 44, Great Windmill-street, Golden-square.

THE Advertiser is desirous of a RE-ENGAGEMENT as ESTIMATOR, or in a builder's establishment where the several offices are confined to one person. Unexceptionable references as to character and ability.—Address, C. C. No. 8, Hall-street, Arlington-street, New North-road.

TO BUILDERS, ARCHITECTS, &c

THE Advertiser, who has served five years with an Architect, wishes for EMPLOYMENT with a BUILDER or ARCHITECT; can make working drawings, is a good accountant, and would devote two years for improvement at a small remuneration; has good reference for ability and integrity.—Address, J. R. W. care of Mr. Broomhead, 36, Swinton-street, Gray's-inn-road.

WATER AND DRAINAGE WORKS

THE Advertiser, who has been engaged as Engineer's Assistant, Inspector of Works, and Contractor's Agent, on the Drainage and Water Supply of Three Towns, is desirous to meet with an ENGAGEMENT, in the middle counties, with a gentleman of respectability and influence. Testimonials will be produced.—Address, ESPERANCE, Office of "The Builder."

TO INVENTORS, MANUFACTURERS, and MERCHANTS.—An Architect and Surveyor in a midland county town is willing to accept a profitable AGENCY. Security if required.—Address, SURVEYOR, 22, Cecil-street, Strand.

TO ARCHITECTS, SURVEYORS, &c

THE Advertiser, accustomed to prepare fair and working plans, detail drawings, specifications, estimates, &c. and is familiar with the practice of building in all its branches, desires a PERMANENT SITUATION, either in an Office or on Works. Salary moderate.—Address to A. B. C. Willmott House, Old Kent-road.

TO ARCHITECTS, SURVEYORS, &c

THE Advertiser, a good Designer and quick Draughtsman in Ecclesiastical and Italian Architecture, and the various other styles, OFFERS his SERVICES to the above to prepare Designs, competition or otherwise, at his own residence, or their offices. Can be furnished, together with working drawings, details, &c. and perspectives made and coloured.—Address, L. X. at Wilson's Library, Kentish-town.

TO ARCHITECTS.

THE Advertiser, who can give satisfactory references, desires a RE-ENGAGEMENT in a London or country office, where his services in designing, colouring, making plain and ornamental drawings, &c. would be required. For further particulars address R. Y. Post-office, New Brentford, Middlesex.

NEW GOVERNMENT OFFICES.—A Gentleman who has had great experience in preparing competition drawings, is open to an ENGAGEMENT in preparing the above for the profession.—Address, OMEGA, Spalding's Library, Nottingham.

BUILDER'S CLERK.—A highly respectable, middle-aged Gentleman, accustomed to the routine of a builder's office, an efficient penman and accountant, wishes for an ENGAGEMENT as above, or in any other capacity where the above qualifications, added to steadiness and integrity, are deemed desirable. The most satisfactory references can be given.—Address, S. T. V. Office of "The Builder."

TO ARCHITECTS.

A FRENCH GENTLEMAN, Fellow of the Imperial School of Paris, who is a first-class draughtsman and colourist, and is thoroughly conversant with Classic and Modern Architecture, and who has published an Architectural Work, is desirous of JOINING an ENGLISH ARCHITECT, either permanently, or for the competition advertised for Public Offices.—For particulars and references, apply by letter to Mr. W. BLACKETT, 69, Lincoln's-inn-fields, London.

A MILLWRIGHT and ENGINEER, of considerable experience, is in WANT of a SITUATION, either as FOREMAN or as MILLWRIGHT, to keep the machinery or engines of any kind of mill in repair. Good reference can be given.—Address to A. B. 113, Vauxhall-walk, Lambeth.

TO ARCHITECTS

AN ARCHITECT'S ASSISTANT is desirous of meeting with an ENGAGEMENT. He has been nine years in the profession during which time he has had considerable experience in the duties of an Architect's Office, is a capital draughtsman and colourist, and has been accustomed to preparing working and finished drawings and specifications, taking out quantities, surveying, and levelling.—Address, J. T. 7, Upper Park-street, Greenwich.

A GERMAN GENTLEMAN, quite conversant with the English, French, and Italian languages, and possessing a thorough knowledge of mathematics, such as the different and integral calculus pure and applied to mechanics; analytical and descriptive geometry, perspective drawing, trigonometry and its applications to surveying, levelling, &c.; and likewise sufficiently practically skilled as a mechanic to make models in metal wishes for an ENGAGEMENT in the ENGINEERING profession.—Apply to X Y. Office of "The Builder."

TO ARCHITECTS AND CIVIL ENGINEERS.

A GENTLEMAN, regularly articled to the Architectural and Engineering Professions, who has been much engaged in getting out drawings, and who is acquainted with the general routine of office work, is desirous of a RE-ENGAGEMENT as an ASSISTANT. Unexceptionable references will be given.—Address, Y. Z. 134, High-street, Southwark.

TO JOINERS

A YOUNG MAN from the Country wishes for EMPLOYMENT at the Bench as an IMPROVER. Apply to W. P. 93, Thomas-street, Gibson-street, Waterloo-road.

TO BUILDERS, DECORATORS, &c.

A RESPECTABLE Young Man wishes to ENGAGE HIMSELF as WRITER, GRAINER, &c. Can do painting and glazing if required. Has served his time in the trade. Good references can be given.—Address, B. Office of "The Builder."

A RESPECTABLE YOUTH (aged 14) wishes for EMPLOYMENT in a professional office. Can copy drawings, make figures and square dimensions. Has had some office experience. Salary of minor importance.—Address, prepaid, H. T. L. Alma-terrace, Stockwell Private-road, Clapham.

A FIRST-CLASS WRITER, who has also a thorough knowledge of painting and decorating, is open to an ENGAGEMENT. Good references. No objection to the country.—Address, H. W. Office of "The Builder."

TO ARCHITECTS, SURVEYORS, BUILDERS, &c

AN ARCHITECT, possessing good practical abilities, having a few hours' leisure in the evening, would be glad to occupy the same in assisting either of the above professional gentlemen with drawings at home. Address, H. P. 27, Rathbone-place, Oxford-street, London.

TO CIVIL ENGINEERS, ARCHITECTS, AND SURVEYORS.

A YOUNG MAN wishes for an ENGAGEMENT in an office of the above. Can make finished and working drawings, take out quantities, and has a general knowledge of surveying, levelling, bridge drawing, &c.—Address, C. L. 12 York-place, City-road.

AN experienced CLERK of WORKS is open to a RE-ENGAGEMENT.—Address, N. T. care of Mr. Atkinson, 20, Lambeth-road, opposite the Blind School, Southwark, London.

TO ARCHITECTS, BUILDERS, &c

A PRACTICAL, experienced Person, who is a good draughtsman, wishes a RE-ENGAGEMENT as CLERK of WORKS or General or Shop FOREMAN, or general SUPERINTENDENT on an estate. Country not objected to. Good testimonials.—Address, ZETA, 41, Robert-street, Hoxton.

TO BUILDERS AND OTHERS

A YOUNG MAN, aged 20, wishes to obtain a SITUATION in a BUILDER'S OFFICE. He can copy drawings, writes a good hand, and is willing to make himself generally useful. Three years' good character from last employer. No objection to the country.—Address, X. Y. Z. Post-office, Lyall-place, Eaton-square, London.

TO SURVEYORS.

A YOUNG MAN, aged 24, who has had some experience in measuring, taking out quantities, and abstracting, wishes for a SITUATION where he would improve in the above. Good references. Salary one guinea a week.—Address, H. M. Office of "The Builder."

AN ARCHITECT and SURVEYOR'S ASSISTANT, about leaving his employer from whom he can produce good testimonials, will be happy to assist any gentleman in GETTING UP DRAWINGS for the Public Offices, or other buildings. He is a good draughtsman and colourist, understands perspective, and has had some experience in setting out quantities.—Address, Y. Z. Mr. Wood's Post-office, Bridge-place, Harrow-road.

TO ARCHITECTS, ENGINEERS, &c.

A GENTLEMAN, who has had great experience in the profession, and fully competent to conduct the management of an office, wishes to meet with an ENGAGEMENT, with a view to a share or partnership.—Address, DELTA, Bridge's News-office, Sherrard-street, Golden-square.

TO BUILDERS, &c.—WANTED, the TOP FLOOR or a small HOUSE in ST. JAMES'S (near the clubs), to fit up as chambers. Own servants.—Address, L. L. D. Office of "The Builder."

DUNSTABLE.—Eligible and Commodious BUSINESS PREMISES TO BE LET, with convenient Domestic Apartments immediately adjoining, situate in the High-street, having a frontage of 40 feet, by a depth of 124 feet. The Warehouses and Offices (erected not long since) have been built with a view to the Straw Business.—Apply to W. C. REED, Architect, 64, Old Broad-street, London.

FACTORY.—WANTED, in the neighbourhood of Finsbury, Curtain-road, or Old-street-road, a very large FACTORY, or GROUND to build one.—Apply by letter, with particulars, to J. A. at Gilbert's, Bookseller, Copthall-buildings, City.

STANLEY-BRIDGE WHARF TO LET. Consists of a water frontage of about 150 feet, by about 200 feet in depth by the roadside, and would be a good show-yard for saleable goods, on the King's-road, Chelsea, a little beyond Cremorne-gardens; there is a dwelling, with many outbuildings, and a shed, 100 feet long by 40 feet wide, wanting a roof; suitable for a builder, engineer, manufactory, or the timber, stone, brick, lime, or any trade or business requiring room.—For further particulars inquire of Messrs. EVERSFIELD and HORNE, Parliament-street.—Conveyances to or from every ten minutes, by boat or omnibus.—To be had on lease at very moderate terms; or a part may be had.—No tolls to town.

TO BE LET, or SOLD, under unusually advantageous circumstances, SIX substantial CARCASES in an advanced state, and eligibly situated, on a high road, in an improving neighbourhood.—Address, Mr. SMERDON, 9, Lansdowne-terrace, Battersea.

TO BUILDERS.—TO BE LET, on lease, for 85 years, 18 feet FRONTAGES, in the best part of Chelsea, suitable for 10-roomed houses. Arrangement for advances can be made. Also TO BE SOLD or LET, 6 acres of FREEHOLD LAND, at WEYBRIDGE.—Apply to Mr. J. SHEPPARD SCOTT, Architect, 16, New Broad-street, City.

TO CARPENTERS and JOINERS.—A BUSINESS in the country TO BE DISPOSED OF, in an improving market town. This is an excellent opportunity for a person of business habits, the late proprietor having done a good trade, and will give the most satisfactory reasons for leaving. About 150*l.* required for stock, implements, &c.—Address, W. C. Office of "The Builder."

TO CARPENTERS, BUILDERS, &c.—An established BUSINESS, in the southern part of the Metropolis, TO BE DISPOSED OF, the present proprietor retiring from the trade. A most eligible opportunity to any person having about 200*l.* The premises comprise commodious workshops and a dwelling-house, on a long lease.—Application, from principals only, to Mr. H. SOWDON, Auctioneer and Surveyor, 30, Moorgate-street, City, and Commercial House, Old Kent-road.

TO ENGINEERS, FOUNDERS, and OTHERS.—TO BE DISPOSED OF, by private contract, the PREMISES and TOOLS of an engineer and founder, in excellent order. The premises are situate in the immediate vicinity of the intended new line of street from London-bridge to Blackfriars. They have recently been put into thorough repair, and are conveniently arranged. A lofty chimney-shaft has also been erected. The tools, which comprise numerous lathes, planing, drilling, and shaping machines, cupolas, foundry boxes, smiths' tools, &c. are all good, and ready for immediate work. The premises comprise, in addition to the manufacturing portion, two dwelling-houses, adapted for a foreman and a principal. The rent is 150*l.* per annum, including the use of a steam-engine and boiler. One half the purchase money may remain on mortgage.—For further particulars, apply to Messrs. FULLER and HORSEY, Bulter-street, City.

A DISCOUNT ALLOWED TO THE TRADE.

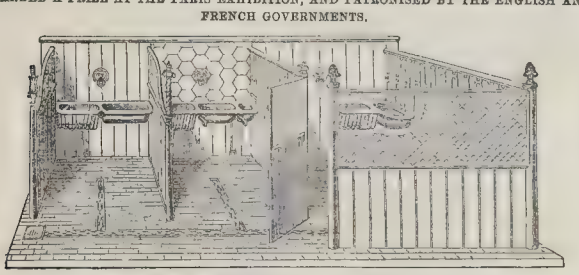
This Windguard is highly recommended by the Manufacturers,

F. EDWARDS, SON, and CO.
42, POLAND-STREET, OXFORD-STREET.

RADIATING AND REFLECTING STOVE.

WILLIAM S. BURTON'S NEW REGISTER STOVE

combines completely the well-known principles of both Stephen's and Sylvester's celebrated Patent Stoves, while it has others equally valuable, which are peculiarly its own, and for which a patent has been granted. Its reflecting and radiating powers are perfect, it is very simple, and cannot be put out of order, consumes but little fuel, is most cleanly and cheerful in use, while its general appearance, no fender being needed, is most imposing.



Prices, complete, black or bronzed, from 5l. 10s.; bright, 14l. 5s. and upwards. One may be seen in action in his show-rooms, which contain such an assortment of fenders, stoves, ranges, fire irons, and general ironmongery, as cannot be approached elsewhere, either for variety, novelty, beauty of design, or exquisiteness of workmanship. Bright stoves, with bronzed ornaments and two sets of bars, 4l. 14s. to 13l 13s.; ditto, with ormolu ornaments and two sets of bars, 5l 5s. to 26l. Bronzed fenders with standards, 7s. to 5l. 12s.; steel fenders, 2l. 15s. to 11l.; ditto, with rich ormolu ornaments, 2l. 10s. to 18l. Fire-irons, from 1s. 9d. the set to 4l. 4s.

Illustrated Catalogues sent (per post) free.

39, OXFORD-STREET; 1, 1a, 2, & 3, NEWMAN-STREET; and 4, 5, & 6, PERRY'S-PLACE, London. Established 1820.

NEW PATENT INVENTIONS FOR STABLE REQUISITES.

AWARDED A PRIZE AT THE PARIS EXHIBITION, AND PATRONISED BY THE ENGLISH AND FRENCH GOVERNMENTS.

COTTAM and HALLEN, of Winsley-street,

Are the original inventors of the PATENT ENAMELLED MANGER, WATER-TROUGH and WROUGHT-IRON RACK, united to an iron top-plate, and forming one complete and useful fixture, having Cottam's Patent Noiseless Halter-Guide and Collar-Hook attached, the ball of which is taken to the back of the manger, and works with ease and freedom up or down the guide-bar. Cottam's new Patent Seed-Box, of galvanized sheet-iron, is an important addition to the above fittings, being simple in construction, light and durable, promotes cleanliness, and is economical in its results. Also, the Patent Saddle and Harness Bracket combined, which can be used with great advantage where space is an object, as it can be turned up out of the way when not in use.

Improved Harness Holders, for preserving the shape of the harness, and preventing its cracking. Patent Loose-Box Fittings, cheap and Durable Corn-Bins.

Improved Surface-Drain, with safety covers, Sanitary Traps, and every article for the harness-room and stable, kept in stock, plain, galvanized, and enamelled. Iron Gates, Fencing, Hurdles, &c.

The new Illustrated Catalogue for 1856, and estimates gratis, upon application to

COTTAM AND HALLEN, 2, WINSLEY-STREET, OXFORD-STREET.

BATHS and HOT-WATER APPARATUS. J. TYLOR and SONS' ILLUSTRATED CATALOGUE of BATH WORK, &c. to be had on application. Estimates and Plans for Fixing given.—J. TYLOR and SONS, Manufacturers, Warwick-lane, Newgate-street, London.

VENTILATING STOVES! SUSPENSION STOVES!—Approved by thousands of purchasers, and recommended as the two best, cheapest, most healthy, and economical for churches, chapels, halls, schools, watch-ones, shops, greenhouses, bedrooms, libraries, &c. Prospectuses, with prices, sent post-free.—DEANE, DRAY, and CO. Stove Range, Ironmongery and Furnishing Warehouse, London-bridge.

MR. S. EGAN ROSSER, Warming and Ventilating Engineer, &c. (successor to the late Mr. John Sylvester, C.E.) has REMOVED from Great Russell-street, Bloomsbury, to No. 6, CANNON-ROW, PARLIAMENT-STREET, WESTMINSTER.

CORRUGATED IRON.—A large quantity of CORRUGATED IRON TO BE SOLD, below the market price.—Apply for particulars, to COTTAM and COTTAM, St. Pancras Ironworks, London. Iron Roofs, corrugated and galvanized Stores, Houses, &c. for home and exportation, upon a principle requiring no skilled labour to fix them. COTTAM and COTTAM, St. Pancras Ironworks, old St. Pancras-road, London.

P. O'CONNOR'S PATENT LEVER HINGE.—The most perfect and simple INVENTION for CLOSING SWING DOORS and GATES yet produced. The motive power being a weighted lever, it may be easily adapted to any size door, and it is not liable to get out of repair, as spring hinges generally are. May be had from all Ironmongers and Factors; J. CARTLAND and SON, Manufacturers, Birmingham; or from the Patentee, P. O'CONNOR, Ironmonger, Wavertree, Liverpool

COLLINGE'S PATENT HINGES.—Manufacturers, CHARLES COLLINGE and CO. 84 and 85, Bridge-road, Lambeth, where a great variety are always on view for church, park, railroad, coachhouse, and other gates and doors of large and small dimensions, a ton weight moving with these hinges as easily as a wicket. Ornamental hinges, adapted for drawing-rooms, &c.; doors fitted with them may be removed and replaced in an instant. Rising and double acting spring hinges, and superior gate fastenings, at moderate prices. None genuine unless marked "Charles Collinge, Patent, Lambeth." Plain and ornamental cast and wrought iron-work, for building and other purposes. Engines, machinery, patent axle-trees, sugar-mills, &c

FIRE-PROOF CONSTRUCTION.—FOX and BARRETT'S PATENT.

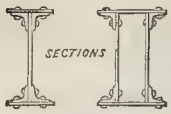
This improved system of fire-proof construction has been most extensively adopted, and its application has been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private.

The system combines ECONOMY, with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.

The floors and roofs are formed by a combination of joists of wrought or rolled iron with concrete, so constructed that each floor becomes in effect a beam of artificial stone, with ribs of iron, the structure possessing great strength and rigidity, and forming a fire-proof foundation adapted to receive a finished surface, either of the ordinary flooring boards, or of cement, asphalte, tiles, slate, or other material.

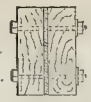
Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, both as superseding the necessity for fire-resisting party and brick arches, and as insuring the great desideratum of fire-proof construction, even for ordinary dwelling-houses and domestic buildings, within the reach of every one.

Further information may be obtained of the Proprietor of the patent.—Mr BARRETT, 16, York buildings, Adelphi.



COMPLETE IMMUNITY from FIRE, THIEVES, and GUN-POWDER. EDWIN COTTERILL, Inventor, Patentee, and Sole Manufacturer of the Royal Chubb Detector Locks. The only locks which have obtained Parliamentary and Royal approval, and cannot be blown up with gunpowder. Descriptive drawings, with testimonials, and full report of the numerous fail attempt of Mr. Hobbs to pick the Detector Lock at Guildhall (after one hundred and one), at Manchester, forwarded free.—Manufacturer of Fire-proof Safes and Chests, Patent Double and Single Acting Spring Bolts, &c. &c.—4, 16, Vittoria-street, corner of Regent-place, Birmingham.

LIGHTNING CONDUCTORS.—R. S. NEWALL and CO. Patentees of the Copper Rope Lightning Conductor, supply Lightning Conductors, with the point and all staples complete for fixing, at 6d. per foot.



R. S. NEWALL and CO.'S Patent Copper Rope Conductor is being applied by architects, engineers, and scientific men in all parts of the world.

COPPER and IRON CORD for WINDOW SASH-LINES.

OFFICES, Gateshead-on-Tyne,

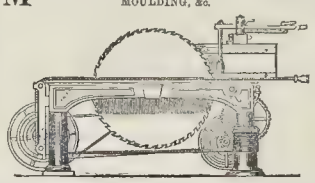
TO BUILDERS, CONTRACTORS, and OTHERS.—FOR SALE, the undernoted CAST-IRON GIRDERS, which were made to order, but are now not required, on account of the works being stopped:—
3 Girders, 26 ft. 8 in. long, by 13 in. deep at centre, and 8 in. at ends, weigh about 30½ cwt. each
12 Girders, 21 ft. 9 in. long, by 12 in. deep at centre, and 8 in. at ends, weigh about 16½ cwt. each.
93 Girders, 19 ft. 6 in. long, and 11 in. deep at centre, and 8 in. at ends, weigh about 12½ cwt. each.
4 Girders, 16 feet long; by 10 in. deep at centre, and 7 in. at ends, weigh about 6½ cwt. each.
14 Girders, 14 ft. long, by 9 in. deep at centre, and 6½ in. at ends, weigh about 4½ cwt. each.
4 Girders, 13 feet 6 in. long, by 10 in. deep at centre, and 7 in. at ends, weigh about 5½ cwt. each.
2 Girders, 13 feet long, by 15 in. deep at centre, uniform section, weigh about 8 cwt. each.
12 Girders, 9 ft. 6 in. long, by 8 in. deep at centre, uniform section, weigh about 3½ cwt. each.
The above may be seen at Dunfermline Foundry; or any further information obtained, from JOHN WHITELAW, Dunfermline, N. B. who will receive offers for the whole, or any portion. The girders can be tested to the usual extent, according to the size, and certificate of proof furnished.
Dunfermline, October 28, 1856.

TO BELL-HANGERS, GAS-FITTERS, IRONMONGERS, &c. &c.—The Trade supplied on the best terms with House Bells, Zinc, Tube, and Copper Wire, Gas Pendants, Brackets, and Joints of all descriptions for Gas-fitting, in Brass and Iron; Tin, Composition, Iron and Brass Tubing, Cornice-poles, Rings and Lacquered Cast Tube for Picture Rods, Desk Rails, &c. &c.
Superior Rolled Brass for Engravers, Castings in Fine and Common Brass, Gun Metal, &c. &c.
RICHARD EVERED'S, Brass and Bell Foundry and Metal Warehouses, Nos. 10, 11, and 12, Charles-street, Long-acre, London.



PATENT MACHINES for WORKING on WOOD.—These celebrated Machines have been awarded a number of prize medals by many scientific institutions, and also by the Great Exhibition in London, and are now extensively used by the Indian, American, and all the principal governments in Europe; also by eminent Contractors, Builders, Shipwrights Machinemakers, and other workers in wood. Their operations are in every respect perfect, either in hard or soft wood, for planing, squaring up, moulding, tenoning, mortising, grooving, rebating, sawing, and boring, which they perform in a very rapid and superior manner, at a greatly reduced cost.—Sold only by WILLIAM FURNESS, Patentee, 26, Lawton-street, Liverpool, from whom full particulars may be obtained, and all the machines can be seen at work.

GARDNER'S PATENT STEAM GENERATOR and SMOKE CONSUMER produces more steam with lessened consumption of fuel, and entire removal of smoke. These patented improvements are highly recommended for their simplicity, durability, and great economy. They are self-acting, have no moving parts, therefore require no external aid.

They are applicable to all Furnaces, Locomotives, Marine Engines, Ovens, Pottery and other Kilns, Common Fire, Kitchen Ranges, Hall and Hot-air Stoves.—Application to be made to the PATENTEE, 24, Norfolk-street, Middlesex Hospital; to Messrs. BURRIDGE and HEALY, 118, Dorset-street, Fleet-street; or to Z. D. BERRY, Albion Works, Wilton-road, Pimlico.
Testimonials, &c. may be seen upon application.

MACHINERY for SAWING, PLANING, MOULDING, &c.

SAMUEL WORSSAM and CO. beg to call the attention of Contractors, Shipbuilders, proprietors of Saw-Mills, and others, to their improved Inventions and Adaptations in Saw Frames and Benches, Roller and Chain Planing Machines, Endless Saw Frames, and all other kinds of Machines, for Sawing, Planing, Groving, and Moulding Wood. They have constantly on hand machinery, either wholly or partly made, so that they can at all times on short notice supply them. S. W. and CO. beg to state that they have hitherto confined their attentions to this sort of machinery, and have had the honour of supplying some of the most distinguished companies, ship builders, and contractors in the world with their machines, for home and foreign use. One of their Saw Benches, and also a smaller one, with Boring Apparatus, may be seen at the Machinery Department, Crystal Palace.—A descriptive Catalogue, with Drawings, may be had on application to SAMUEL WORSSAM and CO. Engineers, &c. King's-road, Chelsea, London.

TO IRONMONGERS, BUILDERS, &c
PATENT WROUGHT-IRON WELDED TUBE for GAS; galvanized ditto for water; high-pressure cocks, &c. Manufacturers of Dr. Arnott's Improved Ventilators.
HULETT and CO. 55, High Holborn.

A PRIZE MEDAL for SUPERIOR LOCKS was awarded to J. H. BOOBBYER at the Great Exhibition of 1851, who invites the attention of Builders, &c. to his Stock of Ironmongery, Brass Foundry, Nails (wrought and cut), Copper and Zinc; Patent Locks of all descriptions; China, Glass, and Wood Furnitures of all kinds, with Patent Shifting Spoon, Dr. Arnott's Ventilator, &c.; and the new registered Venetian Ventilator, so much admired, &c. &c. 8d. each.
J. H. BOOBBYER (late STURCH and BOOBBYER), established nearly 200 years, for the supply of Goods from the best Manufactories, at the lowest prices.
14, Stanhope-street, Clare-market, London.

JOHN TANN'S NEW PATENT RELIANCE LOCK and CHEMICAL-FILLED FIRE-PROOF SAFES, DOORS, ROOMS, &c. Manufacturers of cash and deed boxes, copying presses, every description of lever locks and street-door latches. To be had of the General Lock and Safe Warehouse, 30, Walbrook, City. List of prices on application.—Several second hand SAFES for SALE, at half the original cost.

CHUBB'S LOCKS, with all the recent improvements; STRONG FIRE-PROOF SAFES, CASH and DEED BOXES.—Complete lists of sizes and prices may be had on application.
CHUBB and SON, 57, St. Paul's-churchyard, London; 28, Lord-street, Liverpool; 16, Market-street, Manchester; and Hornsey-fields, Wolverhampton.

LAMBERT'S SELF-CLOSING LAVATORY AND CLOSET VALVE

No. 7.

Is adapted for high or low pressure, and for any kind of BASIN. Many hundreds are in use under continuous pressure of 100 to 200 feet: they are found to be exceedingly durable, and are cheaper than common cocks. Manufactured solely by the Patentees,

THOS. LAMBERT and SON,

Brass Founders and Engineers,

Corner of Short-street, New Cut, Lambeth.

N.B. No. 7, combined with a DOULTON'S PAN and TRAP, is the CHEAPEST COTTAGE CLOSET yet produced. Price complete, 13s. 6d. each.

TO WATER COMPANIES AND PLUMBERS.

HIGH-PRESSURE COCKS & CLOSETS.

The Health of Towns Commissioners having recommended the adoption of the high-pressure principle in all towns, WARNER'S HIGH-PRESSURE COCK is recommended as a Cock free from leakage, and applicable for all purposes and situations. Patent Closets and Basins with supply-valve for attaching direct to main pipe without a cistern, cocks, or wire.

LEAD, IRON, and TIN PIPE.

JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin-street London.

TO WATER COMPANIES, LOCAL BOARDS OF HEALTH, AND OTHERS.

LAMBERT'S NEW VALVE COCK,

For Preventing Waste of Water.

Is so constructed that it cannot be left open accidentally or wilfully, and further it will at each action deliver a specific quantity, and under the same pressure this quantity will never vary.

It is peculiarly adapted for closets, self-acting or otherwise.

Price, complete for high pressure, 18s. 6d. each.

" " low " 12s. 6d. "

THOS LAMBERT and SON, Patentees and Manufacturers, Founders and Machinists, Short-street, New-cut, Lambeth.

VENTILATION.—PURE AIR.

Sheringham's Ventilator for the admission of pure air through an

EXTERNAL WALL.

With single pulley, from 6s. each; with leading pulley, from 6s. 6d.

These Ventilators are arranged that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants; and as they are placed in the external wall, their action is not impeded when the house is closed for the evening, at which time a constant supply of fresh air is most required.—HAYWARD, BROTHERS, sole Manufacturers, 196, Blackfriars-road, and 127, Union-street, Borough; and of all respectable ironmongers, builders, &c.

SALES BY AUCTION.

Re C. J. MARE.—SURPLUS MACHINERY AND STORES.

MESSRS. FULLER and HORSEY, in conjunction with Messrs PULLEN and SON, are instructed by the Assignees to SELL by AUCTION, at the Works, Blackwall, on MONDAY, NOVEMBER the 24th, at ELEVEN, in lots, SURPLUS MACHINERY and STORES, including a nearly new cent actors' portable steam-engine of 8-horse power, two eg-end steam boilers, 24 feet and 36 feet long; eccentric cutting and punching press, two Fairbairn's patent rivetting machines, the castings for a pair of 250-horse power marine engines, forged work and brass work for ditto, four new marine boilers for ditto (incomplete), fly-wheels, spur and rigger wheels, set of pumps, six double and single purchase cranes, ten wrought-iron trollies, six weighing machines, bending and shaping slabs, fifty portable forges, forty pair wrought-iron blocks, ten anvils, smiths' tools, twenty tons broken cast-iron, twenty tons scrap-iron, and numerous other effects.—To be viewed three days prior to the sale, when catalogues may be had at the Works; of CHAS. LEE, Esq. Official Assignee, Aldermanbury; of Messrs. LAWRANCE, FLEWS, and BOYER, Solicitors. Old Jewry-chambers; of Messrs. NEWSON, EVANS, and NEWSON, Solicitors, Wardrobe-place, Doctors'-commons; of Messrs. PULLEN and SON, 80, Fore-street, Cripplegate; and of Messrs. FULLER and HORSEY, Billiter-street, City.

Re C. J. MARE.—Pair of New Oscillating Marine Engines, of 177 horse power.

MESSRS. FULLER and HORSEY, in conjunction with Messrs. PULLEN and SON, are instructed by the Assignees of Mr. C. J. Mare to SELL by AUCTION, at the Works, Blackwall, on THURSDAY, NOVEMBER the 27th, a PAIR of new OSCILLATING MARINE STEAM-ENGINES, collectively of 350 horse power, nominal, diameter of cylinders, 70 inches, length of stroke, 5 feet 6 inches; the cylinder covers, intermediate shaft, rods, levers, and numerous other parts are polished bright, the boilers are tubular, and of the latest improved construction, they are fitted with Beardmore's patent smoke consuming apparatus, which is found to economize the consumption of fuel very considerably, and are capable of supplying steam equal to 2,000-horse power.—To be viewed at any time by special order. Catalogues may shortly be obtained of CHAS LEE, Esq. Official Assignee, Aldermanbury; of Messrs. LAWRANCE, FLEWS, and BOYER, Solicitors. Old Jewry-chambers; of Messrs. NEWSON, EVANS, and NEWSON, Solicitors, Wardrobe place, Doctors'-commons; and, with orders to view, of Messrs. PULLEN and SON, 80, Fore-street, Cripplegate; or of Messrs. FULLER and HORSEY, Billiter-street, City.

Superior Chimney-pieces of Statuary Marble, some richly-sculptured, and of Dove and Vein Marble, in great variety.

MESSRS. ROBINS will SELL by AUCTION, at their ROOMS, Great Piazza, Covent-garden on TUESDAY next, NOVEMBER 25, at TWELVE, STATUARY MARBLE CHIMNEYPIECES, some richly sculptured, suitable for first-class drawing-rooms, others of a less expensive character, with trusses; black and Sicilian marbles, for dining-rooms and libraries, several of dove and Sienna marble; and a great var ety of vein marbles of smaller size.—On view three days prior, at the Auction-rooms, Covent-garden.

SALES BY AUCTION.

Valuable Water-side Premises on the Regent's Canal, Kingsland-road, with Cement Kilns, Steam Engines, &c. and an improved Rental of 24l. a year.

MESSRS. EVERSFIELD and HORNE are instructed by the Mortgagees to SELL by AUCTION, at the MART, on TUESDAY, NOVEMBER 25, in two lots, the beneficial LEASE of the extensive PREMISES, known as Tuscany Wharf, near the Canal-bridge Kingsland-road, fitted up at a great expense by Messrs. Freen and Co. for the manufacture of cement, but equally applicable for many other purposes. Held for a long term, at a moderate ground-rent; also an improved rent of 24l a year, arising out of a plot of ground opposite Tuscany Wharf.—May be viewed by leave of the tenants, and particulars had of EDWARD JENNINGS, Esq Solicitor, 32, New Bowcourt; at the Mart; and of the Auctioneers, 40, Parliament-street, or Coal Exchange.

To BUILDERS, BUILDING SOCIETIES, and OTHERS.—Valuable Freehold Building Land, Residence, &c. (the free), with immediate possession, at Hersham, Surrey, within five minutes' walk of the Walton Station, on the South-Western Railway.

MESSRS. CHURCH and SON are directed to OFFER for SALE, by PUBLIC AUCTION, at the MART, opposite the Bank of England, on THURSDAY, NOVEMBER 27, 1856, at TWELVE o'clock, in three lots, TWO very valuable PLOTS of FREEHOLD BUILDING LAND, and a substantial brick-built and conveniently arranged Freehold DWELLING-HOUSE, with range of outbuildings adjoining, and large garden in front, desirably situate on the high road from London, about half a mile from Hersham, 1½ from Walton, and within five minutes' walk of the Walton station on the South-Western Railway. Lot 1 comprises a Plot of Land at the corner of the high road and the road from Walton to Hersham, with a building frontage of about 33 feet, and an average depth of 264 feet, or thereabouts. Lot 2, a Plot of Land adjoining the corner of the same road, with a building frontage of 426 feet, and an average depth of 274 feet, or thereabouts; and Lot 3, a substantial brick-built House and premises, fronting the high road from Walton to Hersham, containing eight rooms and all necessary offices, with chaise house, stable, and large well-stocked garden enclosed with walls, in the rear, of the estimated annual value of 32l. The land is well adapted for the erection of detached or semi-detached houses, the soil is good, and an abundant supply of water can be obtained at trifling expense. It is surrounded by excellent roads and ornamental park-grounds. In commanding situation, at the intersection of two wide roads, thus affording large building frontages, and, after with its continuity to the railway station, particularly recommend it for building purposes.—Particulars and conditions of sale, with plans annexed, may be obtained of Messrs. BRICKMAN, DARTMOUTH, and DRAKE, Solicitors, 46, Parliament-street, Westminster; at the Mart; and of the Auctioneers, William-street, Woolwich.

BROMPTON HOSPITAL ESTATE.—Stock and Effects of a Builder and Contractor. Absolute Sale.

MR. PETER BROAD will SELL by AUCTION, by order of the Committee, on the PREMISES, on MONDAY, DECEMBER 1, and following day, the whole of the valuable STOCK and PLANT of a Builder, comprising a large quantity of scaffolding, stock bricks, paving-stone, flags, chimney-pots, and slate, Portland, and other stones, 20,000 feet deal boards, mahogany and other timber, cement, plaster, 6 tons of hair, ironmongery and brass goods, sheet and pipe lead, glass, plumbers' tools, timber, carpenters' benches, smith's forge, bellows, anvil, and tools. The erections of carpenters' and smiths' shops, sheds, counting-house, and various effects. On view the day prior. Catalogues on the Premises; at the Rose Tavern, Brompton-road; or at the Offices of the Auctioneer, 28, Poultry.

BRIXTON.—Builder's Stock-in-Trade, Carts, Waggons, Iron Hurdles, and Effects.

MESSRS. NORTON, HOGGART, and TRIST have received instructions from the Executors of the late Mr. W. J. Lee, to SELL by AUCTION, on the PREMISES, Notley's Brick field, Acre-lane, Brixton, on THURSDAY, NOVEMBER 27, at ELEVEN for TWELVE o'clock, the RESPECTABLE STOCK of CAPITAL RED PEPPER BRICKS; oak planks, fencing posts and rails, elm boards, fellocs, three tons of old iron, sashes and frames, about 15,000 capital white Suffolk bricks, large quantity of paving stones, York landings, paving sinks, steps and sills, Portland blocks and slabs, dove and veined marble, statuary, Yeovil and other chimney-pieces, grates, cisterns, capital waggons, ploughs, harrows, and iron hurdles, and miscellaneous items.—May be viewed on the preceding day the sale, and catalogues had, on the Premises; at the Crown Tavern, Acre-lane, Brixton; Horns Tavern, Kennington; and of Messrs. NORTON, HOGGART, and TRIST, 69, Old Broad-street Road-Exchange

KING'S CROSS.—Stock in Trade of a Brick, Pipe, Pipe, and Lime Merchant.—Steam-boiler, Steam-engine, Horses, Carts, and other effects.

MESSRS. PRICKETT and SONS will SELL by AUCTION, on the PREMISES, Great Northern Wharf, York-road, King's-cross, on WEDNESDAY, NOVEMBER 26th, and following days, at ELEVEN o'clock, the REMAINING STOCK of a BRICK, TILE, PIPE, and LIME MERCHANT; together with a 40-horse power boiler, 30-horse power steam-engine, pair of 4 feet 6 inch grinding burr mill-stones, two powerful crab cranes, capital carts, van, several sets of harness, cut crusher, chaff-cutting machine, oak office furniture, and other effects.—May be viewed the day prior to the sale, and catalogues obtained on the Premises; the Victoria Hotel, King's-cross; and of Messrs. PRICKETT and SONS, at their Auction and Estate Offices, 34, Southampton-buildings, Chancery-lane; and High-street, Highgate.

TO CABINETMAKERS, TIMBER MERCHANTS, BUILDERS, and OTHERS.—FOR SALE by AUCTION, without reserve, at the PREMISES, No 12, Carnation-road Shoreditch on MONDAY, 24th NOVEMBER 1856 at TEN for ELEVEN o'clock precisely, about SEVENTY LOGS CITY ST. DOMINGO, CUBA, and HONDURAS MAHOGANY. Also large quantities of Mahogany (Dry) in Flitches, Planks, and Boards; Cedar in Planks and Boards, Rosewood Planks, Walnut in Flitches, Burrs, Planks, and Veneers; Red Pine (Dry) Planks, Deals, and Battens; Maple Veneers, old Building Materials, and other Goods.—To be viewed two days previous to, and on the morning of Sale. Catalogues may be had on the Premises, and of THOMAS EDWARDS and SON, Mahogany Brokers and Auctioneers, 18, Pinner's Hall, Old Broad-street, City.

TO CABINET-MAKERS and BUYERS of MAHOGANY.—TO BE SOLD by AUCTION, on WEDNESDAY MORNING, 26th inst., at ELEVEN o'clock precisely, in the WOOD SALES SHEDS, Brunswick and Toxteth Docks, Liverpool:—

1,347 Pieces, of which 856 Pieces are Curls City St. Domingo Mahogany, being the cargo just landed, ex Mercutia, from the city direct.

On account of the Importers.

577 Logs and Curls St. Domingo Mahogany, being the cargo now landing, ex George Walker, from Porto Plata.

Apply to Messrs. A. Durant and Co. Merchants.

224 Logs and Curls St. Domingo Mahogany, just landed, ex Coronet, from St. Domingo.

Apply to Messrs. Bunt, Dand, and Co. Merchants.

210 Logs Honduras Mahogany, hourly expected to arrive, per Condenee

Apply to Messrs. Newell, Bunt, and Co. Merchants.

177 Planks Italian Walnut-Wood, just landed, ex Tiber, from Ancona.

On account of the Importers.

To which will be added the usual assortment of other Fancy and Furniture Woods. The Broker will be in London on Monday and Tuesday next, prior to the Sale, and will give the fullest particulars of measurement and description of each piece, may be referred to, on application, or with introductions to Messrs. Edwards and Son, at Messrs. Durant and Co.'s, 11 Tel, Manchester-street, Manchester-square, London.

EDWARD CHALLONER, Broker, Liverpool.

The custom of measuring mahogany in Liverpool yields to the buyer from 5 to 6 per cent, and the price is generally 5 per cent. more than in London; but, in Liverpool, the wood is accessible alike to all buyers, without exception; it is seen too, and sold and delivered at first hand, without the extra delay and measurements, with individual descriptions of each piece, &c.

MR. D. A. RAMSAY respectfully announces that the SALE advertised for MONDAY, 24th instant, is POSTPONED until further notice.—79, King William-street, City.

TO BUILDERS AND OTHERS.—HIGH-STREET, BROWLEY, MIDDLESEX.

MR. T. S. SMITH has been instructed to LET by TENDER (to be sent in by SATURDAY next, NOVEMBER 29th, 1856), on a building lease for seventy years, about ONE ACRE of valuable FREEHOLD BUILDING LAND (and tax redeemed), with or without the residence and other buildings now thereon, known as "Bromley House," near the Bow Railway Station, having a commanding frontage to the High-street, of about 300 feet, offering a desirable opportunity for the erection of shops and houses, being the only available spot now left for building in the High-street. May be viewed, and printed forms of Tender and further information obtained of Mr. T. S. SMITH, Auctioneer and Surveyor, 44, Lombard-street, and Upton, Essex, where a plan may be seen.

FINCHLEY.—LAND fronting the Regent's Park-road, and East-end-road, TO BE LET on Building Leases for ninety-nine years, with power of enfranchisement. Plots from one to four acres for large villa residences; smaller plots for semi-detached houses, and plots for shops in the village. Apply to W. A. BOULNOIS, Esq. Architect, 6, Waterloo-place, Pall-mall; or to Messrs. BARKER, BOWLER, and PEAKE, 1, Gray's-inn-square.

FREEHOLD LAND TO BE LET, on Building Lease for ninety nine years. Money advanced to responsible parties. Freehold Land to be Sold for building purposes in eligible situations.—Apply at the Offices of Messrs. MORGAN and PHIPSON, Architects, 3, Danes-Inn, St. Clement's, Strand.

FREEHOLD LAND TO LET, on Building Leases.—The Rev. William Ford and Mr. Henry Webber, Executors of Richard Barford, Esq. late of Islington-park, have to offer TWO valuable PLOTS of FREEHOLD LAND, for building leases for a term of ninety years, in Barford-street, Liverpool-road, Islington. The land-tax is redeemed and the sewer is made. For particulars, apply to Mr. HENRY WEBBER, Timber Merchant, 31, Old-street, St. Luke's.

TWELVE PLOTS of BUILDING-GROUND, at West Ham, Stratford, Essex. They were allotted by a Land Society, and will be sold for less money than is already repaid; the balance may be paid by instalments. There are nearly fifty houses already on the estate, and the railway station will shortly be erected.—Apply to Mr. S. 195, Shoreditch, London

FIRST-RATE BUILDING SPECULATION.—Some VALUABLE LAND, fronting a high road at HAMPSTEAD, for one or more houses, is now to be let and may be had on such a lease as to make it a most profitable investment. It is in the midst of finished and occupied houses, and no expenditure is required for roads or sewers. A PAIR of CARCASSES TO BE SOLD, on the same estate.—Apply to Messrs. ROBERTS & BALL, Architects, 16, Holles-street, Cavendish-square.

EXTENSIVE PLOT of vacant GROUND, in a most important first-rate locality, adjoining Regent's-circus, with entrance from Oxford-street. Could be made available for a building operation of any character or magnitude. It is presumed from its extent and high class situation (nearly a quarter of an acre), to be eminently adapted for an arcade or any other similar public establishment carried out under the Limited Liability Act.—For particulars, apply to Messrs. GRAHAM and JACKSON, 37 and 38, Oxford-street.—May be treated for as a whole or separately.

LAND WANTED.—The Directors and Guardians of the Poor of the Parish of Marylebone having it in contemplation to remove the children from the workhouse, are desirous of receiving TERMS for the PURCHASE or otherwise of LAND, within a convenient distance, on a line of railway. Full particulars with a plan, if possible to be forwarded to the Secretary, at the Workhouse, on or before MONDAY, the 24th inst.—By order, (signed) THOS. B. RAE, Secretary.

Secretary's Office, Nov. 15, 1856.

TO BUILDERS and OTHERS.—TO BE SOLD, Valuable Plots of FREEHOLD LAND, having 101 feet frontage to the high road near Single Gate, Merton, suitable for building Villas.—For particulars apply to Mr. H. ROWLEY, Finsbury Freehold Land Society, 58, Bedford-row, Holborn.

WESTON-SUPER-MARE, SOMERSET. The important and valuable "WEST COTTAGE PROPERTY," in the very centre of the town, close to the railway, and the whole entirely overlooking the sea, is now open for SALE. The whole is freehold, with immediate possession.—Plans &c., of B. G. PHILLIPS, Esq Weston-super-Mare.

REIGATE, SURREY, within Three-quarters of an Hour's Ride of London.—TO BE SOLD a very desirable SITE for a RESIDENCE, with about TEN ACRES of FREEHOLD LAND ornamentally timbered, picturesquely situate on the southern slope of Reigate Hill, about half-a-mile from the Reigate Town Station of the South-Eastern Railway, commanding extensive views, and affording an opportunity for building a House in this favourite locality rarely to be met with. Dry Soil and Pure Water.—For Particulars apply to Messrs. PAGE and LEES, Estate Agents, Reigate.

WANTED, immediately, a PLOT of FREEHOLD GROUND, for building purposes (about two acres), close to a canal, a short distance from a railway, and within four miles of the City.—Address, stating full particulars and price, to A. B. (ground floor), 26, Bedford-row, Gray's-inn.

IMPORTANT TO BUILDERS AND CAPITALISTS.

UNITED TRADESMEN'S FREEHOLD LAND SOCIETY.—The beautiful ESTATE at HORNSEY, purchased by the Trustees, consisting of about thirty acres, and within three minutes' walk of the station, will next summer be accessible from the City by means of the Metropolitan Railway. Persons desirous of possessing land in this charming and picturesque neighbourhood, can do so immediately by joining this society. Plots, 30l. each; subscription, 6s. per month; at their Office, the Savings' Bank, Goldsmith's-place, Hackney-road, on the third Wednesday in each month, from seven until Nine o'clock. Applications to Mr. J. LAWLESS, 1, Thurlow-place, Hackney-road; or to Mr. DANIELL, Hornsey, and Estate Office, 92, Keppel-street, Russell-square. The ground on the first portion of the estate being the only part on which a tavern can be built, is delightfully situated on the high road leading to Tottenham, and less than two minutes' walk from the Hornsey Station, to be disposed of, with all its privileges, for the sum of 300l.—Apply as above

WATERSIDE PREMISES at LIME-HOUSE.—TO BE LET on LEASE, THREE spacious WAREHOUSES, abutting on the River Lee Cut, each measuring nearly 1,000 superficial feet, and containing about 20,000 cubic feet. Apply to Mr. WILLIAM ELLISON, Architect, No 19, Strand-road, Limehouse.

LONDON: Printed by CHARLES WYMAN, at the Printing Office of COX (Bros.) & WYMAN, 74 & 75, Great Queen-street, Lincoln's-inn-fields, in the Parish of St. Giles-in-the-Fields; and published by the said CHARLES WYMAN, at the Office of the BUILDER, 1, York-street, in the Parish of St. Paul, Covent-garden, both in the County of Middlesex.—Saturday, November 22, 1856.

COMPETITIONS.

TO ARCHITECTS, &c.

THE ST. JAMES'S CHURCH BUILDING COMMITTEE, SOUTHAMPTON, are desirous of receiving PLANS, DETAILED DRAWINGS, and SPECIFICATIONS, in conformity with the Rules of the Incorporated Society for Building Churches, and of the Church Commissioners, for the erection of ST. JAMES'S CHURCH, upon land lying between Hebers Bridge-road and Winchester-terrace, in the parish of St. Mary, and town of Southampton, on or before the 13th day of DECEMBER next. The church to contain 750 sittings, including 150 children (provision being made for additional accommodation if required at any future time), at a cost not exceeding 3,500l and to be completed with tower and spire, exclusive of lighting and warming; but a separate estimate will be required for the tower and spire, to enable the committee to erect the same now or at a future period. The sum of 50l. will be paid for the plans, drawings, and specifications retained, and the others will be redelivered to the parties applying for the same at the expiration of one calendar month from the said 13th day of DECEMBER next, but no charge is to be made for the plans, &c. returned. The plans, &c. to be sent to the Rev. W. H. WHITE, the Chairman of the Committee, at No. 15, Laura-place, Southampton.

Southampton, November 26, 1856.

TO ARCHITECTS. — WANTED, COMPETITION DESIGNS, for a NEW TOWN HALL, to be erected in ST. ANDREW'S. Cost of erection not to exceed 3,500l.—For particulars, apply to Messrs. GRACE and YOOLE, Town Clerks, St. Andrew's, Scotland.—St. Andrew's, Nov. 22, 1856.

CONTRACTS.

NOTICE to BUILDERS.—The Commanding Royal Engineer, Portsmouth, hereby gives Notice, that SEALED TENDERS will be received at the Office of the Director-general of Contracts, Pall-Mall, London, on or before FRIDAY, the 12th day of DECEMBER, 1856, from persons desirous of CONTRACTING for BUILDING a SCHOOL-ROOM and LIBRARY at Cambridge Barracks, Portsmouth. The plans and specification may be seen, and all necessary information obtained at this office, between the hours of TEN and FOUR, each day except Sunday, until the 11th proximo. The person whose Tender may be accepted will be required to provide two eligible securities, to be bound with him jointly and separately, in a bond of 400l for the due performance of the contract, by the 1st OCTOBER, 1857. The War Department reserves the right of rejecting the whole or any of the Tenders. No notice will be taken of any Tender unless upon the printed form, which can be obtained at this Office.

Royal Engineer Office, Portsmouth, November 25, 1856.

CONTRACTS.—WAR DEPARTMENT.—To BUILDERS and CONTRACTORS.—The Commanding Royal Engineer of the Aldershott Dist rict hereby gives Notice, that SEALED TENDERS will be received by the Director-General of Contracts, War Department, Pall-mall, London, until TWELVE o'clock on FRIDAY, 12th DECEMBER, 1856, from parties willing to CONTRACT for the CONSTRUCTION and ERECTION of ONE RESERVOIR, and ALTERATIONS of another, for the SUPPLY of WATER to the CAMP at ALDERSHOTT, within eight weeks from the date of notification of the acceptance of the Tender.—Plans may be seen; and specifications and forms of Tender obtained, on application at the Royal Engineer Office, Aldershott. The War Department reserves the right of rejecting the whole or any of the Tenders.

Royal Engineer Office, Aldershott, November 23, 1856.

CONTRACTS.—WAR DEPARTMENT.—To BUILDERS and CONTRACTORS.—The Commanding Royal Engineer of the Aldershott District hereby gives Notice, that SEALED TENDERS will be received by the Director-General of Contracts, War Department, Pall-mall, London, until TWELVE o'clock, on FRIDAY, the 19th of DECEMBER, 1856, from parties willing to CONTRACT for the CONSTRUCTION and ERECTION of THREE WOODEN BUILDINGS, for Chaplain's Quarters at the Camp at Aldershott, within four weeks from the notification of the acceptance of the Tender. Plans and specifications may be seen, and forms of Tender obtained, on application at the Royal Engineer's Office, Aldershott. The War Department reserves the right of rejecting the whole or any of the Tenders.—Royal Engineer Office, Aldershott, Nov. 24, 1856.

CONTRACTS.—WAR DEPARTMENT.—To BUILDERS and CONTRACTORS. The Commanding Royal Engineer of the Aldershott District hereby gives Notice, that in consequence of additional buildings being required, the period for the receipt of TENDERS, advertised for on the 5th instant, for the Removal of the Police Establishment at Aldershott Camp has been POSTPONED; and that TENDERS will now be received from parties desirous of offering for the REMOVAL of the present POLICE ESTABLISHMENT, and ERECTION of ADDITIONAL BUILDINGS, until FRIDAY, the 19th DECEMBER, 1856. The plans may be seen, and specifications and forms of Tender obtained, at the Royal Engineer Office, on and after THURSDAY next, the 4th proximo. The War Department reserves the right of rejecting the whole or any of the Tenders.

Royal Engineer Office, Aldershott, November 25, 1856.

CONTRACT for SEWERS.—The Vestry of the Parish of Clerkenwell and the Board of Works for the Holborn District are desirous of receiving TENDERS for RE-BUILDING 150 feet of the old FLEET DITCH, and for the formation of a Side Entrance and works incidental thereto. The plans and specification can be seen at the Offices of the Board of Works for the Holborn District, Little Gray's-inn-lane, where Tenders are to be delivered on THURSDAY morning, the 4th of DECEMBER next, at TEN o'clock in the forenoon precisely. The lowest Tender will not necessarily be accepted.

ROBERT PAGET, Vestry Clerk, Clerkenwell.
S. W. HOPWOOD, Clerk to the Board of Works for the Holborn District.

November, 1856.

NORTH-EASTERN RAILWAY.—The Directors of the North-Eastern Railway are prepared to receive TENDERS for the undermentioned ARTICLES, in such quantities as they may require from the 1st January to the 30th June, 1857, delivered at the Company's Storehouses, at Newcastle, Gateshead, York, Leeds, or Hull. Payments for each month's delivery at the end of three months, or cash, deducting discount.

1. Timber, Deals, &c.
2. Best English Oak Wagon Wood.
3. Railway Keys.
4. Wrought and Cast Iron; and Railway Chairs.
5. Rails.
6. Heavy Ironmongery.
7. Steel, Files and Springs.
8. Tyre Hoops.
9. Brushes.
10. Wire Ropes, and General Hemp Cordage.

Forms of Tender may be had on application to Mr. BARNES, Stores, Gateshead, on and after TUESDAY, the 2nd DECEMBER, and Tenders must be sent in, addressed to the Secretary, at York, sealed, and marked "Tenders for Stores," on or before MONDAY, the 15th of DECEMBER. The Directors do not bind themselves to accept the lowest or any Tender.

JOHN OLEGHORN, Secretary.

York, 26th November, 1856.

CONTRACTS.

TO BUILDERS, CONTRACTORS, and OTHERS.—The Vestry of the Parish of St. George in the East, hereby give Notice, that they will meet on THURSDAY, the 4th day of DECEMBER next, at SIX o'clock in the evening, at the Board room of the Workhouse, Charles-street, Old Gravel-lane, to receive TENDERS from parties who may be willing to CONTRACT for the CONSTRUCTION of BRICK SEWERS, 660 feet in length, or thereabouts, with other WORKS in connection therewith, in John-street and Samuel-street, in the said parish, and for the maintenance of such works in complete repair for the term of twelve calendar months. Plans, sections, and a specification of the works may be inspected, and other particulars obtained, at the Vestry Offices, 40, St. George-street, between the hours of TEN and FIVE. The Vestry do not bind themselves to accept the lowest or any Tender, and the party whose Tender shall be accepted, will be required to provide two approved sureties for the due performance of the work.

W. L. HOWELL, Vestry Clerk.

Vestry Offices, November 21st, 1856.

LLANDUDNO IMPROVEMENT ACT, 1854.—To SEWER CONTRACTORS, &c.—Persons desirous to CONTRACT for the CONSTRUCTION of the WHOLE of the SEWERAGE in the town of Llandudno, may see the plans, sections, and specifications, prepared by T. MACDONALD SMITH, Esq. C.E. at the office of the Commissioners, between the hours of TEN o'clock a.m. and FOUR o'clock p.m. daily, on and after MONDAY, the 24th inst. Tenders (under seal to be sent in, addressed to the Clerk to the Commissioners, on or before THURSDAY, the 11th of DECEMBER next. The Commissioners do not bind themselves to accept the lowest Tender; but in the event of one being accepted, the contractor or parties will be required to give security for the due performance of his or their contracts. The Commissioners have on hand a quantity of sewerage bricks, pipes, invert and junction blocks, which the contractors will have to take at cost price with order.

JOHN WILLIAMS, Clerk to the Commissioners.

Improvement Commissioners' Office, Nov. 19, 1856.

MERTHYR TYDFIL LOCAL BOARD of HEALTH.—To IRONFOUNDERS, CONTRACTORS, and OTHERS.—Persons willing to TENDER for the ERECTION of a new IRON LATTICE BRIDGE of about 88 feet span, including abutments, retaining walls, and approaches, to be built over the river Taff, at Pontythun, in the parish of Merthyr Tydfil, may see plans, specifications, and obtain further particulars on application to Mr J. W. HARRISON, Surveyor to the Board, at his office in High-street, Merthyr, between the hours of TEN a.m. and TWO p.m. from the 1st of DECEMBER to the 15th DECEMBER inclusive. Tenders to be sent under cover to Mr. JAMES WARD RUSSELL, and endorsed "Tender for the Pontythun Iron Bridge," not later than MONDAY, 15th of DECEMBER.

N.B. The Board do not pledge themselves to accept the lowest or any other Tender.

JAMES WARD RUSSELL, Clerk to the Board.

Merthyr Tydfil, November 24, 1856.

TO BUILDERS, CONTRACTORS, and OTHERS. — Persons desirous of CONTRACTING for the ERECTION of a NEW HOUSE on the PENYRHEWL ESTATE, near Pontypool, may inspect the plans and specifications, and obtain all other information, on application, personally, to Mr. WALKER, the White Lion, Pontypool; or by letter, to the Architects, on and after the 19th instant. The estimates to be sent to the White Lion Hotel, Pontypool, endorsed "Tender for New House," and addressed to the Architects, not later than the 28th instant, who will meet the Proprietor and Contractors on the 2nd of DECEMBER, at TWO o'clock p.m. at the above Hotel, to open the Tenders, but they do not bind themselves to accept the lowest or any Tender.

BIDLAKE and LOVATT, Architects, Wolverhampton.

TO BUILDERS.—BOROUGH of WALSALL.—The Town Council of the Borough of Walsall, acting as the Burial Board, are prepared to receive TENDERS for the ERECTION of TWO CHAPELS, ENTRANCE LODGES, and ENTRANCE to the new Cemetery for the said Borough, according to Plans and Specifications which may be seen at the Town Clerk's Office, Bridge-street, Walsall, on and after MONDAY, the 24th of NOVEMBER, instant. The Board do not pledge themselves to accept the lowest or any Tender, and the Contractor will be required to enter into a Bond with one or more sufficient surety or sureties, to the satisfaction of the Board, for the due performance of the Contract. Sealed Tenders, endorsed "Tender for Cemetery Buildings," to be sent to the Town Clerk's Office on or before TUESDAY, the 2nd day of DECEMBER next.

SAMUEL WILKINSON, Jun. Town Clerk.

Walsall, November 20th, 1856.

TO BRICKMAKERS, SCAVENGERS, and OTHERS.—The Crown Estate Paving Commissioners do hereby give Notice, that they are ready to receive TENDERS from parties willing to contract for the REMOVAL, during the year 1857, of DUST, DIRT, CINDERS, and ASHES from the houses, buildings, and premises under their jurisdiction in that respect. Forms of Tender and further particulars may be obtained on application to me here, where Tenders, according to such forms, sealed, addressed to the Crown Estate Paving Commissioners, and endorsed "Tender for Dust," are to be left, at or before THREE o'Clock on WEDNESDAY, the 3rd day of DECEMBER, 1856.

FRANCIS ADAMS, Clerk to the Commissioners.

1, Whitehall-place, Nov. 17, 1856.

TO ARCHITECTS.

THE Directors of the MANCHESTER UNITY FRIENDLY SOCIETY are desirous to receive PLANS for the ERECTION of OFFICES in the City of Manchester. Plans of the land, the amount to be expended, and the requirements of the building, may be obtained on application to Mr. HENRY RATCLIFFE, 29, Dale-street, Manchester. Plans will be received up to MONDAY, the 15th day of DECEMBER.

[For remainder of Contracts see next page.

CONTRACTS.

TUNSTALL LOCAL BOARD of HEALTH.—NEW COVERED MARKET.—To BUILDERS, IRONFOUNDERS and others.—The Tunstall Local Board of Health are about to receive TENDERS for the EXECUTION of the several WORKS required in the ERECTION of a COVERED MARKET, according to the design and specification of G. T. ROBINSON, Esq. Architect, Leamington. The drawings and specifications may be seen for in WEDNESDAY, the 26th instant, to WEDNESDAY, the 24th day of DECEMBER, [illegible] Parade, Leamington. Any Builder, Ironfounder, or Tradesman who is desirous of tendering for the Works is required to apply at the Office of the Surveyor, where all further particulars may be obtained. After that time they will be for inspection at the Offices of the Local Board. Any Tender received [illegible] will not be proceeded to [illegible] and will be returned to [illegible]. The lowest Tender will not necessarily be accepted. By order, [illegible] Tunstall, Nov. 26, 1856. JOSEPH LOWNDES, Clerk.

14, Stanhope-street, Clare-market, London.

RADIATING and REFLECTING STOVE. WILLIAM S. BURTON'S NEW REGISTER STOVE combines comfortably the well known principles of both Stephens and Sylvester's celebrated patent stoves, while it has others equally valuable, which are peculiarly its own, and for which a patent has been granted. Its reflecting and radiating powers are perfect, it is very simple, and cannot be put out of order, consumes but little fuel, is most cleanly and cheerful in use, while its general appearance, no fender being needed, is most imposing. Prices, complete, black or bronzed, from 2l. 10s.; bright, 14l. 5s. and upwards. One may be seen in action in his Show-rooms, which contain an assortment of fenders, stoves, ranges, fenders, and general ironmongery, as cannot be approached elsewhere, either for variety, novelty, beauty of design, or exquisiteness of workmanship. Bright stoves, with bronzed ornaments, and two sets of bars, 2l. 14s. to 13l. 13s.; ditto, with ormolu ornaments and two sets of bars, 5l. 5s. to 29l. Bronzed fenders, with standards, 2l. 3s. 3s.; steel fenders, 2l. 15s. to 11l.; ditto, with rich ormolu ornaments, 3l. 19s. to 18l. Fire-irons, from 1s. 9d. the set to 4l. 4s.

The late additions to these extensive premises (already by far the largest in Europe) are of such a character that the entire of EIGHT HOUSES is devoted to the display of the most magnificent stock of GENERAL HOUSE IRONMONGERY (including Cutlery, Nickel Silver, Plated Goods, Baths, Brushes, Turnery, Lamps, Gasoliers, Iron and Brass Bedsteads, Bedding and Bed Hangings, so arranged in Sixteen Large Show-rooms as to afford to parties furnishing, facilities in the selection of goods that cannot be hoped for elsewhere. Illustrated catalogues sent (per post) free.—39, Oxford-street; 1, 1A, 2, and 3, Newman-street; 4, 5, and 6, Perry's-place, London.—Established 1820.

TO PLUMBERS.—TO BE SOLD a BARGAIN, a CASTING-FRAME, complete, with head and tail pan, iron cart on wheels, with strickles and plane.—Apply, X. Y. Z. Post-office, Nottingham.

TO ARCHITECTS and BUILDERS.—HAWKINS'S REGISTERED COPPER and TINNED IRON SASH-CHAIN is greatly approved for its strength, durability, and facility in running over pulleys; and when worked at its warranted load will be found one of the most useful and efficient inventions for hanging window-sashes of any weight up to 4 cwt. May be obtained from every respectable ironmonger in the kingdom. Manufactory, No. 27, Dale-end, Birmingham.

Plan and Section of Buckled Plate, Convex Side.

MALLET'S PATENT BUCKLED PLATES.

TUPPER AND CARR,

SOLE LICENSEES AND MANUFACTURERS.

THESE Plates are applicable to every purpose where strong, rigid, light, and durable lead sustaining surfaces are demanded: as for the Flooring of Bridges, Viaducts, Jetties, Fireproof Flooring for Buildings, Fireproof Partitions, Bulkheads, Doors and Shutters, the Plates in between Iron Palisades or Wrought or Cast Walls, the Centres of Iron or other Roofs, as for Railway Stations &c. The construction of Iron, Military, Colonial, or other Huts, Stores, and Iron Buildings of all sorts; the Construction of Water-Tanks; the Covering of Reservoirs of Waterworks; and, generally, for every purpose to which Corrugated Iron has been applied, but are many others to which that is inapplicable,—as, for example, the Construction of Balcony or Cantilevered Galleries, Projecting Footways, &c. The Plates differing their support entirely from themselves and the walls.

BUCKLED PLATES may be united to each other, or to the frame of the structure they cover, by either lap or butt joints, and either by screw bolts, rivets, or wood screws into timber; and the joints are made perfectly watertight when required, by putting and driving up, or by interposed strips of felt saturated in oil cement, or in tar and pitch, or by strips of vulcanised India-rubber, or by a thin layer of oil putty.

The sizes of the Patent Buckled Plates are—4 ft. by 4 ft.; 3 ft. by 3 ft.; 4 ft. by 2 ft.; and 3 ft. by 1 ft. 6in.

Other sizes by agreement.

For further particulars, prices, &c. apply to the Licensees,—

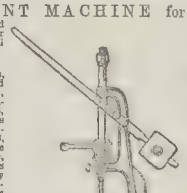
LIGHTNING CONDUCTORS.—

R. S. NEWALL and CO. Patentees of the Copper Rope Lightning Conductor, supply Lightning Conductors, with the point and all staples complete for fixing, at one shilling the foot. R. S. NEWALL and CO.'S Patent Copper Rope Conductor is being applied by architects, engineers, and scientific men in all parts of the world.

COPPER and IRON CORD for WINDOW SASH-LINES.



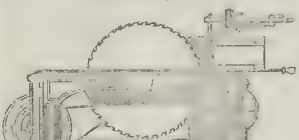
OFFICES, Gateshead-on-Tyne.
149, Strand, London.
67, Hyde-park-street, Glasgow.
27, Dale-street, Manchester.

IRON FOUNDRY, Harrow-street, Lant-

street, Southwark.—W. F. BARTLETT, manufacturer of Girders, Columns, Cantilevers, Railing, and Newel Bars, Iron Coping, Panels, Tomb Enclosures, Area Gratings, Sash Weights, &c. Also Fly and other Wheels, Riggers, Pinions, Engine and Lathe Castings; Forge Backs, Furnace Bars, Kilns, Pans, Pipes, Tank Plates, and other Castings, to patterns or drawings.

NEW PATENT MACHINE for

MORTISING and TENONING HARD or SOFT WOOD and BORING WOOD or IRON.



House and Coach Builders, Joiners, Cabinetmakers, and others, doing similar work, are invited to call at the Patentees', POWIS, JAMES, and Co Wholesale Builders and Cabinet Makers, Ironmongery Establishment, 26, Waldmar-street, City, and see in action this very simple, powerful, and expeditious machine, which is the only one yet brought out, for performing these three separate kinds of work by one machine; and as it is self feeding, it does not require any skill or care in using like the older inventions introduced. It can either be worked by a boy, or made to go by steam power.

P.S. Steam Engines and Machinery constructed.

MACHINERY for SAWING, PLANING,

MOULDING, &c.

SAMUEL WORSSAM and CO. beg to call the attention of Contractors, Shipbuilders, proprietors of Saw-Mills, and others, to their improved Inventions and Adaptations in Saw Frames and Benches, Roller and Chain Planing Machines, Endless Saw Frames, and all other kinds of Machines, for Sawing, Planing, Grooving, and Moulding Wood. They have constantly on hand machinery, either wholly or partly made; so that they can at all times on short notice supply them. S. W. and CO. beg to state that they have hitherto confined their attentions to this sort of machinery, and have had the honour of supplying some of the most distinguished companies, ship builders, and contractors in the world with their machines, for home and foreign use. One of their Saw Benches, and also a smaller one, with Boring Apparatus, may be seen at the Machinery Department, Crystal Palace. A descriptive Catalogue, with Drawings, may be had on application to SAMUEL WORSSAM and CO. Engineers, &c. Kings-road, Chelsea, London.

COLLINGE'S PATENT HINGES.—

Manufacturers, CHARLES COLLINGE and CO. 64 and 65, Bridge-road, Lambeth, where a great variety are always on view for church, park, railroad, coachhouse, and other gates and doors of large and small dimensions, a ton weight moving with these hinges as easily as a wicket. Ornamental hinges adapted for drawing-rooms, &c.; doors fitted with them may be removed and replaced in an instant. Rising and double-acting spring hinges, and superior gate fastenings, at moderate prices None genuine unless marked "Charles Collinge, Patent, Lambeth." Plain and ornamental cast and wrought iron-work, for building and other purposes. Engines, machinery, patent axletrees, sugar-mills, &c.

COMPLETE IMMUNITY from FIRE,

THIEVES, and GUNPOWDER. EDWIN COTTERILL Inventor, Patentee, and Sole Manufacturer of the Royal Climax Detector Locks. The only locks which have not been picked, and cannot be blown up with gunpowder. TO BELL-HANGERS, GAS-FITTERS,

IRONMONGERS, &c. &c.—The Trade supplied on the best terms with House Bells, Zinc, Tube, and Copper Wire. Gas Pendants, Brackets, and Joints of all descriptions for Gas-fitting, in Brass and Iron; Tin, Composition, Iron and Brass Tubing, Cornice-poles, Rings and Lacquered Case Tube for Picture Rods. Desk Rails, &c. &c.

Superior Rolled Brass for Engravers, Castings in Fine and Common Brass, Gun Metal, &c. &c.

RICHARD EVERED'S, Brass and Bell Foundry and Metal Warehouses, Nos. 10, 11, and 12, Charles-street, Long-acre, London.

JOHN WARNER and SONS, Patentees of

IMPROVEMENTS in the MANUFACTURE of LARGE BELLS.

J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior tone, truer in form, and less costly than heretofore been accomplished.

Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any size, note, weight, singly or in peals.

TUNED BY MACHINERY

Stocked and wheeled ready for fixing. Old Bells recast or taken in exchange.

MUSICAL HAND-BELLS tuned to the Chromatic Scale, with improved Coppers, and pressed on a new system, which gives superior tone and facility for ringing.

The great 16-ton Bell, for the Houses of Parliament, was made by JOHN WARNER and SONS, 1856, under their Patent.

J. AND RILEY CARR, Bailey-lane Works,

Sheffield, Manufacturers of Circular and Vertical Mill-saws, Veneer Segments, &c. Improved Gulleting, Topping, and Engravers' Files of superior quality.—Patent Flooring Machine and Moulding Irons of every description.

LOSH, WILSON, and BELL,

NEWCASTLE-ON-TYNE.

Manufacturers of Bar Iron, Railway Bars, Forge and Engine Work, Cast-Iron Goods, and

STEWART'S PATENT CAST-IRON GAS and WATER PIPES.

Office, No. 7, Pine-lane, London.

TYERMAN'S PATENT HOOP-IRON BOND,

FOR BUILDING PURPOSES.

ADOPTED BY SEVERAL DEPARTMENTS OF THE GOVERNMENT.

TARIFF OF PRICES beyond the current Price of Hoop-iron.

Gauge.	In. wide.	Per 1,000 ft.

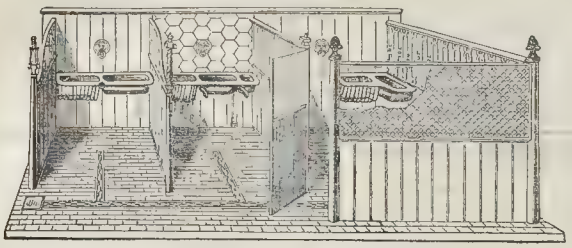
15	1½	7s. 6d.
15	1¾	8s. 0d.
15	2	8s. 6d.
15	2½	9s. 6d.



THE PATENT BOND (which is prepared from the ORDINARY HOOP IRON, by notching it at intervals of 1¼ inches) is now being extensively used in the leading GOVERNMENT WORKS, DOCK BUILDINGS, BARKS, ASYLUMS, BRIDGES, VIADUCTS, PRISONS, ENGINE-HOUSES, and MANUFACTORIES, as well as in other PUBLIC and PRIVATE WORKS, in London and in all parts of the kingdom.

Sole Manufacturers—THOMAS PERRY and SONS, Highfields Works, Bilston.

London Depôt—ST. ANN'S WHARF, EARL-STREET, BLACKFRIARS.

NEW PATENT INVENTIONS FOR STABLE REQUISITES.

AWARDED A PRIZE AT THE PARIS EXHIBITION, AND PATRONISED BY THE ENGLISH AND FRENCH GOVERNMENTS.

COTTAM and HALLEN, of Winsley-street,

Are the original inventors of the PATENT ENAMELLED MANGER, WATER-TROUGH, and WROUGHT-IRON RACK, united to an iron top-plate, and forming one complete and useful fixture, having Cottam's Patent Noiseless Halter-Guide and Collar-Rein attached, the ball of which is taken to the back of the manger, and works with ease and freedom up or down the guide-bar, Cottam's new Patent Seed-Box, of galvanized sheet-iron, is an important addition to the above fittings, being simple in construction, light and durable, promotes cleanliness, and is economical in its results. Also, the Patent Saddle and Harness Bracket combined, which can be used with great advantage where space is an object, as it can be turned up out of the way when not in use.

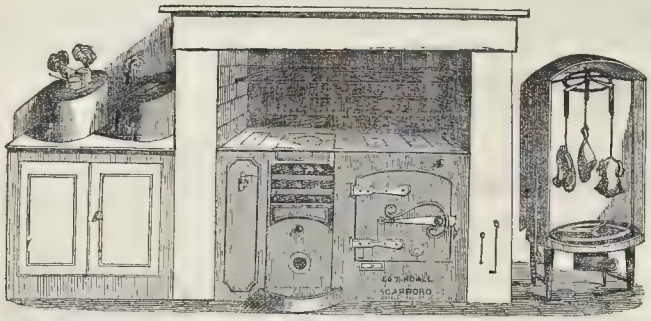
Improved Harness Holders, for preserving the shape of the harness, and preventing its cracking. Patent Loose-Box Fittings, Cheap and Durable Corn-Bins.

Improved Surface-Drain, with safety covers, Sanitary Traps, and every article for the harness-room and stable, kept in stock, plain, galvanized, and enamelled. Iron Gates, Fencing, Hurdles, &c.

The new Illustrated Catalogue for 1856, and estimates gratis, upon application to

COTTAM AND HALLEN, 2, WINSLEY-STREET, OXFORD-STREET.

PARKIN AND MARSHALL,



GENERAL MERCHANTS, AND MANUFACTURERS OF

TABLE CUTLERY, PEN and POCKET KNIVES, SCISSORS, RAZORS, ELECTRO-PLATED WARES, FILES, SAWS, EDGE and JOINERS' TOOLS, AUGURS, STEEL, &c. &c.

TELEGRAPH WORKS, SHEFFIELD.

OFFICES—{NEW YORK—71, JOHN-STREET. BOSTON—25, KILBY-STREET. U.S. MELBOURNE—94, COLLINS-STREET EAST.

CORPORATE MARK—XLALL.—Granted by the Cutlers' Company, 1780.

Messrs. PARKIN and MARSHALL have also pleasure in stating that they are appointed Sole Wholesale Agents for the Sale of the undernamed Articles, manufactured by

MR. ENOCH OLDFIELD TINDALL, IRON WORKS, SCARBOROUGH, viz.:—

TINDALL'S PATENT PORTABLE MANGLES, WASHING AND WRINGING MACHINES, NAPKIN PRESSES, COOKING RANGES, LAUNDRY STOVES SANATORY TRAP AND GRATE, CHAFF CUTTERS, OAT, BARLEY, MALT, AND LINSEED MILLS, BEAN MILLS, OILCAKE BREAKERS PORTABLE SAW-MILLS, TURNIP CUTTERS, CULTIVATORS, PLOUGHS, HARROWS, &c. &c.

THE PATENT COOKING RANGES AND ROASTERS are now amongst the most complete and inexpensive before the Public, and are rapidly superseding the antiquated Ranges of our country.

THE IMPROVED LAUNDRY STOVE will heat Fifteen Flats at once, occupies only 12 inches in space, is removeable from one room to another, and will be found invaluable in Public Hospitals, Infirmaries, Laundries, and Private Families.

E. O. T.'S SANATORY GRATE AND TRAP is now acknowledged to be the best and most secure from effluvia (as well as not being liable to choke, and readily cleaned) that has been introduced.

THE MANGLES AND WRINGING MACHINES have been introduced into the Royal Household, most of the Public Laundries, and also into many thousand Private Families, who bear testimony to their efficiency and superiority over all others.

Prize awarded for Mangles by the Yorkshire Agricultural Society, at Rotherham, August, 1856.

THE OAT BRUISERS AND CHAFF CUTTERS, like the above, combine cheapness with the greatest simplicity of construction, and only need to be tried to be appreciated. They effect great saving, and should be in every stable.

N.B.—E. O. TINDALL is the Sole Licensed Manufacturer for the North of England of BUSHE'S celebrated ROOT PULPER and SHEEP TURNIP-CUTTER.

Illustrated Catalogues per post, on receipt of twelve stamps.

AUSTIN'S IMPERIAL

PATENT SASH and BLIND LINE

can be obtained of all

ROPEMAKERS, IRONMONGERS, MERCHANTS, FACTORS, and WHOLESALE HOUSES, in TOWN or COUNTRY.

Established 1774.

TO ARCHITECTS, &c.—The IMPROVED SELF-ACTING WATER-BAR for FRENCH CASEMENTS, the best and most effectual yet invented, is made by T. SMITH, of 14, Queen-street, Oxford-street, near Argyll-street, where a working model can be seen, or a sketch will be sent on application.

N.B.—Espagniolette Bolts of a superior quality, at reduced prices.

MR. S. EGAN ROSSER, Warming and Ventilating Engineer, &c. (successor to the late Mr. John Sylvester, C.E.) has REMOVED from Great Russell-street, Bloomsbury, to No. 6, CANNON-ROW, PARLIAMENT-STREET, WESTMINSTER

NEW GLASS GAS STOVE.—NEALL'S PATENT; Unique, Elegant, Efficient, and Inexpensive; price only 30s.—This valuable invention combines the important advantages of light and heat, with perfect freedom from smoke or smell, forms an ornament to a drawing-room or gentleman's hall, and is equally available for public or private offices.—DEANE, DRAY, and CO. Gas Engineers, London-bridge, Sole London Agents. The trade supplied.

VENTILATING STOVES! SUSPENSION STOVES!—Approved by thousands of purchasers, and recommended as the two best, cheapest, most healthy, and economical for churches, chapels, halls, schools, warehouses, shops, greenhouses, bedrooms, libraries, &c. Prospectuses, with prices, sent post-free.—DEANE, DRAY, and CO. Stove Range, Ironmongery and Furnishing Warehouse, London-bridge.

GURNEY'S WARMING APPARATUS, for CHURCHES, PUBLIC BUILDINGS, and PRIVATE HOUSES.—This Apparatus is a modification of that invented by Mr Goldsworthy Gurney, and now used by him for warming the House of Commons and House of Peers. It is constructed so as to be available for private houses, churches, and other buildings. It is simple, inexpensive, and powerful (the fuel may be coal, coke, or gas) combining the laws of conduction and convection of heat, to temper and warm air for respiration, without drying or reducing its natural hygrometric break. For further particulars apply to Mr. WOODCOCK, 5, Bessborough-gardens, Pimlico, who will supply the Apparatus, and is empowered to grant licenses for agencies under the patent.

ECONOMIC COOKING-STOVE.—DEANE, DRAY, and CO. recommend with confidence their IMPROVED COOKING-STOVE to the notice of the public. It is cheap in first cost, simple in construction, easy of management, capable of doing a large amount of work with a comparatively small consumption of fuel, and is manufactured in sizes suitable for large or small families. In operation daily in the stove and fender department of Deane, Dray, and Co.'s establishment; where may also be obtained engravings with prices, or forwarded free by post.—DEANE, DRAY, and CO. (opening to the Monument), London-bridge. Established A.D. 1700.

DR. ARNOTT'S SMOKE-CONSUMING GRATE.

Will this Grate become universally used?

Its advantages over every other consist in—

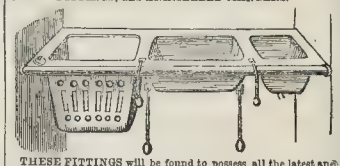
1. A saving of 50 per cent. in fuel.
2. Its being a cure for a Smoky Chimney.
3. Its not requiring one half the attention of an ordinary fire.
4. Its being perfectly safe.

A Prospectus, with a Second Series of Testimonials, just issued, from all parts of the country, will be sent on application.

F. EDWARDS, SON, and CO. 42, Poland-street, Oxford-street.

HEATING BY  HOT WATER.

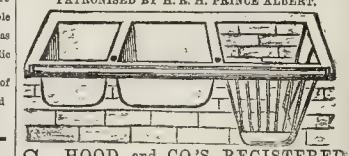
JOHN WEEKS and CO. King's-road, Chelsea, HOT WATER APPARATUS MANUFACTURERS. Buildings of every description, and of the most extensive dimensions, can be effectually warmed by Hot Water. JOHN WEEKS and CO. can give innumerable references of Churches, Dwelling-houses, Warehouses, &c. &c. where they have fixed their Hot Water Apparatus. Also to be seen in extensive operation at their Premises, King's-road, Chelsea.



BATHS and HOT-WATER APPARATUS. J. TYLOR and SONS' ILLUSTRATED CATALOGUE of BATH WORK, &c. to be had on application. Estimates and Plans for Fixing given.—J. TYLOR and SONS, Manufacturers, Warwick-lane, Newgate-street, London.

WARMING and VENTILATING CHURCHES and PUBLIC BUILDINGS generally with PURE WARM AIR.—CUTLER and SONS respectfully state that they are prepared to Contract for the Erection of their improved Warm-Air and Ventilating Apparatus, for Halls, Churches of the largest dimensions, and every description of public buildings, the perfect action of which they undertake to guarantee.—The may be seen in constant use at their Foundry and Gas-Engineering Works, 16, Great Queen-street, Lincoln's-inn-fields, London.

ASHDOWN'S PATENT VENTILATING and SMOKELESS GAS-FIRE.—CUTLER and SONS, Licensed Manufacturers, under the immediate superintendence of the Inventor.—This is the only gas-fire adapted to open grates, it differs materially from all others hitherto offered to the public, it combines the most perfect combustion with ventilation, and presents a glowing warmth from an open radiating surface, unequalled by any other gas-stove; it is also well suited to the drawing-room, library, bed-room, or hall; and may be seen in action, daily, at CUTLER and SONS', Gas Engineers, Founders, and Manufacturers of Gas-heating and Cooking Apparatus of every description, 16, Great Queen-street, Lincoln's-inn-fields.



PATENT PURE WARM-AIR VENTILATING STOVES.—The only Pedestal Stove which gained a Prize Medal (Class 476) at the Great Exhibition, 1851, especially adapted for warming churches, chapels, schools, entrance-halls, libraries, warerooms, &c. with great economy.—CUTLER and SONS, Sole Licencees and Manufacturers, Founders, and Gas Engineers, 16, Great Queen-street, Lincoln's-inn-fields, London.

BARTON'S PATENT SAFETY STABLE FITTINGS, and ENAMELLED MANGERS.

THESE FITTINGS will be found to possess all the latest and most important improvements, and are of the best manufacture. All kinds of Stable-furniture in stock. Iron Hurdles, Gates, Fencing, Tomb-railings, &c. New illustrated Catalogues forwarded on receipt of two postage-stamps.—JAMES BARTON, Ironfounder, &c. 370, Oxford-street, London.

PATRONISED BY H. R. H. PRINCE ALBERT.

S. HOOD and CO.'S REGISTERED STABLE-FITTINGS, with FRONT REVOLVING ROLLER, plain or enamelled. GIRDERS (cast and wrought-iron), COLUMNS, Sash-Weights, Rain-Pipes, Eaves-Gutters, variously moulded. Ornamental Rain-Pipe Heads, of Gothic and other designs, and all castings connected with buildings, in London time, and at country prices.

CASTINGS WAREHOUSE, 68, UPPER THAMES-STREET.

TO IRONMONGERS, BUILDERS, &c.

PATENT WROUGHT-IRON WELDED TUBE for GAS; galvanized ditto for water; high-pressure cocks, &c. Manufacturers of Dr. Arnott's Improved Ventilators. HULETT and CO. 53, High Holborn.

HARTLEY AND CO.'S GLASS TARIFF FOR THE FIRST OF DECEMBER

IS NOW READY, AND MAY BE OBTAINED ON APPLICATION TO

MESSRS. JAMES HARTLEY AND CO. SUNDERLAND.

It contains:—

No. 1. TARIFF.—CROWN GLASS.
" 2. SHEET.
" 2R. SHEET FOR EXPORTATION.
" 3. HARTLEY'S PATENT ROUGH PLATE.
" 4. PATENT FLUTED.
No. 5. PATENT QUARRY.
" 6. PATENT DIAMOND.
" 7. PERFORATED GLASS FOR VENTILATION.
" 8. PATENT PLATE.
" 9. POLISHED AND CAST PLATE.
No. 10. COLOURED GLASS AND GLASS FOR RAILWAY PURPOSES.
" 11. MISCELLANEOUS GLASS ARTICLES.
" 12. SHADES.
" 13. STAINED GLASS WINDOWS.

The whole of the foregoing Tariffs have been simplified the nomenclature altered to correspond with the terms employed by Architects in their specifications—and the nominal High Prices reduced, so that the whole is now subject to one uniform rate of Discount to the Trade.

Having now abolished all the anomalies engendered by fiscal regulations, it is believed the present Tariff will meet the general requirements of the Trade, and that Shippers will be able to compete with Glass of Foreign Manufacture in all parts of the World.

TO ARCHITECTS, BUILDERS, CONTRACTORS, AND OTHER CONSUMERS OF GLASS.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th of an inch thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th or 4 lbs. is now universally used for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, MILLS, MARKET HALLS, BATHS AND WASH-HOUSES, FACTORIES, WORKSHOPS, SHIP-BUILDING SHEDS, AND OTHER EXTENSIVE BUILDINGS.

By a carefully prepared Estimate, it has been ascertained that FOUR-FIFTHS of the ROUGH PLATE, or non-transparent Glass, consumed in the United Kingdom in 1854 was manufactured by HARTLEY'S PATENT—thus affording the most incontestable evidence of its superiority over every other article of the kind, and as being the only description of Glass suitable for the purposes above named. It combines size and strength with economy of cost, and is manufactured in sizes expressly for RIDGE and FURROW ROOFS, giving a SPAN of TWELVE FEET, at a price not exceeding, weight for weight, that of Common Crown Glass. Its non-transparency renders BLINDS UNNECESSARY, and no scorching occurs in Greenhouses glazed with it; hence the preference given to this Glass for all Horticultural purposes.

For further particulars, apply to

JAMES HARTLEY AND CO. SUNDERLAND; AND PURFLEET WHARF, EARL-STREET, BLACKFRIARS, LONDON.

Sole Manufacturers of Lockhead's Patent Perforated Glass for Ventilation.

*** *Hartley and Co.'s Glass Tariff Newspaper will be forwarded gratis, on application.*

FACING FOR BUILDINGS COMPANY—TAYLOR'S PATENT.

BUILDINGS PERFECTLY RESISTANT TO WET WITHOUT ADDITIONAL EXPENSE, OR THE USE OF COMPO,

REQUIRING THE CONSTANT EXPENSE OF PAINTING. EXTERNAL WALLS FACED WITH AN INDESTRUCTIBLE MATERIAL.

STONE-FACED BUILDINGS AT LITTLE MORE COST THAN CEMENT.

No necessity for Iron Cramps and Bond-stones, and the Stone Ashlar never injuriously weighted by the settlement of the Mortar joints of the inside Brickwork. The INSIDE of CHURCHES and OTHER BUILDINGS FACED WITH STONE instead of Plastering. Also Dining halls, Lobbies, Staircases, &c. of Private Residences. It can be had ready for fixing from the quarries at a small cost for carriage, or prepared at home. Can be used with the ordinary Bricks of any locality, and by the ordinary workman. The CHURCH faced inside and outside in this manner, and the other Buildings at SPRING GROVE HOUNSLOW, and elsewhere, can be inspected, and all particulars obtained, of

Mr. JOHN TAYLOR, ARCHITECT, OFFICES OF THE COMPANY, 40, KING-STREET, CORNER OF CHEAPSIDE.

THE SEVRES GLASS COMPANY.

LEGENDRE AND TURPIN'S

WHOLESALE ESTABLISHMENT for the supply of CRYSTAL WHITE SHEET GLASS, First, Second, and Third Quality;

CHEAP, LIGHT, AND DURABLE ROOFING.

CROGGON'S PATENT ASPHALTE ROOFING FELT, has been extensively used and pronounced efficient, and particularly applicable for warm climates.

1st. It is a non-conductor.—2nd. It is portable, being packed in rolls, and not liable to damage in carriage.—3rd. It effects a saving of half the timber usually required.—4th. It can be easily applied by any unpractised person.—5th. From its lightness, weighing only about 42 lbs. to the square of 100 feet, the cost of carriage is small.—6th. Under slate, metal, or tiles, it is a most effective non-conductor

INODOROUS FELT, for damp walls and for damp floors, under carpets and floor cloths. Price ONE PENNY per Square Foot.

CROGGON and CO.'s PATENT FELTED SHEATHING, for Covering Ships' Bottoms, &c., and

DRY HAIR FELT, for Covering Steam Boilers, Pipes, &c., preventing the radiation of Heat, saving 25 per cent. of Fuel and deadening Sound.

Samples, testimonials, and full instructions, on application to CROGGON and CO. 2, DOWGATE-HILL, LONDON.

TO IRONMONGERS AND THE TRADE GENERALLY.

D. HULETT and CO. Manufacturers of GAS CHANDELIERS, HALL LANTERNS, GLASS LUSTRES, &c. &c. A large assortment of the newest designs always on show—every article marked in plain figures. Patentees and manufacturers of the Metarnid Gas Regulator. Complete pattern-book and price list, 108.—55 and 56, High Holborn.

EXTRA-SIZED SHEET GLASS. R. METTAM and CO. beg to inform Builders, Picture Dealers, and the Trade in general, that they have just received a large consignment of the above Glass. As a sample, the following may be quoted:—60 by 40, 57 by 38, 54 by 43, 54 by 36, 57 by 34, 46 by 36, 54 by 32, 52 by 32, 50 by 30, and numerous other sizes. Estimates and Price Lists forwarded post-free, on application at the Warehouse, 30, PRINCES-STREET, Soho, opposite St. Ann's Church, London.

SUPERIOR BRITISH PLATE-GLASS, at VERY LOW RATES.—The Union Plate-glass Company, having recently completed considerable improvements and additions to their works, respectfully inform their friends that they are now able to supply orders without delay, and invite the attention of the trade to the low rates at which their now much esteemed manufacture is sold.—Lists of prices may be obtained on application at the Works, Pocket Nook, St. Helen's, Lancashire; the Warehouse, 99, Hatton-garden, London, and 45, Piccadilly, Manchester; Messrs. C. and J. MALLOCH, 30, Turner's-court; Glasgow; Messrs. JOHN DIX and CO. Bath-street, Bristol; Messrs. H. SHUTHORPE and SON, Cork-hill, Dublin; Messrs. J. MILLS (late Shop Foreman to Messrs. Lawrence and Sons), JOINER to the TRADE, 7, Princes-street, Stamford-street, Lambeth. Shop-fronts, fittings, staircases, &c. Well-seasoned materials and superior workmanship, at the lowest possible prices. A quantity of doors and sashes always in stock.—By enclosing a postage-stamp, a full list of prices will be returned.—Workshops, 110, Broadwall.

TO ENGINEERS, FOUNDERS, and OTHERS.—TO BE DISPOSED OF, by private contract, the PREMISES and TOOLS of an engineer and founder, in excellent order. The premises are situate in the immediate vicinity of the intended new line of street from London-bridge to Blackfriars. They have recently been put into thorough repair, and are conveniently arranged. A lofty chimney-shaft has also been erected. The tools, which comprise numerous lathes, planing, drilling, and shaping machines, cupolas, foundry boxes, smiths' tools, &c. are all good, and ready for immediate work. The premises comprise, in addition to the manufacturing portion, two dwelling-houses, adapted for a foreman and a principal. The rent is 150l. per annum, including the use of a steam-engine and boiler. One half the purchase money may remain on mortgage.—For further particulars, apply to Messrs. FULLER and HORSEY, Billiter-street, City.

PAPER-HANGINGS.—The CHEAPEST HOUSE in London for every description of PAPER-HANGINGS is GROSSE'S WHOLESALE WAREHOUSE, 22, GREAT PORTLAND-STREET, Oxford-street, where you can select from the LARGEST and MOST EXTENSIVE Assortment in the Kingdom, THIRTY PER CENT. CHEAPER than any other house in the trade. Builders, Decorators, Dealers, and large consumers will do well to visit this establishment.

PAPER-HANGINGS.—The attention of purchasers of English and French Paper-hangings and Decoratis as is invited to the MONTHLY SALES by AUCTION, held by Mr. EDWIN WHITE, at his commodious ROOMS, 170, Bishopsgate-street Without. Catalogues on application.

WANTED, to BORROW £1,000.—The Local Board of Health for the district of Burnham, Somerset, are desirous of obtaining the above sum for the completion of Public Drainage Works, on mortgage of the special district rates, under the provisions of the Public Health Act, 11 & 12 Vict. cap. 63. Parties willing to advance this sum may obtain any further information on application to the Clerk, to whom all Tenders must be sent (stating the rate of interest required, and when the money can be advanced) on or before the 12th day of DECEMBER next.—By order of th. Board.

ROBERT SALISBURY, Clerk.

Dated Burnham, Somerset, 17th Nov. 1856.

Established 1838.—Registered pursuant to 58 sec. 7 & 8 Vict. cap. 110.

MONEY LENT for Two Years, One Year, or Six Months, on Personal Security, Freehold or Leasehold Property, Gold and Silver Plate, Watches, Jewellery, and every description of available security. Repayable by weekly, monthly, or quarterly instalments. Sums from 3l. to 500l. may be obtained three days after application. This office being open daily from Nine till Six, the unpleasant necessity of applicants having to explain their affairs before a large number of persons is entirely avoided.—FIN-BURY LOAN OFFICE, 144, St. John-street-road, Clerkenwell three doors from Middleton-street.

Albemarle street, Nov., 1856.

DURABILITY of GUTTA PERCHA TUBING.—Many inquiries having been made as to the durability of Gutta Percha Tubing, the Gutta Percha Company have taken an early opportunity of publishing the following letter:—FROM SIR RAYMOND JARVIS, Bart., VENTNOR, ISLE of WIGHT.—"Second Testimonial."—"March 10th, 1852.—In reply to your letter, received this morning, respecting the Gutta Percha Tubing for Pump service, I can state, with much satisfaction, it answers perfectly. Many Bottles, and other persons, have taken examples from there; but the most apparent difference in pricing has been down, now several years, and I am informed that it is to be adopted generally in the houses that are being erected here."

N.B. From this Testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.

THE GUTTA PERCHA COMPANY, PATENTEES.
18, WHARF-ROAD, CITY ROAD, LONDON.

TO ENGINEERS, RAILWAY COMPANIES, MILLOWNERS, &c.—VULCANIZED INDIA RUBBER of all sizes for Steam and Hot-water Joints, is now becoming indispensable in Engineers' Establishments.—J. L. HANCOCK begs to offer the following Articles, which are now in use and supplied from the Original Patent Process for such manufacture:—

FOR ENGINEERS.—Vulcanized Rubber Washers; Valves for Air-pumps, &c.; Elastic Packing, in Sheet Rings, or Ropes; Plunger Packing; Suction Pipes, made to stand 25 inches of vacuum; Pipes, cast to stand extreme pressure, and to stand steam, to solder.

FOR RAILWAY COMPANIES.—Buffer and Bearing Springs, Tarpaulins, Rugs, and Waterproof Clothing. Hose Pipes of any required strength; Valves and Cocks made any size to order, Gauge glass Rings and Compound Packing of any size or thickness.

FOR MILLS and FACTORY USE.—Vulcanized Rubber Driving Bands, any breadth, width, or thickness. Rollers, Washers of all sizes. Door and Buckskin Springs, Gas Bags, Flexible Gas Tubing, and Engine Hose.

Air Beds, Cushions, Bolsters, and Mattresses, of all sizes; Soda and Stockings. Any article of this class made to pattern or size.

All orders punctually attended to, addressed JAMES LYNE HANCOCK, Vulcanized Rubber Works Goswell road, London.

The Builder.

VOL. XIV.—No. 721.

NE Abraham Cowley, a moralist, and a poet little known to this generation—unless by his monument in Westminster Abbey,—from under the shade of *old patrician trees*, once apostrophised "the monster London," in a charming "Ode to Solitude." That monster,—

"Monstrum horrendum, informe, ingens * * *

we might even conclude the line—

"cui lumen ademtum,"—

now grasps and gathers the fields on every side,—tops the heights of Highgate; fills up the hollows of Rotherhithe and the Isle of Dogs; *utilizes* cabbage-ground, ditches, and swamps; outruns the police at Notting-hill; and is altogether beyond the limited capacity and ability of any Board of Works.

The "village" Islington, as the poet knew it, is as much a part of town as any district within the sound of Bow bell, or "Big Ben."

"——— Where has commerce such a mart,
So rich, so throng'd, so drain'd, and so supplied
As London, opulent, enlarg'd, and still
Increasing London? " * * *

said Cowper; and he too, if living now, would wonder at the enormity of the growth, as at the inadequate provisions for it, in relations of a sanitary and moral nature, and haply would say again, with more of need,—

"God made the country, and man made the town."

Indeed, to estimate the *facts* of existing London, and gather anything beyond a confused impression of immensity, requires somewhat more than average intelligence,—whilst to grapple with the facts, with a view to improvements, may demand absolutely a colossal mind. When you hear, in the provinces, of a man who "knows London well," misdoubt the reality of the knowledge attributed to him. Show us such a man, and we would hold him a curiosity. "Horatio's servant once," who had a *friend* hard by, had not 'lighted more fortuitously upon a rare specimen of humanity.

Singular to the enlightened view of an age which recognizes the bearings of the situation and arrangement of towns, and the plan and construction of dwellings, upon morals and health, are the circumstances under which great cities have grown up. The advantages from the vicinity of a navigable river; in modern times, the concurrence of two or three roads or railways, or the means of assuaging "the insane thirst for gold," have sufficed to bring first a few sojourners, next a colony of huts, and then too generally a crowd of ill-ordered and ill-constructed buildings. Lastly of all, it is discovered that these have formed a town,—a town wanting in all the appliances which the place of habitation of man, in towns or single dwellings, requires,—and the more so, and the more elaborately devised, as the number of inhabitants is greater.

Perhaps in fixing on the site of a town—were it a matter of selection,—many arguments besides those of sanitary advantage would claim their share of attention. The choice of the site of London originally was, it may be said, a judicious choice,—for, it could not be taken into consideration that from one small spot, a vast area of habitations would be extended so as to form—not one city, but an accumulation of towns. These now necessarily vary very greatly in their conditions of soil and level; and they present, therefore, those contrasts which become so remarkable on every occasion of epidemic.

Clearly, however, whether or not the whole area now comprised in London is what should have been *utilized* for building purposes,—information of the conditions of it, especially as to soil and level, should be ready at hand. It is, indeed, obvious, that a survey of the site, and an examination of the soil should be the steps first taken, before any town or collection of houses is commenced. Where that is not done, the omission will have to be supplied; but, as in the case of a great metropolis, when impediments to such a survey may have grown up to an embarrassing extent.

One of the peculiarities of that accumulation of towns known as London, is the conformation, by which an immense portion of the area once was covered with water at every tide—and would, indeed, still be so, but for the means taken to prevent it. The *proportion* of the area referred to, is only understood by colouring a map so as to show it prominently. In some parts of London, now thickly populated, a mere island, like that which became the site of Westminster Abbey, appears as a habitable spot.

It is desirable that the method of showing many of the physical conditions of countries by means of maps, should be extended more generally than it has been to the case of towns and populous districts. Johnston's admirable "Physical Atlas" affords the suggestion of what might be carried further; and we may observe that there are many matters besides the street arrangement, or even the *physical* conditions of London, which might be well explained by maps, or better than they are at present. If the churches were prominently marked on one map, the schools on another, and public buildings generally with more distinctive marks than are now used, on a third, we think some advantage would accrue by so presenting the facts to the eye, which is not afforded by the present maps, or by mere tables of statistics. Again, the sites of the old remains, or the localities of important antiquarian discoveries, should be marked on a map. Parts of another plan, differently shaded, might show the conditions of mortality, crime, or ignorance, or of property, or pauperism, at the latest previous census or inquiry. Many other items of information should be found in an atlas of London—information which now is to be got only from detached maps (if there be such), or laboriously from other sources,—and such an atlas London requires. In short, to the great metropolis one might say,—Know thyself!

Believing that a knowledge of the nature and levels of the soil of London is essential to success in sanitary works and other improvements, we are glad now to meet with a very important contribution to the objects we have in view. Mr. Robert W. Mylne has issued a "Map of the Geology and Contours of London and its Environs,"* which to a scale of 3¾ inches to one mile, exhibits an area of 176 square miles—extending from Kew-bridge on the west to Plumstead Marshes on the east, distant sixteen miles; and from Hornsey on the north, to the Crystal Palace on the south, distant eleven miles—and shows the variations of level by contour lines, and the geological features of the surface of the ground in and around London, and gives much other useful information. The situation of the principal public buildings, and the junctions of the main streets and roads, are shown to identify localities. It is, perhaps, to be regretted, that the whole street and building plan is not filled in; but this might have required the purchase of a copyright, and have increased the cost of a map which already (at 2*l.* 10s. and 3*l.*) is somewhat expensive. The size of the map is 5 feet by 3 feet 5 inches. The materials have been derived from the author's own surveys and investigations, aided by contributions from the best sources.

* Published for the Author, by E. Stanford.

The importance of "contour maps" (showing lines of equal height), in the case of large and populous towns, is obvious. In the absence of such a map of the metropolis, the author says, a portion of his present work was undertaken nine years ago; and contour lines, deduced from various documents and extensive personal surveys, were laid down on Wyld's Map of "London and its Environs." In 1848, as our readers will remember, the Ordnance Department undertook to make for the Metropolitan Commissioners of Sewers of that day, a block survey of London with levels; and with these aids the author revised and extended his contour lines, and published, in 1851, on a small scale, a topographical and geological map. He remarks, that though the Ordnance skeleton plans referred to—on the scale of twelve inches to a mile—were an important addition to local information, no step was afterwards taken by any public department, either to complete and reduce to a more convenient size "those accurate surveys," or to construct a contour map. On the Continent almost all the capitals, as well as several of the principal towns, have been accurately contoured by their respective Governments; and in England within the last ten years, the counties of Lancashire and Yorkshire, with their important towns, besides several districts and towns in Scotland, have been similarly mapped on a scale of six inches to a mile, and published by the Ordnance Department.

The datum from which all the levels and contours in Mr. Mylne's map are taken, is the Thames High Water-mark, Trinity standard (London Docks, Shadwell entrance, 1800), which is 12½ feet above the mean tide level at Liverpool, or Ordnance datum. The contour lines represent 10 feet differences of altitude, and each 50-feet line is strongly marked and figured.

The map represents geologically, in twelve colours, the various surface soils. A large amount of accumulated ground in the old parts of the metropolis is omitted, and the original surface is substituted: also in the valleys and marshes, the alluvial deposits, varying from 2 feet to 4 feet, covering extensive beds of peat and gravel, are not shown: with these exceptions, the colours indicate the original surface soil. The geological information in the map is the result of some years' observation and inquiry, both as to the surface soils, and the substrata of London, in regard to which subject the author published a series of outline sections in 1850. He has also derived important data from the published papers and MSS. of the late Rev. H. De la Condamine, on the Woolwich district, and from the observations of Mr. Prestwich on the London tertiaries.

Besides the levels and geological features, many interesting facts relating to public works are recorded, such as the course of canals and level of water at the locks, the lines of railways and level of rails at the stations, the falls at mills and weirs, the area of the principal docks, the width of their entrance-gates, and the depth of water on the sills. The width of the River Thames, and the sectional area of the river, and maximum depth at high water, are given at several points; also, the level of the lowest spring tides, the lineal waterway of all the bridges, and the drainage area of the river. The position of the different waterworks establishments, according to the recent arrangements and improvements, are indicated, showing the level of the several filtering, storage, and service reservoirs. The boundaries of the thirty-eight new districts of the Metropolis

Local Management Act are also shown; and on another edition of the map, in place of the geological colouring, the districts are coloured, and the lines of the main sewers are marked, showing above sixty outlets into the river.

The lowest strata occurring within the metropolis are found to the south-east, or from the Plumstead boundary of the map up to between Brixton and Dulwich; for, in consequence of a remarkable disturbance, the chalk occurs at the surface, and various portions of the superimposed tertiary strata are exhibited. The Bagshot sands cap the Hampstead and Highgate hills to the north of London. The drift beds of gravel and sand, with the light argillaceous deposits forming brick earth, occupy the valleys and slopes of rising ground. Thus, in the south-east district are the striped sands, shelly clays and sands, and mottled clays of the Woolwich and Reading series; and from the Plumstead boundary to near the valley of the Ravensbourne, passing at the back of Greenwich Hospital, are silicious sands (Thanet sands). The chalk comes to a straight edge, in a line passing from Woolwich Dockyard, south-westerly, to the back of the Greenwich marshes, and again occurs in two small detached portions by the Kent Waterworks, between Deptford and Lewisham. The other tertiary strata just now mentioned, however, are interspersed with extensive tracts of the sandy clays, strong clays, and pebble bed of the London clay; and Shooter's-hill, 412 feet high; the Ravensbourne valley above Lewisham; part of the eminence adjacent to the Crystal Palace, 353 feet, and other parts, are shown as "gravel and sand." The London clay is chiefly found at the north-west of the metropolis, as at Wormwood-scrubs, Kensall-green, Portland-town, Regent's-park, Somers-town, Pentonville, Holloway, and part of Stamford-hill, and beyond these; but it also extends in narrow strips along Hackney-brook, to near Blackfriars-bridge, and to a spot at some distance in the rear of the National Gallery after following the line of the Serpentine, and encircling great part of the area of Bayswater and Kensington-gardens. It is also found at Wanstead, Leyton-street, and Church-end, north-east of the metropolis.

The "peat and alluvium" are shown in the Plaistow-marshes, the Greenwich-marshes, the Isle of Dogs, and at the Commercial Docks; south of Rotherhithe, at the Great Surrey Canal; in the lower part of the course of the River Lea; and south of Hungerford-market, and over a considerable part of Westminster. The general soil of London and of the bed of the Thames is gravel and sand, but brick earth is found at Turnham-green, Barnes, Shepherd's-bush, Fulham, Battersea; in the centre of the gravel at Kensington-gardens; in the City; at the Metropolitan Cattle Market; at Hoxton, Ball's-pond, and Stoke Newington; near Victoria-park, near Limehouse, and at Ilford, and other localities.

Information of the character above described of course renders the map of great service in many ways. A third version of it is announced, coloured to represent the districts and areas at present supplied by the different water companies. The mains will be marked in contrasted colours, and the sites of the principal wells and other particulars as to water-supply will be given on the same sheet.

Sewage Manure.—In reply to the questions asked by your correspondent, "W. O'Brien," respecting sewage manure,—Can *any* manure be deodorized without losing a great deal of its agricultural value? allow me to say, Perhaps not; but sewage manure, ere it has had time to enter into a decomposing condition, can most certainly be deodorized without losing any of its agricultural value, and not only so, but its value must be enhanced. As to the mode of effecting the deodorizing and consolidating, this is now generally known as the lime process (Higgs' patent), concerning which I send you testimonials.—W. H. jun.

THE STRUCTURAL AND DECORATIVE WORKS AT ALNWICK CASTLE, NORTHUMBERLAND.*

After the able papers you have heard from Professor Donaldson, there is little of interest that I can add.† But with your leave I should like to address to you a few words on the part I have taken in the alterations now in progress at Alnwick Castle.

In the spring of 1854, his Grace the Duke of Northumberland wrote to me from Rome, desiring to have plans and interior elevations of the entertaining rooms (copies of which are on the table), that he might consult some architects at Rome on the subject. Soon afterwards, designs for ceilings, &c. were forwarded to England for the opinion of some of his Grace's friends. Beautiful as these drawings were, I had great doubts of the propriety, as well as practicability, of introducing Italian art into a border castle. My own wish would have been to devise Mediæval decorations to a plan consistent with modern requirements, and that would have accorded with the exterior, as well as the associations of the place. I must here observe that I do not for a moment admit, what many opponents of that style urge against it,—that because the doors, the windows, and the ceilings are Mediæval, therefore the floors must be covered with rushes, and the furniture benches. It certainly was not the spirit of that style to be so cramped. The artists of those days availed themselves of the best the age produced, and the style will be most completely carried out in our present time by introducing all modern improvements that will conduce to elegance and comfort.

In this instance, however, be it observed, none of the ancient features remained internally; and indeed, the arrangement of the interior was so changed in the repairs of the latter end of the eighteenth century, that there was nothing of archæological interest to preserve; therefore, whatever was done, must necessarily be different from whatever existed in the old border fortress of the fourteenth, fifteenth, and sixteenth centuries.

His Grace having honoured me with instructions to prepare plans and elevations, my duty was to exert my utmost endeavours to arrange the best plan the nature of the structure would admit of, and to improve the external appearance by adding such features as it most required, at the same time giving every facility to the introduction of the designs of Commendatore Canina.

The foundation-stone of the Prudhoe Tower was laid by the duchess on the 25th of November, 1854, and by July in the following year, it was, together with the entrance, built two-thirds of its height, as well as rebuilding the dining-room, which had been found in too dilapidated a state to repair. 12,000 tons of new stone had been, up to that time, used in these buildings.

In the summer of 1855 the Commendatore Canini sent over Signor Monteroli, an architect, and Signor Bulletti, a carver in wood, the former to make drawings, full size, after the approved designs; the latter to carve samples to be taken to Italy to be executed, it being, at that time, intended that the whole of the ceilings and other decorations should be made in Italy.

His Grace having confided to me the general direction and execution of the works at Alnwick, it struck me, that not only the plain surfaces of the ceilings might be better done on the spot, but also some portions, at least, of the carvings, and that there was a most favourable opportunity for creating a school for carving in the Italian style. I found a person (Mr. John Brown) working for a cabinet-maker in Alnwick, who showed considerable dexterity in using his carving tools. I gave him a piece of the egg ornament to copy, in which he was so successful, that I sought out others, and gradually collected a sufficient force from Glasgow, Shields, Sunderland, and Newcastle, in all twenty-one men and six boys, who are now executing the carvings, under the direction of Sig. Bulletti, with Mr. Brown as foreman, in a manner that will be a credit to the country and themselves. For any similar employment, I can with great pleasure and satisfaction recommend them to your notice, not only as able artists, but orderly and well-conducted men.

On the walls there are plans and elevations of the castle as I found it: also, plans and elevations of the alterations now in progress.

By reference to the former plans, you will see a want of proper communication,—that the access to the drawing-room was through the saloon or the dining-room,—that the dining-room could only be approached through the drawing-room, or by a circuitous route in the bed-room passage and breakfast-room. The kitchen was also divided from the keep, in which the dining-room was situated, by an open archway, through which the carriages of the company were passing about the same time the dinner was crossing it. There are legends of patties having been blown about the court-yard. The library was far removed from the other sitting-rooms, so that after breakfast the company were separated, trusting to the next hospitable meal to bring them together again.

To obviate these defects and also increase the accommodation, I had to take down two towers,—one to make room for the Prudhoe Tower, in which are the library and the great staircase,—the other for a chapel and a staircase to the bed-rooms. I had also to obtain a better entrance, and by projecting a corridor on arches and corbels, I gained separate access to the various sitting-rooms, besides adding a picturesque feature to the exterior. The entrance is now from the covered drive in the inner court into a low hall, and thence, passing through the old wall of the waiting-room, by a staircase 12 feet wide, to a vestibule on the principal floor, 30 feet square; from thence into an ante-room, with a library on the left hand and the drawing-rooms on the right: the vestibule opens into the corridor before mentioned, and so on to the second drawing-room, the great dining-room, and the small dining-room. The vestibule also gives access to the chapel, and the passage to bed-rooms on that floor, and the staircase to the bed-rooms on the upper floor. In altering the present library into the private rooms of their Graces, I constructed a passage across the gateway, and at the end a lift from the kitchen, by which the patties may travel in safety.

These alterations caused no destruction of ancient buildings: for reference to a drawing, which shows the plan of 1630 distinguished from the plan of 1760, shows that many of the towers had been rebuilt in different positions. As, for instance, the tower on the drawing-room could not originally have been so near the hall, because a kitchen intervened. Neither could the original tower, west of the octagon towers of the gateway, have admitted the present library, and a dressing-room between it and the gateway. There is also another proof of their modern construction. In pulling down the tower where the Prudhoe tower now stands, a bottle was found in the wall, containing the following inscription:—

"This castle was built by Matthew and Thomas Mills, master masons, in the year 1764."

The mortar and masonry were also of a very different description from the old portions.

As far as my investigations go, I believe the only round tower to be that of the dining-room, and this one was in a very dilapidated condition,—the outer shell good, but the lower portions of the interior built with mud, and further weakened by three windows, that had been cut through the wall in the alteration of 1760.

This tower has had the delicate operation (which you all so well know), of having its interior picked out and a new one put in, while its skin remains the same.

During the last two years there have been about 200 men employed, viz.—Quarrymen and labourers, 42; workmen's labourers, 50; masons, 60; carpenters and joiners, 16; plumbers, 6; plasterers, 6; smiths, 10; painters and gilders, 8; carvers, 27; clerk of the works and foremen.

The building stone is from a quarry belonging to his Grace, three-quarters of a mile distant on Alnwick Moor. The steps are from

---

* Read by Mr Salvin, at the Royal Institute of British Architects, November 17th.

† These papers, or portions of them, we shall give in a future number.

Rothbury Moor, twenty-two miles distant. Each step is in one stone, 12 feet long, and the landings of one stone, 12 feet square. Stones of 30 feet square and 50 or 60 feet long, may be obtained if required: its texture is very hard and of a beautiful white, free from marks or flaws.

A description of the internal decorations of Alnwick Castle, abridged from the specifications of Canina, was then given. The following is part of it:—

GENERAL ARRANGEMENTS.

It having been determined by his Grace that all the decorations should be executed after the best style of the first masters of the fifteenth and sixteenth centuries in Italy, particularly in Rome, and that nothing should be done without his approval, the execution of the various works in stucco, marble, wood, and other materials, will correspond in style and character with the best Italian work of the revival by the ablest artists; commencing at the entrance with simplicity, and increasing in richness of decoration according to the destination of the several apartments.

STAIRCASE.—GROUND FLOOR.

The *Ceiling* to be decorated with panels in stucco, with a little more ornament than in the entrance, and with a circular centre.

The *Wall* opposite the three arches to be faced with coloured marbles, with bands and compartments, of approved design; and this decoration to serve also as a continuation for the imposts and as base to the grand staircase. Opposite the stairs, an arch to serve for the decoration of a window recessed in the thickness, before which will be placed a statue or a group in marble, in order to cover the lines of the window, which are not in harmony with the internal decoration.

The *Pedestal* or *Dado* to be likewise of coloured marble, corresponding to the wall facing the entrance; and midway of this wall will be placed two candelabra, similar to those before mentioned.

The *Pavement* to be of the white stone of the country.

STAIRCASE.

The *Grand Staircase* to be decorated above with three large arches, forming together the respective cross forms of the vaulting. The arches to be decorated with stucco in compartments, with mezzotints in the ground, in imitation of the Loggie of the Vatican. A similar decoration for the ceiling, and for the ground of the arches in the walls above the imposts.

The *Walls* will be lined with coloured marbles, as also the piers of the arches, finishing at the imposts.

At the head of the stairs, on the principal floor, the same decorations will occur, with panels to correspond with the other arches; the existing windows being reduced to a convenient shape to adapt them to the character of the internal decoration. In the archway in front, and in the opposite one, will be placed a balustrade of marble, with a large candelabrum, likewise of marble, on a pedestal.

The *Flights of Stairs* to be divided by a landing, with another at the head, from which five steps lead to the vestibule or hall on the principal floor.

All the steps and landings to be of the white stone of the country.

Flanking the rake of the stairs will be a base or spandril, from which rise the pier of the arches, having imposts and dado of white marble, with compartments of coloured marble.

LIBRARY.

Ceiling.—This noble room, of a regular form, will be decorated with a flat ceiling in wood, carved and painted, with ornaments in the panels and compartments. There will be besides, in each of the main compartments, a trophy allusive to the Arts and Sciences.

The *Walls* will be covered with two tiers of bookcases, a staircase in the thickness of the wall, leading to a gallery, giving access to the upper cases.

Bookcases.—The bookcases will be carved or wrought in maple-wood, polished, the decoration being applied to forms and depths the same as those of the bookcases in the existing library.

Pictures.—In the upper part of the walls portraits of the illustrious family will be placed, on a ground ornamented and painted red.

Windows.—A large window of two heights, which occupies one side, precisely facing the entrance into the library, will be reduced to a form convenient for the internal decoration. At the sides will be placed the lower tier of bookcases, and in the space above portrait pictures, as already stated. In the same sides will be placed two portraits, sculptured in *basso relievo*, by Sig. Macdonal, of Rome.

Fire-places.—The three fire-places in this room will have chimney-pieces of various coloured marbles, with simple ornaments proportionate to their relative dimensions.

Other Windows.—At the left of the entrance of this room, at the end, another large window of two stories, crossed by the gallery to the second tier of bookcases, will also be reduced to a convenient form internally.

The wall fronting the large window will receive bookcases in two tiers, having in the centre the principal doorway marked with appropriate decorations.

Floor.—The floor of this room will be of wainscot, covered with a carpet.

SALOON.

Ceiling.—This room, for which the decorations were determined in the year 1855, is now far advanced. The form is regular, and polygonal in the centre, which occupies the interior of one of the circular towers of the castle. One portion of this ceiling was executed in wood with carvings, in August this year, to show the effect of the design made in Rome in the beginning of 1856.

A *Frieze*, with ornaments and boys on a red ground, painted in Rome by Sig. Mantovani, goes round the room, under the cornice, above which is a flat ceiling: below is an architrave, which also goes round the room; the whole forming a very rich and effective entablature.

Damask.—The walls will be covered with satin of a yellow colour, similar to Genoa tissue, of the height of 13 feet 3 inches.

Fire-place.—On the long side of the room, in the centre, will be placed a marble chimney-piece, executed in Rome, and decorated with two figures of slaves.

Doors.—In the centre of each end is a door, to be executed in the same style as the ceiling, having the same colours, and rich carvings on the panels and dressings.

Windows.—In the other walls the five windows will be decorated with archivolts carried by pilasters, within which will be painted ornaments, as also on the external part of the window shutters, to correspond with the rest of the decorations.

Window Curtains.—Rich hangings will be fitted to the windows.

The *Dado* will be of walnut-wood, from Italy, and of the height of 3 feet 6 inches.

The *Floor* will be of wainscot, covered with a carpet, harmonizing in design and colours with the rest of the decorations.

DRAWING-ROOM.

The drawing-room is of a polygonal form, composed of three sides, half octagonal, and one rectangular.

Ceiling.—A well-studied combination of the polygonal form produces the decoration of the ceiling. All this ceiling is executed in wood, and at present the ornaments are being executed: these will serve as a model, both for the carving and for the decoration in colour.

Frieze.—The frieze is composed of ornaments with boys, on a blue ground, already painted in Rome by Sig. Mantovani: a carved cornice over it will serve as an impost to the ceiling, and a corresponding architrave will complete the upper part of the decoration.

Chimney-piece.—In the centre of the longest side of this room will be placed a chimney-piece of white marble, with two canephoræ, which are being executed in Rome.

The *five Windows* round this room will have a decoration in wood, with pilasters and archivolts, and these will be painted with ornaments, as will likewise the shutters.

Damask.—All the walls will be covered with a red satin drapery, of Bolognese manufacture, from a drawing prepared for the purpose.

Dado.—In the part below a dado, like that in the preceding room, of dark Italian walnut.

The *Floor* will be of wainscot, covered by a carpet.

DINING-ROOM.

The rectangular form of this room offers a good opportunity for regular divisions, according to a drawing executed in Rome in 1856.

The *Ceiling* will be carved, and left with the natural tint of the wood. A cornice, with modillions, crowns the walls; and underneath it a painted frieze, divided into pictures of allegorical or historical subjects, as shown in a sketch by Sig. Mantovani.

Damask.—The colour of the damask for the walls to be carmine red; the height about 15 feet.

Chimney-piece.—In the centre of the long side of this room a large marble chimney-piece, composed of two figures, adapted from the most celebrated works of the ancients, agreeing with the remaining architectural decorations, but varying from all the other chimney-pieces.

Pictures.—Above this chimney-piece will be placed a large frame, carved to correspond with the ceiling and chimney-piece. It will contain a picture, now in the present library. On the other side walls will be placed similar portrait pictures.

The *Dado* will be of choice wood, divided into panels, alternately plain and carved, of the height of 4 feet 7½ inches. The carving to be of the style of that in the choir at Perugia, and other similar examples. In the divisions of the parts above will be arranged ornaments, supporting cornucopiæ for lights, as well as two small candelabra above the chimney-piece.

Doors.—To preserve symmetry, it is proposed to place doors, two at each end of the room, with moulded jambs and entablature, the panels and mouldings enriched with carvings.

THE CHAPEL.

The decorations of this chapel being in the Mediæval style, it is intended to introduce in the lower part mosaic decorations, especially in the parapet or fascia at the base of the windows; having compartments of Alexandrine work, like those in the ancient Basilicas, and in Westminster Abbey, composed of hard stones, such as porphyry, serpentine, &c.

The space under this parapet, down to the skirting of the floor below, will have like decorations; but instead of "Pietre dure" they will be of Majolica.

The *pavement* of the passage in the centre of the floor, and the space where the communion-table is placed, will be arranged in divisions of mosaic, like the parapet under the window.

Such is the brief statement of the structural and ornamental operations of the most important class, now carrying on at Alnwick Castle. The style of decoration that has been adopted will, of course, admit of a variety of opinions among artists and men of taste, arising from education, predilection, and consequent habits of thought. But, it will be allowed, that the style has not been selected without much and deep consideration, and is justified by the precedent of all periods. And all must agree, that the execution of the work is being carried out with a grandeur of idea, a munificence, a considerate love for the arts, and with a generous public spirit worthy the characteristic nobility of the princely line of the Percys. T. L. D.

In the course of the discussion which followed, the Chairman (Mr. Scott) observed, that there were few questions attended with greater difficulty to the architect than the mode of dealing with castles. For the last half-century it had been the fashion to build new castles; and although Mr. Salvin had built the most complete one—a perfect model of a mediæval fortress—that gentleman must excuse him for expressing his opinion that building castles was one of the greatest fallacies that could now be carried out. They were not necessary, as in the Middle Ages, and it was a great mistake to suppose that a building to be erected in the Mediæval style must be a castle. He most earnestly hoped that they had seen the last of *new* Mediæval castles. The restoration of *genuine* Mediæval castles was entirely another question. The examples which had come down to the present time were glorious remnants of the art, and of the noble thought of the artists of former days, who designed these structures with the greatest ability, and carried

them out with a grandeur of idea and a nobleness of sentiment unequalled by the works of any age. These venerable relics deserved the most careful conservation, and in any alteration of them it would be right, as Mr. Salvin had done, to restore them, in all general features, to their ancient state. These buildings, however, in most cases were now occupied by noblemen who had not, as in former times, to defend the borders against a neighbouring kingdom. He agreed with Mr. Donaldson, or rather with the sentiments of the Duke, expressed by Mr. Donaldson, that a nobleman of the present day should not immure himself in a fortress or live in a guard-room; but in going beyond that point, he thought it his duty, as representing in some degree the Gothic class of the profession, to say, that he believed there were others besides himself who would think the Duke had been mistaken in the rest of his logic. This difference of opinion he (the Chairman) wished to express in the most tender manner. The Duke had been animated with the most noble feelings, and had called to his assistance an architect who, in the particular style in question, was one of the ablest in the profession; and he had also secured the aid of one to whom they owed much for the learned manner in which he had investigated ancient art, and the valuable works he had produced, and in regard to whom the greatest respect and tenderness of treatment were due, from the melancholy circumstances of the moment. There was not the least reflection on the judgment of Canina. He had carried out the works at Alnwick most admirably in the style which had been chosen: the only possible reflection would be upon the logic of the Duke of Northumberland, which had induced him to adopt that style, and consequently to place the work in the hands of Signor Canina. His own opinion was that the art of the Middle Ages was just as capable of being applied to the wants of the present day, and particularly to the fitting up of Alnwick Castle, as the art of any other period. The great principles of decoration were the same in every style. Those principles arose from nature, and it was therefore quite compatible to carry out all that was required at Alnwick in the same style as the architecture of the exterior of the building, as in the style derived from the Renaissance Palaces of Rome; and further, that in doing so, Mr. Salvin might have done much more towards carrying out and developing a style of our own than could possibly be done by carrying out the Italian style. It might have been possible to take up the spirit of that style in such a manner as to have formed a style of our own; and with all due respect for the noble and generous sentiments of the Duke of Northumberland, and more especially for the great abilities of Signor Canina, he must repeat that he thought his Grace had made one of the greatest and most lamentable mistakes which had been made in the present day.

Mr. M. D. Wyatt, honorary secretary, observed that Mr. Scott had alluded to himself (Mr. S.) as identified with mediæval architecture in this country. Mr. Scott's sentiments, however, differed so much from the mediæval spirit, and were so consonant with the spirit of our own times, that he (Mr. Wyatt) thought he should be rescued from such an accusation. Mediæval decoration was generally spoken of as if it were necessary that the precedent of our forefathers should be taken exactly as they had left it to us. In this country, neither sculpture nor painting had been developed in such perfection in mediæval times as would be required now. A general code of grammar was an excellent thing; but he hoped that the chairman and all those who advocated the revival of mediæval art, would endeavour to disengage themselves from the rigid trammels of the past, and to fling away the shell, now that they were happily [illegible]

Mr. Pocock, Fellow, considered that the Duke of [illegible] architecture of the fifteenth and sixteenth centuries, because, in that style, the architecture of ancient Greece and Rome had, in fact, been reduced and adapted to modern wants. It was very different, however, with regard to mediæval architecture and decoration, which had not been so modified at present; but which he hoped it would be under the able hands of its professional admirers. A nobleman, however, seeing such an adaptation as the Italian style prepared to his hands, would naturally rather adopt it than attempt to carry out the mediæval style, and incur the risk of failure, without first [illegible] such something executed in accordance with it.

Mr. Jennings, Mr. Donaldson, Mr. Ashpitel, and Mr. Fowler, jun. also spoke.

Coating Iron with Copper, &c.—Mr. E. R. Southby, of Bulford, Amesbury, has patented some improvements in coating iron with copper; and Mr. W. Tytherleigh, of Birmingham, has patented a new or improved method of coating or covering iron, or articles of iron, with copper or alloys of copper.

THE PROPOSED DECORATIONS AT ALNWICK.

I feel most reluctant to make an act of individual munificence the subject of public discussion; and had it not been formally, and no doubt with the consent of the Duke of Northumberland, brought before the Institute, I should never have ventured to intrude my opinion; but such having been the case, and it chancing to be my turn to take the chair on the occasion, the discussion was really forced upon me, and I must plead this as my apology for begging you to insert the following remarks, intended to form a part of a chapter upon the restoration of ancient mansions in a little work I have in hand on the subject of secular architecture.—

"A truly lamentable error has recently been fallen into at Alnwick Castle. That stately structure, the home of the ancient Percys, a place replete with the most stirring historical reminiscences, and the scene of an infinity of romantic incidents, had, from the effects of time and injudicious alterations, in great measure lost its ancient character. The present Duke of Northumberland conceived the princely idea of its thorough restoration—a work which, so far as the exterior is concerned, would appear to have been exceedingly well carried out by his architect, Mr. Salvin. At this point, however, his Grace appears to have become alarmed, and to have asked himself whether he was to sacrifice his future comforts and the luxuries of modern life, and to immure himself within the stern apartments of a feudal fortress. The true answer is obvious, — that nothing of the kind was necessary; but that, on the contrary, he had before him the noblest opportunity ever offered of bending the beautiful style of the fourteenth century to meet the usages and refinements of the nineteenth; and I heartily commiserate the architect whose unhappy lot it has been to let it slip. Whether the princely lord of Alnwick thought he had no other alternative between the debased Gothic of Windsor and (what I hope I shall be pardoned for calling) the mimic feudalisms of Peckferton, I know not, but the result was this, that happening at the time to winter in Rome, his Grace became enamoured of the interiors of the Renaissance palaces, and fostered the unfortunate idea of making his ancestral residence a feudal castle without, and a Roman palazzo within; and this is now being actually carried into effect, in a manner so liberal and so costly, as only to render one's grief the more poignant, that a scheme conceived in so princely a spirit should be ruined by an unhappy error.

The works are not being carried out by the duke's excellent architect, Mr. Salvin, but by artists brought from Rome for the purpose, at the head of whom was the celebrated and now lamented Canina. From the description of the works given by Professor Donaldson (who, in conjunction with Professor Cockerell, has inspected, and I regret to say, approved, what is going on), it appears that most of the choicest works are to be executed in Italy; but that for the more ordinary carving, a school has been established on the spot under the direction of Italian artists; every possible pains being taken in instructing local workmen in the exotic art, as if it were now for the first time introduced into England. Conceive, for one moment, what would have been the result had all this liberality and energy been directed to instructing them in the true style of our own country; and had these simple workmen, instead of being perplexed by drilling them into producing forms of ornament which they cannot comprehend, and which have no relation to the forms of nature with which they are surrounded, been directed to study the ancient works within their reach, as at York, Durham, or Hexham, or in those cloisters of which it is said, that—

> "Nor herb nor floweret glistened there,
> But was carved in the cloister-arches as fair."

And if they had been then taught that the true mode of carrying the art to still higher and higher perfection, was to study and arrange for themselves the works of nature which surround them at every step, learning from them ever new beauties and ever fresh ideas—beauties and thoughts not belonging to one age of the world, but to all time—though varying in every country as nature has seen fit to give variety to its productions!

I will not dwell longer on this subject than to call attention to two singular and not uninstructive considerations which it suggests. The first is this—that though the so-called "revival of art" took place in Italy some three or four centuries back, and all Europe has been working at it nearly ever since, it appears, on the evidence of the most distinguished architect in Rome, that its best productions are the works of the first revivers. This certainly does not say much for it as a *progressive* art. The second is not unlike it—it is this: that though the revived Roman architecture was transplanted into England some 250 years since, and is considered by our architects to be so thoroughly acclimatized and naturalized that they stand by it as if it were as much the Englishman's birthright as Magna Charta itself, the unwelcome fact has at length oozed out, and, unpalatable as it must be, is confirmed by the united testimony of our two respected architectural professors, that if we wish to carry out the style in its perfection, the proper course is to import architects from Rome to do it. Surely this is sufficient proof that it remains an exotic art!"

I have, since writing the above, read with great interest the paper in your last number, bearing initials which can never fail to ensure attention. I remember remarking when I came from the discussion at the Institute, that the bearer of these initials had evinced that kind of amused interest in it which a man of conscious orthodoxy would feel in an argument between the advocates of two opposing heresies, and his letter quite carries out the idea. I really think, however, that the differences between my view and his are not, after all, very wide.

He exposes the error fallen into in language stronger than I was master of. He, of course, agrees with me also in thinking that the reproduction of the internal forms of a feudal fortress would have been a frivolity: we want no strongholds along our borders, and do not ask our nobles to immure themselves in mimic fortifications. He next agrees with me in the opinion that the true course would have been to introduce into the interior every elegance and refinement that the skill or taste of modern times could suggest, and he details the mode of doing this almost exactly as I should have done. Where, then, do we differ? Merely in this, that he thinks that this should have been done in utter forgetfulness of all pre-existing styles; while I, convinced that this is morally impossible, would make the finest period of our national architecture (which, by a happy coincidence, is the same which would appear to have been that of the old castle) the ground upon which I would have endeavoured to develope that free and untrammelled architecture which I would advocate.

It is quite clear that the result which "J. F." has in his imagination has considerable affinity to that which I also had in view: for while he describes the contrast between Italian and Gothic art as producing a "painful discord," a "pantomime," &c. he speaks of what he suggests as producing "little incongruity," and as being "in fact, the goal to which the former style" (that of the fourteenth century) "*was tending*." It is manifest from this that he considers the style which correctly represents the present age to have, to say the least, a far closer relationship to that of England in the fourteenth century than to that of Rome in the sixteenth.

I will not endeavour to defend the attempts which have been made at the adaptation of Gothic architecture to our wants from the criticisms to which they are naturally open. The earlier of them were made before the style was in any degree understood: many others have been placed in the hands of persons who, though known as good house-builders, were equally well known *not* to be Gothic architects. The Palace of Westminster is as superior to such works as Barry to Batty Langley. It may have its faults, but if the next great work in that style bears the same proportion in merit to Westminster which that bears to Windsor, I

will only say that it will be the glory of all lands and the admiration of all ages.

One great fault, if I may be allowed to say so, in the Westminster work is that its style is founded upon that of a period at which our architecture had long passed its prime, instead of taking as its groundwork the truly beautiful and refined style of St. Stephen's Chapel,—a work worthy of any age, and (as I believe) contemporary with Alnwick Castle.

GEO. GILBERT SCOTT.

INSTITUTION OF CIVIL ENGINEERS.

AT the opening of the session on the 11th instant, the president, Mr. R. Stephenson, on taking the chair, said, that for some time past the state of his health had been so precarious, as to render it doubtful whether he could remain in England to be present at the first meeting of the session: he had been extremely anxious on this point, as he wished to meet the members, before his departure on a journey which might have a duration of at least two months, and thus cause his absence at the period of the annual general meeting, when the election of the council and officers for the ensuing year would take place. The president then made some remarks on the office of president and on the papers read last session.

After the reading of a paper "On the Improvement of Railway Locomotive Stock," by Mr. D. K. Clark, Assoc. Inst. C.E. which had been previously printed and circulated, a communication was brought forward, claiming for Mr. James Kennedy, of Liverpool, the merit of having first introduced a locomotive with horizontal cylinders and a cranked axle, inasmuch as it was asserted that they were first applied by Mr. Kennedy in the "Liverpool," which was stated to have been started on the 22nd July, 1830, and was employed in aiding in the construction of the Liverpool and Manchester Railway.

Mr. Roger Salter, after the meeting, explained two models of his self-acting penstocks, or flushing machines, for cleansing house drains and sewers. These machines were of two kinds, the one having a valve hung horizontally, the other a valve, or gate, hung vertically. In house drains, a tank, or cesspool, was formed for the collection and retention of all the waste water running from the house, say in the course of one day, and thus this water which would otherwise possibly help to create the necessity for flushing, would itself act as a flushing medium. If the rain-water also was allowed to run into and collect in this tank, then the number of flushings would be increased. It was believed that the mechanical arrangements for making flushing tanks self-acting were novel and important.

THE LATE MR. J. M. RENDEL.

AT a meeting of the Institution of Civil Engineers, on the 25th inst. Mr. Brunel, on taking the chair, announced to the meeting the decease, on the 21st instant, of Mr. James Meadows Rendel, past president of the Institution, and proposed, as a mark of respect for the memory of the late distinguished member, to adjourn the meeting. This proposition was unanimously agreed to, several members availing themselves of the opportunity of expressing their respect and esteem for their late friend, and their sympathy with his family for the heavy loss they had sustained.

The late Mr. J. M. Rendel was a native of the West of England, where he was practically instructed in the executive part of the profession, and was early selected by that acute observer of talent, Mr. Telford, for laying out and constructing considerable lengths of turnpike roads in Devonshire and Cornwall; and the difficulties he there encountered and overcame, tended much to give him that self-reliance so useful to him in his subsequent career.

After being engaged in several large works in his native district, he undertook the construction of the cast-iron bridge over the River Laira, near Plymouth, at the express desire of the Earl of Morley, who had the discrimination to discover the latent talents of the young engineer, then only twenty-two years of age, and to his exclusive direction, with the approval of Mr. Telford, was entrusted the execution of that important work. It was commenced in the year 1824, and was completed in 1827, as described in the first volume of the Transactions of the Institution. This was soon followed by the construction of the floating steam-bridge for crossing the estuary of the Dart, near Dartmouth, somewhat on the same principle as those subsequently established by him for crossing the Hamoaze, between Torpoint and Devonport, as described in the second volume of the Transactions, and later still, those at Saltash, at Southampton, and at Portsmouth.

He was engaged also in the distribution of the water mains at H. M. Dockyard, Devonport, and on the waterworks at Edinburgh.

In the year 1838 he removed from Plymouth to London, and soon became extensively occupied on important works, and was engaged in the Parliamentary contests of that remarkable period in the history of engineering. Among the numerous works upon which he was occupied may be mentioned the Montrose Suspension Bridge; the Inverness Bridge; the Leith, and the East and West India and London Docks, where he designed and executed extensive improvements, amounting to partial reconstruction.

The design for the construction of docks at Birkenhead, Cheshire, of such an extent as to create a formidable rival to Liverpool, brought Mr. Rendel very prominently before the world, and the protracted contests on this subject will not only be long remembered in the history of Parliamentary committees, but the evidence given by the projector and other engineers, as now collected, forms a valuable record of the state of engineering practice. The almost incessant labour and the mental anxiety inseparable from this undertaking, were more than even his powerful constitution could support, and it is feared that they tended to shorten his valuable life.

The daring project of constructing a dock at Great Grimsby, by projecting the works far out upon the mud banks of the River Humber, was next successfully accomplished; and he commenced the two great works which alone suffice to hand down his name to posterity, beside those of Smeaton, Rennie, and Telford,—the Harbours of Refuge of Holyhead and Portland; both these works were conceived with the largest views, and have been carried on with great rapidity. In both cases the system was adopted of establishing timber stages over the line of the jetties and depositing the masses of stone, of all dimensions, by dropping them vertically from railway waggons into their positions; thus bringing up the mass simultaneously to above the level of the sea. In this manner, as much as 24,000 tons of stone have been deposited in one week, and to supply this vast demand, monster blasts of five or six tons of gunpowder were frequently employed.

Among the other works upon which Mr. Rendel was engaged, should also be mentioned the constructions on the River Lea, and the improvements of the Nene river; the latter a work of considerable difficulty, and not yet completed. He was also employed by the Exchequer Loan Commissioners to report upon the drainage and other public works in Ireland.

He was less engaged in railways than in hydraulic works, but in England he executed the Birkenhead, Lancashire, and Cheshire Junction line, and in India he had the direction of the "East Indian" and the "Madras railways," the former projected by Mr. Macdonald Stephenson, as the first of the vast system now being formed, and which will work such a revolution in the destiny of the Indian Empire. The Ceylon and the Pernambuco lines were also under his charge.

With his high qualities, which were fully appreciated, it need scarcely be mentioned that he rose rapidly to a very high position in his profession. He became a Fellow of the Royal Society, and was elected upon the council. He was a very early member of the Institution of Civil Engineers, having joined it in 1824. He had been for the last sixteen years upon the council, and held the post of president during the years 1852 and 1853.

MODEL LODGINGS IN THE STRAND.—A company, we hear, is being formed for the erection of a model lodging-house in Eagle-court, Strand. Miss Burdett Coutts has promised, it seems, to take 1,000*l.* of shares, if the remaining 4,000*l.* are subscribed; endowing St. Michael's Church, Burleigh-street, with the profits of her investment.

MEDALLIC ARCHITECTURAL ILLUSTRATIONS.

M. WIENER, of Brussels, of whose medals we have before had occasion to speak, is executing a series illustrative of the buildings of all countries. Of the English series (published by Messrs. Elkington) we have before us those representing, inside and out, Lincoln Cathedral, York Cathedral, and St. Paul's, London. That of Henry VII.'s Chapel, Westminster, is also nearly finished. These medals are exceedingly well executed: the effect given to the interior of St. Paul's, with the slight relief obtainable, is very striking. M. Wiener is the artist who made the medals for the Universal Exhibition of Paris.

It is to be regretted that medals are so little prized comparatively in Great Britain that the practice of medal die engraving is nearly confined to one family.

COMPETITIONS.

Aylesbury Cemetery.—We understand the designs of Messrs. Poulton and Woodman have been selected out of thirty-five submitted in competition. The buildings are to be in the decorated Gothic style, and the estimated cost is 1,800*l.*

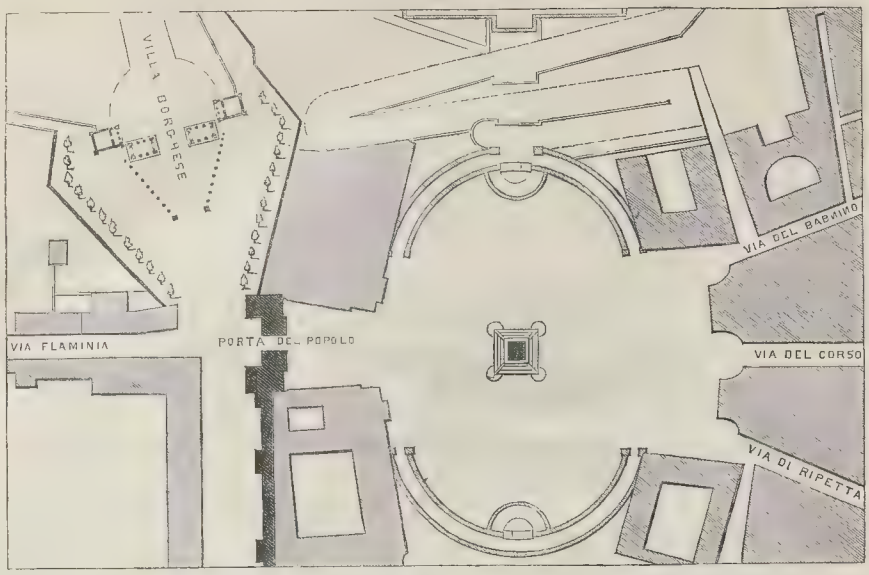
Litchfield Museum.—A competitor asks for information respecting the competition plans of the "Litchfield Public Museum and Library," which were sent in on September 22nd.

Castleford Burial-Ground.—Mr. Sykes, the clerk to the local Burial Board, asks us for the name of the writer of the rhymes in our last, headed, "To Architects. Competition. Prize of Five Pounds;" seeming to think that they were rather directed against himself, than written to benefit the class to whom they are addressed. We cannot comply with his request, but he may rest assured there is no personal "malice" in the case. Mr. Sykes says:—

"E. G. B. cannot regret more than I did that the premium should be so low, but it was a matter over which I could have no control. The amount was *not* fixed by the Burial Board, but by the ratepayers in vestry assembled. It was at first proposed that the sum should be *two* pounds; and it was, I believe, only on my ridiculing the idea of such a sum being offered (which I considered would be an insult to the profession), that the larger sum was agreed to."

Berwick Corn-Exchange.—The "Memoranda for the use of Architects," just forwarded to me from Berwick, says:—"The total cost of the structure and fittings must not exceed 2,750*l.* * * * * * The architect whose design, primarily or otherwise, shall be proposed to be adopted, shall, on application by the company's secretary, furnish full and complete working specifications, and on doing so shall be entitled to receive from the company the sum of 40*l.* unless he be appointed surveyor of the works, in which case he shall perform the duties of a surveyor, or superintending architect, in the usual way, and be entitled to a commission on the expenditure at the rate of 5 per cent. (such commission not to exceed 125*l.* in the whole), and no more."

Now, according to the methods in use in London, 5 per cent. upon 2,750*l.* amounts to 137*l.* 10s.; and after vainly endeavouring to solve this discrepancy in other ways, I have come to the conclusion that probably, as Berwick-on-Tweed is a town by itself in the United Kingdom—with special Acts of Parliaments, laws, customs, and so forth—there is a special mode of calculation in use there. If this be so, it will, of course, be necessary to follow it in estimating for work to be done in Berwick; and I have, therefore, requested them to send me a copy of the Berwick edition of Cocker, to aid me in my estimate.



WALKER.

PROPOSED OFFICES FOR THE METROPOLITAN BOARD OF WORKS.

AT a meeting of the Metropolitan Board, held on Tuesday, the 25th instant, a report was brought up from a Committee on the Site of Offices, which recommended, "That a proposal be made by the Board to the Corporation of the City of London, for taking a portion of the site of the former Fleet Prison, in Farringdon-street, having a frontage of 100 feet, on a building lease, for a term of eighty years, at a rent of four guineas per foot."

Mr. Leslie objected that the report only referred to the frontage, and that there was no plan of the ground; and Mr. Hows said that to give four guineas per foot for a freehold in the City was absurd, especially while they had ground of their own, well adapted for the purpose, in Greek-street, Soho.

Various other members spoke and objected to the site, and at length the further discussion of the subject was adjourned till Friday.

PLAN SHOWING SITE OF THE VILLA BORGHESE, AND NEW ENTRANCE.

LONDON AND THE CHARTER OF SANITARY REFORM.

Mr. Leslie's second lecture, "On the Metropolis, viewed from the great Sanitary Charter, the Metropolis Local Management Act," at the Royal Polytechnic Institution, on Tuesday evening last, was attended by a much larger audience than the first, and who manifested deep interest in the subject.

The chief points brought out in this lecture were the uncompromising hostility of the lecturer to cesspools and cesspool reservoirs; that they were behind the age in which we lived, and were a disgrace to humanity. He cited the case of two houses he occupied in Conduit-street, where, in the year 1843, he had destroyed eleven cesspools, substituting very small tiles, at a uniform inclination of fall into the sewer, and that for a period of thirteen and a half years he had not been called upon for one sixpence additional expense: storm waters, rapid thaws, had all been discharged without the slightest inconvenience, and he considered, that while enjoying great sanitary advantages, he had been a great pecuniary gainer by the outlay, 12*l.* 10*s.* for each house; that his example was followed about fifteen months afterwards by Mr. F. O. Ward and Mr. Owen Jones, the same tradesman being employed to do both their houses exactly as his had been done. The lecturer then traced the sewage matter rapidly discharged from his house as fast as it was generated into the street sewer, and thence into the great cesspool reservoir of the King's Scholars-pond, and showed from an official report of the year 1849, that in its first mile from the river there were 6,000 loads of filth, and that this obnoxious deposit extended to a depth of about 30 inches for a mile and a half up the sewer; that a horse was introduced to drag a plough and harrow; that the only admission for the horse was at the outlet, and the operation was only possible for a very short period of each tide; that subsequently the plough and harrow were attached to a barge, and by keeping the gates closed until there was a difference between the level of the sewer and the Thames of 8 feet, then suddenly opening the gates, thousands of loads of the filth were swept into the Thames.

The lecturer asked if the audience supposed that this abomination was in some outlandish, uninhabited portion of the large metropolitan area? No; he said it was in the parish which he had the honour to represent at the Metropolitan Board of Works, St. George's, Hanover-square, in the fashionable district of Belgravia, passing all around her Majesty's town residence, Buckingham Palace, the mile and a half described terminating about midway up the Green-park, in the direction of White Horse-street, Piccadilly, from Buckingham Palace.

He showed that, in the last cholera visitation in the sub-districts of St. George, Hanover-square, the proportions of deaths in 1,000 persons were, twelve in Hanover-square, twelve in Mayfair, and forty-nine in Belgravia.

This brought out the remedy, which consisted, according to the lecturer's views, in passing this northern sewage in a culvert, under the bed of the river, to the deep intercepting sewer from Putney, through Battersea, Southwark, and so on to Sea Reach, as described in our last week's publication.

The lecturer then read the awful amount of mortality through those black portions of the map in Surrey and Kent, where the intercepting sewer would thoroughly and effectually drain. This mortality in several of these parishes exceeded a fifth of the whole population. The lecturer cited Milton, who was born in 1608, in Bread-street, Cheapside, as one of the earliest complainers of sewers:—

> "As one who long in populous city pent,
> Where houses thick and sewers annoy the air,
> Forth issuing on a summer's morn, to breathe
> Amid the pleasant villages and farms
> Adjoin'd, from each thing met conceives delight."

The lecturer then showed that the sanitary charter prevented the Metropolitan Board of Works from continuing or constructing any works that might be a nuisance, and he cited cases where disease had originated from opening cesspools and cleaning out house drains, and called upon his audience to examine immediately the state of the drains, and to abolish cesspools of every kind, these being quite as dangerous as having barrels of gunpowder under their habitations. He concluded with the announcement that he should give a third lecture in the same theatre, on Tuesday, the 2nd of December.

The Soulage Collection.—This very beautiful and important collection of works of Italian art, mainly of the fifteenth and sixteenth centuries, bought, as our readers know, by a body of gentlemen, with the disinterested view of securing it for the country, is now being arranged in Marlborough House, and will probably be opened to the public in the course of ten days. It consists of 800 objects, and will occupy three rooms. The works of art purchased at the Bernal sale will occupy two other rooms; so that, together, the exhibition will be one of great interest. We postpone some observations on the Soulage Collection, as we intend to illustrate one or two of the specimens.

ENTRANCE TO THE VILLA BORGHESE, ROME.

Seeking to place before our readers illustrations of some work of the late Luigi Canina as an architect, we have been enabled, by the kindness of Mr. Arthur Ashpitel, to engrave a view of the Entrance to the Villa Borghese, with a plan showing the site of the villa and the approaches. Mr. Ashpitel, in sending us the materials, writes as follows:—

"It gives me a melancholy pleasure to enclose the only drawings I have of the works executed by my late friend the Commendatore Luigi Canina. As may be expected of such a city of the past as Rome, there is little scope for the skill of the active practical architect. Except some new houses in the Piazza at the end of the Via Fontanella, and some additions to the Palazzo Borghese, I think I saw little of his works at Rome. His great restoration of the Aqueducts had been scarcely commenced, and nothing that he carried out at Turin has been published.

The annexed sketches, however, have especial interest. They consist of a new Entrance, or '*Ingresso*,' to the Villa Borghese, in lieu of that destroyed in the famous '*quarant' otto*.'

The prince had either seen or heard of the works executed at Munich, in the Greek style, for the King of Bavaria, and Canina's designs are based on the same style, but are no doubt in a purer taste.

The site is close to the entrance to Rome, by the beautiful Piazzo del Popolo. The design is that of a double Greek Propylaion: it is carried out to a fine scale, each of the columns being about 25 feet high, and the entire construction is that of the Attic period. The roofs, and their covering, acroteria, antefixa, everything is exactly as if it was in Attica. It is, perhaps, the only perfect imitation of ancient Greek art, in all its details, now in Europe."

Early Closing.—We are informed that a move in this direction has been made by the mahogany and timber merchants in the metropolis, a meeting having been held at Garraway's Coffee-house, on Monday evening, November 17, at which several influential members of the trade pledged themselves to the principle, and formed a committee for the purpose of canvassing the trade for its universal adoption.

ENTRANCE TO THE VILLA BORGHESE, ROME.—The Late Luigi Canina, Architect.

PROVINCIAL NEWS.

Bath.—An advertisement appears in the local *Chronicle* of a proposed public building to be undertaken by shareholders, to contain a music-hall of large dimensions, a winter garden, pump-room, &c. near the Marlborough-buildings entrance to the Victoria-park. It is projected that the winter garden (under glass, of course) should afford to residents and visitors a promenade in wet weather, and it is proposed to bring the Bath waters to the new pump-room, in pipes, the surplus water to be used for ornamental fountains in the grounds, which it is contemplated to lay out in the style of the gardens of the Tuilleries at Paris. To effect these objects it is calculated that a capital of 10,000*l.* will be required, and it is proposed to raise this sum in shares of 10*l.* each. The designs for the new building have been prepared by Mr. J. Wilson, of this city, architect.

Liverpool.—The Dock Committee last week considered a motion, to the effect "that a special committee be appointed for the purpose of laying out the land between the Prince's dock and the Canning half-tide dock, and [considering?] whether any and what alterations shall be made in the existing docks and basins, with a view of giving improved facilities to the trade of the port; and also to take into consideration the present defective approaches to the landing-stage, to confer with the special committee of the council as to the best means of improving them, and report to this committee." The vice-chairman (Mr. Rankin) was of opinion that it would be better that the sub-committee should take a very general instead of a limited view of dock extension and improvements, both as to the accommodation of shipping in the provision of wet and dry docks, and the giving of facilities to the approaches to the landing stage. That some extension of the docks must take place there could be no doubt, when they bore in mind that within the last half-century the trade of the port had doubled itself every fifteen years, and that since 1848 the return of the income showed an increase of 113 per cent. per annum. With these facts before him he would move as an amendment, "that a special sub-committee be appointed to consider and arrange a plan of dock improvement and extension, and to confer with a sub-committee of the council with regard to the approaches to the landing-stages, the widening of the streets along the line of docks, and the transfer of the baths (on George's-pier) and the adjoining lands from the corporation to the dock trustees." Some discussion followed, in the course of which an opinion was generally expressed that to include in the motion the wide question of dock extension would swamp the entire question, inasmuch as Parliament would in all probability decline to give them the necessary powers, having already thrown out a Bill for the purposes referred to by Mr. Rankin. The suggestion of Mr. Rankin with respect to the "baths and adjoining property" was ultimately included in the original motion, which was carried by 11 to 9, the words "in the existing docks and basins" having been first struck out. A committee was then formed.

Dudley.—The Netherton Tunnel Works are being rapidly proceeded with. The whole of the face work is being done with Tividale blue bricks, and the string courses, copings, inverts, canal curbings, quoins, drains, &c. with the same massive material, the moulded work being glazed on the face surface. This latter improvement is the invention of Mr. Gilbert, of the adjacent tile works, who is supplying the contractor.

Darlington. — A fountain, designed by Mr. Handyside and executed at his works, has been ordered for Mr. Pease, and will be placed in a stone basin, in Darlington Market-place. It will stand on a granite pedestal 2 feet above the level of the water, and is made of cast-iron. At the top, at a height of 14 feet from the base of the metal part, are figures of two children embracing, and betwixt them a bell-shape jet is fixed, which delivers a circular cascade enveloping the figures, and falling into a vase or basin, surrounded by six lions' heads, from the mouths of which six jets descend into a larger basin. The top basin is supported by three dolphins, from the nostrils of which six jets arise, which intersect the others. These are received into a large basin, which is supported upon a pedestal, having in each of the four square compartments a lion's head, from the open mouths of which the water is ultimately discharged into the stone basin.

Cockermouth.—The directors of the Cumberland Union Banking Company, finding that their old premises were inconveniently small, succeeded in purchasing the house lately occupied by Mr. E. B. Steel, which, by the direction of Mr. Charles Eaglesfield, they have converted into a banking establishment, by an entirely new arrangement of the ground-floor, and adding a new polished stone front up as high as the first-floor, which is of white stone, and the other part is finished with Portland cement.

CHURCH-BUILDING NEWS.

Kingscote (*Gloucestershire*).—The church here has been restored by Mr. Teulon. It has a chancel and nave, with western tower, and there is a chapel on the north side for Col. Kingscote's family. The architect has restored and in some places inserted new windows and has re-roofed both the chancel and the nave; re-seated the nave all in oak, with pulpit and prayer-desk, and put stalls in the chancel, with new sanctuary rails. The east window, a three-light early decorated, is glazed with grisaille glass, with some colour, and also the side lights. A canopy tomb, containing a sculpture in marble, by Manning, is laid on the north side of the sanctuary. The work has been completely carried out, and all the stone work of the tower, with its beacon turret, carefully restored.

Gloucester. — At the meeting of the town council on Thursday in last week, Messrs. Medland and Maberly's plan for the new cemetery was selected as the most desirable out of about sixteen, and the council are advertising for tenders for certain portions of the work.

Lydney.—On the 20th inst. the consecration of Aylburton chapel and burial-ground, in the parish of Lydney, took place. The chapel, rebuilt on a new site, given by Mr. Charles Bathurst, of Lydney-park, has been completed at his sole expense. It is dedicated to St. Mary, and consists of a nave, south aisle, and chancel, with tower at the west end.

Newcastle-under-Lyne.—The parish church has been closed for the purpose of effecting some improvements. One alteration, says the *Staffordshire Advertiser*, is the throwing open of the vestry to the body of the church, in order to give additional room for the children connected with the schools. In taking down the wall an old arch, in the Early English style, has been uncovered, and is in good preservation. It is supposed to have been one of the principal entrances to the church. The mode of lighting has been improved by a large coronal chandelier, suspended from the ceiling. Eight smaller lights are placed under the galleries.

Great Brington. — "The Rose Memorial" painted glass window has been completed by the artist, Mr. Geo. Hedgeland. It is composed in the Perpendicular style, to accord with the architecture of the building, and consists of five compartments with pierced tracery above; the three centre compartments being those in which the figures are painted. The wings are filled with a quarried ground, on which are inserted typical medallions, and the colour of the glass in the wings assimilates with that inserted in the piercings of the tracery above. The subject is "The Three Marys at the Sepulchre with the Angel after Our Lord's Resurrection." The devices in the quarried ground of the wing compartments are the emblems of the four Evangelists, the whole being surrounded by a crown border of fifteenth century.

Harrow.—Upwards of 4,000*l.* having been subscribed towards the completion of Harrow School Chapel, the works have been resumed, and it is hoped that in a year the two remaining portions of the design (including a memorial aisle to the Harrow men who fell in the Crimea) will be ready for use. From 800*l.* to 1,000*l.* will still be wanted, if the spire, projected by Mr. Scott, is to be a part of the work, and some minor details finished as they ought to be. The boys have opened a subscription for a new organ for their new chapel, and which already amounts to more than 200*l.* Two stained-glass windows of a costly description have been ordered for the chancel apse; one the produce of a collection in the chapel on founder's day last year, and the other the gift of a former Harrowian, now an undergraduate at Oxford. Others are expected to follow these, from subscriptions in the masters' houses and other sources.

Sedgefield.—The foundation-stone of a new chapel for the Wesleyan Methodists was laid in this village on Thursday in last week. Mr. Haswell, of North Shields, architect, was engaged to prepare plans and specifications for the new chapel.

Cockermouth.—The new cemetery here has just been completed: it occupies a piece of ground of about five acres, situated on the south side of the town, upon the side of the old road to Keswick. The grounds have been laid out by Mr. Charles Eaglesfield, of Maryport, architect, who supplied the plans, &c. for the chapels and lodge. The chapels are placed so that the divisional gravel-walk, which separates the consecrated from the unconsecrated ground, goes through betwixt the two chapels by an open archway surmounted by a tower and spire, adjoining which is a vestry and waiting-room for each chapel. The chapels are each lighted by three lancet windows on each side, and at the end of each there is a three-light lancet window, with a small circular light above. The roof, which is open timbered, as well as the other fittings, is stained and varnished. The walls are built of blue limestone, with white freestone dressings.——A new Roman Catholic Church has just been finished here, consisting of nave and vestry, provision being made to add a circular apse at some future time should they require additional room. The building is Gothic in character, and lighted by five cusp-headed two-light windows on each side. The south-west end has a triple-tracery window, and is surmounted by a bell-turret and cross. The roof is open, of stained deal, having curved ribs and hammer beams. The architect was Mr. Thomas Gibson, of Newcastle. The works were executed under the superintendence of Mr. Jonathan Cape, of this town, builder.

Sutton (*Suffolk*).—A school, capable of accommodating 120 children, with master's residence attached, has just been erected in this parish. The buildings are designed in the style of the old brick houses so frequently found in Norfolk and Suffolk, a picturesque effect being obtained by the introduction of moulded and black brick-work. The total outlay will be between 500*l.* and 600*l.* The works have been executed by Mr. Canham, bricklayer, and Mr. Whitehead, carpenter, both tradesmen residing in the village. The architects are Messrs. Morgan and Phipson, from whose designs the parish church is also about to be nearly rebuilt, and a new parsonage erected.

SCULPTURE FOR CEMETERIES.

Now that new cemeteries are being formed in every direction, would it not be well to consider how, independently of the plan upon which they are laid out and planted, they might be made ornamental by the introduction of gravestones of a more tasteful design than the hideous white slabs which at present seem indigenous to our churchyards? I have lately seen a pretty little cemetery, opened only two or three years ago, which is already disfigured by the stonemasons' work. You have, through the *Builder*, brought about very many improvements, and you can, through the same medium, draw attention to this subject. I would venture to suggest that a sum of money be offered for competition for the best series of designs, to be afterwards given to the public, for monuments and gravestones suitable for the middle and lower classes, for those persons who cannot afford to pay for novelty of design. Should this meet with your approbation, I am sure many would contribute towards such a prize, and many would try to gain it; and competent judges would, I think, be willing to undertake the task of deciding on the merits of the different competitors.

Being quite ignorant of the arrangements which would be previously necessary, and of the amount which ought to be offered for competition, I apply for advice on this subject. I would gladly undertake all that I, in my humble situation, could do towards raising a subscription for such an object.

A Member of a Mechanics' Institute.

THE HALF-HOLIDAY QUESTION.

In perusing the pages of your valuable publication of the 8th instant, headed "The Half-holiday for Workmen," and bearing the signature of "A Master in the Building Trade," and being connected with the movement as a committee of building operatives in Manchester and Salford, we beg the privilege of a reply. In doing so, we cannot but express our surprise that the master builder should proceed so prematurely to pronounce judgment before making himself conversant with the movement. The master-builder writes, that whilst the workmen do not intend to obtain it at their own expense, masters are unable to give it, and he is certain the public will not pay for it. We are of an opinion that the public will more readily accede to the workmen's request than in any other measure previously laid before it. Who but the public have so nobly contributed to the establishment of those useful and important Mechanics' Institutions, which are an infinite honour to our country, and show to the world that the claims of the operative are not disregarded by the higher classes of society? But what use are these institutions, however valuable, if the workmen have not an opportunity to use them for intellectual improvement?

Again, the master-builder wishes to know whether it is reasonable to suppose that if one of his workmen is called on to work on a Friday and Saturday for one of his customers, after working four days elsewhere, he will pay him two full days' wages? Our answer must be, No.

For his information we beg to state, that the principle laid down for the boon is, that a trifling advance be charged for the five days, so as to cover the cessation from work the three hours on the Saturday afternoon, and the time worked on Saturday morning be charged in proportion to time already worked on the five days; and, if disposed, the masters may so arrange their future contracts as to meet the desire of the operatives without difficulty or loss: and surely we may flatter ourselves on success, when we consider how generously the public have provided for the workmen's instruction in our free libraries and other institutions. Will the public not extend its philanthropy further, and thus place within our limits that which will prove a lasting benefit, not only to us, but to the working population of the country at large?

Hoping our request will be acceded to with perfect good feeling, is the wish of

THE COMMITTEE OF THE BUILDING TRADES OF MANCHESTER AND SALFORD.

CONFERENCE AS TO LONDON DRAINAGE SCHEME.

A deputation from the Metropolitan Board of Management met Sir Benjamin Hall, at the office of the Board of Works, Whitehall-place, on the 20th inst. when Mr. Thwaites reviewed the reasons of the Metropolitan Board for adopting the plan B, which the First Commissioner of Works had rejected, but expressed the desire of the Board to discuss the subject with him in a friendly spirit, a sentiment with which Sir Benjamin expressed his cordial concurrence. Mr. Thwaites asked him what plan would be satisfactory to the Government as to the point of discharge, and Sir Benjamin read a letter from Captain Burstall, R.N. whom he had consulted on the subject, and by whose decision he appeared inclined to abide.

Captain Burstall, in his communication, submitted "that the nearest point to London at which the outfall should be made so as at all times to be certain that the fullest proportion discharged at one-and-a-half hour before high water, would not flow in or near the inhabited part of the metropolis, is in the upper part of Erith Reach, fifteen miles from London-bridge, 7-8ths of a mile from Erith Church, and a quarter of a mile below Jermington Point, nearly opposite Rainham Creek. From this, as a point of outfall, commencing at one-and-a-half hour before the time of high water there, the upper portion of the sewage," he continued, "would (at springs) be opposite Barking Creek, and at neaps off Woolwich, in the lower part of the Barking Reach, near the metropolitan boundary. It cannot, therefore, be said that, even from this position, the sewage would be perfectly clear from the eastern limit of the metropolis area at spring tides, but it is certainly far enough from any inhabited district to guarantee that, with those inflows caused by the north and north-west winds, the river would not be polluted in the vicinity of Woolwich. The additional length of drain necessary to be constructed by this outfall is exactly one mile, and the additional portion of river above it thus freed from sewage, would be 7-8ths of a mile. For similar reasons as those above stated, I would beg to suggest that the outfall at the north should be at Rainham Creek, which would be an extension of 5-8ths of a mile beyond that proposed."

The letter concluded by pointing out some alleged discrepancies of proportion in the reservoirs on Mr. Bazalgette's plans, and on which some discussion took place between the latter gentleman and Captain Burstall. Mr. Carpmael then asked whether the deputation were to understand that the plan indicated in Captain Burstall's letter as to the points of outfall was satisfactory to the First Commissioner: to which Sir B. Hall replied, "Yes. What I mean to convey to the deputation is this,—that I have consulted Captain Burstall as to the nearest point of outfall that would meet the requirements of the Act, and Captain Burstall has stated that the two points set forth in his letter are the nearest points that would meet these requirements. I don't think I should be justified in asking you to go beyond these points. I should then be asking you to expend money for purposes other than was considered by the Legislature necessary for the metropolis. Therefore, I shall be perfectly satisfied as regards the outfalls if those set out by Captain Burstall be adopted. Of course, the capacity of the reservoirs must be accurately determined, because the fixing upon the point of outfall will be of no value unless the reservoirs are of such capacity as to allow the outfall within a certain space of time."

Subject to the general revision of their own engineer, "so far as they are concerned," therefore, the Metropolitan Board were given to understand that they were required to agree upon a plan fixing the point of discharge north and south, as indicated by Captain Burstall, no explanation as to which, Sir Benjamin intimated, could be allowed to alter its spirit and meaning, although the Metropolitan Board were free to go farther down the river if they chose.

Thus far, then, the matter is arranged, if we can properly say so, although we can scarcely consider the question as finally settled, even yet.

THE TRISECTRIX AND THE CUBITRIX.

In your number for November 15, there is a paper under this heading, signed "J. P. W." which, on examination, I find professes to solve the ancient problem of the trisection of an arc; for it is stated, that "the point N trisects the arc A E." I beg, however, to be allowed to point out two fundamental errors in the formulæ, which will, I think, completely nullify the solution. The equation (1.) may be put thus:—

$$\sin.\tfrac{1}{3}\theta = \tfrac{1}{8}\sin.\theta + \sqrt{\left\{(\sqrt{1-\tfrac{1}{4}\sin.^2\theta} - \cos.\theta)^2 + \tfrac{1}{3}\sin.^2\theta\right\}}$$

Now, if this equation is always true, it is so when $\theta = 180°$, or $\sin.\theta = 0, \cos.\theta = -1$, $\sin.\tfrac{1}{3}\theta = \sin. 60° = \frac{\sqrt{3}}{2}$. Putting these values in the equation, we have—

$$\frac{\sqrt{3}}{2} = \frac{2}{3}, \text{ or, } 27 = 16,$$

which is palpably false.

Secondly, the equation (3.) is obtained by differentiating (1.). If we take the case of $\theta = 0$, or, $\cos.\theta = 1$, $\sin.\theta = 0$, $\cos.\tfrac{1}{3}\theta = 1$; the equation (3.) becomes—

$$1 = \tfrac{1}{3},$$

another palpable error.

The "differential calculus" is a very keen weapon, which "J. P. W." has handled carelessly, and thereby cut his own figures; for he attempts to prove the truth of a simple trigonometrical formula by differentiating it!

E. W. T.

ELECTRO-TELEGRAPHIC PROGRESS.

The Atlantic telegraph is now assuming a very decided shape, so far as preliminaries to the actual spinning of the wire is concerned. "The Atlantic Telegraph Company (limited)" is already initiated at 117, Bishopsgate-street Within, and they have ordered the wire, and propose to lay it down next summer. The capital (350,000*l.*) is being collected in 1,000 shares, payable by instalments. The projectors are Mr. Brett, Mr. Field, Dr. Whitehouse, the electrician, and Mr. Bright, of the Magnetic Telegraph Company. A prospectus with other documents has been printed and privately circulated, further publicity being considered unnecessary. It is estimated that the net receipts will annually amount to 40 per cent. of the capital subscribed. Mr. Morse calculates that 14,400 words may be daily transmitted, or about 480 messages, and that arrangements may be made for doubling the number. The London messages sent between 10 a.m. and 3 p.m. will reach New York of course at earlier periods of what may be called the same business day on which they are sent, so that a message despatched at 10 a.m. on a Saturday, for instance, may reach an office in New York *before* 10 a.m. on that day, or, figuratively speaking, may be sent in "no time," and some little perhaps to spare over and above. The Americans will not be able to return the compliment in precisely the same way, but will also have it in their power to accommodate their London correspondents otherwise. All doubt and difficulty as to the practicability of laying and working the telegraph have disappeared, it seems, so that men of skill and experience, such as Mr. Morse, in telegraphing, and Lieut. Maury in nautical surveys and sea affairs in general, are quite confident of success. Lieut. Maury has invented a method whereby the cable will be secured, even though a storm may oblige the ship from which it is payed out to cut and run. Our Government have offered to aid in the work, and to assure the company in 4 per cent. on their capital for Government messages. A Government vessel will assist the United States one in the laying of the cable.—— The electric telegraph having reached Constantinople, efforts are being made to extend it to Alexandria in Egypt, and thence (as already conceded) to the Red Sea, whence a submarine line will continue it *viâ* the Persian Gulf to India.——The London and North-Western Company have at length adopted one of those numerous suggestions which we have assisted in urging for the public safety,—namely, a special train telegraph, by which at every two miles intelligence is conveyed of "train on," or "train off," or of accident by the way.——Notice is given that application will be made to Parliament next session for Acts incorporating, respectively, the European and Indian Junction Telegraph Company and the Atlantic Telegraph Company. Supposing these projects to be carried out, they will constitute two of the greatest enterprises of modern times. The former is to compose the intermediate link in the chain of telegraphic communication between London and India; whilst the latter company, as we have before noted, proposes to join the wires of the American telegraphs with those of Europe. Thus the complete engirdlement of the globe by the electric wire may be said to be on the cards as a project fully resolved on; for although it is not yet proposed to connect India *eastward* with America, so as to positively complete the whole ring or circle, India will really and practically be connected with America without that further link in the chain, so soon as the two projects resolved on are realised.

PLASTER CAST-WORK.

In reply to "who is to blame for bad plaster cast-work," I think it will be generally allowed that as there is scarce a master plasterer left, of any note, the builder having monopolized the whole, it is but right that he should bear his full share of the blame. Those who do not execute their own plastering sublet it to any one who will do it the cheapest, and most likely the worst: that party, after being largely employed for a time, in the end calls his creditors together: such a case occurred very recently.

Respecting the present system of contracting much might be said. It is quite evident the work requires to be carried out under a much stricter inspection then it has hitherto been. It is to be hoped that the Office of Works will set the example in that respect. If architects were to make a reserve of the plaster ornament, so that the execution of it might be more under their own control, that would be one way of meeting the evil complained of, and we might have the work fit to be seen when done, instead of the reverse, which is now generally the case.

A Practical Man.

THE SOCIETY OF ARTS.

The first ordinary meeting of the 103rd session of this society was held on Wednesday, the 19th, at their house in John-street, Adelphi; Colonel W. H. Sykes, the chairman of the council, in the chair. The chairman in his opening address congratulated the members on the increased comfort and accommodation which had been placed at their disposal since the last session, but reminded them that the Society of Arts and its domicile for nearly a century, would soon be separated by the termination of their lease, which would expire in ten years. He hoped that the society's next home would be suitable to its position and development. The present state of the silver currency and the gold question, were then adverted to; and the chairman subsequently stated, that as an additional incentive to candidates for examination beyond the honourable certificates of competency which they might obtain, the council had thought it desirable to institute money prizes, and for the prize fund further subscriptions were invited. The late Mr. Wood, chairman of the Board of Inland Revenue, was considerate enough to place at the disposal of the council, as prizes, a couple of situations in his department. His unexpected decease had, however, deprived the council of these rewards for competent candidates; but the council still hoped that the heads of departments will not be wanting in the desire to aid in their laudable efforts to stimulate self-instruction in manhood. The paper read at the last meeting was by Dr. Forbes Royle, F.R.S. "On Indian Fibres," being a sequel to "Observations on Cordage, Clothing, and Paper Materials."

THE ARCHITECTURAL ASSOCIATION AND THE INSTITUTE.

PERMIT me to say a few words in reply to the letter you have inserted from Mr. E. C. Robins, especially as it appears side by side with your own brief notice of the late meeting of the Association, and its purport is to cast some doubt on the existence of that *entente cordiale* between it and the Institute which you bear testimony to.

That there is the element of youth in the Association is true enough: the remark was never more so than of the present Committee; but that there is not in this question "inexperience and precipitancy" is amply proved by the very long time the Committee have taken to consider the proposal of the Institute. Their excellent letter in reply to it is before your readers, who, I feel confident, will see in it an entire absence of every unworthy motive short of that to which the official documents of the Institute give expression.

I question, sir, whether Mr. Robins's brother associates of the Institute (many of them eminent architects) will feel flattered by his peculiar definition of the cause of their taciturnity at its meetings; but of one thing I feel sure, and that is, that the acts of the two societies will be dictated by what they respectively consider best calculated to further the general welfare of the profession, rather than by that *pitting* of one society against the other so much to be deprecated in all our personal discussions of the question, and that there is little likelihood of the associates engaging with our Association in the noble game of "Leap-frog" or "Follow-my-leader," to which they are all invited in that gentleman's somewhat angry communication. WILLIAM YOUNG.

*** It would seem to be unnecessary for us to insert any other letters on this subject. The Association has carefully weighed the proposal to join the Institute, and, having decided in the negative, there the matter must rest, at all events for the present. We cordially wish the Association, as originally founded, the greatest success, convinced that the energetic prosecution of the objects it has in view must tend to further the interests of the art and its professors. We should, nevertheless, regret if it ultimately resolved itself into a body of architects eligible as members of the Institute, but holding off as opposed to its constitution or management. This, however, we need not now discuss.

ADORNMENT OF OUR ROADS.

"AN unemployed C. E." shows us, in your impression of the 22nd inst. how many of our principal public roads have been curtailed of their former fair proportions; how the gardens that formerly ornamented these roads, with their lawns, and bushes, and sweet-smelling flowers, have been covered with long rows of ugly shops; and how these thoroughfares have been thus contracted, thus disfigured, and thus injured. The evil of covering these gardens with buildings might have been more tolerated if the buildings had possessed any architectural beauty; but they do not; and instead we have miles of the clumsiest-looking shops that can be seen. No doubt the utilitarian tendency of the age, together with the neglect and carelessness, or incompetency, of the great majority of our parochial authorities, has been the main cause of it: every foot of space has been economised and made use of as much as possible, no one in authority apparently caring how or in what manner. The result is sad. London, the largest, the wealthiest, the most important and influential city in the world, may almost be regarded as the most ugly. True, the character of the suburbs is greatly improved; many villas and mansions there are a credit to us, but the general body of the metropolis is deplorably deficient in architectural embellishment and wise sanitary arrangements, and, consequently, injurious to the health and education of the inhabitants.

The dense patches of old, crowded, tumbledown houses in various parts—the haunts of vice and the sources of disease in this great metropolis—should be swept away; the principal public roads, particularly those entering the metropolis, should not be suffered to be further injured in the manner they have been; and means should be taken to make these and other principal thoroughfares not only as perfect as possible as regards communication, but as agreeable as possible as places of promenade. Hence they should be embellished, have more trees, more statues and fountains. The public never begrudge money's worth.

It is now established, upon good authority, that dwelling-houses, even of the most ordinary kind, may be built in strict accordance with sound architectural principles and design, and with a little ornament added to them, at very little more expense than the present workhouse style costs; and I think that our architects, for the sake of their own high art, ought to make this clearly manifest to the public.

Let the members of the Institute of British Architects and the Architectural Association, instead of devoting so much of their attention, as they do, to details, direct some of their studies towards the achievement of the best style of common dwellings on a large scale.

It is beyond all doubt that very much remains to be done in this direction; and by such improvements as I have briefly named the public health and morality would be greatly improved, and our metropolis made more worthy of a great nation. L. W.

Notices of Books.

A Manual of Gothic Surface Ornament. J. H. and J. Parker, London and Oxford.

MESSRS. PARKER are publishing a series of Manuals of Gothic Ornament, and the little book now before us is the third of the series. No. 1 was devoted to stone carving, No. 2 to mouldings. The object of the present manual has never before been separately treated on, and deserves to be carried even further in a more expensive work hereafter. The Manual, at 1s. 6d. with its *thirty plates*, is a miracle of cheapness, and could not have been produced but for the stores of illustrations the publishers are able to fall back upon. As a sample of the letterpress, and a useful exhortation, we extract the passage on the surface ornament most used in the Decorated style:—

"It is in this style that we find the greatest variety of diaper-work. It is always used in profusion, and of very various design. Natural objects are imitated with great exactitude: the leaves of the oak, the vine, and other plants are used, and sometimes animals are introduced.

This was certainly the best period of mediæval sculpture. All employed in art had applied themselves to their great instructor—Nature; and their study in this school had given to their works a freshness and a freedom not to be found at any other period. The woods, the fields, and the garden were laid under contribution, and their capitals, their crockets, and finials, were made up of truthful copies of real leaves and fruit. The river and the sea were not forgotten, for water-plants, and even sea-weed, were used for the purposes of decoration. But their skill was not confined to the mere *copying* of natural forms, but lay more in the *adaptation* of them to the architectural purposes for which they were wanted. The member on which they are used never loses its character: a capital is a capital, though composed of leaves, each of which is a truthful copy of nature. This adaptation requires artistic skill,—something more than mere manual dexterity; but these qualities seem to have been combined in the workmen of the fourteenth century, and must be again before we can have any original works equal to theirs. But there is no reason why modern workmen should not be at least equal to the earlier ones: the same nature is before them; the same inexhaustible magazine of form to draw from: the same materials exist in as great profusion as ever; and modern science and art *ought* to give to the workmen greater facility of execution than was possessed by their predecessors. Mind alone is wanting; the strong enthusiasm for the works of nature; the deep feeling for the beauties of external objects; and, above all, a solemn reverence for the Hand which formed and fashioned all these wonderful objects,—this is still wanting. The soul directs the hand; and, though it may not always be able to give form and substance to the imaginings of the mind, still no great work will ever be accomplished, no original conception ever be carried out, unless the two be combined."

The British Almanac; and the Companion to the Almanac or Year-book of General Information for 1857. London: Knight and Co.

THE "Companion" for the present year includes papers, amongst others, on the state of the Decimal Coinage Question, by Professor de Morgan; the Postal System; Arbitration in Trade Disputes; the Material Progress of British India (an elaborate view), and a paper on Metropolitan Communications and Thames Bridges, chiefly as to Westminster, attributed to Mr. Edward Hall. The section on Architecture and Public Improvements occupies twenty-four pages, and is illustrated by engravings of the Congregational Church at Wicker, Sheffield; the Peers' Staircase in the House of Lords; some details of Rochester and Westminster Bridges; and a view of Tavistock-chambers in Southampton-street, Strand, where Mr. Charles Gray has shown his skill in the management of brickwork, and established for himself a distinctive reputation. The article is succinct and comprehensive. Touching the use of external colour and of compo, the writer says, in his introductory observations,—

"Questions appertaining to architecture are now commonly discussed. Although the value of external colour in materials, and of truth in structure, have been too much neglected; for the future state of taste, it would be as unfortunate that either or both should prevail to the exclusion of other equally important attributes of architectural art, as that the present state exhibited in ordinary town and suburban buildings should be accepted as satisfactory. It is quite erroneous to view the use of imitative cement, or 'compo,' as maintained by 'our architects:' compo is demanded by the public and given by the speculative builders for several, with them, very cogent reasons. It is always worth inquiring whether the prevalence of any course may not partly arise from some element of correct principle, and whether a particular opposite course—even were it for a time attractive by its freshness—might not itself be a mere exchange from one partial form of acceptance of the several required principles of good architecture to another. For the best art in architecture will prevail only when *all* the attributes of the art are understood and put forth. Some of these proper attributes may be consistent with the use of cement: others may be absolutely inconsistent with it as an imitative material: effect as to colour may be got by treatment of brickwork, but it does not follow that every building which is so far successful, has all the attributes referred to, some of which may be best expressed by stone, which, it should never be forgotten, is the material which affords the most scope for expression, as well as for the development of all the attributes in their due relation. Where external colour is designed, —as properly it is in many buildings—coloured *materials* indeed afford the best medium of its application. But the highest efforts in external colour do not approach the beauty of what has been called 'Nature's own polychromy,' expressed by weather tints on the stone,—an element in the effect of architecture which, presenting as it does that contrast to the regularity of lines which is required, is of the highest value. The uniform or shining surface of cement is unfavourable to such effect; but equally in attempts to substitute for the work of Nature any strong artificial colouring, some degree of disadvantage is attendant. The argument from the smoke-laden atmosphere of towns must indeed have weight. Still it must be understood that the grandest architectural results are resigned or lost whenever so much impurity as now exists in a London atmosphere prevails."

Mr. Knight must pardon us, if, without any desire to find fault, we complain that a glance through the book has shown us more errors, typographical and otherwise, than ought to exist. We will mention a few, in order that the next issue may be corrected. Thus, the Office of Works is called Office of *Parks* (p. 39), and Mr. *Inman* is said to be the Surveyor of Works there instead of Mr. Hunt (p. 40). Colonel Lloyd, called the British Minister at Bolivia (p. 54), died at Therapia, we believe, in 1854. There is no such body as "The Commissioners of Sewers for the Metropolis" (p. 77), the Metropolitan Board of Works (not mentioned) should take its place. The Office of Metropolitan Buildings no longer exists (p. 78); nor does the School of Design, at Marlborough House (p. 79): the Department of Science and Art should be named instead of the latter. Mr. Thomas Cubitt was not eighty-eight when he died, but in his sixty-eighth year (p. 219). Daines's process is called *Davies's* (p. 224); and for Mr. Cuning, Dr. Oldling, Mr. Poulson, Messrs. Habersham, Mr. Chitton, Mr. William Cubitt, &c. should be read Mr. Cuming, Dr. Odling, Mr. Poulton, Messrs. Habershon, Mr. Clutton, *Sir* William Cubitt, &c. The writers of the articles could not have seen proofs. These, after all, however, are but specks, and "Knight's Almanac" continues to be an indispensable adjunct to every writing-table.

ALUMINIUM CHEAP AS IRON.—In an interview we recently had, says a writer in the *Medical Times*, with one of the firm of Rousseau, who have obtained a patent for a process of obtaining aluminium from clay, this gentleman informed us that he had little doubt of being able to obtain the metal at as low a price as iron: thus, in a few years we may be carried across the ocean in ships of aluminium, and our bells and musical instruments, all our cooking utensils, and an immense number of articles of daily use and ornament, will in all probability be made of this light, beautiful, indestructible product of clay.

Miscellanea.

River Lee Improvements.—The trustees of this navigation have for several years past been expending large sums of money in enlarging, rebuilding, and deepening the locks, bridges, and waterway, and giving increased facilities on the tidal arms communicating with the Thames at Bow-creek and Limehouse. Amongst other improvements, a new pair of locks have been built at Old Ford, and embankments made so as to throw the river into one level from the tidal portion to Tottenham Mills, a distance of about five miles, where a new lock was built some years since by the trustees. It is therefore anticipated that great facilities will be given to the eastern suburbs of the metropolis in the carriage of bricks, lime, manure, ashes, stone, and other heavy materials, by the saving in transhipment and increased freights carried. The works, according to the *Herts Mercury*, were opened for traffic on the 15th instant, by the Marquis of Salisbury, chairman of the River Lee Trust. The new locks are placed side by side, so as to economise water by working alternately from each other: they are 18 feet 6 inches wide by 100 feet long, and 16 feet wide by 90 feet long respectively, and have 7 to 8 feet of water over the cills, being fitted with every convenience for the increasing trade of the district.

Tendering for Glass. — The complaint of "Vitreus" is well founded. Architects and builders, however, are not so much to blame as the glass manufacturers, who publish a tariff made up of anomalies and absurdities originating in fiscal regulations of former days: the time has arrived for a change, and by referring to your advertising columns, at all events one new tariff will be seen adopting a more simple nomenclature, also abolishing hieroglyphics and high nominal prices. Attention to the definition of the qualities given will prevent the ambiguity complained of. A great desideratum is an authoritative work for the use of architects, builders, &c. giving a short account of each description of glass, so that it might be seen what weights and sizes were incompatible with the manufacture, with instructions as to the correct definitions: also, the applicability of the various sorts of glass; in short, how to put "the right article in the right place."—James Hartley.

A New Calculating Machine.—We read in the *Moniteur*, that M. Thomas, of Colmar, has lately made the finishing improvements in the calculating machine called the "Arithmometer," at which he has been working for upwards of thirty years. Pascal and Leibnitz, in the seventeenth century, and Diderot, at a later period, endeavoured to construct a machine which might serve as a substitute for human intelligence in the combination of figures, but failed. M. Thomas's "Arithmometer" may be used without the least trouble or possibility of error, not only for addition, subtraction, multiplication, and division, but also for much more complex operations, such as the extraction of the square root, involution, the resolution of triangles, &c. A multiplication of eight figures by eight others is made in eighteen seconds; a division of sixteen figures by eight figures in twenty-four seconds; and in one minute and a quarter one can extract the square root of sixteen figures, and also prove the accuracy of the calculation. The working of this instrument is, however, most simple. To raise or lower a nut screw, to turn a winch a few times, and, by means of a button, to slide off a metal plate from left to right, or from right to left, is the whole secret.

The "Builder's" Smokeless Fire.—I was much pleased to see the subject of "smokeless fires" brought under the notice of your readers again at this seasonable time of the year. A gentleman told me that he had tried it, and the fire was not touched, but kept burning from 7 a.m. to 7 p.m. We have had fires burning eight hours in the same way. But there is one thing in your correspondent's letter which I think is wrong: it is the recommending a piece of sheet-iron for stopping up the bottom of the grate. What would be much better is a piece of fire lump for a bottom, as also the sides and back, on the principle of Leslie's patent. A high authority in such matters says,—"A grate surrounded by iron is an absurdity, as the metal conducts the heat away rapidly: it should be backed and lined with fire-bricks or Welsh lumps, which throw out the heat with great power. In an open fireplace, the active combustion is wanted in front, and there only should air enter the fire: in most grates the air enters below, causing the greatest heat to be thrown upon the ashes. It may be thought that closing up the bottom would produce the same effect as allowing it to be choked up with ashes in a common grate, deadening the fire. But this is not the case if the bottom is placed slanting outwards, and formed of fireclay: the ashes can be removed in front, and from all the draught being in front there is a bright fire at the place where it is required."

H. Childs.

Lectures at Aldershott.—It is interesting to hear that a series of lectures, open to the whole garrison, are in course of delivery at this camp, on the following useful and entertaining subjects:—Capt. Collinson, Commanding Engineer, four lectures on Mechanics; Mr. Grant, Inspector of Schools, four lectures on Natural Philosophy; Capt. Murray, R.E. four lectures on Construction of Barracks; Rev. J. W. Hayward, Chaplain, four lectures on Geology and Natural History; Mr. Stent, architect, four lectures on Architecture; Mr. Watling, two lectures on Natural History; Rev. J. E. Sabin, Chaplain, two lectures on "Old England 160 Years Ago;" the Chaplain-General, two lectures on "Eminent Men who have risen from the Ranks;" C. Lefroy, esq. one lecture on "How the Earth is made;" and the Rev. T. R. Maynard, Chaplain, one lecture on "What I saw in Spain."

Power of a Railway Company over a Street Frontage Line.—In the Vice-Chancellor's Court, on 20th inst. *in causa* The London and Blackwall Railway Company *v.* The Limehouse District Board of Works.—Mr. Rolt and Mr. Greene, on behalf of the plaintiffs, moved for an injunction to restrain the defendants from demolishing and in anywise obstructing the progress and completion of the plaintiffs' buildings, now in course of erection on the plaintiffs' land, for the purpose of a new station and railway over the Commercial-road, and from demolishing or in anywise obstructing the progress and completion of any other erections or buildings, whether temporary or permanent, erected or built, or to be erected or built, for the purposes of the railway or station at Stepney, upon the ground purchased by or belonging to the plaintiffs, so that such erections or building as were intended permanently to remain do not project beyond the front or inner line of piers of their bridge now crossing the Commercial-road. The Board of Works for the Limehouse district, which had been constituted under the Metropolis Local Management Act (18th and 19th of Victoria, chap. 120), which received the Royal assent on the 14th of August, 1855, objected, on the part of the general board, as well as on their own part, to the proposed station of the plaintiffs at Stepney, on the ground that it was being erected beyond the regular line of buildings in Commercial-road, and that the previous consent in writing of the Metropolitan Board of Works, as required by the provisions of the Metropolis Local Management Act, had not been obtained.—The Vice-Chancellor, without calling for a reply, said that he must grant the injunction. He thought it plain upon the construction of the statutes that, express powers having been vested in the company by their Act for special objects for the benefit of the public, no general powers in a subsequent Act would override them.

Russian Archæological Discovery. — The labour of removing a cairn 250 feet in height, carried on for nearly five years, near Alexandropol, in Ekatarinoslaw, has just been completed, with the discovery of numerous articles of gold, silver, bronze, and clay, as also of iron shafts and rods, nails, skeletons of horses, and ornaments of gold, the whole in excellent preservation. In comparing the well-known passage in *Herodotus*, respecting the burial-place of the Scythian kings, with the present discovery, it is clear that this is one of the catacombs mentioned by him; and sanguine hopes are entertained of further discoveries.

Railway Matters.—The works at the Dover end of the East Kent line have been commenced by the sinking of a shaft for a tunnel under the western heights, which will bring the terminus of the new line right into the middle of the town, and close on the harbour.——The railway traffic returns for the United Kingdom for the week ending November 15, amounted to 424,964*l.*; and for the corresponding period of last year to 401,832*l.*: showing an increase of 23,132*l.* The gross receipts for the eight railways having their termini in the metropolis amounted to 180,591*l.*; and last year to 175,374*l.*: showing an increase of 5,217*l.* The increase on the Eastern Counties amounted to 1,065*l.*; on the Great Western to 2,306*l.*; on the London and North-Western to 1,410*l.*; on the London and Blackwall to 150*l.*; on the London, Brighton, and South Coast to 909*l.*; on the London and South-Western to 1,015*l.*; and on the South-Eastern to 353*l.*: total, 7,209*l.* But from this must be deducted 1,990*l.* decrease on the Great Northern. The receipts on the other lines in the United Kingdom amounted to 244,373*l.*; and for the corresponding period of 1855, to 226,458*l.*: showing an increase of 17,915*l.*——Herapath is of opinion, that before many years elapse, there must be separate lines for goods and passengers. Such is the magnitude of the goods traffic on the London and North Western, that, in 1855, the receipts for goods very nearly equalled those for passengers, being 1,353,500*l.* for the former, and 1,489,600*l.* for the latter, and exceeded the whole united working expenses, passenger duty, and rates and taxes by 22,400*l.*

The Turner Monument in St. Paul's.—In the Vice-Chancellor's Court, on Friday in last week, before Sir Richard Kindersley, the trustees of the late Mr. Turner, the artist, applied by petition for the residue of a sum of 1,241*l.* after payment of costs, to enable them to carry out the deceased artist's wish to have a monument erected in St. Paul's Cathedral, where he desired to be buried, "among his brothers in art." It was likely that tenders for designs might be invited, and prizes awarded for the best; but all the petitioners asked was, the sanction of the Court to enable them to be unfettered in their discretion. The Vice-Chancellor said he wished to leave the trustees as unfettered as possible, both as to the design and the erection of the monument, but, before the money was paid out, it was right the Court should have some tangible evidence of what it was wanted for. He wished the matter, therefore, to stand over till the trustees could mature their scheme, and bring it before him. It thus appears that, at all events, there is no longer any fear, such as there has been, that there would be no residue to expend, as funeral expenses, if they may be so called, according to the deceased's wish.

Art Exhibition at Norwich.—The Exhibition of Works of Art at Norwich has been opened. In reference to the progress of local art, especially in the Norwich school, a local paper says:—The attempt which has now for the last few years been in progress, to create, through the assistance of the Schools of Design, a more practical knowledge of the principles of art, both with a view to their application to manufactures, and to an improvement and elevation of the general taste of the nation, has not at present been, perhaps, so efficacious in Norwich as might have been anticipated. But this has not originated so much from a want of taste, or of an appreciation of the beautiful in nature and in art, as from the total want of direction in its pursuit. The School of Design and the Fine Arts Association have, to a certain extent, been instrumental in tending "To create a soul out of the ribs of death," and again to bring art to bear upon the public mind with as much force as could be expected in the time, considering the state of almost complete inanition which had existed for so long a period. The School of Design, both in reference to the public pupils and among the sons and daughters of the middle classes, whose inclinations, or whose decided and created tastes have led them to take advantage of the tuition of such an instructor as Mr. Claude Nursey, has, without doubt, given a stimulus to artistic taste that, as years flow on, must create a vast change in the general tone of the public mind. The exhibition of art treasures, even if it does not attain unmixed good, is, nevertheless, to be encouraged, since, whatever it realizes, undoubtedly tends to elevate the human race, and in elevating, to advance its moral power. In the Exhibition, which this day opens its doors to the public, there is much that is calculated to attain this end. Nor is this its only attraction, for on its walls the works of native artists are not only more numerous, but indicate that a stimulus has been given to their labours highly creditable to their powers and their industry.

Dangerous Buildings.—At the Marlborough-street Police Court, a few days ago, the Marquis of Salisbury was summoned under the Buildings Act, for allowing a house belonging to him, in Cranbourn-passage, to be in a dangerous state. On the report of the surveyor, the police took out the summons, which was served on Messrs. Nicholson and Co. the admitted agents or professional advisers of the marquis. The chimney still remained. Mr. Beadon referred to the clause in the Buildings Act, and remarked that it was most curiously worded. The notice must be by registered letter, to the owner or his agent. Instructions were given for a fresh summons to be served, according to the exact form prescribed by the Buildings Act.

The Fire, South Metropolitan Schools.—In your description of the fire at the South Metropolitan Schools there are some inaccuracies, which perhaps you will permit me to notice, though they are unimportant, and fewer than in other reports of the disaster. The "water tower" (or rather a tower containing a stone staircase) was not injured in any portion but its roof, though it was in the midst of the hottest flame. The "workshops" were in no part burnt, and there was no "drifting sleet" to add to the discomfort of the children. Respecting the importance of these buildings being fireproof there can be but one opinion, and I have hopes that the Board under which I act will now allow me to separate the building into divisions by stout walls and iron doors, the only impediment to this having been a most untoward lack of funds, altogether precluding the possibility of adopting anything like complete fireproof construction, the attempt to do which would have been tantamount to the abandonment of the scheme of establishing the schools.

Edwin Nash, Architect of the Building.

Chester School of Art.—The honorary secretary of this school, Mr. A. Rigg, announces the following as the result of the public examination in Drawing, held at the School, in September last:—About 750 were examined, and the awards received on 22nd October, were three medals, seventy-five prizes to those examined in the first or lowest grade, twenty to those examined in the second grade. In reference to the subject of drawing as a branch of general education, the writer says, "I trust the day is not far distant when none will be ignorant of what is so essential to every artisan. On the continent this, and modelling, as well as science, are really studied. Many positions in our large engineering and similar establishments are closed to English boys, because they have not attended to drawing. In the course of the summer I was in personal communication with the actual managing heads of three large engineering works, in three different counties, each employing one thousand men: in each case the managing head of the whole was chief of the drawing office, and in each case he was a foreigner. Surely parents will so arrange for their children, that the next generation may not have to look abroad to find persons qualified in science and drawing, to conduct some of the most important concerns in the kingdom."

"Big Ben."—We have received a letter from Mr. E. T. Loseby, urging that as the bell for the clock-tower at Westminster is for the clock, and will be struck, according to Parliamentary returns, by a hammer of 120 lbs. falling 6 inches, it is with such a hammer falling that distance it should be tried. He urges further, "that if the quality of the tone proves satisfactory, the referees should proceed to note its volume by stationing themselves at different distances from the tower in and about the neighbourhood of London, in order to compare the quantity of sound produced by this and other known bells; due allowance being made for the difference of size, the direction of the wind, and the state of the atmosphere, &c." The weight of the bell, misprinted in our notice, is 16 tons, 18 cwt. 1 qr. and 22 lbs.

The Worcester School of Art.—The annual meeting of this institution was to be held on Friday last, at the Music Hall, Worcester. The drawings of the pupils have been exhibited at the school, and a large number of visitors have inspected them. The exhibition contained a greater amount of advanced works, and the studies have been rendered more useful by their application to articles of manufacture. The number of pupils in the school is still on the increase, the average monthly attendance during the past year having exceeded that of the preceding by sixteen. The female classes also are on the increase, and the attendance is good.

Fatal Accident.—At Weymouth, on Tuesday in last week, two workmen engaged on the railway works ascended a scaffold erected for the purpose of laying the iron roofing on the goods shed, a height of 40 feet. The scaffold was kept up by a pole, sustained at each end by the iron girders, and spanning 30 feet. The men had resumed their labours but a short time, when the pole snapped asunder, and the whole of the scaffolding fell into the area below, together with the two unfortunate workmen. One of them, named Davis, was killed on the spot. The other, a foreman of the iron works, named Waterhouse, was taken up in an insensible and almost lifeless state, no hopes being entertained of his recovery.

Lighten our Darkness.—Notwithstanding all the letters and remonstrances that have appeared in the *Thunderer* and elsewhere, relative to the maltreatment of her Majesty's loving subjects on her Majesty's highway, Policeman X has not thought it proper to increase in vigilance sufficient to prevent these outrageous attacks on person or property, which, to the alarm of all peaceably-disposed citizens, continue to grace the police reports day by day. As punishment of the aggressor proves a very inefficient strapping-plaster for a broken head, or salve for rifled pockets, the following suggestion, emanating from my good woman and her darlings, may not fall unheeded on the hitherto torpid senses of the authorities. Mrs. Grundy and the pets (who nightly undergo a martyrdom of anxiety till my knock is heard at the door), with true feminine ingenuity, have struck out this remedy, which they, with native modesty, maintain cannot but prove an *infallible* preventive for the evil. "Let the gas-lamps be multiplied," say they, "all the dark corners made plain, the roads improved, and the pavements be laid down where needed; and *then* let us see who'll attempt to garotte, or who'll consent to be garotted!" Sir, the remedy suggested seems to me at once so simple, but practical, that I doubt not, by your kind indulgence, it will effect, if put in practice, the desired object, and so henceforth render unnecessary the harrowing fear and alarm now felt by Mrs. Grundy and the pets (bless them!) for the daily safety of their much-lover'—Paterfamilias.

Recent Excavations at Pompeii.—The public baths recently discovered are situated near the Stabian Gate, where the work of excavation was commenced in 1854, and where many objects of great interest have been discovered. A correspondent of the *Athenæum*, in a lively communication, gives the following account of them:—"I may say of these baths that they are the most important excavations that have been made for many years. In plan, they resemble the baths so well known, differing from them in certain decorations of stucco. The subjects of my description are much more magnificent, whilst the others are in a higher state of preservation. We enter from the street into a grand cortile, surrounded on two sides by a peristyle. This was the '*Spheristerium*,' where those who came to bathe played at *palli*. Two or three, both *spheri* and *palli*, were found within the portico, as, also, a stone, with this inscription, '*Pilicrepi Plaudite.*' The first chamber we shall enter is the '*Spogliatorium*,' where the bathers undressed. The vault of this room is adorned with painted, wavy decorations, which, for want of a better term, we should call Pompeian. On the left is the '*refrigidarium*,' a cold bath, round in form, and having niches all round for people to sit in, whilst another larger niche remains to show where the water came in at a gush. This bath is richly painted in fresco, with flowers; and in one of the compartments is the figure of a woman, nude, reclining on her side, with her back towards the spectator. Her hair has fallen back over her shoulders. The '*tepidarium*,' which follows after the cold bath, is oblong in shape. The roof and sides are ornamented with circular and octagonal figures, in the centre of which are various devices,—animals, a Pistrice, a lion, winged figures, dolphins,—in short, everything that the most capricious imagination could suggest. All round this chamber there are niches, which were used for holding the perfume vases. After the '*tepidarium*,' we meet with the '*ippocaust*,' or the '*caldarium*.' In shape it resembles the '*tepidarium*,' whilst the ornaments are principally composed of armour, arms, and trophies, worked in stucco in *rilievo*. At one extremity is a marble bath: at the other was a fountain. This bath stands on many small pilasters, under which passed the flames of the fire; thus warming the pavement and heating the lateral walls and passing off above. On the other side of the peristyle are several rooms painted in fresco. These must have been for those who were waiting for a bath; and the painted figures represent females or nymphs, nude, and holding fountains or vases in front of them. Besides these figures, there are also landscapes painted round the rooms. Cav. Bonucci is of opinion that the parts of the buildings I have been describing formed the baths devoted to the women. Varro says that these public institutions were divided into two parts,—'*virilia*' and '*muliebria*;' and there can be little doubt but that the portion recently excavated formed the '*muliebria*.' The '*virilia*' are now in the course of being brought to light. Fifteen men only are occupied in removing the mountain of scoriæ and dust which covers this remaining portion; and much interest exists among antiquaries to know the results of the operations. Amongst other objects found in these '*Bagni*' were some silver and bronze coins, which of course have been sent to the Museum. They were lying near a skeleton, perhaps of the Custode, for it was near the door. This public edifice is situated in the street which leads from the Forum to the Porta Stabiana, and is nearly opposite the beautiful shop richly decorated with marbles of various colours and designs, and in which were found many imperial coins."

Clitheroe Waterworks.—These works have recently been completed at a cost rather more than 10 per cent. under the Parliamentary estimate; which estimate included that per centage for contingencies. The mains are now charged with water, and the inhabitants are being supplied as rapidly as the company are able to put branch pipes into the houses, of which about 950 have already been fixed. Fire-plugs have been provided by the corporation. The recent supply was principally from wells, and unusually hard; the principal town well (one of the softest) being 23 degrees of hardness, and the others varying as high as 34 degrees, while the new supply is only four degrees, reducible by boiling to $2\frac{1}{2}$ degrees. The new supply is also said to be comparatively free from organic and solid matters. The water is procured from springs, that rise on the fells, $3\frac{1}{4}$ to $4\frac{1}{2}$ miles north of Clitheroe. The formation is of millstone grit, and from 560 to 1,300 feet above the mean level of the sea. The minimum yield of the sources in the most droughty seasons is over 300,000 gallons per diem, for the immediate supply of which amount the works have been constructed. The conduits and pipes, however, have been laid down of sizes to admit of their conveying a much larger quantity, which, without further powers being required can be supplied at a nominal expense. Although the population of Clitheroe in 1851 was only 7,244, in 1854 provision had to be made for 10,000 persons, at 30 gallons per head per diem. The supply is collected by means of earthenware conduits, and conveyed to a reservoir, about two miles north of the borough, at an elevation of 75 feet above the highest level of the district, and of 250 feet above the lowest. The main from the reservoir to the town, consists of 9-inch cast-iron pipes. The conduits and iron mains extend to a length of twelve miles. The cost of the works, inclusive of all extras, coating pipes, &c. but exclusive of land, Parliamentary, legal, and engineering expenses, is 13s. per head, and inclusive of all expenses, 1*l.* per head. The works were designed and carried out by Mr. Mc Landsborough, of Bradford, C.E.; Mr. J. Barker acting as clerk of the works (since appointed manager), and Mr. Booth, as inspector. The earthenware pipes were supplied by Messrs. Hayes, Brough, and Co. of Liverpool; the iron pipes by Mr. Clark, of Clitheroe; the fire-plugs, &c. by Messrs. Guest and Chrimes, of Rotherham; and the formation of reservoir, conduits, pipe-laying, &c. were executed by Mr. J. Metcalf, of Bradford.

Mr. Morewood and the Intercepting Drainage Plans.—Mr. J. L. Morewood, who has long been urging his plan for the main intercepting drainage of the metropolis, is again moving in this matter, having recently had printed and circulated a correspondence with Sir Benjamin Hall on the subject, in which, on the one hand, Mr. Morewood reminds Sir Benjamin of various favourable notices and opinions which he had taken of the writer and his plans; and claims the principle adopted by the Metropolitan Board, while also pointing out their deviations and complications based on that principle, and the additional expense to be thereby uselessly incurred; Sir Benjamin, on the other hand, denying that he had ever given any opinion in favour of Mr. Morewood's plan, although he had expressed himself in favour of a scheme for preventing the sewage from flowing into the Thames within or near the Metropolis.

Buildings in London.—A large block of chambers and offices, situate at the junction of Dowgate-hill and Turnwheel-lane, Cannon-street, has just been completed for Mr. J. W. Rimington. The building is four stories in height, exclusive of lofty cellarage and warehouse room in the basement, the whole of which is fireproof. The rooms on each floor are arranged either for letting in sets or singly. The whole are ventilated by means of air-flues in the chimney-shafts. Water and washing closets are fitted up on every floor. Fireproof strong-closets are provided for each set of rooms and in several of the single ones. The ground-floor windows are fitted with Bunnett and Corpe's patent revolving shutters. The contract price for the building and fittings was 8,382*l.* subsequently increased, by repairs to adjoining properties, and alterations occasioned thereby, to about 8,600*l.* Mr. R. W. Wright was the architect. The contractors were Messrs. John and Charles I'Anson; and Mr. William Backhouse was the clerk of works.

An Artesian Well at Norwich.—The first artesian well, it is believed, ever bored in this city, has been completed at the brewery of Messrs. Morgan, King-street. Mr. Thomas Clarke, the artesian well engineer to Her Majesty's dockyards, contracted for the works, and personally superintended them. For 38 feet below the surface a 6-feet cast-iron cylinder was sunk: at about 30 feet from the surface, and, of course, projecting 8 feet into the cylinder, a shaft or cast-iron pipe, 12 inches in diameter, commences its descent. For 12 feet the borings were found to be through loose flints, decidedly impregnated with sewerage deposits: to this, for about 16 feet, succeeded a kind of yellow marl, varying much in colour. The borings, after this, were through white chalk, with layers of flint at intervals of 3 feet, and this continued (the flint layers becoming harder, and the chalk more and more pure) until, at the depth of 200 feet from the surface, a copious supply of water was obtained. The borings were continued 38 feet further, to ensure perfect freedom from the slightest impurity or turbidity. When the bore pipe was removed, the water flowed into the cylinder at the rate of 500 gallons per minute. The water fills 8 feet of the cylinder, at the bottom of which is a 4-feet layer of concrete and cement, and from this, by means of force-pumps and other machinery, the supply is derived. After the steam-engines had pumped for twelve hours, the quantity of water was not reduced in the cylinder more than 4 inches. The flow of water is about 150 gallons per minute. The water, according to the *Norfolk Chronicle*, has been found, on analysis, to be of the very purest character, and admirably adapted for brewing purposes. The expense of the well is said to be comparatively trifling, not more than what many firms would pay in a few years for the former cost of water. Mr. Clarke, the engineer, is about being engaged in the construction of other works of similar character in Norwich.

WANTED: A NATIONAL GALLERY.—Allow me to offer a few remarks upon our *future* National Gallery. Common-sense says the present site is the only one suitable: "the public" echo this opinion; therefore I will not occupy your space upon this point, but will suggest to the President and members of the Royal Academy, that they, as a body representing the "arts" in this country, should ask the Government boldly to remove the soldiers and the workhouse, and purchase the block of houses running as far as Hemmings-row. This would afford ample space for a grand pile of buildings, worthy of our great and free nation. The building should form a quadrangle: it would be large enough for the gallery of old masters, modern masters, Royal Academy, and for the exhibition of some of our fine drawings and etchings, and for the print-room; thus bringing under one roof all our art-treasures, which now lie scattered, and difficult of access, as far as our splendid collection of prints and drawings by the great old masters are concerned. The entrance to the different galleries should be from the court-yard, which would enable the carriages to be removed from the front of the Royal Academy, and thus prevent the confusion which is now caused in Trafalgar-square during the "season." We want a "National Gallery," and why not put it on the "nation's best spot," and erect a building worthy of the greatest nation in the world? And what country can boast of so many great artists?

R. C.

"FEE CASE:" RAISING ADDITIONAL STORIES IN METROPOLIS.—Your correspondent, "W. P. G." does not correctly state the decision in this matter. The defendant, on applying for his expenses (and he appeared by counsel), was refused them by Mr. Corrie, who said it was a very proper case to bring before him. I am inclined to think the matter was viewed by him rather that it would prove a hardship on the builder, than that the fees were not legally due upon each of the three houses. All three houses being more or less affected by the works, it was not attempted to be proved that such works were only "in, to, or upon the same building." The builder, in the first instance, made an insufficient tender of *1l.* 1s. on the centre house. The notice given by builder met none of the requirements of the Act.

A DISTRICT SURVEYOR.

EXPOSURE OF GOODS.—POLICE ACT.—Our actual footways and roadways are being encroached upon to an alarming extent, particularly in the parish of Clerkenwell, which is becoming a Rag Fair;—bales of cotton and flannels 7 or 8 feet high on footways; old furniture, sofas, and arm-chairs in the roadways, which also display an attractive assortment of crockery. While so much cavil is made at any one building on or occupying his own ground or area, surely the very objectionable feature of actual obstruction on our footways and roadways themselves is one that should be promptly met, by proceeding, not under "Metropolis Local Management," but under the "Police Act." SISTE, VIATOR!

TENDERS

For the erection of a Calvinistic Chapel, Llandudno. Messrs. Wehnert and Ash own, architects.

Owen Thomas, Llandudno...	£1,870	0	0
Pritchard, ditto	1,793	0	0

For alterations to granary, Shad Thames. Mr. W. A. Boulnois, architect.

Myers	£1,723	0	0
T'Anson	1,684	0	0
Macey	1,590	0	0

TO CORRESPONDENTS.

Removal of External Colouring.—Are there any means of removing colouring from other wall, where the colour has been used by soap or some other ingredient? It will not yield to scrubbing with a hard brush, and possibly there may be some chemical agent which would operate in effecting the removal. The stone below is red sandstone, which has been faced.—R. G. B.

Construction of Baths.—A friend of mine is going to erect a bath, of about 21 feet square, to be heated from the underside. It must be water-right, capable of sustaining a heat of 400 or 500 degrees: it is proposed to have the floor of tiles. Could any of your correspondents inform me of the best mode of constructing it, as if supported upon brick-work and contraction would render it difficult to stanch? Also, is there any cement (for stanching the joints) capable of resisting the effects of heat? H.

"J. H."—"Artist."—"J. P." Leeds (we are forced to decline, uniformly).—"J. S."—"E. F."—"A Builder" (the district surveyor is entitled to a fee. The exemption applies only to "necessary repairs" not affecting the construction of external or party walls. In all cases do as we have already stated by the Committee of the House who framed the Act, repair surfaces only.—plastering, joiners' work, &c.)—"E. P. S."—"W. P. G."—"W. G."—"N. W. L."—"Bonhamite Inquirer."—"H. and B."—"Mr. R" (will appear).—"W. G. R."—"C. V."—"J. K."—"R. W. W."—"O. P."—"Alpha."—"H. B."—"W. G. B."—"W. G. R."—"G. T. W."—"H. D."—"An Articled."

ADVERTISEMENTS.

TO PARENTS AND GUARDIANS.

ARTICLED PUPIL WANTED.—A Land Surveyor, carrying on an extensive practice in a large and increasing town in the south of England, having the management of several very extensive buildings and other estates, and also several lucrative house and other agencies, is desirous of obtaining an OUT-DOOR ARTICLED PUPIL. From the extensive business transacted in the office, a pupil would possess superior advantages to obtain a thorough knowledge of his profession.—For particulars, apply by letter only, to A. B. 22, High-street, Southampton.

MARBLE WORKERS.

WANTED, a steady, energetic MAN, well acquainted with sanding and polishing marble work for making chimney-pieces.—Apply, by letter, to T. C. Office of "The Builder."

WANTED, a YOUTH, from 17 to 19 years of age: one who has been accustomed to a Builder's Office. He must be able to square dimensions, and roughly trace drawings.—Apply, stating where last employed, and salary required, to W. P. care of Mr. Hatchetts, Stationer, Moorgate-street, City.

FOREMAN OF CEMENT WORKS.

WANTED, a Person fully qualified to act as FOREMAN of CEMENT WORKS. He must be thoroughly acquainted with the manufacture of Portland cement. One who has held a similar situation would be preferred. None need apply whose character will not bear the strictest investigation. Applications, with testimonials or references, to be addressed to A. B. Office of "The Builder."

WANTED, by a steady, competent Young Man, of good character, a SITUATION as ENGINE-DRIVER. Can be highly recommended. No objection to the country.—Address, S. W. B. 5, Ivy-place, High-street, Hoxton.

TO ARCHITECTS, &c.

WANTED, by the Advertiser, an ENGAGEMENT, as ASSISTANT. He has been in the profession two years, is a neat draughtsman, and is conversant with the usual routine of an architect's office.—Address, M. X. Inn, Caunterbury-street, Hackney-road.

WANTED, a SITUATION, as BUILDER'S CLERK, by a person of several years' experience in measuring, taking out the bills, and estimating. No objection to the country.—Address, C. C. No. 6, Hall-street, New North-road, London.

TO ARCHITECTS AND ENGINEERING SURVEYORS.

WANTED, by a Young Man, a RE-ENGAGEMENT in an Office of the above, as JUNIOR ASSISTANT, at a moderate salary. References satisfactory. Address, A. B. 500, Rosoll-street.

TO HOUSE DECORATORS, PAINTERS, &c.

WANTED, a SITUATION, by a Person who has been accustomed to keep the Books and make Estimates, &c. Sketching, &c. And also to the Decorative and Graining Writing, Furniture Painting, &c. Has been 6 years with the above employer, to whom he would wish to refer them, with other reference, if required. Country preferred.—Address, S. N. Post-office, Wandsworth.

WANTED, a SITUATION, by a Person of high moral character and general practical knowledge in the building trades, having been engaged the last ten years as manager in an art-builder's and carpet surveyor's office, preparing finished and working drawings and specifications, estimates, &c.; having had considerable practice in farm buildings, &c. would prefer a situation on an estate, or to assist in an agent's office, where he may make himself generally useful. Can give the most satisfactory references.—Address, Y. Z. care of Geo. Drayton, Stationer, Snow-hatch, Shrewsbury.

TO BUILDERS.

WANTED, a SITUATION as SHOP FOREMAN of CARPENTERS, in town or country. Good testimonials.—Address, prepaid, H. B. 75, Tooley-street, Borough.

TO SAW-MILL OWNERS, BUILDERS, AND OTHERS.

WANTED, by a Young Man, a SITUATION as SAW-SHARPENER, CIRCULAR BENCHMAN, or FRAME WORKER, or will take the management of a steam-engine. Can have good references from his late employer. No objection to the country.—Address, L. L. Office of "The Builder."

TO BUILDERS AND OTHERS.

WANTED, by a thoroughly practical and energetic man, aged 31, a SITUATION as SHOP or GENERAL FOREMAN. First-rate references and a most years' character can be given.—Address, A. B 8, Waterloo-terrace, Upper-street, Islington.

WANTED, by the Advertiser, a SITUATION in the HOT-WATER WORK. Used to gas-fitting. No objection to town or country.—Address, X. Y. Z. 22, Nesfield-street, Clerkenwell, London

TO BUILDERS, CONTRACTORS, &c.

WANTED, by a Practical Man, a SITUATION as FOREMAN of BRICKLAYERS, or INSPECTOR of any PUBLIC WORKS. Can have as to ten years' testimonials from one of the largest public bodies as to the duties of the day, where he acted as foreman.—Address, T. G. 1, Myatt-street, Camberwell New-road.

THE Advertiser seeks a SITUATION as CLERK to a BUILDER, CONTRACTOR, or ARCHITECT. He is a good draughtsman and accountant, experienced in the usual duties, and can superintend work.—Address, A. D. R. 33, Bryanstone-street, Strand

BUILDER'S CLERK.—A highly respectable, middle-aged Gentleman, accustomed to the routine of a builder's office, an efficient penman and accountant, wishes for an ENGAGEMENT as above, or in any other capacity where the above qualifications, added to steadiness and integrity, are deemed desirable. The most satisfactory references can be given.—Address, S. T. V. Office of "The Builder."

TO CONTRACTORS.

A GENTLEMAN, who has had the management of extensive railway works, waterworks, and other works, as CONTRACTOR'S AGENT, is desirous of a similar ENGAGEMENT, or as GENERAL SUPERINTENDENT of WORKS. He is thoroughly acquainted with all kinds of works, materials, labour, prices, &c. and can furnish most unexceptionable references and testimonials. Would probably not object to go abroad.—Address, Mr. B. Laburnum Villa, South Lambeth-road, London.

A MILLWRIGHT and ENGINEER, of considerable experience, is in WANT of a SITUATION, either as FOREMAN or as MILLWRIGHT, to keep the machinery or engines of any kind of mill in repair. Good reference can be given.—Address to A. B. 15, Vauxhall-walk Lambeth.

A YOUNG MAN, who has served four years to the PLUMBING, PAINTING and GLAZING, is desirous of obtaining a SITUATION as an IMPROVER, in the PLUMBING Way, as the object. Country not objected to.—Address, W. X. 93, Murray street, City-road.

TO CARPENTERS, BUILDERS, AND OTHERS.

A PERSON of thorough business and sober habits (aged 29) requires an ENGAGEMENT as CLERK or FOREMAN in a Builder's Establishment, or as manager of a small business, having a thorough practical knowledge of the business, and being a good draughtsman.—Address, R. R. DAVISON, 9, Sirewan place, King's road, Chelsea, London

TO BUILDERS AND RAILWAY COMPANIES.

AS GENERAL FOREMAN, FOREMAN of a large JOB, or FOREMAN of CARPENTERS, a good all-round Man, in all the branches and used to measurement, with first-class testimonials, having had to compete his engagement, is open to offer of the above.—Address, Z. A. 26, Edith-street, Great Cumberland-street, Hackney-road.

A YOUNG MAN, thirteen years in Architects' Offices, in Scotland, and well recommended in London, desires a SITUATION, with an ARCHITECT or BUILDER, at about 1*l.* per week, in town or country.—Address, C. C. Office of "The Builder."

TO CONTRACTORS, &c.

A SITUATION as SHOP, or FOREMAN of WORKS, by a thorough practical CARPENTER. Makes working drawings; can direct every branch of building; would take the entire charge of a job or other works. No object to reside in the country.—Address, A. B. 49, Bur on-street, Tavistock-square, London.

TO ARCHITECTS.

A GENTLEMAN, who has been six years in the profession, and served his articles in a provincial town, is desirous of entering a London office, and would OFFER his SERVICES for a period, on advantageous terms, to his employer. Competent to prepare finished, working, and detail drawings; is a good writer, thoroughly understands perspective and colouring, and could take charge of the duties generally.—Address, P. J. Post office, Tonbridge Wells.

TO ARCHITECTS.

AN ARCHITECT desires a RE-ENGAGEMENT as an ASSISTANT. For full particulars and references address P. S. Post office, New Brentford

AN ARCHITECT and SURVEYOR is desirous of a RE-ENGAGEMENT on moderate terms. Has been several years engaged in offices and superintended works.—Address, E. V. 68, City News-rooms, Cheapside.

A RESPECTABLE Practical Person, of good address, wishes a SITUATION as a BUILDER'S, as MANAGER of a BUSINESS, embracing if the branches; he is competent to keep the accounts, estimate, take out quantities, and also well versed in the general and other regulations of public bodies, &c. Can be highly recommended as to character, and would expect but a respectable situation.—Address, prepaid, L. L. VERT, Post-office, Commercial-road, Peckham.

BUILDER'S BUSINESS WANTED.—Any party wishing to dispose of an old established JOBBING BUSINESS, in or near the City, where a x or eight men are constantly employed, and which could be improved, can hear of a purchaser by forming partnership, addressed to G. C. 5, Kent-terrace, New Cross-road, Deptford.

N.B.—Please to observe, Bath-row is a narrow passage on the New-road midway between Brook-street and the corner of the Hampstead road.

BUILDERS, ARCHITECTS, AND MASONS.

MARBLE. — The ITALIAN MARBLE COMPANY beg to call the attention of Architects, Builders, and Others connected with the trade, to their large and well-assorted STOCK of VEIN, SICILIAN, and other MARBLES. The liberal system of business adopted by this company, the superior quality of their marble, and their very moderate scale of prices are combined, to form an inducement to buyers. An inspection is solicited at the Depôt Bridge Wharf, Millbank, adjoining Vauxhall-bridge, where no other persons are authorised to sell except Mr. Baxter, Wharf Foreman, or the undersigned.

WILLIAM W. BONNIN, Secretary.

MARBLE WORKS by PATENT MACHINERY, Commercial-road, Pimlico, London.

THOMAS JACKSON begs to draw the attention of the public to the most extensive stock of Marble Chimney-Pieces in the Metropolis; consisting of a selection of upwards of two hundred and 1 manufactured by steam power from the finest Italian and other marble, and with that careful attention to the details and finish so necessary in good marble work. The Stock consists of elegant Drawing-Room Chimney-Pieces in Statuary Marble: bold, massive Chimney-Pieces, in Black, Black and Gold, Bardilla, Sienna, Verd Antique, Brocatella, Dove, St. Ann's, and Serpentine Marble, suitable for Dining-Rooms, Libraries, Vestibules, and Entrance-Halls; and a great variety of others in Veined, San Juan, Emperor's Red and Amber Marble, for Boudoirs, Breakfast-Rooms, best and secondary Bed-Rooms, &c.; also, Monuments, Tombs, Tablets, and Pedestals for Busts and Statues, and Slabs for Cabinet Work, &c.; the whole executed from the most classical designs, and in all the varieties of fine finest Italian and British Marble, at the lowest remunerative prices.

MARBLE and STONE CHIMNEYS.—1000 MARBLE CHIMNEYS of various designs and colours, most of them fixed, are now on view at the Cambridge Heath Marble Sawing-Mills. The proprietor has again enlarged his workshops, and erected so much improved machinery, so as not only to compete, but is able to manufacture more, and consequently cheaper than any house in the trade.

The Trade supplied.

MARBLE CHIMNEY-PIECES.—The nobility and gentry of the United Kingdom who are building or refitting their mansions are respectfully invited to inspect the most Extensive Collection of MARBLE CHIMNEY PIECES lately imported from the Continent. They comprise Statuary, Giallo di Sienna, Vert Rouge, Dove, Black and Gold, Rouge de Belmont, Bardiglio, and other choice foreign marbles; and are designed with great taste, and executed by first-class artists.—On sale, in the show rooms of Messrs. EVANS, SON, and CO. King William-street, London-bridge.

MARBLE CHIMNEY-PIECES, and every other description of marble work, supplied to builders and the trade at about HALF the USUAL PRICE, in many instances less than slate.—Manufactured by the LONDON and CONTINENTAL MARBLE COMPANY, at their own Quarries in France and Belgium.—Office and Depôt, 3, Crooked-lane, London-bridge.—Estimates given for works to any amount.

LLOYD'S MARBLE WHARF, Thames-bank, Pimlico, adjoining Vauxhall-bridge. — Italian Statuary, Veined, Sicilian, Dove, Sienna, and other Marbles, for sale, at import prices. A resident manager on the wharf at all hours.

GATES and GEORGE, CARN, AUBIGNY, and GENERAL STONE MERCHANTS, CAEN WHARF, ROTHERHITHE, LONDON.

STONE! STONE! STONE! — To the TRADE.—The cheapest place in London for Portland and Bath Stone, Yorkshire Landings, Steps, Curb, Paving, Seif-face Slab, Granite Pitching and Curb, Guernsey broken Road Materials, and every other description of stone, at JOHN KNIGHT and SONS, Devon Wharf, Mile-end. York tooled paving, 33s. 6d. per 100 feet; Slab for hearths, 4d. per foot sup.; slab for chimney-pieces, 3½d. per foot sup.; 8 by 4 window-sills, 6d. per foot run; 12 by 3 coping, 8d. per foot run; box chimneys (any opening), 8s. 6d. each. Terms cash on delivery.

CAEN and AUBIGNY STONE.—P. FOUCARD, Stone Merchant and Quarryman. Cargoes shipped to order from Caen to any port. Contracts taken for any quantities. Depôts: Granite Wharf, East Greenwich; Lett's Wharf, Waterloo-bridge. Office: 246, High-street, Southwark, near the Townhall.

BRAMLEY FALL STONE.—To ENGINEERS and CONTRACTORS.—The quality so well known and highly approved, in numerous public works, is SUPPLIED from the QUARRY at MEANWOOD, by the several Quarrymasters at Horsforth, with punctuality, and at the lowest possible rates, by JAMES AKEROYD and SONS, Gepton-wood Quarries and Canal Basin, Leeds

STONES, GRANITES, SLATES, &c.—W. and J. FREEMAN supply the various British and Foreign Stones, Granites and Aberdeen Granites, in scuppit blocks, or worked to specification. Also, the usual quarry-worked varieties of flues, landings, &c. &c. direct from the Quarries to Liverpool, Hull, or any of the outports (for exportation or otherwise), or by rail to any part of the kingdom.—Stocks of each description always ready for immediate delivery from their Wharfs, Millbank-street, Westminster Basin, and adjoining Commercial Docks) Deptford.—Office, 27, Millbank-street, Westminster

YORKSHIRE STONE.—The CHEAPEST PLACE in Yorkshire for all kinds of QUARRY-WORKED STONE, including Spandril Steps, Staircases of all kinds, Bases, Heads, Curbs, Landings, and Slabs, Hearthstones, &c. is at the ISLAND WHARF and SAWING-MILLS, LEEDS. All kinds of masonry clean worked for fixing, and carefully packed, to ruby truck or vessel, and forwarded direct to any part of the kingdom. For prices, &c. apply to JOHN DANIEL, Stone Merchant, LEEDS; or to ROBERT DANIEL, PIMLICO, LONDON.

BANGOR WHARF, King's-road-bridge, Cadogan-road, STINGFIELD and COMPANY, late W. W. Rawlins, beg to call the attention of Builders and others to their stock of Bangor slates, lathes, plaster, Roman, Portland, and Keene's cement, blue lias, Dorking and chalk lime, plasterers' hair, Yorkshire plain, pan, and ridge tiles, glazed sewer pipes, Cheltenham and brass, Welsh fire-bricks, gravel and shells for garden paths, ballast, sand, &c. Materials landed, wharfed, and carted

MARKET-WHARF, REGENT'S-PARK-BASIN.—WEST-END DEPOT, for Yorkshire Paving, Portland and Derby stone, Bangor Slates, Slabs, &c. Ashlar, Bricks, Lime, Cement, Plaster, Tiles, Laths, and Fire Goods of all kinds and WOOD invite the attention of Builders, Masons, and others, to their Stock as above, where everything will be charged at the lowest prices. Headstones, Ledgers, Steps, Landings, &c. cut on the shortest notice. Country orders promptly attended to.

BRAMLEY FALL! BRAMLEY FALL! On account of greater facilities than possessed by any one else, TRICKETT and PERKIN are prepared to supply in any quantity BRAMLEY FALL STONE, at greatly reduced prices, having opened the extensive quarries in the Hawksworth Cutting, on the North-Eastern Railway, near Horsforth. The stone is of the same quality as the well-known old Bramley Fall and Horsforth Quarries, but has the advantage of being of a lighter and more uniform colour. The North-Eastern Railway Company have put sidings in on both sides of the railway. Powerful cranes are fixed, so that the stone can be got to any size, and the stone being loaded in the quarries on the railway-trucks, can be forwarded the same day to any part of the kingdom, or supplied in London river via Selby or Hull, in any quantity.—For particulars apply to JOHN TRICKETT, Stone Merchant, Hunslet, near Leeds, or to SAMUEL TRICKETT, Victoria Stone Wharf, Isle of Dogs, London.

QUARRY WORKED STONE.—Architects, Masons, and Builders would effect a great SAVING in cost by ordering bases, plinthes, templates, sills, corbels, imposts, cornices, se pings steps, staircases of all kinds, moulded or plain, square or spandril, from the quarries ready worked for fixing. Experienced foremen are kept, and the stone is clean worked, and carefully packed or screwed, and delivered direct in one bottom by vessel or railway truck.—Prices and every information given on application, accompanied by plans or sketches, to SAMUEL TRICKETT, Stone-wharf, Isle of Dogs, or to JOHN TRICKETT, Hea tingley, Leeds, Yorkshire.

RANSOME'S SILICIOUS STONE.—All kinds of ARCHITECTURAL EMBELLISHMENTS executed in this beautiful and indestructible material, at prices not exceeding the ordinary cements. Full particulars furnished on application to Mr. FRED. RANSOME, Whitehall-wharf, Cannon-row, Westminster; or Patent Stone Works, Ipswich.

GRANITE.—The Welsh Granite Company, Carnarvon, supplies Pitching or Paving Sets of this Material to order. The Sets, which have for several years been extensively used in Manchester, Bristol, Leeds, and other large towns, combine in a higher degree than any others, the qualities of roughness in wear and durability. The stone is also well adapted for foundation courses, plinths, &c. for public buildings and for mill-stones.

GRANITE.—King William and Nelson Monuments, Plinth and Steps of the Royal Exchange, and Terraces at the Crystal Palace. Supplying the Hay tor Company under Royal Charter.—For terms apply to Mr. C. HOAR, Haytor Granite Office, 4, Millbank-row, Westminster.

This Windguard is highly recommended by the Manufacturers,

F. EDWARDS, SON, and CO. 12, POLAND-STREET, OXFORD-STREET.

VENTILATION.—PURE AIR.

Sheringham's Ventilator for the admission of pure air through an

EXTERNAL WALL.

With single pulley, from 6s. each; with leading pulley, from 8s. 6d.

These Ventilators are adapted that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants; and as they are placed in the exterior wall, their action is not impeded when the house is closed for the evening, at which time a constant supply of fresh air is most required. HOWARD, BROTHERS, sole Manufacturers, 108, Bunhill-row, and 117, Union-street, Bishopsgate, and their respective Ironmongers, builders, &c.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its remunerative properties, that it is not affected by frost, and does not seggetate in damp situations. Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements are laid at the Institute of Civil Engineers, to be obtained from the Makers, JOHN BAZLEY WHITE, and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

ATKINSON'S CEMENT, so long known and esteemed in London for plastering purposes, is a quick-setting Cement, that requires no colouring. Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster; and Seel-street, Liverpool.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER, for internal uses. These well-known hard Stuccoes dry quickly, and can be painted upon within a few days. Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

PORTLAND CEMENT WORKS, NORTHFLEET, Kent.—KNIGHT, BEVAN, and STURGE, Manufacturers only of first-class quality, for the home and foreign trade. Portland Cement is manufactured at these works with especial reference to its destination, whether for stuccoing, brickwork, blocks for breakwaters, tidal work, or otherwise.—London Wharf, Belvedere-road, Lambeth.

PORTLAND and BATH CEMENT.—FULLWOOD THOMPSON and CO. request the attention of Merchants and Contractors to the quality of their Portland and Bath Cement, which they manufacture on an improved system, securing regularity of strength and colour, and at a less cost than is attainable by most other makers.

These cements set under water in a few minutes, and are not affected by extreme heat or cold.

FULLWOOD THOMPSON & CO. will be happy to send prices and samples in reply to application by post. They deliver free into the Bristol and Exeter Railway Company's trucks at their works, or free on board in the Port of Bridgewater.

3 & 8, South Wharf, Paddington.

NOTICE.

CHARLES RICHARDSON takes the earliest opportunity of informing Engineers, Architects, Contractors, and others, that he is now bringing GREAVES'S BLUE LIAS LIME per the Great Western Railway from Harbury to Bull's-bridge and Paddington, from whence it can be delivered alongside any part of the river Thames, canals, or railway stations in London the day after it is burnt and ground, in any quantity, and at a great reduction in price.

All applications for prices and terms will meet with prompt attention.

N.B. Please observe the lime is ground at the works, not in London.

BLUE LIAS LIME.—Messrs. GREAVES and KIRSHAW having completed their Works on the Birmingham and Oxford Line of the Great Western Railway, at Harbury, are now prepared to supply the GROUND LIME of the best quality, direct from the kilns, to all the Stations on the Great Western Railway.—Greaves's Blue Lias Lime.—Portland, Bath, and Lias Cement.—Works, at Harbury, Stockton, and Wilmcote.—Office, at Warwick.

BATH, PORTLAND, and ROMAN CEMENTS.—The London and West of England Cement Company can offer to the Trade the best natural HYDRAULIC CEMENTS at reduced prices. The Company particularly recommend the best quality of their Bath Cement for all modelling cornices, decorations, &c. as having all the qualities requisite for an interior cement, and being quite unaffected by extremes of weather. The Company also supply BLUE LIAS LIME, lump and ground, which will carry more sand than any in the market.—Communications to be addressed to the General Offices, 30, Old Broad-street, London; to Mr. MONUMENT, 4, Caroline-place, City-road; to Mr. TIMEWELL, the Depôt, 9, North Wharf-road, Paddington; or to the Works, Dunball, Bridgewater.

SOUTHAM BLUE LIAS LIME DEPOT. Glazed Stoneware Sewage Pipes. Brick, Lime, and Cement Merchants, TATHAM and CO. 14, South Wharf, Paddington.

PORTLAND and BATH CEMENTS. TATHAM and CO. 14, South Wharf, Paddington.

PARIAN CEMENT, reduced in price 25 per cent. This article is valuable for inside stucco, and especially for skirtings, for flooring on brick arches, &c. It takes paint in a few hours after its application on walls or laths, is without efflorescence, and may be papered in a couple of days. A finer quality forms a beautiful Scagliola, with any admixture of colours.—Manufactured by FRANCIS, BROTHERS, Cement Works, Nine-elms, London.

CEMENT.—ROMAN and PORTLAND CEMENTS, and PLASTER of PARIS, manufactured by C. J. HILTON, can be had in any quantity, wholesale and retail, at his wharf, 6, Upper Thames-street, London; and also at the manufactory, Faversham, Kent.—N.B. These Cements supplied for shipment, on advantageous terms.

DAVIES and NORMAN, CROWN WHARF, GREAT SCOTLAND YARD. ROMAN and PORTLAND CEMENTS. LIME, BRICKS, TILES, SLATES, FIRE GOODS, &c. STONEWARE PIPES, PANS, TRAPS, &c. A Liberal Allowance to the Trade.

THE PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs. ROBINS and CO. to WHOM THE PRIZE MEDAL WAS AWARDED in 1851, are prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes to which Cement is applicable. Orders received at Great Scotland-yard and at the Works.

HUBBUCK'S PATENT WHITE ZINC PAINT,

The Permanent White of the Ancient Artist.

HUBBUCK and SON, the Original Manufacturers, are enabled, by their process, which is patented, to supply Pure White Zinc Paint at the price of White Lead. Neither heat nor tropical climes act upon it. It is entirely free from any poisonous or pernicious property. Those direful maladies, paralysis and painters' colic, will be altogether avoided. The Powdered White Zinc may be had for grinding in Oil, and where it is used with Size, Varnish, &c. To prevent the prejudice against Zinc paint, which the adulterated article must otherwise produce, it is now sold by the Wholesale Paint-dealers in Original Packages, each cask stamped, HUBBUCK—LONDON—PATENT. And when so marked, the quality is guaranteed. THOMAS HUBBUCK and SON, the Original Wholesale Manufacturers, Paint and Varnish Works opposite the London Docks, London.

N.B. OLD ZINC AND ZINC CUTTINGS BOUGHT TO ANY EXTENT FOR REFINING.

BLUE LIAS LIME.—CHAS. NELSON begs to offer to consumers a supply of Blue Lias Lime direct from his Quarries in Warwickshire, the quality of which has been tested by several of the largest building firms in the metropolis and approved by them; and those who have favoured C. N. with their patronage during the last three years have always expressed themselves satisfied with his system of weighing or measuring the lime. When the lime is delivered by boat, the master has instructions to produce (on demand) the canal company's note, by which the purchaser may know the exact weight delivered.—Orders addressed to the London Depôt, 16, South Wharf, Paddington. J. D. BLYTH, Sole Agent, will have immediate attention.—Quarries and Manufactories, Stockton, near Southham, Warwickshire.

NOTICE.

SOUTHAM HYDRAULIC BLUE LIAS LIME.

WILLIAM OLDHAM begs to inform those parties requiring genuine Hydraulic Blue Lias Lime, that he is prepared to deliver the best quality of ground and lump, into boats, at the Works.—Address, WILLIAM OLDHAM, Blue Lias Lime and Cement Works, Southam.

GREY STONE LIME WHARFS, 12, UPPER GROUND-STREET, Blackfriars (Surrey side), 7, NORTH WHARF-ROAD, Paddington.

WILLIAM PETERS begs to inform the trade he is in a position to supply the best GREY STONE LIME in any quantities from the above wharfs, or per barge direct from the kilns.

Large Grey Stone, or Grey Chalk, free on board at Works, 1s 9d. per ton.

Small ditto, ditto, 4d. per ton.

Barges loaded in a few minutes.

Wouldham-hall Grey Stone Lime Works, on the Medway, near Rochester.

11, George-yard, Lombard-street, City

ELMLEY CEMENT WORKS.—ROMAN and PORTLAND CEMENT of the first quality, manufactured on the above works. Also STOCK and KILN BURNT BRICKS, hand moulded and machine made, for shipment or otherwise.—Apply to G. BOOTH, Agent, as above.

CHADWICK'S CEMENTS.—To Railway and Dock Directors, Gas and Waterworks Companies, Coal-Mine Proprietors, Builders, Contractors, &c.—JOHN CHADWICK, Manufacturer of the Patent Lithic, Roman, and Portland Cements, is prepared to enter into contracts with any of the above branches that may favour him with their orders. The advantages to be derived from the above Cements, manufactured by J. C. over all others, are their extraordinary hydraulic properties.—Samples and references may be had on application either at the Works, Ashton New-road; or the Warehouse, 5, Broom-street, Shude-hill, Manchester.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings, of good and sound quality, constantly on sale at H. DODD'S Brickfields, which are only a quarter of an hour's walk from the City. H. D. earnestly requests purchasers to favour him with a visit, in order to inspect his stock, and to judge for themselves.

Malm Place, half-washed Stocks, and Place Bricks, also on sale. These bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing.

Apply to HENRY DODD and CO. at the Counting-house, Hoxton Brickfields, Grange-walk, near the Rosemary Branch, Hoxton

N.B. Light-coloured Pit Sand or Ballast supplied by H. D. on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand.

BRICKS.—Mr. Rydon having made more bricks than he requires for the builders on his estate, Highbury New-park, would be glad to treat for disposing of the same with builders and others for supplying first-class STOCK and RED BRICKS upon advantageous terms.—For particulars, apply at the Estate Office, Dell's Farm, Stoke Newington Green.

THE BEST HERTFORDSHIRE MALM SECONDS;

THE BEST WHITE SUFFOLK and RED FACINGS: WHITE SUFFOLK PERFORATED BRICKS; DEEP-RED RUBBING BRICKS.

Also COWLEY and KENT STOCKS, in any quantities.

J. EASTWOOD and SONS, Belvidere-road, Lambeth; and Surrey-canal-bridge, Old Kent-road, Surrey.

N.B.—Lime, Cement, Slates, Fire-bricks, &c. and all kinds of Building Goods.

BRICK-FIELDS, QUEEN'S-ROAD, PECKHAM, SURREY

(Within a short distance of the five bridges).

THE BEST MALM-CUTTERS, SECONDS, PICKINGS, and PAVIORS, in any quantity.

Also, STOCKS, of FIRST QUALITY.

J. EASTWOOD and SONS, Belvidere-road, Lambeth.

BRICKS of all kinds (clamp-burnt or kiln-burnt), Lime, Chalk, Chalk Rubbish for brick-making, Flints for building, pottery work, Foundry Loam, Whiting, Whiting Sand for ashphalte, Land Drain Pipes, Patent Drain Pipes, Gas Soil for brick-making, &c. &c. sent by barge from Messrs. MEESON and CO.'S works at Grays, Essex, to any part of the Thames, the various canals, the river Lea, &c. or by rail to any station on the London and Southend and Eastern Counties lines, or any railway connected with them. Vessels of 300 to 400 tons can load alongside the wharves at Grays. At MEESON and CO.'S wharf and kilns, Bow-bridge, Stratford, Essex, the above-named articles can also be procured, as well as all kinds of fire goods (both Welsh and Newcastle), Fire-clay, Flare-burnt Lime, and Marble and Pamper Lime; and here lime is packed in hogsheads, casks, jars, &c. for exportation

General Offices—No. 12, GEORGE-YARD, LOMBARD-STREET.

Letters addressed to Grays Essex, will meet with immediate attention.

TO BRICKMAKERS, LIMEBURNERS, and OTHERS.—3,000 CHALDRONS of BREEZE to be taken by craft from Pearce's Wharf, Limehouse-cut.—Tenders of price per chaldron to be forwarded to A. H. STILL, Manager, Gasworks, How-common-lane.

THREE HUNDRED THOUSAND BRICKS and BRICKFIELD, &c. TO BE DISPOSED OF, having a siding to railway at Wimbledon Station.—Apply to Mr. DEGGLE, Upnor, near Rochester.

COLES, SHADBOLT, and CO. CEMENT and PLASTER MANUFACTURERS, LIME BURNERS.

Brick, Tile, Drain-pipe, Hair Lath, and Fire Goods Merchants.

ST. JAMES'S and THORNHILL WHARFS, Caledonian-road, London.

WANTED to PURCHASE, immediately, 3,000 STOCK BRICKS, to be delivered alongside Canal, West Ham, Essex.—Apply at the Offices of Mr PATMAN, 31, Great James-street, Bedford-row.

TO EXCAVATORS, CONTRACTORS, and OTHERS.—WANTED, immediately, 1,000 YARDS of first-class PUDDLING CLAY, for dock purposes; to be delivered alongside Hay's Wharf, Mill-lane, Southwark.—Apply to ALLEN, SNOOK, and STOCK, Architects and Engineers, 6, Duke-street, London-bridge

BEADON'S PATENT IMPERISHABLE GUTTER-TILES,

For Spouting Roofs of Houses (either old or new, whether of thatch, slate, or tile), and other structures.

SOLE AGENT,

J. B. LAWES, 1, Adelaide-place, London-bridge.

This is the cheapest kind of spouting known; for, besides its lower cost, it will last without paint or repair as long as the building itself. It will bear the weight of any ladder; and in case of accident a labourer can repair it. It occupies the room of a large amount of roofing, effecting a great saving in slates, tiles, &c. It is especially applicable to the backs of houses in town, cottages, and agricultural buildings.

Price 4d. each tile of about 13 inches long; stop-ends and outlets, 6d. Any mason can put them up, or, if over 100 feet are required, a man will be sent to fix them at 9d. per foot. This charge to include tiles delivered in Agent's yard, cement, and labour. May be had in London, Gloster, Bridgwater, and Ruaby.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 21, WHARF, Macclesfield-street North, City-road Basin. Secondly, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietor; and, thirdly, that the "REPORTS OF THE JURIES," page 881, of the Great Exhibition, rank the Manufactories known so long as "The Tileries," Tunstall, Staffordshire, as the first of the kind in the world.

PATENT TERRA-COTTA. Tracery for Parapets and Terraces, Mullions, Pinnacles, Moulded Bricks, Coats of Arms, Crosses, Label Mouldings, Friezes, Trusses, Vases, Balusters, Capitals and Bases of Columns, Paving, Facing Bricks, Copings, Kitchen and other Sinks, Chimney Shafts and Tops, and numerous other Articles, manufactured by J. M. BLASHFIELD, in Patent imperishable Terra-Cotta, at Mill-wall, Isle of Dogs; and sold at No. 1, Wharf, Praed-street, Paddington-basin.

WOLSTON'S TORBAY IRON-PAINTS, warranted to stand the action of the Atmosphere, Steam, Gases, Noxious Vapours, Damps, and Salt Water, also intense heat without blistering. These Paints have been tested for five years in the Government Yards, and two Official Reports made thereon, which testify that 63lbs. of Wolston's Torbay Iron-Paint will effectually cover as much surface as 112lbs. of either White or Red Lead, and that they resist atmospheric action better than lead Paints. For all Public Works, Galvanized and other Iron Roofing, Fencing, Shipping purposes (Wood or Iron), Stucco and Cement Fronts, economy and durability will find Builders and Painters, for all priming purposes, the saving will be immense. Manufactured at the TORBAY IRON-PAINT and ORE WORKS, Brixham, Devon; London Depôt, Chamberlain's Wharf. Letters or orders addressed to Mr. WOLSTON, at the Works, or No. 34, John-street, Bedford-row, will have immediate attention.

DRAUGHTS of COLD AIR and DUST round room, office, or outside doors and windows EFFECTUALLY PREVENTED by GREENWOOD'S patent INDIA-RUBBER STOPS, the most simple and effectual method of making air-tight joints to joiners' or cabinet work, old or new. These Stops can be had any length or pattern. Self-acting spring Stops, for the bottoms of doors. The Trade supplied.

JOHN GREENWOOD, Patentee, 10, Arthur-street West, London-bridge.

THE SCOTTISH EQUITABLE LIFE ASSURANCE SOCIETY.—Instituted 1831.

Accumulated Funds—ONE MILLION STERLING.

Annual Revenue—ONE HUNDRED AND SEVENTY THOUSAND POUNDS.

Existing Assurances—FOUR MILLIONS AND THREE-QUARTERS.

At the Division of Surplus, at 1st March, 1856, a Policy for 1,000 effected at 1st March, 1839, was increased to 1,374l. 15s. 10d. being at the rate of Two and a Quarter per Cent. per Annum on the sum assured. This addition may be converted into a present payment, or applied in reduction of the future premiums.

Profits are divided triennially, and belong wholly to the assured.

Policies effected before 1st March next will receive SIX years' additions at the division of surplus in 1862.

Copies of the Report by the Directors on the recent division of surplus, and all information, may be had on application at the Head Office, or Agencies.

ROBERT CHRISTIE, Manager.
WILLIAM FINLAY, Secretary.
Head Office—26, St. Andrew-square, Edinburgh.
Office in London—26, Poultry.
A. T. RITCHIE, Agent.

PROVIDENT CLERKS' MUTUAL LIFE ASSURANCE ASSOCIATION.—Established 1840.—Every description of Life Assurance effected.

WM. THOS. LINFORD, Sec.

15, Moorgate-street, London.

PROVIDENT CLERKS' BENEVOLENT FUND.—The attention of clerks is earnestly invited to the great advantages themselves and families may derive from this fund.

WM. THOS. LINFORD, Sec.

15, Moorgate-street, London.

TO ENGINEERS, ARCHITECTS, and OTHERS REQUIRING a good HOUSE and extensive OFFICES.—The OFFICE of the CLERICAL, MEDICAL, and GENERAL LIFE ASSURANCE SOCIETY being about to be REMOVED to ST. JAMES'S-SQUARE, the present HOUSE and OFFICES, with Office Fittings and Fixtures, are now TO BE LET, or the LEASE, FIXTURES, and OFFICE FITTINGS, TO BE SOLD, on very moderate terms.—Inquire of Mr. FINNIS, House Agent, 85, Great Russell-street; or of the Secretary, on the Premises, 99, Great Russell-street, Bloomsbury.

NOTICE to BUILDERS and SEWER-CONTRACTORS.—TO BE DISPOSED OF, at a sacrifice, upwards of 1,500 feet of 12-inch STONEWARE DRAIN-PIPE.—For full particulars inquire of Mr. W. MERRY, Surveyor of Sewers, Vestry-hall, Harrow-road, Paddington. Office hours from Ten till Twelve a.m.

WINDOW BLINDS.—TYLOR & PACE, Window Blind Manufacturers, 104, New Bond-street, and 3, Queen-street, Cheapside, London, submit the following PRICES of WINDOW BLINDS, which they can recommend as being made in the best manner:—Venetian blinds, per square foot, 9d.; best holland blinds, on rollers, 6d.; best ditto, on spring rollers, 8d.; gauze wire blinds, in mahogany frames, 8s.; perforated zinc blinds, in ditto, 1s. 10d.; outside blinds of striped cloth, 2s. Transparent blinds in great variety. Engravings, with prices and discounts to builders and the trade forwarded on application, post free.

WINDOW BLINDS.—FULLER, BROTHERS, Manufacturers of every kind of Inside and Outside WINDOW BLINDS, warranted of the best materials and workmanship, at the lowest possible prices. Builders and the Trade supplied. A List forwarded on application.—98, Charlotte-street, Blackfriars-road; and at Sydney, New South Wales.

VARNISH.—Patent Transparent Indian-rubber Varnish, warranted to resist damp or moisture, is perfectly colourless, and can be prepared to any degree of lustre, so as to suit from a flatted ground to a polished surface. It is suited to prints, water-colour drawings, or paintings; to white marble and delicately-coloured papers, will protect the most delicately-flatted rooms from injury by water, &c.; it is suited to artists as a medium for colours; to light woods; for the interior of steam-boats, pianos, &c.; to coach painting and varnishing, as it will neither crack nor change colour. Specimens can be seen and samples bottles obtained of W. BLIZZARD, 15, Mill street, Hanover-square.

N.B. Sample bottles forwarded to the country on the receipt of eighteen postage stamps.

WARNER'S PATENT VIBRATING STANDARD PUMPS.—PATENT CAST-IRON PUMPS, for the use of farms, cottages, manure-tanks, and wells of a depth not exceeding 30 feet.

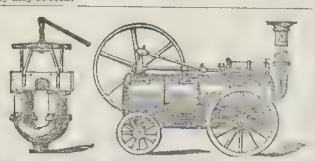
Diameter of Barrel.	Length of Barrel.		£ s. d.
2½ in.	short 1 ft. 7 in.	Fitted for lead,	1 10 0
2½ "	long 3 3	gutta percha	1 14 0
3 "	ditto 3 6	or cast iron	2 0 0
3½ "	ditto 3 6	flanged pipe,	2 12 0
4 "	ditto 3 6	as required.	3 3 0
2½ "	short, with 15 feet of lead pipe attached, ready for fixing		2 14 0
2½ in.	long ditto ditto		2 18 0

The short-barrel Pump is very convenient for fixing in situations of limited height and space, for the supply of coppers and sinks in washhouses with soft water from under ground tanks, or in hot, forcing, and plant houses; they may be fixed, when desired, under the stage. May be obtained of any Ironmonger or Plumber in town or country, at the above prices, or of the Patentees and Manufacturers, JOHN WARNER and SONS, No. 8, Crescent, Jewin-street, London.—Every description of Machinery for Raising Water, by means of wheels, rams, deep well pumps, &c. Also, Fire and Garden Engines, &c. &c.—Engravings sent on application.

R. RICHARDS and CO. PUMP MANUFACTURERS and ENGINEERS.

Pumps in Wrought and Cast Iron and Brass, bored by machinery, and fitted in the best possible manner, suitable for excavators, roads, brickmakers, farms, gardens, stables, liquid manure, ships, barges, well-sinking, &c. adapted for any depth. Hydraulic Pumps for deep wells.

PUMPS ON HIRE.



Pumps of any size, single or double barrel, up to double 18-in. diameter, kept ready for use at reduced prices.

N B. The above can be worked either by hand, horse, or engine power.

Iron Pails 38s. per doz. painted.
Ditto .... 48s. per doz. galvanized.

Upper Ground-street, Blackfriars Bridge, Surrey Side.

CONTRACTORS' STEAM-ENGINES.—TO BE LET, on HIRE, or for SALE, several NEW and SECOND-HAND STEAM ENGINES, of various powers, suitable for contractors' work generally.—Apply to Messrs. MEDWIN and HALL, Engineers, Surrey Iron Works, Blackfriars-road, where they may be seen.

PORTABLE STEAM-ENGINES and PUMPS kept in Stock for Hire at reduced Prices, R. RICHARDS and CO. Pump Manufacturers and Engineers Upper Ground-street, Blackfriars-bridge (Surrey Side).

TO CONTRACTORS.—STEAM-DREDGER, STEAM-TUG, and HOPPER BARGES.—TO BE DISPOSED OF, by Private Contract, a powerful STEAM DREDGING MACHINE, in excellent order—length over all, 58 feet, beam 25 feet, fitted with a 30-horse power condensing steam-cranking and boiler with two furnaces, buckets, crab, and every requisite; an iron clinker-built, paddle-wheel STEAM-TUG—length over all, 78 feet, 7 feet beam between paddles, fitted with 30-horse power condensing steam-engine and boiler; Twelve two-room HOPPER BARGES, with chains and orabs; one three-room ditto, and one open Coal Barge.—For further particulars, apply to Messrs. FULLER and HORSEY, Billiter-street, City.

FOR SALE, a 12-horse power horizontal high-pressure STEAM-ENGINE, with superior boiler, safety-valve, gauges, &c.—Apply for full particulars to VICKERY and WILLIS, 107, Southwark-bridge-road.

STEAM-ENGINES for SALE, at the East London Ironworks, Cambridge-road, Mile-end-road. The best and most economical high-pressure horizontal engines always for sale.—Messrs. J. MUSTO and CO. having a large sale for these particular engines, endeavour to keep a stock either finished or in course of erection, which can be seen at their works. Satisfactory reference can be given, and engines of their make inspected at work in several parts of London. Workmanship and materials warranted.

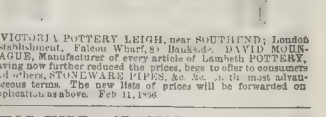
TERRA-COTTA CHIMNEY-TOPS, FIRE-CLAY FLUE-PIPES, RIDGE & PAVING TILES, &c.

SALT-GLAZED STONEWARE, FIRE-CLAY, AND TERRA-COTTA WORKS,

NEAR BARNSLEY, YORKSHIRE.



The Proprietor, E. B. BEAUMONT, manufactures every description of STONEWARE for drainage, building, sanitary purposes, and fancy ware, from clays which have been subjected to the most searching analyses, and proved to be of the most tenacious and indissoluble qualities. The pipes are wrought by Spencer's Patent Machine, by which tube and socket are one, without a manipulated joint, and rendered the more compact by high-pressure; and as every improved apparatus has been made available to secure the highest excellence with great economy of labour, the goods are put upon the market at a considerable reduction from the prices charged for others at all assimilating in quality, whilst the stock on hand is always sufficiently large to provide for works of the greatest magnitude.

THE TRADE LIBERALLY TREATED WITH.

Price lists and Diagrams sent free on application,—

At the WORKS.....To Mr. WM. FORD, Darfield Fire-clay Pottery, near Barnsley.
In LIVERPOOL.....To Mr. JOHN SIDDALL, 20, Shaw's-row.

15	"	"	2s. 6d. "

These pipes are made under steam pressure, and burnt to great hardness, and are capable of bearing nearly double the hydraulic pressure of ordinary glazed pipes. The prejudice against red-ware is also done by the manufacture, and it is well known that good earthenware, UNGLAZED, is the oldest material discovered in a perfect state in Rome, Babylon, Nineveh, &c. &c.

WATER-CLOSET, WITH APPARATUS COMPLETE, for 12s. 6d.

CONSISTING OF

STAFFORDSHIRE BASIN AND TRAP, Enamelled White Inside, BRASS VALVE, &c.

MANUFACTURED AND SOLD BY

W. PATTEN, PATENTEE, OLD FISH-STREET, near SAINT PAUL'S, LONDON.

TO WATER COMPANIES AND PLUMBERS.

HIGH-PRESSURE COCKS & CLOSETS.

The Health of Towns Commissioners having recommended the adoption of the high-pressure principle in all towns, WARNER'S HIGH-PRESSURE COCK is recommended as a Cock free from leakage, and applicable for all purposes and situations. Patent Closet and Basins with supply-valve for attaching direct to main pipes without a cistern, cocks, or wire.

LEAD, IRON, and TIN PIPE.

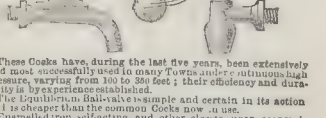
JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin-street London

TO WATER COMPANIES, LOCAL BOARDS OF HEALTH, AND OTHERS.

LAMBERT'S NEW VALVE COCK, For Preventing Waste of Water.

It is constructed that it cannot be left open sufficiently by wilfully, as if differently so that each action delivers a specific quantity, and under the same pressure this quantity will never vary.

It is peculiarly adapted for closets, self-acting or otherwise.



Price, complete for high pressure, 10s 6d. each.

For [illegible]

THOS LAMBERT and SON, Patentees and Manufacturers, Founders and Machinists, Short-street, New-cut, Lambeth.

PRIZE MEDAL, CLASS 2.

HIGH-PRESSURE VALVE COCKS.—LAMBERT'S PATENT.

These Cocks have, during the last five years, been extensively and most successfully used in many Towns under enormous high pressure, varying from 100 to 350 feet; their efficiency and durability is by experience established.

The Equilibrium Ball-valve is simple and certain in its action and is cheaper than the common Cocks now in use.

Enamelled iron, self-acting, and other closets, upon economic arrangements, suitable for public buildings, cottages, asylums, &c.

Shipping Agents, Dover; Capt Beadel, Harp Hotel, Dover; or to Mr. J. B. Terson, Auctioneer, No. 6, Castle-street, Dover.

FREEHOLD LAND TO BE LET, on Building Lease for ninety-nine years. Money advanced to responsible parties. Freehold Land to be Sold for building purposes in eligible situations.—Apply at the Offices of Messrs. Morgan and Phipson, Architects, 3, Danes-Inn, St. Clement's, Strand.

TO BUILDERS and OTHERS.—TO BE SOLD, Valuable Plots of FREEHOLD LAND, having 141 feet frontage to the high road near Single Gate, Merton, suitable for building Villas.—For particulars apply to Mr. H. Rowley, Finsbury Freehold Land Society, 43, Bedford-row, Holborn.

NEW WINDSOR ESTATE. — Valuable BUILDING LAND TO BE LET, in Plots for first and second class Villa Residences, with Stabling, which are much needed in this beautiful locality. The situation is the finest in or near Windsor, adjoining on the Park and Long Walk, and commanding a splendid view of the Castle. Within ten minutes of the Great Western and fifteen minutes' walk of the South Western Railway Stations. Advances can be had by responsible parties.—For particulars apply to Mr. WILLIAM SIM, Architect and Surveyor, 2, Dane-Inn, Strand

FIRST-RATE BUILDING SPECULATION.—Some VALUABLE LAND, fronting a high road at Holloway, for one or more houses, is now to be had, at such a low price as to make it a most profitable investment. It is in the midst of Railway and occupied houses, and no expenditure is required for roads or sewers. A PAIR of CARCASSES TO BE SOLD, on the same estate.—Apply to Messrs. ROBERTS & BALL, Architects, 18, Holles-street, Cavendish-square.

FINCHLEY.—LAND fronting the Regent's Park-road, and East-end-road, TO BE LET on Building Leases for ninety-nine years, with power of enfranchisement Plots from one to four acres for large villa residences; smaller plots for semi-detatched houses, and plots for shops in the village. Apply to W. A. BOULNOIS, Esq. Architect, 6, Waterloo-place, Pall-mall; or to Messrs. BARKER, BOWKER, and PEAKE, 1, Gray's-Inn-square.

EXTENSIVE PLOT of vacant GROUND, in a most important first-rate locality, adjoining Regent's-circus, with entrances from Oxford and the adjacent streets, suitable for a building operation of any character or magnitude. It is presumed from its extent and high class situation (nearly a quarter of an acre), to be eminently adapted for an arcade or any other similar public establishment carried out under the Limited Liability Act.—For particulars, apply to Messrs. GRAHAM and JACKSON, 37 and 38, Oxford-street.—May be treated for as a whole or separately.

TO BE LET, or LEASE TO BE SOLD, very extensive PREMISES in Bermondsey, and within ten minutes' walk of London-bridge, well adapted for a contractor or builder. They consist of a large yard, twelve-roomed house, including two offices, with garden in rear; joiner's shop for twenty-thirty benches, scaffolding for deals, &c. upwards of 200 feet long; two saw-pits, two large sheds, stabling for twenty horses, &c. The whole containing nearly an acre of ground, and will be let at very low rent.—Apply to ROBERT WARD and SON, Timber Merchants, 5, Orford-street.

FREEHOLD GROUND-RENTS and BUILDING LAND.—TO BE SOLD, FREEHOLD GROUND-RENTS amounting to 131l per annum, well secured upon houses at Holloway, offering a good investment for trust-moneys; also Sixteen Acres of Land, which may be purchased in large or small quantities at fee-farm rents, whereby houses may be erected and sold as freeholds, free from the law of forfeiture under leases and probate duty.—Apply to Mr. PEACHEY, 17, Salisbury-square, Fleet-street.

HIGHBURY-HILL PARK. — Valuable BUILDING LAND TO LET, close to the high road, with roads made and sewers in, near to church and chapel, and convenient for railway and omnibus communication to the City.—For particulars, apply to JOSEPHUS FERRIS, Esq. Polewinne House, Highbury New Park; or to GORDON STANHAM, Architect, St. Alban's Cottage, North End, Hammersmith-gate.

IMPORTANT TO BUILDERS AND CAPITALISTS.

UNITED TRADESMEN'S FREEHOLD LAND SOCIETY.—The beautiful ESTATE at HORNSEY, purchased by the Trustees, consisting of about thirty acres, and within three minutes' walk of the station, will next summer be accessible from the City by means of the Metropolitan Railway. Persons desirous of possessing land in this charming and picturesque neighbourhood, can do so immediately by joining this society. Plots, 30l. each; subscription, 5s. per month; at their Office, the Saving Bank, Goldsmith's-place, Hackney-road, on the third Wednesday in each month, from Seven until Nine o'clock Capitalists and others desirous of possessing land at once can do so by application to Mr. J. LAWLESS, 1, Thurlow-place, Hackney-road; or to Mr. DANIELL, Hornsey, and Estate Office, 92, Keppel-street, Russell-square. The ground on the first portion of the estate being the only part on which a tavern can be built, is delightfully situate on the high road leading to Tottenham, and less than two minutes' walk from the Hornsey Station, to be disposed of, with all its privileges, for the sum of 300l.—Apply as above.

TO ARTISTS, SCULPTORS, and OTHERS.—TO BE LET or SOLD, a commodious RESIDENCE, with gallery, studio, and stables attached.—The Premises may be viewed on application at No. 18, Harley-street Cavendish-square.

TO BE LET, at Reigate Wharf, Reading, a BARGE-HOUSE, TIMBER and BARGE HOUSE, &c. slated, with sky-lights 78 feet long inside, 26 feet wide up to plate, with excellent steam trunk supplied by steam-engine; also part of Wharf and Saw-pits.

WANTED, as above, a Foreman who can manage circular saws.

FOR ARTISTIC, SCHOLASTIC, or other PURPOSES.—Suites of Rooms, also a Shop, Parlour, and Kitchens, in a large House in Sloane-street (a main thoroughfare), may be had Unfurnished, on very moderate terms.—Apply to Mr. FREDK. GODWIN, Auctioneer and House Agent, 3, Halkin-terrace, Belgrave-square

EXTENSIVE BUSINESS PREMISES, newly erected, TO BE LET on lease, comprising nearly 4,000 feet super. business space, and 2,300 feet super. dwelling space, with every convenience for letting off, situate in a leading thoroughfare, near Commercial-street, Spitalfields-market, Eastern Counties Railway, &c. &c. For particulars, and to view, apply to Mr. JAMES TOLLEY, Surveyor, Lamb-street, Spital-square.

DUNSTABLE.—Eligible and Commodious BUSINESS PREMISES TO BE LET, with convenient Domestic Apartments immediately adjoining, situate in the High-street, having a frontage of 40 feet, by a depth of 124 feet. The Warehouses and Offices (erected not long since) have been built with a view to the Straw Business.—Apply to W. C. REED, Architect, 64, Old Broad-street, London.

WATERSIDE PREMISES at LIME-HOUSE.—TO BE LET on LEASE, THREE spacious WAREHOUSES, abutting on the River Lee Cut, each measuring nearly 1,000 superficial feet, and containing about 20,000 cubic feet.—Apply to Mr. WILLIAM ELLISON, Architect, No. 19, Stainsby-road, Limehouse.

ROOMS WANTED by a SOCIETY. — A suite, containing Members', Meeting, and Reading rooms, Office, and if possible Exhibition-rooms. Situation near Regent-street preferred.—Apply, post-paid, stating terms, and number and size of rooms, to Secretary, P. S. 21, Regent-street.

TO BE LET, or SOLD, under unusually advantageous circumstances, SIX substantial CARCASSES, in an advanced state, and eligibly situated, on a high road, in an improving neighbourhood.—Address, Mr. SMERDON, No. 9, Lansdowne-terrace, Battersea.

London: Printed by Charles Wyman, at the Printing Office of Cox (Bros.) & Wyman, 74 & 75, Great Queen-street, Lincoln's-inn fields, in the Parish of St. Giles-in-the-Fields; and published by the said Charles Wyman, at the Office of "The Builder," 1, York-street, in the Parish of St. Paul, Covent-garden, both in the County of Middlesex.—Saturday, November 29, 1856.

CONTRACTS.

NOTICE to BUILDERS.—The Commanding Royal Engineer, Portsmouth, hereby gives Notice, that SEALED TENDERS will be received at the Office of the Director general of Contracts, Pall Mall, London, on or before FRIDAY, the 19th day of DECEMBER, 1856, from persons desirous of CONTRACTING for BUILDING a SCHOOL-ROOM and LIBRARY at Cambridge Barracks, Portsmouth. The plans and specification may be seen, and all necessary information obtained at this Office, between the hours of TEN and FOUR, each day except Sunday, until the 12th proximo. The person whose Tender may be accepted will be required to provide two eligible securities, to be bound with him jointly and separately, in a bond of £400 for the due performance of the contract, by the 1st OCTOBER, 1857. The War Department reserves the right of rejecting the whole or any of the Tenders. No notice will be taken of any Tender unless upon the printed form, which can be obtained at this Office.

Royal Engineer Office, Portsmouth, November 25, 1856.

WATFORD BURIAL BOARD.—(ALTERED ADVERTISEMENT)—To SURVEYORS and ARCHITECTS.—The Burial Board for the Parish of Watford, in the county of Hertford, are desirous of receiving (within five weeks from the date of this advertisement) PLANS, DESIGNS, SPECIFICATIONS, and ESTIMATES, comprising separate plans, sections, and elevations, for FENCING in FIVE ACRES of LAND, or thereabouts, part of a field (called Old Field), in the parish of Watford aforesaid, for Erecting a new Chapel on the consecrated, the other on the unconsecrated portion; the consecrated portion being two in width of the land, commencing by the side of Cuey, otherwise Colney Street, and the remaining part the unconsecrated portion, Sexton's House with board room, clerk's room, &c., and a separate Mortuary or receiving-house, and for laying out the land as one for a Burial Ground, with a sufficiency of roads and of pathways to afford access to the gravel, and to mark every grave space. The Board will not bind themselves to employ or engage the person whose plans, designs, specifications, and estimates, or any or either of them may be approved, but in case he should not be employed or engaged, the Board will pay him a premium of Ten Guineas for the same, when such plans, designs, specifications, and estimates shall become and be the absolute property of the Board. The Board will not pay any charge or expense for preparing, and they will not pledge themselves to accept or approve any plan, design, specification, or estimate. A plan of the land is deposited with Mr. PUGH, the Clerk to the Board, and may be seen at his Office at Watford, at any time between the hours of TEN and FOUR in the daytime, till within two days of the expiration of the time hereby limited. All plans, &c. to be sent to the Clerk's Office free of expense on the day the five weeks will expire, or earlier; and those not approved will be returned free of expense, in such way as the respective owners may request.

WATFORD, 28th November, 1856.

BURY SAINT EDMUND'S, SUFFOLK. The Commissioners for Paving, Lighting, and otherwise improving the Town of Bury St. Edmund's, in the County of Suffolk, are ready to receive TENDERS for the MAKING an UNDERGROUND DRAIN SEWER, commencing from a place called the Lavers, to the Culvert, at the Fox Inn, in Mustowstreet, in the same town. Drawings and specifications may be seen at Mr. JOHN CROFTS', Halter-street, Bury St. Edmund's; or G. R. BURNELL'S, Esq., 14, Lincoln's-inn-fields, London, between the hours of TEN and FOUR. The Commissioners do not bind themselves to accept the lowest Tender. Tenders to be delivered, sealed, post-paid, and addressed to Mr. PARKE, Clerk to the Commissioners, Halter-street, Bury St. Edmund's, on or before the 13th day of DECEMBER next, to be laid before a meeting to be held on MONDAY, the 15th of DECEMBER instant, when parties Tendering are invited to attend.

Bury St. Edmund's, December 1, 1856.

LLANDUDNO IMPROVEMENT ACT, 1851. To SEWER CONTRACTORS, &c. Persons desirous to CONTRACT for the CONSTRUCTION of the WHOLE of the SEWERAGE, in connection with the Improvement of Llandudno, may see the Plans, Sections, and Specifications, prepared by T. MACDOUGALL SMITH, Esq., C.E. at the Office of the Commissioners, between the hours of TEN o'clock a.m. and FOUR o'clock p.m. daily, on and after MONDAY, the 24th inst. Tenders (under seal) to be sent in, addressed to the Clerk to the Commissioners, on or before THURSDAY, the 11th of DECEMBER next. The Commissioners do not bind themselves to accept the lowest Tender; but in the event of one being accepted, the party or parties will be required to give security for the due performance of his or their contract, to the full specifications, prepared by T. MACDOUGALL SMITH, Esq., C.E. at the Office of the Commissioners, between the hours of TEN and FOUR, each day, except Sunday, until the 12th proximo. The person whose Tender may be accepted will be required to provide two eligible securities, to be bound with him jointly and separately, in a bond of £400 for the due performance of the contract, by the 1st OCTOBER, 1857. The War Department reserves the right of rejecting the whole or any of the Tenders. No notice will be taken of any Tender unless upon the printed form, which can be obtained at this Office.

Royal Engineer Office, Portsmouth, November 25, 1856.

CONTRACTS.

TUNSTALL LOCAL BOARD of HEALTH.—NEW COVERED MARKET.—To BUILDERS, IRONFOUNDERS, and OTHERS.—The Tunstall Local Board of Health are prepared to receive TENDERS for the EXECUTION of the several WORKS required in the ERECTION of a COVERED MARKET, according to the design and specification of G. T. ROBINSON, Esq., Architect, Leamington. The drawings and specifications may be seen from WEDNESDAY, the 26th instant, to WEDNESDAY, the 24th day of DECEMBER, 1856, at the Architect's Office, 23, Upper parade, Leamington, where all further particulars may be obtained. After that date they will lie for inspection at the Offices of the Local Board, Amicable-street, Tunstall. Sealed Tenders, properly endorsed, to be sent to me on or before the 14th JANUARY, 1857. The lowest Tender will not necessarily be accepted.—By order,

Tunstall, Nov. 29, 1856. JOSEPH LOWNDES, Clerk.

GLOUCESTER CEMETERY. — Parties desirous of TENDERING for the ERECTION of TWO CHAPELS, with TOWER and SPIRE, LODGE, and MORTUARY CHAMBER, with ENTRANCE-GATES, &c. for the Burial Board of the City of Gloucester, may see the plans and specifications at the Offices of the Architects, Messrs. MEDLAND and MABERLY, Clarence-street, Gloucester, on and after the 9th day of DECEMBER next. The Estimates to be delivered, post-paid, to the Clerk to the Burial Board, on or before the 20th day of DECEMBER next. The Board will not bind itself to accept the lowest or any Tender.—By order of the Board,

Gloucester, November 20, 1856. A. H. JENKINS, Clerk.

TO DUST CONTRACTORS.—The Vestry of the Parish of Chelsea will meet at the Board-room, at the MANOR-HOUSE, King's-road, Chelsea, on TUESDAY, the 9th day of DECEMBER, at ELEVEN o'clock in the Forenoon precisely, to receive TENDERS from any person willing to Contract, pursuant to the terms of a Draft Contract, marked "Dust Contract, 1856-7," now lying for inspection at the Office of the Vestry, Manor-House aforesaid, for COLLECTING and REMOVING the DUST, ASHES, FILTH, and RUBBISH, from the houses and other places within one or more of the several districts into which the said parish is divided, during the period commencing on the 10th day of DECEMBER, and ending the 29th day of SEPTEMBER, 1857. Parties Tendering must appear personally on the day the Tenders are opened, and a deposit of Ten Pounds per cent is to be paid on the acceptance of the Tender, and the remaining three-fourths as provided in the said Draft Contract. The costs, charges, and expenses of and incidental to the preparation and completion of the Contract, to be paid by the contractor upon the execution of the same. Sealed Tenders, signed by the proposed contractors, with the names and residences of two householders as sureties for the performance of his Contract, are to be left at the said Office, on or before SATURDAY, the 6th day of DECEMBER, but no Tender will be received or accepted unless made on one of the printed forms to be obtained at the said Office. The Vestry do not bind themselves to accept any Tender. By order,

CHARLES LARKE, Vestry Clerk.

Offices of the Vestry, Manor-House, King's-road, Chelsea,
November 27, 1856.

HACKNEY DISTRICT BOARD of WORKS. Notice is hereby given, that the Board of Works for this District will, at their meeting to be held at the Town hall, in Church-street, Hackney, on THURSDAY, the 18th day of DECEMBER, 1856, at TEN o'clock in the forenoon, CONTRACT for the SUPPLY and LAYING DOWN of 50,218 feet superficial of YORK PAVING:

1,300 Feet run of Granite Curbing.
285 Yards super. of Granite Paving.
8,809 Feet super. of York Paving Relay.
3,000 Feet run of Granite Curbing Relay.
200 Yards super. of Granite Paving Relay.

More or less, for paving and repairing the footpath commencing at the parish boundary at Cambridge-heath, adjoining the gate of the Marc-street, Hackney, to opposite Ward's corner. Also for paving and repairing the footpath commencing at the parish boundary at Kingsland-street, along the east side of Kingsland-road, Newington-road, and High-street, Newington, to opposite Abney-park Cemetery. The Tenders, addressed to the Clerk must be sealed, and marked "Tender for Paving and Curbing." Forms of Tenders and further particulars may be obtained at the Office of Mr. JAMES LOVEGROVE, the Surveyor, at the Town-hall, Church-street, Hackney, between the hours of TEN and FIVE, and by order of the Board,

RICHARD ELLIS, Clerk.

MERTHYR TYDFIL LOCAL BOARD of HEALTH. To IRONFOUNDERS, CONTRACTORS, and OTHERS. Persons willing to TENDER for the ERECTION of a new IRON LATTICE BRIDGE of about 80 feet span, including abutments, retaining walls, and approaches, to be built over the river Taff, at Pontytrinan, in the parish of Merthyr Tydfil, may see plans, specification, and obtain further particulars on application to Mr. J. W. HARRISON, Surveyor to the Board, at his Office in High-street, Merthyr, between the hours of TEN a.m. and TWO p.m. from the 1st of DECEMBER to 18th DECEMBER inclusive. Tenders to be delivered under cover to Mr. JAMES WARD RUSSELL, and endorsed "Tender for the Pontytrinan Iron Bridge," not later than MONDAY, DECEMBER the 22nd. The Board do not bind themselves to accept the lowest or any other Tender.

JAMES WARD RUSSELL, Clerk to the Board.

Merthyr Tydfil, November 24, 1856.

TO ROAD CONTRACTORS and OTHERS. The Executive Committee of the Third Tower Hamlet Freehold Land Society, are prepared to receive TENDERS for the CONSTRUCTION of the ROADS, and SEWERS, with all the necessary Drainage, Works, &c. &c. on the Estate, situate in the Parish of Bow, in the County of Middlesex, and known as the Land between the Old Ford Road, Bow, and the Regent's Canal, Hackney, and the Estate of the Victoria Park Freehold Land Society, Hackney. Plans and Specifications may be seen at the Offices of the Society, No. 1, Bow-road, Bow, on and after Monday next, the 1st day of December next. Tenders to be sent in on or before the 15th day of December next.

[For remainder of Contracts see next page.

CONTRACTS.

PARISH of BRIGHTON.—To BUILDERS and OTHERS.—The Burial Board for the Parish of Brighton are desirous to receive TENDERS for and upon the Plans, Drawings, Specification, and Conditions of Contract for the ERECTION of TWO CHAPELS, with Vestries and a Central Tower, &c. Sexton's Lodge, Lych House and Memorial Gateway, on the new Burial ground. The plans, drawings, specification, and conditions of contract will be for inspection at the Parochial Offices, Church-street, Brighton, from FRIDAY, the 5th day of NOVEMBER inst. until SATURDAY, the 6th day of DECEMBER next, between the hours of NINE and SIX; and further information may be obtained upon application to GEORGE WILLIAM LEE, Esq. Architect, Bedford Chambers, Bedford-row-street, Strand, London. Tenders to be delivered at the Parochial Offices, Church-street, Brighton, on MONDAY, DECEMBER the 29th inst., not later than TWO o'clock in the Afternoon, endorsed, "Tender for Chapels, &c. to the new Burial ground, Parish of Brighton." Each Tender to be accompanied with a sealed note, containing the names and address of the parties who will be willing to enter into bonds for the due performance of the several works. The Burial Board will not be bound to accept the lowest or any Tender. By order of the Board, SOLOMON CLARKE, Vestry Clerk.

Brighton, Nov. 27, 1856.

BERMONDSEY VESTRY, SURREY.—To STONE MERCHANTS and OTHERS. The Vestry of this Parish will meet at the WORKHOUSE, in Russell-street, Bermondsey, on MONDAY, the 15th day of DECEMBER inst., at Six o'clock in the evening precisely, to receive TENDERS for the supply of 800 feet of 18 by 9 ABERDEEN GRANITE TRAMSTONE, delivered at Spa-road's Wharf, near Rotherhithe Tollbar Turnpike. The same is to be cut ready for the top, bed, perpendicular, and joints, and in lengths of not less than 3 feet 6 inches. The Tenders to state within what time the stone can be delivered, and the time limited will form part of the essence of the contract. Payment will be made within one month after the surveyor has given his certificate to that effect, and such certificate to be given only on the completion of the contract. The Vestry do not bind themselves to accept the lowest or any Tender. GEO. H. DREW, Clerk.

Vestry Office, Maltby-street, December 5, 1856.

LLANDOVERY, CARMARTHENSHIRE. To BUILDERS, MASONS and OTHERS. Persons desirous of CONTRACTING for the ERECTION of a NEW HALL and CORN MARKET, to be built at Llandovery, are requested to send in their Tenders, to the Powell's Arms on or before the 15th day of JANUARY next. An inspection of the plans and specifications may be obtained upon applying to Mr WM. REES, Town-clerk, Llandovery, after the 15th of DECEMBER.

N.B. This advertisement will not be repeated.

LOSH, WILSON, and BELL, NEWCASTLE-ON-TYNE.

Manufacturers of Iron for Railways, Bars, Forge and Engine Work, and Tyres, and Spring Steel.

STEWART'S PATENT CAST-IRON DIAGONAL WATER PIPES

Offices, No. 7, Great-George-street, London.

ALEXANDER'S PATENT SASH and BLIND LINE

Can be obtained of

ROPEMAKERS, IRONMONGERS, MERCHANTS, FACTORS, and WHOLESALE HOUSES, in TOWN or COUNTRY.

Established 1774.

TO IRONMONGERS, BUILDERS, &c.

PATENT WROUGHT-IRON WELDED TUBE for GAS; galvanized ditto for water; high-pressure cocks, &c. Manufactured by Archibald Somerville, Improved Ventilators. HULETT and CO. 57, High Holborn.

JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS.

J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior tone, truer in form, and at less cost than has heretofore been accomplished.

Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any size, note, weight, study or in peals.

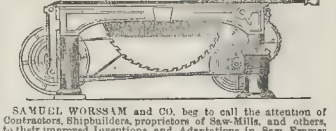
TUNED BY MACHINERY.

Stocked and wheeled ready for hanging. Old Bells recast or taken in exchange.

MUSICAL HAND-BELLS tuned to the Chromatic Scale, with improved Clappers, and pegged on a new system, which give superior tone and facility for ringing.

The great 16-ton Bell, for the Houses of Parliament, was made by JOHN WARNER and SONS, 1856, under their Patent.

HART AND SON,
IRONMONGERS AND MANUFACTURERS,
53, 54, 55, 56, & 57, WYCH-STREET, STRAND,
London.



LOCKS, HINGES, HANDLES, BOLTS, &c.

First-class Prize Medal, Paris Exhibition, 1855.

Specimens at the Hardware Court, Crystal Palace, Sydenham.

MACHINERY for SAWING, PLANING, MOULDING, &c.

SAMUEL WORSSAM and CO. beg to call the attention of Contractors, Shipbuilders, proprietors of Saw-Mills, and others, to their improved Inventions and Adaptations in Saw Frames and Benches, Roller and Chain Planing Machines, Endless Saw Frames, and all other kinds of Machines, for Sawing, Planing, Grooving, and Moulding Wood. They have constantly on hand machinery, either wholly or partly made, so that they can at all times on short notice supply them. S. W. and CO. beg to state that they have hitherto confined their attentions to this sort of machinery, and have had the honour of supplying some of the most distinguished companies, ship builders, and contractors in the world with their machines, for home and foreign use. One of their Saw Benches, and also a smaller one, with Boring Apparatus, may be seen at the Machinery Department, Crystal Palace.—A descriptive Catalogue, with Drawings, may be had on application to SAMUEL WORSSAM and CO. Engineers, &c. King's-road, Chelsea, London.

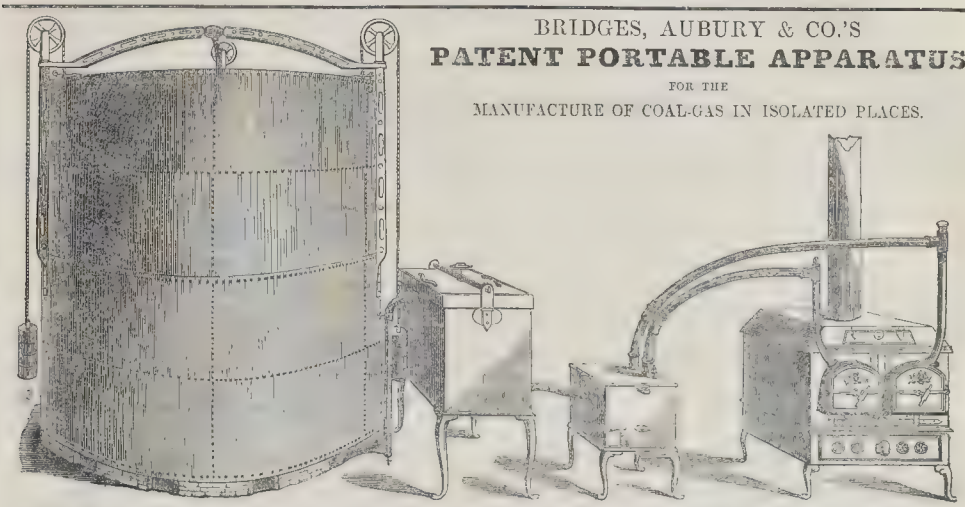
WOOD-PLANING and MOULDING MACHINE. WANTED, to PURCHASE, a good SECOND-HAND MACHINE, of such description.—Address, WILLIAM WINTERTON, Saw Mills, Leicester.

PLANING-MACHINE for SALE.—A first-class PLANING-MACHINE, nearly new, to be DISPOSED OF. Will plane 9 feet in length, 3 feet in width, and 3 feet in depth, and weighs about six tons. It is from the patterns of Shepherd, Hill, and Spinks, of Leeds. Further particulars may be obtained by application to E. B. S. 47, Finchley-road, Walworth.

W. BOOTH, CITY CENTRAL SAWING, PLANING, and MOULDING MILLS, WHITECROSS-STREET, St. Luke's, respectfully solicits the attention of the trade to the central position of his establishment, which will be found a great advantage to the City Builders, Casemakers, Yard Keepers, and Manufacturers. Every accommodation is offered that the trade requires, having large space, &c. Teams and carts to the Docks and Railway Stations daily. Five minutes' walk from the Bank of England.—Particulars per post, or on application.

PATENT MACHINES for WORKING on WOOD.—These celebrated Machines have been awarded a number of prize medals by many scientific institutions, and also by the Great Exhibition in London, and are now extensively used by the Indian, American, and all the principal governments in Europe; also by eminent Contractors, Builders, Shipwrights Machinemakers, and other workers in wood. Their operations are in every respect perfect, either in hard or soft wood, for planing, squaring up, moulding, tenoning, mortising, grooving, rebating, sawing, and boring, which they perform in a very rapid and superior manner, at a greatly reduced cost.—Sold only by WILLIAM FURNESS, Patentee, 36, Lawton-street, Liverpool, from whom full particulars may be obtained, and all the machines can be seen at work.

SAWING-MACHINERY for SALE.—ONE VERTICAL SAW-FRAME adapted for cutting round or square timber up to 5 feet in width, and of any length; with forty-eight saws, and everything complete. ONE SELF-ACTING CIRCULAR SAW-BENCH, 60 feet long, adapted for a saw 4½ feet diameter, and under; with a set of seven saws. ONE HORIZONTAL STEAM ENGINE, with a 30-inch cylinder and 4-feet stroke, with all the necessary shafting, drums, pillow-blocks, &c. for driving the above machines, according to a fixed plan. The machinery is quite new, and of the most modern and approved construction. The whole is complete, ready for erection, being highly finished, and in every respect first-class machinery. It is offered for sale solely on account of the owners having departed from their intention of erecting it abroad.—For further particulars apply to the makers, JOHN McDOWALL and SONS, Walkinshaw Foundry, Johnstone.



WROUGHT-IRON GIRDERS
For BRIDGES and BUILDINGS,
MANUFACTURED AND GUARANTEED AS TO STRENGTH
CAST-IRON GIRDERS for BRIDGES
Wrought-iron Doors, Boiler, & General Smiths' Work.
BUILDERS' CASTINGS OF EVERY DESCRIPTION.

ROLLED WROUGHT-IRON FLITCHES
For TRUSSING BETWEEN TIMBER.
SPIKES, RIVETS, CUT NAILS, WROUGHT DITTO SCREWS, BOLTS AND NUTS, BAND HOOPS, CHAINS, &c.
CONTRACTORS' PLANT, RAILS, EARTH WAGGONS,
And IRON WORK for WOOD WAGGONS, &c.

MATTHEW T. SHAW, 64, CANNON-STREET (late with C. J. Mare & Co.)
Such arrangements are made for Despatch and Punctuality that Orders can be executed in a few days.

ZINC ROOFING, INCLUDING TIMBER OR IRON FRAMEWORK,
IS AS
CHEAP AS SLATES OR GALVANIZED IRON, LIGHTER, AND MORE DURABLE.
Certificates, and Models of various descriptions, may be seen, and estimates obtained on application to
THE SURVEYOR OF THE VIEILLE MONTAGNE ZINC MINING COMPANY, 12, MANCHESTER BUILDINGS, WESTMINSTER.
ROOFS CONSTRUCTED UNDER HIS SUPERINTENDENCE GUARANTEED TO REQUIRE NO REPAIRS FOR AT LEAST TEN YEARS.
THE OLD METAL BEING ALWAYS RETAKEN AT HALF-PRICE, RENDERS IT ADVANTAGEOUS FOR ALL TEMPORARY BUILDINGS.
Many roofs covered with zinc thirty-five years ago have never required repairs.

BRIDGES, AUBURY & CO.'S
PATENT PORTABLE APPARATUS
FOR THE
MANUFACTURE OF COAL-GAS IN ISOLATED PLACES.

The Nobility, Railway Companies, Millowners, &c., can now, by the use of the above patent, make their own gas. There are many advantages in this apparatus over every other invention. It is really portable: can be taken to pieces and put together again, and gas obtained in a short time.
Can be seen in operation at the Edenbridge Station, South-Eastern Railway; Market Tey Station, Eastern Counties Railway; Caterham Station and Hotel, Caterham Railway; and at the Philanthropic Farm Schools, Red-hill; and elsewhere. References and testimonials given upon application to the Patentees, at their Manufactory, 84, Webber-row, Westminster-road.

VENTILATING STOVES! SUSPENSION STOVES!—Approved by thousands of purchasers, and recommended as the cheapest, most healthy, and economical for churches, chapels, halls, schools, warehouses, shops, greenhouses, boudoirs, libraries, &c. Prospectuses, with prices, sent post-free.—DEANE, DRAY, and CO. Stove Range, Ironmongery and Furnishing Warehouse, London-bridge.

DR. ARNOTT'S SMOKE-CONSUMING GRATE.
Will this Grate become universally used?
Its advantages over every other consist in—
1. A saving of 50 per cent in fuel
2. Its being a cure for a Smoky Chimney
3. Its not requiring one half the attention of an ordinary fire.
4. Its being perfectly safe.
A Prospectus, with a Second Series of Testimonials, just issued from all parts of the country will be sent on application.
J. EDWARDS, SON, and CO., 43, Poland-street, Oxford-street.

RADIATING and REFLECTING STOVE. WILLIAM S. BURTON'S NEW REGISTER STOVE combines completely the well-known principles of both Stephen's and Sylvester's celebrated patent stoves, while it has others equally valuable, which are peculiarly its own, and for which a patent has been granted. Its radiating and reflecting powers are perfect, it is very simple, and cannot be put out of order, consumes but little fuel, is most cleanly and cheerful in use, while its general appearance, no fender being needed, is most imposing. Prices, complete black or bronzed, from 9l. 10s.; bright, 14l. 5s., and upwards. One may be seen in action in his Show-rooms, which contain such an assortment of fenders, stoves, ranges, fire-irons, and general ironmongery, as cannot be approached elsewhere, either for variety, novelty, beauty of design, or exquisiteness of workmanship. Bright stoves, with bronzed ornaments and two sets of bars, 2l. 2s., 2l. 9l. Bronzed fenders, with standards, 7s. to 3l. 12s.; steel fenders, 2l. 15s. to 11l.; ditto, with rich ormolu ornaments, 2l. 15s. to 18l. Fire-irons, from 1s. 9d. the set to 2l. 2s.
The late additions to these extensive premises (already by far the largest in Europe) are of such a character that the entire of EIGHT HOUSES is devoted to the display of the most magnificent stock of GENERAL HOUSE IRONMONGERY including Cutlery, Nickel Silver, Plated Goods, Baths, Brushes, Turnery, Lamps, Gasaliers, Iron and Brass Bedsteads, Bedding and Bed Hangings, so arranged in Sixteen Large Show-rooms as to afford to parties furnishing facilities in the selection of goods that cannot be equalled elsewhere. Illustrated Catalogue sent (per post) free.—39, Oxford-street; 1, 1a, 2, and 3, Newman-street; 4, 5, and 6, Perry's-place, London.—Established 1820.

BATHS and HOT-WATER APPARATUS. J. TAYLOR and SONS' ILLUSTRATED CATALOGUE of BATH WORK, &c., to be had on application. Estimates and Plans for Pumping and Fixing by J. TAYLOR and SONS, Manufacturers, Warwick-lane, Newgate-street, London.

NEW GLASS GAS STOVE.—NEALL'S PATENT, Unique, Elegant, Efficient, and Inexpensive; price 30s. 6d. This valuable invention combines the important advantages of a light, a fire, a perfect freedom from smoke or smell, forms an ornament to a drawing-room or gentleman's hall, and is equally available for public or private offices.—DEANE, DRAY, and CO. Gas Engineers, London-bridge, Sole London Agents. The trade supplied.

HEATING BY HOT WATER.

JOHN WEEKS and CO. King's-road, Chelsea, HOT WATER APPARATUS MANUFACTURERS. Buildings of every description, and of the most extensive dimensions, can be efficiently warmed by Hot Water. JOHN WEEKS and CO. can give innumerable references of Churches, Dwelling-houses, Warehouses, &c. &c., in other lots where their Hot Water Apparatus. Also to be seen in extensive operation at their Premises, King's-road, Chelsea.

REGISTER STOVES, with PATENTED IMPROVEMENTS.—DEANE, DRAY, and CO. invite the attention of purchasers to their Stock of STOVES for drawing and dining rooms; also, a large assortment of PATTERNS, suitable for sitting-rooms, offices, bed-rooms, &c. In Fenders and Fire-Irons, DEANE, DRAY, and CO are constantly introducing every novelty at the lowest prices. DEANE, DRAY, and CO.'s Stove, Range, and General Ironmongery Warehouse, London-bridge.—Established A.D. 1700.

PARIS EXHIBITION, 1855.
PRIZE MEDAL
AND
HONOURABLE MENTION AWARDED TO
THOMAS WALKER,
STOVE MAKER, BIRMINGHAM.
Sign of NAPOLEON BONAPARTE.
The only Stove for which a Prize was awarded at the French Exhibition.
For Churches, Gentlemen's Halls Shops, &c.
The best invention of Stove ever brought before the Public.
These Stoves show a bright fire; are durable, economical, and burn iron twelve to sixteen hours with one supply of fuel.
Prospectuses and testimonials may be obtained at the Manufactory,
88, OXFORD STREET, BIRMINGHAM.

GLOVER, BROTHERS
FOUNDERS, ENGINEERS, and SMITHS,

Castings and wrought ironwork of every description. A large stock of patterns for building and other purposes, for the use of which no extra charge is made.
Estimates on application.
168, Brunswick-lane, Spa-road, Bermondsey.

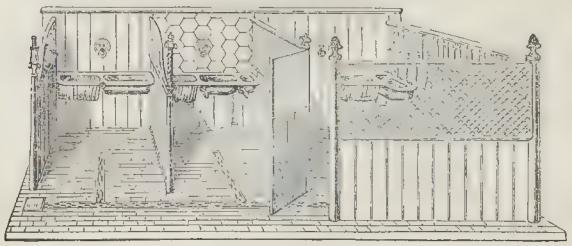
COMPLETE IMMUNITY from FIRE, THIEVES, and GUNPOWDER.—EDWIN COTTERILL, Patentee, Patentee and Sole Manufacturer of the Indestructible Detector Locks, the only Locks which have been tested and cannot be picked and gunpowder. Detective travellers, with testimonials and full report of the numerous attempts by Hobbs to pick the Climax Detector Locks, as also many recommended by, at Manchester, Liverpool, Birmingham, and Bristol, Safes and Chests, Patent Double and Single-Action Door-Springs, &c. &c.—A 16, Victoria-street, corner of Regent-place, Birmingham.

A PRIZE MEDAL for SUPERIOR LOCKS was awarded to J. H. BOOBBYER at the Great Exhibition of 1851, who invites the attention of Builders, &c. to his Stock of Ironmongery, Brass Foundry, Nails wrought and cut, Copper and Zinc; Patent Locks of all descriptions; China, Glass, and Wood Furnitures of all kinds, with Patent Shifting Spindles; Dr. Arnott's Ventilator, &c.; and the new registered Venetian Ventilator, so much admired, &c. &c. &c. &c.
J. H. BOOBBYER (late STURCH and BOOBBYER), established nearly 200 years, for the supply of Goods from the best Manufactories, at the lowest prices.
14, Stanhope-street, Clare-market, London.

CHUBB'S LOCKS, with all the recent improvements; STRONG FIRE-PROOF SAFES, CASH and DEED BOXES. Complete lists of sizes and prices may be had on application.
CHUBB and SON, 57, St. Paul's-churchyard, London; 28 Lord-street, Liverpool; 16, Market street, Manchester; and Horsley-fields, Wolverhampton.

JOHN TANN'S NEW PATENT RELIANCE LOCK and CHEMICAL FILLED FIRE-PROOF SAFES, DOORS, ROOMS, &c. Manufactures of cash and deed boxes, copying presses, every description of lever locks and street-door latches. To be had at the Patentee's Lock and Safe Warehouse, 7, Wych-street, Strand. Lists of prices on application.—Several second-hand SAFES for SALE, at half the original cost.

COLLINGE'S PATENT HINGES.—Manufacturers, CHARLES COLLINGE and CO. 64 and 65, Bridge-road, Lambeth, where a great variety are always on view for church, park, railroad, coachhouse, and other gates suitable to all sizes and small thicknesses of wrought mooring with these hinges as easily as a wicket. Ornamental hinges, adapted for lamb's eye nos. & c., and are fitted with them may be removed and refixed in a minute. Rising and double-acting spring hinges, and superior cast locks, of modern prices. Note—grounds unless fitted "Collinge's Hinge, Patent, Lambeth." Plans and ornamental designs in wrought ironwork, for building and other purposes. Engines, machinery, patent axletrees, sugar-mills, &c.



JOHN McDOWALL and SONS, Engineers, Wakefield, are prepared to supply Johnston's manufacture every description of yarn in connection with the sewing and shaping of cloth.—Full information, and specimens of the various manufactures, may be had on application as above.

WANTED, a SMALL IRON FOUNDRY, for light work, for five or six moulders. Ten or twelve miles from London would not be objected to, if near a railway station.—Address, H. S. 61, Threadneedle-street.

TO CONTRACTORS to the WAR DEPARTMENT.—JUKES COULSON and CO. 11 and 12, Cranwell-street, Oxford-road, Manchester, beg to inform the trade that they have PATTERNS suited by the Government, of Stoves, Ranges, Cooking Apparatus, Kitchen Utensils, and Sundry Castings, which have lately been Contracts for these articles from the War Department for some years, and will be happy to furnish prices for the above to parties contracting Works, or for any articles in the ironmongery trade.

NEW PATENT INVENTIONS FOR STABLE REQUISITES.

AWARDED A PRIZE AT THE PARIS EXHIBITION, AND PATRONISED BY THE ENGLISH AND FRENCH GOVERNMENTS.

SMITHFIELD CLUB SHOW—STAND 268 to 270.

COTTAM and HALLEN, of Winsley-street,

Are the original inventors of the PATENT ENAMELLED MANGER, WATER-TROUGH, and WROUGHT-IRON RACK, united to an iron top-plate, and forming one complete and useful fixture, having Cottam's Patent Noiseless Halter-Guide and Collar-Rein attached, the ball of which is taken to the back of the manger, and works with ease and freedom up or down the guide-bar, Cottam's new Patent Seed-Box, of galvanized sheet-iron, is an important addition to the above fittings, being simple in construction, light and durable, promotes cleanliness, and is economical in its results. Also, the new Patent Saddle and Harness Bracket combined, which can be used with great advantage where space is an object, as it can be turned up out of the way when not in use.

Improved Harness Holders, for preserving the shape of the harness, and preventing its cracking. Patent Loose-Box Fittings, Cheap and Durable Corn-Bins.

Improved Surface-Drain, with safety covers, Sanitary Traps, and every article for the harness-room and stable, kept in stock, plain, galvanized, and enamelled. Iron Gates, Fencing, Hurdles, &c.

The new Illustrated Catalogue for 1856, and estimates gratis, upon application to

COTTAM AND HALLEN, 2, WINSLEY-STREET, OXFORD-STREET.

TYERMAN'S PATENT HOOP-IRON BOND,

FOR BUILDING PURPOSES.

ADOPTED BY SEVERAL DEPARTMENTS OF THE GOVERNMENT.

TARIFF OF PRICES beyond the current Price of Hoop-iron.

Gauge.	In. wide.	Per 1,000 ft.
No. 18	1¼	7s. 6d.
15	1½	7s. 6d.
15	1¾	8s. 9d.
15	2	8s. 6d.
15	2½	9s. 6d.

THE PATENT BOND (which is prepared from the ORDINARY HOOP IRON, by notching it at intervals of 1¼ inches) is now being extensively used in the leading GOVERNMENT WORKS, DOCK BUILDINGS, BANKS, ASYLUMS, BRIDGES, VIADUCTS, PRISONS, ENGINE-HOUSES, and MANUFACTORIES, as well as in other PUBLIC and PRIVATE WORKS, in London and in all parts of the kingdom.

Sole Manufacturers—THOMAS PERRY and SONS, Highfields Works, Bilston.

London Depôt—ST. ANN'S WHARF, EARL-STREET, BLACKFRIARS.

FIRE-PROOF CONSTRUCTION.—FOX and BARRETT'S PATENT.

This improved system of fire-proof construction has been most extensively adopted, and its application has been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private.

The system combines ECONOMY, with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.

The floors and roofs are formed by a combination of joists of wrought or rolled iron with concrete; so constructed that each floor becomes in effect a beam of artificial stone, with ribs of iron; the structure possessing great strength and rigidity, and forming a fire-proof foundation adapted to receive a finished surface, either of the ordinary flooring-boards, or of cement, asphalte, tiles, slate, or other material.

Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, both as superseding the necessity for cast-iron girders and brick arches, and as bringing the great desideratum of fire-proof construction, even for ordinary dwelling-houses and domestic buildings, within the reach of every one.

Further information may be obtained of the Proprietor of the patent,—Mr. BARRETT, 12, York-buildings, Adelphi.

CANNON IRON FOUNDRY, 80, Goswell-street, St. Luke's.—JONES and BLAXTON, having made great additions to their STOCK of PATTERNS, beg to inform the Trade that they can now supply them with Plain and Ornamental Iron Columns, Girders, Railings, Gates, Iron Coping, Balconies, Window Guards, Verandahs, Ornamental Staircase Panels, Iron Staircases, Tomb Enclosures, Trellis Panelling, Lamp and other Brackets, Cantilevers, Newel Bars, Water Closet Work, Area Gratings, Fly and other Wheels, Wheel Plates, &c.

BAKERS' OVEN WORK, Forge Backs and Troughs, Ram Water Pipes and Gutters, Sash Weights, Furnace Bars, Stoves, Ranges, &c. always in stock.

IRON FOUNDRY, Harrow-street, Lant-street, Southwark.—W. R. BARTLETT, manufacturer of Girders, Columns, Cantilevers, Railing, and Newel Bars, Iron Coping, Panels, Tomb Enclosures, Area Gratings, Sash Weights, &c. Also Fly and other Wheels, Riggers, Pinions, Engine and Lathe Castings; Forge Backs, Furnace Bars, Kilns, Pans, Pipes, Tank Plates, and other Castings, to patterns or drawings.

ESTABLISHED 1817.

RICHARD LYDELL'S Brass and Bell Foundry and Metal Warehouses, Nos. 10, 11, and 12, Charles-street, Long-acre, London.

HARTLEY AND CO.'S GLASS TARIFF FOR THE FIRST OF DECEMBER

ISNOW READY, AND MAY BE OBTAINED ON APPLICATION TO

MESSRS. JAMES HARTLEY AND CO. SUNDERLAND.

It contains :—

No. 1. TARIFF.—CROWN GLASS.
" 2. SHEET.
" 2B SHEET FOR EXPORTATION.
" 3. HARTLEY'S PATENT ROUGH PLATE.
" 4. PATENT FLUTED.
No. 5. PATENT QUARRY
" 6 PATENT DIAMOND.
" 7. PERFORATED GLASS FOR VENTILATION.
" 8. PATENT PLATE.
" 9 POLISHED AND CAST PLATE.
No. 10. COLOURED GLASS AND GLASS FOR RAILWAY PURPOSES.
" 11. MISCELLANEOUS GLASS ARTICLES.
" 12 SHADES.
" 13 STAINED GLASS WINDOWS.

The whole of the foregone Tariffs have been simplified—the nomenclature altered to correspond with the terms employed by Architects in their specifications—and the nominal High Prices reduced, so that the whole is now subject to one uniform rate of Discount to the Trade.

Having now abolished all the anomalies encendered by usual regulations, it is believed the present Tariff will meet the general requirements of the Trade, and that Shippers will be able to compete with Glass of Foreign Manufacture in all parts of the World.

FACING FOR BUILDINGS COMPANY—TAYLOR'S PATENT.

BUILDINGS PERFECTLY RESISTANT TO WET WITHOUT ADDITIONAL EXPENSE, OR THE USE OF COMPO,

REQUIRING THE CONSTANT EXPENSE OF PAINTING. EXTERNAL WALLS FACED WITH AN INDESTRUCTIBLE MATERIAL.

STONE-FACED BUILDINGS AT LITTLE MORE COST THAN CEMENT.

No necessity for Iron Cramps and Bond-stones, and the Stone Ashlar never injuriously weighted by the settlement of the Mortar joints of the inside Brickwork. The INSIDE of CHURCHES and OTHER BUILDINGS FACED WITH STONE instead of Plastering. Also Dining Halls, Lobbies, Staircases, &c. of Private Residences. It can be had ready for fixing from the quarries at a small cost for carriage, or prepared at home. Can be used with the ordinary Bricks of any locality, and by the ordinary workman. The CHURCH faced inside and outside in this manner, and the other Buildings at SPRING GROVE HOUNSLOW, and elsewhere, can be inspected, and all particulars obtained, of

Mr. JOHN TAYLOR, ARCHITECT, OFFICES OF THE COMPANY, 40, KING-STREET, CORNER OF CHEAPSIDE.

TO ARCHITECTS, BUILDERS, CONTRACTORS, AND OTHER CONSUMERS OF GLASS.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th of an inch thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th or 4 lbs. is now universally used for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, MILLS, MARKET HALLS, BATHS AND WASH-HOUSES, FACTORIES, WORKSHOPS, SHIP-BUILDING SHEDS, AND OTHER EXTENSIVE BUILDINGS.

By a carefully prepared Estimate, it has been ascertained that FOUR-FIFTHS of the ROUGH PLATE, or non-transparent Glass, consumed in the United Kingdom in 1854 was manufactured by HARTLEY'S PATENT—thus affording the most incontestable evidence of its superiority over every other article of the kind, and as being the only, description of Glass suitable for the purposes above named. It combines size and strength with economy of cost, and is manufactured in sizes expressly for RIDGE and FURROW ROOFS, giving a SPAN of TWELVE FEET, at a price not exceeding, weight for weight, that of Common Crown Glass. Its non-transparency renders BLINDS UNNECESSARY, and no scorching occurs in Greenhouses glazed with it; hence the preference given to this Glass for all Horticultural purposes.

For further particulars, apply to

JAMES HARTLEY AND CO. SUNDERLAND; AND PURFLEET WHARF, EARL-STREET, BLACKFRIARS, LONDON.

Sole Manufacturers of Lockhead's Patent Perforated Glass for Ventilation.

*** *Hartley and Co.'s Glass Tariff Newspaper will be forwarded gratis, on application.*

Offices, No. 6, Guildhall Chambers, Basinghall-street, City.

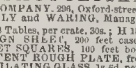
CHEAP AND DURABLE ROOFING.

By Her Majesty's  Royal Letters Patent.



F. McNEILL and CO. of LAMB'S-BUILDINGS, BUNHILL-ROW, LONDON, Manufacturers and ONLY Patentees of

THE PATENT ASPHALTED FELT, FOR ROOFING HOUSES, VERANDAHS, SHEDS, &c.

Patronized by

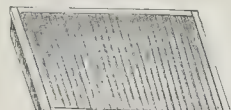
HER MAJESTY'S WOODS AND FORESTS,
HER MAJESTY'S COMMISSION OF CUSTOMS,
HONOURABLE EAST-INDIA COMPANY,
HONOURABLE BOARD OF ORDNANCE,
HER MAJESTY'S ESTATE, ISLE OF WIGHT,
ROYAL BOTANICAL GARDENS, REGENT'S PARK,

And by the most eminent members of the Royal Agricultural Societies of England, Scotland, and Ireland; at whose great national shows it has been exhibited, and OBTAINED THE PRIZE, for being the best and cheapest article for roofing; also used for under slates at the Royal Agricultural Society's House, in Hanover-square. Its advantages are lightness, warmth, durability, and economy. It is impervious to rain, snow, and frost, and a non-conductor of heat and sound. The Felt can be cut to any length, by 32 inches wide. The price is only ONE PENNY PER SQUARE FOOT. Samples, with full directions as to its uses and the manner of applying it, with TESTIMONIALS, some of them of seven years' experience, from Architects, Builders, Noblemen and Gentlemen who have extensively used it, sent free to any part of the town or country. A Dry-hair Felt, for covering Boilers, &c. is also manufactured, by which a saving of about 25 per cent in fuel is effected. The TRADE are respectfully exhorted to send their orders DIRECT to the FACTORY, as the surest means of being supplied with the genuine article, and in lengths best suited to their roofs. They are likewise CAUTIONED AGAINST MISREPRESENTATION, as the only works in Great Britain where the above is made are F. McNEILL and CO.'s Manufactories, LAMB'S-BUILDINGS, BUNHILL ROW. Roofs covered with the Felt to be seen at the Factory, also the new Vice-Chancellor's Courts the passages and offices leading to Westminster Hall, and other buildings at the New Houses of Parliament.—A Liberal Discount allowed to the Trade.

By Royal  Letters Patent.

THE COSMOPOLITAN GLASS COMPANY, 296, Oxford-street.
HELY and WARING, Managers.

CCC CROWN, 18 Tables, per crate, 30s.; H 15 oz. SHEET, 2½d per foot; FOREIGN SHEET, 200 feet cases, 34s per case; CROWN or SHEET SQUARES, 100 feet boxes, 2d. per foot: HARTLEY'S PATENT ROUGH PLATE, from 6d. and PERFORATED VENTILATING GLASS, 1s.6d. per foot; CRYSTAL SHEET GLASS, 4d., 6d. and 8d. per foot; FLASHED RUBY, 10d. GROUND SHEET, 3½d ENAMELLED, 8d per foot. Tiles and Slates from 6d. each. Sashes primed and glazed. HELY'S PATENT GAS SHADE SCREEN, for INDICATING and ADVERTISING at NIGHT.



Catalogues and Prospectuses free.

CRYSTAL WHITE SHEET GLASS, First, Second, and Third Quality, in Cases of 100, 200, and 300 feet, suitable for Pictures and superior Glazing, from 3d. to 6d per foot; also in Cases of 100 and 200 feet, assorted sizes. Belgium Sheet Glass, in Cases 200 feet each, 37 lbs. 32s.; 42lbs, 34s. Squares, in Boxes of 100 feet each, 8 by 4, to 10 by 8, 1½d. per foot. Larger sizes up to 84 by 14, 2d per foot. Ground Glass, in Cases, 2½d. per foot. Crown and Sheet British and Patent Plate, HARTLEY'S Patent Rolled Rough Plate, English and Foreign Fluted, Stained Glass, Glass Slates, &c. &c. Price-lists and estimates forwarded on application to ROBERT METTAM, 30, Princes-street, Leicester-square.

PATENT and BRITISH PLATE GLASS.—JAMES METLEY and CO. beg to inform Architects Builders, and the Trade generally, that their new Tariff of Prices for the above will be sent on application; they will also on receipt of particulars, furnish estimates for any description of Glass now manufactured.—Patent Plate, Sheet, Crown, and Ornamental Window Glass Warehouse, 35, Soho square, London.

CRYSTAL SHEET GLASS, first, second, and third quality, in cases about 200 feet each, suitable for pictures and superior glazing, from 3d. to 6d. per foot; Belgian sheet glass, in cases 200 feet each, 3rds, 32s.; 4ths, 36s.; squares, in boxes, 100 feet each, 6 by 4 to 10 by 8, 1½d.; larger sizes, up to 52 by 14, 2d.; ground-glass, in cases, 3½d. per foot; Crown and Sheet, British, Patent, and Hartley's Patent Rolled Rough Plate, English and Foreign Fluted, Stained Glass, Glass Slates, &c.; Sheet Lead, Pipe, White Lead, Oils, Colours, &c.
G. FARMILOE and SON, 118, St. John-street, West Smithfield.

PLATE-GLASS.—The THAMES PLATE-GLASS COMPANY'S PATENT GLASS GRATING LIGHTS, for Cellars, Flooring, and Ships' Decks.

These Lights equals that of Iron gratings; can be had in sizes to suit the largest or smallest Openings; neat in appearance, not slippery to walk upon, and an unobstructed Light is obtained.

THE CHEQUERED PLATE GLASS made by this Company is preferred to any other kind of obscured glass, from its crystal and brilliant appearance.

The prices of PLATE GLASS have recently been very much reduced. Sash Quality scarcely exceeds the price of ordinary thin Window-glass.

This Company manufactures Plates of all lengths, up to 24 feet long by 14 feet wide.

Contracts with the Trade for Sash Quality, are taken by the Thames Plate Glass Company, on the Lowest Terms.—Address to the Secretary, Mr. G. GWILLIAM, Savoy Wharf, Strand.

E. and W. H. JACKSON beg to call the attention of Builders and the Trade to the LOW PRICES at their PATENT PLATE GLASS, BRITISH PLATE, silvered and for glazing, of unrivalled quality and finish; ROUGH PLATE, CROWN, SHEET, COLOURED, and ORNAMENTAL GLASS, in every variety, of the best manufacture, at the lowest terms. Designs and estimates furnished for ornamental windows, either for house or church decoration.—All applications for estimates and lists of prices to be made at their warehouse, 115, OXFORD-STREET.

PLATE-GLASS.—Builders can be supplied with PLATE-GLASS of any size AT VERY REDUCED PRICES, upon application to the SOHO PLATE-GLASS COMPANY, 26, Soho-square.

SHEET WINDOW-GLASS.—Messrs. PACK, BARBER, and CO. have now on hand a large Stock of Sheet Window-glass, nearly 18th inch thick, 44 by 30 to 40 by 20, 3rd and 4th, from 32s. to 44s. per case, 200 feet.—23, Westcheap-street, Smithfield.

TO ARCHITECTS and BUILDERS.—GLASS CHANDELIERS, CANDELABRA, &c. for Gas or Candles, at PELLATT and CO.'S (late Pellatt and Green) Falcon Glass-works, Holland-street, Blackfriars. Sketches, with prices, free per post.

CHURCH CUSHION and HASSOCK MANUFACTURERS
DOOR-MATS AND COCOA-NUT MATTING.
JONES and WILLIS,
Temple row House, Birmingham,

And of Great Trinity-lane, New Cannon-street, City, London, beg to draw the attention of the clergy, churchwardens, architects, &c. to the above, and being extensive manufacturers, and under their own entire management, can offer much more than ordinary advantages in price and variety.

Catalogues and estimates free, upon application; likewise of their Church Decorations, in Altar-cloths, Carpet, Chancel and Desk Hangings, Embroidery, Fair Linen Cloths, Robes, Surplices, Clerical Clothing, &c.

TO ARCHITECTS and BUILDERS.—T. TRELOAR, 42, Ludgate-hill, Manufacturer, supplies Cocoa-nut Fibre Matting, Door-mats, Hassocks, &c. of the best quality, on the most reasonable terms. Warehouse, 42, Ludgate-hill.

ROBERT NORTON, Secretary.

DURABILITY of GUTTA PERCHA TUBING.—Many inquiries having been made as to the durability of Gutta Percha Tubing for Gutta Percha Company, the Proprietors have much pleasure in inserting the following letter from SIR RAYMOND JARVIS, Bart., TENNYSON D'EYNCOURT, Esq., and WIGHT.—Second Testimonial. "March 10th, 1852.—In reply to your letter, received this morning, respecting the Gutta Percha Tubing for Pump Service, I can state, with much satisfaction, it answers perfectly. Many Pipes, and other Tubes, have been examined it, and there is not the least apparent difference since the first laying down, now several years, and I am informed that it is to be adopted generally in the houses that are being erected here."
N.B. From this Testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.
THE GUTTA PERCHA COMPANY, PATENTEES.
18, WHARF-ROAD, CITY-ROAD, LONDON.

WOLSTON'S TORBAY IRON-PAINTS, warranted to stand the action of the Atmosphere strong Gases, Noxious Vapours, Damp, and Sea Water, also to withstand without blistering Fire Proof Paint, recommended for the years in Her Majesty's Dockyards, with other Reports made thereon, which testify that Coils of Wolston's Torbay Iron-Paint will effectually cover as much surface as double of either White or Red Lead and that they are much better than the best Paints. For all Public Works of Iron, and other Iron Roofing, Fencing, Shipping purposes (Wood or Iron Structures), cannot be surpassed, combining as it does the Colored Builders and Painters, for all painting purposes the same as all Patentees. Manufactured at the TORBAY IRON PAINT and OIL WORKS, Brixham, Devon. London Depôt, Chamberlain's Wharf, Letters or orders addressed to Mr. WOLSTON, at the Works, or No 31, John-street, Belfast-street will have immediate attention.

THE THAMES STEAM-TUG and LIGHTERAGE COMPANY, (Limited). The business of this Company having commenced very important assistance is being rendered by Messrs. RIDEN and BLAKE, Northumberland Wharf, Brentford, and the Corn Exchange, Mark-lane.—By order,
CHARLES ELY, Jun. Secretary.
28 Parliament-street, Westminster, Dec. 1, 1856.

The Builder.

Vol. XIV.—No. 722.

KNOWING the uncertainty which prevails in the minds of many, as to the *charges* that *architects* should make under various circumstances, it seems to us desirable that the particulars of a case tried before the Lord Chief Baron, in the Court of Exchequer, at Westminster, on Monday last, should be stated pretty fully. The relation ought to serve, too, as a caution and warning to architects, and a reproof to committees and boards.

In the early part of last year, a premium of ten guineas was offered by the trustees of the Leamington National Schools, by an advertisement in our pages, for the best design for schools and residences, to cost 1,300*l.*; the employment of the successful competitor to carry out the design being left an open question. From the designs submitted, one by Messrs. Clarke and Worthington was selected, as best meeting the views of the trustees, and one by Mr. Murray; and, after some consideration, the latter was put aside, and Messrs. Clarke and Worthington were directed to make certain alterations, and to prepare drawings for the builders: they were also empowered to make out bills of quantities (for the cost of which the contractors were to allow in their estimate 2 per cent.), and tenders were advertised for. The lowest of these, when received, amounted to something like 1,990*l.*, and with certain ornamental work suggested, to 2,022*l.* Explanations ensued in reply to objections, and then the contract was prepared, the committee of Privy Council having promised a large grant conditionally on the project receiving general support, and was executed by the builder and the chairman of the trustees, Mr. Watson. Out of doors, however, the excess in the estimated cost raised opposition (our readers heard something of it at the time), and the supporters of the second design brought that forward, with a builder's tender to execute it for the sum originally named. The trustees became frightened, and after various stormy meetings, the architects were directed to send an account of their charges up to that time, supposing the matter not completed; all the working drawings, extra show drawings, perspectives, one of them lithographed, and a set of plans for the Privy Council office had been made. The bill was commented on, but ultimately the payment of the premium, and of a sum on account, was promised. The money, however, came not, and as nothing definite could be learnt, the architects found themselves compelled to bring an action, and this was done against Mr. Watson, and four other trustees, for the sum of 180*l.* 16s. 6d. The defendants paid into court the sum of 110*l.*

For the ordinary two sets of drawings required, the working drawings, detailed specification, general approximative estimate, obtaining tenders (everything, in short, but superintending the work), a commission of 3¾ per cent. on the amount of contract was charged. For a plan and elevation, with plan of the ground, and a coloured perspective drawing, to assist in obtaining contributions, 15*l.* 15s. For a smaller perspective to be lithographed, 3*l.* 3s. For copies of the drawings and specification, to be deposited in the Privy Council Office, 5*l.* 5s.; and for the "quantities," as already mentioned, 2 per cent. The travelling expenses came to 20*l.* and these items, with the lithographer's bill, and some small charges not disputable, amounted to the sum claimed.

Mr. Aitchison, Mr. Finch, Mr. Ashpitel, and another deposed, without reference to the circumstances, that looking at the work done, the charges were customary and fair. Mr. Worthington, in the course of his evidence, when asked as to the sum named in the advertisement, made the observation that they, meaning competing architects generally, never paid any attention to that, knowing perfectly well that committees never adhered to it. The assertion was correct enough—too correct; but it was unfortunate for the plaintiffs' case. Mr. Serjeant Shee, who stood manfully by his clients, the trustees, to the last, which is more than can be said for the leading counsel engaged for the plaintiffs, who ran before the fight began, battered away with this admission, and did much damage. The defence on the part of some of the defendants was, that they had been misled by the plaintiffs, and that Leamington had no schools in consequence; while one of them deposed that he was no party to the matter, and was not present when the tenders were opened. Further, they said they understood that 5 per cent. was to include all the extra drawings. Mr. Banks, architect, on the part of the trustees, was deposing that he should have considered a charge of 2½ per cent. enough under the circumstances, when the judge inquired if the counsel for the plaintiffs saw any means of getting over the proof given, that one of the defendants was not liable. A clause in an Act of Parliament was pointed out, which gives the judge power to rectify a misjoinder of defendants by striking out a name; but the Chief Baron said, if he exercised the power, it would certainly be with the condition that the amount paid into court should be returned to the defendants, with permission to make such change in it as they might think fit. He dwelt upon the fact that the defendants were trustees *ex officio*, without their will therefore, and would have to pay whatever loss was suffered out of their own pockets. The witnesses for the plaintiffs were men of the highest possible character, but they had spoken simply as to the charges being fair, not as to the merits of the case, and he leant to the opinion that the trustees had been misled. In the face of such observations it was not thought wise to adopt the alternative, and a verdict was accordingly given for the defendants. The plaintiffs will have the costs to pay, including those of a special jury, and after months of labour, and a year and a half of anxiety, will find themselves out of pocket and out of heart—the victims of a system which, as now administered, demoralizes and degrades. By the bare-faced and dishonest disregard by committees of the sum named in their conditions, when selecting a design, competing architects are tempted—indeed forced, if they would succeed, to disregard it too, and then, on the first revolt against the system, they alone are pointed at as deceivers, and made the sufferers.

IMPROVEMENTS IN HOUSE-BUILDING.

CASEMENTS AND VENTILATION.

The opportunities that architects have in ordinary houses, of improving upon the domestic and sanitary contrivances, are really few in number, though the importance of improvement is fully recognised. New inventions of a promising nature are never wanting. Failures in their application, however, have been numerous; so that an architect who has really the best disposition to use the resources of his time, may—although neglecting no precaution—only reap the result of much mortification, and some animadversion for his manner of spending his employer's money. All progress is gained only through *experiment* as one of its stages: in nothing is progress so much needed—in nothing has it been so protracted—as in what ministers to domestic comfort: yet experiments involve outlay which may turn out to have been misapplied. In his own house, an architect has a better chance of forwarding the desired improvement; and some praise is due to those who make any attempts.

In an article in a former volume* we dwelt at length upon the necessities and difficulties of the case, and tried to suggest means of using to a greater extent, and with more certainty of good results, inventions which were continually made. The difficulty that was felt chiefly was in getting a proper substitute for the test of time, or ready reference to any results which were known. Frequent and trustworthy information is still wanted; and we are anxious to aid the publication of it, especially from the class of workmen,—who often, by communicating what they have seen and know, could really do much for common objects, and for the advancement of science and its applications. We have recently had accounts of failures in the use of some newly-applied materials, of the most serious and costly nature; one of the instances being in the case of a very important public building, by an architect who positively had been quoted to *us* as an example of the general prejudice which architects were supposed to have against progress, and who has thus in an unfortunate manner vindicated his innocence of the particular character imputed to him. Even these mistakes, however, must not lessen the attention which the general subject of new building contrivances requires.

Our immediate object, however, was to mention as worthy of consideration, a somewhat novel arrangement of double casements in a house which is being built by Mr. Andrew Moseley, at Eden Hurst, Fulham, for his own residence. The object, that of combining moderation from extremes of temperature, with good ventilation, is one of the most important matters for attention, and one which is still the most neglected. French casements hung folding as usual, opening down to the floor, are fixed in two pairs, the one pair opening inwardly, and the other outwardly,—a space of 10 inches being left between the two. The shutters and blinds are in the space. A flue of 9 inches by 4½ inches, is carried up from close under the lintel at one side to the roof-space, where some external opening for escape will be provided. In the sill, or step of the window, will be two circular brass ventilators, one communicating with an external opening in the riser of the step, and the other with an internal grating or perforated plate next the window, in the floor of the room,—that is to say, one channel to admit air to the casement-space from the exterior, the other to admit to the same space air from the room. Mr. Moseley's object of course is, to obtain, in the first place during hot weather, a current of air from the exterior, which may play between the two glass surfaces, and thus keep the heat of the sun from the room,—it being assumed that the heat of the roof would effect a draught through the flue first mentioned, and preserve the current. In cold weather, the external valve would be closed; and that from the room being opened, it is thought that the warm air of the room would be drawn between the two surfaces of glass, and so keep the outer cold air from affecting the internal temperature. If, however, the draught of the fire-place should cause a current in the reverse direction, the air would be somewhat warmed before entering the room by its contact with the glass of the internal casement. But artificial ascent might be forced by a jet of gas, placed between the casements. The latter plan, we may suggest, might well be carried out, with a view to the lighting of the room by night, in the manner which would best prevent baneful results to health from gas-burners. The bulk of the injurious effect through heated atmosphere and want of ventilation in public rooms, and in many private houses, is to be traced to the unventilated gas-flames alone.

Besides these means of ventilation, each room of the house is to have a ventilator in the centre of the ceiling. For this position, a modified form of Looker's tubular ventilator

* Vol. xiii. p 289

has been designed by the architect. Mr. Moseley's adaptation consists in the formation of the inner or moveable tube with spiral grooves round it, so that by means of a couple of pins fixed in the outer tube, and working easily in the two grooves, the inner tube is supported, whilst it can be readily adjusted to an increased or diminished area of escape. The bottom of the tube can be covered with an ordinary "flower," in the centre of which a square hole would be left for the insertion of the key, or the end of a stick.

In the City Bank, in Threadneedle-street, by the same architect and his brother, a somewhat similar arrangement of ventilation to that above described, between double thicknesses of glass, has been provided in the lantern light of the principal room.

In the house at Eden Hurst there has of course been no sufficient opportunity of certifying the success of the means adopted; but whatever may be the result in this particular case, the object will, no doubt, draw towards such contrivances attention of those who have regard for the importance of improvements in ordinary house building, and especially in the much-neglected matter of ventilation.

We propose shortly to add to the information of this practical kind which may be found in our volumes, by detailed descriptions of other recent structural applications which appear to have the character of improvements.

ON THE DECORATIONS OF ALNWICK CASTLE.

Nothing can be more embarrassing and difficult in a discussion, like the one now going on, than to avoid personal allusions of a painful nature, and the more particularly in a case like the present, where a generous and high-minded nobleman has in the most frank and candid manner allowed the description to be submitted to the Institute of the works now proceeding in his own mansion. Unless such discussions are conducted with the utmost delicacy and consideration, and particularly by members of the Institute itself, I foresee the reluctance which other persons of consequence and station will have, of allowing anything to be known to the profession of what they are about; and professional men themselves are so susceptible of being made the victims of the animadversions of one or other of the two leading parties that now insanely divide the profession, that when I have applied for particulars of important works upon which they are engaged, I have met with a positive refusal.

To designate a work like that of Alnwick as a "monstrous," a "lamentable," an "unhappy error," so as to cause "poignant grief," as "bad logic," the "greatest and most lamentable mistake of the present day," is dealing hard words, and not very courteous, to a proceeding at once generous and kind to the Institute.

I dislike to allude to myself in a matter where I have played a very humble part, merely putting together other men's materials; but I must distinctly disavow that at any time did Mr. Cockerell or myself bear testimony to this principle, that "if we wish to carry out in this country the Roman style in its perfection, the proper course is to import architects from Rome to do it." We should have been false to ourselves and our profession if we had said such a thing, or for a moment thought it; for we are well convinced, that there are men in England second to none in any other country, and who are capable to erect the noblest works, whether in the Roman or any other style. But far be it from us to call in question the perfect liberty of his Grace, when, after various essays of Gothic internal decoration and inspection of the most approved specimens here, and not satisfied with the attempts made in this country, he visited the finest palaces of France and Italy, in order to see examples of other styles. Having chosen the Roman, and being at Rome, was it surprising that he should have consulted a man of reputation on the spot to advise as to its execution *in situ?* And doubtless it is most impolitic in us to advocate the exclusive employment of Englishmen in England, when we see that one of our own talented countrymen, by the force of his own genius and taste, and by the good sense of the citizens of Hamburgh, has been imported there to build them a church, and has again been selected for the design of their Town Hall. Most impolitic, I say, in us, for then we should imitate the bad faith of the committee at Lille, who have deprived our countrymen of the fair fruits of their skill, and handed over their design to be carried out by a Frenchman.

I venture also to notice another confounded inference, as though Mr. Cockerell and myself were antagonistic to our friend Mr. Salvin, whose talents we honour and whose character we esteem. Nothing could be further from the fact: our co-operation with him has been most cordial and sincere.

The specimens of carving exhibited on the evenings when the paper was read, could hardly have been looked at, when those forms are stated to have no relation to nature. They are founded *upon* nature, and did I not know the feeling and general discernment of the eye of that critic, I should have attributed such a remark to a certain obliquity of vision, or unacquaintance with classic ornamental sculpture, which has never been surpassed, nay, in the Gothic times; or to a one-sided predilection, that strangely misleads the judgment. By another critic, not in your columns, the establishment of the school of carving is attributed "to a mean and flint-paring subterfuge, sanctioned too by members of the Royal Institute of British Architects." The best reply to this assertion is by reference to the specimens of wood carving under which the table of the Institute so often *groans;* and to the fact that at the Exhibition of 1851 we had no specimens that could compete either in design or execution with those from France, Italy, or Belgium. When these carvers shall have left the works at Alnwick, there will be a class of intelligent, skilful, and refined workmen, equal to any men at home or abroad, guided, as they are, under the superintendence of Mr Salvin.

But I dissent from the "logic" which arrives at conclusions so hostile to the present works. There is no parallel between "J. F.'s" allusion to the Roman portico to the Gothic cathedral of S. Paul's and the work at Alnwick; and as widely different is the supposition of adding the portico of the Parthenon to the front of Westminster Abbey. Had it been proposed to convert the Barbacan into a propylon, like the entrance to the Villa Borghese, illustrated in your last number, or to substitute the middle gateway by an Italian lodge gate, "J. F.'s" parallels would hold good. But at Alnwick, the exterior is preserved intact in style, where no contrast meets the eye. And the transition from the Mediæval of the exterior, to the revival of the interior, which dates only a century or two later, may be so graduated, as to approve itself to the eye of those, whose experience ranges rather wider than Anglican limits. They who have seen the Palazzo Ducale of Venice, by no means a pure specimen, have not accused the interior of dissonance from the exterior aspect; while those, who have seen the cold, meagre, yet pedantically accurate restoration of the Chambers of Blois, would hardly wish to see its chilly decorations transferred to Alnwick. It is remarkable that Mr. Scott,—and let me honour that name while I quote it,—himself acknowledges that the castellated style for the interior would be inappropriate; and he and "J. F.'s" champions of Gothic art are at variance as to the precise style to be adopted. The latter contends that the decorations should not directly adhere to any known style; and in his next two paragraphs suggests the precise mode of ornamentation and hangings adopted for Alnwick. Mr Scott considers that to be morally impossible, and advocates, as a groundwork, not any *domestic* building, but a *religious* one. Alas! there is no other to quote but "the beautiful and refined style" of S. Stephen's Chapel, which of all others, to my mind, has always seemed an effete example of corruption and debility in its combinations, profiles, and decorations.

But nothing can be more unfortunate for art than the exclusiveness which seeks to consider all other art "illogical," "not of the true style," and intolerable, but the style professed specially by one's self. This is most unreasonable and ungenerous. There is no style *exclusively* English. We owe all our styles to foreign importations, from the pre-Norman downwards; as witness Mr. Poynter's table, in the second volume of the "Transactions" of the Institute. We have modified some parts: we have produced special delightful combinations in others. But the continent has preceded us in them all, except, perhaps, in the Tudor. It is true that Mediæval art has had the longer reign, and during that period has created wondrous works. But since its decay in England, no domestic building can be quoted, the Gothic internal fittings of which render it tolerable, whether considered æsthetically or in regard to domestic comfort. So great is the contrast with our present habits and costume, that a Gothic interior is purely melodramatic, with strange inconsistencies, as glaring as the coat and breeches in which Garrick played *Macbeth*—a childish trifling with grave realities.

It is stated as a *reproach* to modern art that Canina should go back to the productions of the artists of the fifteenth and sixteenth centuries, as the best types of that style. But what class of art can be quoted to show that its last monuments are the best? Is it so with Egyptian, Greek, or Roman? Is it so with Gothic? Must not the Mediævalist of the present day hark back to the twelfth, thirteenth, or fourteenth centuries for the choicest types? and is it to be forbidden to the Roman to do so? But the old Mediæval artist of that time never did that. He never reverted to the style of the previous period, when he had to make his alterations or additions to an existing building of bygone times. He left his addition with the impress of his own time. To that he was not false. Bacon's was a wise saying,—"Let us *look* back to the past, but not *go* back."

There is room for all styles. Let us be generous to each other, for we can afford it. Each style has its beauties, its fitness; and those are the worst enemies of architecture, who would slavishly limit its productions to one class or one period. Above all, let us hope that the genius of the country may produce a distinctive architecture of its own; not less noble, not less commanding, not less expressive than those matchless productions of man's taste and intellect in all ages and countries, which command our wonder and are worthy of our emulation.

Thos. L. Donaldson.

ARCHITECTURE ON THAMES SIDE.

So rapid is the change which is taking place in the architectural features of London, that in a very few years it will be almost as difficult to find examples of buildings erected between the reign of Queen Elizabeth and the occurrence of the Great Fire, as it is now to discover remains of Norman and Mediæval work. The almost complete disappearance of a city in less than 300 years, enables us in some measure to account for the small number of architectural fragments which remain to assist us in forming an idea of the appearance of Roman London. This circumstance has led some to suppose that the now famous city, which was occupied more than 400 years by the Roman conquerors, was a place of trifling importance. The great embankment of the Thames,—the extent of the Roman wall of London,—the varied and beautiful portions of the basement of buildings which, from time to time, are exposed to the sight,—and the glimmering accounts of remote historians, show that this was not the case. Like the city of Verulam, Roman London was, no doubt, chiefly built with such bricks or tiles as could be readily made not far off.

A ground-plan of Roman London may be arrived at from the remains of the Roman period which have been discovered. Of Saxon London we know less; and it is much to be regretted that none of the painstaking artists of that time have, even in their imperfect perspective, left us a view, however slight, of the Saxon city. Indeed, we have little in the picture and plan way about London until Queen Elizabeth's days. Feeling the value of such records, we have from time to time given slight sketches of parts of London as they then existed. Many of these have already disappeared, and it is to be hoped that the time is not far distant when sanitary inquirers

ARCHITECTURE OF THAMES SIDE.

Inn, near Wapping Old Stairs.

Timber House, at Blackwall.

and students will look upon the illustrated facts in our pages as curiosities.

Along the banks of the river some houses have tumbled down: others have been condemned, and many removed, to make way for more substantial buildings. Soon there will not be one of the old-fashioned balconied houses, in which our forefathers enjoyed the breezes of Father Thames, left. Let us, therefore, preserve the appearance of one or two specimens before it is too late. Many of these houses have been little changed since the time when Queen Elizabeth passed them on her way to Greenwich. The quaint little hostelry shown in the engraving stood near Wapping old stairs: it had experienced many changes. It was built upon the artificial bank of the Thames, and it is not long since the gibbets of pirates, mutineers, and similar offenders might be seen a short distance off.

In the neighbourhood of Blackwall, there are several houses of old date, ornamented with carved brackets, from which we may to a certain extent get an idea of the style of the houses of London, a little before the Elizabethan reign. The old dwellings in the main streets of Poplar, Limehouse, and Wapping, are also worthy of the attention of those who are curious in such matters. These regions in the far east would in other ways seem strange to the dwellers in the west — shops for the sale of what would be to the most of them unknown commodities; groups of rather haggard-looking dock labourers; figureheads of ships fixed on the corners; watermen, sailors, musicians, emigrants from Ireland, the Highlands, Germany, and elsewhere, lounging carelessly about; eastern men, with little trains of attendants, and other features of so distinct a kind, that those who are not acquainted with the place would scarcely recognise it as a part of London. The carved timber house at Blackwall, shown in the engraving, is called, by the tradition of the neighbourhood, the residence of Sir Walter Raleigh: the place is partly occupied by two Thames fishermen, who sell tobacco, and keep a sort of general store. "And here, sir," said one of these worthies, "Sir Walter smoked his first pipe of tobacco!" Our readers, however, need not believe that. Figs. 1 and 2 show the style of the carving.

If, after the removal of the wooden houses on the banks of Father Thames, something better were reared to take their place, we should be content. It unfortunately happens, however, that in most instances buildings far more unsightly than their predecessors have been put up, and it is humiliating to view the strange sight exhibited on both sides of the Thames. Even the places of historical interest are being hidden from the view, by unsightly storehouses: witness the Tower, where brick buildings of the most commonplace form have almost hidden the venerable fortress from the passengers on the river. The City churches are treated in like manner.

Now that peace has returned, the question can be asked without the risk of embarrassing any operations, if the incrustations upon the Tower are necessary for its defence; and if the stores which these have been put up to contain, might not be just as well taken

to Woolwich, or elsewhere, and the peep of the ancient palace and stronghold restored to us, as some little recompense for other failures In *course of time* the records will be removed from the Norman Chapel there, and the public admitted to view a most perfect and interesting relic of the past. Let us hope that the Traitor's-gate, which has been so long closed, will be also made visible. This place was covered in during the time the Duke of Wellington had charge of the Tower, and converted into a bath for the soldiers of the garrison: but it is not used: why, then, conceal it from so many who would be glad to see it?

We have before now referred to that wonderful work, the embankment of the Thames, and now give some slight illustrations (figs. 3, 4, and 5), which will serve to convey a better notion to some of our readers than mere description of an example of both engineering skill and industry, which has been prepared for us, and left with but the faintest mention of those to whom we are indebted for this great national benefit.

Tradition reports that the brother of Caractacus was killed in a battle on the Isle of Dogs, as it is now called, by the Romans. If this tradition is to be relied upon, it would serve as a date to show that at that time the river wall was made, for before this work had been executed the Isle of Dogs must have been under water. It is said by Tacitus that the bank was made by Romans forcing the Britons to execute the work under their instruction.

If so, it is a curious circumstance, in connection with this great work, that so few remains of that people have been found along the extent of its course. The building of Hadrian's wall is carefully chronicled, and along its course, for some distance from the wall, are encampments, altars, residences, and other interesting memorials of those who built and defended it.

During the construction of the Victoria Docks, where in various parts opportunities were afforded for the discovery of Roman remains along the large embankment there in old time made, there was not, so far as we could gather, anything which satisfactorily proved this to be of the Roman period. A few Roman fragments, of but little consequence, were found during the course of this immense excavation; large quantities of the bones of animals, and, as we were informed the other day, thick layers of the leaves of trees, at a considerable depth, and which were so fresh, that intelligent persons were surprised at their appearance.

The various great works still left in England, older than the Roman period, the circumstance that the British at the commencement of that time were able to manufacture war chariots, and also that they had some skill in the working of various metals, show that at any rate a part of the people were not altogether barbarians.

We have ventured to mention these few matters in the hope that it may be the means of inducing some of our readers to give a more careful investigation to this important subject than it has so far met with. It would be very useful to make a list of the antiquities which are known to have been found upon the river embankment.

The sketches which adjoin this were made along the margin of the Isle of Dogs, where the crown of this work in the narrowest part is 6 yards across and upwards of 5 yards high. The sides slope gradually towards the river and land: next the former it is in places strengthened with loose stonework. In some parts the artificial bank is as much as 50 yards across; on which is built a windmill, a manufactory, and timber dwellings, very much warped and upwards of two centuries old.

In the fourteenth century it is known that in the middle of the Isle of Dogs there was a chapel or hermitage. A group of buildings there, still called the Chapel-house, displays remains of what may have been the chapel, consisting of thick masonry, of chalk and flint, on which the modern cottages have been engrafted.

Passing on towards Blackwall, and noticing that the waves of Father Thames are not improved in clearness, we halt at the entrance, near Blackwall, of the West India Docks. At this part the tide rises on some occasions upwards of 32 feet, and at ordinary spring-tide to a height of 25 feet.

The Roman vessel here roughly represented (fig. 6) was taken with other fragments from the Thames during the progress of some works at North Woolwich, not long since, at a depth of 12 feet below the present level; showing that there the river bed had risen to a serious extent.

ASSERTED FAILURE OF THE COLNEY HATCH COUNTY LUNATIC ASYLUM.

We have received from five separate quarters copies of the "Special Report," and "Supplementary Special Report of the Committee of Visitors of the County Lunatic Asylum at Colney Hatch," as to the condition of the building, together with various private statements on the subject. The documents in question contain reports ranging from November, 1851, to the present time, from Mr. Harris, Mr. Trimen, who appears to have stepped in of his own accord as a censor, Mr. Lewis Cubitt, and the architect of the building, Mr. Daukes. These reports will have been presented to the Court of Justices before the publication of our present number, who will have to weigh very conflicting opinions. While the three first-named speak of failures as threatening even imminent danger, the architect of the building maintains that it is perfectly sound throughout. While Mr. Cubitt says that the foundations are insufficient, that the walls must be underpinned, that the brick arches over the galleries to render them fireproof thrust out the walls and must be removed, that the roofs are faulty in construction and must be taken off, and that the drainage is inefficient; and would seem to show that some thousands must be spent to put the structure right; the architect of the building states that he "cannot discover one serious defect," that there is not "a single defect that would justify the supposition of the insufficiency" of the foundations, that "there is not a single foot of arching (of which there are eight miles in the building) affected by lateral thrust," that "a more complete system of draining was never introduced in any building than that adopted in this," and that it is simply the too complete drainage of the clay on which the building stands that has caused the "few slight settlements" really apparent. It is a very serious question affecting professional reputation, and must not be pre-judged. The contractor would seem to be inculpated by some of the statements.

ON STAINED GLASS.

Boringdon Church.—A "testimonial window" is about to be put up in the parish church of Boringdon by inhabitants of Hemel Hempsted, Great Berkhampstead, and the neighbourhood, in memory of Lieut. H. S. Ryder, who fell amongst the foremost, twice wounded, in the last attack on the Redan, Sept. 8, 1855; and in expression of their respect for the Hon. G. D. Ryder, his father, who represented the county of Hertford in Parliament for many years. The design for this window (which is not a large one) was made by Mr. Cope, R.A. who has taken for his subject the Resurrection of the Just. The principal figure is a youthful form, rising in the lightness of the "glorious body," and guided by an angel to the brighter realms, a kindred face in the same region, implying that others of the same family have been called to their inheritance of the promise in early childhood. In the side lights are figures of different ages, composing the general subject. At the bottom of the centre light is an indication of the tombstone placed by Mr. Ryder's brother officers over his grave near Sebastopol. The texts of Scripture, viz. "The dead in Christ shall rise first," and "The promise is to you and to your children," explain the hopeful character of the whole scene, and the consolation intended to be conveyed to those whose feelings in such circumstances awaken the liveliest sympathy. The execution of the work in glass has been confided to Mr. Lavers, and may be now seen at 30, Southampton-street, Strand. All will applaud the step which has been taken of calling in high artistic talent to the aid of the glass-painter, although all may not approve of the style of art here adopted for the windows of a mediæval church. Apart from the question of character, the drawing of the head and neck of the kneeling female figure on the left hand, together with some of the ornamental details, might be improved: the latter indeed, we were informed, would be so. It need never be feared that *good drawing* in stained glass will prove detrimental to its effect, let the style of the building in which it is to be placed be what it may: that, at any rate, should be insisted on in every window put up in this the nineteenth century. The expression of earnest religious feeling must be the object aimed at, instead of the representation of merely sensual beauty; and this being given in harmonious, powerful, and translucent colours, the artist always acting on the recollection that it is a *window*, not a painting, that is required, would go far to produce such results as we have not lately seen.

Deal.—The east altar window has been filled in with stained glass. The window contains six subjects from the New Testament, with other devices, and the openings are surrounded with a border. The tracery also contains twenty pieces filled with angels and foliage. The window is the gift of the Countess of Clanwilliam, of Deal Castle. The west window is also filled with stained glass subjects, to the memory of the late rector, and beneath this window is a brass inscription with the following words:—"In memory of Archibald Hamilton Duthie, M.A. rector of Deal, the founder of this church." The whole of the works have been designed and executed by Messrs. C. and A. Gibbs.

Whitehaven, Cumberland.—Irton Church has been lately restored, and the west window has been filled in with stained glass by the same artists.

THE CHURCH OF ST. CATHERINE AND THAT OF THE KOPTES, ALEXANDRIA, EGYPT.

Every evening the sound of a little bell is to be heard in the harbour of Alexandria. That sound proceeds from the convent of the friars of St. Francis and the splendid church of St. Catherine. It is situate in the new part of the city, in the so-called quarter of the *Francs*, and presents from the large street and square a very imposing aspect. The entrance is through a garden, in which stand on both sides three large Palm (date) trees, which stamp the whole *avenue* with a truly Eöthen character. The style of the church is the Romanic, with chapels to the right and left, analogous to those of St. Peter, in Rome. The central nave may be about 60 paces long, to about 20 in breadth, to which are added, right and left, four chapels, with as many altars. The choir and the high altar, with its splendid altar painting and pavement, make a very beautiful *ensemble*. The pavement is made of burnt plates, which form a very fine mosaic. Those of St. Catherine are from Naples, and could not be matched by any similar fabric in Europe. The curtains around the altar are also of a very gorgeous colouring, as none but the Eastern nations are capable of producing,—countries where sky and flowers are so beautiful. If one rides through those lands which overspread Palestine like a carpet, interwoven with the most smiling and gorgeous flowers, which stand either on the road-side, or raise their heads from amongst meadows, or the cracks of rocks—one can understand the glare of Oriental tapestry and others of their fabrics.

The Church of St. Catherine, in Alexandria, like the great Cathedral of Cairo, owes its origin, beside the endeavours of the Franciscan monks, to the collections and funds of the General Commissariat of the Holy Land in Vienna. The church possesses also a fine mediæval picture, a *Predella*, with a row of figures, probably of the old Florentine or Siena school, brought hither by the Franciscan monks. The large street, however, in which stands St. Catherine, as well as the huge establishments of the Lazarist friars, bears an altogether Western character, and it is clear that Eastern architecture is on the wane here as well.

The church of the Koptes in Alexandria boasts of being in the possession of the tomb of St. Mark, as the body had been conveyed to Venice, and is situate in the older town, where once stood the wonder of the world, *ancient*

Alexandria. The church presents a truly antique aspect of a double row of colonnades. A particularity of Koptic churches is that they do not admit any light, and are perfectly dark, like their prototype, the ancient catacombs: a niggardly lamp spreads a gloomy glare over the scene. There is a wooden lattice separating the nave (if it can be so called), and a compartment for the females.

PROVINCIAL NEWS.

Ipswich.—At a meeting of promoters of a new Music-hall for Ipswich, last week, it was stated that several architects and builders had been communicated with, and it had been ascertained that a suitable building, capable of holding 1,500 or 2,000 persons, with appropriate rooms and fittings, could be erected for 2,500*l.* They propose to raise 5,000*l.* The site, which is to be central, it was estimated would cost about 1,000*l.* and there then remained 1,500*l.* for the purchase of an organ, and other incidental expenses. Resolutions were passed, and a committee, with treasurer and secretary, were appointed.

Cambridge.—Here also a new Music-hall is on the *tapis*, together with Baths and Washhouses. The music-hall would serve for several purposes, *i. e.* lectures, balls, concerts, &c. and might also be used as a corn-exchange, the present one being inadequate. An eligible site has been sought out, and a company is about to be formed.

Oxford.—Her Majesty lately signified her intention to present six portrait-statues to the new museum at Oxford. The statues—all of men illustrious in science and philosophy—are to be executed in Caen stone, of life-size, and are to be placed against the pillars in the grand hall of the museum. Of two statues entrusted to Mr. Alexander Munro, one—the statue of Galileo—was completed some time ago; and on the other—that of Newton—Mr. Munro, according to the local *Chronicle*, is at present engaged. Another of the six statues, assigned to another young sculptor, Mr. Thomas Woolner, is being completed in the stone. The subject is Lord Bacon. The authorities consulted for the likeness have been the picture by Van Somer and a terra-cotta bust of Bacon when a boy (both in the possession of Lord Verulam at Gorhambury), together with the old statue in St. Michael's Church, St. Alban's.

Brighton.—The new groyne formed a subject of animated discussion at a special meeting of the town-council on Saturday last. The report of the Highways and Works Committee was read, pointing out various defects in the work, but stated that "the contractor had promised to remedy the defects mentioned forthwith." It was moved as an amendment to a proposal to approve the report, that a competent surveyor or engineer be called in to inspect the new groyne, and report whether it had been erected agreeably to the terms of the contract. It was contended that as the evils pointed out were not so serious as seemed to be imagined, they might have resulted in a great measure from the neglect of the council to appoint a clerk of the works, which, in a matter of such magnitude, they should clearly have done. One councillor observed that the council had themselves to blame somewhat when they accepted a contract from the son of the surveyor.—The surveyor was present, and explained that at the time he certified the groyne was completed to his satisfaction it was nearly covered with beach. He also explained as to several of the details mentioned in the committee's report, and said, the idea of his wilfully and intentionally being guilty of such meanness as deceiving the public in such a paltry affair, was absurd. He was very sorry indeed that his son's tender had been accepted; but he could not have said to the committee, "Don't accept my son's tender," as that might have caused variance between himself and his son. The groyne was double the strength of any other they had; and, having withstood the gales it had, would last for fifty years. The amendment was carried by a large majority, only three hands being held up against it; and a committee was then appointed to carry out the resolution, and report.

Cardiff.—Plans for a new Post-office for this town, executed by Mr. John Seddon, have been completed, and will in all probability be soon carried into effect, in Church-street. The erection will be in the Byzantine style. The whole of the building not being required for postal business, several sets of rooms, forming the upper part, will be let off as offices and for other purposes; and a scheme is now on foot for raising a sufficient number of shares of 25*l.* each to carry out this object.

Cardigan.—This town is fast emerging from its primitive state, and looks forward at no remote period to be classed with other county towns of far more importance. Gas is about being introduced by Mr. Edge, of London; and an Act of Parliament is now being applied for to enable the corporation to erect markets, Guildhall, grammar-school, &c.; all of which will be carried out by Mr. Withers, the architect to the corporation.

Holyhead.—On Monday week during a strong breeze of wind, nearly two lengths (or about 60 feet) of the staying on the northern breakwater were carried away. This will occasion a loss to the contractors, and the weather continues unfavourable for pitching out additional lengths for depositing stones for extending the breakwater.

Wellington.—The opening of the new Catholic schools, Millbank, contiguous to the Catholic Chapel, Wellington, took place on Tuesday in last week. The school is a square brick building, of a mixed order—Gothic predominating, from designs of Mr. E. W. Pugin (the builder being Mr. James Palmer, of Willenhall), and consists of two rooms, upper and lower, 36 feet by 28 feet; height of lower room 12 feet: the upper room has a lofty open roof of stained deal. There are four fire-places and fifteen windows, with porch and large front window. The school is capable of accommodating about 750 scholars of both sexes. The cost of erection is estimated at about 400*l.* Fifty pounds are from the Catholic Poor School. The school is under Government inspection.

Clitheroe.—A project for erecting a public hall, with apartments for educational and other purposes, has recently been originated. It is proposed to erect the building by means of some ten or twelve hundred 1*l.* shares.

Nairn.—A new bridge is about to be thrown across the River Nairn, at some convenient place between the town of Nairn and the village of Cawdor. There are no means, it seems, of crossing the Nairn (except by a rough and not very safe ford), even for foot passengers, between the bridge of Nairn and the bridge of Kilravock—better known as the "White Brig," one of General Wade's erection, a distance of fully seven miles. There is now a railway station at Kildrummie called the Cawdor Station, erected by the directors of the Inverness and Nairn Railway Company, for the convenience of the Cawdor district; but as matters now stand, it is nearly useless from want of a bridge.

THE WESTMINSTER CLOCK AND BELL.

MR. LOSEBY's statement, that it appears from the parliamentary papers that the Westminster clock is calculated to strike the great bell with a hammer of only 120 lbs. raised 6 inches, is a pure and simple fabrication of his own, as anybody may see who will take the trouble to look at the contract, which was printed in 1852 and again in 1855. And anybody who chooses to look at my latest book "On Clockmaking" (not the rudimentary treatise, but a reprint of the article in the "Encyclopædia Britannica," sold at Dent's, in the Strand), will see that a hammer of 4 cwt. falling 12 inches—nearly eight times Mr. Loseby's figures—was the least that I contemplated in designing the clock. The hammer will in fact be considerably more than this, as the bell is not only heavier, but much stronger than I ventured to expect three years ago.

I have been wondering what could suggest to Mr. Loseby such an absurdity as the striking of a bell of 16 tons with a hammer of 120 lbs.; and perhaps this is the explanation. It does appear from the parliamentary papers he refers to that—not before but—after the intended weight of the bell had been increased from that of the Oxford bell to 14 tons, a hammer of little more than Mr. Loseby's size was proposed, in that very plan for the clock which his fraternity, the Worshipful Company of Clockmakers, memorialised the Commissioners of Works to adopt, and to rescind (if they could) Mr. Dent's contract to execute my plan. It is only charitable to suppose that, writing with an imperfect recollection of the papers, and animated by a natural and amiable desire to pay off some old scores respecting his chronometer grievances, Mr. Loseby has, with a curious felicity of blundering, transferred the folly of the company of clockmakers to my account.

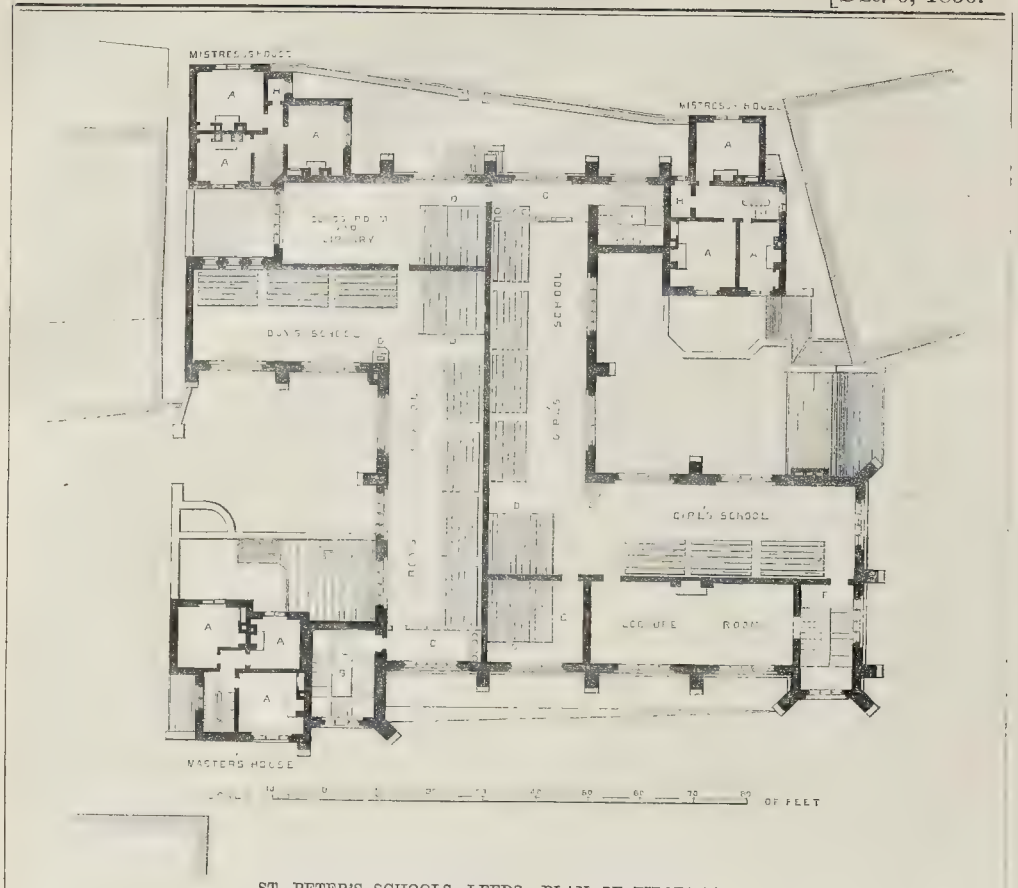
E. B. DENISON.

PROPOSED MEMORIAL CHURCH AT CONSTANTINOPLE.

IN answer to inquiries, we have to state that we have ascertained that there is no foundation for the report that the time for sending in the designs has been postponed from Jan. 1 to Feb. 1.

An architect calls our attention to the clause in the prospectus recommending architects to avail themselves of the materials of the locality, and particularly of the Marmora marble, and requests information. The Royal Institute of British Architects, on the promulgation of the competition, offered its assistance towards this object, and tendered its rooms as the place where specimens of such materials might be deposited, but no advantage has been taken of the offer. As we read the prospectus, the committee of the memorial church (not composed of architecturalists) did not bind itself to provide such information, which, of course, the competitors were invited to find for themselves. It did, however, we believe, take such steps as lay within its power, but with what result we are not aware. We had hoped our columns might have been made the vehicle of communication on a subject on which we are sure the chivalry of competition would induce those who were successful in their inquiries to help their brother architects.

COMPETITION FOR PROPOSED CHURCH AT BERNE.



DESIGNS for a church are invited from architects of all countries by members of the "Catholic parish of the city of Berne." According to a writer in the *Ecclesiologist* (in which periodical will be found some particulars of the value of materials and labour), the cost should not exceed 6,000*l.* The first prize is 60*l.*; and four medals, gold and silver, are also offered. No engagement is made that the design obtaining the first prize shall be executed. We have deposited at our office in York-street, for inspection, an authoritative translation into French of the conditions, together with a plan of the site.

THE CASTLE AT CANNES.

MY attention has just been called to a paragraph which appears to have gone the round of the metropolitan and provincial press, to the effect, that Lord Ellenborough on a recent visit to Cannes, purchased for the sum of 10,000*l.* the Château-on-the-Hill, the property of T. R. Woolfield, esq. moved to do so, from the fact of its being a *fac-simile* of an old mansion of his ancestors where he had passed his infancy, and which Mr. Woolfield having seen and sketched thus reproduced on the shores of the Mediterranean. Will you permit me, in justice to myself as architect of the Château-on-the-Hill, to give a flat contradiction to this tale?

The building in question was erected from an entirely original design made by me, on the occasion of a professional visit paid to Mr. Woolfield, in 1850. Mr. Woolfield gave me no definite instructions respecting the character of the building he intended to raise, than that he wished it to be castellated like an English castle. As I erected also the Protestant Church and the Château La Bouche, at Cannes, both from purely original designs, such a report as that to which I address myself, if allowed to pass unchallenged, is calculated to damage my reputation, and injure me in my professional capacity. I, therefore, with confidence rely upon your impartial justice to afford me the opportunity of circulating my contradiction to the statement through the same channel that disseminated it.

THOS. SMITH, Architect and Surveyor.

ST. PETER'S SCHOOLS, LEEDS: PLAN OF FIRST-FLOOR.

THE LEEDS PARISH CHURCH SCHOOLS.

The foundation stone of these schools was aid by the Lord Bishop of Ripon. The schools are on a plot of ground on the north-east side of the parish church, which has been purchased for that purpose, and will occupy altogether about half an acre of ground.

The buildings will comprise three teachers' residences, with boys', girls', and infants' schools, having separate entrances to each. The schools will be capable of accommodating 937 children (allowing 9 superficial feet to each child), and contain, on the ground-floor infants' school, with open and covered playgrounds for boys, girls, and infants, and the necessary out-offices.

On the first-floor are the boys' and girls' school, with class, library, and lecture-rooms, and lavatory and cloak-room to each school. The materials will be brick, with stone dressings. There will be a tower at the north-east corner, containing entrance and staircase to boys' school: the upper part will be used for the ventilation of the schools, which will be carried out by Messrs. Haden and Son, engineers, Trowbridge. Messrs. Dobson and Chorley, of Leeds, are the architects.

VENTILATION OF HOSPITALS.

The remark of your correspondent, Dr. Corfe, affords an opportunity of correcting a clerical error in the paragraph which is referred to as "somewhat vague." The sentence should read, "The air expired from the lungs has not a temperature sufficiently elevated to raise it even to a couple of feet above the head without its undergoing diffusion from the combined influence of the law of gases, and *from* the rapidity," &c. &c. Probably the construction of the sentence is still objectionable, but the correction of the clerical error, by substituting the preposition *from* for *of*, will render the meaning clearer.

Your correspondent thinks that the remark, that "the admission of direct currents of air is impracticable in this climate during two-thirds of the year," is not borne out by practical experience, and refers for proof to the Middlesex Hospital. He does not, however, state that the "tripartite" construction of the windows there adopted permits of their being left open over a longer period than is usual with ordinary sashes, although it might be expected that a construction which prevented "*direct*" currents would have this advantage.

The use of perforated zinc plates, in the upper part of the walls of the new wards, is *precisely* one of that class of expedients which "scientific ventilation" has recourse to for obtaining communication with the exterior air when direct currents are inadmissible, and the arrangement is only defective, inasmuch as it appears that it is necessary to close the openings in seasons of intense cold, and so suspend the operation of what ought to be a system of "permanent ventilation."

There cannot be a doubt that Dr. Corfe strictly expresses the causes of vitiation in a hospital atmosphere when he adds to the deoxydization of the respired air and impure exhalations from the respiratory organs, the "general noxious malaria which is constantly passing off from the bodies of individuals labouring under severe forms of disease." This and the previously mentioned cause of vitiation, if rarely practically considered in hospital ventilation, is precisely the special condition which determines the necessity of a vastly increased amount of ventilation in hospitals, as compared with some other buildings, and constitutes the case alluded to by M. Morin, as distinguishing the ventilation of places inhabited by the sick and wounded from that of those occupied by persons in good health; and he intimates that the ventilation of the Hospital Beaujon (24 feet to 36 feet cube per patient per minute) became insufficient when the proportion of severe surgical cases was too great.

As to the direction which should be given to the movement of the air, it is not pretended that the diffusion of gases can be *prevented* by establishing a current towards the source of impurity, but such diffusion is capable of being materially *retarded*. Everybody knows that offensive smells are much less perceptible to windward than to leeward of the locality where they are generated, and that the volatile gaseous exhalations from a coke fire, or one of Dr. Arnott's smokeless grates, are much less perceptible when there is a good draught towards the fire-place, than when the draught is imperfect; and hence it would be reasonable to infer that the spread of infectious disorders is lessened by arrangements the tendency of which is to retard the diffusion of the *materies morbi* and to remove them at once from the spot where they are generated. By such a process the space around the patient's bed cannot be said to become a "nidus" of foul air when the movement of the air of the ward is *towards* the bed, any more than when the malaria is *diffused* throughout the air of the ward by a movement in a contrary sense. Under both sets of circumstances, the amount of vitiating products is the same. Hence, if there be no advantage to each individual patient, by withdrawing immediately from the bed that portion of

ST. PETER'S PARISH CHURCH SCHOOLS, LEEDS.——Messrs. Dobson and Chorley, Architects.

air which he himself vitiates, the general atmosphere of the ward must certainly be benefited. In discussing this point, the idea is again disclaimed that air vitiated in any particular spot can be thence withdrawn without any of it being diffused into the surrounding space; but it is urged that arrangements which permit of the immediate escape of vitiating products from the locality of their generation must have a tendency to retard their diffusion. Nor must it be forgotten that the most perfect ventilation in the world cannot prevent the emanation of the objectionable, products: the design is to get rid of them as speedily as possible. Thus, when the receiving-room of an hospital is occupied by some 200 or 300 patients, let it be ever so well ventilated, it is impossible during the time the patients are in the room, absolutely to prevent disagreeable odours being perceptible; but their accumulation to such an extent as to become offensive may be prevented and the subsequent purification of the atmosphere of the room perfectly accomplished. Neither is it pretended that the extraction of the vitiated air, at a point in the immediate vicinity of the bed, is a condition *essential* to good ventilation. As was observed in a former communication, good ventilation may be carried out, whether the system adopted be ascending, descending, lateral, diagonal, or with almost any direction of movement. The determination of what system is to be preferred, must depend upon the circumstances of each case, and will generally in practice be found to be governed rather by the construction of the building than any merely theoretical views of what is best.

The ventilation of the Middlesex Hospital having been referred to, the writer considers it incumbent upon him to disclaim the idea of imputing, in the most distant manner, any degree of inefficiency in the system there employed, and only regrets that he has not enjoyed an opportunity of making himself acquainted with its working.

The conclusion is drawn by Dr. Corfe that the statement that "when an upward ventilation by one or two extraction openings in a flat ceiling is sought to be accomplished, it is impossible to prevent the vitiated air from being disseminated throughout the atmosphere of the ward," must be taken with reserve; and he mentions that such openings have been in operation in the Middlesex Hospital, with a decisive and satisfactory sanitary influence upon the patients.

From the description, however, which he gives of the arrangements there adopted, it would seem that the ventilation is actually effected *by the dissemination* of the vitiated air throughout the atmosphere of the ward, and its subsequent escape, in a state of *dilution*, through the apertures in the ceiling; and provided that the introduction of fresh air is sufficiently ample to ensure a high state of dilution, there is nothing on the face of such an arrangement that would be inconsistent with good ventilation, or the existence of a satisfactory "sanitary influence upon the patients."

S. Egan Rosser.

ON THE APPLICABILITY OF GOTHIC ARCHITECTURE.

THE OXFORD ARCHITECTURAL SOCIETY.

At a meeting of this society, on the 19th November, the Rev. Dr. Bloxam in the chair, Mr. Buckeridge read a paper "On the Universal Applicability of Gothic Architecture."

Mr. Buckeridge remarked that,—"Before really entering upon the subject of his paper, it would be necessary to define what he meant by Gothic Architecture, as applicable in our own age and country to all kinds of buildings; and that in talking of the architecture of the present day considerable inconvenience arises by not having any name by which to call it: to call it Early English, Decorated, or Perpendicular, would carry us back to the thirteenth, fourteenth, and fifteenth centuries respectively: what we are doing now is the result of the study of the architecture of the Middle Ages, and that though it was founded chiefly on the Decorated or Geometrical principles, we were nevertheless free to profit by a knowledge of the other styles; and this is what he means when using the term 'Gothic' in the course of his paper.

In advocating Gothic as the style in which we ought alone to build, we are often met with some such objection as that it is very well suited for churches, parsonages, and schools, but it does not do for dwelling-houses or civil buildings; why, he could not conceive; for, if our forefathers of the Middle Ages wanted a town-hall or labourer's cottage, their own architecture could furnish both the one and the other: the idea of running over to Greece or Rome for examples never entered into their heads, and, if it had, they would not have found what they wanted. In Sir Christopher Wren's time they did this, and lamentable and hideous are the results which are daily staring us in the face! Churches made up of scraps of heathen temples; mansions both in town and country necessarily unsuited to their position and purpose, on account of the difference of climate and customs; smaller houses, and even shop-fronts, glory now-a-days in various miserable adaptations of the 'Five Orders.'

Our domestic architecture should have a peculiar expression, illustrative of our manners and customs; and the first thing to be done in designing is to make your plan as convenient and well suited as possible to the requirements; this being done, the various elevations, &c. would naturally follow, and the result would be satisfactory, because truthfully treated. It is quite a mistaken notion to design the exterior first, and then try to coax the plan to suit it: the result of such a proceeding would be generally full of mistakes and inconveniences in the internal arrangements.

To every building, no matter what, he would apply *unflinchingly* our Gothic architecture of the nineteenth century, and guarantee that there should be no lack of light or any of those inconveniences, real or imaginary, which Gothic architecture has been charged with producing.

He then called attention to the dull, insipid, utilitarian, and unconstructional appearance of our street architecture: many of the houses with shops on the ground-floor are apparently supported by large

sheets of plate-glass and a few very thin strips of wood; whose principle of strength assimilates to the old fable of the 'bundle of sticks,' which so long as they remained together were comparatively strong, but separate them and they were easily snapped. He then contrasted these with shops constructed on true, sturdy, time-enduring, Gothic principles, in true materials; not lath-and-plaster, brick and compo, and all such like shams. Now-a-days houses are built *to let*, not to look at, or to be handed down to posterity.

He would not be content with Gothic exteriors only, but would carry out the same principles in the interior, and make every article of furniture breathe the same Gothic spirit."

The Master of University defended the Classical, or rather Palladian style, for which he claimed a place among our buildings, as possessed of a beauty, and solid grandeur of its own, as affording contrast and variety.

CHURCH-BUILDING NEWS.

Littleport (Cambridgeshire).—The church of Littleport has recently undergone considerable additions by Mr. Teulon, at the entire cost of the vicar, the Rev. Edward Sparke, Canon of Ely. The church, which consisted of a nave with north and south aisles, chancel, and south mortuary and western tower, required sittings to the value of nearly double; and the plan adopted has been to take down the north aisle, which was very dilapidated, and build an aisle equal to the nave (in fact, like a second nave), and north of that an aisle equal to the south aisle, continuing both eastward, as the mortuary on the south side: this internally gives a triple arcading, and accomplishes a very spacious church (the original being by no means small). A pulpit of stone commands the whole; and the sittings, which are all of oak, are plain but solid. The other part of the church is designed to agree with it, and the chancel also: this latter, however, appertains to Clare Hall, Cambridge. The church is a Third Pointed church, with lofty tower. The works are undertaken by Bennett and Brown, of Lynn.

Ryngesbury.—The new porch of St. Mary's Church was opened on the 23rd ult. The porch and doors are constructed from a design of Mr. Arthur Blomfield, son of Bishop Blomfield, carried out by a mason named Usborn, of St. Neots, and Rattee, of Cambridge. On the east side of the porch is a brass plate inserted in the wall, bearing an inscription stating that "This porch was erected by Lieut.-col. Humbley, Rifle Brigade, in September, 1856," as a thank-offering for preservation from death in twenty-two battles, all specified, and fought in five different kingdoms, for which the gallant warrior has received thirteen medals. It appears that there is only one officer in the British army now living who has received more clasps than Colonel Humbley, namely, General Sir James Schoedde, C.B. who wears the war medals and fourteen clasps.

Latchingdon and Snoreham.—The new church in Latchingdon parish has been consecrated. Its dimensions are about 90 feet by 33 feet, and it is capable of accommodating 300 persons. The structure is faced with Kentish rag and Bath stone trassings, and consists of a nave and chancel, with a bell-turret and shingle spire. The church is built in the style of the thirteenth century. The sittings are open benches of stained deal. There are stained windows on the south side of the church; one in the nave, presented by Mr. C. H. Pulley, sen. which is placed there to perpetuate the memory of two of his daughters; the other in the chancel, a gift of the Rev. H. R. Merewether, curate of the parish, in memory of his two infant sons. An iron corona, with eight branches, is hung from the centre, and this, with the ornamental iron railing of the communion, is the work of Mr. Harris, of Althorne.

Smallthorn (Burslem).—The ceremony of laying the foundation-stone of a new Wesleyan chapel in the village of Smallthorn, took place on Monday before last. The design of the chapel is by Mr. G. Ford, of Burslem, and is of the Early English style, with open roof. Its cost will be about 220*l.* including the site, and the edifice will accommodate from 160 to 170 persons.

Burton-on-Trent.—A stone monument has been erected in the old churchyard, over the remains of Richard Roe, many years a constable of the town. The monument, as described by the *Derbyshire Advertiser*, has a square pedestal, bearing the inscription on three of its sides. On the top is a capital with four pediments, ornamented with wreaths and knots, and the four corners are adorned with honeysuckles. The whole is crowned by an obelisk, making the height of the monument 10 feet. Surrounding it is an iron palisading.

Fenton (Stoke-upon-Trent).—From funds supplied by Mr. W. Baker, the interior of Fenton Church has just undergone a renovation. The work of restoration and enlargement was entrusted to Messrs. Ward and Son, architects, Hanley. The interior has undergone a complete change. The former unseemly flat ceiling has been removed, and the roof elevated into a pointed form, and lined throughout with stained and varnished wood. Wood pillars, similarly stained and varnished, rise from the side aisles, and support tracery arches, also of stained wood, and attached to the roof. The two side galleries have been entirely removed, the only one remaining being at the west end, which receives additional light from the opening of an arch in the tower. A new approach has been made to this gallery, which is now attained by a spiral staircase, erected in a new turret outside the tower. The body of the church has the addition of a middle or centre alley, which has rendered a re-arrangement of the pews necessary. The chancel is entirely new: it has north and south aisles, separated from it by stone pillars and arches, and there are also arches opening into the body of the church. The chancel is paved with Minton and Co.'s tiles, and lighted by six windows filled with stained glass; the centre, or principal window, being a memorial to the late Mrs. Baker—subject, the Ascension. The principal figure is a representation of the ascending Redeemer, while the Apostles, who are represented with upturned and astonished countenances, occupy the whole breadth of the lower portion of the window. The window has the appearance of one painting. It was supplied from the establishment of Mr. T. Ward, of London. Some of the other windows in the chancel contain the armorial bearings of the Bourne and Baker families. The church is heated by a system of underground flues, and in connection with which there are eleven fires in the pavement of the aisles and chancel.

Barnsley.—The foundation-stone of St. John's church, Barnsley, has been laid. The church is designed in the Early Decorated style of architecture, and consists of chancel, 31 feet by 18 feet, with sacristy in north side; and a clerestoried nave of five bays, 75 feet by 21 feet, having north and south aisles, 9 feet in width. The total internal width of the chancel is 15 feet, and the total length is 106 feet. The height of the nave to the apex of the roof is 56 feet, and consists of braced and bolted principal framing (no intermediates being used) and common rafters, and will be open to the ridge. The roof over the chancel is highly pitched and divided into panels formed by moulded ribs. All the seats in the nave and aisles will be low open benches, having cut standards. The chancel is provided with stalls for the choir, and the altar is raised seven steps above the floor of the nave. The chancel will be pierced on the south side by two three-light windows, the east gable being filled with a moulded window of five lights, supporting a circle containing six spherical triangles, trefoliated. The clerestory will be pierced with ten circles, filled with tracery of varied designs. The aisles are to have two-light windows, moulded, the tympanum being perforated in geometric forms. The west gable will be supplied with two two-light windows, and a vescica above. There are three gabled buttresses at the west end of the nave, the circles being without buttresses. The outsides of the walls have battering sides, from plinth to underside of window-sills. In the chancel the buttresses spring out of these slopes. Courses will run round the church inside and out, that to the chancel being moulded. The walls will be built with pitched-faced sandstone from an adjoining quarry. It is proposed to erect the lower stages of a tower on the south-west angle of the site, connecting the same with the south aisle by means of a short corridor or porch. As the site falls rapidly from north to south, the tower will be on the lower level; but access to the building will be obtained by means of steps placed in the corridor. The whole of the walls will be diapered in the interior of the building, and will be made by means of simple polychromatic decorations to look as cheerful and light as possible. Some stained glass is promised for the chancel. The church will be further embellished by the erection of a gabled stone bell-turret, the height of which, to the summit of the cross, will be 76 feet. Mr. Philip Boyce is the architect. The contractors are—for masonry, Mr. Robinson; joiners' work, Mr. Joseph Smith; plumbers' and slaters' work, Mr. Matthew Wood; plasterers' work, Mr. Barker. The estimated cost of the building is 2,000*l.* towards which 1,714*l.* odds have been obtained. The site was presented by Mr. Edward Newman, of Barnsley, and Mr. William Shaw, of Stanley Hall, Wakefield, has given the stone for the building. The handloom weavers of the district have contributed no less than 80*l.* out of their poor earnings, and the school children are to provide a font.

Carlisle.—The Roman Catholic Church of St. Mary and St. Joseph, in this city, was re-opened on Sunday before last. Alterations and additions have been made to the building, with a view to afford better accommodation to the increased number of worshippers. The church, according to the local *Journal*, has been lengthened several feet, by throwing into it additional space at the west end: the old gallery has been taken down, and a more commodious one erected to the rear of where it stood; and a porched entrance has been added to the south-west corner of the church. The organ has been removed to the gallery at the west end, and in its place is a chapel dedicated to St. Mary, surrounded by a carved screen, and inclosing a statuette of the Virgin and Child. On the opposite side of the altar is a similar chapel consecrated to St. Joseph, also containing a piece of sculpture, called the "Angel Guardian," and a picture of the Birth of Christ in the Stable at Bethlehem. A bell-turret has been erected at the east end of the church.

Newcastle-on-Tyne.—A new United Presbyterian church and schools are about to be erected at Elswick, Newcastle-on-Tyne, from the designs of Mr. Thomas Oliver, Jun. of Sunderland. It is proposed to adopt coloured brickwork as the predominant material.

Brechin.—The Gothic window in the north gable of the New Free Church here has been filled with stained glass. Messrs. Watson, of Dunfermline, were the contractors for the glazier work.

Aberdeen.—It is proposed to erect a new Roman Catholic Church in Aberdeen. A site has been procured, with 170 feet of frontage to Huntly-street, extending back to Golden-square, and including St. John's Chapel. The church is proposed to be in the cathedral style, of large size, with clergymen's residence attached, and is intended (though the plans are not yet prepared) to be of architectural merit. The funds are being raised.

THE HEALTH ACT.

A correspondent, who signs himself "Pabulum Acheronis," knowing that the duration of human life around his home is but half what it might be, in a spot naturally salubrious, and indeed, altogether unlike what the mortuary registers show it to have been a few years since, and what it would be if proper drainage and water supply were provided, thus writes,—"For nearly eight years have the General Board of Health bandied us about, the icy hand of death ever stalking unchecked, bereaving homes that with honest, common-sense precautions, might still have been happy. Typhus, in 1848, was decimating districts in the parish: panic-struck, we invoked Whitehall, and were honoured by a visit of Mr. Superintending Inspector. A short lull in Death's doings, and again the Health party were urged by the vacillating populace.

Four times in eight years the farce has been enacted at each outbreak of fever, and the magical superintending inspectors have appeared. Four distinct reports of four separate inspections have been printed and circulated, each showing a truly fearful state of things.

Prior to the fourth inspection and report, the Pre-

sident of the General Board wrote, informing the Health advocates that, if the General Board were to have a memorial from *a majority of the ratepayers in the district to which it was proposed*, he, the President, *would feel justified in immediately making a provisional order for the application of the Act to that district*, &c. &c. Such memorial was sent and acknowledged, when down comes another superintending inspector to mock and tantalize us. He had not the assurance to differ from the other three published reports as to the filthy present, and foretells a still more dismal future; but recommends a more extended boundary; and the President, finding the operation of the Act unpalatable to the "*influential inhabitants*," has put a new feature on the means of ascertaining whether health or disease shall be our lot, namely, the want of a sufficient proportion in *value and number* of the ratepayers.

Farmers are not often advocates for draining anything but their broad acres, unless it be the "flowing bowl;" and it will be no wonder that the full VALUE of that party has been against the *value* of life. Numbers of our party have become disgusted with such evasion; and, after having done all the President said was requisite, all but the "promoter" and a few stanch friends have left the field to the opponents of the Act, and these opponents have sent up a memorial, which the General Board allow to be imposed upon them, though they must be perfectly aware its pure *fiction can be proved undeniably*."

We have allowed the writer to speak for himself, but we are disposed to believe that we should find the Board were prevented from moving by some requirement of the Act which they could not overcome.

THE BRITISH ARCHÆOLOGICAL ASSOCIATION.

THIS society commenced the new session with a very satisfactory meeting at their rooms in Sackville-street, on Wednesday, the 26th, Mr. Pettigrew, F.R.S. in the chair. There was a good muster of members, and several interesting communications were read, especially some remarks by Mr. Wills, on the proceedings of a certain dealer in curiosities, who puts forward for sale Egyptian and other works, as found in excavations in London, and a second paper from Mr. Vere Irvine, on the circular hollows (which have been called hut hollows) in Cissbury Camp, and others of the same chain.

METROPOLITAN BOARD OF WORKS.

AT the ordinary meeting of this Board, on Friday in last week, a memorial as to a park for Finsbury was referred, after some discussion, to the Committee of Works, with other proposals of a similar description.

A letter from Sir S. M. Peto to Mr. Woolrych, the secretary, was then read, in which Sir Morton requested liberty to appear before the Court with Mr. Maclean, in order to explain finally the plan of the latter gentleman for carrying the outfall of the metropolitan sewage to the German Ocean. In this letter Sir S. M. Peto stated that, although he had no desire to be in any way connected with the execution of such works, he was willing, with his friends, to construct the outfall to the sea for a rent or interest of 5 per cent. per annum on the cost of the Board's own outfall and works connected therewith.

Mr. D'Ifanger moved that Sir S. M. Peto be requested to attend and explain the plan. The chairman said, that such a plan was one for the consideration of the Government rather than the Board. It was strongly protested against, and finally the resolution was negatived by a large majority.

At a special meeting of the Board, held on the 2nd inst. a report, by Mr. Bazalgette, on the outfall for main drainage, suggested by Capt. Burstall, was read. According to that plan, the reporter stated, "The outfalls would now be fifteen miles below London-bridge, and it is proposed to confine the periods of discharge from them within 1½ hour before high water, and 2¾ hours after high water, with certain exceptions hereafter named, giving a period of 8 hours' storeage and 4¼ hours of discharge per tide." The reporter also stated, that "the level of the overflow weir would be 16½ feet above *datum*, and the mean depth of the reservoirs would be 14 feet. The reservoir on the north side would cover about 10 acres, and contain about 6,000,000 cubic feet, when full; that on the south would cover about 4½ acres, and contain about 2,750,000 cubic feet, when full; so that the average daily flow of sewage during dry weather would about half fill the reservoirs in eight hours." The total estimate for the metropolitan drainage, as now designed, would, it was said, be 2,836,600*l.* In reply to Mr. Turner, Mr. Bazalgette said, that it would cost the same money to extend the sewers to the sea whether plan B or plan B* was adopted, but that in the case of plan B* 103,000*l.* more would be lost; and he believed that plan B was better than plan B*, notwithstanding Capt. Burstall's report, and that cast-iron pipes had already been tried in smaller sewers, and had proved to be uninjured by any chemical action of the sewage.

Mr. Leslie objected to the plan, and moved that the report be not received. On a division, however, this motion was negatived by a majority of 23 to 4. Mr. Carpmael moved the adoption of plan B* as suggested by Capt. Burstall and approved by Sir Benj. Hall, but it was objected that sufficient notice of the motion had not been given, and its consideration was postponed.

The engineer will have yet another report to make.

ERITH AND GRAVESEND *versus* THE DRAINAGE SCHEME.

THE scheme for the drainage of the metropolis, as proposed by the Metropolitan Board of Works, and, with certain modifications, approved of by Sir B. Hall, appears to have caused great excitement in the districts immediately below the intended outfall, near Erith, and a numerous and influential deputation, consisting of the authorities and landowners of Erith and its vicinity, and of the Corporation and Commissioners of Improvement of the Borough of Gravesend, waited, on the 28th ult. upon Lord Palmerston, as Prime Minister, at his private residence, Cambridge House, Piccadilly, upon the subject.

The deputation from Erith was headed by Sir Culling Eardley, and the Gravesend deputation by Mr. W. Fletcher, the mayor.

Sir Culling Eardley addressed the premier in strong terms against the proposed scheme, and urged the suggestion some time since made by us, that a commission of experienced engineers, &c. should be appointed to consider the various plans. Sir S. M. Peto's plan, a Bill for which is in preparation, was specially referred to as perhaps one of the best.

The Mayor of Gravesend also expressed a strong opposition to the Erith outlet on the part of his constituents, the inhabitants of Gravesend.

Finally, Sir Culling Eardley announced plainly that endeavours would be made to obtain an injunction in Chancery against it if persisted in.

Lord Palmerston said the attention of Government would be given to this important matter.

It has been urged in favour of the Erith outfall that no complaint can justly be made on the part of the population or proprietors down the river, inasmuch as they already have to submit to the passing of the Metropolitan sewage down the river from whatever outfalls at present exist; but its disemboguement in the one tremendous stream in their comparatively near vicinity is a very different and far more obnoxious state of matters from its dilution in the river near or within the limits of the metropolis itself, and one cannot wonder at or regard as unreasonable the horror with which the new scheme appears to be regarded down the river.

LONDON-BRIDGE TO WESTMINSTER.

IN constructing a new line of street from London-bridge to Westminster, through the Borough, has it never entered into the minds of the projectors to combine a railway therewith? This greatest of all requirements for facilitating the traffic between the east and west of London might be easily effected by laying down a tram-way for a single line on either side of the street upon raised columns. We should thus combine, in one grand and novel project, a covered footway for passengers, a carriage-road, and a railroad.

Not being an architect I do not enter into the objections to which this combination might give rise, but I can conceive none which can at all outweigh the immense advantages offered to the public convenience. I leave the matter, therefore, in the hands of the able men of the profession. B. J. S.

LIVERPOOL ARCHITECTURAL AND ARCHÆOLOGICAL SOCIETY.

A MEETING of this society was held on Wednesday evening, the 19th November. Mr. S. Huggins presided. The secretary announced that the council had decided to recommend as a subject for the students' competition design, a Dissenters' chapel, with 1,200 sittings; the cost to be about 6,000*l.*

The chairman called attention to a design which he had prepared for the Free Public Library. It was not finished at the time it was sent in, but being now completed, he had brought it before the society.

Mr. John Hay said the chairman's were the only plans in which the instructions were complied with. The speaker also called attention to a design of Mr. Hornblower for the new library and museum. He had not complied with the instructions so literally as the chairman had done. These instructions had been literally cast to the winds by the decision which the committee in their wisdom had arrived at. While they found themselves justified in paying premiums for the designs selected, they did not feel themselves under any obligation to accept either of those which were successful, and so far the matter was as open as ever.

The paper for the evening was read by Mr. H. Cox, on "Alexandria in 1847 and 1848." The paper contained many interesting details of the state of Alexandria, and the condition of the inhabitants at the period referred to, the value of the information being enhanced from the fact that the author resided there for more than two years.

ARCHITECTURAL COMPETITIONS.

FOLESHILL UNION.

I AM glad to be able to inform you that the *vexata quæstio* of selecting judges to decide upon the merits of competition designs, promises to be at once set at rest.

The Building Committee of the Foleshill Union have shown themselves such adepts in mastering the difficulties attending the position, that I hold they should at once be elected to the office of deciding upon all such matters.

To prove my position I have only to inform you that they received a number of sets of designs for a new workhouse on Monday, the 24th ult. and on the 26th they issued the following:—

"Foleshill Workhouse.

I beg to inform you that your plans for this building were, with others, submitted to the Building Committee to-day, and were not approved of. They lie at the workhouse, at your disposal.

I am, your obedient servant,
Coventry, 26th Nov. 1856. THOS. DEWES."

Comment is unnecessary! A COMPETITOR.

THE GOVERNMENT OFFICES' COMPETITION.

YOU will much oblige by stating in the *Builder* how many transverse sections and longitudinal ones will be required for showing the interior of the new Government Offices in any designs which may be sent in. O. P.

*** This is left to the competitors. One of each will doubtless be considered a compliance with the conditions.

I TAKE the liberty of asking your opinion as to whether coloured drawings will be received for the block plan of the proposed new Government Offices, Whitehall. There being nothing mentioned to the contrary in the instructions, I presume they will; yet I would rather have your opinion on the subject.
ALPHA.

*** Coloured drawings are not prohibited by the published "Conditions." It must be observed, however, that all that is actually asked for by the Government is *a block plan*, showing the mode of concentrating the Government Offices, with a plan for improving the approaches to the Houses of Parliament and the communication with the Surrey side of the river.

NEW CHURCH IN BOW, MIDDLESEX.

A LARGE church is now rapidly approaching completion in Tredegar-road, Old Ford, in this parish, on land given for the purpose, by Sir Charles Morgan, Bart. Mr. John Nicholls is the architect. The Rev. G. T. Driffield, Rector of Bow, who, with the aid of a few friends, has undertaken the expense of the edifice, at first proposed having one of Mr. Samuel Hemming's iron churches; but this plan was relinquished, in consequence of an offer made by Mr. Hemming to erect a permanent structure which should bring in some elaborate iron windows which he had purchased. The result was the present building. The church has nave, chancel, north and south aisles, two entrance towers at the west end, with stairs to galleries, a central porch or vestibule, another at the north-east angle, and a vestry corresponding at the south-east. The aisles are divided from the nave by two ranges of columns, one carrying the gallery (which is an integral part of the design), the other supporting the roof. The total length, internally, is 114 feet, with a breadth of 60 feet. The pulpit, reading-desk, and clerk's desk, are placed centrally. The woodwork is stained: the columns are to be painted in colours. The east window, in the Perpendicular style, nearly 30 feet high, with five lights, has been filled with stained glass, in patterns, by Mr. Bell, of Camden Town. The church will be lighted by three *coronæ lucis*, suspended from the roof of the nave, and will be warmed by hot water. The aisles are divided into seven bays: the two end

bays on each side, with their buttresses, being varied from the rest on account of a difference in the windows. In each tower is a rose window, above which is an arcade with belfry openings, surmounted by a broach spire and finial. The walls are of picked stocks, with white bricks in the buttresses, parapets, and plinths: the dressings to doors and windows, the heads to buttresses, and the belfry arcades, are in Bath stone. The church will accommodate more than 1,500 persons. The contract is for 5,000*l.*

THE CITY.

The Church of St. Nicholas Cold Abbey, in Old Fish-street, has undergone a thorough internal repair and decoration, under the direction of Mr. John Young, jun. architect. The predominant colours used are fawn, warm lavender, and dead white. This is one of the churches erected by Sir Christopher Wren, and cost 5,500*l.*

A movement is in progress to decorate the (R. C.) Church of St. Mary's, Moorfields. It is proposed to introduce gilding and polychromatic decoration, under the direction of the last-named architect. With this view, one of the side chapels has been commenced, and is in a forward state.

THE CONTRACT SYSTEM.

"CAST WORK."

I have read three or four articles headed "Bad Plaster Cast Work" and "Who is to blame?" In my mind the architect is to blame for giving away the contract belonging to all the trades, from the commencement to the finish of a building, to one single contractor, who, as a matter of course, is not a judge of each and all of those trades, nor does he care only to make as much money as he can. He generally sub-contracts for about half of what he gets with the cheapest plasterer he can get hold of, who may be, as is too often the case in these days in this depressed and plundered trade, an old hod or hawk boy, who has neither reading, hands, nor practical qualities, and who would not know the difference between Grecian or Roman leafage, or any of the Gothic styles, as was formerly the case when each trade had the benefit of its own calling. And it comes to this. If some great radical change be not made in the giving away contracts in the building line (that is, giving each trade the benefit of his own contract), in the course of a few years you will neither have architects that will deserve the name, nor in all England one single stucco man who can work by hand any device that may be wanting. That was not formerly the case with the beautiful art which has done so much to decorate many of the old buildings and baronial halls of past times, and has given character and name both to architecture and art, each of which is now so much depreciated, particularly in England. I know of a recent instance of the contract for the stucco plastering of a Roman Catholic Chapel in the town of Wicklow that is to be done in the Gothic style, at least, a thousand pounds' worth of stucco-plastering work, for which the architect recommended a common mason, and also a carpenter, to the clergyman as proper parties to undertake the contract, in place of recommending no other but legitimate stucco-plastering employers for their own business. And this is only one out of four or five other (Roman) Catholic Churches that have been recently contracted for in the same way in and about the suburbs of London, as well as all the great works, for whatever reason is best known to the said architect himself. This, in my mind, is the only way to account for contracted ideas indifferent drawing, loss of the art, bad modelling, inferior cast-work, and bad stucco-plastering in general. THOS. M'ANASPIE,

An Artist and a Practical Workman.

Dublin.

IMPORTANCE OF A KNOWLEDGE OF DRAWING TO ALL CLASSES.

A lecture on this subject was given at the Coalbrookdale Literary and Scientific Institution, on Tuesday evening before last, by Mr. George Wallis, head-master of the Birmingham School of Art. The lecture was well-timed, as the schools, under a master sent down by the Department of Art, are about to open. Mr. Wallis, in course of his lecture, said:—What may be called the English School of Art excelled in colour, but we have neglected the more important principles which lie at the base of all. Some twenty years ago the Government of this country, conscious of our national defects, undertook to remedy them. They begun, however, by teaching "design," an unfortunate term to select, seeing that it includes invention, which it is out of the power of schools to teach. We have now, however, arrived at the point from which we ought to have started. The object of the Government now is to teach the whole people that they may appreciate works of merit, as well as to educate students in these schools that they may create them. The hand is a beautiful mathematical instrument, an exquisitely constructed pair of compasses, which acts upon the paper or the canvas, according to the dictates of the mind. The study of art may be said to be a race, in which the hand is constantly endeavouring to overtake the mind. And he who beyond the execution of his fingers sees nothing to be desired, has arrived at perfection in his own eyes, and is generally found to be conceited and incapable of progress. As long as the boy of the village school sees beyond what he has been enabled to accomplish, there is hope of improvement, and there is no point beyond which he may not rise. In nature, the eye of the artist detects variations, even in two sides of the same face; and the same with regard to a leaf. The great fault of young students, however, is that they grow impatient, refuse to rise by degrees, and revel in cottages, barns, and cattle, skipping altogether the alphabet of the science which really lies at the root of the matter. Parents, I am sorry to say, and masters, too often are implicated in this fault. Against this abuse I was influenced, twenty years ago, to protest, and to advocate, upon public ground, a general system of art-education that should be free from this. In the schools now about to open here there will be none of it.

ARCHITECTS' CHARGES.

Stumper v. *Lupton.*—In this case, tried at the Liverpool County Court, before Mr. Pollock, John Stumper, executor of the late George Stumper, architect, sought to recover the sum of 19*l.* 9*s.* the balance of professional fees on the cost of a building erected for the defendant from plans furnished by the deceased George Stumper. From the evidence, it appeared that Mr. Stumper died while the work was in progress, although not before it was very nearly completed. The charge was for the balance of a sum represented by 5 per cent. on the value of the whole contracts. For the defence it was contended that the fees were not exigible on the extra or additional work, nor for any of the work which remained unfinished at the time of the architect's death. 10*l.* had been paid into court, so that the sum really at issue was 9*l.* 9*s.* A great extent of evidence was led on both sides, from which it appeared that the work was, in reality, done as well and as expeditiously as if it had been superintended throughout by the deceased, with the exception of a portion of a wall, which it appears will require to be taken down and rebuilt, on account of some insufficiency of the foundation, and which, when done, will cost about from 12*l.* to 14*l.*

His Honour said, as the work had been done in a satisfactory manner, and as it had been shown that Mr. Stumper had given frequent attendance while the building was in progress, it could not be allowed that any deduction was due on that ground. On the other hand, however, as it appeared that a portion of the work which had not been superintended by the deceased had proved defective, it was only fair to admit that the defendant was entitled to an allowance, as he had a right to the professional skill of the man under whose direction the work was undertaken. Under all the circumstances, he considered the justice of the case would be met by awarding one guinea to the plaintiff over and above the sum paid into court, and each party to pay their own costs.

THE BUILDERS' BENEVOLENT INSTITUTION.

On Thursday, 27th of November, a special general meeting of the friends and subscribers to this excellent institution was held at the London Tavern, for the purpose of electing three pensioners on the funds—two males and one female—from a list of fourteen candidates. The president, Mr. Alderman William Lawrence, presided, and was supported by Messrs. George Bird, Joseph Bird, J. Thorn, Grayson, J. Williams, Thos. Cozens, J. Morris, John Newson, jun. and other influential members of the building trade.

The Chairman, in opening the proceedings, expressed his regret that only three could be elected out of the list of candidates. It was hoped that they would have been enabled to take in more, but the state of the funds would not permit of such a course being adopted. It therefore behoved them to use their best endeavours to raise more subscriptions, and thus enable the directors to announce another early election, when the whole of those who were unsuccessful to-day might receive the benefits of this truly charitable institution.

The last annual report stated that "the subscriptions and donations received during the past twelve months amount to 1,354*l.* 1*s.* and 700*l.* stock has been added to the sum invested in the Three per Cent. Consols, as follows:—250*l.* stock to the Relief Fund, and 450*l.* stock to the Building Fund, making the total amount 5,450*l.* stock—viz. 3,500*l.* to the Relief Fund, and 1,950*l.* to the Building Fund. It is for the relief of the numerous applicants who have survived their strength and capability of earning a maintenance, and for the benefit of those who have outlived their friends, and are left destitute and helpless, that the directors of this charity strongly solicit the aid of the generous and the humane. By its means the deserving and aged tradesman will be enabled to end his days contented, in the assurance that his former respectability and good conduct in life have saved him from the pressure of want and neglect in his declining years. The large number of these deserving cases which present themselves to the notice of the directors at each election of pensioners proves to demonstration the necessity that existed for establishing such an institution."

The election having been made, a vote of thanks was passed to the Chairman, and the proceedings terminated.

Notices of Books.

VARIORUM.

The two lectures by Dr. Booth, the Society of Arts' treasurer, advocating the Society's system of examinations, have been published by Messrs. Bell and Daldy, of Fleet-street, for the Society of Arts, in the form of a pamphlet, titled "How to Learn and What to Learn," and containing an appendix, with the programme of the examinations for 1857, and other matter relating to the system. The last of these two able lectures concludes with some important remarks on the subject of Reformatories. "Surely," says the lecturer, "the Eastern tale, how the fountain of youth transformed the decrepitude of age and the wrinkles of the old into the vigour, strength, and beauty of the young, was not so strange as the moral renovation which is now taking place in these reformatories. But I much fear the greater the good they do, the more criminals they reform, the more felons they set up in life, the more likely is it that this great philanthropic movement will be brought to a stand-still; because, when once it becomes generally known that the old proverb, 'Honesty is the best policy,' no longer holds good, but is superseded by this other, 'Thieving is the best policy;' when you systematically reward and cherish the evil doer, while you treat with cold neglect the poor but honest child; when you nationally realize the sneer of the satirist, *virtus laudatur et alget*, praise virtue and let her starve; when the paupers of our crowded lanes and festering alleys shall hear how that good-for-nothing boy Tom Styles, who was tried at the sessions, and found guilty, was sent to a reformatory, where he learned a trade, and is now a magnate in Australia, the owner of flocks and herds, dining off gold plate and fairing sumptuously every day; why the police-office will become the primary institution of the country instead of the school-room; the gaol gate will have more attractions than the church door; and men will seek to graduate in prison as a preliminary to success in life, as the youth of the upper orders now do at a university. You will realize the old fable, every guilty head you cut off from the hydra crime will be replaced by seven others in its stead. Now, do not mistake me: I do not undervalue or make light of the great present good which the reformatory movement is effecting. The criminals are a fact, and as a fact they must be dealt with. All honour to those men who have put their hands to this great and good work. At the same time, I say without the shadow of a doubt on my mind, that the good will be turned into evil *unless as much at least be done for the virtuous as for the vicious portion of society.* My argument is briefly this—if education and industrial training can so thoroughly cleanse these who have been dragged through the mire of guilt and crime, how much more ought they to do for those who have never offended, whose habits have not been warped? It is easier to keep a tree straight than to make it grow from crooked to straight. * * * The great principle which ought to underlie every system of national education is this, that every healthy child should contribute a portion of his labour to defray, at least in part, the charge for his school instruction. Let him give value for what he receives. * * * A boy who

alternates three hours' labour with three hours' learning, will make more progress than another who is shut up for the whole six hours in a school-room. This is one of the cases where three added to three do not make six."——The first part of the first volume of the "Transactions of the London and Middlesex Archæological Society" has been published by Parker, 377, Strand. It is illustrated with various engravings. Amongst its various contents, and besides the introductory and other addresses delivered at the society's meetings, official proceedings, &c. there are reprints of the valuable papers read before the society's meetings, including one on Late Discoveries in London, by Mr. C. Roach Smith; on Crosby-place, by the Rev. Thomas Hugo; on St. Helen's, Bishopsgate, by Mr. Thomas Lott; on Monumental Brasses, by the Rev. C. Boutell; Recollections of Westminster, by Mr. H. Mogford; on some London Relics, by Mr. Sydney Smirke; on Primæval London and Middlesex, by the Rev. T. Hugo; on Monuments in Westminster Abbey, by the Rev. Charles Boutell; on the Chapter-House, Westminster, by Mr. G. G. Scott, and other interesting matter. —— A version of "The Joint-Stock Companies Act, 1856," by Mr. W. G. Harrison, Barrister-at-Law, and Mr. G. A. Cape, Jun. secretary to the Indurated Stone Company, has been published by Baily, of Royal Exchange-buildings, Cornhill. The Acts, schedules, &c. are preceded by some introductory remarks, legal and practical, and the pamphlet is supplied with a pretty full index to its contents. The introduction contains much useful information as to partnership at common law, the formation of joint-stock companies, and of subscribers' liabilities, the position of members, &c. It concludes with a few warning words as to the bubble companies, with limited capital, which will inevitably rise together with the many onerous and responsible associations which the new Act will originate, and, indeed, is already originating, and as to the caution which ought to be used in *dealing* with limited companies. —— "How a Penny became a Thousand Pounds," is a little book still worthy of selection from the mass before us, albeit not now very fresh, and probably already well enough known to many of our readers, at least by hearsay. The author is evidently a shrewd fellow, and his mode of making a penny fructify like wheat till a good crop be reaped, might doubtless be practised in many trades, and, even though not very successful in some cases, would beget thrifty habits, and show the importance of small things in a practical way. Messrs. Houlston and Stoneman, of Paternoster-row, are the publishers. —— "The Unity of Worlds and of Nature," by the Rev. Baden Powell, Savillian Professor of Geometry at Oxford (Longman and Co.) has just reached a second edition, revised and enlarged. The three essays which constitute this bold and able volume, namely, "On the Spirit of the Inductive Philosophy," "On the Plurality of Worlds," and "On the Philosophy of Creation," are exceedingly interesting to a mind prepossessed in favour of expanded, theoretical, and general views, and well adapted, even as an intellectual exercise, to strengthen and develope the reasoning faculties in any mind not totally absorbed in worldly pursuits. And in saying so, we do not mean to commit ourselves to all the author's views, the gladiatorial conflict with some of which might do more to give mental power to the reader than the mere passive assent to his most masterly processes of reasoning. The boldness of views to which we referred is remarkable in a clergyman. The author scarcely disguises his contempt for those secular writers who display an overweening anxiety to square their ideas with what they imagine to be strict ecclesiastical orthodoxy, and who display an affected horror of all and everything overstepping the constrained limits within which they have restricted their own reasonings.

Architectural Society of Northampton.—The Earl of Pomfret has given permission to this society further to explore the site of Sewardsley, or Shoscley, Nunnery.

Miscellanea.

The Iron Trade.—More furnaces have been blown out, and wages are being reduced, but the trade is not thought to be in a worse state than it was some weeks since. The American orders are still far below the average. Importations in America, indeed, are rapidly on the decline, as appears from statistics prepared for the Pennsylvanian iron-masters. The importation of rails for the year ending June 30, 1855, was 127,517; production of American mills for year ending Dec. 31, 1855, 135,300; decrease of importation for average of five years, 101,210; increase of domestic produce, average in five years, 35,300; nett decrease of annual average in 1855, 65,910.——From Glasgow, we learn that at Dixon's Ironworks they are preparing a furnace and apparatus to put Bessemer's process to trial.——The tender of Messrs. Moser and Sons (of Southwark) has been accepted by the Admiralty, for the supply of iron of British manufacture, of different descriptions, for Sheerness and other dockyards.

Art-Manufacture Exhibition at Edinburgh.—The exhibition of the Art-Manufacture Association of Scotland, which opens in the National Gallery, Edinburgh, on the 15th instant, promises, it seems, to be one of considerable interest and extent. There are a good many exhibitors in metal-work and wood-carvings. In the latter list are Messrs T. W. Wallis, Louth, Lincolnshire; W. G. Rogers, London; W. Potts, Handsworth, Birmingham; Taylor and Sons, Edinburgh; Davidson, ditto; Hutchison, ditto; B. Reeves, ditto; R. Mack, ditto; M'Kechnie and Davis, ditto; D. Smith, ditto; H. Scrymgeour, ditto. A communication has been made to the secretary of the Association, through M. du Sommerard, keeper of the Hôtel de Cluny in Paris, that the Emperor of the French has given instructions to the Minister of State and of the Imperial Household, that specimens of the productions of the Imperial manufactories be sent to the Exhibition. The Scottish papers state that the English manufacturers have met the application of the Association in an admirable spirit; and the London and Edinburgh Shipping Company have intimated their readiness to convey articles to and from London in their steamers—the *Prompt*, *Express*, and *Rapid*—at merely nominal freights.

St. Martin-in-the-Fields Reading-room for the Working Classes.—A lecture on "St. Martin's in the Olden Time," was given on the 28th ult. in the Boys' School-room, Adelaide-place, by the Rev. W. G. Humphry, B.D., the vicar, in aid of the funds of the library and reading-room. The lecture was listened to with great attention by a numerous audience. The reverend lecturer traced the parish from its first mention in the thirteenth century (when it was connected with that of St. Margaret) to the time when those of St. Paul, St. Anne, St James, and St. George were taken out of it. He described the "faire crosse" at Charing, and the stately edifices of the nobles that once adorned the banks of the Thames, and gave a list of the numerous celebrated characters in art and literature who had been residents in the parish in the olden time.

South Shields Drainage.—A report furnished to the Town Council of South Shields, by Mr. Christopher Thompson, the borough surveyor, in reference to the sewerage pipes at present in use by the contractors for the borough, states, that the pipes at present in use are from the works of Messrs. Harriman and Co. of Blaydon, and Mr. W. Walker, of Corbridge. Tests of pressure and absorption, applied in the presence of the mayor and council, showed, on Messrs. Harriman and Co.'s pipes, capability of sustaining an average pressure, after saturation, of 194½ lbs. on the square inch. The average absorption was 1·880 per cent. on Mr. W. Walker's pipes, an average pressure, after saturation, of 210⅝ lbs. on the square inch; average absorption of 1·328 per cent on broken pipes.

Dollman's "Ancient Domestic Architecture."—We are asked to mention that the delay in the production of the second part of this work has been unavoidable, partly through the sketches and drawings of St. Cross's Hospital and St. Mary's Hospital, Chichester, having occupied much more time than was anticipated. The engraver promises that it shall be ready for delivery on the 10th of January, and that the third part shall be complete within three months from the issuing of the second part. The subjects in Parts II. and III. will be St. Cross and St. Mary's Hospital, Chichester; the Bede House, Stamford; and Blundell's School, Tiverton.

Destruction of South Lambeth Chapel.—On Sunday evening last, the greater part of this chapel was reduced to a mass of ruins, by a fire which broke out in the joists under the flooring, which the hot-air pipes used for warming the building must have fired. The chapel was insured. It was fortunate the fire took place before the congregation assembled for evening service.

Fire-grates.—Allow me to suggest a new method of constructing fire-grates in such a way as to prevent smoke. The bars of the fire-grate to be so made as to work on a hinge, allowing them to be raised, as it might be, like opening the mouth. Spaces must be cut in the jambs of the fire-grate, to admit of two iron plates, one on each side: these two plates must also work on a hinge at the back, and be capable of being raised like the bars of the grate: the plates must be *below* the bottom bar. Thus, when the fire is made, the two plates would be in the spaces in the jambs, and in no way interfere with the burning, and the bars would also be in their usual position. But when it was desired to add more fuel, the plates must be pulled together, so as to come *under* the fire, and then, being in that position, they must be raised like the opening of a mouth, and of course the fire and the bars, and the two plates (or one plate if easier) would all be raised together, so as to allow of fresh fuel being put at the *bottom* of the grate instead of being placed on the *top*, as at present. Then, this being done, the plates and bars and the fire would be let down again, and the plates drawn back again into the spaces in the jambs (or, if one plate, into its receptacle at the side), and by this means the smoke would be consumed in having to pass through the fire at the top.—W. G. R.

Huddersfield Mechanics' Institute.—The annual meeting of this Institution was held in the Philosophical-hall, at Huddersfield, on 27th ult. when the large room, holding some thousands of persons, was crowded. The meeting had excited great interest, several distinguished persons having accepted the invitation of the committee to be present on the occasion. On the platform were Lord Goderich, M.P. Sir John Pakington, M.P. Sir Robert Peel, M.P. Major-General Wyndham, Mr. Baines, of Leeds, Mr. Wickham, M.P. and other influential persons. The platform, which was constructed to hold 200 or 300 people, was filled by the principal manufacturers of the neighbourhood and their families. The hall was decorated with various drawings, executed by the members of the classes connected with the Institution. Lord Goderich having taken the chair, the annual report, which was of a highly satisfactory character, was read, after which his lordship addressed the meeting, as did also Sir John Pakington and Sir Robert Peel.

Blasting in Welsh Slate Quarries superseded.—A new system of machinery is being brought into use, and has been tried at Carnarvon, by which slate, it is said, can be cut into any required form, clean from the hill or quarry itself, without any of that enormous waste which results from blasting and the crush given to blocks contrary often to their lines of cleavage. The patentee of the machinery is Mr. Smith, of the Liverpool Corporation, who has purchased the patent right from the inventor, Mr. Jonah Ellis. The machine tested at Carnarvon was ordered on behalf of Lord Palmerston, and has been executed by Messrs. Thomas and De Winton, of that town. It is said to be equally suited to every form which the slate quarry can assume. The power made use of is steam, and the guide or directing agency is a screw, made to act upon chisels, so that the blocks are cut from the mass without cracks or splits, or waste of any kind, the lateral or horizontal cut being met by a vertical cleavage, so that slabs or blocks can be cut off to any required size and form, from a cubic foot to a hundred tons, if necessary.

Falling of a Railway Station Roof.—At Yarmouth last week the entire roof of the engine shed at the railway station fell, injuring three men. The fall of the roof is ascribed primarily to a severe gale of wind, and, secondarily, to its own weight. It was composed of iron, wood, and slate; had only been repaired within the last few weeks; and on Monday was being painted in the inside.

Fee Case: raising Buildings in the Metropolis.—The report of the above case, communicated by me to your Journal, is strictly correct; and it was with regret that I read in your last number the very perverse statement of your correspondent, "District Surveyor," the more especially as it is calculated to mislead your numerous readers, and to raise a doubt upon a point, concerning which there can be but one opinion. An additional story is erected upon *one house*, in a row of houses: the side walls and chimneys are of course carried up to form the story, and *one fee* is alone chargeable; and if the owners of the adjoining houses also construct an additional story, *then* a similar fee will become due on *each* addition. The builder did not employ counsel, and the "District Surveyor" paid his own expenses, as well as the cost of the summons. It is to be hoped that an appeal will be made to the Metropolitan Board, to protect the inhabitants of Clerkenwell from these unpleasant proceedings. I enclose from the builder in the case a verification of my statement.—W. P. G.

*** Here the matter must drop.

The Great Atlantic Telegraph.—The subscription list for the 350,000*l.* required by the Atlantic Telegraph Company has been already closed, the applications having considerably exceeded the specified amount. All the shares are of 1,000*l.* each, and a call of 20 per cent. was to be paid upon them on Friday. A combination of names of high standing in the commercial world has been obtained, and the confidence felt in the early accomplishment of the undertaking appears to be complete. The proportions in which the 350 shares have been taken are 101 in London, 88 in America, 86 in Liverpool, 37 in Glasgow, 28 in Manchester, 4 in Tewkesbury, 4 in Brighton, 1 in Nottingham, and 1 in Leamington. It is understood that application will be made to the United States' Government for an annual grant equal to 4 per cent. on the capital, such as has been accorded by the British Treasury. The company possess an exclusive privilege from the British colonies of Newfoundland and Prince Edward's Island, and also from the State of Maine, for bringing sub-marine cables to these shores.

Iron Lattice Bridge for the East Indian Railway.—A bridge of a somewhat novel construction is now being made in this country for the East Indian Railway. It is intended to cross the river Soane, one of the tributaries of the Ganges, and when completed will be nearly a mile in length. There will be twenty-nine piers, and the span from pier to pier will be 150 feet, being about 26 feet more than the span of the arches of the High Level-bridge at Newcastle-upon-Tyne. Like that structure, it will consist of two roadways, the upper one for the railway, and the lower one for foot-passengers and palanquin-bearers, the height from the lower to the upper way being 26 feet. The peculiarity of the construction is that the two roadways are fastened together and supported by latticework of wrought-iron, combining great strength with a light and elegant appearance. The bars are of channel iron, and cross each other diagonally, being firmly riveted together at each crossing. One complete arch has just been constructed at the Elswick Engine Works, Newcastle, by way of experiment, and the result is most satisfactory. The entire weight is 120 tons. It was made with a slight curve, 2 inches higher than a dead level, and when tested with a weight of 362 tons it only went down 2 inches below the level, or 4 inches altogether at the centre. The separate lengths or arches will rest at each end on five rollers of cast-iron, to allow of expansion and contraction, according to the variation of the temperature. The engineer engaged in the construction of this bridge is Mr. George Rendel, of London. As soon as the bridge is completed it will be taken to pieces in order to be shipped, and will be reconstructed in India.—*Manchester Guardian.*

Wiltshire Archæological Society.—The first *conversazione* meeting for the season, of the Wiltshire Archæological and Natural History Society, was held on Thursday evening, 27th ult. at Devizes, Mr. Ewart, M.P. in the chair. Amongst the papers read, the first in order was an historical sketch of Woodhouse, near Horningsham, drawn up by Mr. William Wansey, F.S.A. It was a source of considerable regret that the respected representative of a family, several members of whom played a conspicuous part in the struggle of the seventeenth century, was not himself present on the occasion, in order to enhance, by a living impersonation, the story which he told so well. In Mr. Wansey's absence, his paper was read by the Rev. W. C. Lukis, who next read a paper of his own, on the subject of "Paxes." A third paper was by Mr. Cunnington, of Devizes, describing the unearthing of a British chieftain of gigantic stature, in September last, from his resting-place [?] on Roundway Down, and of the discovery of other antiquities. Then came a lecture on Ancient Music, illustrated, both instrumentally and vocally, by Mr. Lambert, of Salisbury.

A New Theatre for Australia.—According to the *Australian and New Zealand Gazette*, a new theatre is to be built at Launceston by a company. This plan, it is said, assimilates in several respects to that of the Haymarket Theatre, and was an improvement on the former plan. In the new plan the theatre was made to hold 700 instead of 650, and without any extra expense. The new theatre would "hold," as it was said, 132*l.* 14*s.*; that is, 394 in the pit, at 3*s.*; 168 in the dress circle, at 5*s.*; and 168 in the boxes, at 4*s.*; amounting in all to 710 sittings, or standing room for 1,000. There would be a double tier of boxes. A shareholder had arranged to supply stone for the building at the same cost as bricks. There were to be six private boxes provided, and the orchestra is to be the size of that of the Haymarket Theatre. The land and building will cost 3,000*l.* which is being raised in shares of 10*l.* each, all of which, excepting forty-three, were taken up at the meeting, so that no time will be lost in erecting the building, which will be finished complete in all the details.

Construction of Baths.—With reference to a recent query on the subject of baths, a correspondent points attention to the advantage of lining both *sides* and floor with the patent glazed and coloured bricks of the Poole Architectural Pottery Company. He says they are superior in all respects to tiles for the purpose, as being cheaper, firmer, and not liable to come off like the latter. Several baths have been lined with them. By a judicious introduction of colour also, as white, buff, blue, chocolate, &c. a beautiful effect may be obtained at small extra cost.

Improvement upon Wall Paper.—Mr. Joseph Adshead, of 54, George-street, Manchester, has patented what is described as a "durable and economical substitute for paper," called "anti-moisture cloth," to supersede ordinary paper-hanging. Mr. Adshead's offices, it seems, are already furnished with a great number of specimens in imitation of wood, marbles, &c. and also flower-pieces. The imitations of wood are said to include most of the kinds known, and some new to this country; and there are specimens of granite painting, marbles, &c. The surface is glossy, and can be cleaned even with hot water, it is said, without injury. The texture of the cloth is woven, and hence its adaptability to various other purposes, such as coverings for tables and furniture in general, and bindings of books, specimens of which have been prepared. The extra cost of the material is said to be not much.

Visitation from Defective Sewerage, Marylebone.—At the Marylebone Vestry on 20th ult. Dr. Bachhoffner called attention to the following case:—A gentleman residing in Crawford-street lived in a house adjoining one which had been unlet for some months past, and the whole neighbourhood had suffered considerably, for a long period, from the foul smells arising from the sewers of the unoccupied house. About two months ago this gentleman lost a son through fever, arising from the abominable nuisance, and now no less than nine of his family were seized with the same complaint, and were in a dangerous state. The nuisance was complained of some months ago, but no steps were taken to remedy it, and it had gone on unabated. Dr. Bachhoffner, therefore, moved that steps be taken to enter the house by Dr. Thompson, the medical officer of health, without delay, and the source of infection removed, according to the powers vested in the parochial authorities by the New Metropolis Management Act. The motion was unanimously carried.

Rochester-bridge.—An application has been made by Colonel H. Sandham, the director of the Royal Engineers' establishment at Brompton, to the authorities, to allow the troops under his command to be employed in the destruction and removal of old Rochester-bridge. The opportunity was considered favourable for exercising the officers and men in the demolition of ponderous works. The authorities have accorded permission for the men of the Sappers and Miners to be employed in the undertaking, and a party of the Royal Engineers have been engaged making the necessary preparations. The piers and foundations will be destroyed by means of sub-marine explosions, in which divers belonging to the corps will be employed. Could not the military, as we often suggested, be usefully employed in the *construction* of public works as well as in *destruction*? The health and strength of the soldiery would thus be greatly promoted, and an enormous waste of manual power be put an end to.

The Soulages Collection, at Marlborough House, will be opened to the public on and after Monday next.

Cambridge Architectural Society.—The second meeting of this society for the October term was held on 20th ult. when the secretary read a paper on the Cathedral of Drontheim, in Norway, illustrated by the work of Count Minutoli. This cathedral was begun in 1080, consequently the earlier portions are Romanesque. The nave, with the western front, and also the choir, are in the Early Pointed style. The great feature of the building is the Pointed octagon, at the eastern extremity of the choir, under which originally was placed the shrine of St. Olof. It is now almost the only part in tolerable preservation, the edifice having been several times accidentally burnt, besides being sacked by the Lutherans in the tenth century, since which period the nave has been a complete ruin, and the choir so blocked up with modern repairs and galleries as to present but little of the original design. A complete restoration by a competent architect is shortly, however, to be commenced.

The Cedars, Putney.—In reference to a paragraph in the *Builder* of November 22nd, permit me to observe that the architect therein named is employed in the completion of a block of buildings commenced from my design, and corresponding to a wing already erected. Both blocks form detached parts of a general arrangement designed and planned by me.

George Morgan.

St. James's Chapel, Hampstead-road, has been re-opened, after repair. The burying-ground is closed. The chancel Venetian window has been filled with diapered stained glass, with the Paschal Lamb, &c. &c. and an inscription at the central base, that it is "A tribute of affectionate esteem from the congregation to a beloved pastor, the Rev. H. Stebbing, D.D. in the twenty-second year of his resident ministry." Regret has often been felt that so estimable a man and a theological author, has not been gifted by "the powers that be" with merited preferment.—P.

Important to Workmen.—Sheriff Strathern, says the *Glasgow Gazette*, has expressed an opinion at the Airdrie Small Debt Court, which is of some importance to the working classes. He said,—"It was illegal for the master to charge interest on advances to the workman, in the course of a pay for work done." As the practice of charging a shilling per pound and a penny per shilling for money advanced to workmen prevails to a great extent in the mining and manufacturing districts, it is but right that both master and servant should know that the exaction is illegal.

Houses for the Poor in the City.—Having seen in the last number of your valuable paper an account of the noble, generous support Miss Burdett Coutts (of imperishable memory) has liberally given to proposed lodging-houses in the Strand, I beg to know if it is too presumptuous to ask that illustrious benevolent lady to help the poor City of London in a like affair? There can be no harm done by your inserting this, as they cannot take in your paper, or they would have seen what Manchester, Liverpool, Bolton, Sheffield, and other places are doing.—S. P. X.

Art in Reading.—A meeting of the inhabitants, presided over by the mayor, was held on the evening of the 1st inst. at the Town-hall, to concert measures for establishing a school of art in the town. Mr. Cole, Inspector-General of the Department of Science and Art, attended by invitation, and explained the nature of the aid which Government afforded to schools of art. It was for the town to provide a suitable room and to raise a capital of 150*l.* and find five public schools willing to receive instruction in drawing, and when this was done, the Department would give its aid and recommend a master. Mr. Cole had no doubt that a good master would soon make the school self-supporting, as at Taunton, Hereford, and other semi-rural towns where the population was below that of Reading.

Faculty granted for Rebuilding Part of a Church.—In the Consistorial Court, at Salisbury Cathedral, Dr. Phillimore gave judgment in the case of the Rector of Steeple Langford, Wilts, *v.* Churchwardens; being an application for a faculty to take down and rebuild the chancel of Steeple Langford Church, to make a vestry-room, and otherwise to enlarge it. The parish opposed it on various grounds; one being that several bodies must be disturbed. The judge said the living must be considered as well as the dead, and it had been the constant practice of the ecclesiastical courts to decree faculties, the effect of which was to disturb graves, for the purpose of improving and enlarging churches. The Court decreed the faculty, but without costs. The alterations are to be effected under Mr. Slater, architect.

Lincoln Diocesan Architectural Society.—This society has commenced its career at Lincoln under favourable circumstances, so that its numerous members may now be fully assured of the success that promises to attend the important step it has taken of removing from Louth and Newark to the chief city of the county, where it not only has the most abundant, varied, and beautiful objects of instruction ever within easy reach of this its now central and sole establishment, but presents an easy mode of access to its visitors from almost all directions. It is the intention of the society to hold an inaugural meeting, at Lincoln, on the 26th of May next, and the two following days, at which the architectural societies of Yorkshire, Leicestershire, Northamptonshire, Bedfordshire, and Worcestershire will be present. The Rev. Edward Trollope, F.S.A. Leasingham, Sleaford, is the hon. acting secretary.

TENDERS

For building a House for Mr. E. G. Salisbury, at Houghgreen, Chester. Mr. James Harrison, architect:—

J. D. Williams	£2,408	0	0
T. Carter	2,352	0	0
W. Davies	2,293	0	0
S. Harrison	2,286	0	0
J. Royle and Son (accepted)	2,197	0	0

For new School, Master's House, and Park Lodge, Haydon Sherborne, Dorset, for Mr. G. D. Wringfield Digby:—

Gent	£1,200	0	0
Chapman and Croad	1,298	0	0
Hull and Redout	1,251	4	10
Guppy	1,222	17	0
Green	1,210	0	0
Sarrell	1,200	0	0
Down	1,113	0	0

For the pewing and general painting of Limehouse Church. Mr. Arthur W. Blomfield, architect :—

Evans (Brothers)...	£1,903	0	0
Gumbrell ...	1,429	0	0
Blackburn ...	1,414	0	0

McA." "J. K." (in type).

ADVERTISEMENTS.

TO BUILDERS. —TO BE DISPOSED OF, a BUILDING BUSINESS, established upwards of half a century, in the centre of a town about fifty miles from London, population 9,000. The house and premises are fitted up with every convenience, and belong to the present occupier, who is relinquishing the business on account of ill-health. The premises may be rented by the year or on lease, and immediate possession had. The Stock, which is reduced very low, to be taken at a valuation. For particulars apply, by letter, to Mr. WM. AUSTIN, 19 Albion road, Wandsworth-road, London.

TO PARENTS AND GUARDIANS.

ARTICLED PUPIL WANTED.—A Land Surveyor, carrying on an extensive practice in a large and interesting town in the south of England, having to manage a moiety of special work relative to public and private estates, and also several lucrative house and other agencies is desirous of obtaining an ARTICLED PUPIL. From the extensive business transacted in the office, a pupil would possess superior advantages to obtain a thorough knowledge of his profession. For particulars, apply by letter only, to A. B. 22, High-street, South Hampton.

A YOUTH WANTED, in a SURVEYOR'S OFFICE, where a premium will be required, to reside with the Youth, or otherwise. Apply to Mr. CHARLES RAWSON, Engineer, Land and Surveyor to the Keighley and Worth Valley Local Board of Health, Keighley, Yorkshire.

A SKETCHING CLERK. — A Gentleman who has formerly been articled to an Architect and Surveyor, and well qualified to set out for drawing working illustrations, both figure and landscape, in a manner of neatness, &c.—Address, by prepaid letter only, stating age and salary expected to J. W. at S. Phillips's Newspaper Office, Stone-street, Tetford and-court-road.

TO JOINERS.

MR. J. WESTON (author of the "Joiner's Instructor") has an excellent OPENING for an active YOUNG MAN who may be competent to set out the whole of first-class staircase and handrail work. A premium or its equivalent required. Apply at 34, Dorset-street Bridge, N. Hun-ton Liberal wages will be given.

TO JOINERS.

THIRTY good BENCH-HANDS may meet with EMPLOYMENT, on application to Mr. JAMES E. HALL, Builder, Farrington-street Bridge, N. Hun-ton. Liberal wages will be given.

WANTED, a PERSON to MANAGE a PRIVATE GAS-WORKS. He must be a good smith, as he will be required from what smith work may be necessary in the progress. Wages, 30s. per week. Good references required. Also for character and honesty. Address, by letter only, to G. W. Messrs. Smith and Hart's, Booksellers, Cirencester.

WANTED, immediately, a good perspective DRAUGHTSMAN, &c. Apply personally between Twelve and Four at No. 9, Hart-street, Bloomsbury square.

TO VENEER SAWYERS.

WANTED, a MAN, to take the MANAGEMENT of a VENEER WHEEL, in NEWCASTLE ON TYNE. No one need apply who does not thoroughly understand the work, and cannot give a satisfactory reference to his former employers as to character and ability. Apply to Messrs. GREY, Sawmills, St. Nicholas'-road, Newcastle-on-Tyne.

TO PARENTS AND GUARDIANS.

WANTED, in the Office of a London Architect, as an ARTICLED PUPIL, a Youth of gentlemanly feeling and perseverance. Premium moderate. — Address, A. B. care of Mr. S. Bartlett, 45, Bedford-row.

TO BUILDERS AND FOREMEN.

WANTED, by a Builder, in a large town in the Midland Counties, an experienced MAN, well acquainted with Letting down to Sub-and setting out Carpenters' and Joiners' work.—Address, stating terms, and where lately employed, &c. T. P. office of "The Builder."

TO SURVEYORS AND GENTLEMEN.

WANTED, an ENGAGEMENT, by the Advertiser, a thorough practical Builder and Surveyor, who has been engaged eight years on a nobleman's estate. Has had considerable experience in alterations, repairs, and the erection of farm and other buildings; also in valuing timber, surveying land, &c. &c. References can be had. Address A. care of Mr. Green, 98, Chester-terrace, Boo-ough-road, South-wark, London.

TO ARCHITECTS.

WANTED, a SITUATION, in an Office of Private, by a young man who has recently and satisfactorily completed his articles with a gentleman of extensive practice, to whom he can refer. Salary not so much an object as the opportunity for evading his acquirements. Terms, C. D. Office of "The Builder."

TO CARPENTERS AND JOINERS.

WANTED, by a respectable Young Man, who has served his apprenticeship in London, constant EMPLOYMENT. Moderate wages will be accepted.—Address, P. H. 63, Chiswell-street, Finsbury.

N.B. Importer of the PURE ROCK ASPHALTE, from the LIMMER Mines in Hanover.

CROGGON and COMPANY, Manufacturers of
PATENT ASPHALTE ROOFING,
BOILER, RAILWAY, SHEATHING and INODOROUS FELT.
For Damp Walls, and Lining Iron Houses.
2, DOWGATE-HILL, LONDON.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional JOHN BAZLEY that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not vegetate in damp situations. Account of COMPARATIVE EXPERIMENTS on the strength of it and other Cements read at the Institute of Civil Engineers, to be obtained from the Makers, JOHN BAZLEY WHITE, and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

ATKINSON'S CEMENT, so long known and esteemed in London for plastering purposes, is a quick-setting Cement, that requires no colouring. Sold exclusively by JOHN BAZLEY WHITE and BROTHERS Millbank-street, Westminster; and Seel-street, Liverpool.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER, for internal uses. These well-known hard Stuccos dry quickly, and can be painted upon within a few days.—Sold only by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster

PORTLAND CEMENT WORKS, NORTHFLEET, Kent.—KNIGHT, BEVAN, and STURGE, Manufacturers only of first-class quality, for the home and foreign trade. Portland Cement is manufactured at these works with especial reference to its destination, whether for stucconę, brickwork, blocks for breakwaters, tidal work, or otherwise.—London Wharf, Belvedere-road, Lambeth.

PORTLAND and BATH CEMENT.—FULLWOOD THOMPSON and CO. request the attention of Merchants and Contractors to the quality of their Portland and Bath Cement, which they manufacture on an improved system, securing rectitude of strength and colour, and at a less cost than is attainable by most other makers.

These cements set under water in a few minutes, and are not affected by extreme heat or cold

FULLWOOD THOMPSON & CO. will be happy to send prices and samples in reply to application by post. They deliver free into the Bristol and Exeter Railway Company's trucks at their works, or free on board in the Port of Bridgewater.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL.—Light, Dark, and Portland Cements equal to any made. Manufacturers also, and Dealers in Plaster, Paris White, Mastic, Hair, Lias Lime, Laths, Slates, and Slate Slabs, Fire-bricks, Grindstones, Cement Chimney-tops, ditto Vases, Ridging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Pozzolano.

JOHNS and CO.'s PATENT PERMANENT STUCCO WASH (perfectly non-absorbent), STUCCO, CEMENT, STUCCO PAINT.—CLARK and BENGOUGH, Manufacturers, Grand Surrey Canal Bridge, Old Kent-road. Office, 4, George-yard, Lombard-street.

PORTLAND and ROMAN CEMENT. PLASTER of PARIS

Manufactured by J. M. BLASHFIELD, at Millwall Isle of Dogs. Warehouse, No. 1, Wharf, Paddington-basin.

CHARLES RICHARDSON, 3 & 6, SOUTH-WHARF, PADDINGTON BASIN. COWLEY and DENHAM, PORTLAND, ROMAN, AND OTHER CEMENTS, TAMWORTH GLAZED SEWAGE PIPES BLUE VITRIFIED BRICKS, COPINGS, PIPES, &c.

3 & 6, South Wharf, Paddington.

NOTICE.

CHARLES RICHARDSON takes the earliest opportunity of informing Engineers, Architects, Contractors, and others, that he is now bringing GREAVES'S BLUE LIAS LIME per the Great Western Railway from Harbury to Bull's-bridge and Paddington, from whence it can be delivered alongside any part of the river Thames, canals, or railway stations in London the day after it is burnt and ground, in any quantity, and at a great reduction in price.

All applications for prices and terms will meet with prompt attention.

N.B. Please observe the lime is ground at the works, not in London.

BLUE LIAS LIME.—Messrs. GREAVES and KIRSHAW having completed their Works on the Birmingham and Oxford Line of the Great Western Railway, at Harbury, are now prepared to supply LUMP and GROUND LIME of the best quality, direct from the kilns, to all the Stations on the Great Western Railway.—Greaves's Blue Lias Lime.—Portland, Bath, and Lias Cement.—Works, at Harbury, Stockton, and Wilmcote.—Office, at Warwick.

BATH, PORTLAND, and ROMAN CEMENTS.—The London and West of England Cement Company can offer to the Trade the best natural HYDRAULIC CEMENTS at reduced prices. The Company particularly recommend the best quality of their Bath Cement for all modelling cornices, decorations, &c. as having all the qualities requisite for an interior cement, and being quite unaffected by extremes of weather. The Company also supply BLUE LIAS LIME, lump and ground, which will carry more sand than any in the market.—Communications to be addressed to the General Offices, 30, Old Broad-street, London; to Mr. MONUMENT, 4, Caroline-place, City-road; to Mr. TIMEWELL, the Depôt, 9, North Wharf-road, Paddington; or to the Works, Dunball, Bridgewater.

SOUTHAM BLUE LIAS LIME DEPOT. Glazed Stoneware Sewage Pipes. Brick, Lime, and Cement Merchants, TATHAM and CO. 14, South Wharf, Paddington.

PORTLAND and BATH CEMENTS. TATHAM and CO. 14, South Wharf, Paddington.

PARIAN CEMENT, reduced in price 25 per cent. This article is valuable for inside stucco, and especially for skirtings, for flooring on brick arches, &c. It takes paint in a few hours after its application on walls or laths, is without efflorescence, and may be papered in a couple of days. A finer quality forms a beautiful Scagliola, with any admixture of colours. Manufactured by FRANCIS, BROTHERS, Cement Works, Nine-elms, London.

CEMENT.—ROMAN and PORTLAND CEMENTS, and PLASTER of PARIS, manufactured by C. J. HILTON, can be had in any quantity, wholesale or retail, at his wharf, 6, Upper Thames-street, London; and also at the manufactory, Faversham, Kent. N.B. These Cements supplied for shipment, on advantageous terms.

DAVIES and NORMAN, CROWN WHARF, GREAT SCOTLAND-YARD. ROMAN and PORTLAND CEMENTS. LIME, BRICKS, TILES, SLATES, FIRE GOODS, &c. STONEWARE PIPES, PANS, TRAPS, and about 12 other manufactory, Faversham, Kent. N.B. These Cements supplied for shipment, on advantageous terms.

THE PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs. ROBINS and CO. to WHOM the PRIZE MEDAL was AWARDED in 1851, are prepared to supply any quantity of every description of PORTLAND CEMENT, manufactured by them for all the purposes to which Cement is applicable. Orders received at their Northfleet Depôt at the Works.

HUBBUCK'S PATENT WHITE ZINC PAINT,

The Permanent White of the Ancient Artist.

HUBBUCK and SON, the Original Manufacturers, are enabled, by their process, which is patented, to supply Pure White Zinc Paint at the price of White Lead. Neither heat nor tropical climes can upset it. It is entirely free from any poisonous or pernicious property. The accidental maladies paralysis and painter's colic, will be altogether avoided. The Powdered White Zinc may be had for grinding in oil, and with ease is ground to a fine impalpable powder. To prevent the paint which the unscrupulous make, the registered initials must appear on each package, with the Words Zinc Paint sealed in Original Packages, each package stamped, HUBBUCK, LONDON—PATENT. And when so marked the quality is guaranteed. THOMAS HUBBUCK and SON, the Original Wholesale Manufacturers, Paint and Varnish Works opposite the London Docks, London.

N.B. OLD ZINC AND ZINC CUTTINGS BOUGHT TO ANY EXTENT FOR REFINING.

BLUE LIAS LIME.—CHAS. NELSON begs to offer to consumers a supply of Blue Lias Lime direct from his Quarries at Ware-hampton, the quality of which has been tested by several of the largest railway companies, and by private parties, and found to be of the most superior description. Any quantity will be delivered at the nearest railway station, or on board any vessel in the river Thames, and the Limes will be carefully packed in casks, and forwarded to any part of the kingdom, so as to arrive in the best condition. Where the Lime is to be used for grinding, it is recommended that the casks be not opened, but the Lime ground with the casks, as by this means the Lime will be found to produce a much greater quantity of powder than if the casks are first emptied. Orders addressed to the Lessee, Mr. Charles Nelson, Wharf, Paddington, will receive prompt attention. Quarries at Ware-hampton, Warwickshire. Wharf, Paddington. Quarries and Manufactories, Stockton, near Southam, Warwickshire.

NOTICE.

SOUTHAM HYDRAULIC BLUE LIAS LIME.

WILLIAM OLDHAM begs to inform those parties requiring genuine Hydraulic Blue Lias Lime, that he is prepared to deliver the best quality of ground and lump, into boats, at the Works. Address, WILLIAM OLDHAM, Blue Lias Lime and Cement Works, Southam.

GREY STONE LIME WHARFS, 12, UPPER GROUND-STREET, Blackfriars (Surrey side), 7, NORTH WHARF ROAD, Paddington.

WILLIAM PETERS begs to inform the Trade that he is in a position to supply the best GREY STONE LIME in any quantities from the above wharfs, or per barge direct from the kilns.

Large Grey Stone, or Grey Chalk, free on board at Works, 1s. 9d. per ton

Small ditto, ditto, 2s. per ton.

Barges loaded in a few minutes.

Wouldham-hall Grey Stone Lime Works, on the Medway, near Rochester.

CHADWICK'S CEMENTS.—To Railway and Dock Directors, Gas and Water-works Companies, Coal-Mine Proprietors, Builders, Contractors, &c.—JOHN CHADWICK, Manufacturer of the Patent Lithic, Roman, and Portland Cements, is prepared to enter into contracts with any of the above branches that may favour him with their orders. The advantages to be derived from the use of Cements manufactured by J. C. over all others, are their extraordinary hydraulic properties—Samples of which he is always happy to lend or supply to order at the Works, Ashton New-road; or the Warehouse, 5, Broom-street, Shude-hill, Manchester.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings of good and sound quality, constantly on sale at Mr. DYER'S Brick-fields, which are only a quarter of an hour's walk from the City. He earnestly requests purchasers to favour him with a visit, in order to inspect his stock, and to select them himself.

Malm Place, half-washed Stocks, and Place Bricks, also on sale. These bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external use.

Apply to HENRY DODD and CO. at the Counting-house, Hotten Brick-fields, Grange-walk, near the Rosemary Branch, Hoxton.

N.B. Light-coloured Pot Sand of a good quality constantly on sale. Orders addressed to Mr. Dyer, as above, or to Mr. Dodd, at Mill-wall, Isle of Dogs; and sold at No. 1, Wharf, Praed-street, Paddington-basin.

BRICKS.—Mr. Rydon having made more bricks than he requires for the builders on his estate, Highbury, New-park, would be willing to enter into arrangements with builders and others for supplying first-class STOCK and RED BRICKS upon advantageous terms.—For particulars, apply at the Estate Office, Delly Farm, Stoke Newington Green.

THE BEST HERTFORDSHIRE MALM SECONDS;

THE BEST WHITE and RED PAVINGS; WHITE SUFFOLK PERFORATED BRICKS; DEEP-RED RUBBING BRICKS.

Also COWLEY and KENT STOCKS, in any quantities

J. EASTWOOD and SONS, Belvidere-road, Lambeth; and Surrey-canal-bridge, Old Kent road, Surrey.

N.B.—Lime, Cement, Slates, Fire-bricks, &c. and all kinds of Building Goods.

BRICK-FIELDS, QUEEN'S-ROAD, PECKHAM, SURREY

(Within a short distance of the five bridges).

THE BEST MALM CUTTERS, SECONDS, PICKINGS, and PAVIORS, in any quantity

Also, STOCKS, of FIRST QUALITY.

J. EASTWOOD and SONS, Belvidere-road, Lambeth.

BRICKS of all kinds (clamp-burnt or kiln-burnt), Lime, Chalk, Chalk Rubbish for brick-making, Flints for building and pottery work, Foundry Loam, Whiting, Whiting Sand for asphaltic, Land Drain Pipes, Patent Drain Pipes, Gas Soil for brickmaking, &c. to be had by barge from Messrs. MEESON and CO'S works at Grays, Essex, in any part of the Thames, the various canals, the river Lea, &c. or by rail to any station on the London and Southend and Eastern Counties lines, or any railway connected with them. Vessels of 500 to 600 tons can load alongside the wharves at Grays. At MEESON and CO.'s wharf and kilns, Bow-bridge, Stratford, Essex, the above-named articles can also be procured, as well as all kinds of fire goods both Welsh and Newcastle, Fire-clay, Flare-burnt Lime, and Marble and Temper Lime; and here lime is packed in hogsheads, casks, jars, &c. for exportation.

General Office—No. 13, GEORGE-YARD, LOMBARD-STREET, Letters addressed to Grays Essex, will meet with immediate attention.

COLES, SHADBOLT, and CO. CEMENT and PLASTER MANUFACTURERS, LIME MERCHANTS, Brick, Tile, Drain-pipe, Hair Lath, and Fire Goods Merchants.

ST. JAMES'S and THORNHILL WHARFS, Caledonian-road, Islington.

ROMAN CEMENT, made at the above works, may be had fresh from the kilns daily—a great advantage to dealers and sewer contractors, especially in winter time.

PORTLAND CEMENT, of the best quality, strength, and colour, manufactured in Kent, the nearest point to London, and less than any of the Lag Cements, which are much inferior to it, and should not be used in the construction of sewers, &c. where Portland Cement is required.

PLASTER of PARIS, direct from the quarries, both coarse and fine, wholesale and retail.

Caledonian-road, Islington.

LIME, Grey Stone, Chalk, and Blue Lias Lime, fresh burnt, a constant and regular supply of which may be had by the barge or yard.

A large assortment of Glazed Stoneware Drain-pipes, of the best Lambeth make; Yorkshire Plain, Pan, and Paving Tiles; Welch Fire-bricks, Lumps, and Clay; Hair and Lath. All kinds always in stock

These goods are of the best quality, and sold at the lowest possible prices.

N.B. Shipping orders promptly executed.

BEADON'S PATENT IMPERISHABLE GUTTER-TILES,

For Spouting Roofs of Houses (either old or new, whether of thatch, slate, or tile), and other structures.

SOLE AGENT,

J. B. LAWES, 1, Adelaide-place, London-bridge.

This is the cheapest kind of spouting known; for, besides its lower cost, it will last without paint or repairs as long as the building itself. It will bear the weight of any ladder; and in case of accident a labourer can repair it. It occupies the room of a large amount of roofing, effecting a great saving in slates, tiles, &c. It is especially applicable to the backs of houses in town, cottages, and agricultural buildings.

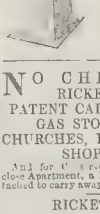
Price 4d. each tile of about 13 inches long; stop-ends and outlets, 6d. Any mason can put them up, or, if over 100 feet are required, a man will be sent to fix them at 5d. per foot. This charge to include tiles delivered in Agent's yard, cement, and labour. May be had in London, Gloster, Bridgwater, and Madeley, Staffordshire.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 21, WHARF, Macclesfield-street North, City road, Basin. Secondly, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietor; and, thirdly, that the "REPORTS OF THE JURIES," page 881, of the Great Exhibition, rank the Manufactures from whence it came as "The Tilleries," Tunstall, Staffordshire, as the first of the kind in the world.

PATENT TERRA-COTTA. Tracery for Parapets and Terraces, Mullions, Pinnacles, Moulded Bricks, Coats of Arms, Crosses, Label Mouldings, Friezes, Trusses, Vases, Balusters, Capitals and Bases of Columns, Paving, Facing Bricks, Coping, Kitchen and other Sinks, Chimney Shafts and Tops, and numerous other Articles, manufactured by J. M. BLASHFIELD, the Patent impermeable Terra-Cotta, at Mill-wall, Isle of Dogs; and sold at No. 1, Wharf, Praed-street, Paddington-basin.

DRAUGHTS of COLD AIR and DUST round room, office, or outside doors and windows EFFECTUALLY PREVENTED by GREENWOOD'S patent INDIA-RUBBER STOPS, the most simple and effectual method of making air-tight joints to joiners' or cabinet work, old or new. These Stops can be had any length or pattern. Self-acting spring Stops, for the bottoms of doors.

The Trade supplied.



JOHN GREENWOOD, Patentee, 10, Arthur-street West, London-bridge.

Price 10s.

To be had of Ironmongers and Builders, and of the Patentee, at his Office, 65, Fenchurch street.

GALVANIZED WINDGUARDS.

No. 1. 3 feet high, 14 in. by 9 in. bottom, 18s.

No. 2. 4 " " " " " 20s.

A DISCOUNT ALLOWED TO THE TRADE.

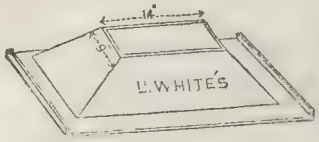
This Windguard is highly recommended by the Manufacturers,

F. EDWARDS, SON, and CO. 12, POLAND-STREET, OXFORD-STREET.

NO CHIMNEY WANTED for RICKETS'S PATENT CALORIFERE GAS STOVES in CHURCHES, HALLS, or SHOPS;

And for Counting-houses, or any close Apartment, a Pipe can be affached to carry away the burnt air.

RICKETS'S CHEAP GAS STOVE, Price £1. 15s.

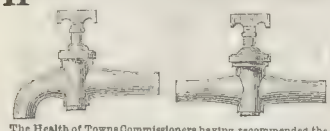


Made of Sheet Iron, suitable for Heating small Counting-houses, Bedrooms, Cellars, &c. &c.

MANUFACTORY, AGAR-STREET, STRAND, LONDON.

Liberal Discount to Builders.

PATENT SOLID SWISS PARQUETERIE. This beautiful, unique, economical, and elegant description of Parquetry, extensively used in Paris and other Continental cities, is now introduced into this country: an extensive assortment of specimens and patterns commencing at 1s. per foot super. (and upwards), may be inspected at the Show and Application Rooms of Messrs. H. P. BURT and CO. 2, Charlotte-row, Mansion-house; or of Messrs. ARROWSMITH and CO. 59, New Bond-street.

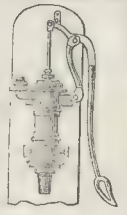


IMPORTANT TO BUILDERS.

REGISTERED CAST-IRON CHIMNEY-HOPPER and CHIMNEY-BAR COMBINED, ensuring a perfect formation of the Flue, and rendering smoky chimneys impossible. One trial will cause their adoption in every building
Price from 8s 6d. each, according to size.
IRON GIRDERS and COLUMNS to MODEL or DRAWING
IRON PIPES and connections for gas, water, and liquid manure.
RAIN-WATER PIPE and EAVE GUTTERS, at wholesale prices. Also, O.G Gutters, Sash-weights, STABLE FITTINGS, pumps, tomb railing, cattle and pig troughs, and COLUMNS with caps and bases, and every kind of builders' castings, in stock, at LYNCH WHITE'S Iron Wharf, Upper Ground-street, London, near Blackfriars-bridge.

SMOKY CHIMNEYS.—The best Cure is KITE'S PATENT ALBERT CHIMNEY-CAPS, patronised by Her Most Gracious Majesty the Queen, Buckingham Palace; in St. James's Palace, Claremont, Windsor Castle, Ordnance Departments, Government Offices, Public Buildings, &c. Also extensively adopted by the Nobility, Gentry, and the Public in general. Wrought iron, 35s.; Galvanised do. 30s.; Cast do. 25s. each: the latter as durable as the building itself. The merits of this invention are proved by practical experiments; they are likewise architectural in appearance.—Depôt, Barton's Iron Works, and Manufactory for the Patent Stable Fittings, and Enamelled Mangers.—Address JAMES BARTON, 370, Oxford Street, London.

TO WATER COMPANIES AND PLUMBERS
HIGH-PRESSURE COCKS & CLOSETS.



The Health of Towns Commissioners having recommended the adoption of the high-pressure principle in all towns, WARNER'S HIGH-PRESSURE COCK is recommended as a Cock free from leakage, and applicable for all purposes and situations. Patent Closets and Basins with supply-valve for attaching direct to main pipes without a cistern, cocks, or wire.
LEAD, IRON, and TIN PIPE.
JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin-street London.

TO WATER COMPANIES, LOCAL BOARDS OF HEALTH, AND OTHERS.

LAMBERT'S NEW VALVE COCK,
For Preventing Waste of Water.
Is so constructed that it cannot be left open accidentally or wilfully, and further it will at each action deliver a specific quantity, and under the same pressure this quantity will never vary.
It is peculiarly adapted for closets, self-acting or otherwise.
Price, complete for high pressure, 10s 6d. each.
" " low " 12s 6d. "
THOS. LAMBERT and SON, Patentees and Manufacturers, Founders and Machinists, Short-street, New-cut, Lambeth.

TO BUILDERS AND PLUMBERS.
The attention of the Trade is called to JOHN WARNER & SONS'
PATENT VIBRATING STANDARD PUMP,

which is recommended for the simplicity of its construction, and the ease with which it works.
By the introduction of the vibrating standard, the cumbrous carriage and expensive slings and guides are unnecessary, rendering the price considerably less than Pumps made on the old plan.
Rear and Water Engines for raising fluids from a depth not exceeding 28 feet; also, Garden Engines constructed on the same principle.
JOHN WARNER & SONS,
8, Crescent, Jewin-street, London.
Manufacturers and Patentees.

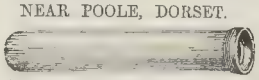
MUSTO and Co. having a large sale for these particular Engines, endeavour to keep a stock either finished or in course of erection, which can be seen at their Works. Satisfactory reference can be given, and Engines of their make inspected, at work, in several parts of London. Workmanship and materials warranted.

GREAT REDUCTION in PRICE of STONEWARE DRAIN-PIPES.

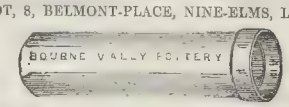
WILLIAM NORTHEN,
UNION POTTERY, 14, VAUXHALL-WALK, LAMBETH,
Begs to call the attention of Surveyors, Contractors, Builders, and others, to a very great REDUCTION in the PRICES of his
GLAZED STONEWARE DRAIN-PIPES.
LISTS OF PRICES FORWARDED ON APPLICATION.

REDUCTION IN THE PRICE OF CLOSET-PANS



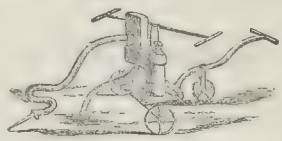
DOULTON AND WATTS,
LAMBETH POTTERY, HIGH-STREET, LAMBETH,
Have reduced the Price of their PATENT ENAMELLED CLOSET-PANS WITH TRAPS, to
5s. 6d.

These Pans, therefore, which have a strong Vitrified Body, as well as a White Interior Glaze, may now be obtained at the price of the commonest description of Closet-pan.



THE BRANKSEA POTTERY,
NEAR POOLE, DORSET.

GREAT REDUCTION IN PRICES OF DRAIN-PIPES.
TO THE METROPOLITAN BOARD OF WORKS, DISTRICT BOARDS, BOARDS OF HEALTH, TOWN COUNCILS, IMPROVEMENT BOARDS, SURVEYORS, AND BUILDERS.



THE BRANKSEA POTTERY and CLAY COMPANY are prepared to supply all descriptions of Glazed Drain-pipes, Bends, Double and Single Junctions, Closet-pans, &c. Also, Terra-cotta Chimney-pots and Fire-bricks of a very superior quality at moderate prices.
N.B. A LIBERAL DISCOUNT TO THE TRADE. A LARGE ASSORTMENT OF GOODS CONSTANTLY ON SALE.
The clay obtained from the pits on the island of Branksea is of the finest quality, and the goods are manufactured by men of long experience in the trade, which is still carried on in the old masonry. The articles offered for sale will be found to bear comparison with the best goods manufactured in any part of England.
A list of prices forwarded free on application to Mr. T. G. BECK, at NEW WHARF, No. 6, Little Abingdon-street, adjoining the New Houses of Parliament; or to Mr. R. PETTO, at the Works, Branksea Island, Poole, Dorset.

BOURNE VALLEY POTTERY, NEAR POOLE, DORSET.
DEPOT, 8, BELMONT-PLACE, NINE-ELMS, LONDON.

EXTENSIVE REDUCTION IN THE PRICES OF SALT-GLAZED STONEWARE DRAIN-PIPES, FLUE-PIPES, BENDS, JUNCTIONS, CLOSET-PANS, &c. &c.
The Proprietors of the above Works are prepared to supply the various articles used in drainage, &c. in any quantities. The pipes, &c. are made of the finest clay, the produce of the estate, by skilful and experienced workmen, assisted by new and patent machinery, and are so thoroughly vitrified by the intense heat to which they are subjected, as to prevent the possibility of the absorption of any liquid. They will bear comparison with goods made in any part of the kingdom.
Lists of prices, and any other information may be obtained, on application to the Manager, Mr. J. T. BOUNSALL, Bournemouth, near Poole; or of the Agent in London, Mr. G. S. WHITTON, 17 and 18, Princes-street, Lambeth.

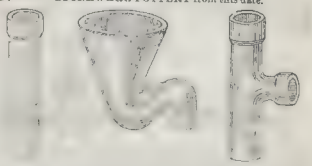
AND AT LAMBETH POTTERY, LONDON

UNDERHAY'S PATENT

REGULATOR CLOSETS for constant or intermitting supply, dispense with Cisterns, Service Boxes, Valves, Levers, Cranks, Levers, &c. &c.; much time is saved in fixing, and a better flush of water obtained in use.



Pan, Valve, Self-acting, and Servants' Closets, on this principle, may be seen at the Works. They are very cheap, their efficiency is guaranteed. 5,000 of them have been sold, and no instance of failure has occurred.

These Stool-valves are cheaper, stronger, and more ornamental, than any other Many thousands are in use, and greatly approved of.

Manufactured by
CHARLES BOTTEN and SON,
Brass Founders, Crawford passage, Clerkenwell, London.

GREAT REDUCTION in the PRICE of

STONEWARE POTTERY from this date.

VICTORIA POTTERY, LEIGH, near SOUTHEND; London Establishment, Falcon Wharf, 70, Bankside.—DAVID MOUNTAGUE, Manufacturer of every article of Lambeth POTTERY, having now further reduced the prices, begs to offer to consumers and others, STONEWARE PIPES, &c. &c. on the most advantageous terms. The new lists of prices will be forwarded on application as above.—Feb. 11, 1854.

FOR HIRE, a SPACIOUS TENT, adapted

for the Laying of Foundation Stones for Public Buildings, &c.

Also, for Sale, a Quantity of Cocoa Matting for Churches, at greatly reduced prices.

Apply to H. PIGGOTT, 112, Fore-street, City.

REDUCTION IN PRICES.

PATENT DRAIN-PIPES, UNGLAZED,

manufactured by ARTHUR C. FRANCIS and CO. Grays, Essex. Sold by them, and by FRANCIS, BROTHERS, Nine-Elms, London, and at all their Warehouses.

PRICES.

3 inch bore, in 2 ft. 6 in. lengths, at					2½d. per foot.
4	"	"	"	"	3½d. "

These pipes are made under steam pressure, and burnt to great hardness, and are capable of bearing nearly double the hydraulic pressure of ordinary glazed pipes. The prejudice against red-ware is overcome by this manufacture, and it is well known that good earthenware, UNGLAZED, is the oldest material discovered in a perfect state in Rome, Babylon, Nineveh, &c. &c.

WATER-CLOSET,

WITH

APPARATUS COMPLETE, for 12s. 6d.

CONSISTING OF

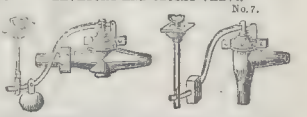
STAFFORDSHIRE BASIN AND TRAP,

Enamelled White Inside,

BRASS VALVE, &c.

MANUFACTURED AND SOLD BY

W. PATTEN, PATENTEE,



OLD FISH-STREET, near SAINT PAUL'S,

LONDON.

LAMBERT'S SELF-CLOSING

LAVATORY AND CLOSET VALVE

No. 7.

Is adapted for high or low pressure, and for any kind of BASIN. Many hundreds are in use under a constant pressure of 150 to 200 feet; they are found to be exceedingly durable, and are cheaper than common cocks. Manufactured solely by the Patentees.

THOS. LAMBERT and SON,
Brass Founders and Engineers,
Corner of Sharp-street, New Cut, Lambeth.

N.B. No. 7, combined with a DOULTON'S PAN and TRAP, is the CHEAPEST COTTAGE CLOSET yet produced. Price complete, 13s. 6d. each.

TO ENGINEERS, ARCHITECTS, and OTHERS REQUIRING a good HOUSE and extensive OFFICES. The OFFICES of the GENERAL MUTUAL and GENERAL LIFE ASSURANCE SOCIETY (now about to REMOVE to ST. JAMES'S-SQUARE), the present HOUSE and OFFICES, with Office Fittings and Pictures, are now TO BE LET, the LEASE, FIXTURES, and OFFICE FITTINGS, to be SOLD, on very moderate terms.—Inquire of Mr. FINNIS, House Agent, 65, Great Russell street; or of the Secretary, on the Premises, 99, Great Russell street, Bloomsbury.

FREEHOLD LAND TO BE LET, on Building Lease for ninety nine years. Money advanced to responsible parties. Freehold Land to be Sold for building purposes in eligible situations.—Apply at the Offices of Messrs. MORGAN and PHIPSON, Architects, 3, Danes-Inn, St. Clement's, Strand.

FINCHLEY.—LAND fronting the Regent's Park-road, and East-end-road, TO BE LET on Building Leases for ninety nine years, with power of exchange in most eligible situations. Freehold Land to be Sold for building purposes in eligible situations.—Apply at the Offices of Messrs. MORGAN and PHIPSON, Architects, 3, Danes-Inn, St. Clement's, Strand.

EXTENSIVE PLOT of vacant GROUND, in a most important first rate local ty, abutting Regent's-circus, with entrance from Oxford-st. the adjacent street, suitable for a building operation of any character or magnitude. It is screened from its extent and high class situation (nearly a quarter of an acre), to be eminently adapted for an arcade or any other similar public establishment carried out under the Limited Liability Act.—For particulars, apply to Messrs GRAHAM and JACKSON, 37 and 38, Oxford street. May be treated for as a whole or separately.

BUILDING LAND TO BE LET, close to St. Jude's Church, old Bethnal-green-road, for the erection of fourth-rate houses, which are in great request, and will let and sell as soon as finished. For further particulars, apply to Mr. CLARKSON, Surveyor, 48, Penton-street, Pentonville.

BUILDING LAND.—WANTED to PURCHASE or RENT, from ONE to TEN ACRES, in any of the following localities:—Islington, Highbury, Holloway, Kentish-town, Camden-town, St. Pancras, Dalston, Hampstead, or within a short distance of the City.—Apply, with full particulars, to Mr. GEO. CLARKSON, 48, Penton-street, Pentonville.

TO BUILDERS and OTHERS.—Greenwich, near the Railway Station.—Very excellent Premises TO BE LET, consisting of a store for timber, parlour, and kitchen, on the ground floor, over which is a workshop, perfectly lighted, capable of accommodating several carpenters; also mail-room and counting-house, with fittings, &c. at the low rental of 30*l.* per annum. The above offers peculiar advantages for a young man commencing business, as it has been established many years, and the late occupier is recently deceased. For further particulars apply by letter to A Z Post office, 32, Lombard-street

TO BUILDERS.—A lucrative and safe speculation. GROUND TO BE LET, in the best part of Paddington.—Apply, by letter only, to Y. M. Office of "The Builder."

TO BE LET, in the neighbourhood of Finsbury-square, SMALL MANUFACTURING PREMISES, consisting of three floors and small yard; water laid on, and capital light. Rent, 24*l.* per annum (no taxes). A front-roomed house and dining room to be had with it, if required.—Inquire at No. 2, Princes-square, Wilson-street.

GUILDHALL, 1st December, 1856.—The COMMITTEE for LETTING the CITY'S LANDS will meet at Guildhall on WEDNESDAY, the 17th inst. at ONE o'clock precisely, to receive PROPOSALS for LEASES of a piece of LAND, containing 1,000 feet of South-street; a house, No. 8, on the west side of Milton-street; a house, No. 2, St. Agnes-terrace, Tabernacle-walk; and a house, No. 13, on the north side of Finsbury-street, Finsbury; a house, No. 3, in the Circus, Minories; and a house, No. 3, Rose and Crown-court, near Broad-street-buildings.—Plans of the property may be seen, and forms of Tender obtained, upon application at the Architect's Office, Guildhall. FERDINAND BRAND, Comptroller.

WATERSIDE PREMISES at LIME-HOUSE.—TO BE LET on LEASE, THREE spacious WAREHOUSES, abutting on the River Lee Cut, each measuring 100 feet superficial in front and extending back at 2 equal depths feet. Apply to Mr. WILLIAM ELLISON, Architect, No. 19, Stansby-road, Limehouse.

EXTENSIVE WATER-SIDE PREMISES, TO BE SOLD, or LET, partly freehold and leasehold, immediately adjoining the South Western Railway Goods Station, known as Brunswick Wharf, Vauxhall, many years successfully carried on in the brick, lime, stone, slate, &c. &c. trade, but available for other purposes. The present proprietor retiring from business, would dispose of the Premises either with or without the stock-in-trade. Apply on the Premises.

IMPORTANT TO BUILDERS AND CAPITALISTS.

UNITED TRADESMEN'S FREEHOLD LAND SOCIETY.—The beautiful ESTATE at HORNSEY, purchased by the Trustees, consisting of about forty acres, and within three minutes' walk of the station, will next summer be accessible from the City by means of the Metropolitan Railway. Persons desirous of possessing land in this charming and picturesque neighbourhood, can have immediate possession of Plots, at 5*l.* each, subscription, 5*s.* per month; at the office, the Savings Bank, Goldsmith's-place, Hackney-road, on the third Wednesday in each month, from seven until Nine o'clock. Capitalists and others desirous of possessing land at once can do so by application to Mr. J. LAWLESS, 1, Fleurlow-place, Hackney-road; or to Mr. DANIELL, Hornsey, and Estate Office, 99, Keppel-street, Russell-square. The ground on the first portion of the estate being the only part on which a tavern can be built, is delightfully situated on the high road leading to Tottenham and less than two minutes' walk from the Hornsey Station, to be disposed of, with all its privileges, for the sum of 300*l.* Apply as above.

TO BUILDERS and OTHERS.—Near VICTORIA-PARK.—TO BE SOLD, several well-built SIX-ROOMED CARCASES, some ready for plastering. A portion of the purchase-money can remain on mortgage if required. For further particulars, apply to Mr. CLARKSON, Surveyor, 48, Penton-street, Pentonville.

TO BUILDERS and OTHERS.—In consequence of a death, valuable PREMISES near Oxford-street, are to LET, upon a repairing lease, at a low rent, for nearly forty years to come. They consist of a spacious dwelling-house, and in the rear, with separate entrance, a tier of workshops. The whole are in good repair, and will require but little, if any, outlay. Rent, 70*l.* per annum.—Apply at the Estate Office, 38, Spital-square, Bishopsgate

TO BUILDERS and OTHERS.

TO BE SOLD, or EXCHANGED for ONE or TWO CARCASES, the LEASE of excellent BUSINESS PREMISES, situate in the Old Bailey, Holborn, and being situated [illegible] Giles-in-the-Fields; and published by the Proprietor, [illegible] at the Office of "The Builder," 1, York-street, Covent-garden, both in the Parish of St. Paul, Covent-garden, both in the County of Middlesex.—Saturday, December 6, 1856.

London: Printed by Charles Wyman, at the Printing Office of Cox (Bros.) & Wyman, 74 & 75, Great Queen-street, Lincoln's-inn-fields; and published by the Proprietor, [illegible] at the Office of "The Builder," 1, York-street, Covent-garden, both in the Parish of St. Paul, Covent-garden, both in the County of Middlesex.—Saturday, December 6, 1856.

Admission, One Shilling, or at all times and to the Lectures at Half-a-crown.
JAMES FERGUSSON, F.R.A.S. } Hon.
JAMES EDMESTON, Jun. } Secs.

CLASSES for DRAWING of ALL KINDS are now formed at the NORMAL SCHOOL of ART, Cromwell-road, South Kensington.—Terms, &c. may be learnt on application by letter, post-paid, addressed to the Secretary.
NORMAN MACLEOD, Registrar.

COMPETITIONS.

NEVILL MEMORIAL.—The Committee of the Nevill Memorial offer a Premium of Ten Pounds, for the best designs and specifications for a BUILDING to be erected in the town of Llanelly, in commemoration of the late RICHARD JANION NEVILL, Esq. All designs and specifications to be delivered to the Secretaries on or before the 31st JANUARY, 1857. For particulars apply to

FRED. L. BROWN,
R. T. HOWELL, } Secretaries.
R. B. JONES,

Llanelly, December 5, 1856.

TO ARCHITECTS and OTHERS.—PLANS WANTED.—The Burial Board for the Parish of Sunderland, near the Sea, in the County of Durham, require PLANS and SPECIFICATIONS for ENCLOSING, LAYING-OUT, and EMBELLISHING TEN ACRES of LAND, for the purpose of a BURIAL-GROUND, with Two Chapels, and Cottages for a Superintendent and Sexton. The site of the proposed burial-ground is situate in the Township of Ryhope, in the township of Ryhope; the portion to be enclosed is staked out, and a plan of the same may be seen at the Offices of the Burial Board. The land to be enclosed on the north, west, and south sides by a stone fence or stone wall, 6 feet high and 12 inch coping, and on the east side or front, adjoining the turnpike-road between Sunderland and Ryhope, by a dwarf wall, with appropriate railing and suitable entrance gates. Each chapel must accommodate 400 persons, and not exceed 600 including the sittings. The two cottages, with store-room, must not exceed £600. The Board will give 20*l.* for the plan and specification approved by them; such plan and specification to be the property of the Board, who do not bind themselves to engage the architect whose plan may be selected.—Plans, with the specifications, indorsed "Plans for Burying-ground," to be delivered at the Office of the Board, No. 2, Church-street, Sunderland, on or before the 2nd day of FEBRUARY next.—By order of the Board,
THOS. F. HEDLEY, Clerk.
3, Church-street, Sunderland, December 3, 1856.

TO ARCHITECTS and OTHERS. — BANBURY CORN EXCHANGE COMPANY (limited).—The Board of Directors are prepared to receive DRAWINGS for the proposed building, which will be erected on the site of the Premises on the Corn hill, Banbury, in the occupation of Messrs Thomas Taylor and Joseph Screven; the whole of the drawings to be in one uniform scale of 8 feet to an inch. The drawings are to comprise a plan of the ground-floor, elevations, longitudinal and transverse sections. The plans and sections to have the size and length of the room figured thereon; the sections and elevations to be tinted in Indian ink only. The estimated outlay not to exceed the sum of 3,000*l.*, and the author of the design approved by the Directors will be employed to superintend the execution of the work at the usual commission of 5 per cent. The author of the next best design in the opinion of the Directors, will receive the sum of 5*l.*; and the author of the design that shall be considered by the Directors next in point of merit shall receive the sum of 1*l.* The designs to be addressed to "The Secretary of the Banbury Corn Exchange Company, Limited, Banbury," and to be sent in on or before the 31st day of DECEMBER instant. A second plan of the site may be seen at the Office of the Secretary of the Company.—By order of the Directors,
THOS. C. JUDGE, Secretary.

Banbury, 9th December, 1856.

COMPETITIONS.

TO ARCHITECTS. — PROPOSED NEW PAUPER LUNATIC ASYLUM for BRISTOL.—The Committee appointed by the Town Council of the City of Bristol hereby offer the following PREMIUMS for the THREE best PLANS for the proposed NEW BUILDING, viz.:—

For the best plan, 100*l.*
For the second best plan, 50*l.*
For the third best plan, 25*l.*

Such plans to be accompanied with specifications and estimates of expense. In the preparation of the plans regard must be had to the following particulars: The building to provide accommodation with requisite offices, and accommodation for resident officers. The amount to be expended on the building to be between 15,000*l.* and not exceeding 20,000*l.* The building must be suited to the intended site to be used as much as possible. The elevation to be of a simple but cheerful character. The "Suggestions and Instructions" for Building Lunatic Asylums, published by the Commissioners in Lunacy, to be, as far as practicable, complied with. Each plan, specification, and estimate, to be signed with a motto, and with a sealed envelope endorsed with such motto, and containing inside the name of the architect competing, to be lodged at the Town Clerk's Office, Council-house, Bristol, on or before the 14th FEBRUARY next. A lithographed plan of the intended site, and copies of the "Suggestions," may be obtained upon application to the Town Clerk's Office.—The Committee do not bind themselves to accept the best or any plan for the said building.

BRICE and BURGESS, City Solicitors.
Council-house, Bristol, December 5, 1856.

CONTRACTS.

TO BUILDERS.

Neither the lowest nor any other Tender will necessarily be accepted. Any further information may be obtained upon application to me, or at the Office of the Architect, Mr. R. KYRKE PENSON, 31, Wind-street, Swansea

GEO. SUBRILL, Secretary to the Gaol Committee.

Carmarthen, Dec. 5, 1856.

TO TIMBER DEALERS, BUILDERS, CONTRACTORS, and OTHERS.—TO BE DISPOSED OF, in consequence of the death of the proprietor, an old established BUILDING and TIMBER TRADE, situate in the county town of Buckingham, with a newly-built dwelling-house, possessing both canal and railway communication. The premises are spacious and convenient for carrying on an extensive and profitable trade, and consist of large timber-yard, newly-erected workshop, sheds, pits, and other conveniences. A handsome modern residence, with garden and useful piece of pasture land, forms the premises. The building and timber trade has been carried on on these premises for upwards of sixty years. The connection is large and respectable, and the neighbourhood is such that little competition. The stock and utensils (which will be taken at a fair valuation) and possession may be had.—For particulars apply to Mr. GEORGE BENNETT, Auctioneer, Buckingham.

NOTICE of PURCHASE. — ROBERT BLADE begs to inform the public and customers of EDWARD SIMMS late of Wilton-road, Pimlico, that he has purchased the Lease of the Premises, as also the Stock which has since been greatly increased) of the said EDWARD SIMMS, situated at Wilton-road, Pimlico, where a choice assortment of FLOORING BOARDS are always kept on hand. All other descriptions of timber at the lowest possible prices. The system of keeping prepared floors, that has been introduced in London at this yard.

TO CABINETMAKERS, PIANOFORTE-MAKERS, BUILDERS, &c.—Messrs. TUELY and CO of Bridge-wharf, City road, beg to inform their town and country friends, that they are cutting their fine Old City St. Domingo Mahogany Log, the "Gem," in addition to their fine veneers from the "Queen," "Prince Albert," and the "Grand Emperor" Logs; also from several fine Ocean and Peacock Barred Flitches.

MAHOGANY and WAINSCOT seasoned by Symington's New Patent Process.—JOHN COOMBE solicits an inspection of his stock. The above process enabling him to season his wood in a comparatively short space of time, he sells at prices generally charged for wet wood. Address PATENT WOOD SEASONING Works, Bath Basket-ground, Mile-end-gate.

NOTICE of REMOVAL. — EDWARD SIMMS begs to inform his customers and friends that he has REMOVED his business from Wilton-road, Pimlico, to the KING'S-ROAD, CHELSEA, where, by strict attention to the execution of their orders, he hopes to merit a continuance of their favours. Beware of imitators.—E. SIMMS, King's-road, Saw-mills, Chelsea, opposite Manor-street.

FURTHER REDUCTION of PRICES.—SAMUEL PUTNEY invites the attention of buyers to his large and well-selected STOCK of DEALS, and the reduced Prices of prepared Flooring, &c.

Inch Yellow Flooring	18s per square.

BARTON'S PATENT SAFETY STABLE FITTINGS, and ENAMELLED MANGERS.

THESE FITTINGS will be found to possess all the latest and most important improvements, and are of the best manufacture. All kinds of Iron furniture in stock. Iron Hurdles, Gates, Fencing, Tool-planking, &c. New illustrated Catalogues forwarded on receipt of Two postage-stamps.—JAMES BARTON, Ironfounder, &c., 37, Oxford-street, London.

COLLINGE'S PATENT HINGES.—Manufacturers, CHARLES COLLINGE and CO. 64 and 65, Bridge-road, Lambeth, where a great variety are always on view for church, park, railroad, cheese-door, and other gates and doors of large and small dimensions, a ton weight moving with these hinges as easily as a wicket. Ornamental hinges, adapted for drawing-rooms, &c.; doors fitted with them may be removed and replaced in an instant. Rising and double-acting spring hinges, and superior gate fastenings, at moderate prices. None genuine unless marked "Charles Collinge, Patent, Lambeth." Plain and ornamental cast and wrought iron-work, for building and other purposes. Engines, machinery, patent axle-trees, sugar-mills, &c.

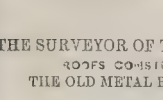
TO ARCHITECTS and BUILDERS.—HAWKINS'S REGISTERED COPPER and TINNED-IRON SASH-CHAIN is greatly approved for its strength, durability, and facility in running over pulleys; and when worked at its warp the load will be found one of the most useful and efficient fastenings for hanging window-sashes of any weight up to 4 cwt. May be obtained from every respectable ironmonger in the kingdom. Manufactory, No. 27, Dalcerd, Birmingham.

HAYWARD TYLER and CO. 85, Upper White Cross-street, London, ENGINEERS and BRASS-FOUNDERS, manufacturers of high-pressure steam-engines, hydraulic presses, soda-water machines, well-engines, and pumps for railways and all other purposes; proving pumps for boilers, iron pipes, &c.; hydraulic machines for proving iron girders, with rams of all sizes, on iron carr age, with gun-metal proving pump, the lever graduated to prove to any required pressure with the greatest accuracy. These machines are used at several of the most eminent Iron Works and Building Establishments in town and country

ZINC ROOFING, INCLUDING TIMBER OR IRON FRAMEWORK,

IS AS

CHEAP AS SLATES OR GALVANIZED IRON, LIGHTER, AND MORE DURABLE.



Certificates, and Models of various descriptions, may be seen, and every information obtained on application to

THE SURVEYOR OF THE VIEILLE MONTAGNE ZINC MINING COMPANY, 12, MANCHESTER BUILDINGS, WESTMINSTER.

ROOFS CONSTRUCTED UNDER HIS SUPERINTENDENCE GUARANTEED TO REQUIRE NO REPAIRS FOR AT LEAST TEN YEARS.

THE OLD METAL BEING ALWAYS RETAKEN AT HALF-PRICE, RENDERS IT ADVANTAGEOUS FOR ALL TEMPORARY BUILDINGS.

Many roofs covered with zinc thirty-five years ago have never required repairs.

WROUGHT-IRON GIRDERS

For BRIDGES and BUILDINGS,
MANUFACTURED AND GUARANTEED AS TO STRENGTH
CAST-IRON GIRDERS for BRIDGES
Wrought-iron Doors, Boiler, & General Smiths' Work.
BUILDERS' CASTINGS OF EVERY DESCRIPTION.

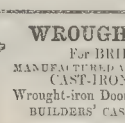
ROLLED WROUGHT-IRON FLITCHES
For TRUSSING BETWEEN TIMBER.
SPIKES, RIVETS, CUT NAILS, WROUGHT DITTO, SCREWS, BOLTS AND NUTS, BOAT-BOLTS, CHAINS, &c.
CONTRACTORS' PLANT, RAILS, EARTH WAGGONS,
And IRON WORK for WOOD WAGGONS, &c.

MATTHEW T. SHAW, 64, CANNON-STREET (late with C. J. Mare & Co.)

Such arrangements are made for Despatch and Punctuality that Orders can be executed in a few days.

JOHN WARNER and SONS, Patentees o IMPROVEMENTS in the MANUFACTURE of LARGE BELLS

J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior tone, truer in form, and at less cost than has heretofore been accomplished.



Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any size, note, weight, singly or in peals.

TUNED BY MACHINERY.

Stocked and wheeled ready for fixing. Old Bells recast or taken in exchange.

MUSICAL HAND-BELLS tuned to the Chromatic Scale, with improved Clappers, and pegged on a new system, which give superior tone and facility for ringing

The great 16-ton Bell, for the Houses of Parliament, was made by JOHN WARNER and SONS, 1856, under their Patent.

TO BELL-HANGERS, GAS-FITTERS, IRONMONGERS, &c. &c.—The Trade supplied on the best terms with Hoop Bells, Zinc, Tube, and Copper Wire. Gas Pendants, Brackets, and Joints of all descriptions for Gas-fitting, in Brass and Iron; Tin, Composition, Iron and Brass Tubing, Cut-piece-poles, Rings and Lacquered Cane Tube for Picture Rods Desk Rails, &c. &c.

Superior Rolled Brass for Engravers, Castings in Fine and Common Brass, Gun Metal, &c. at

RICHARD EVERED'S, Brass and Bell Foundry and Metal Warehouses, Nos. 10, 11, and 12, Charles-street, Long-acre, London

LIGHTNING CONDUCTORS.—R. S. NEWALL and CO. Patentees of the Copper Rope Lightning Conductor, supply Lightning Conductors, with the point and all staples complete for fixing, at one shilling the foot.

R. S. NEWALL and CO.'S Patent Copper Rope Conductor is being applied by architects, engineers, and scientific men in all parts of the world.

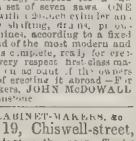
COPPER and IRON CORD for WINDOW SASH-LINES.

OFFICES, Gateshead-on-Tyne.
130, Strand, London.
67, Hyde-park-street, Glasgow.
27, Dale-street, Manchester.

MACHINERY for SAWING, PLANING, MOULDING, &c.

SAMUEL WORSSAM and CO. beg to call the attention of Contractors, Shipbuilders, proprietors of Saw-Mills, and others, to their improved Inventions and Adaptations in Saw Frames and Benches, Roller and Chain Planing Machines, Endless Saw Frames, and all other kinds of Machines, for Sawing, Planing, Grooving, and Moulding Wood. They have constantly on hand machinery, either wholly or partly made, so that they can at all times on short notice supply them. S. W. and CO. beg to state that they have always devoted their attentions to the best of machinery, and have had the honour of supplying some of the most distinguished companies, ship builders, and contractors in the world with their machines, for home and foreign use. One of their Saw Benches and also a smaller one, with Boring Apparatus, may be seen at the Machinery Department at Crystal Palace. A descriptive Catalogue, with Drawings, may be had on application to SAMUEL WORSSAM and CO. Engineers, &c. King's-road, Chelsea, London

NEW PATENT MACHINE for MORTISING and TENONING HARD or SOFT Wood and BORING WOOD or IRON.



House and Conch Builders, Joiners, Cabinetmakers, and others, doing similar work, are invited to call at the Patentees', DAVIS, JAMES, and Co. Wholesale Builders and Cabinet Makers, Ironmongery Establishment, 26, Watling-street, City, and see in action this very simple, powerful, and expeditious machine, which is the only one yet brought out, for performing these three separate kinds of work by one machine; and as it is self-feeding, it does not require any skill or care in using like the older inventions introduced. It can either be worked by a boy, or made to go by steam power.

P.S. Steam Engines and Machinery contracted for.

SAWING-MACHINERY for SALE.—ONE VERTICAL SAW-FRAME adapted for cutting round or square timber up to 8 feet in width, and of any length; with forty-two saws, and everything complete. ONE SELF-ACTING CIRCULAR SAW-BENCH, 60 feet long, adapted for a saw 4½ feet diameter, and under; with a set of seven saws. ONE HORIZONTAL STEAM ENGINE, with 4 cylinders either an 18-feet stroke, with all the necessary shifting, driving, pulleys, blocks, &c for driving the above machines, according to a fixed plan. The machinery is quite new, and of the most modern and approved construction. The whole is complete, ready for erection, being highly finished, and in every respect first class machinery. It is offered for sale solely on account of the exporters having departed from their intention of erecting it abroad.—For further particulars apply to the makers, JOHN McDOWALL and SONS, Walkinshaw Foundry, Johnstone.

TO BUILDERS, CARPENTERS, CABINET-MAKERS, &c

JOHN DALE, 18 and 19, Chiswell-street, Finsbury square, respectfully invites the above Trades to the inspection of his immense stock of ironmongery, which cannot be surpassed in variety, quality, and cheapness by any house in London.

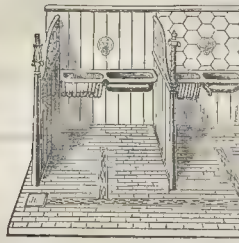
TYERMAN'S PATENT HOOP-IRON BOND,

FOR BUILDING PURPOSES.

ADOPTED BY SEVERAL DEPARTMENTS OF THE GOVERNMENT.

TARIFF OF PRICES Beyond the current Price of Hoop-iron.

Gauge.	In. wide.	Per 1,000 ft.
No. 16 ..	1¼ ..	7s. 0d.
15 ..	1½ ..	7s. 6d.
16 ..	1¼ ..	8s. 0d.
15 ..	2 ..	8s. 6d.
15 ..	2½ ..	9s. 6d.



THE PATENT BOND (which is prepared from the ORDINARY HOOP IRON, by notching it at intervals of 1¼ in lies) is now being extensively used in the leading GOVERNMENT WORKS, DOCK BUILDINGS, BANKS, ASYLUMS, BRIDGES, VIADUCTS, PRISONS, ENGINE-HOUSES, and MANUFACTORIES, as well as in other PUBLIC and PRIVATE WORKS, in London and in all parts of the kingdom.

Sole Manufacturers—THOMAS PERRY and SONS, Highfields Works, Bilston.

London Depôt—ST. ANN'S WHARF, EARL-STREET, BLACKFRIARS.

NEW PATENT INVENTIONS FOR STABLE REQUISITES.

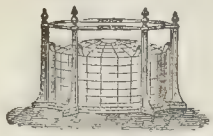
AWARDED A PRIZE AT THE PARIS EXHIBITION, AND PATRONISED BY THE ENGLISH AND FRENCH GOVERNMENTS.

COTTAM and HALLEN, of Winsley-street,

Are the original inventors of the PATENT ENAMELLED MANGER, WATER-TROUGH, and WROUGHT-IRON RACK, united to an iron top-plate, and forming one complete and useful fixture, having Cottam's Patent Noiseless Halter-Guide and Collar-Rein attached, the ball of which is taken to the back of the manger, and works with ease and freedom up or down the guide-bar. Cottam's new Patent Seed-Box, of galvanized sheet-iron, is an important addition to the above fittings, being simple in construction, light and durable, promotes cleanliness, and is economical in its results. Also, the Patent Saddle and Harness Bracket combined, which can be used with great advantage where space is an object, as it can be turned up out of the way when not in use.

Improved Harness Holders, for preserving the shape of the harness, and preventing its cracking. Patent Loose-Box Fittings, Cheap and Durable Corn-Bins.

Improved Surface-Drain, with safety covers, Sanitary Traps, and every article for the harness-room and stable, kept in stock, plain, galvanized, and enamelled. Iron Gates, Fencing, Hurdles, &c.



The new Illustrated Catalogue for 1856, and estimates gratis, upon application to

COTTAM AND HALLEN, 2, WINSLEY-STREET, OXFORD-STREET.

STEVENS AND SON,

ENGINEERS,

IRON AND BRASS FOUNDERS AND MANUFACTURERS;

CONTRACTORS

FOR THE

ERECTION OR ALTERATION OF GAS-WORKS FROM TWENTY LIGHTS UPWARDS,

With Buildings, Mains, Meters, Service Pipes, Lamp-Posts, Lamps, and Gasfittings

WATERWORKS FOR THE SUPPLY OF TOWNS,

WITH BUILDINGS, STEAM-ENGINES, PUMPS, MAINS, SERVICES, &c.

Gas Stoves for Heating Churches, Chapels, Lecture Halls, and Public Buildings of all kinds; these have been recently fixed at New College, Oxford; St. George's Catholic Cathedral, Southwark; and numerous Churches, Chapels, &c.

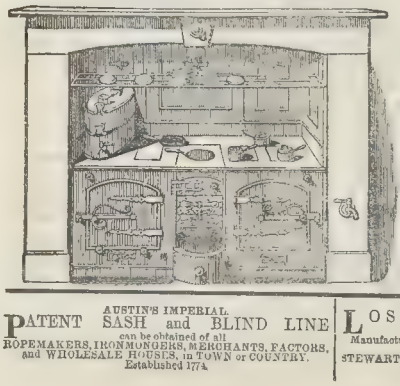
Gas Cooking Stoves and Ranges on the most improved principles.

GAS-FITTING IN ALL ITS BRANCHES.

GAS CHANDELIERS OF ALL SIZES, IN BRASS OR IRON, FROM TWO TO TWO HUNDRED LIGHTS.

DEVICES FOR GAS ILLUMINATION.

IMPROVED REGISTERING TURNSTILES FOR TOLL-BRIDGES, EXHIBITIONS, PUBLIC GARDENS, BATHS AND WASHHOUSES, &c.



These Turnstiles have been selected for the Entrances of the Great Exhibition, New York.

PATENTEES OF THE SEMAPHORE RAILWAY SIGNAL.

Signals for communication between Guard and Engine Driver. Railway Stores and Lamps of every description.

DARLINGTON WORKS, 16 to 19, SOUTHWARK-BRIDGE ROAD, LONDON.

FLAVEL'S PRIZE KITCHENER.

The only Kitchen Range which obtained a Prize Medal and special approbation at the Great Exhibition, 1851.

These Ranges are strongly recommended for their simplicity of construction and their economy and cleanliness in use.

The top forms a Hot-plate, and the open fire removes many of the objections which are felt to close Ranges.

They are made in all sizes, from 3 feet to 18 feet in width, suitable for large or small establishments.

They are admirably adapted for the Cure of Smoky Chimneys.

SOLE AGENTS:

BENHAM AND SONS,

19, WIGMORE-STREET, LONDON;

and at the Crystal Palace, Sydenham.

PATENT AUSTIN'S IMPERIAL SASH and BLIND LINE can be obtained of all ROPEMAKERS, IRONMONGERS, MERCHANTS, FACTORS, and WHOLESALE HOUSES, in TOWN or COUNTRY. Established 1774.

LOSH, WILSON, and BELL, NEWCASTLE-ON-TYNE. Manufacturers of Bar Iron, Railway Bars, Forge and Engine Work, Cast-iron Goods, and STEWART'S PATENT CAST-IRON GAS and WATER PIPES Office, No. 7, Size-lane, London.

WARMING and VENTILATING CHURCHES and PUBLIC BUILDINGS generally with PURE WARM AIR.

CUTLER and SONS respectfully state that they are prepared to Contract for the Erection of their improved Warm-Air and Ventilating Apparatus, for Halls, Churches of the largest dimensions, and every description of public buildings, the perfect action of which they undertake to guarantee.—One may be seen in constant use at their Foundry and Gas-Engineering Works, 16, Great Queen-street, Lincoln's inn-fields, London.

ASHDOWN'S PATENT VENTILATING and SMOKELESS GAS-FIRE.

CUTLER and SONS, Licensed Manufacturers, under the immediate superintendence of the Patentee.—This is the only gas-fire adapted to open grates, it differs materially from all others hitherto offered to the public, it combines the most perfect combustion with ventilation, and presents a glowing warmth from an open radiating surface, unequalled by any other gas-stove; it is also well suited to the drawing-room, library bed-room, or hall; and may be seen in action daily, at C. TLER and SONS', Gas Engineers, Founders, and Manufacturers of Gas-heating and Cooking Apparatus of every description, 16, Great Queen-street, Lincoln's-inn fields.

PATENT PURE WARM-AIR VENTILATING STOVES.—The only Pedestal Stove which gained a Prize Medal (Class 4?3. at the Great Exhibition, 1851, especially adapted for warming churches, chapels, schools, entrance halls, libraries, warerooms, &c. with great economy.—CUTLER and SONS, Sole Licencees and Manufacturers, Founders, and Gas Engineers, 16, Great Queen-street, Lincoln's-inn-fields, London.

RADIATING and REFLECTING STOVE.

WILLIAM S. BURTON'S NEW REGISTER STOVE combines completely the well-known principles of both Stephen's and Sylvester's celebrated patent stoves, while it has others equally valuable, which are peculiarly its own, and for which a patent has been granted. Its reflecting and radiating powers are perfect, it is very simple, and cannot be put out of order, consumes but little fuel, is most cleanly and cheerful in use, while its general appearance, no fender being needed, is most imposing. Prices, complete black or bronzed, from 9l. 10s.; bright, 14l. 5s. and upwards. One may be seen in action in his Show-rooms, which contain such an assortment of fenders, stoves, ranges, fire-irons, and general ironmongery, as cannot be approached elsewhere, either for variety, novelty, beauty of design, or exquisiteness of workmanship. Bright stoves, with bronzed ornaments, and two sets of bars, 4l. 14s. to 13l. 13s.; ditto, with ormolu ornaments and two sets of bars, 5l. 5s. to 23l. Bronzed fenders, with standards, 7s. to 3l. 12s.; steel fenders, 2l. 15s. to 11l.; ditto, with rich ormolu ornaments, 2l. 15s. to 18l. Fire-irons, from 1s. 9d. the set to 4l. 4s.

The late additions to these extensive premises (already by far the largest in Europe) are of such a character that the entire of EIGHT HOUSES is devoted to the display of the most magnificent stock of GENERAL HOUSE IRONMONGERY (including Cutlery, Nickel Silver, Plated Goods, Baths, Brushes, Turnery, Lamps, Gaseliers, Iron and Brass Bedsteads, Bedding and Bed Hangings, so arranged in Sixteen Large Show-rooms as to afford to parties furnishing facilities in the selection of goods that cannot be hoped for elsewhere. Illustrated catalogues sent (per post) free.—39, Oxford-street; 1, 1a, 2, and 3, Newman-street; 4, 5, and 6, Perry's-place, London.—Established 1820.

GURNEY'S WARMING APPARATUS, for CHURCHES, PUBLIC BUILDINGS, and PRIVATE HOUSES.—This Apparatus is a modification of that invented by Mr Goldsworthy Gurney, and now used by him for warming the House of Commons and House of Peers. It is constructed so as to be available for private houses, churches, and other buildings. It is simple, inexpensive, and powerful (the fuel may be coal, coke, or gas) combining the laws of conduction and convection of heat, to temper and warm air for respiration, without drying or reducing its natural hygrometric break.—For further particulars apply to Mr. WOODCOCK, 5, Bessborough-gardens, Pimlico, who will supply the Apparatus, and is empowered to grant licenses for agencies under the patent.

ECONOMIC COOKING-STOVE.—DEANE, DRAY, and CO. recommend with confidence their IMPROVED COOKING-STOVE to the notice of the public. It is cheap in first cost, simple in construction, easy of management, capable of doing a large amount of work with a comparatively small consumption of fuel, and is manufactured in sizes suitable for large or small families. In operation daily in the stove and fender department of Deane, Dray, and Co.'s establishment; where may also be obtained engravings with prices, or forwarded free by post.—DEANE, DRAY, and CO. (opening to the Monument), London-bridge. Established A.D. 1700.

VENTILATING STOVES! SUSPENSION STOVES!—Approved by thousands of purchasers, and recommended as the two best, cheapest, most healthy, and economical for churches, chapels, halls, schools, warehouses, shops, greenhouses, bedrooms, libraries, &c. Prospectuses, with prices, sent post-free.—DEANE, DRAY, and Co.'s Stove Range, Ironmongery and Furnishing Warehouse, London-bridge.

DR. ARNOTT'S SMOKE-CONSUMING GRATE.

Will this Grate become universally used?

Its advantages over every other consist in—

1. A saving of 50 per cent. in fuel.
2. Its being a cure for a Smoky Chimney.
3. Its not requiring one half the attention of an ordinary fire.
4. Its being perfectly safe.

A Prospectus, with a Second Series of Testimonials, just issued, from all parts of the country, will be sent on application.

F. EDWARDS, SON, and CO. 42, Poland-street, Oxford-street.

BATHS and HOT-WATER APPARATUS.

J. TYLOR and SONS' ILLUSTRATED CATALOGUE of BATH WORK, &c. to be had on application. Estimates and Plans for Fixing given.—J. TYLOR and SONS, Manufacturers, Warwick-lane, Newgate-street, London.

HEATING BY  HOT WATER.

JOHN WEEKS and CO. King's-road, Chelsea, HOT WATER APPARATUS MANUFACTURERS. Buildings of every description, and of the most extensive dimensions, can be effectually warmed by Hot Water. JOHN WEEKS and CO. can give innumerable references of Churches, Dwelling-houses, Warehouses, &c. &c. where they have fixed their Hot Water Apparatus. Also to be seen in extensive operation at their Premises, King's-road, Chelsea.

PARIS EXHIBITION, 1855.

PRIZE MEDAL

AND

HONOURABLE MENTION AWARDED TO THOMAS WALKER,

STOVE-MAKER, BIRMINGHAM.

Sole NAPOLEON BONAPARTE.

The only Stove for which a Prize was awarded at the French Exhibition.

For Churches, Gentlemen's Halls, Shops, &c.

The best invention of Stove ever brought before the Public.

These Stoves show a bright fire; are durable, economical, and 1 ire from twelve to sixteen hours with one supply of fuel.

Prospectuses and testimonials may be obtained at the Manufactory,

58, OXFORD STREET, BIRMINGHAM.

HARTLEY AND CO.'S GLASS TARIFF FOR THE FIRST OF DECEMBER

NOW READY, AND MAY BE OBTAINED ON APPLICATION TO

MESSRS. JAMES HARTLEY AND CO. SUNDERLAND.

It contains:—

No. 1. TARIFF.—CROWN GLASS.
" 2. SHEET.
" 2B. SHEET FOR EXPORTATION.
" 3. HARTLEY'S PATENT ROUGH PLATE.
" 4. PATENT FLUTED.
No. 5. PATENT QUARRY.
" 6. PATENT DIAMOND.
" 7. PERFORATED GLASS FOR VENTILATION.
" 8. PATENT PLATE.
" 9. POLISHED AND CAST PLATE.
No. 10. COLOURED GLASS AND GLASS FOR RAILWAY PURPOSES.
" 11. MISCELLANEOUS GLASS ARTICLES.
" 12. SHADES.
" 13. STAINED GLASS WINDOWS.

The whole of the foregoing Tariffs have been simplified—the nomenclature altered to correspond with the terms employed by Architects in their specifications—and the nominal High Prices reduced, so that the whole is now subject to one uniform rate of Discount to the Trade.

Having now abolished all the anomalies engendered by fiscal regulations, it is believed the present Tariff will meet the general requirements of the Trade, and that Shippers will be able to compete with Glass of Foreign Manufacture in all parts of the World.

TO ARCHITECTS, BUILDERS, CONTRACTORS, AND OTHER CONSUMERS OF GLASS.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th of an inch thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th or 4 lbs. is now universally used for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, MILLS, MARKET HALLS, BATHS AND WASH-HOUSES, FACTORIES, WORKSHOPS, SHIP-BUILDING SHEDS, AND OTHER EXTENSIVE BUILDINGS.

By a carefully prepared Estimate, it has been ascertained that FOUR-FIFTHS of the ROUGH PLATE, or non-transparent Glass, consumed in the United Kingdom in 1854 was manufactured by HARTLEY'S PATENT—thus affording the most incontestable evidence of its superiority over every other article of the kind, and as being the only description of Glass suitable for the purposes above named. It combines size and strength with economy of cost, and is manufactured in sizes expressly for RIDGE and FURROW ROOFS, giving a SPAN of TWELVE FEET, at a price not exceeding, weight for weight, that of Common Crown Glass. Its non-transparency renders BLINDS UNNECESSARY, and no scorching occurs in Greenhouses glazed with it; hence the preference given to this Glass for all Horticultural purposes.

For further particulars, apply to

JAMES HARTLEY AND CO. SUNDERLAND; AND PURFLEET WHARF, EARL-STREET, BLACKFRIARS, LONDON.

Sole Manufacturers of Lockhead's Patent Perforated Glass for Ventilation.

*** *Hartley and Co.'s Glass Tariff Newspaper will be forwarded gratis, on application.*

FACING FOR BUILDINGS COMPANY—TAYLOR'S PATENT.

BUILDINGS PERFECTLY RESISTANT TO WET WITHOUT ADDITIONAL EXPENSE, OR THE USE OF COMPO,

REQUIRING THE CONSTANT EXPENSE OF PAINTING. EXTERNAL WALLS FACED WITH AN INDESTRUCTIBLE MATERIAL.

STONE-FACED BUILDINGS AT LITTLE MORE COST THAN CEMENT.

No necessity for Iron Cramps and Bond-stones, and the Stone Ashlar never injuriously weighted by the settlement of the Mortar-joints of the inside Brickwork. The INSIDE of CHURCHES and OTHER BUILDINGS FACED WITH STONE instead of Plastering. Also Dining halls, Lobbies, Staircases, &c. of Private Residences. It can be had ready for fixing from the quarries at a small cost for carriage, or prepared at home. Can be used with the ordinary Bricks of any locality, and by the ordinary workman. The CHURCH faced inside and outside in this manner, and the other Buildings at SPRING GROVE HOUNSLOW, and elsewhere, can be inspected, and all particulars obtained, of

Mr. JOHN TAYLOR, ARCHITECT, OFFICES OF THE COMPANY, 40, KING-STREET, CORNER OF CHEAPSIDE.

THE SEVRES GLASS COMPANY.

LEGENDRE AND TURPIN'S

WHOLESALE ESTABLISHMENT for the supply of CRYSTAL WHITE SHEET GLASS, First, Second, and Third Quality;

WINDOW-GLASS, Shades, Moderator Globes, Lamp Glasses, Bottles, and other Articles in White Glass, at

131, UPPER THAMES-STREET, LONDON-BRIDGE.—WORKS: SEVRES, NEAR PARIS.

CHEAP, LIGHT, AND DURABLE ROOFING.

CROGGON'S PATENT ASPHALTE ROOFING FELT, has been extensively used and pronounced efficient, and particularly applicable for warm climates.

1st. It is a non-conductor.—2nd. It is portable, being packed in rolls, and not liable to damage in carriage.—3rd. It effects a saving of half the timber usually required. 4th. It can be easily applied by any unpractised person.—5th. From its lightness, weighing only about 42 lbs. to the square of 100 feet, the cost of carriage is small.—6th. Under slate, metal, or tiles, it is a most effective non-conductor

INODOROUS FELT, for damp walls and for damp floors, under carpets and floor cloths. Price ONE PENNY per Square Foot.

CROGGON and CO.'s PATENT FELTED SHEATHING, for Covering Ships' Bottoms, &c., and

DRY HAIR FELT, for Covering Steam Boilers, Pipes, &c., preventing the radiation of Heat, saving 25 per cent. of Fuel and deadening Sound.

Samples, testimonials, and full instructions, on application to CROGGON and CO. 2, DOWGATE-HILL, LONDON.

TO BUILDERS and OTHERS.—WANTED, to PURCHASE a GREENHOUSE, about 30 feet long.—Address, stating particulars and price, to W. B. 139, Hounsditch.

The Builder.

VOL. XIV.—No. 723.

NOW that the structural question as to the new Westminster-bridge is settled in favour of the course chosen by the engineer, we would ask,—is there any real reason why the work should not go on? At least three of the arches of the old bridge are in a *dangerous* state: the water-way remains with a double obstruction of piers and foundations: piles and staging also encumber the river; and by every winter's delay there is increased chance of some disaster which would interrupt both land and river traffic. It may be thought that in this country little is to be feared from ice. But in the last severe winter, all the arches, except one, were sometimes blocked; and the water rushed through that one remaining channel. The engineer is therefore justified in saying, in the "Observations" printed as an Appendix to the Report and Evidence of last July, that "danger" might result "to the stability of the present structure, and to the navigation, should the suspension of the works be much longer continued, and the fabric be exposed to the contingencies of a winter season, especially as four of the piers of the old bridge have been cut through for the foundations of the new bridge." In 1851, according to Mr. Walker's evidence, the stability of the present bridge in the defective part was dependant upon the centres borne by piles, which last were defective; and he clearly stated his opinion that those "stilts under the arches" were not then proof against ice which might come down the river. Indeed, before the committee of the previous year, in giving a similar opinion, he had referred to the especial weakness which would be found in the piers, if, through accident, any of them should be brought to serve as abutments, in which case, through the fall of a couple of arches, the whole bridge might follow. And in Mr. Page's letter of the 26th March last, appended to the report and evidence, we read that "piles of the staging and gauntrees are subject to accidents from the craft running against them," and that not many weeks earlier "the gauntree for the first arch was in danger of being brought down—in consequence of its supporting piles being struck by a barge, and the first navigable arch had to be stopped for the repairs; while about the same time, a barge was sunk amongst the piles of No. 1 pier:" such casualties, it seems, often occur; and "an accident" might happen, which at least would "close the navigable arches on the Middlesex side." During the progress of the works, by constant watchfulness, more serious accidents may have been prevented. Now, the bridge has been suddenly stopped at the most critical point; the men trained in the operations are lost, and every one connected with the engineering direction has been troubled and fretted, and needlessly called to answer for conclusions made, and re examined and re-made, by committees and commissions, years ago. Meanwhile, over 32,000*l.* of English money are lying idle in the river; and it will cost 10,000*l.* to clear the said river bed,—the 32,000*l.* being blown to dust and rubbish. Add to these values, the loss on nearly 29,000*l.* worth of materials which are prepared and delivered, and on nearly 24,000*l.* worth of "plant." Looking at the actual disbursements,—76,988*l.* 12s. 9d. on the 31st of May last, had been paid; nearly the whole of which, and perhaps even a greater sum, would be *lost* by the mere abandonment of the present plan.* Moreover, *after this loss*, it would cost a far larger sum than what remains to be expended, or than even the whole cost on the present site, to build a bridge on another site,—and probably, calculating upon the use of some of the prepared materials or not. The part of the new bridge in progress would be completed, with a 30-feet *roadway* and temporary footpaths, in twelve months, for 31,700*l.*; the old bridge could be removed, and the remainder of the new bridge 85 feet in width could be completed in two years afterwards: and surely the *onus* of bringing a very strong argument to the case lies with those who postpone the work and stop the way. The argument, however, tends, as we are prepared to show, all in the reverse direction.

Whether assuming the existence of one bridge between Waterloo and Vauxhall, for carriage traffic, or two bridges, it may be considered to have been *decided* that a site for one of the number was the old site of Westminster-bridge; and, as to the diminished headway for the new bridge, that point raised again and again, also may be held to have been disposed of. At least, it is to be observed that, on the basis of such conclusions deliberate enough, surely—the works lately in progress, were commenced, and amounts which we have named were expended. Therefore, unless a *decision* is a mere whimsy of the legislative and official mind, there is only before us this question—are the proposed Government Offices both so paramount and so unyielding that the main routes of London should be diverted for them, or is the traffic belonging to the Offices and the Houses of Parliament, or that belonging to the bridge necessarily to be sacrificed one for the sake of the other? We will enter into the question, however, on any grounds.

Let us premise that it is right to view the improvement of particular quarters of the metropolis, with reference to any main communications, and the whole inhabited area, more than it has been the practice to do, judging from the partial works which usually are undertaken. What can be done in one year by our free and liberal people and government may, perhaps, be little,—perhaps it is better so. Plans, indeed, and those adequate and comprehensive, should be in readiness; and, further, their existence should be remembered when the opportunity arrives.

Progress, we have often observed, suffers from two opposite influences, sometimes there is either prejudice against change, or disregard of the fact that, by lapse of time, new conditions have arisen; but sometimes equally in lapse of time, some conclusion is forgotten, and an ascertained stage of improvement is lost. Thus, the plan of Sir Christopher Wren, for the improvement of the City, aimed at objects which ever since, from time to time, have been sought for in plans designed piecemeal, and therefore at some disadvantage,—as witness the lines of Gresham-street and Cannon-street, as compared with those of the original comprehensive plan. In western London, recent improvements were preceded by suggestions for the same objects made often during the course of many years.* It would conduce to the more efficient prosecution of works, and might save some time, if such plans could be looked to at the proper moment.

The traffic under and over Westminster-bridge has been noted and numbered; gradients have been compared; the heights of vessels and cargoes have been measured; and the flow of the stream and the tides has been tested times enough during the last twenty years, to settle any of the difficultics of the site. The results may be seen in several of the Westminster-bridge reports, where every interest in the matter will be found to have been heard; and only after the careful consideration of every point in the question, inclusive of the site, and the headway—the chief matters now revived—were the works commenced. Sir William Molesworth—who paid great attention to the subject—in his letter to the Treasury, dated 19th April, 1854, adverted to the economy of the old site, regarding cost of approaches, and compensation for property. He also referred to one account of the land and river traffic, which had been taken during five days, when it was found that the average of twelve consecutive hours was 9,200 carriages, of all descriptions, going over the bridge, while only fifty sailing-barges had passed under it. The latter had used an arch of the old bridge, having but 20 feet of headway. The Navigation Committee of the Corporation of London, up to the 17th July last, were arguing for a height of not less than 25 feet. The 20-feet arch (No. 10 from the Middlesex side) has been constantly used by the straw barges, which have the highest cargoes of any on the river,—and with the inconvenience of a narrow arch, and, therefore, practically a diminished headway. At Battersea-bridge, the headway is less, with the further inconvenience of very difficult navigation. One objection made has been to the necessity of depressing the masts considerably,—partly because it is thought cargo might have to be shifted, and partly because it would require a little more labour to raise the mast. But there really would seem to be no difficulty in arranging the cargo in the required manner before-hand; and it has been suggested, that with the addition of a counter-balance weight, the masts might be managed as readily as are the funnels of steam-boats. The consideration of the improved effect of the Houses of Parliament; and the great saving of horse-power by easy gradients, had led the committee of 1853, after hearing all objections, to decide that a headway of 25 feet was not of sufficient importance to justify a large sacrifice of the interests of the land traffic; and thus the headway of 20 feet was finally adopted. This, in the design, seems to be rather exceeded—with the additional advantage of width,—except in the side arches, where the headway may be a trifle less. It was even known, before the scheme for the new bridge had been decided on, whether the communication to the Houses of Parliament was interfered with by the traffic to the bridge, and it was also known that new Government Offices would be wanted somewhere in the locality of Downing-street.

Many who have treated this question of site, have argued that some route from Charing-cross, or from one or other of certain intermediate points, would give the best place for crossing, and would afford relief to the Houses of Parliament. But, these persons by *removing* the route northward, forget how large an amount of traffic

* The valuation of Mr. Charles Stephenson, the Surveyor, was as follows:—

For permanent works, examined and approved by the engineer	£70,436 11 2	
Miscellaneous items	6,529 6 5	
Making together		£76,965 17 7
For materials delivered and approved by the engineer	28,957 3 0	
For plant provided	29,888 16 6	
	£58,846 1 6	
Additional payments to the 31st May, 1856, were:		
Under contract	30,982 15 4	
For professional services of engineer and staff during contract:		
Engineer	4,461 3 11	
Staff	1,294 7 4	
	5,755 11 3	
Other payments	8,844 17 10	
Payment preliminary to the contract:		
Engineer	1,014 18 4	
Other payments	1,397 7 0	
	2,412 8 4	
	£.6568 12 9	

* See Gwynn's 'London and Westminster Improved,' 1766. Mr. Sydney Smirke's "Suggestions for the Architectural Improvement of the Western Part of London," 1834, many Parliamentary papers exhibiting Mr. Pennethorne's proposals, &c. &c.

would be drawn a long distance roundabout from the Birdcage-walk, and from Victoria-street, which last was formed with special reference to the old site of Westminster-bridge. Such a route would be still past the Offices, and meeting traffic to the Houses of Parliament, at least up to the time of the completion of a bridge south of the Houses,—when even, looking at the plan of 1846, in the absence of Westminster-bridge, the circuit would be very considerable. The traffic direct, to the other side of the river and the railway stations, from the Houses of Parliament and the Government Offices themselves, with the various private offices which will continue to cluster around the locality, itself deserves to be considered,—as also does the view of the front of the Houses of Parliament,—as we may say, even hazarding the retort that we should be building a bridge for the sake of seeing a building. But taking into consideration the traffic which belongs to Charing-cross, and that to Westminster and Pimlico, there is some mistake in what seems to be assumed that the former preponderates enormously over the latter. At least in 1847, as to the carriage and horse traffic over the bridge during twelve hours, Mr. Pennethorne's account supplied to the committee of 1850, showed the numbers to be—from Middlesex to Surrey,—from Charing-cross, 1,404, and from Westminster, 930; and from Surrey to Middlesex,—to Charing-cross, 1,498, and to Westminster, 974. This was in the winter, whilst the other total above would appear to have been in the summer. Doubtless, the traffic since 1847 has largely increased. But we think the increase is likely to be greatest in connection with Westminster and Pimlico.

Even before the recent outlay, we might have shown that, having the opportunity of making a communication with the other side of the river—one which admittedly had some recommendations—it would have been well to take advantage of the opportunity, seeing that the cost of the work would be comparatively small. The report of Messrs. Rendel and Simpson, indeed, set forth a sum of 384,800*l.* as required for approaches; but those authorities disregarded the fact that the houses on the north side of Bridge-street did not require to be touched, and that those on the south side having to be removed in connection with the Houses of Parliament, had likewise no fair relation with the calculation for the bridge: and Mr. Page, in his "Observations," shows that the only buildings necessarily to be removed were seven houses between the foot of the bridge and Stangate, on the Surrey side, which might be estimated at 15,000*l.* Thus so far as the Westminster-bridge approaches went, the reporters were in excess 339,800*l.* Let it be also observed that the area now occupied by Bridge-street cannot be required to build upon, consistently with the preservation of proper space between the Offices and the Houses of Parliament. The whole of it, indeed, even the buildings on the south side, are shown bounded by that extraordinary red line on the Government plans.

To whatever proposed new site the bridge were transferred, there would still be too great a distance in one or other direction, between it and the next adjoining bridge for carriage traffic. The bridge removed, also it should be remembered, is one of the free bridges, of which London has a number wholly disproportionate to the requirements of the capital, and a number much smaller than are found in places of far less importance, both at home and abroad. The enormous injury to property is not the only consideration; but the mere blocking up of an accustomed London route, however planned originally, is a serious inconvenience. We apprehend that the bridge furnishes the required route between Pimlico and the railway stations in Surrey, at less cost in opening lines of thoroughfare, than the other suggested sites,—desirable as those may be for other bridges,—which, however, would hardly be provided in the same short time. Mr. Rendel, in 1844, as we read in the report of 1846, said—"I do not believe that there is a part of the Thames better suited for a bridge;" and the report of Messrs. Rendel and Simpson, whilst advocating the provision of the additional bridge so often spoken of as required southward, never urged the removal of Westminster-bridge. And Mr. Pennethorne on one occasion, in alluding to the two bridges proposed, one from Charing-cross, and the other from the Horse-ferry, referred to the desirableness of preserving a route of some kind at Westminster,—although he may not have attached the same importance to the *carriage* route that way, that we do.

We do not advocate all the deference which is sometimes paid to vested interests: yet, some will argue that there is a moral justice in preserving what now exists; and the alteration to a roundabout way from what is viewed as a direct route by those interested most nearly, is no ordinary matter. The property of the Westminster-bridge trust, now in the hands of the Board of Works (shown by the plan referred to in Mr. Hardwick's evidence in 1850), in great part bounds the approaches; and some of it, we are informed, was lately sold on the presumed faith of the retention of the bridge, and that heavy compensation would be demanded for any change of site,—and this might be a very important element in the question as to cost.

The chief sites which have been discussed, we may say, have been,—the site of the present bridge, or close to it; a site proposed in 1845 for a bridge a little north of the India Board, with access from Parliament-street; one from the front of Richmond-terrace, or a skew-bridge from the same point to the Bridge-road, to save the cost of approaches on the Lambeth side; a bridge from Charing-cross, approved by the Metropolitan Improvement Commissioners in 1846; one immediately south of the Houses of Parliament, intended to be in a line with the new Victoria-street, which it was a misfortune not to make, as then proposed; and at the Horseferry-road. A plan was also made for the Metropolitan Improvement Commissioners in 1846, for a bridge from the India Board, with curved approaches, dividing the traffic, and giving longer and more easy ascents. For the bridge from Charing-cross (along with which was contemplated as essential, a bridge at the Horseferry, or other adjacent spot) there were originally two plans, but one of these would have had an approach through the gardens of Northumberland House, whereas the other plan, for which indeed the Parliamentary notices were given, had one approach alongside of Northumberland House, and across Whitehall-place, and another from exactly opposite the Horse Guards. With this and the Horseferry-bridge, extensive street improvements, especially on the Surrey side, and a direct route to the High-street, Borough, were designed by Mr. Pennethorne. It is to be hoped this scheme will eventually be carried out.

Indeed, we wished to urge that not one, or two bridges, but three are required for carriage traffic between Waterloo and Vauxhall. It is a false system, and one that is injurious to London in many ways which may appear to have no immediate connection with the subject, to stint the means of communication between different parts of a metropolis, as in London would seem to have been done. Looking to mere area, the very heart of London is that portion of the plan which is cut off by the curve of the river between the Blackfriars-road and Westminster-bridge-road. Yet, sites for dwellings for the poor are wanted; and some public buildings, notwithstanding the low level, might be advantageously placed in the locality, were the freedom of access perfect, and divested of a tax. The question of provision of dwellings is one with which London has dallied much too long: some energetic meeting of the evil is required; and as a large number of the poorer inhabitants of the neighbourhood of Parliament-street may suffer grievously by the proposed improvements there, Government may fairly be asked to promote the erection of dwellings of a different class to those which now exist on the Lambeth side,—such as combine a more economic use of the ground with better distribution of plan,—and to provide the requisite direct communication to them. Indeed, so strongly does this argument of the utilization of the Lambeth district prevail with the writer of the article in the "Companion to the Almanack" which we lately referred to, that he seems to rely upon it as his main argument for increase in the number of Thames bridges.

As a measure of police, we believe that much increased free communication between the opposite sides of the river, is a thing in which the whole metropolis should take interest. We apprehend that people living on the Middlesex side of the water, have often before them the idea of an impassable gulf of separation from peoples and things transpontine, unless these are made the *via media* of communication to exoppidan Sydenham, or some snug box at Dulwich or Brixton-hill. Certainly there is some peculiarity in the population on any less important side of a river, which would seem to show the desirableness of equalizing the positions by frequent means of communication. There are the Transteveri of Rome. We know one provincial town—for it is essentially *one* town, though there are two boroughs separated by a narrow stream—where, when an election takes place on one side, you would know of nothing extraordinary in progress; whilst on the other, a similar event is, or was, the occasion of riot or military repression. And we presume the population of the New-cut, the Waterloo-road, and the quadrant space to which we have referred, is not a very presentible sample of London. The tendency of all such localities, with inadequate or restricted means of access, seems to be that they become, to a certain extent, an Alsatia for the lawless—an asylum for the *classes dangereuses*,—to whom there is no particular commercial or financial argument for the saving of *time*,—or who will afford the *time* for the sake of a little freedom from observation. To the really hardworking member of the labouring classes,—and as Mr. Roebuck would say, we *all* belong to that class,—either time or *any* toll may be a matter for consideration in the choice of an abode. But the removal of the exaction on the "pay bridges" would not be a sufficient measure. The great object is to ensure frequent and ready means of unimpeded communication.

Thus, *several* bridges being required, and the site of Westminster-bridge being not only unobjectionable, but, as we believe, a necessary route for one communication, there will be little difficulty on these grounds alone in deciding in favour of the immediate prosecution of the present works. We do not care to urge further, that any other course would be unwarranted by any engineering question, and that it would be disgraceful to our system of legislation and government. We only need say, that if the other proper communications are formed, one from Charing-cross, and one from some well-chosen point south of the Houses of Parliament (which, perhaps, may not be the Horse-ferry), the Government Offices would not be prejudiced, and a most useful medium of communication would be preserved at now very small cost. If, having other bridges, 85 feet be considered an unnecessary width, let the dimension be 50 feet. On that assumption thus stands the case:—The loss by abandoning the present scheme may be taken as not under 70,000*l.*; to which should be added, we believe, a further sum if the "plant," now paid for, be not used. The present portion being completed in twelve months for 31,700*l.* the additional 17 feet would require an outlay of 48,000*l.*—say, making together, for the completion of a 50-feet bridge, with the approaches as they are in the present case, 80,000*l.* in round numbers. While to obtain a similar bridge on a new site, there would be an outlay of 150,000*l.* *plus* the cost of approaches, of which latter *item* some idea may be gathered from what has been said above.

A SMOKELESS FIRE.

It will be of little use forcing manufacturers to burn their smoke, unless the production of it in the fire-places of private houses can be checked also. With a view to this most important desideratum, Mr. John Leslie has patented an arrangement which calls for attention. Air is brought to the front of the fire-place by pipes, and the gases (he maintains there is no *smoke*) are allowed to escape only by an opening close to the *bottom* of the grate, formed by means of a false back. An opening into the flue from the upper part of the room serves to ventilate the apartment. The patentee states that 15 lbs. of coal supply the fire for nine hours, and looks forward to the abandonment of projecting chimney-breasts (a very small flue being sufficient), and to the avoidance of disfiguring cowls.

HIGHER BROUGHTON CHURCH, MANCHESTER.—Mr. Oliver, Jun. Architect.

HIGHER BROUGHTON CONGREGATIONAL CHURCH, MANCHESTER.

This church, now in course of erection, is cruciform on plan, and is divided by cast-iron columns into nave, aisles, and transepts. The chancel is arranged for a communion place, and also for the choir and organ. The galleries are approached on either side by the tower and porch entrances. The iron columns are carried up in one length from the gallery beam, to support the roof, which, by being divided into three spans, is found to be favourable to æsthetic and acoustic purposes. Colour will be introduced in the chancel arch, spandrils, and gallery front. The internal sizes are as follows:—Length of nave, 79 feet 6 inches; breadth, 41 feet; across transepts, 56 feet; chancel, 20 feet. Mr. T. Oliver, jun. of Sunderland, is the architect.

ON THE VARIOUS METHODS NOW BEFORE THE PUBLIC, OF INDURATING AND PRESERVING ARCHITECTURAL STONEWORK.*

Some years since the late A. W. Pugin portrayed, in his "Contrasts," the difference between numerous Mediæval and modern edifices. That ingenious critic might, with equal propriety, have drawn a parallel between the present conditions of the buildings of the ancient Assyrians, Egyptians, Greeks, Romans, and British people: he might even have included the architectural works of London, previous to the beginning of the present century; nearly all of which, so far as the stone is concerned, are in a very perfect state as contrasted with many of the buildings recently erected in this country. The architectural and sculptural works of Nineveh and Athens, which are two or three thousand years old, are much less decayed than the stonework composing the eastern *façade* of Buckingham Palace, before it had been erected a thousandth part of the time. It may be said that the question is one of £. s. d.; but all architects specify and contract with the builders, that "the whole of the materials are to be of the best quality of their respective kinds," and therefore, when a client employs a builder to erect a magnificent structure, he ought not to expect it to be in a perishing condition, like the palace of our Sovereign, before its completion. When the Government ordered the enlargement of Buckingham Palace, it certainly did not entertain the most remote idea that Her Majesty would be inconvenienced by scaffolding, and a host of workmen to repair the defective stonework immediately after its erection, nor that, when repaired, the expensive process of oiling and painting would be resorted to, to avert the progress of decay in the new Caen stone, rapidly mouldering away.

I believe that the knowledge of the most fit and proper materials, according to circumstances, for constructing the exterior of our ornamental edifices, is better understood at this time and in this country than at any former period amongst any civilized people; yet, with all our advancement in art and science, the art and mystery of obtaining good and durable stone for our decorated architecture never was in so low a state, and never was allowed to be so improperly practised. No material is so durable as always to retain its first appearance: the most solid and compact rocks have not such a degree of impenetrability, nor so close a union of the parts which compose them, as to be exempted from ultimate dissolution: there is scarcely a substance which does not exhibit proofs of "weathering," after having been exposed to the action of rain and atmospheric influences for a considerable time: it may be observed even on granite and the most densely compacted silicious rocks. The stonework of many beautiful buildings of recent date is in a worse state of external decay than that of others, which have borne the vicissitudes of summer and winter during six or seven centuries: in some bodies these changes are not so frequent and remarkable as in others, though equally certain to take place at a more distant period. Sooner or later all stone will decay; but whether the ruin be effected in ten years, or in ten thousand, is only a question of relative duration, somewhat in proportion to the labour of appropriation to useful or ornamental purposes, as the parts may be exposed to the weather, either in large or small masses. The same influence is for ever at work, to bring about the disintegration, decay, and final dissolution of all things.

Of all the causes of decay in stone, none are more destructive than variations of temperature; causing disintegration of the crystals or grains from each other by mechanical means. The vicissitudes of heat and cold, and of dryness and moisture, frequently alternating, are more ruinous to the carved parts of a building than either of these extremes constantly operating. However slight the additional heat may be to which a body is subjected, it will expand under its influence, and contract when the temperature is lowered. The thermometer will probably vary 100 degrees from the severe frost of a winter's night to the direct rays of an afternoon summer's sun, which never shines upon north or north-east sides of a building, except very obliquely at rising and setting; but the south and west fronts have the same degree of cold as the north and east during the night, with the additional warmth of meridian splendour daily. Such extremes must tend to loosen the component parts and separate many small fragments from the surface, especially if the mass be made up of different substances, in which case some will expand and contract more, in proportion to their size and density, than others. The test of time proves this to be correct, for in almost all cases the greatest amount of disintegration has taken place where the inequalities of temperature are greatest.

Rain facilitates decomposition, or separation of the molecules by chemical means. If the stone happens to be of a quality likely to be disintegrated by frequent changes of temperature, and to be decomposed chemically through the influence of rain, it will very rapidly moulder away, should both these causes operate at the same time, or nearly so; by no means an unusual occurrence.

An eminent political writer has remarked, that the very best laws are but necessary evils; because if everybody would do what is right and proper, there would be no necessity for laws of any kind. By the same mode of reasoning, if builders would do what they engage to do, and what is right, there would be no necessity for contrivances to prevent good stone from perishing; because no materials but those of the best quality would be used in the erection of a building. This refers especially to cases where a building has been erected with stone supposed to be good enough to show no important symptoms of decay during a reasonable period, say the lifetime of the proprietor, the architect, or the builder. But to the annoyance of all parties, before the edifice has been eight or ten years in existence, large portions of the stonework may be gradually crumbling away; as is the case with the Ionic entrance to Hyde-park from Piccadilly, constructed with Portland stone; and the exterior of Henry VIIth's Chapel at Westminster, refaced with Combe Down, Bath stone. Such, indeed, is the lamentable prospective state of the latter building at this time, that there is every probability of its being, within thirty or forty years, in the same dilapidated condition as it was before the repairs in the year 1808, unless some plan be speedily adopted to avert the decay which I have repeatedly observed, with extreme regret, rapidly advancing on the exterior, in consequence of stone of an inferior quality having been used in its restoration. It appears, therefore, to me, that Henry VIIth's Chapel will afford an excellent opportunity to test the merits of the different inventions for preserving stonework; as there can be no doubt that the progress of decay is very far advanced in that beautiful structure.

Buildings constructed with first-class stones, as Portland, Anston, and the best sandstones, ought not to require the aid of indurating processes to render them durable. No one ever thought of preserving the stone of St. Paul's Cathedral, of Greenwich Hospital, or of other public buildings erected in London during the eighteenth century. There is scarcely a trace of decay in the Portland stone of the Post-office, the National Gallery, or the Royal Exchange; whereas the lower part of the river front of the Custom House, the Ionic Entrance to Hyde-park from Piccadilly, and a few other buildings erected about thirty or forty years since, with a very inferior quality of Portland stone, are certainly in a decayed and dilapidated condition. The best specimen, in London, of Anston stone similar to that used at the Palace of Westminster, may be seen in the two elevations of the Museum of Practical Geology in Jermyn-street, and in Piccadilly. There is also an excellent specimen at the Amicable Life Assurance Office, No. 50, Fleet-street, the elevation of which is not extensive, but the stone is remarkably free from decay. The worst specimen may be observed in nearly the whole of the new buildings at Lincoln's-inn.

In all stone quarries, especially those occupying extensive districts, there are variations in the texture, hardness, and durability of some of the beds, which may account for the stone from certain beds being more readily disintegrated when exposed to weather; thus rendering it objectionable for ornamental architecture. In the Houses of Parliament, some such defective stones have been injudiciously used; but the proportional quantity of inferior stone in the entire edifice being small, as compared with that of a good and durable quality, shows that the failures have arisen entirely from inadvertency, or the want of a more careful supervision of the blocks of stone, and of the particular beds from which they were obtained.

The first stage of decay in the Anston stone appears in spots of a lighter colour than the general surface of the stone: these enlarge and unite, until, in some cases, the whole surface acquires at a distance a pale yellowish brown tint. Upon closer examination, on the face, or more correctly speaking, under an exceedingly thin film on the surface, there seems to be a sort of disruption of the particles, overcoming their cohesion, and a powdery incoherent light-coloured surface is the result. This is easily rubbed off, and it may probably, though not certainly, continue to increase in depth; for some few stones in the Houses of Parliament present unequivocal evidence of the surface having undergone a certain amount of decomposition, or disintegration, since they were finished by the workmen; but this progress of decay appears now to be at least retarded, if it be not altogether at an end. Upon this principle, it is possible that, in many other cases, the present mouldering appearance of certain stones may, at no very distant period, altogether cease.

It would be too much to expect so enormous a quantity of stone, or other natural product, to be all of a quality fit to receive the most refined elaboration, and without any defects; but a question may arise, whether there be more imperfect stone in the construction of the grand edifice just mentioned, than if some other well-chosen stone had been used; Portland, for instance, than which no better material for such a purpose can be named; yet we find buildings constructed with this stone in various stages of preservation, some nearly perfect after being erected probably more than a century; but others mouldering away, only a few years after their completion, merely from want of proper care in selecting the material. These remarks will apply to the stone used at the Parliament Houses, but there are buildings in London and elsewhere, constructed with stone from the identical quarries which have furnished the material for the great work at Westminster, which present scarcely a trace of decay, while the surface of others, erected more recently, is to the eye, even of the casual observer, in a rapid state of disintegration.

The British Isles contain unbounded supplies of building stone, probably as good as any in the world. As it is usually on the surface of the ground in almost every stone district, it may be readily quarried at very little cost, and may generally be transported at small expense to any part of the kingdom. With these advantages, a foreigner might expect to find perfection in stonework in all our towns; our public and other buildings noble illustrations of this source of national wealth, proofs of the skill of our masons and carvers, and of the genius and refined taste of our architects, remaining from century to century in good preservation, deriding alike the frigid rains and scorching solar rays, without need of reparation. This, however, is, we all know, by no means the case: London, and every other large town in our island, abound with examples of material badly selected, improperly exposed, often carelessly worked, and generally discreditable. I readily admit that there are numerous exceptions, but the rule is as I have stated: little or no pains are taken to learn the true relative value of different materials, but to save a small proportion of the first cost, some cheap stone is probably selected for public as well as for private edifices: magnificent club-house, royal palaces, churches, chapels, and cemetery buildings, that were intended to last many centuries, are constructed with the most perishable kinds of Caen or Bath stone; and thus, as time rolls on, we

* Read by Mr. C. H. Smith, at the ordinary general meeting of the Royal Institute of British Architects, December 1st.

find ourselves surrounded with specimens, the greatest use of which now is, to serve as a warning for our future conduct.

Suppose a building to be erected with Caen, Bath, or some other soft cheap stone, that can be worked very expeditiously, and afterwards be hardened, and rendered, at a very small additional cost, indestructible by weather and atmospheric influences; this sounds very tempting, and is no doubt a desirable object to attain. But it should be borne in mind, that the quality which gives Caen or Bath stone a preference among architects and workmen, the facility of working it, also contributes in a great degree to the speedy obliteration of its beauty when exposed to the weather: unless, therefore, the object can be successfully accomplished, the result must be a failure. There can be no difficulty whatever in rendering small specimens of soft stone completely waterproof; but, as with numerous other projects, I foresee almost insurmountable difficulties in carrying out such contrivances upon a large scale, so that they can be practically applied, and completely answer the intended purpose in such buildings as the Royal Exchange or the Palace at Westminster. Among other important advantages, the invention and mode of procedure should be commercially valuable; otherwise the cost of an edifice erected with soft stone, and afterwards indurated, may be greater than if the most durable stone had been employed in the first instance.

It is well known that water, even in its simplest state, acts as a solvent on most things; but when it contains acid, its power of dissolving calcareous substances is considerably augmented. The most perishable kinds of Caen, Bath, or Reigate stone, may be used for decorative purposes in the interior of buildings, where they are protected from the influence of rain or dampness, and may remain for centuries without showing any tendency to decay; but if the same stones should be exposed to the weather, all architectural features would be obliterated in the course of twenty or thirty years. The main object, therefore, to be attended to, in order to preserve stone from decay, is to protect it as much as possible from the influence of moisture, and especially from frequent alternations of wet and dry.

If water be one chief cause of the decay of stone, we must endeavour to saturate the stone with some solution that will repel the water, and thus become the means of conservation. Some years ago the late Mr. Silvester suggested a process for the preservation of stone, cement, and brickwork. It was a solution of soap in the first instance, and afterwards a solution of alum. This plan seemed to answer very well at first, as the water thrown on the specimens flowed off without leaving a trace behind; but the effect entirely disappeared after a time, and the stone became as absorbent as ever. Another scheme has been tried within the last few years, under the sanction of several gentlemen, eminently distinguished for their chemical attainments. A solution was prepared by dissolving flinty sand and potass in boiling water, and called, "silicate of potass," or "water glass:" with this the surface of stone buildings was to be saturated. It had long been known that animals and vegetables had the power of dissolving silica in water; but it is only within a few years that the chemist has learnt to imitate nature in this respect, and to form an aqueous solution of flint. The acquisition of one really new idea in science is likely to give birth to others of far greater importance, and this "water glass" gave promise of the most successful results. Specimens of Caen stone and other soft materials, *soaked* in a solution of "water glass" in the laboratory of the Royal Institution, under the very able direction of the Rev. John Barlow, were very perceptibly indurated after a time, and resisted the action of water and of dilute acid; but having made a similar experiment, in the most careful manner, in the month of January, 1849, upon a piece of Caen stone, which I knew to be of a perishable quality, and placed it on the roof of a building by the side of a piece of the same stone in its natural state, where they have remained until this morning, in order that they might be fully exposed to the action of the atmosphere and the climate, I now find that the silicated specimen and the unsilicated one are both in the same condition, and equally corroded.

Some caution is necessary before experimenting on a specimen of finished work, because few fluids will remain neutral while in contact with stone; they will either preserve it, or in some degree decompose it. Their chemical action should consequently be accurately ascertained by well-directed investigations.

Most of that numerous class of substances, which are of an oily or resinous nature, are insoluble in water, having little or no affinity for it, and generally repelling it: they may, therefore, be useful in protecting other bodies from penetration by rain or moisture. It is well known that if wood is properly painted, or saturated with linseed oil, or linseed oil varnish, it will not readily decay or rot, but will remain unchanged in the damp earth, or exposed to the weather, as long as the oil continues to be of a fatty or greasy nature; whereas the same timber, in the same situation, rapidly becomes rotten without some such preparation. Nearly all the vegetable fats, which have the property of drying or hardening when exposed to the atmosphere, such, for example, as linseed oil, lose their unctuous consistency after a time, probably by evaporation, and dry up so completely as to leave nothing but a trace of resinous, waxy, or gummy matter. It is, therefore, absolutely necessary, in order to preserve wood from decay, to repeat the oiling or painting process every three or four years.

The first step towards investigating a subject scientifically, is to generalize the materials, and argue upon first principles. Without entering upon a controversy as to the merits of the various patented and other inventions for attaining the objects now under consideration the remarkable similarity of each separate process, when compared generally with the others, is rather surprising. All the vehicles named in the specifications of the patents are composed of mixtures of oily, resinous, or bituminous substances. Now it is well known, that although the various oils differ from each other in certain respects, there are yet principles in them which seem to be common to all. Nearly every variety of fat and oil, whether of animal or vegetable origin, either the hardest tallow, the soft greasy fat of a horse or a goose, or the volatile oil of turpentine, may be separated into two distinct substances by compression or by cold. As regards fats and fat oils, that is, those which do not readily harden and dry, one part, the oleine, will remain fluid, while the other part named stearine, at the same temperature, becomes solid; and this solid portion, in its chemical relations, is closely allied to wax. The volatile and essential oils, such as oil of turpentine, become thick by exposure to the air, and in time assume the character of resin. Bitumens gradually pass from a state of fluidity into one of viscidity and solidity. A long time is necessary to produce this alteration by the atmosphere only, but if heat be applied, distillation will carry off the fluid portion, and solidification will be much more rapid. Naphtha, petroleum, mineral tar, pitch, asphaltum, shellac, and a certain portion of coal, appear to have had all the same vegetable origin, and vary but little in their elements and constitution from each other.

The following analytical table of substances of an oily or resinous nature, beginning with caoutchouc, which contains the largest proportion of carbon in 100 parts, and arranged successively as the quantity of carbon diminishes, will show that, notwithstanding the various oils and resins differ so much in appearance, they are all composed of a mixture of only three elements—carbon, hydrogen, and oxygen—and many of them are compounded in very nearly the same proportional quantities:—

	Carbon	Hydrogen	Oxygen	Equal to
Caoutchouc .	[illegible]	[illegible]	[illegible]	100 000
Pitch. ...	88 701	9 709	1 590	100 000
Oil of Turpentine	84 81.	10 149	5 240	100 000
Naphtha	84 187	13 301	2 513	100 000
Wax	81 094	12 085	6 821	100 000
Tallow	79 120	11 581	9 000	100 000
Spermaceti Oil. .	78 203	11 491	10 [illegible]	100 000
Olive Oil	77 2.0	13 3 0	9 430	100 000
Linseed Oil	76 014	11 351	12 635	100 000
Asphaltum	75 000	9 900	15 100	100 000
Resin	74 773	10 859	14 418	100 000
Ether	66 475	14 1 5	19 400	100 000
Alcohol	52 175	13 500	34 325	100 000

The most conspicuous difference exists in the various temperatures at which the substances above-named become solid or fluid: for instance, most of the oils remain in a liquid state at the usual ordinary temperature of our climate, but at the freezing point, or a few degrees lower, they become solid. Pitch, wax, resin, and tallow are usually hard and compact, but melt at a degree a little above summer heat. These remarkable differences must be evident to a casual observer, yet I think I may venture to assert that the most learned philosophers are not yet able to explain to a certainty why the same elements, united in the same proportions and at the same temperature, should give liquefaction in one case and solidification in another. It is also well deserving of notice that all these substances appear to be, as it were, of one family, possessing a sort of chemical affinity, or general good feeling for each other's company: for example, if we take any two substances named in the foregoing table, and put them together at a certain temperature, they will unite and form one homogeneous body: still further, I am of opinion that if the whole collection were to be thrown into a cauldron, placed over a gentle fire, there would soon be a hotchpotch of a uniform texture, somewhat resembling treacle in appearance. There might be individual exceptions, but I believe the rule would be as I have stated.

Many plans have been practised, or tried experimentally, by different persons during the last few years, in order to get over the necessity and expense of oiling a stone building periodically, for the purpose of averting the progress of decay. To generalize and describe these contrivances in a few words, I may say that the patentees have found that oil, in its simplest state, applied in sufficient quantities to saturate the surface of stone, loses by evaporation nearly all its protective influence in a few years; they have, therefore, adopted the plan of charging the oil with an additional quantity of the solid portion of the same, or of any other kind of oil, such as a mixture of oil and wax, resin and turpentine, or of naphtha and shellac. During the process of saturating a porous stone with any of these mixtures, the fluid holding the solid wax or resin in solution acts as a vehicle to carry the wax or resin, by capillary attraction, into the interior of the stone; and, after the fluid portion has evaporated, the solid which remains serves two purposes: it protects the stone from external wet and moisture, which always tends to decompose soft limestone; and then the solid wax or resin serves to cement the grains more firmly together, and thus changes what was previously a fragile absorbent substance into a compact stone, impervious to moisture, so far as the indurating mixture has penetrated.*

ON THE DECORATIONS AT ALNWICK.

I REALLY felt quite pained at finding my excellent friend, Professor Donaldson, so much annoyed; but I am sure that, on consideration, he cannot but see that there is legitimate room for our differences of opinion. He is so much out of his element when writing harshly, that he says, I am sure, more than he means.

Without wishing needlessly to prolong a controversy on which I have had "my say," I must beg you to excuse my clearing myself of some charges to which I feel bound to plead "not guilty."

In the first place, Mr. Donaldson shows me up as a rude and uncourteous disputant, by stringing together, in a few lines, all the strong expressions I had made use of in the course of a speech and a long paper, including one which I cannot recollect using at all. Now, were I, in the same manner, to collect the *complimentary* terms used in the same speech and paper, I should produce an impression of a directly contrary kind; and I appeal to those who heard what I said, or have read what I wrote, whether I did not, while clearly stating my honest opinions, do so with the utmost respect and consideration for the noble personage from whose conclusions I happened to differ. If we bring forward subjects of discussion, we must not object to the free expression of opinion upon them. If we are debarred from this, it would be better that they should be withheld alto-

* To be continued.

gether. I am not so practised a speaker as my friend, and I admit that the word "*logic*," to which he objects, might be changed with advantage to "*reasoning;*" but he must recollect that, when I first used the word, it was not with reference to the Duke: it was Mr. Donaldson who turned it against him by interposing to explain that he was not stating his own but his Grace's arguments.

In the second place, I must demur to several of the professor's statements; as, for instance, to that about his antagonism to Mr. Salvin (!) which I never so much as dreamed of; to what he says about certain styles of art being "illogical" (!) and "not the true style," expressions of which I am unconscious; and to my having said anything against the specimens of carving exhibited, to which I never alluded. What I said was of Italian art in general, which I did not say had "no relation to nature," but "to the forms of nature with which they (the Alnwick workmen) are surrounded." From the "obliquity" of my position, I did not see the specimens well, and ventured no opinion upon them.

I am, again, unconscious of any expression laying me open to the charge of *exclusiveness*. I did not find fault, in the abstract, with the style adopted, but rather with its proposed *location:* indeed, I said I should rejoice to see in England a work of Canina's, provided it were at Northumberland or Sion House, instead of Alnwick.

I further demur to the statement that I "advocate as a ground-work, not any *domestic* building, but a *religious* one." What I said referred to the *style* selected for the Palace of Westminster. The old palace contained remains of at least four phases of Pointed architecture, among which I suggested that that of the beginning of the fourteenth century,—of which St. Stephen's Chapel was the specimen at hand,—would have been a better guide, *as to style*, than those of later periods. With Mr. Donaldson's opinion upon that specimen I have nothing to do,—it is certainly not that usually entertained, but "*de gustibus*," *&c.!*

Having cleared the subject of these overlayings, which are useless but to perplex it, I will add a little on the main questions at issue, which are these:—1st. Whether in these days, when (to say the least), the architecture of our country in the Middle Ages has been carefully studied, and is extensively in use, it would not be better, while restoring an ancient mansion, to use that architecture for its interior (developing it as we think best to meet present wants), than to produce a building externally, in the English style of the fourteenth, and internally in the Roman style of the sixteenth century? 2ndly. Whether the first-mentioned style is capable of being successfully applied to internal finishings, and of being so developed as to satisfy every modern feeling and requirement? On both questions I reply in the *affirmative;* Professor Donaldson in the *negative;* and both being matters of taste and feeling, I do not see how either can prove our case, for on such questions argument is proverbially inconclusive. To attempt to settle them by practical evidence, seems equally unavailing; for it was as easy to an excellent cleric of the last century to say of the conventicle-ized interior of Llandaff Cathedral that, "as far as it is ceiled and plastered, it *looks exceeding fine*," as it is to assert of the interior of the Doge's Palace, that the (undoubtedly fine) Renaissance fittings (introduced after the fires in the fifteenth and sixteenth centuries) present no "dissonance from the exterior aspect;" and, in like manner, the finest work which we can now or hereafter produce, may be as readily pronounced a failure, as the exquisite interior of St. Stephen's Chapel — "an effete example of corruption and debility!"

I will, then, content myself with saying a word in reply to Professor Donaldson's two leading arguments.

On the first question, he argues that it has been the practice of all ages to make alterations in old buildings, not in the style of the buildings but in that prevailing at the time. I admit this,—but it does not apply to the present case, in which the *exterior* is entirely renewed, and, though in the *style* of the old building, yet, in the main, on a new design. To carry out the theory, the exterior ought also to have been changed in style, as would that of the Ducal Palace had Palladio had his will. We cannot, however, argue from this practice of former ages without ignoring one of the most striking characteristics of our own, which, of all periods in the world's history, is the first in which the arts of former ages have been systematically studied. This characteristic causes our age to be emphatically that of *Restoration*. At former periods they *could not if they would* work in the style of their predecessors: with ourselves it is otherwise. If there is one fact more striking than another in our present position it is this; that we *can* work in the styles of our forefathers of the Middle Ages, and that we *have*, with more or less success, revived them, and more especially the style of the thirteenth and fourteenth centuries. Deplore or decry it as you will,—the fact still remains; and any attempt to ignore its influence on our treatment of our ancient buildings involves a far greater neglect of the characteristics of our age than any of which it is the fashion to accuse those who have had a hand in this revival.

On the second question, Mr. Donaldson brings forward what he must forgive my calling the *ad captandum* and very hackneyed argument of the discordance of Gothic architecture with our present *costume!* Let me ask whether the classic revivers of the fifteenth and sixteenth centuries revived also the *costumes* of ancient Rome; and, again, whether the Roman dresses of these centuries had any more resemblance to those likely to be worn at Alnwick than had those of its first builders? The fact is, that this favourite argument—oft repeated as it is—has no real force in it. Buildings are somewhat more durable than fashions in dress. Would it promote harmony of effect for the congregation at Whitehall Chapel to assume the dress of King Charles's cavaliers, or that at St. Paul's to come out in long wigs and high-heeled boots? Even Somerset House would, on this principle, be out of date, and would want a due supply of pomatum and pigtails to bring it into harmony; while the clerks in the Bank of England should wear a livery founded on the "Fashions for the Season" of the times of the Prince Regent! The costume of our day would, in fact, harmonize with no style of architecture which ever existed, or, I trust, ever will exist; and if we could introduce a style which would shame it into anything like taste we should be doing good service.

What I claim for Gothic architecture is its *perfect* and *ready* applicability to our present requirements; and I boldly and unhesitatingly assert that, of all styles, it is the most elastic, and most capable of suiting itself to the circumstances. The revivers of architecture, in shaping it to their necessities, had no examples of the internal finishing of the ancients to go by. Their guides, in doing this, were no other than the works of their mediæval predecessors, which they translated into their newly adopted style. We, in the same manner, do not wish to revive mediæval dwellings *as they were*, but to produce, in the revived style, *what we want*, translating back into it all which is good in what we now use. "J. F." enumerated, as his decorations, the same list which Canina had given; and that simply because he was of opinion that his proposed style would do the same things more consistently. In a paper I had written some months before this discussion arose, I had given an almost identical enumeration of those which I would recommend for a nobleman's mansion, in the style I advocate, *and for the very same reason.* The majority of these decorations were in use before the classic revival, and were borrowed from mediæval buildings; and I boldly assert that, by availing ourselves of the artistic and mechanical facilities of the present day, we may re-apply them to the revived and re-developed style, with a freshness and vigour far exceeding what we can hope for from Italian architecture; unless we are to expect some wondrous results from this new mission of artists from Rome; and, in truth, I must admit that, if we *are* to have Roman buildings, this part of the Duke of Northumberland's plan of proceeding does appear to me to be one of the best modes of infusing new (or rekindling old) life into it.

Geo. Gilbert Scott.

THE SOULAGES COLLECTION OF RENAISSANCE ART.

CARVED STONE CHIMNEY-PIECE.

The extraordinary collection of objects of decorative utility made by M. Soulages, of Toulouse, and brought into this country by a committee of gentlemen interested in the artistic improvement of our manufactures, is now set forth in Marlborough House for public inspection, and has already been visited by a large number of persons. The interest of the collection is materially increased by what promises to be a very complete and excellent catalogue, which is being prepared by Mr. J. C. Robinson, the Curator of the Museum of Ornamental Art. The part already published refers solely to the specimens of Majolica and Palissy ware, and occupies eighty pages.* The second part will be issued next week. The collection was bought at prices regulated by recent sales in this country, and cost 11,000*l.* exclusive of interest, packing, and insurance; and already individuals have offered to relieve the committee of it at the sum required. The object, however, is to induce the Government to purchase it for the country. Should they decline to do so, it will be sold by auction, to the loss of the committee if it be sold for less than the sum it has cost, and to the advantage of art if it realize more, since the arrangement is that in that case the surplus shall be disposed of in furtherance of some object or objects connected with art, to be determined by the major part in value of the subscribers present at a meeting specially called for that purpose.

The following are the subscribers:—E. Marjoribanks, Earl Granville, Lord Ashburton, H. Minton, Edward Wood, Robert Napier, W. Maskell, M. Uzielli, Philip Miles, Lyon Playfair, Richard Redgrave, Henry Cole, J. Mayer, H. T. Hope, J. C. Robinson, Capt. Fowke, W. Ewart, R. Burchett, H. Farrer, C. Sackville Bale, W. Chaffers, A. Barker, Richard Fisher, J. Swaby, John Webb, Holland and Sons; Artists, Carvers, and Workmen in the employ of Holland and Sons; Alfred Lapworth, John Jackson, W. B. Simpson, George Trollope, Jackson and Graham, John Crace, J. Sheepshanks, G. R. Elkington, J. Jobson Smith, Thomas De la Rue, Warren De la Rue, Gillow, R. Phillips, S. C. Hall, Dudley C. Marjoribanks, Sir Francis E. Scott, bart. George Godwin, Henry G. Bohn, G. Gilbert Scott, George J. Morant, I. K. Brunel, Sydney Smirke, Johnstone and Jeanes, Duke of Hamilton and Brandon, Robert S. Holford, Christie and Manson, John Dunn Gardner, Joseph Clarke, Owen Jones, R. J. Spiers, Hanson and Wright, Hunt and Roskell, Council of the Society of Arts, J. J. Mechi, Joseph Rodgers, James Dixon, Mappin, Sir Henry Meux, bart. Sir John Marjoribanks, bart. T. M. Whitehead, Titus Salt, J. W. Fraser, C. Drury E. Fortnum, W. Wilson Saunders, Edward Chapman, the Marquis of Hertford, and Felix Slade.

The collection consists, in the whole, of nearly 800 objects, and includes, besides what we have mentioned, Venetian glass, knives and forks, spoons, coffers, and ivories, enamels of Limoges, bronzes (chiefly decorative utensils), Italian sculpture, Della Robbia ware, painted glass, medals, chiefly Italian, of the quattro and cinque-cento periods, a few pictures, textile fabrics, and decorative furniture.

We must not be understood as expressing unlimited admiration of all the works here collected: they have the faults of the period, some of them in excess. Compared with works of the mediæval times, and of Gothic artists even of their own period, they are found wanting in some most important qualities; nevertheless, they present, as a whole, a deep mine of beauty, most valuable illustrations of the history of decorative art, and admirable results of processes, in the practice of which we are now miserably inferior, even if we have not altogether lost them.

With these few general particulars, and a view of one of the most interesting objects in the collection, a carved stone chimney-piece, set up in the first room, with its bronze andirons, or fire-dogs, of great beauty, we must content ourselves on the present occasion. The chimney-piece, it will be seen, originally followed the shape of the hooded fire-places, of the mediæval period: it came from Padua, is attributed to one of the Lombardi, and was executed quite at the beginning of the sixteenth century. On the face

* Published by Chapman and Hall, London.

CARVED STONE CHIMNEY-PIECE, FROM THE SOULAGES COLLECTION.

Commencement of Sixteenth Century.

of the upper portion of it are represented a boar-hunt and other sports, set forth by a multitude of small figures and animals, admirably grouped. The expression given to some of the figures is excellent, and the whole is full of life and energy. The caryatidal figures which carry the hood are also admirably carved. The andirons of bronze, from the Palazzo Petinelli, at Padua, show the arms of the Barberigo family, and are of a very high class of art. The carved marriage coffer in this room, enriched with subjects from the history of David, and the carved bellows hanging near the chimney-piece, should not be overlooked: but to these and other works in this collection we shall find an opportunity to return.

ARCHITECTURAL EDUCATION.

The following memorial has been addressed to the Council of the Royal Institute of British Architects:—

Gentlemen,—The proceedings of the Institute during the last few months, with reference to certain propositions bearing upon the question of our professional education, seem to warrant the belief that the time has now arrived when this question itself, in its simplicity, may be pressed upon your attention, as the most vital consideration of our policy and the root of all reform.

It is in pursuance of a natural law that a profession like ours comes to establish the organization of a guild. It is no less a rule, that in course of time the attention of each a guild becomes fixed upon one object as in a manner the primary one of all,—the essence of the craft, and the foundation of its honour,—namely, the education of its youth. And in an age when a scientific system of tuition has become the recognised basis of all progress and power, this process of events must only be the more inevitably certain.

The present generation has beheld the guild of architects gradually consolidated in the form of the Institute. As a profession also, we have meanwhile increased almost unprecedentedly in numbers and influence. The association of architecture with the delinentive arts in the Royal Academy of George the Third, we have seen gradually undermined as a merely traditional and unsubstantial connection. We have established an annual Exposition of our own, already of singular promise. Even in emulation with our brethren of foreign countries, we have met with that unexpected success which is the index of extraordinary latent power.

But the more remarkable our progress, the more pressing does one question become. What of the education of this imposing profession? What is to be said of the basis of solid knowledge, without which all this display of energy is but matter of anxiety rather than of triumph?

The Institute may have done much for the advancement of learned research, but has it done anything for the establishment of simple education?

The absolute need of thorough systematic instruction for any vocation of skill in the present scientific age, is to be assumed as an axiomatic principle.

The striking absence of tuition of this kind in our profession is too well known to be matter of argument.

The valuable lectures of University College are, no doubt, paving the way for a better system, but is it impossible for this description of education to emanate from the head-quarters of the profession itself?

The object of the present memorial is to beg that the attention of the Institute and the profession generally may be earnestly turned to this question.

Lest the appeal should fail for want of a definite proposal, I venture to suggest a mode of proceeding in the appended memorandum. I hope the wisdom and experience of the Institute, and the solicitude of the profession at large, may thus be, at least, directed to the immediate discussion of the important subject involved.

This duty ought no longer to be delayed: it is only to be feared that it has been too long delayed already.

ROBERT KERR.

Memorandum of the Proposal above referred to.

The range of essential study for the architect may perhaps be set forth as follows:—

1. Natural Philosophy; or the abstract sciences involved in building.
2. Building; or the science of the operations of the builder.
3. Plan; or the arrangement of buildings and their appliances.
4. Architectural Design; or the Fine Art; historically and critically examined.

Drawing (to be more elaborately acquired) and Estimating would probably complete the scheme. Simple Mathematics ought to be a preliminary.

Presuming the establishment of professorships of these several branches to be deemed premature, and the alternative adopted of prescribing a course of private reading, the council might draw up a list of books, which, in their judgment, would convey a complete system of education.

Those who, upon examination, prove themselves perfect in the prescribed course of study, and otherwise competent, as may be laid down, might be acknowledged as members of the Institute by the title of Graduates, to rank as Fellows when of seven years' practice.

With regard to the pecuniary charge for membership of any public guild, this is properly a tax to meet the expenses of maintenance. Any demand beyond a fair share of such expenses ought only to be made to meet particular circumstances. If the subscription of Graduates, therefore, were reduced to this rate, while other members continued to contribute as at present, this might serve as the least invidious encouragement to Graduates, and without creating difficulties in the way of others.

CHURCH-BUILDING NEWS.

Ipswich.—The new church at "California" is now progressing. The roof, which has undergone a complete alteration and has been strengthened, is nearly covered in, and the buttresses have been so altered that additional security has been given to the fabric.

Oxford.—The chapel of Balliol College, the rebuilding of which was commenced in the Easter vacation, is now complete, with the exception of the roof. The new chapel possesses features new to Oxford, being built in alternate courses of red and white stone, the proportion of the red to the white gradually augmenting as the building rises.——The chief corner stone of the new chapel of Exeter College was laid on 29th ult. The stone was in the first course of the Bath stone plinth, and distinguished by three Maltese crosses inclosed in circles, symbolising the Holy Trinity, and placed at the south-east corner of the sanctuary, at the commencement of the polygonal apse. Mr. Symm is the builder, Mr. Buckeridge the assistant architect, and Mr. Scott the architect. The style is Geometrical Decorated; the plan, a parallelogram, with an apsidal termination, divided into ante-chapel, chapel, and sacrarium. The entire length from east to west is 72 feet, breadth, 30 feet; and height to external ridge, 50 feet. The turret for the bell is to be of oak, covered with a lead spire; the height to the top of which is 130 feet. The whole of the interior is to be groined with stone. The edifice will form the whole of the south side of the large quadrangle, occupying the site of the former chapel and rector's lodgings.

Brentwood.—The reopening of Brentwood Church, after its enlargement, took place on the 4th inst. The additions consist of a chancel, 37 feet by 18 feet 6 inches, with transeptal aisles, arranged with cross gables. All the piers, arches, dressings of the windows and other parts, are of Bath stone; whilst the facing of the external walls is of Kentish rag. The roofs are designed with reference to sound, and present vaulted and boarded surfaces between the timbers, which are wrought. The chancel roof is decorated in colour, by Mr. Castell, of London, having over the altar the four Evangelists. Messrs. Ward have fixed a three-light east window, as a memorial by the incumbent to his father, the late Sir John English; and the two easternmost windows of the aisles are also filled with painted glass. The east window contains groups from the history of our Lord, whilst the other window contains canopied figures of St. Luke and St. John. The architect employed on the enlargement was Mr. Joseph Clarke. The carving throughout has been done under the direction of the architect, by Mr. Daymond; and the whole of the works have been carried out by the contractor, Mr. John Hammond, of Great Warley.

Maidstone.—At a public meeting of the working classes and others, recently held at Maidstone, it was unanimously resolved to support the movement for the erection of a new church in Stone-street of that town. A design had been prepared by Mr. Whichcord, architect. Upwards of 2,100*l.* have already been subscribed.

Wimborne.—The reseating and heating of the Minster are about to be carried into effect.

King's Norton.—The repairs or restorations of the church are nearly completed, and the edifice was reopened for service on Sunday before last. A new stone pulpit, new oak reading-desk, and a lectern have been provided. The pillars and arches are all scraped, and the south aisle has all its windows fitted with new mullions and tracery, and scriptural subjects in stained glass. The porch has had the ceiling removed and the timber stained, exposing a good old oak roof, the tie beam of which has the date 1659. The stonework has been executed by Messrs. Bennett, of Birmingham; the glazing by Mr. G. B. Newbould, also of Birmingham; and the woodwork by Mr. Isaac Clulee, King's Norton.

Shrewsbury.—A new general cemetery for the Shrewsbury parishes and Meole Brace was formally consecrated by the Bishop of Hereford, on Tuesday in week before last. The cemetery is situated on an elevation about a mile from the centre of the town, and embraces an area of twenty acres. The situation is described as a fine one, and the soil and understrata dry. The new buildings will form a group, comprising two chapels, two vestries, a double corridor or cloister, surrounding a small quadrangle, a lych or entrance gatehouse, and, right and left, the officers' houses and the board-rooms. In the centre will be a tower and spire, 130 feet high. These buildings, &c. are situated at the angle nearest the town, and are on the highest portion of ground. The chapel is 45 feet 6 inches long, by 20 feet wide, with south aisle, 34 feet by 9 feet 6 inches, and, under the tower, a space appropriated for a vestry, opening into the church, 14 feet by 10 feet. The east end has a five-light traceried window. The aisle and clerestory windows are two-lights each, traceried. The interior of the chapel is of dressed white freestone. The roof is lofty, and timbered in deal and oak. The windows are glazed in tinted glass, to be gradually substituted by memorials in colour. The floor is of plain quarries: the benches, capable of holding from seventy to eighty people, are plain deal. Under the chapel is a vaulted crypt, entered from the outside. The Dissenters' chapel, although adjoining the Episcopal, is in all respects distinct, though the same in construction: it is 34 feet long, by 20 feet wide, with a south aisle of a single bay and vestry. This chapel is not yet completed. On the north side, and opening to the church by a lofty arch, is the tower, forming the centre of the group of buildings, and now nearly 60 feet high, upon which there is to be a spire. The lych-gate house is to be within 34 feet long, by 15 feet wide, with arched openings and doors at each end, sufficiently high to take a hearse: on the side towards, and communicating with, the corridors are three arches on octagonal pillars, all of dressed white stone: the outer wall has traceried and glazed windows. The roof is to be open timber work and tiles; the floor of blue bricks, with stone kerbs or rails for the carriage way. The corridors are also of dressed white stone, in and out, and form three sides of a square, 62 feet wide, by 72 feet deep. The passage way is about 10 feet wide, opening upon a small centre quadrangle by an arcade: the roof is of open timber and slated. On the right and left of the entrance, and communicating with the corridors, are the officers' houses and board-room, yet unfinished. The style is Perpendicular, and the construction of the walls throughout is of stone. The Redhill quarries have furnished the materials for the foundation and interior of the tower walls, and Grinshill the facings and dressed work. The design and superintendence of the whole of the works on the grounds and erections are by Mr. S. Pountney Smith, of Shrewsbury. Mr. G. Garratt is clerk of the works, and Mr. Owen superintendent of the grounds. Messrs. Groves have constructed the boundary walls. Messrs. Watkin, Parker, and Phillips, have executed the ground work and walks; and Messrs. James Dickson and Son, of Chester, have furnished the plants. Mr. Treasure, of Newport, is now the contractor for the buildings. The works are to be finished by April or May next.

Barrow.—A small painted glass window, the work of Mr. David Evans, of Shrewsbury, has recently been placed in Barrow Church, near Wenlock. A brass tablet underneath the window states that this window was inserted by George Weld Lord Forester, in memory of Elizabeth Lightband, and in grateful acknowledgment of her faithful and valuable services as housekeeper at Willey-park during a period of thirty-two years.

Rugby.—On Sunday before last, the Rugby School Chapel caught fire in consequence of the

overheating of the flues. On the floor being removed, it was discovered that the woodwork beneath had been smouldering for some considerable time. The fire, which was lighted on Friday, must (from the appearance of the charred wood) have immediately ignited the woodwork, but the stoker, fortunately, neglecting his duty, the fire became extinguished, or the calamity would, in all probability, have occurred in the night. The stained-glass window, in memory of the Rugbeans who fell in the late war, being in immediate proximity to the spot where the fire occurred, would doubtless have been destroyed.

West Derby.—The chancel-window of the new church of St. Mary, representing six principal subjects from the life of Christ, in medallions, upon mosaic diaper grounds, with borders of the Early Decorated period, was the gift of Mrs. Thornton; designed and executed by Messrs. Pilkington, of St. Helens.

PROVINCIAL NEWS.

Kidmore End, Caversham.—The new school-room at Kidmore End, in the parish of Caversham, was opened on Saturday before last, by the Bishop of Oxford. The new school-room is from a design by Mr. Arthur Billing, of London, architect. Mr. J. Dormer, of Caversham, was the builder.

Portsmouth.—The new water company have made arrangements for the purchase of the Farlington old water-works, at 42,000*l.* Most of the shares of the new company have been appropriated.

Cardiff.—On Saturday before last, just after the workmen had left off work, at a house in Bute-road, it fell down, and was so completely destroyed, that not one stone remained upon another in its proper position. All the joists and rafters, and two ladders, stood on their ends in the midst of the heap of ruins. The foundation of the adjoining house also gave way, and the building opened from bottom to top, so that it stands in the greatest jeopardy. The house belonged to a mason, and the adjoining one was to be taken down. The houses had been built on a spot formerly called the Brickyard-pill, which was a few years ago a deep pool of water.——A serious accident from the fall of a new parapet, in Bute-road, happened on the same day, to a man while plastering it.——We are asked to state, that the design of the Cardiff Post-office, is by Messrs. Prichard and Seddon, of Cardiff and Llandaff, not by *Mr. John Seddon.* The building is not "*Byzantine*," it is said, "but simply commonsense architecture of brickwork."

Kerry. — A correspondent of the *Shrewsbury Chronicle* calls the attention of the the authorities to the sanitary condition of this village. An amount of filth which would be a disgrace to be seen anywhere, it is said, is left to accumulate in front of the doors, consequently scarlatina, in its foulest form, has been engendered, and has affected with unusual severity all ages and conditions, and left them in some instances in a most deplorable state.

Sheffield.—The opening of the Exchange and News-room here took place on Tuesday in last week. The building has been erected, from designs by Messrs. Weightman, Hadfield, and Goldie, by the Duke of Norfolk, and terminates the pile of buildings lately completed for the butchers'-and poulterers' market, occupying the façade towards the old Haymarket. The Exchange-room occupies the first floor, and is approached by a flight of steps, 5 feet 6 inches broad, inclosed after the manner practised in Italy, having a domical raking ceiling. The entrance vestibule is laid with Minton's tiles. The room is entered by folding-doors. Its dimensions are 57 feet long, 30 feet wide, and 20 feet high. It is lighted by six windows of plate-glass. The internal arrangements are simple. At the end of the room opposite the entrance is a small apartment fitted up by the Telegraph Company, in which the subscribers may write and despatch their messages to all parts of the globe. The fittings were done by Messrs. Drury and Smith, of Sheffield. The exterior of the building is Darley Dale stone. The façade consists of a centre and two receding wings. The former has an order of Roman Doric pilasters, with entablature proper: the windows have architrave mouldings and cornices. The whole rests on an arcade of three openings. In the wings are the lower entrances to the markets, and in the circular corners are the entrances—the one to the Exchange in King-street end, and the Telegraph Company's in the old Fruit Market. Over the market entrances are two niches, with figures carved in stone by Messrs. Lane and Lewis, of Birmingham, representing Mercury and Vulcan. The builders were Messrs. Craven and Fewsdale, Messrs. Drury and Smith, Messrs. J. and C. Ellis, and Messrs. Wilson and Co. Clerk of works, Mr. William Abbey.

Shields.—At a meeting of the River Tyne Commissioners, on the 13th ult. says the *Shields Gazette*, an application was made by the Shipowners' Society of South Shields for a copy of the contract with Mr. Lawton for the erection of the Tyne piers, and of the plans of the works now in progress. The progress the contractor, it continues, was making was generally felt to be unsatisfactory, and as the shipowners of this port contribute largely to the pier fund, it was thought by the society to be no unreasonable request to be informed on what terms the commissioners had made their contract, and what were the nature of the works to be erected. The commissioners declined to give a copy of the contract. The following abstract is then given to shew the amount paid by the shipowners towards the building of the piers, and other particulars: —

Total piers' dues collected from 17th June, 1856, to 12th Nov. 1856	£18,933	16	11
Interest on same	1,730	18	5
Total.....	£50,664	15	4

EXPENDED.

Trow Rock purchase.....	£6,000	0	0

Total	£50,664	15	4

THE CONNECTION OF THE METROPOLITAN RAILWAYS.

THE travelling public still suffering from the want of connection between the various railways which have a terminus in London, it is somewhat surprising that companies have not directed their attention to the large open space of ground on each side of Victoria-street or New Farringdon-street, from Holborn to Clerkenwell, as a site for a grand central terminus: no such opportunity is likely to occur again of obtaining so large a space of uncovered ground in so central a position in London. The access to Surrey is wide and good by Farringdon-street and Blackfriars-bridge. The Holborn viaduct should be part of the plan, and would form a good access from the City and West-end, and by King's-cross and the New-road, the way to Regent's-park and Bayswater is clear and open. The ground might be obtained at once by treaty with the City without an Act of Parliament.

THE ARCHITECTURAL EXHIBITION.

THE opening *Conversazione* of the Architectural Exhibition will be held on Tuesday evening, the 16th, in the Suffolk-street Galleries, and will, doubtless, be well attended. Earl de Grey will preside, if well enough. The first lecture will be given by Professor Donaldson, on January 6; his subject being "The Architectural Magnificence of Rome." The Rev. Mr. Petit will lecture on the Tuesday following. We would point out that by an almost nominal subscription (2s. 6d.), admission may be had to a very promising series of lectures, and to the Exhibition for the whole season.

Through the success which attended the Exhibition last year, the committee were able to pay off part of the outstanding debt to the treasurer; and if they receive proper support this year, support for which an ample return will be made to subscribers, apart from the satisfaction of contributing materially to the advancement of architectural knowledge, the debt will be cleared off, and the Institution will be placed on a sound and permanent footing. Every architect and lover of architecture should feel it his duty to move personally in the matter. It is of no use saying, "I am anxious for its success;" without an effort to ensure it.

SAXELBY CHURCH IMPROVED.

THIS pretty little spire church, situated about five miles on the north-west of Melton Mowbray, is now undergoing a complete restoration. The nave roof has been replaced with a regular *tie-beam* affair, slated and plain ridge. The tower has been partially cut back, and the *worst* places made good with *Roman cement dusted with sand.* The windows, mouldings, wreathings, and plinths, which are of Ketton stone, and covered with lichen, have been most religiously despoiled of it by dry rubbing, and the crocketed spire is threatened with the same process whenever weather will permit. The old porch has been rebuilt of the Upper Wurtnaby *marl* stone (celebrated for its *lasting* qualities), laid "random-wise," and relieved with minute Bath-stone dressings. The chancel is being rebuilt in the same *style.* The whole of this interesting work is being carried on by a gentleman who is both architect and builder. Lord Aylesford is patron of the living, and owns the whole of the land in the parish, and is a large contributor towards the rebuilding of the church. IMPROPRIATOR.

THE METROPOLITAN DRAINAGE QUESTION AND THE BOARD OF WORKS.

A DEPUTATION from the Metropolitan Board of Works, headed by the chairman, waited on the Chancellor of the Exchequer on Thursday in last week, on the subject of the borrowing powers of the Board. They asked the Government to aid them in a loan of 4,000,000*l.* for the purpose of effecting the main drainage and some improvements necessary to the health and comfort of the inhabitants, including the formation of some of those parks and open spaces for which we have so long contended, and also the opening of the new street in Southwark, the repayment of debts incurred by the late commission, &c. The loan it was proposed should be advanced at a rate of not less than 1,000,000*l.* per annum, and the repayment extended over a period of fifty years, on the security of the rateable value of the property of the metropolitan area, now estimated at 11,150,000*l.* and yielding now from three to four hundred thousand pounds a year. The Chancellor of the Exchequer, at the end of a long conversation, said that the Government had no power of contracting a loan without Parliamentary authority, and suggested that the best way to bring the matter to issue was for the Board to put their proposition in writing.

Another deputation as to the metropolitan drainage scheme was on the move at the end of last week,—in this instance from the Corporation of Gravesend and the parishioners of Erith, to the General Purposes Committee of the Court of Aldermen of the City of London, at Guildhall, on Saturday last. The deputation included the Mayor of Gravesend and the Chairman of the Gravesend Improvement Commission, Sir Culling Eardley, Mr. C. A. Smith, of Greenwich, Solicitor, and other gentlemen. The purpose in view was to confer with the City authorities, merchants, and others, as to the carrying of the London drainage down to the estuary of the Thames partly at the national expense, and as to a public meeting being held on the subject. Sir Culling Eardley was spokesman, and urged the agitation of the question in the City, the opening of the Guildhall to engineers who might wish to lecture on the subject, the duty of the City authorities, as conservators of the Thames, to protect the interests and the comfort and health of the residents on its banks, &c. Sir Culling represented that the scheme for disemboguing the whole of the concentrated sewage of the metropolis near Erith would be ruinous to the favourite resorts of the citizens down the river, even from the mere force of the public feeling against such a nuisance; that it was sufficient, in fact, to place the Thames under a sort of quarantine at foreign ports; that it would obstruct the navigation; that it would destroy the metropolitan market for fresh fish, which at present were brought up alive in well-boats, &c. &c. He had considered Sir Morton Peto's scheme, and was now much more favourably inclined towards it than he had been. Finally, Sir Culling incidentally expressed a hope that the Government would appoint a suitable

commission to rough-hew the subject before Parliament met, and that then it would be referred to a committee of the House of Commons.

Mr. Alderman Wire, the chairman of the committee, stated, in reply, that the City, as conservators of the Thames, were interested to see that in any plan for the purification of the Thames the health and comfort of the inhabitants on its banks were duly provided for, and that no obstruction be caused to the navigation; that the subject would receive the attention of the committee, and a communication would be made to the deputation thereon.

The main drainage scheme was again discussed at a meeting of the Metropolitan Board of Works on the 9th, and was adjourned till Tuesday next, when, as we understand, a fierce onslaught will be made on the present plan.

The new Street through Southwark.—The line proposed by the Board through Southwark is not popular, nor are we surprised. We must look to it next week.

CEMETERY COMPETITION.

Whatever punishment might be deemed due to "E. G. B." for his humorous poetry, on the terms proposed to architects by the Castleford Burial Board, architects generally are much obliged to him for the verses, and to the *Builder* for kindly circulating them. The immense waste of labour called for by the cemetery competitions, and the absolute throwing away of so many architects' time, has afforded much pleasure and amusement to Burial Boards, and it is only just to expect that there should be some inclination evinced to check the evil; some little retaliation offered,—some show that "Britons never will be slaves," unless under very peculiar circumstances.

The rank injustice of these competitions shows itself in this fact of frequent occurrence, viz. that the sober-minded judges of the designs, dazzled with the gay tints of the highly-finished sets of drawings, doubt, during their decisions, of the capacity of architects who get up such picturesque effects, to prepare simple sections and specifications. The consequence of this mistrust is, that after the Board have admired the landscape and perspectives awhile, the premium, three, or four, or five pounds, is paid, the unsuccessful designs are returned, and the Board apply to "our own" local architect for fresh plans, "for we shall be safe with him."

Meanwhile "our own architect" has been mentally taking his notes on the competition designs, and whatever pleasing feature is noticed in any one of the buildings, the Board "can of course have that" in the new design. It is pleasant to reflect that, in some recent competitions, three or four designs only were given in, and that the Boards chose the worst.

Archil.

SCHOOLS OF ART.

Burslem.—The annual meeting of the Burslem School took place on Wednesday in last week, the president, Mr. Child, M.P. in the chair. The local interest in the school appears to be sustained. An exhibition of student-works covered the walls of the Wesleyan Chapel School-room, in which the meeting was held. Mr. Child and Mr. Ricardo, M.P. addressed the meeting. In the report the committee congratulated the friends of the institution on the improvement made by the students during the year. A modelling-class had been established through the contribution of Mr. Child. The day-schools, participating in the advantages of the central school, continued to yield satisfactory evidence of steady advancement. After dwelling upon the necessity for a more suitable school-room, the report closed by setting forth the importance of maintaining the school in vigorous operation. From a statement of accounts, it appeared that Mr. Child had given a donation of 40*l.* and that the total income, including the subscriptions, 164*l.* 0s. 6d. and the students' fees, 62*l.* 9s. amounted to 276*l.* 9s. 6d. The expenditure amounted to 277*l.* 10s. 6d.

Swansea.—The annual meeting of the Swansea School was held in the Theatre of the Royal Institution of South Wales, on Tuesday in last week, the Mayor in the chair. In opening the proceedings, the Chairman said this was the first occasion of his being present at a meeting of the School of Art, and he regretted that it was so; but of late his sympathies had been much enlisted in favour of this institution, from facts that had come to his knowledge of the great benefit derived by persons who dated their present prosperous position from the time of their becoming pupils in the School of Art. He trusted that these facts would obtain publicity, and interest others in the prosperity of the school. The report (the fourth annual one) congratulated the meeting on the continued success of the school, although, from the withdrawal of two public classes, the Normal and the National Schools, to the former of which a private teacher had been appointed, there was a falling off in the number of pupils and the amount of receipts. There was an increase of subscriptions. At the last exhibition more than 1,000 persons had attended, and great interest was taken in it by all classes. The number of students receiving instructions in art during the last year in Swansea, including the public schools, had been nearly 500. The master, Mr. Hammerton, addressed the meeting, as did various other gentlemen, and the prizes were then as usual distributed.

Carlisle.—The annual meeting of the subscribers to the Carlisle School of Art was held in the Town-Hall, on Monday before last. The gentlemen present, says the *Carlisle Journal*, were Mr. Irving, Mr. I. Cartmell, Mr. Hannah, Mr. Jas. Steel, Mr. D. M'Alpin (hon. secretary), and Mr. Pozzi (master). Mr. Irving was called to the chair, but the Mayor afterwards entered, and occupied it. The report (the second annual one) stated that Mr. Brook had resigned his appointment as master, and the Department of Science and Art had recommended Mr. William Pozzi, who was accordingly appointed to the vacant office. The income had exceeded the current expenditure, and, therefore, the school had been self-supporting. There was a debt, however, amounting to 56*l.* 2s. 4d. for fitting up and furnishing. The committee urgently appealed to the public for funds to pay it. The ladies' morning-class had improved to some extent, though still comparatively small. There were now 67 pupils receiving instruction at the Central School of Art, and 378 pupils were taught in the various public and private schools attended by the master. The year's revenue amounted to 75*l.*

COMPETITIONS.

Bristol Pauper Lunatic Asylum.—The committee of the "New Pauper Lunatic Asylum for Bristol" wind up their advertisement in the *Times* with the following (I think) novel condition:—"The committee do not bind themselves to accept the *best* or any plan of the said building." Now, as the generally accepted end of a competition is to arrive at the *best*, we can but admire the honesty and foresight of the committee, who, doubtless, have already settled who is to be the lucky man; and as ten to one he will be far from the best, they thus take all cause of growling from the disappointed competitors. As they never bound themselves to accept the best, so nobody can complain even if they do choose the worst. It is the refreshing candour of the advertisement that induced me to draw your attention to it.

THE NATIONAL COLLECTIONS.

We understand that Mr. Sheepshanks has presented to the nation the whole of his collection of paintings and drawings, for the purposes of public instruction in art. Mr. Sheepshanks considers that a crowded thoroughfare is not a suitable site for quietly studying works of art, and has stipulated that his collection must be kept in the neighbourhood of its present locality, at Kensington. Mr. Sheepshanks has signified his readiness to hand over immediately the whole of his collection, which is especially rich in the best works of Mulready, Landseer, and Leslie, and contains fine examples of the principal modern British painters in oil.

According to the belief of the *Globe*, a Royal Commission will shortly be issued, appointing Lord Broughton, the Dean of St. Paul's, Mr. R. Ford, Mr. Faraday, Mr. Cockerell, R.A. and Mr. George Richmond, to inquire into and determine the site of the new National Gallery, and to report on the desirableness of combining with it the Fine Art and Archæological collections of the British Museum.

THE ARCHITECTURAL ASSOCIATION.

At the Association, on the 28th of November, a paper on a proposed "Model Society of Architects," was read by Mr. William Young. The reader considered that though there were many architectural societies, or associations of gentlemen meeting for the discussion of architectural papers, there was not any society or association that could be satisfactorily termed "a model society of architects," by which he meant "a society of professed architects, associated in such a manner as to ensure, by some predetermined course of probation, the possession of a certain amount of professional skill by each and every one of its leading members; and of professional eminence openly recognised by the bestowal of honorary distinction, to be alone attained by their having passed with credit through some prescribed test of professional competency."

He wished the Society to set up some standard of professional competency, and to put before all who joined "a ladder of professional merit to climb."

"I suggest, then," said the reader, "that we publicly announce that from and after the close of this present session, the members of the Architectural Association, though each paying the same subscription, and each retaining the same privileges of free discussion, and equal eligibility to administrative office, shall be divided into Fellows, Graduates, and subscribers; that no one shall henceforth be elected an honorary member of the Association, on any pretence whatever; that amateurs as well as architects and students shall be admitted to equal membership—with this exception, that they and Fellows alone be permitted, on payment of 5*l.*, to compound for their annual subscription, on condition of their attending at least one yearly meeting of the Association, if resident within the metropolis, as now defined by our rules.

That Fellows shall consist of those members of the Association who shall be found to have attained thirteen, and Graduates shall consist of such as have attained six of the following points of distinction or professional competency,—that is to say:—

The creditable service of not less than three years as pupil to an architect.

The creditable service of five years as principal clerk to an architect.

The having officiated throughout as architect of any approved private edifice.

The having officiated throughout as clerk of works (under an architect) of any approved private edifice.

The having practised for three years as an architect or building surveyor.

The having officiated throughout a session as chairman of the Association's class of design.

The holding of the D. S. certificate of the Royal Institute of British Architects, &c.

Each of which items or points of professional competency shall be computed as one point towards the creation of a Fellow or Graduate."

He proposed further, that certain points of competency or distinction should be allowed to count as claims to a degree, repeated as often as they should have been conferred upon or have befallen the claimant.

THE COMPOSER OF "IMMANUEL."

We have pleasure in recording a graceful act on the part of the distinguished Orchestral Society of London, known as the "Amateurs." On the occasion of the rehearsal for the first concert of the present season, on the 28th ult. a silver inkstand was presented, by the members of the orchestra generally, to Mr. Henry Leslie, their conductor, as a small testimony of their sense of the eminent services he has rendered them.

We may be excused departing a little from the strict subject-matter of this Journal, to compliment one who has shown such unwearied devotion to a sister-art; and whose inspirations have already secured for him an elevated position amongst the great writers of the highest class of musical compositions.

From an amateur, Mr. Leslie has become an eminent artist, and his industry in promoting his favourite art amongst the instrumental and vocal performers of the metropolis is as remarkable as his own knowledge of it is profound.

Associated with Lord G. Fitzgerald, Mr. Jekyl, and Sir A. Macdonald, in the formation of the society some twelve years ago, Mr. Leslie has for ten years acted as honorary secretary to it, and for the last three years has filled the more important post of conductor, to the great satisfaction of the members, and with high credit to himself. The inkstand is an elegant production, from the manufactory of Messrs. Hunt and Roskill. It is of scroll pattern, tetragon in form, and Cinque-cento in style, and in design and sentiment symbolical of its purpose. A beautiful figure, allegorical of music, stands on the base of a pedestal, representing the altar of fame, upon which it leans. The base presents four medallions, inscribed with the names of the four great departed writers of symphony,—Beethoven, Mozart, Haydn, and Mendelsohn; and around the altar is entwined a laurel, whose leaves bear the names of the greatest composers, past and present. At the feet of the statue lies an open volume, inscribed with the titles of the chief compositions of the recipient himself. Open music-books, supported by bay-leaves, form the stoppers of the ink-glasses; and the whole composition is creditable to the designer, Mr. Brown.

An address by Mr. Alfred Pollock, responded to by an appropriate answer by Mr. Leslie, expressive of kindly sentiments towards the society generally, terminated the proceedings.

Netley Abbey Ruins.—A correspondent of the *Hampshire Advertiser* complains of the wilful destruction of Netley Abbey. He says that the characteristic mouldings of the arches, and the very capitals of the pillars, are being deliberately broken off and carried away.

Notices of Books.

Memorials of the Lineage, early Life, Education, and Development of the Genius of James Watt. By the late Mr. GEORGE WILLIAMSON. Edited by his SON; and printed for the Watt Club, Greenock, by Thomas Constable, Printer to her Majesty in Scotland. 1856.

THIS is a handsome volume, containing much interesting matter on the subject of which it treats. The volume is graced by an engraved copy of the portrait of Watt in the possession of Mr. John Gray, of Greenock; and as a frontispiece to the second part, which treats more especially of the great inventor himself, as the first does of his forefathers and his native town, there is another portrait, engraved from the original in the possession of Mr. Robert Napier, in which, though not taken in early life, the soft, full eye and the sensitive mouth still speak of the shy and retiring boy and the mother's favourite in a way which testifies that all the hard rubs, the worldly strife, and the ultimate prosperity of the man, did not efface these prominent features in the youthful character. Genius to the last is ever full of youthful freshness of character, and here this is well displayed. There is an engraved portrait of another, though less distinguished man in another part of the volume, namely, Papin, with a likeness too of his celebrated "digester;" and of still greater interest is the lithograph from a photograph of the veritable model of Newcomen's engine in the Hunterian Museum of Glasgow, on which the "queer lad" Watt first tried his "'prentice hand" at engine-work. As we happen to have made allusion to the illustrations in this volume before turning to the volume itself, we may here add that there are various others, including the Clyde map, by Watt's uncle, John Watt; a portrait of the *Comet*, the *first* British steamer; another of the *Atrato*, one of the *last* and most splendid of British steamers to contrast with the *Comet*; both having been brought into existence on the Clyde near Watt's own native town; also an elevation of a proposed cosmopolitan testimonial to Watt, to be erected at Greenock, in the Italian Campanile style; and though last not least in interest, various "specimens of handwriting," or at least *fac similes* of the plain, honest "fist" of the subject of the memoir and of the autographs of others of the Watt family.

It appears from the present publication to be now a settled point that James Watt was born, not at Crawfordsdyke, near Greenock (and indeed in the parish itself), but in the high-street of Greenock, and, singular to say, in a house which stood on the very site where the Watt Club itself, all unconscious of the coincidence, chose to fix its establishment. The discovery looks so like a "thought" that has been fathered by a "wish," that it is but fair to state that strong evidence is adduced to prove that the fact is as stated. James Watt himself had more than once pointed out the old house while it stood as the place of his nativity, and the only wonder is that members of the Watt Club were not aware of this when they set themselves down upon the spot: perhaps even before the proofs were traced out there had been a glimmering "thought" after all that they had settled on sacred ground.

Having, not long since, in noticing Mr. Muirhead's excellent book on Watt, taken the opportunity of reviewing the Life of Watt in a pretty full outline sketch, we shall not return to the subject on the present occasion, although there is much in this volume that is worthy of fresh notice. We may remark, however, before laying down the pen, that the present work contains not a little that is new as to the Watt family and their position in Greenock during the last century. Watt's father was a highly respected magistrate of the town. Originally, he was a builder and contractor, though he served his apprenticeship to a shipwright. Ultimately he became a merchant and shipowner, and, in fact, was elected chief magistrate, although he declined the office. Watt's mother merits reverential notice, as, like the mothers of most men of genius, she was one of a very superior character, and a fine woman, even in personal carriage and appearance. Much of Watt's future career was, no doubt, due to the fostering care and conduct of his mother, to whom he ever turned in the midst of those rebuffs which he perpetually met with at school from those who felt instinctively that he was not fitted to be a playmate of theirs, although, in fact, this did not arise from any unusual brightness of intellect at that time, but rather from his shy and soft disposition. The father of Watt's father was "a mathematician," who taught navigation to the sailors of the thriving port, whose improvement, by the bye, to a great extent, is ascribed to the public-spirited exertions of Watt's own father.

One of the concluding chapters of the "Memorials" contains an interesting account of the origin and history of steam navigation in the Clyde. There were several curious coincidences in the history of Watt to which we pointed attention on a previous occasion; but perhaps there was none more interesting than the fact that while this bright star in the scientific firmament was sinking to his rest, another luminary of a different order, but the first fruits of his inventive genius in its dominion over the waves, arose in the very spot whence he himself had taken his rise: this "luminary" was *The Comet*, the first of British steamers, whose engine was partly made in Greenock itself, and the vessel it was destined for was built at Port Glasgow, close at hand. The coincidence is all the more notable that Watt himself took no part in Bell's invention.

Illustrated Books.—The Campaign in the Crimea: a Historical Sketch. By GEORGE BRACKENBURY, late Secretary at Kadikoi to the Honorary Agents of the Crimean Army Fund. Second series: illustrated by forty plates, from drawings taken on the spot, by WILLIAM SIMPSON. London: Colnaghi, Pall-mall; and Longman and Co. Paternoster-row. 1856.

Private letters testify to the truthfulness of the numerous double-tinted plates of which this tasteful volume and the previous one mainly consist. Together with the explanative letter-press and sketch of the campaign, they form an interesting historical record of what at present seems to stand out as a great and separate war—a short but sharp conflict, which it is to be hoped is really at an end, and is not destined to resume its dreadful course either in its old aspect or in any other. Peace being now restored, the present volume does not come upon us with quite the vivid interest of its predecessor; but though its reception may not be so impressive, it forms a very desirable and valuable complement. Most of the plates on this occasion illustrate either the events of the summer of 1855, or the interior of Sebastopol and its defences.

Orr's Circle of the Industrial Arts.—Vol. I. *The useful Metals and their Alloys.*—Part I. Orr and Co. Amen-corner, Paternoster-row.

THIS new series is intended to form a companion to the very useful and valuable series of *Orr's Circle of the Sciences*, and will embody, as it were, the principles of science in their practical application to the various industrial arts. As in the previous series, various able authors have been engaged to prepare separate articles or treatises on the respective subjects with which they are familiar, each volume even comprising several of such treatises. The shilling part now out is the first of a volume made up of such papers on the useful metals and their alloys, and its value may be anticipated from the fact of such names as Scoffern, Truran, and Fairbairn being amongst those of the authors. A space between page 80 and page 145, we observe, is left in the meantime unoccupied, for an article on Mining and Mining Jurisprudence, by a Government inspector of mines, and which is to appear in the January part. In the outset of the present part, Mr. Scoffern alludes hopefully to Mr. Bessemer's process: "A more beautiful and more immediate application of chemical knowledge to improvement of the iron manufacture," he remarks, and whatever be its upshot, "it is impossible to conceive," and he generously considers it but common justice to give Mr. Bessemer's efforts a cheering and helping word of congratulation and provisional recognition. In this sentiment we concur, all the more heartily that it is in complete harmony with what we have already said on the subject.

Miscellanea.

LUIGI CANINA.—The last months of the life of this deserving *savant* form a string of extraordinary events. His reluctance to being portrayed or otherwise figured, and his charm-making against the *mal' occhio*, were previously mentioned in these pages. Later accounts from Rome assert that Canina died by *self-poisoning*. Being seized by some violent pains, he took *six* (!) of the pills which he had received in London as a patent medicine against that sort of complaint, without consulting a physician at all. Soon afterwards he was seized with still more severe pains, which terminated his life. The pills when examined are said to have been found to contain strychnine.

PROPOSED GREAT HANDEL FESTIVAL IN THE CRYSTAL PALACE.—We are told that the arrangements for this enormous musical exhibition, contemplated in May next, of 2,300 performers, progress in a satisfactory manner. The interest and enthusiasm excited in musical circles are considerable. The Committee of the Sacred Harmonic Society have already received offers of assistance from nearly 3,000 persons desirous of taking part in this great celebration, a number which does not include the Society's own orchestra of 700 performers, nor those members of the musical profession whose position precludes the necessity of applications for engagements. The provincial towns have come forward in a very unanimous manner. Birmingham offers a choir of 400 voices. Under the organisation of Mr. Oliver Mason, the able manager of the Birmingham Festivals, it is suggested that rehearsals should at once commence. Bradford has also a large force of picked Yorkshire vocalists at disposal; while from Liverpool, Leeds, Manchester, York, Hereford, Worcester, Gloucester, Norwich, Keighly, Huddersfield, Lincoln, Exeter, Peterborough, Oxford, Cambridge, Canterbury, Brighton, Leicester, Nottingham, and many other towns, applications to take part continue to be received; and even from places as remote as Dublin, Edinburgh, and Belfast, communications have been made of the desire to be associated in this immense musical gathering. The arrangement of the building to enable all *to hear* will need much consideration.

SOCIETY OF ANTIQUARIES, NEWCASTLE-UPON-TYNE.—The December meeting of this society was held on Wednesday in last week, when there was a numerous attendance of members. Dr. Charlton read a note from Mr. Rippon, of Waterville, announcing the discovery of buried remains of ancient structures in Silloth Bay, where marine works are now in progress. Mr. E. Spoor produced a letter from Mr. Howard, of Blackheath, communicating sketches of marks which he had observed on the oak sides of the Lollards' prison in Lambeth Palace, when visiting that archiepiscopal mansion with the Surrey Archæological Society. One or two other letters were read. Mr. John Fenwick, on behalf of Mr. Grey, of Dilston, presented to the society an inscribed stone, recently found in the Roman station at Corbridge — the lettering sharp and distinct. Dr. Charlton read a letter addressed by Mr. T. Cape, of Bridlington, to Mr. W. H. Brockett, of Gateshead, accompanying a rubbing from the monument of Sir Marmaduke Constable, in Flamborough church, taken for the society in Newcastle. On a plate of *copper*, and in black letter, cut in relief, are lines, of which the *Gateshead Observer*, in its report of this meeting, gives a copy. Mr. Cape, describing some of the more interesting features of the church in which Sir Marmaduke lies buried, mentions the curious fact that, suspended over the rood-loft by a thread, is (November 27) a remnant of a bygone usage—two pieces of white paper, cut in the form of a pair of gloves. Formerly, such emblems of purity were hung over the seat where a deceased spinster had been wont to sit. Dr. Charlton read a short paper on the Boss of a shield, found thirty years ago at Matfen, by some labourers who were making drains.

THAMES TUNNEL.—Amount of tolls in the week ending 6th December—23,038 passengers passed, and paid 95*l.* 19*s.* 10*d.*

ARCHITECTURAL INSTITUTE OF SCOTLAND.—The annual general meeting and *conversazione* of the Architectural Institute of Scotland was held on Monday, the 1st inst. in the George-street Hall, Edinburgh. The attendance of members and guests was large, the hall being well filled. The walls of the room were covered with an extensive collection of photographs and architectural engravings. The photographs which attracted particular attention were three of a size the largest hitherto attempted in Scotland, by Mr. Kibble, of Glasgow. The Lord Provost was called to the chair, and Lord Neaves delivered the introductory address of the session.

The Coventry Water Supply.—The Corporation of Coventry, in July last, fearing the supply of water would not be sufficient for the inhabitants, after an interview with Mr. Hawksley, the engineer, determined to sink their artesian wells lower than they were. The first wells were three in number, of 3½ inches in diameter: they went to the depth of 113 feet. Besides these three wells, there were two springs turned in; but the supply was barely sufficient. For the enlargement of the wells an engagement was entered into with Mr. Docwra, of Waltham-cross, Essex, who, with eight men, commenced boring on the 12th of August. The diameter of the bore was increased from 3½ inches to 9 inches. For several weeks the strata they passed through were chiefly marl and sandstone: at the depth of 170 feet they came to a bed of porous sandstone, which was 14 feet thick; and, after passing this, there was a great increase of water. For the first 120 feet the bore was 9 inches, after that reduced to 7 inches, finally to 6 inches. The supply now, according to the local *Herald*, amounts to nearly 5,000,000 gallons per week, and there is no fear of any want of water. It has been determined not to enlarge or sink the other two artesian wells.

St. Mary's, Spring-grove.—This church was consecrated on Wednesday in last week by the Bishop of London. The estate of Spring-grove, which is the property of Mr. H. D. Davis, has recently been laid out for the erection of first-class mansions, with which it is now thickly studded; and the proprietor has now, at his own expense, erected this new edifice.

Carved Pulpit for St. Anne's, Limehouse.—An elaborately-carved pulpit, in oak, has been completed by Mr. W. G. Rogers, for the church of St. Anne's, Limehouse, from the design of Mr. A. W. Blomfield, architect. It will be fixed by the 30th inst. The working drawings were made by Mr. Harry Rogers.

The Government Wellington Memorial.—The Sculptors' Institute, having caused certain questions to be put to the Chief Commissioner of Works, in respect to the competition for this memorial, the following replies have been given:—"1st. The directions as to size that the model shall bear in proportion to the monument, are set forth most *clearly in the specifications, and competitors must not depart from them*. 2ndly. (The question being, 'Are the designs to be publicly exhibited prior to the decision of the judges?') No further information can be given on the subject of your second inquiry than that afforded by the specifications. 3rdly. The names of the judges cannot be given, as the selection has not yet been made, and will not be made for some time. 4thly. There is nothing in the specifications to bind the Government to employ the author of the best design to execute the work, and no positive obligation can be incurred." The object of the Sculptors' Institute was to promote the confidence of competitors, and the success of the competition, by a mutual understanding on these points.

The Companion to the Almanack.—Sir: As you have given a hint as to the name of the writer of one of the articles in "The Companion to the Almanack for 1857;" and as the authorship of the ordinary article on "Architecture and Public Improvements" during the last three or four years has become known; I should be obliged if you would allow me the use of your pages, to express—especially to those to whom I may have been indebted for information—my very great regret and annoyance at the numerous errors of the press, and the omissions and misstatements, which were not mine, and which there are in both the articles. Not only were no proofs sent for correction—which in the case of the article last referred to (as a general review, necessarily *written* late in the year, and with little self-allowance of time) might be peculiarly required; but elaborate alterations, and unaccountable perversions from the MS. of the article were made, which would go to impute to me culpable ignorance, or very insufficient regard for the merits and the feelings of individual members of that profession which I have humbly endeavoured, through the medium of a work of large circulation, and through many other channels, in some degree to aid in bringing into a right position with the public; and as I need hardly say to those who know me well, at least by the devotion of great pains and exertion. I should wish also,—as you have not distinguished the errors of the "Almanack" from those in the "Companion," to state that I have had no connection with the former, further than having occasionally pointed out errors such as you refer to, but which—or some of them—have, I fear, been repeated in some successive years. At present, with thanks for the opinions which you have kindly expressed, I beg to subscribe myself, sir, your obedient servant,

The Writer of the Articles on "Architecture, and Public Improvements," in the "Companion to the Almanack" for the years 1854-5-6 and 7.

The Proposed Government Offices.—A correspondent, who signs himself "One of the Million," urges us to protest against the proposed under-ground stories, or basement apartments, for printers, compositors, &c. and even for residents, in the Foreign-office and the War-office, to be forthwith erected. "In a hygienic point of view," he remarks, "a basement under the soil is a fearful mistake, where there can be no proper ventilation, where the drainage must be faulty, and where the unfortunate printers and compositors, from the dulness of our atmosphere, rendered more dull from the position of this site, would have to work by artificial light on a great many days in the year, breathing a foul and contaminated air; for it is well known that the parts chosen for this great scheme are on a very low level with reference to the Thames, and that, consequently, the drainage can be anything but perfect." On the other hand, by avoiding a subsoil basement-story for human *burial*, the effect of the buildings would be improved by adding to their elevation, a great fault of our public structures being their lowness of elevation. The Government, it is remarked, ought not to follow mere routine in a matter of this sort, nor to thrust even the humblest citizen underground so long as the lungs are active.

Oxford Architectural Society.—At the last meeting of this society for this term, held on Wednesday, 3rd inst. the Rev. Dr. Bloxam, president, in the chair, Mr. J. M. Derick read a paper on the interesting Monastic Remains at Castle-Dermot, county Kildare. This town traces its origin as far back as A.D. 500, when St. Diarmit founded here an abbey of canons regular. The place was formerly called Disert-Dermot, and Tristel-Dermot, and lastly, Castle-Dermot, from a castle there erected. The only remains marking site of ancient buildings are a small round tower, a circular arch in a ruinous condition, and two ancient crosses. Castle-Dermot was the chief residence of the O'Tooles, from whom was descended the celebrated Archbishop of Dublin, St. Laurence O'Toole, so distinguished by his valour and patriotism during the invasion of Dublin by Strongbow.

The Rivington Pike Water at Liverpool.—The long expected Pike water, says the *Albion* of last week, has at length made its appearance at the threshold of Liverpool, and will ere long constitute the life-blood of the town. A few days ago the pipes along the whole line from Rivington to Prescot were charged with the full pressure, and the experiment was unattended with the slightest accident; and on Friday the Pike water was admitted into the pipes as far as the Old Swan, with an equally satisfactory result. It is understood that as soon as the Prescot reservoirs are full the water will be forwarded to Liverpool. This may, therefore, be expected daily. For the last ten months the Rivington and Anglezark catchment reservoirs have been full, and large quantities of water have occasionally passed over the bye-washes. These reservoirs have a water area of 450 acres, and they contain 2,800,000,000 gallons of water, exclusive of 200,000,000 gallons which will be contained in the Rakebrook and Roddlesworth Reservoirs; constituting in all a four months' supply to a population double that of Liverpool. The latter reservoir has been but recently commenced, the Water Committee having only effected the purchase of the land about six weeks ago. These works, which now literally swarm with men, will, it is believed, be completed in the course of a few months. Some portions of the land have cost the town 40,000*l.* more than they would have done had the scheme not been delayed by a powerful and inconsiderate opposition. The water-shed, in round numbers, is 10,000 acres: the rain falls upwards of 50 inches per annum; and the undertaking will be completed for about 600,000*l.* so that, after all that has been said about the cost of these works, they will be finished at a sum approaching nearer to the original estimate than works of similar magnitude and difficulty. The Kensington and Parkhill service reservoirs have been completed about two years. The Audley-street Reservoir (Everton) is also now nearly completed. A promenade for the public, protected by a parapetted railing, is being formed on the lawn over the arches. It is also under consideration whether a similar promenade shall be made on the Kensington Reservoir. The engineer, Mr. Hawksley, will receive 8,000*l.* when the works are completed, and, adds the *Albion*, will by no means be overpaid. The contract with Messrs. Scott and Howell was determined by the corporation, who placed the work under the superintendence of their own water engineer, Mr. Thomas Duncan. The late Mr. T. H. Statham acted as Mr. Hawksley's agent, though paid by the corporation. Messrs. Docwra and Co. have laid down the pipe line.

Royal Agricultural Society's Premium.—At a council meeting of this society, held on the 4th inst. the premium of 20*l.* for the best essay on the Construction of Agricultural Labourers' Cottages, was awarded to Mr. T. W. P. Isaac, of Bath.

T. G. Messenger's Patent Triangular Tubular Boiler.—This invention consists in surrounding the fire with tubes, which form water spaces, extending from front to back, and secured at each end to sockets cast on inner plates, with sides, and ends, and flanges, to which are secured front and back plates. A water space is thus formed between inner and outer plates, which communicate with the tubes. Water admitted at the lower tubes becomes heated, circulates through all the tubes and water spaces, and rises to an outlet at the upper part of the boiler, from whence it is conveyed to whatever place is required to be heated. The patentee describes its advantages thus:—1st. The amount of surface which is by this arrangement exposed to the fire, reduces the quantity of fuel required very considerably; 2nd. Tubes being used for fire-bars, all burning of the iron is prevented; 3rd. Should any tube become injured, it can be replaced without in the least disturbing the rest part of the boiler. To convert it into a steam-boiler, the patentee proposes to add a steam-chest, communicating with the water spaces.

Fire-proof Safe.—A correspondent describes a large fire and thief proof safe, which has been made for her Majesty's jewellers, Messrs. Tessier and Co. 7 feet 9 inches high, 5 feet wide, and 3 feet deep, and weighing upwards of three tons. The outer casings are made of two strong wrought-iron boiler-plates, and another of hard steel, rivetted together so that it may not be drilled or cut through by any instrument. It was made by Mr. John Tann, of Walbrook.

The Value of Land in Sydney.—The extreme rates which can be obtained in the market for central city property may be understood from the circumstance that a block of land, 69 feet by 67 feet, at the junction of the two busiest streets, realised last week at auction no less than 13,125*l.* Premises with a frontage of 40 feet, in one of these streets, also fetched 4,700*l.* The larger houses in George-street let from 600*l.* or 700*l.* to 1,200*l.* a year.

Cambridge Antiquarian Society.—At the meeting of this society on the 1st instant, Mr. C. H. Cooper, town-clerk, read a catalogue of the plate sent by Queen's College to King Charles I. in the year 1642. The Rev. C. Babington read a paper upon an Athenian inscription. Photographic copies of it were exhibited. It formed part of a Hero-chapel. Its date is probably about the close of the second century of the Christian era.

Toile Metallique.—A specimen of a French invention has been forwarded to us as a useful material for covering skylights liable to breakage from without, and for screens, outside blinds to windows, and other purposes. It consists of simple wire-cloth, interlacing a gelatinous web, elastic enough to admit of being bent or twisted without breaking, and is said to stand both heat and moisture well. A screen over the orchestra in the new concert-room at the Crystal Palace, Sydenham, has been made of it. In Paris it is sold at four francs per square mètre.

Sewers.—The tenders received by the Holborn Board of Works for rebuilding 120 feet of the old Fleet Ditch, formation of a side entrance, and works incidental thereto, Mr. Lewis H. Isaacs and Mr. Sanders Bevan, joint surveyors, were as follow:—

Gardner	£396	0	0
D. Ethick	287	0	0
Day and Co.	239	10	0
Pearce and Tuckwood	229	0	0
Phillips	227	0	0
Thirst	225	0	0
Abbott (accepted)	196	0	0

TENDERS

For re-building Clothworkers'-Hall, Mincing-lane; Mr. Samuel Angell, architect. The quantities were prepared by Messrs. Roberts and Meakin:—

Ashby and Horner	£42,200	0	0
Piper and Son	41,986	0	0
Cubitt	41,800	0	0
Kelk	41,884	0	0
Lee and Son	41,360	0	0
Lawrence and Sons	39,870	0	0
P'Anson	39,446	0	0
Mansfield	38,935	0	0
Pritchard	38,800	0	0
Lucas	37,235	0	0
Holland	36,296	0	0
Haynes and Eyre	35,486	0	0
Gammon	34,966	0	0
Ashby and Son	34,296	0	0
Jay	33,846	0	0

For St. Charles Church, House, and Schools, Hadfield. Quantities not supplied. Messrs. Weightman, Hadfield, and Goldie, architects:—

Walter Sigley, Ashton-under-Lyne	£6,350	0	0
Farrell & Brownbill, Manchester	5,323	0	0
Samuel Bramall, Manchester	5,303	0	0
Thomas Evans, Macclesfield	5,200	0	0
Ellis and Thorpe, Glossop	5,052	0	0
John Eaton, Staleybridge	4,864	0	0
Thomas Tully, Manchester	4,850	0	0
Robinson and Son, Hyde	4,485	0	0
L. Holroyd, Glossop (accepted)	4,117	0	0

For erecting the first portion of a house at Penyrhewl, near Pontypool, Monmouth, for Thomas Phillips, esq Messrs. Bidiske and Lovatt, architects. Quantities not supplied :—

Parker, Pontypool	£3,144	0	0
Young, Chepstow	2,659	0	0

NOTICE.—All communications respecting *advertisements* should be addressed to the "Publisher," and not to the "Editor;" all other communications should be addressed to the EDITOR, and not to the Publisher.

ADVERTISEMENTS.

ARCHITECTS, BUILDERS, ENGINEERS, and SURVEYORS, can be IMMEDIATELY SUPPLIED with COMPETENT ASSISTANTS (temporary or otherwise). Those only recommended whose efficiency and qualifications can be guaranteed. The registry is open to employers, or lists furnished therefrom (free), on application to Mr. RICHARDS, Engineer and Surveyor, 4, Trafalgar square.

TO PARENTS AND GUARDIANS.
ARTICLED PUPIL WANTED.—A Land Surveyor, carrying on an extensive practice in a large and increasing town in the south of England, and having the management of several very extensive building and other estates, and also several lucrative house and other agencies is desirous of obtaining an ARTICLED PUPIL. From the extensive business transacted in the office, a pupil would possess superior advantages to obtain a thorough knowledge of his profession.—For particulars, apply by letter only, to A. B. 22, High-street, Southampton.

METROPOLIS LOCAL MANAGEMENT ACT.—The Vestry of the Parish of St. James, Westminster, are about to appoint a SURVEYOR, an INSPECTOR of NUISANCES, and a STONE-YARD CLERK. Persons desirous of filling either of the above appointments are requested to forward their applications, accompanied by copies of testimonials as to character and ability, not exceeding four in number which will not be returned, to the Vestry Offices, No. 14, Marshal-street, Golden-square, not later than SATURDAY, the 20th instant. No attendance of candidates will be needful unless afterwards requested by letter, and all canvassing on their part is strictly prohibited. The duties and salary of the respective appointments may be ascertained at the above named Vestry Offices daily, between TEN and ONE o'clock, and all applications must be sent in under seal, and endorsed, "To the Vestry of St. James, Westminster: application for office of ——," (as the case may be). The persons elected must be in a position to commence their duties forthwith, and to give such security as may be required of them.

THE BOROUGH ENGINEER of WARRINGTON has a VACANCY for a PUPIL in his Office. A premium will be required.—For further particulars apply to Mr. E. P. COXON, Market-street, Warrington.

WANTED, in the country, an ASSISTANT, who is a good Architectural Draughtsman, and has a knowledge of land surveying, or works of drainage and town improvement. — Apply to Mr. ASHBEE, at 22, Bedford street, Covent-garden.

TO ARCHITECTURAL DRAUGHTSMEN.
WANTED, by an Architect in the country, a competent DRAUGHTSMAN, who can make working designs and detail, and can take out quantities. Apply, stating terms, age, and references, to Mr. OLIVER, Architect, Sunderland.

WANTED, in the Office of a Surveyor to a Local Board of Health in a flourishing sea-port town, a PUPIL, who will have ample opportunities of becoming practically acquainted with the various branches of the profession. A premium required. Address, A. 11, Cheltenham-buildings, Cheltenham-road, Bristol.

TO SAWING-MILL ASSISTANTS.
WANTED, a Young Man, about 20 years of age, thoroughly acquainted with sawing and sawing-machinery to proceed to ASSAM, in the East Indies, as ASSISTANT under the present manager. Application to be made, by letter, addressed to the Secretary of the Assam Company, 30, Great Winchester-street, City, stating age, qualification, and salary required (an agreement to be entered into for three years certain), and enclosing testimonials, and references as to capability and character.

ARCHITECTURAL DRAUGHTSMAN
WANTED, a GENTLEMAN who understands Gothic Architecture, Perspective, and who is a good Colourist.—Apply to Mr RICHARDS, 4, Trafalgar-square.

TO ARCHITECTS' ASSISTANTS
WANTED, by an Architect residing in the country, an experienced ASSISTANT. He must be well conversant with detail of Gothic architecture in its several departments, and able to prepare finished and working drawings, &c.—Apply, stating age, references, and salary required, to F. T. No. 7, Thavies'-inn, Holborn.

TO MASTER BRICKMAKERS
WANTED, by a steady Man, a SITUATION as FOREMAN or a BRICKYARD. He has been used to make and burn all sorts of goods in the said business, and is a good accountant. Was at his last place twenty years, and left through depression in trade. Is ready to fall up such a situation in town or country.—Address, J. W. Post-office, Burton, Bristol; or at Mr. Flanders', Lamb Inn, Dolphin-street, Newport, Monmouthshire.

TO ARCHITECTS, &c.
WANTED, by the Advertiser, an ENGAGEMENT as ASSISTANT in a London office. He has been in the profession three years, is a good draughtsman, and is conversant with the routine of an architect's office. Address, M. X. 10a, Cumberland-street, Hackney-road.

TO BUILDERS AND OTHERS.
WANTED, a SITUATION in town or country, by a good Draughtsman, Colourist, and Penman to &c. Testimonials of the highest respectability can be produced, and security given if required.—Address, J. R. B. No. 6, Post-office, South Clapham-road.

TO BUILDERS AND CONTRACTORS.
WANTED, by the Advertiser, a SITUATION as FOREMAN. Has a thorough practical knowledge of every branch in the building business, and has had great experience in railway works, water, and sewerage works. Can make fair working drawings. No objection to contract at home or abroad. Undeniable testimonials.—Address, W. A. D. 14, Newcastle-street, Strand.

TO CEMENT MANUFACTURERS AND MERCHANTS.
WANTED, by an experienced Man, a SITUATION as FOREMAN. No objection to contract at home or abroad under patent processes of his own. Undeniable testimonials can be given.—Address, W. A. D. 14, Newcastle-street, Strand, London.

TO ARCHITECTS AND BUILDERS
WANTED, by a thorough practical MAN, an ENGAGEMENT, either as CLERK of WORKS or as GENERAL FOREMAN, in town or country. Can measure and set out works, and estimate. Unexceptionable references as to qualification. Wages moderate.—Address, A. Y in care of Mr. Conway, 14, Eccleston-street South, Pimlico.

WANTED, by the Advertiser, a SITUATION as CLERK of DRAINAGE or other WORKS. First-rate testimonials as to ability or character can be given. Address, A. B. 10, Queen's Head-row, Newington-butts.

TO HOUSE-AGENTS, SURVEYORS, AND OTHERS
WANTED, PIECE-WORK, by an experienced practical HOUSE-PAINTER and DECORATOR. A price given for labour only, of any quantity or class of work. Superior references and testimonials. Apply by letter to C. D. Nash and Teatem's, 4, Sawkill-place, Reg.-n-street.

TO BUILDERS AND CONTRACTORS
WANTED, a SITUATION as GENERAL FOREMAN, or FOREMAN of CARPENTERS, by an experienced workman, who has had the management of extensive works in town and country; or would take a job piece work. Good reference as to character and ability.—Address to W. W. No 43, Grosvenor-row, Pimlico.

TO SAW MILL PROPRIETORS AND BUILDERS
WANTED, EMPLOYMENT, by a sober, steady Man, as MOULDING or PLAIN WORKER; can make the moulding irons. Good references for ability from last situation.—Direct, A. R. 43, Cornwall-road, Lambeth.

TO ARCHITECTS
WANTED, by a thoroughly competent Assistant, an ENGAGEMENT, either in town or in the provinces. Has been engaged for some time on the Continent and in London. Best references given.—Address, Mr. CLARKE, 10, Sudely-street, Islington.

TO BUILDERS, CONTRACTORS, AND OTHERS.
WANTED, by a Young Man, aged 21, a Mason by trade, a SITUATION as CLERK, TIMEKEEPER, or INSPECTOR of MASONRY. Can make fair working and full drawings, measure up work, &c.—Address, G. L. F. Benson, Isaac Rehope, Durham.

TO BUILDERS AND PAINTERS
WANTED, EMPLOYMENT, as PLUMBER, PAINTER, and GLAZIER at moderate wages, by a respectable Young Man, with good reference.—Address, H. Y. at Victoria Coffee house, 2, Cambridge-heath, Hackney, Middlesex.

WANTED, by a Young Man, aged 30, an experienced PLUMBER, a SITUATION; can take charge of work. Good references.—Apply, H. L. care of Mr. Margett, 148, Regent street, Lambeth walk.

TO ARCHITECTS, &c.
WANTED, by a Young Man, who has just completed his articles and is fully qualified to undertake all the principal official duties, a SITUATION requiring zeal, confidence, and punctuality. Salary a secondary consideration. References unexceptionable.—Address, A. Z. Office of "The Builder."

WANTED, by a Young Man, a SITUATION, as CLERK, to a BUILDER, ARCHITECT, and SURVEYOR, or as CLERK of WORKS. He is a good draughtsman, experienced in office duties and accustomed to superintend work. Age, 27.—Address, G. H. Mr. Cook's, Maiden-lane, Covent-garden.

TO PLUMBERS AND BUILDERS.
WANTED, by a Young Man, a SITUATION as PLUMBER, PAINTER, and GLAZIER. Reference to his present employer. No objection to town or country.—Address, C. C. No. 13, Sandwich-street, Burton crescent, Newroad.

TO TIMBER-MERCHANTS, SAW MILL PROPRIETORS, &c
THE Advertiser is desirous of an ENGAGEMENT to SUPERINTEND a TIMBER-YARD and SAW-MILL, has had several years' experience in the erection and control of saw-mills, and is well acquainted with machinery; has also a perfect knowledge of the timber trade, and having conducted many extensive building operations, would be very useful to a builder; thoroughly conversant with accounts, and a ready correspondent.—Address, L. Office of "The Builder."

TO BRICKMAKERS and BUILDERS.—A Person perfectly understanding BRICKMAKING in all its branches, wishes to ENGAGE himself as a SUPERINTENDENT of a BRICKFIELD. Good references can be given.—Address, A. B. Mr. F. Fisher, 3, Mordan place, Lewisham-road, Greenwich, Kent.

TO ARCHITECTS, SURVEYORS, &c.
THE Advertiser, a good designer and quick draughtsman in Jacobean street and Italian architecture, and the various other styles, offers his SERVICES to the above, to prepare Designs, competition or otherwise, at their offices, or his own residence. Designs furnished, together with working drawings, details, &c. and perspective and coloured. Highest obligation to an engagement.—Address, N. A. Wilson's Library, Kentish-town.

TO WATERWORKS AND SEWERAGE ENGINEERS.
AN ASSISTANT, aged 32, wants a RE-ENGAGEMENT, either to get out contract or other drawings, or to superintend the construction of works. He has recently superintended the construction of sewers in a large provincial town; has experience in erecting pumping and other engines; and understands machinery well. Has good testimonials. Address, A. M. Z. Dutch Newspaper Office, Edgeware-road.

TO ARCHITECTS AND SURVEYORS.
A NEAT ARCHITECTURAL DRAUGHTSMAN, who also understands Land-Surveying and Levelling, is desirous of a RE-ENGAGEMENT, at a moderate salary.—Address, A. B. 4, More,on-street, Hawley-road, Kentish-town.

TO PARENTS AND GUARDIANS.
A CIVIL ENGINEER, holding a public appointment in a large mercantile sea-port, and charged with the execution of extensive works of towns improvement and sewerage, has a VACANCY for an ARTICLED PUPIL, who will have excellent opportunities of acquiring practical experience in the execution of works, and a knowledge of drawing, surveying, levelling, and the other details of professional routine. A moderate premium required.—Address, by letter prepaid, to A. N. Post Office, Piccadilly.

TO BUILDERS, ARCHITECTS, AND SURVEYORS.
A YOUNG MAN, who has filled situations in the above Offices, wishes for a RE-ENGAGEMENT. Is a good draughtsman, and has a knowledge of taking out quantities, &c.—For further particulars, address G. O. G. 69, Huntingdon street, Barnsbury-park, Islington.

TO BRICKMAKERS.
A YOUNG MAN is in WANT of a FOREMAN'S SITUATION, in a Brick and Tile Yard.—Address, GEORGE DEAN, Northend, Bassingbourn, near Royston.

TO BUILDERS AND OTHERS
A HIGHLY RESPECTABLE, middle-aged Gentleman, accustomed to the routine of a counting-house or builder's office an efficient penman, and accountant, wishes for EMPLOYMENT in any capacity where the above unblemished, added to steadiness and int grity, are deemed desirable. The most satisfactory references can be given.—Address, V. T. X. Office of "The Builder."

TO CONTRACTORS.
A GENTLEMAN, who has had the management of extensive railway works, waterworks, and other contracts, as CONTRACTOR'S AGENT, is desirous of a similar ENGAGEMENT, or as GENERAL SUPERINTENDENT of WORKS. He is thoroughly acquainted with all kinds of works, materials, labour, prices, &c. and can furnish most unexceptionable references and testimonials. Would probably not object to go abroad.—Address, Mr. B. Laburnum Villa, South Lambeth-road, London.

A RESPECTABLE Practical Person, of good address, wishes a SITUATION as a BUILDER'S, as MANAGER of a BUSINESS, embracing all the branches; he is competent to keep books, measure, estimate, and price work, take out quantities, and also well versed in timber and other valuations as to dimensions, &c. Salary not so much an object as a respectable situation.—Address, pre-paid, CULVERT, 28, George-street, Commercial-road, Peckham.

TO ARCHITECTS.
A PRACTICAL CLERK of WORKS is desirous of a RE ENGAGEMENT. Has had the management of very extensive public and private works. First-rate references as to character and ability. No objection to the country. Address, H. T. Office of "The Builder."

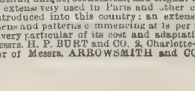
AN Active Man, with a general practical knowledge of building, a competent carpenter and joiner wishes for an ENGAGEMENT as general FOREMAN or CLERK of WORKS.—Address, M. M. Crown, Richmond-road, Twickenham.

A COMPETENT BUILDERS' CLERK, about leaving his present situation, reasons for which will be given, and who has carried out works to the satisfaction of his employers, is desirous of a RE-ENGAGEMENT.—Address, F. B. Office of "The Builder."

TO ARCHITECTS—EVENING EMPLOYMENT.
AN ARCHITECTURAL ASSISTANT, who has had great experience in the various styles (having served for lengthened periods in the offices of some of the most eminent London architects), is desirous of obtaining EVENING EMPLOYMENT for a limited period, on moderate terms.—Address, A. B 9, 19th-street, Kennington-park.

AFTER CHRISTMAS, a Young Man, 33 years of age, who has had many years' experience as Bookkeeper, is desirous of meeting with EMPLOYMENT, either temporary or permanent, in making up tradesmen's accounts whether in a small or large way of business.—Address, V. T. C. Office of "The Builder."

TO DRAUGHTSMEN AND CIVIL ENGINEERS.
H. MORRELL, BLACK LEAD PENCIL MANUFACTURER, No. 149, Fleet-street, London.



These Pencils are prepared in various degrees of hardness and shades.

H H H H for drawing on wood.	F F light and shading.
H H H for architectural use.	F for general use.
H H for engineering.	B black for shading.
H for sketching.	B B ditto ditto.
H B hard and black for drawing.	B B B do. do.
M medium.	B B B B ditto ditto

Sold by all the principal Stationers in town or country.

VOICE CONDUCTORS.—Flexible Tubing, for conveying the voice from one part of the house, or factory, to another; thus communicating, in case of danger or business, as required. Can be had all sizes and colours, or ornamental, at the MANUFACTORY.—COOPER, BLACKFORD, and SONS, 1st, Long acre, London.

VENTILATION.—PURE AIR.

EXTERNAL WALL.

With single pulley, from 6s. each; with leading pulley, from 8s. 6d. These Ventilators are arranged that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants; and as they are placed in the external wall, their action is not impeded when the house is closed for the evening, at which time a constant supply of fresh air is most required.—HAYWARD, BROTHERS, Metal Manufacturers, 196, Blackfriars-road, and 117, Union-street, Borough, and of all respectable ironmongers, builders, &c.

PATENT SOLID SWISS PARQUETERIE. This beautiful, unique, economical, and elegant description of Flooring, so extensively used in Paris and other continental cities, is now introduced into this country: an extensive assortment of specimens and patterns commencing at 1s. per foot super, together with every particular of its cost and adaptation, can be obtained of Messrs. H. P. BURT and CO. 3, Charlotte-row, Mansion-house; or of Messrs. ARROWSMITH and CO. 80, New Bond-street.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL. — Light, Dark, and Portland Cements equal to any made. Manufacturers also, and Dealers in Plaster, Paris White, Mastic, Hair, Lias Lime, Laths, Slates, and Slate Slabs, Fire-bricks, Grindstones, Cement Chimney-tops, ditto Vases, Ridging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Portolano.

JOHNS and CO.'s PATENT PERMANENT STUCCO WASH (perfectly non-absorbent), STUCCO, CEMENT, STUCCO PAINT. — CLARK and BENGOUGH, Manufacturers, Grand Surrey Canal Bridge, Old Kent-road. Office, 4, George-yard, Lombard-street.

PORTLAND and ROMAN CEMENT.
PLASTER of PARIS
Manufactured by J. M. BLASHFIELD, at Millwall, Isle of Dogs. Warehouse, No. 1, Wharf, Paddington-basin

CHARLES RICHARDSON,
3 & 6, SOUTH-WHARF, PADDINGTON BASIN
COWLEY AND KENT BRICKS,
PORTLAND, ROMAN, AND OTHER CEMENTS,
TAMWORTH GLAZED SEWAGE PIPES
BLUE VITRIFIED BRICKS, COPINGS, PIPES, &c.
3 & 6, South Wharf, Paddington.

NOTICE.
CHARLES RICHARDSON takes the earliest opportunity of informing Engineers, Architects, Contractors, and others, that he is now bringing GREAVES'S BLUE LIAS LIME by the Great Western Railway from Hurbury to Bull's-bridge and Paddington, from whence it can be delivered alongside any part of the river Thames, canals, or railway stations in London the day after it is burnt and ground, in any quantity, and at a great reduction in price.
All applications for prices and terms will meet with prompt attention.
N.B. Please observe the lime is ground at the works, not in London.

BLUE LIAS LIME.—Messrs. GREAVES and KIRSHAW having completed their Works on the Birmingham and Oxford line of the Great Western Railway, at Harbury, are now prepared to supply LUMP and GROUND LIME of the best quality, direct from the kilns, to all the Stations on the Great Western Railway.—Greaves's Blue Lias Lime. Portland, Bath, and Lias Cement. Works, at Harbury, Stockton, and Wilmcote.—Office, at Warwick.

BATH, PORTLAND, and ROMAN CEMENTS.—The London and West of England Cement Company can offer to the Trade the best natural HYDRAULIC CEMENTS at reduced prices. The Company particularly recommend the best quality of their Bath Cement for all modelling cornices, decorations, &c. as having all the qualities requisite for an interior cement, and being quite unaffected by extremes of weather. The Company also supply BLUE LIAS LIME, lump and ground, which will carry more sand than any in the market.—Communications to be addressed to the General Offices, 8a, Old Broad-street, London; to Mr. MONUMENT, 4, Caroline-place, City-road; to Mr. TIMEWELL, the Depôt, 9, North Wharf-road, Paddington; or to the Works, Dunball, Bridgewater.

SOUTHAM BLUE LIAS LIME DEPOT.
Glazed Stoneware Sewage Pipes.
Brick, Lime, and Cement Merchants,
TATHAM and CO.
14, South Wharf, Paddington.

PORTLAND and BATH CEMENTS.
TATHAM and CO.
14, South Wharf, Paddington.

PARIAN CEMENT, reduced in price 25 per cent. This article is valuable for inside stucco, and especially for skirtings, for flooring on brick arches, &c. It takes paint in a few hours after its application on walls or laths, is without efflorescence, and may be papered in a couple of days. A finer quality forms a beautiful Scagliola, with any admixture of colours.—Manufactured by FRANCIS, BROTHERS, Cement Works, Nine-elms, London.

CEMENT.—ROMAN and PORTLAND CEMENTS, and PLASTER of PARIS, manufactured by C. J. HILTON, can be had in any quantity, wholesale and retail, at his wharf, 6, Upper Thames street, London; and also at the manufactory, Faversham, Kent.—N.B. These Cements supplied for shipment, on advantageous terms.

DAVIES and NORMAN,
CROWN WHARF, GREAT SCOTLAND YARD.
ROMAN and PORTLAND CEMENTS,
LIME, BRICKS, TILES, SLATES, FIRE GOODS, &c.
STONEWARE PIPES, PANS, TRAPS, &c.
A Liberal Allowance to the Trade.

THE PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs. ROBINS and CO. to WHOM THE PRIZE MEDAL WAS AWARDED in 1851, are prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes to which Cement is applicable. Orders received at Great Scotland-yard and at the Works.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not vegetate in damp situations. Accounts of COMPARATIVE EXPERIMENTS on the strength of this and other Cements read at the Institute of Civil Engineers, to be obtained from the Makers, JOHN BAZLEY WHITE, and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

ATKINSON'S CEMENT, so long known and esteemed in London for plastering purposes, is a quick-setting Cement, that requires no colouring.—Sold exclusively by JOHN BAZLEY WHITE and BROTHERS Millbank-street, Westminster; and Seel-street, Liverpool.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER, for internal uses. These well-known hard Stuccoes dry quickly, and can be painted upon within a few days. Made in bulk by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

PORTLAND CEMENT WORKS, NORTHFLEET, Kent.—KNIGHT, BEVAN, and STURGE, Manufacturers only of first-class quality, for the home and foreign trade. Portland Cement is manufactured at these works with especial reference to its destination, whether for stuccoing, brickwork, blocks for breakwaters, tidal work, or otherwise.—London Wharf, Belvedere-road, Lambeth.

PORTLAND and BATH CEMENT.—FULLWOOD THOMPSON and CO. request the attention of Merchants and Contractors to the quality of their Portland and Bath Cement, which they manufacture on an improved system, securing regularity of strength and colour, and at a less cost than is obtainable by most other makers.
These cements set under water in a few minutes, and are not affected by extreme heat or cold.
FULLWOOD THOMPSON & CO. will be happy to send prices and samples in reply to application by post. They deliver free into the Bristol and Exeter Railway Company's trucks at their works, or free on board in the Port of Bridgewater.

HUBBUCK'S PATENT WHITE ZINC PAINT,
The Permanent White of the Ancient Artist.
HUBBUCK and SON, the Original Manufacturers, are enabled, by their process, which is patented, to supply Pure White Zinc Paint at the price of White Lead. Neither heat nor the chemical fumes act upon it. It is entirely free from any poisonous or pernicious property. Those direful maladies paralysis and painter's colic, will be altogether avoided. The Powdered White Zinc may be had for grinding in Oil, and where it is used with Soy, Varnish, &c. To prevent the prejudice against Zinc paint, which the adulterated article must otherwise produce, it is now sold by the Wholesale Paint-dealers in Original Packages, each cask stamped, HUBBUCK—LONDON PATENT. And when so marked, the quality is guaranteed. THOMAS HUBBUCK and SON, the Original Wholesale Manufacturers, Paint and Varnish Works opposite the London Docks, London.
N.B. OLD ZINC AND ZINC CUTTINGS BOUGHT TO ANY EXTENT FOR REFINING.

11, George-yard, Lombard-street, City
ELMLEY CEMENT WORKS.—ROMAN and PORTLAND CEMENT of the first quality, manufactured on the above works. Also STOCK and KILN BURNT BRICKS, hand moulded and machine made, for shipment or otherwise. Apply to G. BOOTH, Agent, as above

COLES, SHADBOLT, and CO.
CEMENT and PLASTER MANUFACTURERS,
LIME BURNERS,
Brick, Tile, Drain-pipe, Hair Lath, and Fire Goods Merchants,
ST. JAMES'S and THORNHILL WHARFS,
Caledonian-road, London

CHADWICK'S CEMENTS.—To Railway and Dock Directors, Gas and Waterworks Companies, Coal Mine Proprietors, Builders, Contractors, &c.—JOHN CHADWICK, Manufacturer of the Patent Lithic, Roman, and Portland Cements, is prepared to enter into contracts with any of the above branches that may favour him with their orders. The advantages to be derived from the above Cements, manufactured by J. C. over all others, are their extraordinary hydraulic properties. Samples and references may be had, and orders, at the Works, Ashton New-road; or the Warehouse, 5, Broom-street, Shude-hill, Manchester.

NOTICE.
SOUTHAM HYDRAULIC BLUE LIAS LIME.
WILLIAM OLDHAM begs to inform those parties requiring genuine Hydraulic Blue Lias Lime, that he is prepared to deliver the best quality of ground and lump, into boats at the Works.—Address, WILLIAM OLDHAM, Blue Lias Lime and Cement Works, Southam.

GREY STONE LIME WHARFS,
12, UPPER GROUND STREET, Blackfriars, Surrey side,
7, NORTH WHARF-ROAD, Paddington.
WILLIAM PETERS begs to inform the trade he is in a position to supply the best GREY STONE LIME at any quantities from the above wharfs, or per barge direct from the kilns.
Large Grey Stone, or Grey Chalk, free on board at Works, 1s 8d. per ton.
Small ditto, ditto, 4d. per ton.
Barges loaded in a few minutes.
Wouldham-hall Grey Stone Lime Works, on the Medway, near Rochester.

BLUE LIAS LIME.—CHAS. NELSON begs to offer to consumers a supply of Blue Lias Lime direct from his Quarries in Warwickshire, the quality of which has been tested by several of the largest building firms in the metropolis and approved by them; and those who have favoured C. N. with their patronage during the last three years have always expressed themselves satisfied with his system of weighing or measuring the lime. When the lime is delivered by boat, the master has instructions to produce (on demand) the canal manager's pass, by which the purchaser may know the exact weight delivered.—Orders addressed to the London Depôt, 18 South Wharf, Paddington J. D. BLATH, Sole Agent, will have immediate attention. Quarries and Manufactories, Stockton, near Southam, Warwickshire

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings of wood and sound quality, constantly on sale at J. DODD'S Brick-fields, which are only a quarter of an hour's walk from the City. H. D. earnestly requests purchasers to favour him with a visit, in order to inspect his stock, and to judge for themselves.
Malm Place, half-washed Stocks, and Place Bricks, also on sale. The Bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing.
Apply to HENRY DODD and CO. at the Counting-house, Hoxton Brick-fields, Grange-walk, near the Rosemary Branch. Boat in N.B. Light-coloured Pit Sand for sale, privately contractable on sal upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand.

BRICKS.—Mr. Rydon having made more bricks than he requires for the builders on his estate, Highbury New park, would be glad to enter into arrangements with builders and others for supplying first-class STOCK and RED BRICKS upon advantageous terms.—For particulars, apply at the Estate Office, Dell's Farm, Stoke Newington Green.

THE BEST HERTFORDSHIRE MALM SECONDS.

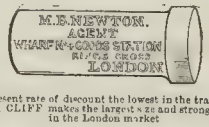
(Within a short distance of the five bridges).
THE BEST MALM CUTTERS, SECONDS, PICKINGS, and PAVIORS, in any quantity.
Also, STOCKS, of FIRST QUALITY.
J. EASTWOOD and SONS, Belvidere-road, Lambeth.

BRICKS of all kinds (clamp-burnt or kiln-burnt), Lime, Chalk, Chalk Rubbish for brick-making, Flints for building and pottery work, Foundry Sand, Whiting, Whiting Sand for asphalte, Land Drain Pipes, Patent Drain Pipes, Gas Soil for brick-making, &c. &c. sent by barge from Messrs. MEESON and CO.'s works at Grays, Essex, to any part of the Thames, the various canals, the river Lea, &c. or by rail to any station on the London and Southend and Eastern Counties lines or any railway connected with them. Vessels of 50 to 600 tons can load along side the wharves at Grays. At MEESON and CO.'S wharf and kilns, Bow-bridge, Stratford, Essex, the above-named articles can also be procured, as well as all kinds of fire goods (both Welsh and Newcastle), Fire-clay, Flare-burnt Lime, and Marble and Temper Lime; and here lime is packed in bogs-heads, casks, jars, &c. for exportation.
General Office—No. 12, GEORGE-YARD, LOMBARD-STREET.
Letters addressed to Grays Essex, will meet with immediate attention.



UPHALL BRICKFIELD, ILFORD, Essex.—WILLIAM HILL, late Henry Kilvington, respectfully invites Contractors, Builders, &c. to inspect his superior STOCK, if the undermentioned BRICKS, which can be purchased at the lowest market price, and can be put aboard any wharf in the Thames, or forwarded per rail, viz.—Malm Cutters, Seconds, Pickings and Malm Stocks, Paviours, Shippers, Best Washed Stocks, Stocks differing in quality.
N.B. Orders received at 20, Whitechapel road.

FIRE-BRICKS, LUMPS, TILES, &c. of every description, at HONDURAS WHARF, 74, Bankside, London. JOHN NEWTON and CO. (seventeen years with James Newton, of Falcon Dock, Bank-side, Fire brick and Tile Merchant) have taken the OLD-ESTABLISHED BUSINESS and PREMISES carried on so many years by WM. WARD and CO. and solicit the patronage of Consumers, Gas Companies, Engineers, Builders, &c. Ramsay's super or Newcastle Fire-brick, Retorts, Fire-clay, &c; also Sanitary-pipes Chimney-tops, Dutch Clinkers, &c. all at the lowest prices. Shipping orders executed with despatch

BEADON'S PATENT IMPERISHABLE GUTTER-TILES,
For Spouting Roofs of Houses (either old or new, whether of thatch, slate, or tile), and other structures.
SOLE AGENT,
J. B. LAWES, 1, Adelaide-place, London-bridge.
This is the cheapest kind of spouting known; for, besides its lower cost, it will last without paint or repair as long as the building itself. It will bear the weight of any ladder; and in case of accident a labourer can repair it. It occupies the room of a large amount of roofing, effecting a great saving in slates, tiles, &c. It is especially applicable to the backs of houses in town, cottages, and agricultural buildings.
Price 6d. each tile of about 12 inches long; stop-ends and outlets, 6d. Any mason can put them up, or, if over 100 feet are required, a man will be sent to fix them at 5d. per foot. This charge to include tiles delivered in Agent's yard, cement, and labour. May be had in London, Ulster, Bridgwater, and Madeley, Staffordshire.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPÔT for this WARE is REMOVED to No. 21, WHARF, Macclesfield-street North, City road, Basin. Secondly, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietor; and, thirdly, that the "REPORTS OF THE JURIES," page 681, of the Great Exhibition, rank the Manufactories known so long as "The Tileries," Tunstall, Staffordshire, as the first of the kind in the world

PATENT TERRA-COTTA.
Tracery for Parapets and Terraces, Mullions, Pinnacles, Moulded Bricks, Coats of Arms, Crosses, Label Mouldings, Friezes, Trusses, Vases, Balusters, Capitals and Bases of Columns, Paving, Facing Bricks, Coping, Kitchen and other Sinks, Chimney Shafts and Tops, and numerous other Articles, manufactured by J. M. BLASHFIELD, in Patent imperishable Terra-Cotta, at Mill wall, Isle of Dogs; and sold at No. 1, Wharf, Praed-street, Paddington-basin.

Established 1838.—Registered pursuant to 53 sec. 7 & 8 Vict. cap. 110.
MONEY LENT for Two Years, One Year, or Six Months, on Personal security, Freehold or Leasehold Property, Gold and Silver Plate, Watches, Jewellery, and every description of saleable security. Repayable by weekly, monthly, or quarterly instalments. Sums from £5 to £500 may be obtained three days after application. This office being open daily from nine till six, the unpleasant necessity of applicants having to explain their affairs before a large number of persons is entirely avoided. PIN-BURY LOAN OFFICE, 144, St. John-street-road, Clerkenwell (three doors from Middleton-street).

WOLSTON'S TORBAY IRON-PAINTS, warranted to stand the action of the Atmosphere, Steam, Gases, Noxious Vapours, Damps, and Salt Water: also intense heat without blistering. These Paints have been tested for five years in Her Majesty's Dockyards, and two Official Reports made thereon, which testify that 6lbs. of Wolston's Torbay Iron-Paint will effectually cover as much surface as 14lbs. of either White or Red Lead and that they resist atmospheric action better than Lead Paints. For all Public Works, Galvanized and other Iron Roofing, Fencing, Shipping purposes (Wood or Iron), Stucco and Cement Fronts, economy and durability will be secured. To Builders and Painters, for all priming purposes, the saving will be immense. Manufactured at the TORBAY IRON-PAINT and ORE WORKS, Brixham, Devon; London Depôt, Chamberlain's Wharf. Letters or orders addressed to Mr. WOLSTON, at the Works, or No. 34, John-street, Bedford-row, will have immediate attention.

THE INDISPUTABLE LIFE POLICY COMPANY.

Incorporated by Act of Parliament.

TRUSTEES.

Richard Malins, esq. Q.C., M.P. | James Fuller Madox, esq.
Richard Spooner, esq., M.P. | John Campbell Renton, esq.
William Wilberforce, esq.

Lord Viscount Torrington, Chairman.

By the Deed of Settlement of the Company, duly stamped in terms of the Act, 7 and 8 Vict. c. 110) complete indisputability is made binding upon the Company, and is guaranteed to every Policy Holder.

A reduction of 25 per cent. has been made on the Premiums of all policies of five years' standing, and those assured on or before the 31st instant, will participate in profits one year earlier than those assured after that date.

ALEXANDER ROBERTSON, Manager.

Persons desirous of being assured, may address the Manager, or any of the Agents of the Company, giving name, address, profession or occupation, and age next birthday; and they will be informed of the amount of the required Premium, and what further steps are necessary to enable the Company to issue a Policy.

THE SCOTTISH EQUITABLE LIFE ASSURANCE SOCIETY.—Instituted 1831.

Accumulated Funds, ONE MILLION STERLING.
Annual Revenue—ONE HUNDRED AND SEVENTY THOUSAND POUNDS.
Existing Assurances—FOUR MILLIONS AND THREE-QUARTERS.

At the Division of Surplus, at 1st March, 1856, a Policy for 1,000l. effected at 1st March, 1839, was increased to 1,371l. 18s. 10d., being at the rate of Two and a Quarter per Cent. per Annum on the sum assured. This addition may be converted into a present payment, or applied in reduction of the future premiums.

Profits are divided triennially, and belong wholly to the assured. Policies effected before 1st March next will receive six years' additions at the division of surplus in 1863.

Copies of the Report by the Directors on the recent division of surplus, and all information, may be had on application at the Head Office, or Agencies.

ROBERT CHRISTIE, Manager.
WILLIAM FINLAY, Secretary.
Head Office—26, St. Andrew-square, Edinburgh.
Office in London—26, Poultry.
A. T. RITCHIE, Agent.

THE LONDON AND COUNTY BRICK COMPANY (Limited). Capital, 10,000l. in 2,000 shares of 5l. each.

There is no liability beyond the amount of each share taken. Offices, 15, Broad-street-buildings, City, and 4, Bermondsey-square.

This Company has been incorporated for the purpose of making, selling, and delivering bricks at places to which the same may be easily and cheaply conveyed. Ground has been taken upon advantageous terms, and is now being worked. Prospectuses and forms of application for shares can be obtained of Mr. HILL, Secretary, at the Offices, as above.

PAPER-HANGINGS.—The CHEAPEST HOUSE in London for every description of PAPER-HANGINGS is GROSS'S WHOLESALE WAREHOUSE, 97, GREAT PORTLAND-street, Oxford-street, where purchasers can select from the LARGEST and MOST EXTENSIVE Assortment in the Kingdom, THIRTY PER CENT. CHEAPER than any other house in the trade. Builders, Decorators, Dealers, and large consumers will do well to visit this establishment.

MARBLE TABLETS. — WANTED, to BUY, for CASH.—Apply to Mr. BARLOW, 83, Sacheverel-street, Derby, enclosing sketch and price.

MARBLE GALLERIES, 17, Newman-street, Oxford-street.

Mr. ALFRED E. EDWARDS (upwards of ten years with the London Marble Company), has opened the above premises, lately in the occupation of Bunny, the celebrated sculptor, under the firm of EDWARDS, EDWARDS, and COMPANY, with the largest stock of BRITISH and FOREIGN MARBLE CHIMNEYPIECES, &c. &c. in London. EDWARDS, EDWARDS, and CO. solicit the favour of an inspection of their stock by architects, builders, and others connected with the trade; and beg to assure them that for design, style of execution, and price, it will be found unrivalled. Estimates for every description of marble work.

BUILDERS, ARCHITECTS, AND MASONS.

MARBLE.—The ITALIAN MARBLE COMPANY beg to call the attention of Architects, Builders, and Others connected with the trade, to their large and well-assorted STOCK of VEIN, SICILIAN, and other MARBLES. The liberal system of business adopted by the company, the superior quality of their marble, and their very moderate scale of prices are combined, to form an inducement to buyers. An inspection is solicited at the Depôt, Bridge Wharf, immediately adjoining Vauxhall-bridge, where no other persons are authorised to sell except Mr. Baxter, Wharf Foreman, or the undersigned.

WILLIAM W BONNIN, Secretary.

MARBLE WORKS by PATENT MACHINERY, Commercial-road, Pimlico, London.

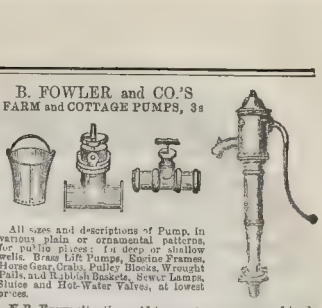
THOMAS JACKSON begs to draw the attention of the public to the most extensive stock of Marble Chimney-Pieces in the Metropolis; consisting of a selection of upwards of three hundred and manufactured by steam power from the finest Italian and other marble, and with that careful attention to the details and finish so necessary in good marble work. The Stock consists of elegant Drawing-Room Chimney-Pieces in Statuary Marble: bold, massive Chimney-Pieces, in Black, Black, and Gold, Bardilla, Sienna, Verd Antique, Brocatella, Dove, St. Ann's, and Serpentine Marble, suitable for Dining-Rooms, Libraries, Vestibules, and Entrance-Halls; and a great variety of others in Veined, San Juan, Emperor's Red and Amber Marble, for Boudoirs, Breakfast-Rooms, best and secondary Bed-Rooms, &c.; also, Monuments, Tombs, Tablets, and Pedestals for Busts and Statues, and Slabs for Cabinet Work, &c.; the whole executed from the most classical designs, and in all the varieties of the finest Italian and British Marble, at the lowest remunerative prices.

MARBLE CHIMNEY-PIECES.—The nobility and gentry of the United Kingdom who are building or refitting their mansions are respectfully invited to inspect the most Extensive Collection of MARBLE CHIMNEY-PIECES lately imported from the Continent. They comprise Statuary, Giallo di Sienna, Vert Rouge, Dove, Black and Gold, Rouge de Belmont, Bardiglio, and other choice foreign marbles; and are designed with great taste, and executed by first-class artists.—On sale, in the show rooms of Messrs. EVANS, SON, and CO. King William-street, London-bridge.

MARBLE CHIMNEY-PIECES, and every other description of marble work, supplied to builders and the trade at about HALF the USUAL PRICE, in many instances less than time. Manufactured by the LONDON and CONTINENTAL MARBLE COMPANY, at their own Quarries in France and Belgium.—Office and Depôt, 3, Crooked-lane, London-bridge.—Estimates given for works to any amount.

LLOYD'S MARBLE WHARF, Thames-bank, Pimlico, adjoining Vauxhall-bridge.—Italian Statuary, Veined, Sicilian, Dove, Sienna, and other Marbles, for Sale, at import prices. A resident manager on the wharf at all hours.

GATES and GEORGE, CAEN, AUBIGNY, and GENERAL STONE MERCHANTS. CAEN WHARF, ROTHERHITHE, LONDON.



ON SALE AND HIRE,
SINGLE AND DOUBLE PUMPS
IN WROUGHT IRON
TO ANY DEPTH,
FOR BUILDERS, CONTRACTORS, EXCAVATORS, WELL-SINKERS, &c.
Sizes, from 3-inch to 15-inch barrels.

N.B. The Largest Stock in London for hand or steam-power, and for every possible purpose for which a Pump is required upon the largest or smallest scale in Wrought or Cast Iron, Copper, or Brass.

B. FOWLER and CO.'S
FARM and COTTAGE PUMPS, 3s

All sizes and descriptions of Pump, in various plain or ornamental patterns, for public places; for deep or shallow wells. Brass Lift Pumps, Suction Frames, Horse Gear, Crabs, Pulley Blocks, Wrought Pails, and Rubbish Baskets, Sewer Lamps, Sluice and Hot-Water Valves, at lowest prices.

N.B. Every attention paid to country, export, and trade orders. Experienced workmen sent to any part of the kingdom, to fix PUMP WORK, HOT-WATER, STEAM, BATH, or DRYING APPARATUS.

BENJ. FOWLER & CO. WHITEFRIARS-STREET, FLEET-ST.

BRAMLEY FALL STONE.—To ENGINEERS and CONTRACTORS. The quality so well known and highly approved, in numerous public works, is SUPPLIED from their QUARRY at MEANWOOD, and the several Quarries at Horsforth, with punctuality, and at the lowest possible rates, by JAMES ARKWOOD and SONS, Gepton-wood Quarries and Canal-basin, Leeds.

BRAMLEY FALL! BRAMLEY FALL!

On account of greater facilities than possessed by any one else, TRICKETT and PERKINS are prepared to supply in any quantity BRAMLEY FALL STONE, at greatly reduced prices, having opened the extensive quarries in the Hawksworth Cutting, on the North-Eastern Railway, near Horsforth. The stone is of the same quality as the well-known old Bramley Fall and Horsforth Quarries, but has the advantage of being of a higher and more uniform colour. The North-Eastern Railway Company have put sidings in on both sides of the railway. Powerful cranes are fixed, so that the stone can be got to any size, and the stone being loaded in the quarries on the railway-trucks, can be forwarded the same day to any part of the kingdom, or supplied in London river via Selby or Hull, in any quantity.—For particulars apply to JOHN TRICKETT, Stone Merchant, Headingley, near Leeds, or to SAMUEL TRICKETT, Victoria Stone Wharf, Isle of Dogs, London.

QUARRY WORKED STONE.—Architects, Masons, and Builders would effect a great SAVING in cost by ordering bases, plinths, templates, cills, corbels, imposts, cornices, 50 rings, steps, staircases of all kinds, moulded or plain, square or panelled, from the quarries ready worked for fixing. Experienced foremen are kept, and the stone is clean worked, and carefully packed or stowed, and delivered direct in one bottom by vessel or railway truck.—Prices and every information given on application, accompanied by plans or sketches, to SAMUEL TRICKETT, Stone-wharf, Isle of Dogs, or to JOHN TRICKETT, Headingley, Leeds, Yorkshire.

BANGOR WHARF, King's-road-bridge, Camden-town. STRINGFIELD and CO. late W. W. Rawlins, beg to call the attention of Builders and others to their stock of Bangor slates, laths, plaster, Roman, Portland, and Keene's cement, blue lias, Dorking and chalk lime, plasterers' hair, Yorkshire plain, pan, and ridge tiles, glazed sewer pipes, closet-pans, and traps, Welsh fire-bricks, gravel and shells for garden paths, ballast, sand, &c. Materials landed, wharfed, and carted.

STONE! STONE! Roofing slates, slate cisterns, sinks, &c. considerably lower than usual quarries.—E. B. HANNAFORD'S Slate Works, Trevalga Wharf, Ratcliff cross.

SLATES.—A Cargo of Welsh-Roofing SLATES, now lying on a Wharf in Thames-street, TO BE SOLD CHEAP, at Welsh list price, or, to make a quick sale, they will be Sold, in lots, to builders.—Apply to Messrs. WILKINSON and CO. 26, Gresham-street, City.

PARIS EXHIBITION. — ENAMELLED SLATE.—TWO FIRST-CLASS MEDALS!—Mr. MAGNUS is the only exhibitor whose productions received this double honour; also the Prize Medal at the Great Exhibition of 1851, and the Medal of the Society of Arts in 1846. This beautiful material, handsomer and more durable than marble, is now finding its way into palaces, into the mansions of the nobility at home and abroad, into the highest class of public buildings, as well as into humbler dwellings. The cost is incomparably below that of any other production that can at all compete with it. It is applicable to a variety of useful and ornamental articles, too numerous to be separately specified. Among the chief are chimney-pieces and ornamental stoves for all apartments; plain and exquisitely decorated slabs for the tops of lava-tables, chiffoniers, consoles, &c.; bed-slabs, baptistries, altar-tablets, pedestals, columns, vases, pedestals, and brackets; wash-stand tops, billiard tables, linings to halls, vestibules, and dairies.—Price lists can be had on application to Mr. MAGNUS, 91 and 93, Upper Belgrave-place, Pimlico.

N.B. Plain slate work executed from a single article to the most extensive contracts, for home and abroad.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality. They have been used at the British Museum, National Gallery, Bethlem Hospital, various Lunatic Asylums, the Ordnance Works, Model Prison, Pentonville, and other Penitentiaries; Malting Floors in Bedfordshire and Hertfordshire, Breweries, the Race Stand at Brighton, Portsmouth Barracks, and are kept in stock in large quantities by Messrs. FREEMAN, Millbank-street; and at Messrs. Brown's, Belvidere-road, where terms may be obtained.

ASPHALTE.—GERVASE FOOTTIT TRINIDAD ASPHALTE WORKS, ROTHERHITHE, LONDON. Established 1834.—TRINIDAD, SEYSSEL, and BRITISH ASPHALTES, manufactured by Steam power, laid down in the best manner, or supplied in any quantity. Information for using forwarded with material. Post-office orders or reference in London promptly attended to. Estimates given for every kind of the above work.

ASPHALTE, FOREIGN and BRITISH, for FLAT ROOFING and every description of PAVING, especially in damp situations. FROM 2s. 9d. PER SQUARE YARD.

Country Builders supplied with Asphalte for footings and barn floors, with instructions for using it.

Apply to JOHN PILKINGTON, Poloneeau and Limmer Asphalte Office, Monument-chambers, 34, Fish-street-hill, London.

N.B. Importer of the PURE ROCK ASPHALTE, from the LIMMER Mines in Hanover.

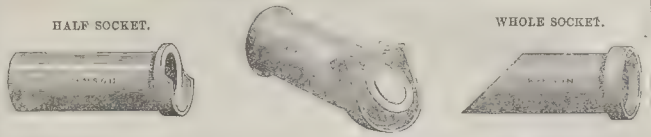
TERRA-COTTA CHIMNEY-TOPS, FIRE-CLAY FLUE-PIPES, RIDGE & PAVING TILES, &c.

SALT-GLAZED STONEWARE, FIRE-CLAY, AND TERRA-COTTA WORKS,

NEAR BARNSLEY, YORKSHIRE.

The Proprietor, E. B. BEAUMONT, manufactures every description of STONEWARE for drainage, building, sanitary purposes, and fancy ware, from clays which have been subjected to the most careful selection, and proved to be of the most tenacious and indissoluble properties. The pipes are wrought by Spencer's Patent Machine, by which tube and socket are one, without a manipulated joint, and the bore is smooth, hard, and even. And every improved apparatus has for years been added to secure the best workmanship with great economy of labour. These desirable results, combined with the low rates from the prices charged for others at all manufacturing quality, what the present and increasingly large to provide for works of the greatest magnitude.

THE TRADE LIBERALLY TREATED WITH.



Price lists and Diagrams sent free on application,—

At the WORKS .....To Mr. WM. FORD Dodfield Fire-clay Pottery, near Barnsley.
In LIVERPOOL .....To Mr JOHN SIDDALL, 2 Johnson's-row.
In MANCHESTER....To Mr. B CONSTERDINE, Heaton's bank.
In GLOUCESTER....To D. S. WILKINS, Westgate Wharf, Gloucester.

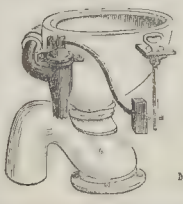
KINSON CLAY, POTTERY, AND BRICK COMPANY. LIMITED.

MANUFACTURERS OF EVERY DESCRIPTION OF SANITARY GLAZED SEWAGE-PIPES, CLOSET-PANS, FURNACE-BLOCKS, FIRE-BRICKS, GAS-RETORTS, CRUCIBLES, &c. &c.



HALF SOCKET. WHOLE SOCKET.

THE POTTERY is situate about a mile and a half from the town and port of Poole. It is worked by steam power, and the pipes are made of the most approved patent machinery, and will bear favourable comparison with any manufactured in the kingdom. The fire-bricks have been tested, and are found fully equal in all respects to those manufactured at Stourbridge and Newcastle. All articles are made from the clay and materials found on the estate. There are inexhaustible supplies of all descriptions of Dorsetshire clay, used for pottery purposes, which can be supplied to the Staffordshire, North Country, and London markets, upon favourable terms.

*** Lists of Prices, and all other information, will be furnished upon application to Mr. PAUL MATHEWS, Manager; Mr. T. W. GREEN, Secretary, at the Works; Mr. F. F. WHITEHURST, at the Company's Depôt, Brentford, Middlesex; or to Mr. JOSEPH COX, 2 and 3, High-street, Lambeth.

DURABILITY of GUTTA PERCHA TUBING.

Many inquiries having been made as to the Durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in giving publicity to the following letter: "FROM SIR RAYMOND JARVIS, Bart., YARMOUTH, ISLE OF WIGHT. Sandown, Isle of Wight, May 1, 1852. In reply to your letter, received this morning, respecting the Gutta Percha Tubing for Pump Service, I can state, with much satisfaction, it answers perfectly. Many Builders, and other persons, have lately examined it, and there is not the least appearance of its decay since the first laying down, now several years, and I am informed that it is now adopted generally in the houses that are being erected here."

N.B. From this Testimonial it will be seen that the COROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.

THE GUTTA PERCHA COMPANY, PATENTEES, 18, WHARF-ROAD, CITY-ROAD, LONDON.

FRAMPTON-PARK ESTATE, WELL-STREET, SOUTH HACKNEY.

MR. HALFORD has received instructions from the Proprietors to SELL by AUCTION, on the above PREMISES, on THURSDAY, DECEMBER 18, at NINE for TEN o'clock, most punctually, in consequence of the number of lots, in order to clear the ground for building purposes, which will be let in plots, fine TIMBER ELMS, chesnuts, pine and ash ditto, fruit trees and flowering shrubs, forming some very fine acclimatised japonicas, rhododendrons, variegated hollies, &c.; two pair of nearly new coach-house gates, several lots of iron hurdles and good paving pebbles, three pair of fowl-houses, useful horse set of harness, and nearly new spring cart, a few tons of meadow hay, bound, and in stack, capital garden engine, fire-wood, and useful stuff.—May be viewed on the Wednesday preceding and morning of sale, where catalogues may be had; at the Warburton Arms, Triangle-green; Dragon, Well-street; and of the Auctioneer, Mare-street, Hackney.

N.B. To suit the convenience of purchasers, one week from the day of sale will be allowed to clear the shrubs, and six weeks for the timber.

Freehold Houses and large Garden, Kingston, Surrey.

MR. NIGHTINGALE will SELL by AUCTION, at the GRIFFIN HOTEL, KINGSTON, on TUESDAY, DECEMBER 16, at TWO, in one lot, by direction of the Executor, TWO good HOUSES and SHOPS, with upwards of an acre and a quarter of first-rate garden ground, abundantly stocked with very productive fruit trees; advantageously situate in Middle Mill-road, within five minutes' walk of the market-place, Kingston. Early possession may be had. May be viewed. Particulars to be had on the Premises; also of WM. CONNETT, Esq. Architect, 8, Raymond's-buildings, Gray's-inn; of S. STAPLAND, Esq. Solicitor, 22, Bouverie-street, London; and of Mr. NIGHTINGALE, Auctioneer, Surveyor, and Valuer, Kingston.

TO BUILDERS, IRONMONGERS, AND BROKERS.

MESSRS. RICE, BROTHERS, will SELL by AUCTION, at PAUL'S-WHARF, Upper Thames-street, on FRIDAY, DECEMBER 19, at TWELVE, the remaining STOCK of IRONWORK; comprising a large quantity of OG and half round iron guttering, rain-water pipes and appurtenances, ranges, stoves, range and stove metal, furnace pans, copper doors and gratings, dampers, sink-traps, stable castings, jewels, railing bars, water-closets, and a variety of useful items. May be viewed the day previous and morning of sale. Catalogues had on the Premises; and of the Auctioneer, 263, Borough, Southwark.

FREEHOLD LAND WANTED to PURCHASE in Gray's-inn-lane, near the Holborn end, or in that immediate vicinity, suitable for the erection of SPACIOUS WORKSHOPS; or Premises capable of being adapted for that purpose. Several small tenements adjoining each other might suit if occupying sufficient area.—Particulars and lowest price to be sent by letter, post-paid, to H. W. care of the Porter, Thavie's-inn, Holborn.

EXTENSIVE PLOT of FREEHOLD BUILDING LAND TO BE SOLD, with three frontages and sewerage, in a most important locality and leading thoroughfare to Hampstead, within five minutes' walk to Chalk-farm and Camden-road Railway Stations in the occupation of the purchase-money may remain on mortgage, if required.—For further particulars apply to Mr. ELLIOTT, Admiral Napier, Alandroad, Weddington street, Kentish-town.

FINCHLEY.—LAND fronting the Regent's Park-road, and East-end-road, TO BE LET on Building Leases for ninety-nine years, with power of exchange and Plots from one to four acres for large villa residences; smaller plots for semi-detached houses, and plots for shops in the village. Apply to W. A. BOULNOIS, Esq. Architect, 6, Waterloo-place, Pall-mall; or to Messrs. BARKER, BOWKER, and PEAKE, 3, Gray's-inn square.

FREEHOLD LAND TO BE LET, on Building Lease for ninety-nine years. Money advanced to responsible parties. Freehold Land to be Sold for building purposes in eligible situations.—Apply at the Offices of Messrs MORGAN and PHIPSON, Architects, 3, Danes-Inn, St. Clement's, Strand.

ALDERSHOT.—Several eligible BUILDING SITES TO BE SOLD, immediately fronting the permanent Barracks at the South Camp. For particulars apply to Mr R. A. DAVIS, Land and Engineering Surveyor and Valuer, Basingstoke, Hants.

EXTENSIVE PLOT of vacant GROUND, in a most important first-rate locality, adjoining Regent's-circus, with entrance from Oxford and the adjacent street suitable for a building operation of any character or magnitude. It is presumed from its extent and high class situation (nearly a quarter of an acre) to be eminently adapted for an arcade or any other similar public establishment carried out under the Limited Liability Act. For particulars apply to Messrs GRAHAM and JACKSON 37 and 38, Oxford street.—May be treated for as a whole or separately.

BUILDING LAND TO BE LET, close to S. Jude's Church, old Bethnal green-road, for the erection of fourth rate houses which are in great request, and will let and sell as soon as finished.—For further particulars, apply to Mr CLARKSON, Surveyor, 43, Penton-street, Pentonville.

TO BUILDERS.—A lucrative and safe speculation.—GROUND TO BE LET, in the best part of Paddington.—Apply, by letter only, to Y. M. Office of "The Builder."

IMPORTANT TO BUILDERS AND CAPITALISTS.

UNITED TRADESMEN'S FREEHOLD LAND SOCIETY.—The beautiful ESTATE at HORNSEY, purchased by the Trustees, consisting of about thirty acres, and within three minutes' walk of the station, will next summer be accessible from the City by means of the Metropolitan Railway. Persons desirous of possessing land in this charming and picturesque neighbourhood, can do so immediately by joining this society. Plots 3 £ each; subscription, 5s per month; at their Office, the Savings' Bank, Goldsmith's-place, Hackney-road, and on the third Wednesday in each month from seven until Nine o'clock. Capitalists and others desirous of possessing land at once can do so by application to Mr. J. LAWLESS, 1, Thurlow-place, Hackney-road; or to Mr. DANIELL, Hornsey, and Estate Office, 32, Kennel-street, Russell-square. The ground on the first portion of the estate being the only part on which a tavern can be built, is delightfully situated on the high road leading to Tottenham, and is but a two minutes' walk from the Hornsey Station, to be disposed of, with all its privileges, for the sum of 300£.—Apply as above.

NEAR WHITECHAPEL.—TO BE SOLD, a piece of FREEHOLD GROUND, with TWO HOUSES standing thereon, Nos. 16 and 17, Great Prescott-street. It is about 100 feet deep, with a frontage of 36 feet. The houses are out of repair, but with a moderate outlay may be rendered suitable for good tenants, or they can be pulled down, and the ground made available for any other buildings. In addition to the 100 feet depth, there is a forecourt of nearly 10 feet, inclosed by iron railing.—Apply, personally, to A. B. at No. 4, Lower Berkeley-street, Manchester-square, before Ten in the morning; or by appointment, at any time.

BRICKFIELD.—TO BE LET, within five miles of London, an old established FIELD, containing seven acres of good brick earth and malm. There is a wash mill, plentiful supply of water, sheds, and other conveniences.—For terms apply to Mr. A. RICHARDS, Auctioneer, Totteuham.

WANTED to PURCHASE, LEASEHOLD GROUND-RENTS.—Address by letter, post paid, stating full particulars, with lowest price, to M. S. care of Mr. Perkins, 31, York-place, City-road.

BUILDING LAND.—WANTED to PURCHASE or RENT, from ONE to TEN ACRES, in any of the following localities:—Islington, Highbury, Holloway, Kentish-town, Camden-town, St. Pancras, Dalston, Kingsland, or within a short distance of the City. Apply, with full particulars, to Mr. GEO. CLARKSON, 43, Penton-street, Pentonville.

EXTENSIVE WATER-SIDE PREMISES, TO BE SOLD, or LET, partly freehold and leasehold, immediately adjoining the South Western Railway Goods Station, known as Brunswick Wharf, and long and extensively and profitably carried on in the brick, lime, stone, slate, &c. &c. trade, but available for other purposes. The present proprietor retiring from business, would dispose of the Premises either with or without the stock in-trade.—Apply on the Premises.

BARGAIN.—TO BE SOLD, under the Mortgage, TWO PAIRS of SEMI-DETACHED VILLA COTTAGES, on the Cumberland Estate, near the Gipsy-hill Station, Norwood, held for ninety seven years, at £15 15s. each, and let to highly respectable tenants at £40 per year each. They were built under a City Surveyor, and to close accounts will be sold at the low price of 775l. per pair. Possession of one may be had.—Apply personally, at the Offices of Messrs. EDWARDS and SMITH, 19, Great Carter-lane, Doctors'-commons.

TO SMALL CAPITALISTS and OTHERS.—TO BE SOLD, a FREEHOLD EIGHT-ROOMED HOUSE, situated in a good thoroughfare, let to a respectable tenant, at 40l. per annum.—For particulars, inquire of J. S. 48, Clarendon-place, Clarendon-square, St. Pancras.

SITE for a HOUSE, at Reigate, Surrey, within three quarters of an hours' ride of London.—TO BE SOLD, a very desirable SITE for a RESIDENCE, with about TEN ACRES of FREEHOLD LAND, ornamentally timbered, situated on the southern slope of Reigate hill, about half a mile from the Reigate Town Station on the South-Eastern Railway, commanding extensive views. Apply to Messrs. PAGE and LEES, Reigate.

ST. BARTHOLOMEW'S DISTRICT PARISH, Bethnal-green.—TO BE LET, for building, on a long lease, a PLOT of GROUND, 70 feet in length, by 30 feet 10 inches in width, adjoining the Infant School of the above parish. Particulars may be known on application to the Master of the National School, or to Mr. WILLIAMS, No. 16, Edward-street, St. Peter's-road, Mile-end.

TO BUILDERS.—A capital JOBBING BUSINESS TO BE LET in full work, the proprietor retiring. Coming in, including stock and plant for all branches, 200l.—For full particulars, apply to Mr. C. BROWN, House and Estate Agent, Westcroft place, Hammersmith.

SHARE or PARTNERSHIP.—An ENGAGEMENT is desired by a Gentleman (who has had first-rate experience in the architectural and engineering profession), with a view to that object. All communications confidential.—Address to ALMA, at the Office of "The Builder."

TO ARCHITECTS and BUILDERS.—T. TRELOAR, 42, Ludgate-hill, Manufacturer, supplies Cocoa-nut Fibre Matting, Door-mats, Hassocks, &c. of the best quality, on the most reasonable terms.—Warehouse, 42, Ludgate-hill.

TO ARCHITECTS AND OTHERS.

MR. EDWARD L. PARAIRE is desirous of Meeting Gentlemen who require COLOURED ARCHITECTURAL DRAWINGS. External, Internal, Isometrical Perspectives got up; outlines of same neatly coloured, with background, on terms that will insure approval. Temporary assistance given in getting up Plans, Elevations, Sections, Detail, and Working Drawings.—Mr. E. L. P. makes a consideration in his charge where competition drawings prove unsuccessful.
Address, 8, Rathbone-place.

SURVEYING, LEVELLING, and CIVIL ENGINEERING.—PRACTICAL FIELD INSTRUCTION is given in Surveying, Levelling, Civil Engineering, &c. by Messrs. HYDE, SMITH, and LEWIS, Civil Engineers Surveyors, &c. of extensive practice, who beg to inform Gentlemen desirous of acquiring a thorough practical knowledge of the Profession, that they have refitted up their Offices with every requisite, including Models and Instruments of every description. The Courses are all remodelled and enlarged, embracing all the late st improvements. Terms for the Course of Three Month. Two Guineas, which includes Field Instruction, Draughting, Mapping, Plan Drawing, &c. &c. There are no extras.—For Prospectuses, &c. apply at the Offices, 24, Guildford-street, Russell-square.

DRAWING, &c.—One Guinea per Quarter, Comprising Architectural Engineering, Mechanical Perspective, Isometrical, Geometrical, Ornamental, and Water-Colour Drawing, Measuring, Taking out Quantities, Abstracting, Valuing, Estimating, &c. &c. Day Pupils, Two Guineas per Quarter.—For prospectuses, apply to Messrs HYDE, SMITH, and LEWIS, Architects, Civil Engineers, &c. Guildford-street, Russell-square.

DRAWING CLASSES.—24, Guildford-St. For Architects, Builders, and Engineers' Sons, Assistants, Foremen, Clerks of Works, &c. At this Establishment Pupils are thoroughly instructed in Drawing of every description. Terms, Day Pupils, Two Guineas per Quarter; Evening Pupils, One Guinea per Quarter.—For Prospectuses, &c apply to Messrs. HYDE, SMITH, and LEWIS, Architects, Civil Engineers, &c. at the Offices.

ARCHITECTURE and CIVIL ENGINEERING DRAWING CLASSES. Established by Messrs. HYDE, SMITH, and LEWIS, Architects, Civil Engineers, &c. for Architects, Builders, and Engineers' Sons, Assistants, Clerks of Works, Foremen, Draughtsmen, Measurers, &c. and for giving EVENING INSTRUCTION in Architectural, Civil Engineering, and Mechanical Drawing; Colouring, Shading, and Tinting; Ornamental and Water-Colour Drawing; Perspective, Isometrical, and Geometrical Drawing; Making Finished and Working Drawings; Preparing Specifications, Taking out Quantities, Estimating, Builders' Work, &c. EXHIBITION of ART TREASURES of the UNITED KINGDOM, 1857. — ISSUE of SEASON TICKETS. — The Executive Committee will be prepared to ISSUE SEASON TICKETS for the forthcoming Exhibition, on and after the 1st of JANUARY, 1857. The committee are induced to make this early appeal for the support of the public in order that they may be enabled more economically to meet the heavy pecuniary demands which the magnitude of the undertaking involves. The season tickets (not transferable), will be of two classes:—

1st. A Ticket—price 2l. 2s.—entitling the proprietor to admission on all occasions when the Exhibition is open to the public.

2nd. A Ticket—price 1l. 1s.—entitling the proprietor to admission on all occasions when open to the public, excepting only on a limited number of days not exceeding eight), reserved for state ceremonials or special attractions. Such reserved days will be duly advertised, and will include the days of opening and closing the Exhibition.

To prevent disappointment the committee have to announce that, as upon the reserved days, a limited number of visitors only can be conveniently and satisfactorily accommodated, they have determined that the registered owners of such limited number of the 2l. 2s. tickets, as may be first issued, shall be entitled to admission to the reserved parts of the building. When the limit of such issue shall be attained the fact will be announced by public advertisement.

The Exhibition will be opened early in MAY, 1857.

Tickets will be on sale at the offices of the Exhibition, 300, Mosley-street, on and after the 1st of JANUARY, 1857.

Applications for tickets, by letter, must be addressed to the Secretary, and post-office orders or remittances, made payable to CHARLES HENRY MINSHIN, Manchester. By order of the Executive Committee,

THOMAS HAMILTON, Secretary.

18th December, 1856. Offices of the Exhibition, 300, Mosley-street, Manchester.

ARCHITECTURAL EXHIBITION and COLLECTION of BUILDING MATERIALS and INVENTIONS, 9, Bolt-street, Fall-mall East, open from 9 in the dusk.—First Lecture on Tuesday, JANUARY 6th, by Professor DONALDSON, "On the Architectural Manifestations of Roman Admission, One Shilling, or by Season Tickets, at all times and to all the Lectures, Half-a-crown.

JAMES FERGUSSON, F.R.A.S.) Hon.
JAMES EDMESTON, Jun. } Secs.

THE ANNUAL EXAMINATION of SCHOOLMASTERS, for Certificates to teach Drawing, will be held at the Offices of the Department of Science and Art, Crimea-road, South Kensington, on MONDAY, the 19th of JANUARY next, at 7 P.M. Schools, which might desire to be examined should send their names in on or before the 5th of JANUARY. NORMAN MACLEOD, Registrar.

THE THIRD BIENNIAL EXHIBITION of ARCHITECTURAL, MECHANICAL, and ORNAMENTAL DRAWINGS, executed by the Students of the Architects', Builders', Civil Engineers', and Mechanists' Drawing Classes, will be open for inspection on Monday, Tuesday, and Wednesday, the 29th, 30th, and 31st of December; and Friday and Saturday, the 2nd and 3rd of January, 1857, from Twelve at noon till Nine in the evening, each day, at the Offices of the Establishment, 37, Oldcastle-street. Admission by ticket, free, to be had at the offices; and at the Office of "The Builder."

T. J. HILL, Architect, Conductor of the Classes.

COMPETITIONS.

TO ARCHITECTS. — PROPOSED NEW PAUPER LUNATIC ASYLUM for BRISTOL. — The Committee appointed by the Town Council of the City of Bristol hereby offer the following PREMIUMS for the THREE best PLANS for the proposed new BUILDING, viz.:—

For the best plan, 100*l.*
For the second best plan, 50*l.*
For the third best plan, 25*l.*

Such plans to be accompanied with specifications and estimates of expense. In the preparation of the plans regard must be had to the following particulars:—The building to receive 200 patients, with requisite offices, and accommodation for resident officers. The amount to be expended on the building to be between 15,000*l.* and not exceeding 20,000*l.* The building material to be of the intended site to be used as much as possible. The elevation to be of a simple but cheerful character. The "Suggestions and Instructions for Building Lunatic Asylums," published by the Commissioners in Lunacy, to be, as far as practicable, complied with. Each plan specification, and estimate, to be signed with a motto, and with a sealed envelope endorsed with such motto, and containing inside the name of the architect competing, to be deposited at the Town Clerk's Office, Council-house, Bristol, on or before the 14th FEBRUARY next. A lithographed plan of the intended site, and copies of the "Suggestions," may be obtained upon application to the Town Clerk's Office.—The Committee do not bind themselves to accept the best or any plan for the said building.

BRICE and BURGESS, City Solicitors.

Council-house, Bristol, December 5, 1856.

TO ARCHITECTS and OTHERS. — BANBURY CORN EXCHANGE COMPANY (limited). — The Board of Directors are prepared to receive DRAWINGS for the proposed building, which will be erected on the site of the Premises on the Corn hill, Banbury, in the occupations of Messrs Timms, Taylor and Joseph Scrivens. The whole of the drawings to be in one uniform scale of 6 feet to an inch. The drawings are to comprise a plan of the ground-floor, elevation, longitudinal and transverse sections. The principal sections (shewing the size and length of the room figured thereon; the sections and elevations to be tinted in Indian ink only. The estimated outlay not to exceed the sum of 1,500*l.* The author of the design approved by the Directors will be employed to superintend the execution of the work at the usual commission of 5 per cent. The author of the next best design in the opinion of the Directors, will receive the sum of 20*l.*; and the author of the design that shall be considered by the Directors next in point of merit shall receive the sum of 10*l.* The designs to be addressed to "The Secretary of the Banbury Corn Exchange Company, Limited, Banbury," and to be sent in on or before the 31st day of DECEMBER instant. A plan of the site may be seen at the Office of the Secretary of the Company. By order of the Directors,

THOS. G. JUDGE, Secretary.

Banbury, 9th December, 1856.

TO ARCHITECTS and OTHERS.—PLANS WANTED.—The Burial Board for the Parish of Sunderland, near the Sea, in the County of Durham, require PLANS and SPECIFICATIONS for ENCLOSING, LAYING-OUT, and EMBELLISHING TEN ACRES of LAND, for the purpose of a BURIAL-GROUND, with Two Chapels, and Cottages for a Superintendent and Sexton. The site of the proposed burial-ground is situate at Chester Stones, in the township of Ryhope; the portion to be enclosed is staked out, and a plan of the same may be seen at the Offices of the Burial Board. The land to be enclosed on the north, west, and south sides by a sunk fence or stone wall, 6 feet high and 18-inch coping; and on the east side or front, adjoining the turnpike-road between Sunderland and Ryhope, by a dwarf wall, with appropriate railing and suitable entrance gates. Each chapel must accommodate 250 persons, and not exceed 60 feet including the attics. The two cottages will shew no one must not exceed 1*l.* The Board will present for the plan and specification approved by them; such plan and specification to be the property of the Board, who do not bind themselves to employ the architect whose plan may be selected.—Plans, with the specifications, indorsed "Plans for Burying-ground," to be delivered at the Offices of the Board, No. 5, Church-street, Sunderland, on or before the 2nd day of FEBRUARY next. By order of the Board,

THOS. F. HEDLEY, Clerk.

5, Church-street, Sunderland, December 3, 1856.

CONTRACTS.

TO ROAD CONTRACTORS.—TENDERS are required for the MAKING of a PORTION of CHURCH-ROAD, Haverstock hill.—Specifications and conditions of contract may be seen at the Office of Mr. JOHN SHAW, Architect, Chapel Hospital, any day before TUESDAY, the 23rd DECEMBER, between NINE and FIVE o'clock.

NORWICH LOCAL BOARD of HEALTH. TO PAVIORS and CONTRACTORS.—The Paving Committee of the Norwich Local Board of Health are ready to receive TENDERS for Three Years' Performance of the undermentioned CONTRACTS:—

No. 1. For Repairing Carriageway and Footway Pavement, and for Jobbing Work in respect of such Repairs, under lot

3. For Repairing and Watering certain Macadamized Roads.
4. For Repairing and Watering certain other Macadamized Roads.
5. For Watering certain Roads in the County of the City of Norwich.
6. For Watering certain other Roads in the said County.
7. For Watering certain other Roads in the said County.
8. For Watering certain other Roads in the said County.
9. For Watering certain other Roads in the said County.

Specifications and conditions of the several Contracts may be had at the Surveyor's Office, St. Clare Mead, on payment of half-a-crown, where any further information may be obtained. Separate Tenders for all or any of the above Contracts, addressed to the Clerk of the Local Board of Health, and endorsed "Tender for Contract, No. ," to be sent in on or before the 31st DECEMBER instant.—The Committee do not bind themselves to accept the lowest or any Tender.

H. B. MILLER, Clerk.

Norwich, 13th December, 1856.

CONTRACTS.

NOTICE to BUILDERS.—The Commanding Royal Engineer, Shornecliff, hereby gives Notice, that sealed TENDERS will be received by the Director-General of Contracts, Pall-mall, London, on or before WEDNESDAY, the 24th day of DECEMBER, 1856, from persons desirous of CONTRACTING for BUILDING MEDICAL OFFICERS' QUARTERS, Shornecliff. The plans and specification may be seen, and all necessary information obtained, at this Office, between the hours of TEN and FOUR each day, from the 15th to the 23rd instant, inclusive. The person whose Tender may be accepted will be required to provide two eligible securities, to be bound with him jointly and severately in a bond of 250*l.* for the due performance of the contract by the 15th of MARCH, 1857. The War Department reserves the right of rejecting the whole or any of the Tenders. No notice will be taken of any Tender unless upon the printed form, which can be obtained at this Office.

Royal Engineer Office, Shornecliff, December 12th, 1856.

NOTICE to BUILDERS.—The Commanding Royal Engineer, Portsmouth, hereby gives Notice, that sealed TENDERS will be received by the Director-General of Contracts, War Department, Pall-mall, London, on THURSDAY, the 15th day of JANUARY, 1857, before TEN o'clock a.m. from such persons as may be desirous of CONTRACTING for ERECTING an ADDITIONAL STORY to the main out-building of the Garrison Hospital, Portsea, in the county of Hants. The plans, specification, and conditions of contract may be seen, and every information obtained, together with form of Tender, at this Office, on and after the 29th DECEMBER, 1856, between the hours of TEN and FOUR, each day (Sundays excepted), until the 14th proximo, The War Department reserves to itself the right of rejecting the whole or any of the Tenders. No notice will be taken of any Tender unless upon the printed form. Tenders to be endorsed, "Tender for Erecting an additional Story to the main out-building of the Garrison Hospital, at Portsea, in the County of Hants."

Royal Engineer Office, Portsmouth, December 17, 1856.

ROYAL ENGINEER CONTRACT.—The War Department being about to enter into a CONTRACT for the ERECTION of FIVE BUILDINGS on WOOLWICH COMMON, Two to consist of Twenty-four Rooms each, and Three of Eight Rooms; the buildings to be two stories high; such persons as may be desirous of Tendering for the same may inspect the plans and specification, and receive all necessary information relative thereto, by applying to Mr. REES, Clerk of Works, at the Royal Engineer Office, Royal Artillery Barracks, Woolwich, between the hours of TEN a.m and FOUR p.m. up to the 29th of DECEMBER, 1856, Sundays and Christmas-day excepted. Tenders to be delivered at the Office of the Director-General of Contracts, War Department, Pall-mall, London, on the 30th of DECEMBER, 1856. The War Department reserves to itself the right of rejecting the whole or any of the Tenders.

Grand Depôt, Woolwich, December 18, 1856.

TUNSTALL LOCAL BOARD of HEALTH.—NEW COVERED MARKET. To BUILDERS, IRONFOUNDERS, and OTHERS.—The Tunstall Local Board of Health are prepared to receive TENDERS for the EXECUTION of the several WORKS required in the ERECTION of a COVERED MARKET, according to the design and specification of G. T. ROBINS, Esq., Architect, Leamington. The plans, estimates, and specifications may be seen from WEDNESDAY, the 26th instant, to WEDNESDAY, the 24th day of DECEMBER, 1856, at the Architect's Office, 24, Upper-parade, Leamington, where all further particulars may be obtained. After that date they will lie for inspection at the Offices of the Local Board, Amicable-street, Tunstall. Sealed Tenders, properly endorsed, to be sent to me on or before the 13th JANUARY, 1857. The lowest Tender will in no case be accepted. By order,

Tunstall, Nov. 26, 1856. JOSEPH LOWNDES, Clerk.

TO BUILDERS.—The Committee of the Congregational Church at Weston-super-Mare, Somersetshire are prepared to receive TENDERS for the ERECTION of a NEW CHURCH and SCHOOL, at Weston-super-Mare aforesaid. The drawings and specification may be seen at the said Schools, Mount-pleasant, Weston-super-Mare aforesaid, on and after Tuesday next, the 16th instant, and after the Vestry of the present Chapel, and after MONDAY, the 22nd instant, where all further information may be obtained. Tenders will be received on or before noon on MONDAY, the 5th of JANUARY, 1857.

PRITCHETT and SONS, Architects.

Darlington, December 12, 1856.

TO BUILDERS.—Persons desirous of Tendering for the whole or any of the undermentioned WORKS to be done in the ERECTION of BOYS', GIRLS', or INFANTS' SCHOOLS, and TWO DWELLINGS, at Summer-in-the-County of Monmouth, for the Rhymney Iron Company, may see the plans and specifications at their new Offices, Pill-row, Newport, by applying to Mr. ROBERT DUNCAN, the Company's Wharf Agent:

1. Digger, Brickmaker, and Stonemason.
2. Carpenter, Joiner, Ironmonger, Smith, and Founder.
3. Slater and Plasterer.
4. Plumber, Painter, and Glazier.

A bill of quantities may be had gratis, on application by post to me. Tenders to be sent in to me before the 1st day of JANUARY, 1857.

JAMES S. BENEST, Architect.

St. Andrew's Hall Plain, Norwich.

MIDLAND RAILWAY.—The Directors of the Midland Railway are ready to receive TENDERS to CONTRACT for the REPAIRS and MAINTENANCE of the STATION BUILDINGS on the Saltley and Birmingham Branch of the above Railway, for a period of SEVEN YEARS, as per annum. The specification may be seen and particulars obtained upon application at the Engineers' Office, Derby Station, on and after TUESDAY, the 23rd inst. Tenders to be delivered to the Secretary at the Waterloo Hotel, Derby Station, by TEN a.m. on TUESDAY, the 6th of JANUARY, 1857. The Directors do not bind themselves to accept the lowest or any Tender. By order,

JOHN MOORE, Assistant Secretary.

[For remainder of Contracts see next page.

CONTRACTS.

TO BUILDERS.

THE Guardians of the Tonbridge Union are desirous of receiving TENDERS for the Building of a HOSPITAL for SEVEN WARDS, at the Workhouse, near Pembury, according to plans and specifications, to be seen at the Office of the Clerk, 1, Bolsdore-terrace, Tunbridge Wells. Sealed Tenders to be sent to the Clerk, marked "Tender for Hospital," on or before THURSDAY the 8th of JANUARY 1857. The Guardians reserve to themselves the right of rejecting the lowest or any other Tender.—By order of the Board.

Tunbridge Wells, Nov. 29, 1856. W. H. WALL, Clerk.

TO STONE MERCHANTS, MASONS, and OTHERS.—The Woolwich Local Board of Health will be ready to receive TENDERS, on TUESDAY evening, the 16th JANUARY, 1857, at SEVEN o'Clock precisely, for the supply of the undermentioned STONE, viz.:—

About 300 superficial feet of Portland or Purbeck STONE WORK, not less than 2 feet 6 inches thick, and not less than 25 per cent. bed.

About 1,000

WROUGHT-IRON GIRDERS
For BRIDGES and BUILDINGS,
MANUFACTURED AND GUARANTEED AS TO STRENGTH
CAST-IRON GIRDERS for BRIDGES.
Wrought-iron Doors, Boiler, & General Smiths' Work.
BUILDERS' CASTINGS OF EVERY DESCRIPTION.

ROLLED WROUGHT-IRON FLITCHES
For TRUSSING BETWEEN TIMBER.
SPIKES, RIVETS, CUT NAILS, WROUGHT DITTO, SCREWS, BOLTS AND NUTS, BOND HOOPS, CHAINS, &c
CONTRACTORS' PLANT, RAILS, EARTH WAGGONS,
And IRON WORK for WOOD WAGGONS, &c.
MATTHEW T. SHAW, 64, CANNON-STREET (late with C. J. Mare & Co.)
Such arrangements are made for Despatch and Punctuality that Orders can be executed in a few days.

ZINC ROOFING, INCLUDING TIMBER OR IRON FRAMEWORK,
IS AS
CHEAP AS SLATES OR GALVANIZED IRON, LIGHTER, AND MORE DURABLE.
Certificates, and Models of various descriptions, may be seen, and estimates obtained on application to
THE SURVEYOR OF THE VIEILLE MONTAGNE ZINC MINING COMPANY, 12, MANCHESTER BUILDINGS, WESTMINSTER.
ROOFS CONSTRUCTED UNDER HIS SUPERINTENDENCE GUARANTEED TO REQUIRE NO REPAIRS FOR AT LEAST TEN YEARS.
THE OLD METAL BEING ALWAYS RETAKEN AT HALF-PRICE, RENDERS IT ADVANTAGEOUS FOR ALL TEMPORARY BUILDINGS.
Many roofs covered with zinc thirty-five years ago have never required repairs.

TYERMAN'S PATENT HOOP-IRON BOND,
FOR BUILDING PURPOSES.
ADOPTED BY SEVERAL DEPARTMENTS OF THE GOVERNMENT.

TARIFF OF PRICES
Beyond the current Price of Hoop-iron.

TO IRONMONGERS AND THE TRADE GENERALLY.
D. HULETT and CO. Manufacturers of GAS CHANDELIERS, HALL LANTERNS, GLASS LUSTRES, &c. &c. A large assortment of the newest designs always on show—every article marked in plain figures. Patentees and manufacturers of the Mercurial Gas Regulator. Complete pattern book and price list, 10s.—55 and 153, High-st. Boro.

SAVING IN GAS.—D. HULETT, INVENTOR and PATENTEE. The Mercurial Gas Regulator is the only one to ensure perfectly steady, wholesome and uniform Lighting, equalizing the pressure, and preventing any irregularity in the height of the flame.—D. HULETT and CO. 55, High-street, Boro. Manufacturers of Gas Chandeliers, Glass Lustres, &c &c.

RADIATING and REFLECTING STOVE.
WILLIAM S. BURTON'S NEW REGISTER STOVE combines completely the well-known principles of both Stephen's and Sylvester's celebrated patent stoves, while it has others equally valuable, which are peculiarly its own, and for which a patent has been granted. Its reflecting and radiating powers are perfect, it is very simple, and cannot be put out of order, consumes but little fuel, is most cleanly and cheerful in use, while its general appearance, no fender being needed, is most imposing. Prices, complete, black or bronzed, from 8l. 10s.; bright, 14l. 8s. and upwards. One may be seen in action in his Show-rooms, which contain such an assortment of fenders, stoves, ranges, fire-irons, and general ironmongery, as cannot be approached elsewhere, either for variety, novelty, beauty of design, or exquisiteness of workmanship. Bright stoves, with bronzed ornaments, and two sets of bars, 4l. 14s. to 13l. 13s.; ditto, with ormolu ornaments and two sets of bars, 5l. 5s. to 22l. Bronzed fenders, with standards, 7s. to 5l. 12s.; steel fenders, 2l. 15s. to 11l.; ditto, with rich ormolu ornaments, 2l. 10s. to 18l. Fire-irons, from 1s. 9d. the set to 3l. 3s.
The late additions to these extensive premises (already by far the largest in Europe) are of such a character that the entire EIGHT HOUSES is devoted to the display of the most magnificent stock of GENERAL HOUSE IRONMONGERY (including Cutlery, Nickel Silver, Plated Goods, Baths, Brushes, Turnery, Lamps, Gasaliers, Iron and Brass Bedsteads, Bedding and Bed Hangings), so arranged in Sixteen Large Showrooms as to afford to parties furnishing, facilities in the selection of goods that cannot be hoped for elsewhere. Illustrated catalogues sent (per post, free—39, Oxford-street; 1, 1a, 2, and 3, Newman-street; 4, 5, and 6, Perry's-place, London.—Established 1820).

WARMING and VENTILATING CHURCHES and PUBLIC BUILDINGS generally with PURE WARM AIR.
CUTLER and SONS respectfully state that they are prepared to Contract for the adoption of their improved Warm-Air and Ventilating Apparatus, for Halls, Churches of the largest dimensions, and every description of public buildings, the perfect action of which they undertake to guarantee.—One may be seen in constant use at their Foundry and Gas-Engineering Works, 16, Great Queen-street, Lincoln's-inn-fields, London.

ASHDOWN'S PATENT VENTILATING and SMOKELESS GAS-FIRE.
CUTLER and SONS, Licensed Manufacturers, under the immediate superintendence of the Patentee.—This is the only gas-fire adapted to open grates, it differs materially from all others hitherto offered to the public, it combines the most perfect combustion with ventilation, and presents a glowing warmth from an open radiating surface, unequalled by any other gas-stove; it is, also, well suited for a drawing-room, library, bed-room, or hall; and may be seen in action, daily, at CUTLER and SONS', Gas Engineers, Founders, and Manufacturers of Gas-heating and Cooking Apparatus of every description, 16, Great Queen-street, Lincoln's-inn-fields.

PATENT PURE WARM-AIR VENTILATING STOVES.—The only Pedestal Stove which gained a Prize Medal (Class 27b) at the Great Exhibition, 1851, especially adapted for warming churches, chapels, schools, entrance-halls, libraries, warerooms, &c. with great economy.—CUTLER and SONS, Sole Licensees and Manufacturers, Founders, and Gas Engineers, 16, Great Queen-street, Lincoln's-inn-fields, London.

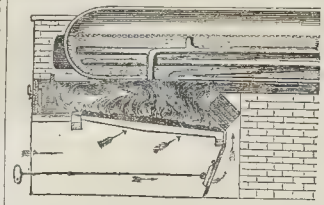
BATHS and HOT-WATER APPARATUS.
J. TYLOR and SONS' ILLUSTRATED CATALOGUE of BATH WORK, &c., to be had on application. Estimates and Plans for Fixing given.—J. TYLOR and SONS, Manufacturers, Warwick-lane, Newgate-street, London.

HEATING BY  HOT WATER.

JOHN WEEKS and CO. King's-road, Chelsea, HOT WATER APPARATUS MANUFACTURERS, Builders of every description, and of the most extensive dimensions, can be effectually warmed by Hot Water. JOHN WEEKS and CO. can give innumerable references of Churches, Dwelling-houses, Warehouses, &c. under which they have fixed their Hot Water Apparatus. Also to be seen in extensive operation at their Premises, King's-road, Chelsea.

VENTILATING STOVES! SUSPENSION STOVES! Approved by thousands of purchasers, and recommended as the two best, cheapest, most healthy, and economical fire-heaters, churches, halls, schools, warehouses, shops, counting-houses, libraries, &c. Prospectuses, with prices, sent post-free.—DEANE, DRAY, and CO. Stove Range, Iron-mongery, and Furnishing Warehouse, London-bridge.

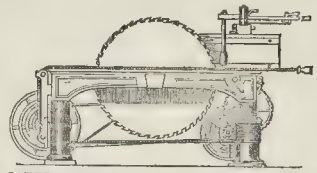
DR. ARNOTT'S SMOKE-CONSUMING GRATE
Will this Grate become universally used?
Its advantages over every other consist in—
1. A saving of 30 per cent. in fuel
2. Its being a cure for a Smoky Chimney.
3. Its not requiring one half the attention of an ordinary fire.
4. Its being perfectly safe
A Prospectus, with a Second Series of Testimonials, just issued, from all parts of the country, will be sent on application.
F. EDWARDS, SON, and CO. 42, Poland-street, Oxford-street.



PARIS EXHIBITION, 1855.
PRIZE MEDAL
AND
HONOURABLE MENTION AWARDED TO
THOMAS WALKER,
STOVE MAKER, BIRMINGHAM.
Signé NAPOLEON BONAPARTE.
The only Stove for which a Prize was awarded at the French Exhibition.
For Churches, Gentlemen's Halls Shops, &c.
The best invention of Stove ever brought before the Public.
These Stoves show a bright fire; are durable, economical, and burn from twelve to sixteen hours with one supply of fuel
Prospectuses and testimonials may be obtained at the Manufactory,
68, OXFORD STREET, BIRMINGHAM.

A PRIZE MEDAL for SUPERIOR LOCKS was awarded to J. H. BOOBBYER at the Great Exhibition of 1851, which invites inspection of Bedsteads, &c. in his Stock of Ironmongery, Brass Foundry, Nails Wrought and Cast, Copper and Tin-ware, Papier Mâché Goods, Japanned Goods, China, Glass, and Wood Furnitures of all kinds, with Patent Shifting Spindles; Dr. Arnott's Ventilator, 4s.; and the new registered Venetian Ventilator, one admired, &c. 6d. each.
J. H. BOOBBYER, 160, 161, and 162, BOOBBYER, established nearly 100 years, for the supply of Goods from the best Manufactories, at the lowest prices.
14, Stanhope-street, Clare-market, London.

CHUBB'S LOCKS, with all the recent improvements; STRONG FIRE-PROOF SAFES, CASH and DEED BOXES. Complete lists of sizes and prices may be had on application.
CHUBB and SON, 57, St. Paul's-churchyard, London; 28, Lord-street, Liverpool; 16, Market-street, Manchester; and Bilston, Wolverhampton.



JOHN TANN'S NEW PATENT RELIANCE LOCK and CHEMICAL FILLED FIRE-PROOF SAFES, DOORS, ROOMS, &c., Manufacturers of cash and deed boxes, copying presses, every description of lever locks and street-door latches. To be had at the General Lock and Safe Works, 30, Wadwick-lane, Old Kent-road. List of prices on application.—Several second-hand SAFES for SALE, at half the original cost.

GARDNER'S PATENT STEAM GENERATOR and SMOKE CONSUMER produces more steam with lessened consumption of fuel, and entire removal of smoke. These patented improvements are highly recommended for their simplicity, durability, and great economy. They are self-acting, have no moving parts, therefore require no external aid.

They are applicable to all Furnaces, Locomotives, Marine Engines, Ovens, Pottery and other Kilns, Common Fire, Kitchen Ranges, Hall and Hot-air Stoves.—Application to be made to the PATENTEE, 2, Norfolk-street, Middlesex Hospital; to Messrs. BURRIDGE and HEALY, 113, Dorset-street, Fleet-street; or to Z. D. BERRY, Albion Works, Wilton-road, Pimlico.
Testimonials, &c. may be seen upon application.

MACHINERY for SAWING, PLANING, MOULDING, &c.

SAMUEL WORSSAM and CO. beg to call the attention of Contractors, Shipbuilders, proprietors of Saw-Mills, and others, to their Improved Inventions and Adaptations in Saw Frames and Benches, Roller and Chain Planing Machines, Endless Saw Frames, and all other kinds of Machines, for Sawing, Planing, Grooving, and Moulding Wood. They have constantly on hand machinery, either wholly or partly made, so that they can at all times on short notice supply them. S. W. and CO. beg to state that they have hitherto confined their attentions to this sort of machinery, and have had the honour of supplying some of the most distinguished companies, ship builders, and contractors in the world with their machines, for home and foreign use. One of their Saw Benches, and also a smaller one, with Boring Apparatus, may be seen at the Machinery Department, Crystal Palace.—A descriptive Catalogue, with Drawings, may be had on application to SAMUEL WORSSAM and CO. Engineers, &c. King's-road, Chelsea, London.

PATENT MACHINES for WORKING on WOOD. These celebrated Machines have been awarded a number of prize medals by many scientific institutions, and also by the Great Exhibition in London, and are now extensively used by the Indian, American, and all the principal governments in Europe; also by eminent Contractors, Builders, Shipwrights Machinemakers, and other workers in wood. Their operations are in every respect perfect, either in hard or soft wood, for planing, squaring up, moulding, tenoning, mortising, grooving, rebating, sawing, and boring, which they perform in a very rapid and superior manner, at a greatly reduced cost.—Sold only by WILLIAM TURNBULL, Patentee, 23, Lawton-street, Liverpool, from whom full particulars may be obtained, and all the machines can be seen at work.

SAWING-MACHINERY for SALE.—ONE VERTICAL SAW-FRAME, adapted for cutting round or square timber up to 5 feet in length, and of any length; with forty eight saws, and everything complete. ONE SELF-ACTING CIRCULAR SAW-BENCH, 60 feet long, adapted for a saw 4½ feet diameter, and under; with a set of seven saws. ONE HORIZONTAL STEAM ENGINE, with a 9-inch cylinder and 9-feet stroke, with all the necessary shafting, drums, pillow-blocks, &c. for driving the above machines, according to a fixed plan. The machinery is quite new, and of the most modern and approved construction. The whole is complete, ready for erection, being highly finished, and is every respect first-class machinery. It is offered for sale solely on account of the owners having departed from their intention of erecting it abroad.—For further particulars apply to the makers, JOHN McDOWALL and SONS, Walkinshaw Foundry, Johnstone.

HART AND SON,
IRONMONGERS AND MANUFACTURERS,

TO CONTRACTORS. — STEAM-DREDGES and HOPPER BARGES. — TO BE DISPOSED OF, by Private Contract, a powerful STEAM DREDGING MACHINE, in excellent order—length over all, 88 feet, beam 25 feet, fitted with a 20 horse power condensing steam-engine and boiler with two furnaces, buckets, crabs, and every requisite; Twelve two-room HOPPER BARGES, with chains and crabs; one three-room ditto, and one open Coal Barge.—For further particulars, apply to MESSRS. FULLER and HORSEY, Billiter-street.

NOTICE of REMOVAL.
15, KING WILLIAM-STREET, STRAND.
Messrs. HARDMAN and CO. have removed their Offices from 402, New Oxford-street to the above address, where they have fitted up rooms for exhibiting specimens and designs of every kind of Mediæval Metal Work, Monumental Brasses, and Stained Glass Windows. London Agents, Mr. S. THOMPSON, to whom applications may be made for designs and estimates. He will also be happy to wait on any gentleman personally if desired, to receive their instructions for the execution of any work.
Metal Works: 168, Great Charles-street, Birmingham; Stained Glass Works: 43, Newhall-hill, Birmingham.

FIRE-PROOF CONSTRUCTION.—FOX and BARRETT'S PATENT.
This improved system of fire-proof construction has been most extensively adopted, and its application has been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private.
The system combines ECONOMY, with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.
The floors and roofs are formed by a combination of joists of wrought or rolled iron with concrete; so constructed that each floor becomes in effect a beam of artificial stone, with ribs of iron; the structure possessing great strength and rigidity, and forming a fire-proof foundation adapted to receive a finished surface, either of the ordinary flooring-boards, or of cement, asphalte, tiles, slate, or other material.
Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, both as superseding the necessity for cast-iron girders and brick arches, and as bringing the great desideratum of fire-proof construction, even for ordinary dwelling-houses and domestic buildings, within the reach of everyone.
Further information may be obtained of the Proprietor of the patent.—Mr. BARRETT, 12, York-buildings, Adelphi.

ESTABLISHED 1817.

REVOLVING SHUTTERS.

MESSRS. CLARK AND CO.

OF 15, GATE-STREET, LINCOLN'S-INN-FIELDS,

WILL SHORTLY BE PREPARED TO SUPPLY THEIR NEW PATENT REVOLVING SHUTTERS, MANUFACTURED IN THE BEST POSSIBLE MANNER, AND WARRANTED, AT A VERY GREAT REDUCTION OF PRICE.

Brass Sash-bars, Stall-board Plates, and every description of Metal Work connected with Buildings. Testimonials and Prospectuses forwarded.

FACING FOR BUILDINGS COMPANY—TAYLOR'S PATENT.

BUILDINGS PERFECTLY RESISTANT TO WET WITHOUT ADDITIONAL EXPENSE, OR THE USE OF COMPO,

REQUIRING THE CONSTANT EXPENSE OF PAINTING. EXTERNAL WALLS FACED WITH AN INDESTRUCTIBLE MATERIAL.

STONE-FACED BUILDINGS AT LITTLE MORE COST THAN CEMENT.

No necessity for Iron Cramps and Bond-stones, and the Stone Ashlar never injuriously weighted by the settlement of the Mortar joints of the inside Brickwork. The INSIDE of CHURCHES and OTHER BUILDINGS FACED WITH STONE instead of Plastering, Also Dining halls, Lobbies, Staircases, &c. of Private Residences. It can be had ready for fixing from the quarries at a small cost for carriage, or prepared at home. Can be used with the ordinary Bricks of any locality, and by the ordinary workman. The CHURCH faced inside and outside in this manner, and the other Buildings at SPRING GROVE HOUNSLOW, and elsewhere, can be inspected, and all particulars obtained, of

Mr. JOHN TAYLOR, ARCHITECT, OFFICES OF THE COMPANY, 40, KING-STREET, CORNER OF CHEAPSIDE.

HARTLEY AND CO.'S GLASS TARIFF FOR THE FIRST OF DECEMBER

IS NOW READY, AND MAY BE OBTAINED ON APPLICATION TO

MESSRS. JAMES HARTLEY AND CO. SUNDERLAND.

It contains :—

No. 1. TARIFF.—CROWN GLASS.
" 2. SHEET.
" 2 B. SHEET FOR EXPORTATION.
" 3. HARTLEY'S PATENT ROUGH PLATE.
" 4. PATENT FLUTED.
No. 5. PATENT QUARRY.
" 6. PATENT DIAMOND.
" 7. PERFORATED GLASS FOR VENTILATION.
" 8. PATENT PLATE.
" 9. POLISHED AND CAST PLATE.
No. 10. COLOURED GLASS AND GLASS FOR RAILWAY PURPOSES.
" 11. MISCELLANEOUS GLASS ARTICLES.
" 12. SHADES.
" 13. STAINED GLASS WINDOWS.

The whole of the foregoing Tariffs have been simplified—the nomenclature altered to correspond with the terms employed by Architects in their specifications and the nominal High Prices reduced, so that the whole is now subject to one uniform rate of Discount to the Trade.

Having now abolished all the anomalies engendered by fiscal regulations, it is believed the present Tariff will meet the general requirements of the Trade, and that Shippers will be able to compete with Glass of Foreign Manufacture in all parts of the World.

TO ARCHITECTS, BUILDERS, CONTRACTORS, AND OTHER CONSUMERS OF GLASS.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th of an inch thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th or 4 lbs. is now universally used for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, MILLS, MARKET HALLS, BATHS AND WASH-HOUSES, FACTORIES, WORKSHOPS, SHIP-BUILDING SHEDS, AND OTHER EXTENSIVE BUILDINGS.

By a carefully prepared Estimate, it has been ascertained that FOUR-FIFTHS of the ROUGH PLATE, or non-transparent Glass, consumed in the United Kingdom in 1854 was manufactured by HARTLEY'S PATENT—thus affording the most incontestable evidence of its superiority over every other article of the kind, and as being the only description of Glass suitable for the purposes above named. It combines size and strength with economy of cost, and is manufactured in sizes expressly for RIDGE and FURROW ROOFS, giving a SPAN of TWELVE FEET, at a price not exceeding, weight for weight, that of Common Crown Glass. Its non-transparency renders BLINDS UNNECESSARY, and no scorching occurs in Greenhouses glazed with it; hence the preference given to this Glass for all Horticultural purposes.

For further particulars, apply to

JAMES HARTLEY AND CO. SUNDERLAND; AND PURFLEET WHARF, EARL-STREET, BLACKFRIARS, LONDON.

Sole Manufacturers of Lockhead's Patent Perforated Glass for Ventilation.

*** *Hartley and Co.'s Glass Tariff Newspaper will be forwarded gratis, on application.*

THE SEVRES GLASS COMPANY.

SNOXELL'S

PATENT REVOLVING WOOD AND IRON SHUTTERS,

WITHOUT MACHINERY,

96, REGENT-STREET, AND AT HIS STEAM WORKS, 135, OLD-STREET.

Testimonials from Architects, Bankers, &c. of their security and durability, forwarded.

MANUFACTURER OF METALLIC DRAWN SASH-BARS, STALL-BOARD PLATES, &c.

BUNNETT AND CO.

ENGINEERS, IRON AND BRASS FOUNDERS.

Works: DEPTFORD, KENT, LONDON.

Office: 17, QUEEN-STREET, Cheapside. —— Scotch Branch: PARLIAMENTARY-STREET, Glasgow.

Original Patentees of Revolving Iron Shutters, and of the New (the fourth) Patent

INTERLOCKING CURVILINEAR REVOLVING IRON SHUTTERS,

Which are formed in the solid Lath by powerful machinery, without Hinges or Rivets and are greatly superior to all others, being CHEAPER, STRONGER, LIGHTER, and MORE SECURE, and thoroughly protected from rust by their new PATENT PROCESS OF ENAMELLING, which gives a beautiful surface of any colour, and does not require painting. Suited in their various modifications for Shops, Offices, Public Buildings, and Private Dwellings. A more simple arrangement of the same for Warehouses, Cottages, Portable Buildings, &c. from 3s. 6d. per foot super. and upwards.—B. and CO. continue to manufacture the Original Patent

CURVILINEAR REVOLVING IRON SHUTTER,

which obtained the Prize Medal in the GREAT EXHIBITION of 1851, with Hinges as usual, and which can also be protected from rust by the Patent Enamelling Process.

CAUTION. Many complaints of Iron Shutters, and much disappointment having arisen from parties having been misled by Advertisements, &c. of pretended improvements, BUNNETT and CO. beg to state that every real improvement in Iron Shutters (since their first Patent in 1837), has been introduced by themselves, the result of nearly twenty years' most extensive practical experience, during which many thousands have been manufactured by them without failing to give entire satisfaction in any instance.

BUNNETT and CO. are also the Original Patentees of Metallic sash Bars and Mouldings for Shop Fronts, Skylights, Stallplates, &c. and have now the pleasure of introducing their

NEW PATENT ENAMELLED METAL SASH-BARS, &c.

for Shop Fronts, which combine the strength of wrought-iron with the brilliancy of glass, and do not require cleaning. They are got up in every variety and style of ornament and colour, to suit architectural decorations.—Plain enamelled wrought Iron Bars for Skylights and other purposes.

All works are guaranteed of the very best description, and Architects may depend on their designs being faithfully carried out. They are respectfully requested, when intending to adopt any of BUNNETT and CO.'s Works, to see that the name is properly inserted in the specification, much inconvenience having occasionally occurred from the omission; and all parties interested in the same, are respectfully invited to view their extensive Works and Machinery in operation.

Estimates, with all necessary information, and Explanatory and Detail Drawings promptly furnished.

PLATE-GLASS.—The THAMES PLATE-GLASS COMPANY'S PATENT GLASS GRATING LIGHTS, for Cellars, Flooring, and Ships' Decks. The strength of the Lights equals that of Iron grating; can be had in sizes to suit the largest or smallest Openings; retains appearance, not slippery to walk upon, and an unobstructed Light is obtained.

THE CHEQUERED PLATE GLASS made by this Company is preferred to any other kind of obscured glass, from its crystal and brilliant appearance.

The prices of PLATE GLASS have recently been very much reduced. Sash Quality scarcely exceeds the price of ordinary thin Window-glass.

This Company manufacture Plates of all lengths, up to 20 feet long by 10 feet wide.

Contracts with the Trade for Sash Quality, are taken by the Thames Plate Glass Company, on the Lowest Terms. Address to the Secretary, Mr. G. GWILLIAM, Savoy Wharf, Strand.

By Royal Letters Patent.

THE COSMOPOLITAN GLASS COMPANY, 396, Oxford-street.

HELY and WARING, Managers.

CCC CROWN, 18 Tables, per crate, 30s.; H 16 oz. SHEET, 24d. per foot; FOREIGN SHEET, 20 feet cases, 24s. per case; CROWN or SHEET SQUARES, 100 feet boxes, 2d. per foot; HARLEY'S PATENT ROUGH PLATE, from 6d. and PERFORATED VENTILATING GLASS, 1s. 6d. per foot; CRYSTAL SHEET GLASS, 4d., 6d. and 8d. per foot; FLASHED RUBY, and GROUND SHEET, 4d. ENAMELLED, 8d. per foot. Tiles and Slates from 6d. each. Sashes primed and glazed. HELY'S PATENT GAS SHADE SCREEN, for INDICATING and ADVERTISING at NIGHT.

Catalogues and Prospectuses free.

E. and W. H. JACKSON beg to call the attention of Builders and the Trade to the LOW PRICES of their PATENT PLATE GLASS, BRITISH PLATE, silvered and for glazing, of unrivalled quality and finish; ROUGH PLATE, CROWN, SHEET, COLOURED, and ORNAMENTAL GLASS, in every variety, of the best manufacture, at the lowest terms. Designs and estimates furnished for ornamental windows, either for house or church decoration.—All applications for estimates and lists of prices to be made at their warehouse, 113, OXFORD-STREET.

CRYSTAL WHITE SHEET GLASS,

First, Second, and Third Quality, in Cases of 100, 200, and 300 feet, suitable for Pictures and superior Glazing, from 3d. to 6d. per foot; also in Cases of 100 and 200 feet, assorted sizes. ACTON'S COOKERY-BOOK THOROUGHLY REVISED.
Newly revised and much enlarged Edition, with additional Plates and Woodcuts, in fcp. 8vo. price 7s. 6d.
MODERN COOKERY for PRIVATE FAMILIES reduced to a System of Easy Practice in a Series of carefully tested Receipts, in which the Principles of Baron Liebig are applied to Culinary Science, as much as possible applied and explained. By ELIZA ACTON.
"A much enlarged edition of this useful collection of receipts has lately been published. The preface seems particularly worth attention. It deprecates the waste so common in kitchens, and gives good cookery to be one of the principles of limited income as well as of wealth."—*Morning Chronicle.*
London: LONGMAN, BROWN, GREEN, LONGMANS, and ROBERTS.

In two Volumes, 8vo. with nearly 1,600 Woodcuts, price 60s.
DR. URE'S DICTIONARY of ARTS, MANUFACTURES, and MINES: containing a clear Exposition of their Principles and Practice. The Fourth Edition, much enlarged and corrected throughout.
"These volumes of Dr. Ure's consist chiefly of original and exact treatises written with much accuracy and care that they may be universally resorted to as authorities,—as indeed the former editions have been,—as well by artists and manufacturers as by British and French scientific writers. The author has throughout the entire work kept most seriously before his mind the one object of promoting the best and most economical development of the arts and manufactures, and has produced a work which altogether surpasses every other of its kind with which we are acquainted."—*Mechanics' Magazine*
London: LONGMAN, BROWN, GREEN, LONGMANS, and ROBERTS.

IMPORTANT to the ENGINEERING PROFESSION.—SAFE and RAPID TRANSMISSION of DOCUMENTS.—Plans, Deeds, Law Papers, Sample, and Articles of private use, &c. forwarded daily at THREE p.m. to all parts of the Continent, with the Mails through out, by the CONTINENTAL EXPRESS PARCELS AGENCY, of which the proprietors are the sole correspondents of the Royal Prussian Post-office, the Belgian Government Railway, and agents of the mail packets between Dover and Ostend. Rates fixed and in detailed Tables of which, with every information, to be had gratis, on applicant on at the Chief Office, 52, Gracechurch-street, London.
Parcels to be sent the same day must be at the Chief Office by THREE p.m.

JAMES PILBROW, F.S.A. &c. Civil Engineer, Tottenham. In order to prevent error or misconception on the part of his clients, friends, and business connections, feels himself called upon to point out a singular error which occurs in the "Post-Office Directory," 1857, (just published), wherein it would appear that he is one of a firm of Engineers and Draughtsmen; such is not, nor ever has been the case, nor does there exist any such firm as that of "EDWARD and JAMES WALKER." The Publisher of the Directory, having been apprised of the mistake, has undertaken to rectify it immediately, and explain it in his reissue for MARCH next.
Post-chaise, December 18, 1856.

MATHEMATICAL DRAWING INSTRUMENTS.—JOHN ARCHBUTT, 20, Westminster-Bridge-road, Lambeth (near Astley's Theatre), begs to call attention to his Stock of Instruments manufactured by superior workmen. The prices will be found considerably lower than ever charged for articles of similar quality and workmanship. Rules, scales, tapes, &c. at equally low prices. An illustrated price-list will be immediately forwarded, free, on application.
N.B. A few New and Second-hand Levels and Theodolites always for Sale

AN ACCOUNTANT, of ability and experience, undertakes to MAKE UP ACCOUNTS in arrear, and keep the books of builders, contractors, tradesmen, and others all posted upon very low terms. First-rate references to character, &c. given.—Address, S. V. Office of "The Builder."

TO SURVEYORS.—FOR SALE, a DIAL, on tripod stand, in case; RULE, with scales and slaves; LEVELLING RULE, in case; DRAWING-BOARD, on trestles, with drawer; 4 DRAWING-BOARDS; 2 SQUARES, &c. (magneter or separate). A PUG-MILL FOR SALE.—Apply at 88, Blackfriars-road, Southwark

DURABILITY of GUTTA PERCHA TUBING.—Many inquiries having been made as to the Durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in giving publicity to the following letter:—FROM SIR RAMSAY MUNDAY RIS, Bart., VENNOR, ISLE of WIGHT.—Second Testimonial.—"March 18th, 1856.—In reply to your letter, received this morning, respecting the Gutta Percha Tubing for Pump service, I can state, with much satisfaction, it answers perfectly. Many Builders, and other persons, have lately examined it, and there is not the least apparent difference since the first laying down, now several years, and I am informed that it is to be adopted generally in the houses that are being erected here."
N.B. From this Testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.
THE GUTTA PERCHA COMPANY, PATENTEES, 18, WHARF-ROAD, CITY-ROAD LONDON

HANCOCK'S PATENT VULCANIZED INDIA-RUBBER TUBING, HOSE-PIPES, WASHERS, ENGINE-PACKING, both round and flat, and SOCKET-RINGS, for Hot-water-pipes. Vulcanized Rubber Springs, and Solid Round Rubber Cord of all sizes of any length. Billiard Cushions and Rubber Strips, cut to any pattern for bucatelle tables.
Dying-dresses of superior make, and improved Vulcanized Rubber Supply-pipes for ditto.
Vulcanized Rubber, in sheets, from three to four feet wide, and of any thickness. Air-beds, Pillows, and Cushions inflating Portable Baths, Invalid Cushions, and Articles of this kind made to any pattern to order
N.B. All communications and orders punctually attended to, addressed to the Manufactory, JAMES LYNE HANCOCK, Goswell-mews, Goswell-road, London.

The Builder.

VOL. XIV.—No. 724.

EARL DE GREY presided at the opening meeting of the ARCHITECTURAL EXHIBITION, in the Suffolk-street Galleries, on the evening of Tuesday, the 16th, when there was a very large attendance of members of the profession and lovers of the art, including a considerable number of ladies. Depending merely on recollection we may jot down as amongst the gentlemen present—Professor Cockerell, Professor Donaldson, Mr. Fergusson, Mr. Henry Baker, Mr. Cockerell, jun. Mr. Sancton Wood, Mr. Griffith, Mr. Papworth, Mr. Edmeston, Mr. Ashpitel, Mr. Clarke, Mr. T. H. Wyatt, Mr. Sidney Godwin, Mr. Thoms, Mr. C. H. Smith, Mr. Houle, Mr. Stevens, of Derby; Mr. Smith, of Hereford; Mr. Norton, Mr. Jennings, Mr. Truefitt, Mr. Edward Hall, Mr. James Wylson, Mr. Field, Mr. Woodthorpe, Mr. Kerr, Mr. Geo. Morgan, Mr. Lewis, Mr. Henry Hart, Mr. Burnell, Mr. Blatchley, Mr. E. Richardson, Mr. G. R. Corner, the Rev. Mr. Boutell, Mr. Chas. Mayhew, the Rev. Joseph Hunter, Mr. Parker, of Oxford, Mr. Thomson, &c.

The president on taking the chair, said he had been told he might be of use by presiding on that occasion, and there he was. A quarter of a century ago architects in this country were not numerous, and these did not work together. Now, however, it was different, and they formed an important body. If not the first society that was established to bring the profession together, the first that came under his notice was the Royal Institute of British Architects. Why he was made the president of that body he could scarcely say, as at that time he had no special knowledge of architecture: but it was thought, and he himself always was of opinion, that a mixture of classes was desirable; moreover, it might have been considered that as a man without any interested motives, or any particular theory to advance, he was better fitted for it than a member of the profession; and it was, perhaps, on that ground that he was selected. This was the commencement of his connection with architects and architecture, and he should be most ungrateful if he did not acknowledge at all times the kindness, he might say affection, he had been received with. When he afterwards became his own architect, which he was compelled to admit he did, he had no doubt the profession forgave him with the impression that, finding difficulties, and making mistakes himself, he would so learn to appreciate and forgive others. The second institution he would speak of was the Architectural Museum, an association with an entirely different but to another class equally useful object. An architect, at a recent meeting there, had spoken of the advantage which had resulted under his own eye from leading workmen from the country to visit the Museum; and he, the president, had had cases wherein, if he could have sent men to study the various specimens contained in the Museum, he would gladly have done so. There could be no doubt of its great value. The Architectural Exhibition was the third, and that differed altogether from the other two. The Institute was for the hard heads of the profession; the Museum for the hard hands of the operative; and the Exhibition was for the encouragement of a general feeling on the part of the public, in behalf of the art. The friends and supporters of the exhibition need not all be architects: all might gain by assisting it. He thought it likely to be of the highest service in many ways. An architect to be great should be an artist,—at any rate should have the tastes and feelings of the artist,—and this institution was valuable in fostering that taste. The collection was not confined to designs, but included sketches and views of great merit. He must certainly give the managers credit for another thing, and that was for interesting so many ladies in the Institution. Once get the ladies to support a movement and it was sure to succeed. Even amongst the exhibitors there was one lady, and he must remark that her works did her infinite credit. He would further take the liberty of saying to the ladies, you cannot do a better thing than encourage in your children love of the fine arts and a taste for drawing. It was advantageous in every station, and not least to those who needed no profession, for it gave them a pursuit and kept them out of mischief. Some time ago he had filled the office of Lord-Lieutenant of Ireland: her Majesty probably did not select him on account of any knowledge he might have of drawing, but he would tell them how it operated in one instance, although not very important. When he went into the viceroyal residence he adopted as a dressing-room an apartment not before used, and unable otherwise to make the keeper comprehend what he wanted to fit it for use, drew out a plan of the arrangement he desired, and a sketch of a washing-stand; on which Paddy rushed off and declared throughout the town that "Ireland had never had such a man for Lord-Lieutenant, for he could draw a washhand-stand as well as an upholsterer." He had said, however, enough, but if he had been presiding at a dinner for the advantage of the Institution, he certainly would have added, "Prosperity to the Architectural Exhibition," with three times three.

Mr. Ashpitel, the treasurer, then made some observations on the financial position of the exhibition. When the committee decided on taking the galleries in which they then were, it had been thought a bold step; but the lectures last year had proved very successful: much of the balance on the wrong side had been paid off, and it only needed the exertion of its friends to give him, the treasurer, what he had never yet had, the burden of a balance. Briefly alluding to a few points connected with the exhibition, he would remind them that there were from 400 to 500 drawings gathered together in all styles, and it was an interesting feature, that it included a number of the designs sent in for three recent competitions, Lille, Liverpool, and Rotherham. If anything could check committees, and prevent hole-and-corner work, it would be the knowledge that the various designs would afterwards be exhibited here. At Lille the successful competitor had been put on one side, and the execution of his design given to a Frenchman; and he had been given to understand that at Liverpool the successful competitor would be treated in the same way. He could understand such a thing occurring between two foreign countries, but wholly amongst Englishmen he could not. The designs in the room, he was glad to see, were not a parcel of splendid impossibilities. the majority of them had an end, an aim, a use, and a purpose. The collection of building materials was a valuable part of the exhibition. It was of the utmost importance to know how to carry out a design efficiently at the least possible cost. It would be observed that there was much originality in some of the designs, and this was of great consequence. The mere copyist would never leave what succeeding ages would value. Some of the endeavours wanted taming down; but reflection would do that. It should be remembered that the perfectness of an art was never effected by an individual, it was the result of united efforts; and he did hope that the Architectural Exhibition would give rise to a lasting school of architecture in England.

Professor Cockerell said, as a veteran student of art amongst them, a proposition had been confided to him which he was sure they would confirm unanimously: it was a vote of thanks to the Earl de Grey for his kindness in presiding on that occasion. The noble president had been modest in expressing his own qualifications, but all who knew him knew the zeal he had exhibited in favour of their art. As president of the Institute, the Earl had invariably shown the greatest attention to its interests, and kind bearing to the members. There was a general call for the right man in the right place, and the president certainly fulfilled the dictum. It was satisfactory to see our princes finding interest in the art: artists needed princes, but it should be remembered at the same time that princes needed artists. An examination of the collection would show the progress our art was making: many new masters had shown themselves, and there was an affluence of clever works. He had every reason to believe that this our day would mark its own character, and leave monuments worthy of our age and advanced position.

The motion was carried by acclamation, and the president, in reply, said that when he took the chair at the first meeting four years ago, the bantling had been christened, but was a weakly infant: the nurses, however, had done their duty well, and it might now be regarded as a thriving child, able to stand on its own legs, and hold up its head in the world. He would regard all who were present on that occasion as godfathers and godmothers, and, with such an army of sponsors, its progress and success could not fail to be rapid.

The interval from the last exhibition having been remarkable more for *projects* than for completed buildings, it was perhaps hardly to be expected that the exhibition of the present year should present any great advance upon its predecessors. An unusual number of competitions, and those of a very important character, are still in preparation; and, as no amount of illtreatment seems to prevent the aspiring architect of our day from adventuring in these *lotteries*, we may suppose that the circumstances referred to have told much against the year's gathering in Suffolk-street. The day may arrive when the objects now sought through competitions will be attained by the profession through the medium of an exhibition such as that which we hope will one day exist,—and to this end no less than for public interests, the present collection of works deserves to be visited by all who can conceive the importance which architecture, as art and science, necessarily has so long as beauty is sought for in all things, and places of habitation are required.

Many leading members of the profession are still absent from the walls. We continue to regard as the main object of the Exhibition, the illustration of what has been carried into execution during the year. We will just venture to point out a few omissions, such as it should be the object in future to prevent. In church architecture we do not find any sufficient information by plan and section, or even by views, of what has been doing in the restoration of the different cathedrals. Several of the best of the new works of the year are not shown: for example, some by Mr. Scott and Mr. Ferrey; the decoration and fittings of the Salford Catholic Cathedral, by Messrs. Weightman, Hadfield, and Goldie; and Mr. Teulon's Church in Lambeth, and some others, given in our pages. In the class of public buildings we may name the works at the Houses of Parliament; at Somerset

House; the Junior United Service Club; the Surrey Gardens Music Hall; the Schools for the Department of Art, at Brompton; the City Bank; the buildings at the City of London Cemetery: the new Music Hall at Birmingham; the Birmingham and Midland Institute; the Manchester Art-Treasures Exhibition Building, in course of erection, and the Manchester Mechanics' Institution; the tower to the new Townhall at Leeds; the additions to Exeter College, Oxford; the Wellington College, Sandhurst; the Victoria Military Hospital; the Scutari monument, and several other monuments; and the new Ball-room at Buckingham Palace. Illustrations of some of these and other works have been engraved for the *Builder*, but should have been found also in the Architectural Exhibition. In consequence of such omissions, as we took occasion to show last year, erroneous notions as to the state of actual architecture in our day, get disseminated amongst the public. The fact is, the architects who are most actively engaged in practical architecture, are precisely those who are least able to contribute drawings; and this circumstance should be understood by the critics of the daily and weekly press.

We shall notice some of the principal works hereafter, and in the meanwhile we again invite our readers to give their earnest aid to the Exhibition. The profession are greatly indebted to the exertions of Mr. Fergusson, Mr. Edmeston, and other leading members of the committee.

We are glad to be assured that there is now no doubt of the success of the undertaking; and the opportunity which all may have of visiting the galleries and attending lectures during the season, at a nominal rate, will, we hope, at once be taken advantage of. Architecture for the general mass of the public, still offers "a new pleasure," and this will be derived as are intellectual gratifications—those which are most valuable and most pleasurable, as well as enduring,—after the subject is opened, and the study is commenced,—as may be done from the Exhibition and lectures in Suffolk-street.

We will only add now that the two rooms devoted to materials and manufactured articles are well filled, and very much advantage will result from that portion of the Exhibition.

ONSLOW CHAPEL, QUEEN'S ELM, BROMPTON.

In the early part of 1852, the Rev. J. Bigwood was requested by a small congregation, gathered together in Thurloe Chapel, Alexander-square, Brompton, by the Rev. James Macaulay, of the Free Church of Scotland, to become their minister. He consented; and on June 10th, 1852, about forty persons, including Episcopalians, Presbyterians, Independents, and Baptists, met, and passed a resolution forming themselves into a church. The congregation increased, and have now built a chapel for themselves near Queen's Elm, in the Brompton-road.

The foundation-stone of the edifice was laid on the 6th of May last, by the Hon. A. Kinnaird, M.P. and is in the Decorated style. The materials employed externally are Kentish ragstone for the plain portions of the walls, and Bath stone for the dressings of the doorways, windows, tracery, weatherings, and copings. The elevation next the roadway consists of a central gable, in which is a window of four lights, with a small tower at each side, surmounted by a spire partly perforated. These towers have square bases, with octagonal superstructures on them, surmounted by open belfries and spires. On each side of the chapel are five pointed windows of two lights, with tracery heads. In the vestry at the east end are two pointed windows, filled with stained glass. The clear internal size is about 67 feet long, and 47 feet in width, and the height 42 feet to the crown of the arch under the timbers of the roof. This area also comprehends a minister's vestry. There is a gallery at the west end, which projects 14 feet from the walls, and altogether the chapel is computed to contain 750 hearers. The roof does not show its constructive timbers. It consists of a large pointed arch, which spans the area between the side walls. This is divided into compartments, by main beams springing from the piers between the windows, dividing it into six divisions, between which are panels formed by intermediate ribs. The ceiling is fawn-coloured. Mr. Mumford was the architect; Mr. T. Rudkin the contractor. The amount of the contract was 2,369*l.*; entire cost, including heating, lighting, furniture, &c. about 3,500*l.* There is school accommodation at the back for 300 children.

ON THE LEADING PRINCIPLES IN THE COMPOSITION OF ORNAMENT OF EVERY PERIOD.*

Ornament is the result of an innate desire in man to produce for himself forms of beauty, in imitation of the works of nature by which he is surrounded: he sees everywhere that the Creator has made all things not only useful, but beautiful; and he in turn desires to create.

There is scarcely a people, in however early a state of civilisation, with whom this strong desire does not exist. It is absent in none, and it grows and increases in the ratio of their progress in civilisation.

It is to this feeling that we must ascribe the tattooing of the human face and body, resorted to by the savage to increase the expression by which he seeks to strike terror on his enemies or rivals, or to create what appears to him a new beauty. As we advance higher through the whole range of civilisation, from the decoration of the rude tent or wigwam to the sublime works of a Phidias or a Praxiteles, the same feeling is everywhere apparent. Man's highest ambition is to create, to stamp on this earth the impress of an individual mind.

From time to time a mind, stronger than those around us, will impress itself on a generation, and carry with it a host of others following in the same direction; yet never so completely as to destroy the individual ambition to create. Hence the formation of styles, and the modification of styles.

Ornament, with every people, precedes the development of every other form of art. Architecture, one of the earliest, adopts ornament, does not create it. As we find that to ornament is, with every people, one of the first natural instincts; so we shall find, that in the exercise of this instinct they could not do otherwise than follow natural laws.

The ornament of a savage, being the result of a natural instinct, is necessarily always true to its purpose; whilst in much of the ornament of civilised nations, the first impulse which generated certain received forms being enfeebled by constant repetition, the ornament is oftentimes misapplied. And instead of first making the most convenient form, and adding beauty, all beauty is destroyed, because all fitness, by superadding ornament to ill-contrived form. If we would return to a more healthy condition, we must even be as little children, or as savages: we must get rid of the acquired and artificial, and return to and develop our natural instincts.

It would be far beyond the limits of the powers of any one individual to attempt to gather together illustrations of the innumerable and ever-varying phases of ornamental art. It would be barely possible if undertaken by a government, and even then it would be too voluminous to be generally useful. All, therefore, that I have proposed to myself in forming the collection which I have ventured to call the *Grammar of Ornament*, has been to select a few of the most prominent types in certain styles closely connected with each other, and in which certain general laws appeared to reign independently of the individual peculiarities of each. And it will be my endeavour to show, that in all the varying phases of ornamental art these leading principles are the same as those which every work of nature displays.

I have ventured to hope that, in bringing into immediate juxtaposition many forms of beauty which every style of ornament presents, I might aid in arresting that unfortunate tendency of our time to be content with copying, whilst the fashion lasts, the forms peculiar to any bygone age, without an endeavour to ascertain, generally completely ignoring the peculiar circumstances which rendered an ornament beautiful, because it was appropriate, and which, as expressive of other wants, when thus transplanted, as entirely fails.

It is more than probable that the first result of sending forth to the world this collection will be seriously to increase this dangerous tendency, and that many will be content to borrow from the past those forms of beauty which have not already been used up *ad nauseam*. It will be my endeavour to arrest this tendency, and to awaken a higher ambition.

By endeavouring to search out the thoughts which have been expressed in so many different languages, we may hope to find an ever-gushing fountain in place of a half-filled stagnant reservoir.

In the prosecution of this work, and in the study of ornament, I have gathered these main facts:—

First. That whenever any style of ornament commands universal admiration, it will always be found to be in accordance with the laws which regulate the distributions of form in nature.

Secondly. That however varied the manifestations in accordance with these laws, the leading ideas on which they are based are very few.

Thirdly. That the modifications and developments which have taken place from one style to another have been caused by a sudden throwing off of some fixed trammel, which set thought free for a time, till the new idea, like the old, became again fixed, to give birth in its turn to fresh inventions; changes in the general character of ornament which are analogous in their results to organic changes in architecture, such as the substitution of the arch for the horizontal beam by the Romans, and the pointed arch of the Normans for the round arch of their predecessors. They have the same influence in the history of Art as the sudden discovery of a general law in science, or the lucky patented idea which, in any work of industry, suddenly lets loose thousands of minds to examine and improve upon the first crude thought.

Lastly. I will endeavour to show that the future progress of ornamental art may be best secured by engrafting on the experience of the past the knowledge we may obtain by a return to nature for fresh inspiration. To attempt to build up theories of art, or the formation of a style, independently of the past, would be an act of supreme folly. It would be at once to reject the experiences and the accumulated knowledge of thousands of years. On the contrary, we should regard as our inheritance all the successful labours of the past, not blindly to follow them, but simply as guides by which we may find the true path.

We have, then, first to consider what are the laws of form which we find in nature, and which are universally obeyed in all those archaic periods of art of which the works command, and ever will command, the admiration of the world.

If we examine any work of nature — a man, an animal, a tree, a flower, — we shall at once see that, independently of the beauty which results from the fitness of any part for the duty it has to perform, there is another beauty superadded which bears the same relation to the general structure that ornament does to the architectural members of which it forms a part. It is, in fact, ornament. There is no necessity for the covering of the muscles or the bark of a tree to assume the beautiful form which nature has given to it, still less for the decorative beauty superadded, both of surface, ornament, and of colour, except to satisfy certain faculties which the Creator has implanted in us. Man, besides his intellect, possesses sentiments and affections, and the delight we experience in looking upon any work of perfect beauty results from all these faculties being thoroughly satisfied, leaving the mind in a state of repose. We therefore lay it down as an axiom,—

1. *That true beauty results from that repose which the mind feels when the eye, the intellect, and the affections, are satisfied from the absence of any want.* This test may be applied to ornament in many ways.

Egyptian ornament was not only constructed in a way to satisfy the eye by the beauty of its form, the mind by the propriety of its applica-

* From the "Grammar of Ornament," read before the Royal Institute of British Architects, December 15, 1856, by Owen Jones, Fellow, Corresponding Member of the Academy of St. Fernando, of Madrid.

ONSLOW CHAPEL, QUEEN'S ELM, BROMPTON.

tion, but also as a religious symbol it appealed to the sentiments and affections. It was complete in itself and the mind of the beholder was in as perfect rest as when looking on its natural type. Egyptian constructive ornament was always symbolic: the column only a few feet high, or one 40 feet or 60 feet, as at Luxor or Karnac, was an enlarged papyrus plant; the base representing the root, the shaft the stalk, and the capital the full-blown flower, surrounded by a bouquet of smaller plants, tied together by bands. Not only did a series of columns represent a grove of papyri, but each column was in itself a grove; and we find on the walls of Egyptian buildings representations of groves of papyri in various stages of growth, which would only have to be assembled as they stand, and tied round with a string, and we should have the Egyptian shaft, with its highly ornamented capital. Egyptian art, although the oldest, is, in all that is requisite to constitute a true style of art, the most perfect. The language in which it reveals itself to us may seem formal and rigid, but the ideas and the teachings it conveys to us are of the soundest. All other styles approach perfection only so far as they follow, in common with the Egyptians, the true principles to be observed in every flower that grows. Like these favourites of nature, every ornament should have its perfume, *i.e.* the reason of its application. It should endeavour to rival the grace of construction, the harmony of its varied forms, and the due proportion and subordination of one part to the other found in the model. When we find any of these characteristics are wanting in a work of ornament we may be sure that it belongs to a borrowed style, where the spirit which animated the original work has been lost in the copy.

Greek ornament, not being a symbol possessing only beauty of form and fitness of application, leaves a want, which is only supplied when the ornament is used as an accessory to painting and sculpture. The Moors and Arabs, on the contrary, being debarred from these adjuncts, but possessing the same refined instincts as the Egyptians, by interweaving with their ornaments inscriptions appealing both to the highest faculties and sentiments, obtained that same repose which we find in every work of nature, however humble, and which we hold to be the first condition of a work of art.

2. Again, we never find in nature any superfluous ornament: there we always find *construction decorated, decoration never purposely constructed.* When an ornament is constructed falsely, appearing to give support which it does not, it fails to engender the feeling of repose by neglecting to satisfy the intellect, however much its beauty and other charms may appeal to the eye and the affections. This law, so constantly violated in modern times, was universally obeyed in all the best periods of art. The Egyptians and the Greeks always obeyed it; as did likewise the Arabs, Moors, Indians, and even the Chinese. With the Moors especially, not only does all their ornament obey this law of decorating construction, but the constructive idea is carried out in the details of the ornament itself. The Romans, the artists of the Renaissance, the Italian, and the later Gothic periods, equally disregarded it. We derive farther, from observation of Nature's works, another proposition, viz. that—

3. *Beauty of form is produced by lines growing out from the other in gradual undulations: there are no excrescences: nothing could be removed and leave the form equally good or better.*

There is nothing more characteristic of true art than the gradual undulation of form. In nature all transitions of curved lines from curved, or of curved lines from straight, are gradual. There is nothing abrupt, and this is the feature which distinguishes in all things the elegant and refined from the coarse and vulgar: it is the property of pure form, either in rest or in motion.

The gradual undulation of form is the secret of success in Greek art: the want of it is the sign of the decline of the Roman. It was possessed by the Gothic artists of the thirteenth century, and even by those of the Renaissance, but it lasted with them only for a time.

With Michelangelo and his followers commenced a new era. Grace of outline and delicacy of undulation were abandoned for boldness of conception and wonderful fertility of execution, which, whilst appealing more strikingly to the intellect and the senses, left unsatisfied the more refined instincts and the affections. The same change took place in ornament: from the delicate relief and modulation of the Renaissance artists, those of the sixteenth and seventeenth centuries returned to the coarser modelling of the Romans. The refinements which the early artists obtained by a return to nature for fresh inspiration were gradually forgotten, and ended in a style which for want of a name has been called the Rococo. In modern times a return to a more moderate relief was obtained in this country by the works of Adams, Flaxman, and Sir John Soane: but it took but slight root, and the great rush upon Roman architecture in the time of George the Fourth deluged the country with ornament outrivalling in coarseness all Roman models, and ended in a state of disorder, in the misapplication and imperfect modelling and drawing of ornament, from which we are now but slowly recovering. The artists of France have been kept within bounds. Percier and Fontaine exercised a similar influence in France to our Adams here—an influence, which from the more general academic system in France, has not been lost sight of; and the abundant studies of so many French artists in Italy have resulted in forming in France a style of ornament which borders on the other extreme, and from its flatness often verges upon insipidity.

If we examine the leaf of a plant or a tree, we shall find that, independently of the beauty of the general form, there is another beauty which arises from the exquisite way in which all the lines on the surface are distributed over its area.

However varied the general outline of the leaf, it will be found to be arranged in masses, the areas of which always diminish in regular proportion. Up the centre of each mass is a main sap-feeder; and as the object clearly is to distribute the sap to the extremities of the leaf in the readiest way, however varied the form, the main sap-feeders will divide the masses into proportionate areas. Every portion of these spaces is again subdivided in the same way; with such perfection, that the skeleton of a dissected leaf presents the appearance of a series of graduated tints in which there is no break.

Now we shall find in all decorative ornament of the best period that this natural law has been instinctively obeyed, not only in the distribution of form on the individual ornament, but also in the general arrangement of a group, and we therefore venture to lay down as an axiom that, in the composition of ornament,—

4. *The general forms should be first cared for: these should be subdivided and ornamented by general lines: the interstices may then be filled in with ornament, which may again be subdivided and enriched for closer inspection.*

The Greeks were most happy in their recognition of this law; but the Moors, perhaps, have more fully carried it out. With them ornament adapts itself so perfectly to the general form which encloses it, that it as often would appear to have suggested, as to have resulted from it.

5. We observe also another natural law in the works of all the Oriental nations, that in their surface decoration ALL LINES FLOW OUT OF A PARENT STEM: EVERY ORNAMENT, HOWEVER DISTANT, CAN ALWAYS BE TRACED TO ITS BRANCH AND ROOTS.

6. *All junctions of curved lines with curved, or of curved lines with straight, should be tangential to each other.*

Nature is said to abhor a vacuum: it may equally be said she abhors an angle. In the whole range of her vegetable productions it will be impossible to find a line butting on another line, every branch of a tree, every stem of a leaf, every vein upon the leaf, is always softened at the point of junction with another by a re-entering curve. This also is a natural law universally obeyed in the best periods of art, equally violated when art declines. It is always present in Greek ornament, often absent in the ornament of Pompeii.

Another universal law which may be recognised in every work of nature, and which should be observed in every assemblage of forms, as well as in each simple ornament, is, that whenever we recognise perfect harmony in any composition, it will be found that the straight, the inclined, and the curved, are properly balanced and contrasted. When any of these forms are wanting, the eye is as much disturbed by an unsatisfied want as when, looking on any composition of colours, any one of the three primaries is absent. In all the geometrical patterns of the Egyptians and all the Mahommedan races this is especially cared for, as well as by the Greek and by the Gothic architects in all their

tructures. It is daily and hourly neglected in modern times. It is one of the most serious faults in the decorations of the interiors of houses, and absolutely fatal in articles of costume, where lines are constantly running in one direction uncorrected, and as constantly tending to destroy the repose of the forms which they are designed to decorate and develope.

We have thus seen that the natural laws of decorating construction, the gradual undulations of form, proportionate division and subdivision of general masses; the radiation from a parent stem, tangential curvature of lines; the balancing and contrast of the straight, the inclined, and the curved, are universally obeyed in every perfect work of ornament.

I will now endeavour to show, in the second place, that *however varied the forms which have been generated in the several styles of ornament in accordance with these general laws, the leading ideas on which they are based are very few.*

The ornament of Egypt is founded on few types, and these natural types. The lotus and papyrus, growing on the banks of the Nile, symbolising the food for the body and mind; the feathers of rare birds, which were carried before the king as emblems of sovereignty; the palm branch, with the twisted cord made from its stems; these are the few types which form the basis of that immense variety of ornament with which the Egyptians decorated the temples of their gods, the palaces of their kings, the covering of their persons, their articles of luxury, or of more modest daily use, from the wooden spoon which fed them, to the boat which carried their similarly adorned embalmed bodies across the Nile to their last home in the valley of the dead.

In Greek ornament the types are still more limited: the honeysuckle and the acanthus are as universal as the lotus and papyrus with the Egyptians. There is much, however, of Greek ornament which is rather constructed on the general principles which reign in all plants, than representing any particular plant. The laurel, ivy, and vine are sometimes used as borders on vases surrounding pictures, and may be said to be in such cases symbolical; but as a general rule they were not so, and must be considered simply decorative features, which would have afforded but little satisfaction in themselves when deprived of the pictures to which they were the adjuncts.

The Romans, through the Greeks, adopted the acanthus almost exclusively. Their carved ornaments are always modifications of the acanthus: in the painted decorations the acanthus forms the ground work on which are engrafted representations of natural plants and flowers.

There is no form which has taken such deep root as this acanthus leaf, and this we think because it contains within itself all the true principles of ornamentation. The Romans, however, were limited in the use of it by the fixed law that each acanthus leaf grew out of another; but when this law was abandoned in the Byzantine period, it led to the formation of continuous scroll-work, which is so common in the MSS. of the twelfth and thirteenth centuries. The artists of the Renaissance, in returning to the acanthus, returned also to this law of its use; and, like the Roman, all their ornaments grew one out of the other.

In the ornament of the thirteenth century, again, there are but few typical forms. The most endless variety of combinations of foliage is produced by a repetition of trefoil and cinquefoil leaves, which have scarcely any particular relation to any natural plant, but being constructed on true principles are necessarily beautiful. In the later Gothic period, as a much greater approach to nature was attempted, a greater variety of types were used; but the ideal representation formed on a recognition of a natural principle was far beyond, in effect, the result obtained by the imperfect attempt at the natural. In violating consistency in the application, all true beauty was lost.

In the purely conventional ornament of the Oriental nations, it is still more remarkable how few are the generating forms.

The secret of success in every work of ornament is the production of a broad general effect by the repetition of a few simple elements: variety should rather be sought in the arrangement of the several portions of a design than in the multiplicity of varied forms.*

ON THE VARIOUS METHODS NOW BEFORE THE PUBLIC, OF INDURATING AND PRESERVING ARCHITECTURAL STONEWORK.†

The first patent for indurating and preserving stone which I shall notice was granted to François Teychenne, a foreigner, residing abroad: it is dated February, 1847: it afterwards became the property of William Hutchison. I believe the works are now carried on at Tunbridge Wells, and the patent belongs to the "Indurated Stone Company." In general terms the operation may be thus described. The stone to be indurated must be worked to the requisite form, then thoroughly dried in a heated chamber, or by some other convenient method. The solution, in which the stone is to be immersed, is composed of resin dissolved in turpentine, oil, wax, tallow, or other fatty substance: the materials are to be melted in a boiler of suitable size, and while they are in a state of ebullition the stones are put in, and the operation of boiling is continued until they are impregnated to a sufficient depth from the surface. In ordinary cases two hours' boiling will impregnate the stone one inch.

The next invention for a similar purpose, patented by Barnabas Barrett, is dated October, 1853: it is now worked in the name of "The London Stone-Hardening and Preserving Company:" their office was at 11, Moorgate-street. The following is Mr. Barrett's mode of procedure. The stones to be indurated are first completely worked to their required form, then placed in a chamber or oven, which is heated from 50 to 60 degrees, to drive out whatever moisture they may contain. In all cases where it is practicable, the stones are to be operated upon in an air tight chamber, exhausted, or partially so, and then the indurating mixture, whether hot or cold, is allowed to trickle down or flow into the chamber to fill the vacuum; the effect of which will be that the liquid indurating substance will readily find its way into the pores of the stone, and become incorporated therewith. Mr Barrett's indurating mixtures are classed under six varieties:—the first is composed of resin dissolved in naphtha, spirits of wine, or turpentine, mixed with gutta percha, dissolved in coal tar naphtha, and when warmed with steam heat, mixed with oil or any other greasy materials; after which "anti-corrosia" is ground down and well mixed with the above. Another mixture is composed of unslacked lime, with oil or soft soap, and Russia tallow, mixed with it whilst slacking; when well slacked, to be placed in a copper with alum water and "anti-corrosia," ground-up copperas and a solution made from potatoes and beer settlings: when well boiled and mixed together, they are left to settle, and the solution is drawn off. These various preparations are rather complicated: I will, therefore, not occupy more time by going further into Mr. Barrett's inventions.

The next patent for the same purpose, granted to John Benjamin Daines, is dated April, 1856. The specification describes the invention as "An improved mode of treating surfaces of soft and porous stone, &c. for the preservation of the same from decay." Mr. Daines's chief object is to impart to the exterior surfaces of stone or compo buildings, the power of resisting the destructive effects of the atmosphere and of damp; and in some measure to neutralize the tendency to alkaline efflorescence. To produce these results, he first applies a solution of sulphate of zinc or a solution of alum; after which, sulphur dissolved in linseed or other oil. This mixture is to be laid on the surface of buildings, or building materials, by the aid of a brush, or by means of an exhausted case applied to the wall of the building, or by any other suitable means: the stone will then be impervious to moisture.

Mr. Henry Clinton Page took out a patent, dated May, 1856; part of which is for "indurating common stone work generally:" for this purpose he dissolves bees'-wax in coal-tar naphtha. But if the colour of the stone be very delicate, or the preservation of its natural colour be desired, Mr. Page substitutes double distilled camphine in place of the coal-tar naphtha, and white wax instead of common bees'-wax. The solution is to be applied with a brush to the surface of the stone, repeating the process as often as the stone will absorb it, and until the pores are completely filled therewith; using the solution thicker for coarse grained than for fine grained stone.

Having given an abstract of four distinct patents for attaining the same object, I will now endeavour to give a general view of the mode of operating, and of certain practical difficulties attendant thereon. Every one practically acquainted with the working of stone, whether as a mason or a carver, must be well aware of the time occupied, and of the liability to damage incurred in removing heavy masses of elaborately wrought stone after the work is finished; and that the risk of injury or breakage is far greater with soft than with hard stone. In several of the patented inventions, it is expressly stated that the stones, after being completely worked, are to be thoroughly dried in a hot-air chamber, or oven; and in one instance it is stated, they are afterwards to be put into a tank of boiling solution, and boiled for several hours; in another method the stones are to be put into an air tight chamber, exhausted, or partially so, and then filled with the indurating mixture, either hot or cold. I need scarcely state that it is an utter impossibility to exhaust, even partially, a vessel capacious enough to hold the largest stones that are generally used in a first-class building. The failure of the atmospheric railway, on the Croydon line, arose entirely from the impracticability of exhausting large vessels, as it was found impossible to make them anything approaching to air-tight. If the stones are to be completely immersed in the indurating mixture, there will be great waste, as no other part than that which is to be exposed to the weather need be indurated; in fact the joints, beds, and back being covered with an oily or resinous substance, will prevent the mortar or other aqueous cement from adhering properly to the stone; and the result must be a certain amount of weakness in a building so constructed.

Among the writings of various patentees I find the remarkable statement, that "the process gives to the most porous stone the hardness of primitive granite." It will be unnecessary to expatiate on this imaginary result: we will look upon it as the infatuation of a parent for his offspring. The same patentee attributes the decay in stonework to alkaline efflorescence, arising from the cement or mortar used in the walls: he has arrived at this conclusion after a variety of tests and trials during eleven years. These are assertions, but no proofs are offered. The gentleman has no doubt seen many examples of stone in an advanced state of decay, covered with a saline or alkaline efflorescence; but is he prepared to show, by experiments, that the same stone would have remained perfectly free from disintegration, had it been situated far from the influence of what he conceives to be destructive agents? I have submitted a piece of limestone, which I know to be of a good and durable quality, to the most severe tests of both salts and alkalis, trials far more powerful than anything likely to occur to stone in the ordinary course of nature, yet with all such violent experiments, I have never been able to produce more than a mere trace of alteration or disintegration; I am therefore disposed to believe that the salts and alkalies have little or nothing to do with the decay of stone. Among the published writings of patentees I find also this remark: "In many cases the decay of stone is accelerated by the employment of sea or salt sand; a proof of the destructive effects of salt upon stonework may be observed in any seaport town." No doubt the author has observed stonework in some seaport towns in a deplorable state of decay: many of the buildings at Brighton, constructed with Portland stone, are in this condition: but we have no "*proof*" that such decay is occasioned by

---

* To be continued.

† Continuation of the paper read by Mr. C. H. Smith, at the ordinary general meeting of the Royal Institute of British Architects December 1st. See page 673, *ante*.

marine influence. The surface of the masonry of most of the buildings at Oxford is so decomposed, that it is peeling off like paper or rags. Had this beautiful city been erected with the same stone, on the sea coast instead of the interior of the country, many might have imagined that the wretched condition of the stonework was entirely owing to the destructive effects of sea salt, whereas it is the result of bad stone.

The Island of Portland is only five or six miles in circuit: of course it is surrounded on all sides by the sea: it contains seven villages, all built with Portland stone, and they are in an excellent state of preservation. But the most remarkable instance, which proves that sea salt has no effect whatever on good stone, is that of Sandysfoot Castle, near Weymouth, built with Portland stone in the time of Henry VIII. It is so close to the sea, that every high tide washes the lower part of the walls, and in stormy weather the building is completely overwhelmed by the spray, yet the stone is quite perfect, and the chisel marks are as fresh as when left by the workmen. The fact is, *good* stone will remain nearly perfect in any situation, during almost an indefinite period; whereas *bad* stone, if exposed to the weather, will rapidly moulder away, whether placed on the sea shore, or in the middle of a large continent. The four patents which I have described, may be classed under one general heading, because they all recommend oily or resinous mixtures to be applied to the stone in a somewhat similar manner.

I have one more invention for a similar purpose to offer to notice, which has been reserved on account of the indurating mixtures being of an aqueous and more scientific character, and therefore differing essentially from any of the others. The inventor, Mr. Frederick Ransome, has sent me the following particulars: "The process consists in the employment of two or more separate solutions, which, by mutually acting upon each other, produce within the pores of the stone an indestructible mineral precipitate. In operating, the stone may either be immersed in, or saturated on the surface with, a weak solution of silicate of soda or potash; and afterwards with a solution of chloride of calcium or barium, when an insoluble silicate of lime, or baryta, is formed in the pores of the stone, rendering it impervious to moisture and insusceptible of injurious effects from atmospheric influences. Or instead of a silicate of potash or soda, a solution of sulphate of alumina may be employed, and then, by an application of baryta, a compound of sulphate of barytes and alumina is produced."

Any of the before-named mixtures, whether oily or watery, will readily be absorbed into the pores of a newly worked piece of stone; but after a building has been erected a few years in London, or any other large town, its surface becomes so thoroughly grimed with dust, soot, and impurities of a populous neighbourhood, assisted, in no small degree, by powerful winds and driving rains, that the indurating mixture cannot easily be made to soak in; it will run off the surface of the stone as it would off glass, or other non-absorbent material. But if, by some contrivance, it can be made gradually to enter within the pores, if the building should have been erected only a few months, the dirt will be so difficult to remove, that a large portion of it must unavoidably be mixed with the indurating materials, and the result will be a dirty, disagreeable appearance, permanently given to the entire edifice. Were it not for the soot and dirt, the oily mixtures applied to limestone would be so far blanched in about a year, as to cause the stone to be rather whiter than if no such process had been applied to it. To overcome these objections, some have suggested that the entire surface of the stonework should be scoured, scraped, or even chiselled afresh, in order that the indurating material may have uninterrupted access to the substance of the stone. This proceeding would not only be very expensive, but it would be liable to alter the character and effect of the mouldings, carvings, and decorations generally; and as the projecting parts are usually the first to show symptons of premature decay, they would therefore require the greatest amount of induration. Unless the indurating fluid can be made to soak into the stone at least half an inch, it may be worse than useless; because, in all probability, wet will get in behind the hardened surface, and thereby occasion larger portions to exfoliate than if the stone had been left in its natural state.

I may now offer a few comments on the manner of testing the merits of these patented inventions. You have already heard mentioned some extraordinary contrivances of air-tight chambers, and baking and boiling building stones to render them imperishable: such performances, upon samples like those shown to me by the patentees, are quite within the bounds of possibility; but it would be a novelty to see the Parliament Houses first placed in an oven and then in a tank of boiling liquid. If, therefore, the desired object cannot be effectually accomplished by such means; if the stones cannot be properly protected from the effect of atmospheric influences, without treating them in the manner described, the inference must be, that if a building is merely brushed over a few times with a cold solution, the result will certainly be ineffectual: if the former plan be a sure one, the latter must be very doubtful. Taking all circumstances fairly into consideration, I am of opinion that no plan for indurating and preserving architectural stonework is likely to answer the intended purpose, unless it can be applied after the building is erected, and after the mouldings and carvings are completely finished. Then comes the question, how to know what is the best material, and how is it to be successfully applied. I have seen multitudes of small specimens of indurated stone, which, while fresh, certainly resist the decomposing influences of air and water; but as the patentees and inventors offer no proofs whatever that the same or such pieces of stone would have rapidly mouldered away, had they not been preserved by their indurating process, how am I know that the same pieces of stone would not have stood the weather equally well without their application?—and I believe, up to this time, no one is prepared to show what condition their specimens will present after eight or ten years' exposure to the weather. I am not disposed to listen with credulity to the opinions or testimonials of individuals, however high their position—however numerous the Roman capital letters may be at the end of their names—unless they have something to relate and to show upon the subject of a more evident and satisfactory character than anything I have heretofore heard or witnessed. No doubt some may consider me captious, over scrupulous, and determined not to believe what I either see or hear; but the *weekly list of patents*, which are taken out for supposed inventions or improvements, most of which are neither seen nor heard of afterwards, shows how many men there are, who, although they do not always deceive other people, are often very successful in deceiving themselves, by believing they have discovered an invention, of great public utility, which is to "*yield* 200 *per cent. profit*," and which golden prospect their fondest admirers can neither see nor comprehend.

It would be a good plan to try the conservative power of a solution on two or three specimens of stone—Caen, Bath, and Portland for instance—choosing pieces of their respective kinds, well known to be of a perishable quality, I am sorry to say that in London there will be no difficulty in procuring such specimens; each piece to be between 2 and 3 feet long, and of sufficient girth to be accurately worked into a few mouldings, such as a piece of cornice. When the working is completed, let each piece be broken (not sawed) in the middle lengthwise, so as to leave clean fractures, with abundant indentations; the two parts will fit each other, without the possibility of either being counterfeited. Let only one piece of each specimen be well prepared with the indurating solution, taking care not to use more or less of the fluid, in proportion to the size of the specimen, than would be used if a large edifice were to be prepared for conservation; then place the prepared and unprepared specimens of each kind of stone side by side, on the top of some elevated building, where they will be fully exposed to all weathers, during several years, more or less according to circumstances. We know beforehand that in course of time the unprepared pieces will show evidence of decay; but if the indurating process answer the intended purpose, if the stones have absorbed the fluid sufficiently deep from their surface to be the means of rendering them durable, the prepared portions ought to be found after a few years unaltered, and comparatively in a perfect state, while their counterparts, having been subjected to precisely the same variations of climate, would perhaps be in an advanced stage of decay, and their architectural features nearly obliterated. Experiments thus performed and recorded would be valuable, because they would prove, as nearly as possible, whether eventually a certain process might be serviceable or useless, or indeed injurious to the stone-work.

During the last twenty or thirty years I have had many conversations with several of the most learned chemists about preserving stone from decay, and have listened with attention to the remarks of intelligent and experienced practical stonemasons, for much gold is sometimes contained in the roughest ore; and a clear operative mechanic, though incapable of expressing clearly that which he conceives in his mind distinctly, will, by judicious questioning, state facts, likely to lead the studious man into a train of ideas which he otherwise might not have thought of: but after all, the object in pursuit seems to be as far off as when I commenced the inquiry: in truth, some years ago I thought I knew more of the subject than I do at present, the difficulties appearing to increase as more information is collected. All the methods of induration which are now before the public are merely mechanical mixtures with the stone, a sort of fluid cement or varnish, which surrounds the grains without altering them, although to a certain extent it glues them together, and partly keeps out moisture: but each individual grain continues in the same state, no chemical change whatever has taken place, the elementary constitution of the stone is the same as it was before the indurating material was applied to it. It is a characteristic feature in quarries of oolite that the stone procured from the uppermost beds is generally, perhaps invariably, of a durable quality; whereas the lowest beds are the first to decay, when exposed to weather. The cause of this difference is known to depend chiefly on the quantity and quality of the cementing substance, by which the particles adhere to each other. The cement that unites the globules into a mass is formed of the same elements as the globules themselves, but more crystalline: it is in fact the decomposition of the superincumbent mass, saturating and crystallizing within the beds beneath. But this natural process of indurating is not performed in a day, nor in a year, but in ages: so slow or gradual is the progress, that in scarcely any case is the lowest bed so hard, or so thoroughly saturated with the crystalline material, as those above.

It seems to me, that if we could pursue, or imitate this natural process, it might lead to the best means of improving the natural condition of soft stone; or, in other words, we might finish the stone which is imperfectly formed in the rocks; Nature not having had time to complete her work. Man can command Nature in no other way than by obeying her laws: in all our experiments or performances, it is not we who operate, but the laws of Nature which we set in operation. The durability of compact carbonate of lime, in a crystalline state, either in the form of stalactites, or that of a porous material, rendered dense and durable by impregnation, may be witnessed in numerous instances in this country, especially in the petrifying caverns of Derbyshire. In the South of Italy and in Sicily, the production of excellent building stone, entirely formed by deposition from water, has been going on abundantly, from the earliest ages of the world to the present time. The Temples of Pæstum, constructed more than two thousand years ago, with aqueous deposit from the neighbouring rivers, are still but little decomposed, so far as the stone is concerned. Most of the modern buildings in Rome, including St. Peter's, which are constructed with a similar material, Travertine stone, or Calcareous Tufo, are generally in excellent condition.

In the waters which produce these petrifactions, there must be some solid body as a nucleus to begin upon, but what constitutes it, is in no respect important; any substance will do for the waters to commence their petrifying works upon; hence, at the caverns, "the wonder seeker" is invited by the guides, to purchase birds'-nests, purses, and various other articles, said to be changed into stone; whereas, in fact, the objects themselves are merely encrusted with stony matter. Although this natural process is progressing now, and has been during all ages, and, to a certain extent, is well understood by chemists and others, yet it has not been applied to any important purposes, and certainly never to artificially indurating and preserving soft stone. If we could successfully imitate nature in this respect, and apply our efforts to the purpose now under consideration, I think they would be more likely to answer than any plan heretofore attempted. It is not in my power to tell you how to proceed, but the principle appears so clear and simple, that I am induced to believe the proper mode of application would soon be found, if scientific men would turn their attention in that direction.

The necessity for preserving the stonework of our buildings from premature decay is entirely an evil of modern date, which, in nearly all cases, ought not to exist; for if builders engage in a legal contract to use the best materials of their respective kinds, they are liable to an action for damage, if it can be proved that defective stone has been introduced into a building; as such a proceeding must be an imposition, if not a direct fraud, upon those who have to pay for the work. And I believe I am correct in stating, that pleading ignorance of the laws of this country is not considered an excuse for the violation of those laws; and that therefore, in all probability, a verdict would be given against the contractors.

With reference to the proceedings for indurating the stonework of the new Palace at Westminster, I fear the parties in authority are rather premature in their decision. Several experimenters have been set to work without investigation or inquiry; without ascertaining what plan is best, or whether their mode of procedure may or may not be injurious to the stonework, or likely to prevent the success of some other treatment which may hereafter be found superior. With every sentiment of respect for the judgment and general discrimination of the noble and learned lord who has lately taken so much interest in this matter, I trust he will forgive me if I entertain the idea that his lordship has yet much to learn before he can properly adjudicate and decide on matters relating to the decay and preservation of stonework at the Parliament Houses.

If there ever was a time when a knowledge of good and bad stone was of considerable importance to the British public, that time is now arrived. Our Government is contemplating the covering of more than twenty acres of ground at Westminster, with official buildings of a palatial character: it is therefore to be hoped that the subject of our attention this evening will apply only to the times past and present, and that in future, when a magnificent structure shall be completed, the external masonry may remain unimpaired during the lives of those who were at the cost of erecting it, without the expense and annoyance of scaffolding, saturating, discolouring, and many other vexatious incidents attendant on the endeavour to make the best of a discreditable affair.

At the close of the paper, the chairman, Mr. Ashpitel, said he believed that, as architects, they might consider it their own fault that stonework so often failed, as it was conceded that England had as good stone as any country in the world. Perhaps the first cause of failure was the want of sufficient care in selecting stone. He had noticed the care taken in this matter in the restoration of Southwell Minster: it was well known that there were in all quarries both good and bad beds of stone, and the selection should be made in the quarry itself. The durability of St. Paul's Cathedral might be ascribed to the precaution taken by Sir Christopher Wren, who, as soon as the stone was quarried, had it exposed upon the seashore for three years before it was used. This could hardly be termed seasoning, as stone was a very different kind of material from wood; but the effect was that, after exposure to the weather, the perfect blocks were easily distinguished from the defective ones, and only those which had stood the weather well were worked. He had been told that Sir Robert Smirke took a somewhat similar precaution at the new Post Office. Unfortunately, few masons or clerks of works understood the bed of the stone; as, in addition to the oolite construction of some stones, pointed out by Mr. Smith, every kind of stone in England, excepting Portland, had the further characteristic of a visible cleavage or bed, and if placed in a building on its wrong bed, the stone would not stand. This was the principal cause of the failure of many buildings of Bath and Caen stone. Granite when improperly bedded, failed from the decomposition of the feldspar; and, in some parts of Waterloo-bridge, the stones appeared as if gnawed into by the weather. From some experiments made by Mr. Freeman, it appeared that in Portland stone there was not any visible bed or cleavage. The workmen were commonly in the habit of turning about the blocks of Caen stone in order to find the bed,—the softest side being the under-bed. He quite agreed with Mr. Smith that alkalies would not injure stone, but they all knew that acids did to a great degree, and consequently the sulphurous acid in the London atmosphere had a corroding effect upon stonework. Mr. Smith had not referred to the method of preserving the monuments in Westminster Abbey adopted by Mr. Gilbert Scott, the architect to the fabric. Some of these were of Purbeck marble, and in a sad state of disintegration. Mr. Scott was so careful of these monuments that he would hardly suffer a brush to touch them: but in order to keep the body of the stone together, he directed a solution to be made of the most colourless lac and spirits of wine, and the dust having been blown from the surface of the stone with a large pair of bellows, the mixture was applied by means of a garden syringe with a fine rose. How long this method would prove effectual he could not say, but as it was very cheap, and did no injury whatever, it was worthy of attention.

Mr. Burnell read a communication from M. Viollet-le-Duc, describing the process of silicatization adopted by him at Notre Dame, Paris. Mr. Burnell added that he had been over the works at Notre Dame, where M. Viollet-le-Duc pointed out to him the experiments he had made. He had himself tried the process at St. Luke's, Chelsea, where the stone had become very hard indeed. He had also broken up and powdered some Farley Down Bath stone, and mixed it with the silicate of potash, and, when that was absorbed, he silicated the mass again. This was two years ago, and recently he boiled a portion of the composition in water for an hour, and could not discover that it discharged any salt. He again boiled it in a solution of potash, and could not discover that the mass was altered, or that there was any free silica; thus proving, as he thought, that the silicate of lime was formed. He agreed with M. Viollet-le-Duc that the success of the process depended upon the stone upon which it was tried: the great mistake in the experiments which had been made at the House of Lords two years ago, was that they took place in the month of November, when the stone was so damp that it could imbibe nothing, and, consequently, the experiments could not succeed. Mr. Smith's impression was that one application of the process was sufficient, but, on the contrary, it was essential that it should be done day after day; that the superfluous salt should be all washed out, and a sufficient quantity of silica introduced to form, with the lime, an insoluble material,—the silicate of lime.

FOREIGN ART-NEWS.

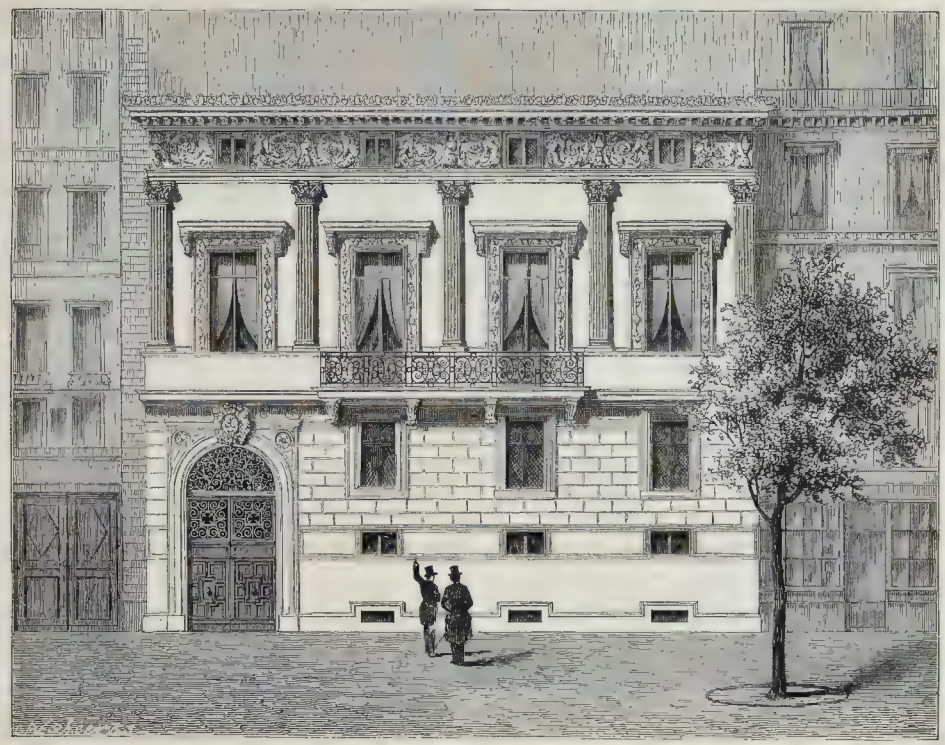
Chateaubriand's Tomb.—There are persons who consider the late vicomte the last of the French classics and original writers. The idea of his grave partakes certainly of the latter character. It has been scooped out in the granite rock of the seashore of St. Malo, in Britanny, and the cover, of the same stone, presents, like the gigantic cross above it, a huge mass seen landwards at a great distance. Chateaubriand intended that this rock-monument should last for ages, but a few equinoctial spring-tides threaten it already with utter destruction.

Paris: Programme of the next Art-Exhibition.—The Secretary of Public Instruction has issued the following programme:—The annual art-exhibition to take place on the 15th of June instead of the 25th of March as hitherto, and to last two months. There will be awarded three classes of medals,—one of 1,500 francs, one of 500 francs, and one of 250 francs. For painting, will be awarded three medals of the first-class, six of the second, and twelve of the third; for sculpture, two medals of the first-class, four of the second, and six of the third; for engravings and lithographs, one medal of the first-class, two of the second, and four of the third; for architecture, one medal of the first-class, two of the second, and three of the third. A great honorary medal of 4,000 francs will be awarded to the young artist who shall have produced the most striking work in any department of the fine arts. The entrance will be one franc on week-days, but every one will be admitted *free* on the day of *rest*, Sunday.

Cologne Art-Union.—The purchase of pictures for distribution to the members this year, began on the 12th inst. A very fine painting by Christian Köhler, "*Gretchen am Spinnrard*" (Goethe's Faust), was purchased for 175 Frederics d'or,—a high price in Germany.

THE HOTEL POURTALES, PARIS.

The Hôtel Pourtales, built by M. Felix Duban, is less remarkable for its size than for the taste which pervades the details, the harmony of the whole, and the convenience of the interior arrangements. Its distinctive character consists in a happy union of the style of the Renaissance, which predominates in the general lines and all the architectonic dispositions, with a style that is Greco-Pompeian, and which appears only in the details, whereby they are refined, and the decorations, often in the architecture of the sixteenth century a little small and too often repeated, are made more firm and dignified.



The entire edifice, by its general simplicity, judicious ornamentation, and the perfect carrying out of the details, makes itself remarkable in the midst of the numerous specimens of architecture called Renaissance (so twisted in outline, so confusedly overloaded with details of bad taste, in equally bad workmanship), that the last twenty years have seen raised under the sun of Paris, and it remains in the opinion of artists as one of the most satisfactory productions of the day in that city.

The Hôtel Pourtales is constructed rather to form a museum than to serve as an ordinary residence. The interior contains several cabinets of curiosities, a Gothic chapel, and a gallery, worthy of the remarkable pictures deposited there. The walls of the portal leading to the courtyard are decorated with statues and antique remains, to the number of thirty-two, among them being a statue of the Emperor Augustus, formerly belonging to Cardinal Richelieu. In the vestibule there are thirty-eight works of art, of the finest description, in the shape of bas-reliefs, busts, and statues. The staircase, which leads to the gallery, is equally adorned with statues and busts. The gallery contains about 200 paintings, of all schools; including "The Virgin and Infant Jesus," by Leonardo Da Vinci, a very fine picture brought from the Palace of the Escurial; "A Portrait," by Antonello de Messina, stated to be one of the first painted in oil in Italy; "The Virgin and Child," by Palmi the elder; "A Magdalen," by Guido; and a "Crown of Thorns," by Titian, besides several by Allori, Andrea del Sarto, Carlo, Dolci, the Carracci, Holbein, Albert Durer, Quentin Metsys, Velasquez, Claude Loraine, Greuze, and others.

THE CONDITION OF TURNER'S PICTURES.

We have made no observations on the position in which the pictures left to the nation by Turner have been placed at Marlborough House, injurious as it is to the fame of the artist, and tantalizing to the public. This probably is the result of necessity, and may be remedied presently. But surely some inquiry should be made into the cause of the evident deterioration of some of the pictures. All who are acquainted with the works of this great master, and know the delicate gradations of colour which he achieved and gloried in, will look with astonishment and pain at some of the pictures now hung, and would feel convinced that some recent agency must have been in operation. We know that this opinion is held by more than one of the Royal Academicians, and we make these remarks in the hope of inducing some explanation.

THE HOTEL POURTALES, PARIS.—MONS. F. DUBAN, ARCHITECT.—*Street Front; and View of the Court.*

THE DISPOSAL OF SEWAGE.

The *Builder* has good reason to recollect, and equally good right to recall, the time when endeavours to obtain an audience on such a subject as this, or to excite any general or abiding interest in it, was up-hill work indeed. The contrast between such a state of matters and the present is highly gratifying. The great questions of drainage and the disposal of sewage are now fermenting in the public mind, and ere long it is to be hoped will settle into some clear and definite course. The Government, as a climax to the present stir on the sewage manure question, intend, it appears, forthwith to appoint a scientific commission to inquire into the whole subject of the disposal of sewage, deodorization and solidification of sewage, irrigation by liquid sewage, &c. and to report to the Government with as little delay as possible on the whole question. A numerous, and evidently highly interested meeting and important discussion, at the Society of Arts, took place on 10th instant, when a paper was read by Mr. W. Fothergill Cooke, "On the utilization of the sewage of towns by the deodorizing process established at Leicester, and the economical application of it to the metropolis." Mr. Chadwick, Mr. Mechi, Mr. Rawlinson, Mr. Lawes, Dr. Letheby, Dr. Copeland, and various other gentlemen, took part in the discussion; and Dr. Lyon Playfair occupied the chair. Mr. Cooke pointed out, not only what had been done at Leicester, but the decided decrease of mortality and lengthening of life there from the sanitary improvements effected; and urged the merits of the local deodorization principle, and the resultant clearing of the Soar water, as applicable to the metropolis. His object, he remarked, was, "to represent the great facilities for, and advantages in, deodorizing the sewage matter of the metropolis before putrescence is in full activity, and the restoration of the water, either in a pure state to the river, or the use of it after deodorization, for the purposes of inoffensive irrigation. That the sewage water," he continued, "can be sufficiently deodorized and purified by lime alone, without causing the slightest nuisance, is a great fact, and I can see nothing but prejudice or penuriousness that can prevent its adoption." In course of the discussion which followed, it was urged that lime did not precipitate or retain the valuable ammonia of the sewage (an alleged vehicle of infectious matter, too), and that, in fact, the Leicester compost bricks were nearly valueless. In reply to this assertion, Mr. Cooke stated that it at all events paid for the cost of preparation, and it must be admitted (we may here interject) that *profit* is not the final, or, indeed, essential point in the question. Were it possible, by properly solidifying the sewage of towns, to get more easily rid of it by shipping or carting it off, and pitching it so condensed into the sea, a great end would be gained. The declension of the assumed great value of solidified manure, from a couple of pounds a ton to as many shillings, is certainly a damper to the idea of converting the sewage of every town into manufactured manure; but farmers have already declared such manure to be useful; and Mr. Cooke stated in his paper that, though slow in appreciating its value, contrasted with the strong and potent guano, above a thousand tons had been taken by the farmers at Leicester during the very week then just past, and that not only had further applications for it been made—at a very low price to be sure—but its value for "nitre-beds" was beginning to be appreciated, and this alone would open a wide field for its employment. The declension of assumed value is no more than we long since anticipated. As to the fact that lime used as in Mr. Wicksteed's process at Leicester does not fix one of the most valuable ingredients of the sewage, this, too, we pointed out; but still, however desirable it may be to correct the chemical deficiency, the final purpose, as we have said, is not necessarily the return of a positive profit on the disposal of the sewage manure. But we are much mistaken if this defect in the Wicksteed patent cannot be readily amended. Common earth—especially clayey soil—is well known to be a most efficient *deodorizer*, when manure or rotting organic matters are put into *it* or under it: why should it not be so when *it* is mixed with sewage itself? It is rather strange that, while Mr. Mechi, Mr. Chadwick, and others, were pointing out the former of these well-known facts, the latter did not suggest itself in course of the same discussion. A clergyman at Wakefield not long since discovered that *clay* fixed the ammonia, and other contaminations in gas, in a way that lime could not, or did not do. A mixture of *lime and clayey soil*, therefore, would appear to constitute a very hopeful as well as economical and cheap deodorizer, fixer, and precipitater of the valuable ingredients of sewage. The general value of the product may yet be still further enhanced by the mixing of the smoke of furnaces, &c. with the sewage, as adopted at Mr. Cubitt's works, and more than once treated of as a feasible idea, though not immediately practicable to any extent, at least as regards the sending of house smoke into the sewers, mixed with or precipitated and solved in water. Carbon is itself a potent deodorizer, and an essential ingredient of all vegetation; and the carbonic acid of the smoke would unite with the ammonia of the sewage, and render it at all events much less volatile, though still soluble in sewage water.

CHURCH-BUILDING NEWS.

Newark.—The first stone of the new church schools about to be erected in connection with Christ Church, Newark, was laid on Tuesday in week before last, by the Duke of Newcastle. The new school, the site of which (in Portland-street, close to the existing school) is the gift of the Duke, was required for the accommodation of the infant and female scholars, and, when completed, it is expected that about 500 boys and girls will be enabled to receive instruction, in accordance with the established principles, in the two schools connected with Christ Church. The design is Tudor Gothic. The building will consist of an infant school-room on the ground-floor, 44 feet long and 30 feet wide, having a class-room in connection with it 15 feet square. The girls' school will be over the infants' school-room, and of the same dimensions, with a class-room as on the ground-floor. The principal front of the building will be next Portland-street, and will consist mainly of three compartments, so divided by buttresses springing from the fence wall to the wall of the building, with open arches beneath, as to have the appearance of flying buttresses. The spaces between these buttresses will be filled in with an ornamental wrought-iron railing. The materials are to be of brick, with Ancaster stone dressings, and the interior finishings will be varnished upon the natural grain of the wood. The roof is open-framed, and will be covered with green Westmoreland slates, cut pattern and laid in bands, finished with a wrought-iron ridge. The cost of the building will be something under 1,000*l*. Mr. Charles Bailey is the architect.

Ely.—The altar screen of Ely cathedral having been opened to the choir, a memorandum relating to it has been placed, by way of record, upon the chapter books, stating that Mr. John Dunn Gardner, of Chatteris, in the Isle of Ely, has caused to be constructed, at his own cost, the whole of the central reredos above the alabaster string course, including the sculptures, mosaics, and other decorations, some of the most important of which were suggested by himself, and executed under his own immediate superintendence. This work was designed by Mr. Gardner as a memorial to his late wife. The other parts of the altar screen, as well as the altar steps and pavement, the altar tomb upon which the effigy of Bishop Northwold rests, the restoration of the last portions of Bishop Hotham's tomb, &c. have been constructed at the expense of the Dean and Chapter. The whole of the sculptures for the altar screen and other works in the choir have been executed by Mr. J. Philip, of London; the stone, alabaster, and wood carving, by the late Mr. Rattee and his successors at Cambridge; the mosaic and encaustic pavements by Messrs. Minton. These works were designed by Mr. Scott. Mr. George A. Lowndes, of Trinity College, Cambridge, gave the iron screen and gates, executed after a design by Mr. Scott, which is placed at the entrance of the south aisle of the choir; and the Rev. Professor Selwyn, Canon, presented the font, placed in the south-west transept, hereafter to be used as a baptistery. The Rev. Chancellor Sparke, Canon, contributed a painted window—the third from Bishop West's Chapel in the south aisle of the choir,—by M. Lasson, of Paris, the subject being the history of John the Baptist. Mrs. Maddy gave a painted window—the second from the west end of the north aisle of the nave,—by Mr. Preedy, of Worcester, the subject the history of Job. The Rev. W. G. Townley, Rector of Upwell and Welney, Norfolk, gave a painted window by Mr. Wilmshurst, placed in St. Catharine's Chapel, after a picture by Bassano, representing the Baptism of our Lord, in the possession of Lieutenant-Colonel Pratt. The Rev. Professor Selwyn gave a painted window, also by Mr. Wilmshurst, which is placed in the same chapel, after a picture by Overbeck, the subject being from the text, "Suffer little children to come unto me, for of such is the kingdom of Heaven." This is the forty-third painted window which has been placed in the cathedral in little more than ten years. A slab of Alexandrine mosaic, to be placed upon the grave of Bishop Allen, has been presented by his son, the master of Dulwich college: an effigy of the late Dr. Mill, canon of the church, placed upon a highly-enriched altar tomb, and surmounted by a hearse, is also in preparation; and an iron screen and gates, the gift of the Dean, for the entrance of the north aisle of the choir, similar to that presented by Mr. Lowndes for the entrance of the south aisle, is likely, according to the *Cambridge Chronicle*, to be completed in the course of a few months. The painted glass for the east windows, for which the late Bishop Sparke gave 1,300*l*. and which has been in preparation for so many years, is likely, says the same paper, to be finished in a few months. Two windows, one the gift of the Judges who have been educated at Cambridge, and the other of lessees of the Dean and Chapter, are preparing for the north aisle of the nave: the bachelors and undergraduates of the University of Cambridge are now taking active measures for finishing the great north-east window of the lantern; whilst the design is in forwardness for the south-west window of the same lantern, to which the Queen and Prince Albert have presented their portraits: this window will contain, like those already executed, eight figures as large as life, four in the upper compartment, and four in the lower. A pavement has been put down in St. Catharine's Chapel. It is a combination of Purbeck marble, encaustic tiles, and borders of incised Portland stone, the incisions being filled with coloured cement. Back screens of an enriched character, to mark the stall work of the northern aisle of the choir, are in course of construction: similar screens will be erected in the south aisle. The Dean and Chapter desire to carry out the remaining works of their new choir in the same style as in those already finished.

Coventry.—West-Orchard Chapel, Coventry, has been re-opened, after undergoing considerable alteration. The chapel has throughout been put in a state of repair, and many parts have been entirely rebuilt. The front is altogether new. The whole of the interior fittings are new, and the pews are low and open. Cast-iron pillars support the galleries, the fronts of which are ornamented with open coloured metalwork. The windows are bordered with stained glass. The roof, which is ceiled, is supported by beams of coloured timberwork, and in its centre there is a sunlight of gas-jets. Means of ventilation are provided, and the place is warmed throughout by a hot-water apparatus. The plans were drawn by Mr. Mault, and the work has been executed by Mr. George Taylor.

Liverpool.—The Roman Catholic Chapel of the Immaculate Conception, just completed in connection with St. Edward's College, Everton, has been consecrated. This chapel has been built as a lady chapel to a cathedral, the designs for which have been furnished by Mr. Welby Pugin. It is to be dedicated to St. Edward, and serve as a parish church. Its form is that of a cross, having a choir and side aisles. The choir will be about 100 feet in length, the interior of the edifice to be lighted with clere-

story windows. A transept will divide the choir from the other part of the edifice, and a large ornamental window is to be introduced at the eastern end. The portion just completed will be appropriated as a private chapel for the dean and canons. It is 40 feet square, having side aisles and other requirements. A range of cloisters, at present of a temporary construction, connect the chapel with the college. The building is in the Pointed style of architecture, and constructed of rustic masonry, a finer description of stone being employed for the facings and dressings. The sanctuary, altar, &c. are ornamented, and the seats are of pitch pine, carved. The contractors for the building are Messrs. Baynes and Son, of Liverpool.

Preston. — A new font has just been placed in the parish church. It is the joint gift of three surviving daughters of the late Mr. Edward Gorst, of Preston. The font is of Caen stone, and is in the Gothic style, of fourteenth century. The bowl, on the upper portion, is octagonal, each face ornamented with a quatrefoil panel, bearing, in the centre, alternately, a bas-relief of the emblems of the four Evangelists: an angel at each corner, appears to bear up the bowl. The stem has eight shafts of Dent marble, inserted against the stone. The work was done by Mr. W. E. Jackson, of York, from designs furnished by Mr. Paley, of Lancaster, architect.

PROVINCIAL NEWS.

Lynn.—The town-council of Lynn recently referred to the ratepayers the question whether an Act for a new and constant supply of water should be applied for. A public meeting of ratepayers was accordingly held last week, when it was stated that the estimate of Mr. Stephenson, C.E. for the works, was 7,200*l.* The total cost would be 10,000*l.* besides the expenses. The meeting was a rather stormy one, and it was ultimately resolved by a large majority that it was inexpedient to make the proposed application to Parliament.

South Weald.—The almshouses of the Brentwood Charity, situated at South Weald, besides being scattered, were dilapidated, and an order was issued from the Court of Chancery, and Mr. Teulon was appointed the architect to carry out a new establishment. The site selected is on the side of a hill inclining to the south. The type adopted is Early Middle Pointed; the material red brick and stone, with black brick. As all the arrangement is on the ground-floor, the *tout ensemble* has an extended appearance, particularly as the fall of the ground has been followed in a gradation of the houses. The chapel forms the central feature, being a parallelogram with three-light east and west windows, distinctive in their tracery. The brickwork is diapered symbolically, and the roof surmounted by a fleche, containing the bell. The interior has the eastern end seated stall-wise, with returns facing the east for the wardens, and this is enclosed with screen-work. The glass of the east window, by Ward, was presented by Lady Sophia Tower. As the houses of the men form the northern flank, and those of the women the southern, they have their respective entrances to the chapel beneath a cloister or covered way, formed by the extension of the roofs of the dwellings, which is, indeed, continued throughout. Each house contains a living-room, bed-room, pantry, and small kitchen, with a yard. The roofs are diapered. There is an hexagonal building on the plateau over the well, with a conical roof terminating in a finial, with this inscription carved within the cornice,—"The beginning of strife is as when one letteth out water; therefore leave off contention before it be meddled with.—*Proverbs.*"

Bridgnorth.—The new market-buildings and public hall are so far advanced towards a complete state, that the portion devoted to the marketting purposes was opened on Saturday before last. The new building is of brick—red, white, and blue—and in the Italian style, after a design by Mr. R. Griffiths, of Quatford, architect. The main block of the building is square, with a tower at the north-west angle; but with the markets which extend down Listley-street, the entire outline is a parallelogram. There are two façades—one in Bank-street, the other in Listley-street—with the tower at the angle. The general walling is of blue brick, banded with white; the quoins, strings, and plinths being also in white brick. The building is two-storied. In the main body the ground-floor consists of shops and entrance-hall, the tops of the windows and entrances presenting, in the exterior, a line of seven circular arches, the middle three having a pier of double width on either side, thus making them central. The arches are in alternate blocks of blue and white brick, springing from piers also in blue, banded with white. The windows and doorways have half-brick reveals in red. The upper story has a tier of windows the piers and arches of which are uniform with those in the lower. Above each of the windows in the upper story is a circular aperture, fitted in with grating in ornamental ironwork, for the purpose of ventilation. The façade in Listley-street is nearly uniform with the one in Bank-street. The markets are situate at the back of the main building, the exterior forming a continuation of the frontage in Listley-street, where there are ten windows and two arched entrances. The Public Hall being built over the centre of the markets, and not being so wide, leaves two side aisles in the latter, which are roofed in with rough-rolled plate glass. The principal entrance to the building is in Bank-street through two archways, fitted up with ornamental iron gates, opening into an entrance-hall, the floor of which is laid with encaustic tiles of plain design. There is a central stone staircase with cast-iron balustrades, conducting to a landing from which are reached the various rooms above the shops. This upper story contains a reading-room and library for the new Literary and Scientific Institute, a magistrates' room, and clerks' office, and the public hall, situate at the back, and over the centre of the markets. The hall is a parallelogram of 80 feet by 32 feet, and is lighted by six windows on each side. The markets are approached either from the principal entrance or from Listley-street. They contain fish-stalls, general and butchers' markets, the whole of which are paved with brick, fitted up with stalls, counters, &c. and have the gas and water laid on. The general market is divided into side-aisles and central avenue by piers and arches which support the public hall. The markets are lighted from the side windows in Listley-street and from the rough-rolled glass roofs of the aisles, and are ventilated by means of perforated zinc.

Leek.—The South Staffordshire Waterworks Company, in carrying out their Works at Lichfield, have found it necessary to alter the course of their tunnel through the town on account of sewage getting into the tunnel. They have therefore made a proposal to the Lichfield commissioners on the subject, but the commissioners have not acceded to it.

Sunderland.—A new tidal lighthouse has been recently erected by the River Wear commissioners on the south pier of Sunderland. It is constructed of iron, and has been placed immediately to the west of the old lighthouse, which is now nearly removed. The house has a catadioptric light of the fifth order, placed at a height of 58 feet above high water of ordinary spring tides. The new structure is circular throughout, and is elevated upon the raised platform or promenade of the pier. The total height from the pier to the top of the lantern-dome is about 53 feet.

SANITARY IMPROVEMENT OF MACCLESFIELD.

FROM the fourth annual report of the Mayor of Macclesfield, as head of the Local Board of Health, it appears that important results are now beginning to be seen obviously to flow from the sanitary measures in progress during the last few years. We must take a few extracts from this report, a printed copy of which has been sent us.

In the four years last past, 43 streets and 245 courts have been sewered, paved, and flagged; every privy and ash-pit belonging to them, numbering 290, has been drained, repaired, or rebuilt, and new ones have been erected where none existed before: 1,489 houses have been drained. In the execution of these works the Board have expended 15,416*l.*; and in the same period, nearly 36,000*l.* has been the entire expenditure.

The Board then refer to their tables of mortality. These tables show the rate of mortality before the operations of the Board to have been 33 deaths in a thousand, whilst the average of the last three years has been reduced to 26 in a thousand. The average age of death of all persons, which was formerly twenty-four years, is already twenty-nine years! Freedom from the former excess of preventable deaths is shown in the registered "causes of death," and singularly confirmed by the nearly uniform numbers dying in the last three years—namely, in 1854, 775; 1855, 797; 1856, 774. In all previous years there appears to have been no such uniformity, because, no doubt, those influences were in existence which rendered life more precarious, contagion more certain, and epidemics more frequent and malignant.

To sum up the benefits, therefore, it will appear that 812 lives have been saved, the proportionate number of cases of sickness to each death have been prevented, and the consequent expense avoided, the mean duration of life has been lengthened five years, and infantile mortality, one of the certain tests of the absence, or otherwise, of sanitary improvement, has been reduced 13 per cent.

An important hint, applicable to other places besides Macclesfield, is embodied in the following quotation from the report as to the approval of a plan for a chapel. "The board," it is remarked, "deemed it proper to require that adequate means of ventilation should be provided, under the direction of their surveyor; for it is worthy of remark that, whilst the Board are scrupulously particular in providing each tramp in a common lodging-house with 250 cubic feet of breathing space, being the admitted quantity of healthy respiration, there are places of worship where the allotted space is only 71 cubic feet for each person, without any provision for due ventilation, and the evil consequences of breathing over and over again the poisonous respirations from each other's lungs, have induced the Board to call attention to the fact, as the powers they possess must eventually be exercised to mitigate such insidious means of destroying health."

The police records and medical reports are said to bear testimony, as does the inspector's report, to the comparative freedom of the town even from crime as well as disease, since the proper regulation of low lodging-houses was first insisted on; and the reporter thinks that even had the exertions and the outlay of the Board had no other effect than this, they would have been thus well repaid.

PROGRESS OF MARSEILLES.

AT the meeting of the Institute of Architects, on Monday, December 1, other proceedings at which we have elsewhere recorded, the Secretary for foreign correspondence read a letter from M. Coste, architect, of Marseilles, part of which we translate. "Marseilles," says M. Coste, "although an ancient Phocian colony, does not possess any trace even of the remains of that period. A few fragments of Mosaics found during some investigations, indicating a Roman occupation, and some Christian sarcophagi of the Middle Age, are the only remains of times past. Marseilles has never been other than a commercial colony, inhabited by a varying population from the shores of the Mediterranean. It is divided into two parts, which adjoin one another; the high town (ancient), to the north, and constructed with narrow and winding streets, to protect it from the sun and wind; and the lower town to the south, divided by broad, straight streets, running from north to south, and from east to west. There are some sheltered public walks here, and it is inhabited generally by the commercial chiefs. The churches and public edifices scarcely offer any points of artistic interest. Some new public walks, planted with trees, have been added of late years.

I must mention, too, the canal which brings the waters of the Durance into the city. In the line of the canal they have put up—about twenty-five kilometres from Marseilles—an aqueduct of colossal dimensions, of which a de-

scription in a constructive point of view might interest. Some years since, the old port being insufficient for the increasing commerce, a new port was established between the years 1846 and 1852, by a strong jetty running into the sea in front of the Joliette—of which it bears the name—and to the west of the upper town. This new port was of great service during the war in the Crimea, and this has shown the need to construct a third, which will bear the name of Port Napoleon. The works of the jetties have been submitted to competition, the cost being nine millions of francs. It is in front of this new port that they are constructing a new town, on the site of ancient Lazaret, and on the parts taken from the sea, and where will be the docks, dockyard, and the station of the railway. It is in front of these two ports, on a promontory, that M. Vaudoyer, architect, has commenced the future cathedral in the Byzantine style; and on another promontory, at the entrance of the old port, the ground has been cleared, to construct there an Imperial residence, after the design of M. Lefuel, architect to the Emperor. The new Bourse, of which the designs were in Paris, is in course of execution in the Rue de la Canæbière, facing the Place Royal, near the old port. It is one of the great projects put forward by a company, to renovate the old city, lengthen the Rue de la Canæbière, and construct a fourth port to the south-west of the promontory, where the Imperial residence is about to be built. Two years ago a zoological garden happily placed to the east of the city, was established, to acclimatize animals which come to us from tropical countries—an establishment which improves every day.

Marseilles, under Napoleon I. numbered but 80,000 souls, and now, under Napoleon III. the population is 250,000—not reckoning the floating population; and there is no doubt but that in twenty years Marseilles will be the first city in France after Paris. My only regret," says the enthusiastic writer, "is, that I was born too soon to witness the full development of my native town."

LIVERPOOL LIBRARY AND MUSEUM COMPETITION.

After a long and stormy discussion at a meeting of the council on the 10th instant, the rewarded designs were put on one side as beyond the means in hand; and it was resolved,—

"That the corporation surveyor be directed to prepare, under the direction of the committee, plans for the new Public Library and Museum, having regard to the amount at the disposal of the committee."

It is unnecessary for us to say that this is but an added injustice towards those of the competitors who adhered to the conditions prescribed by the committee.

ARCHITECTURE AT THE MANCHESTER EXHIBITION.

The committee have decided on appropriating a small section of the building to architectural drawings and designs. The space will be limited. Arrangements will probably be concerted with the Royal Institute of Architects to make the selection, so far as London is concerned.

INDUSTRIAL SCHOOL FOR MIDDLESEX.

The selected design for the Middlesex School is by Mr. Barry, of the firm of Banks and Barry. We are informed it is one of the designs originally sent in to the committee, but not one of the seven selected by the referees, or one of those to which premiums were awarded by the magistrates! Of all the odd proceedings which have attended competitions it would be difficult to cite anything more odd than the story of this particular affair. A report on the subject is about to be published, and may, perhaps, throw some light on it.

Value of Quarry Land at Portland.—A portion of quarry land belonging to Mr. Scriven, stone agent, of Portland, says the *Sherborne Journal*, has been sold by public auction. In 1819 it was sold for about 90*l.*: it has now realised 1,160*l.*

THE LATE CHIEF SURVEYOR OF THE OFFICE OF WORKS.

Some time since Mr. Inman, the late surveyor of the Office of Works, presented a second memorial to the Treasury, reciting all the facts of the case, and pleading the hardship of the departure as regards him from previous practice. The result, we are happy to learn, is, that My Lords have amended for the second time their decision, and have granted him 533*l.* per annum, or two-thirds of his original salary of 800*l.*

THE ARCHITECTURAL MUSEUM.

The Committee of the Architectural Museum have determined, subject to some conditions, to accept the offer of the Board of Trade, of space in their museums at Brompton, or as the Board of Trade have erroneously determined to call it, Kensington-Gore South. The committee will shortly publish a statement of the reasons which influenced them.

A report is current that the Architectural Museum is about to be moved from Cannon-row to the "Brompton boilers." I do not know whether the subscribers have been asked to consent to this removal, but if not, would suggest that a meeting of them be called, before a step of such great importance to the Institution they uphold is irrevocably decided upon. I have no doubt that many powerful reasons may exist in favour of the contemplated change, and these, if fairly stated, might reconcile us all to the weary pilgrimage to Kensington every time we wish to consult the Museum casts; but I think we have a right to know what there is to justify a step which appears to me, and I dare say to others, an act of *felo de se* on the part of the Architectural Museum.

A Subscriber.

THE MAIN DRAINAGE OF THE METROPOLIS.

On Tuesday, the 16th, the Board of Works adopted, by the votes of 23 against 13, the plan B*, having the outfall at the point marked by Capt. Barstal. A strong protest against it, signed by nine members of the Board, was lodged.

PROPOSED MEMORIAL OF IZAAK WALTON.

Being very recently at Winchester, I saw the pavement-tomb of "good Izaak Walton" in the cathedral; the inscription almost obliterated by the wear of nearly two centuries. On my returning to town I asked assistance, and at first thought merely to restore the tomb. Upon consideration, I thought it would be a worthier undertaking if a portrait-tablet were also erected. Communications took place with the Dean and Chapter, and those gentlemen approving of the object, kindly consented to remit their fees if a proper monument were erected.

Mr. Johnson, sculptor, has furnished me with a design, which has been approved by the cathedral authorities. It is intended to be of marble, the head (a medallion) life-size; and the cost, with fixing, &c. will be about 100 guineas.

I intend to ask the aid of all the London fishing-tackle manufacturers to obtain subscriptions, and I entertain very little doubt of speedily obtaining the sum required. John Wilson, Hon. Sec.

BROAD HAVEN, SOUTH WALES.

Our usual sea-side places are so thronged every year that it really seems a charity to point the public to new spots, and you have occasionally commented on some of them. Will you, then, permit me through your columns to call the attention of speculators and enterprising builders to the extremely beautiful sites for erecting marine residences which are to be found at Broad Haven, on the shores of St. Bride's Bay, in Pembrokeshire, South Wales? The rocks are bold and romantic, and the air remarkable for its purity; the water clear as crystal, the sands hard and extensive, a western aspect, partaking of a medium between the relaxing south and often too bracing north. When one looks at the fine rows of houses built on the slopes of the muddy Bristol Channel, one wonders that these more picturesque shores and delightful situations of St. Bride's Bay have not attracted the attention of gentlemen of capital. One obstacle, it is true, has heretofore intervened, which was a want of communication; but the South Wales Railway has removed that obstacle, for this attractive situation is only six miles from the railway station at Haverfordwest (a capital market town), and from Milford Haven only five.

Some few parties have settled down there in the only houses fit for comfortable habitations, but the numerous applications for such residences show how many more of the health-seeking and health-requiring inhabitants of the smoky and busy towns of the kingdom would flock thither during the summer months if good accommodation were afforded.

I have visited all the watering-places around England's varied coasts, but have not been at a spot so fitted for the purpose to which I have referred; and some who sojourned there with me, though strangers to the place before, entertained the same opinion. I shall be glad indeed if this notice, for which I beg a place in your valuable publication, may strike the attention of parties with spirit and capital, and induce them to seek sites there; for there are many to be had at comparatively nominal prices fit for erecting buildings and terraces, which would, in a very few years, well reward them for their outlay, and make this equal, if not superior, to Ramsgate or Margate.

Cheltenham.

EXHIBITION OF FLEMISH PICTURES.

One hundred and twenty-one works of the modern Flemish School have been collected in the Gallery at 121, Pall-mall, and are now open to the public. Amongst them are some pleasing pictures, but the collection can scarcely be said to represent the school fairly. However, as a first step it is to be welcomed. Amongst the most noticeable are—"The Favourite Cat" (2), a delicate little picture by De Block; "The Proposal" (8), by De Braekeleer, full of character; M. Clère's "Redeemer" (16), over the door; "Andrea Vesale" (47), by Hanman; "The Christening," by Van Hove (101); and some of Van Schendel's clever repetitions of candle-light effects. Some of the works are noticeable for the inattention to perspective evident in them; for example, "The Algerian Woman" (118), parts of which are very clever; and "The Siege of Haarlem" (87), where the door of the chateau takes up a position quite independent of the building itself.

COMPETITIONS.

Gloucester Cemetery.—The Burial Board have selected the design of Messrs. Medland and Maberly, for the proposed cemetery, from sixteen that were submitted by various architects for their consideration. Near the centre of the ground will be placed the two chapels, united by their respective vestries, and a tower and spire 80 feet high, containing a bell, and forming the central feature. The entrances to the chapels will be through the porches at the further end of each chapel. These buildings will present a façade of 100 feet in length to the principal entrance of the cemetery, and also to the railway.

Norwich Workhouse.—The Norwich Court of Guardians have selected a design by the above-named architects for the first premium (100*l.*). There were thirty competitors. The cost of the building is not to exceed 20,000*l.* The second premium was awarded to Mr. G. B. Nichols, West Bromwich.

Foleshill Workhouse.—Will you allow me to ask a few queries respecting the so-called competition for this workhouse? 1. When were the printed replies, which were sent to those unfortunate persons who had devoted many days, and it may be nights, to the matter, struck off? 2. Had not *the design*, views of which were got up in London, been sent in a few days previously to the day fixed for the arrival of the other designs? 3. Was not this shown, and an understood selection made, ere the other designs had arrived? 4. What next?—A. M.

ST. JAMES'S, PICCADILLY.

The church of St. James, Westminster, has been re-opened by the Bishop of London. The church had been closed for three months for extensive repairs, alterations, and additions; the latter consisting of the erection of the vestibules at the western end of the aisles, filling up the angles on each side of the tower, and opening a communication through the basement story of the latter, thus forming a continuous ambulatory along the whole western front of the edifice, and extending beyond to the footway of Jermyn-street, giving direct access therefrom by doorways to the nave, the aisles, and by stone stairs to the galleries. By the removal from the interior of the church of the old stairs and numerous other projections, this church is now restored to its original uniformity, and the space these protrusions occupied converted into accommodation for the congregation. The whole interior has been thoroughly cleansed and re-embellished. These works have been carried out under the direction of Mr. Charles Lee, architect. The interior space gained by the alteration is to be appropriated to free sittings for the poor. The outlay has been about 3,000*l.*

The removal, from the interior, of the previous

stairs and other unsightly projections, so as to restore Sir Christopher Wren's *chef-d'œuvre* of parochial interiors to its original state, is of great advantage not only to the appearance of the church but to the accommodation of the congregation, which has been increased by 200 sittings. The alterations were suggested by Mr. Crane, the senior churchwarden.

The organ of this church was originally made by the celebrated Rene Harris, in 1687, for James the Second's Roman Catholic Chapel, Whitehall, and was set up in an elaborately adorned case by Grinling Gibbons. This instrument having, by the lapse of time, fallen into a state of great dilapidation, was in 1852 entirely rebuilt by the late Mr. J. C. Bishop (under the superintendence of Mr. Crane and Mr. Charles Lee), who introduced into it all the modern improvements. It contains forty-one sounding-stops, distributed among three rows of key-boards, viz. great organ choir, and swell with full row of pedals. The former are of uniform compass from double C to F in alt. every stop, with the exception of three in the choir organ, which latter are minus their lower octave. The total number of pipes is 2,240. The rebuilding of this instrument was the last work and avowed masterpiece of the late Mr. J. C. Bishop, and deservedly ranks amongst the finest of metropolitan church organs. The carving over the altar, by Grinling Gibbons, is worthy of attention.

THE METROPOLITAN BUILDING ACT.

"OPENINGS AND RECESSES."

UNDER the second rule of section 13 of the Metropolitan Building Act, 1855, it states that recesses and openings may be made in external walls, provided,—"that the area of such recesses and openings do not, taken together, exceed *one-half* of the *whole* area of the wall in which they are made." Can you or any correspondent inform me how it is, therefore, that in several buildings in the City which have been erected since the 1st of January, 1856, this rule has been altogether set aside, the openings being in some instances three-fourths of the area, and in some nearly the whole of the same; and at the present time there is a large stack of offices being erected on the north side of Fenchurch-street, the façade of which is nearly all windows?

There is in this and many other instances so clear a contravention of the Act, unless the same has been modified by some regulation of the Metropolitan Board, that I cannot understand how it is allowed.

AN OBSERVER.

*** We insert the above, not to raise objection in the case named, but as affording an opportunity to mention the annoyance caused by the regulation in question, and the impossibility in some instances of complying with it. In the City, where light is greatly an object, the district surveyors have probably abandoned the attempt. Shop-fronts they must leave out of the calculation altogether, and in the case of, say, carpenters' workshops, how can they insist on compliance with the clause?

ALNWICK CASTLE DECORATIONS.

IF not forestalling your intention of advising a cessation of the dispute in this matter, the following remarks are submitted as a summary of the questions which have been raised. Mr. Fergusson, in your paper of the 22nd ult. has raised what I must call a factious opposition to the duke, for he admits that no one can find an instance in which "the Gothic style" has been successfully treated; and so he disposes of Sir Charles Barry and Mr. Pugin. If he were to show in a drawing, instead of in the vaguest possible words, what he would have proposed, and how charming he could have made the interiors "without direct adherence to any known style," he would get fiercely criticised by his admirers, and learn the little use there is for any artist to practise "that free and untrammelled architecture" which Mr. Scott, in your paper of the 29th ult. pretends to advocate; winding up his address to the public through your columns, by observing, as one great fault of the work by Sir Charles Barry, that it did not have as a ground-work what he calls "the truly beautiful and refined style of St. Stephen's Chapel, a work worthy of any age." How Mr. Scott must wince under the denunciation of that chapel in your paper of the 6th instant, by one of "our two respected architectural professors," if he cares for their opinions. Mr. Donaldson's advocacy of the proceedings at Alnwick appears to be weak on two points; viz. his total forgetfulness of the English school of ornamental carving for the last thousand years, and his declaration that "when these carvers shall have left the works at Alnwick, they will be equal to any men at home or abroad." Mr. Donaldson is generally so cautious, that such a prophecy is a curiosity, except as a proof that the discussion has become exasperating, and that, therefore, the sooner it ceases the better. Mr. Donaldson, too, disposes of Sir Charles Barry and Mr. Pugin by saying that, "no modern building can be quoted, the Gothic internal fittings of which render it tolerable:" that is another specimen of the fierce criticism which may be expected if any artist ever has the good fortune to find a client willing to allow him to endeavour to realize Mr. Donaldson's, Mr. Scott's, and Mr. Fergusson's aspirations, that the genius of this country may produce a distinctive architecture of its own. One name has hardly been heard in this discussion: one voice has not been raised in defence or in explanation: but Mr. Cockerell must be grieved to observe, that when his foresight as to changes is being justified, his professional brethren should not prepare themselves to meet, without incoherence, without insinuation, and without intemperance, the alteration of fashion which it is not impossible we may owe to the duke's determination to have his house as comfortable as he could make it consistently with the display of magnificence which his rank is supposed to demand, and with the economy which all building-owners of the present day are supposed to be obliged to practise. Throughout this discussion more regard ought to have been shown for those who appreciate at their real value the works of Sir Charles Barry and the late Mr. Pugin. PEACE.

STREET NOMENCLATURE.

AN elaborate report has been prepared by Mr. D'Iffanger, of the Metropolitan Board of Management, on the part of the committee to whom the Board referred this important subject. The report contains a communication on it from the General Post-office authorities, in which much anxiety is evinced that something should be done, and which contains various suggestions and reasons connected with it. From lists given, it appears that there are no less than 571 streets in the metropolis which have only seventeen names among them all!—a never-failing and interminable source of confusion, notwithstanding parasitical distinctions, such as Queen-street, Cheapside, Queen-street, Lincoln's-inn-fields, and six-and-thirty other Queen-streets; or Church-street, Chelsea, Church street, St. Giles's, Church-street, Islington, and more than thirty other Church-streets; many persons omitting all such distinctions, either inadvertently or ignorantly. There are sixty-two George-streets, fifty-five Charles-streets, forty-four John-streets, forty-four King-streets, &c. &c.; but, strange to say, no such superfluity, that we can notice, of such names as Smith-street, or Jones'-street, which moderation says a great deal in favour of the retiring modesty and humility of the numerous or rather the innumerable members of these respectable families.

The report enters fully into the subject of the substitution of new names, going so far, indeed, as to suggest distinct names for every superfluous one already in existence within the limits of the metropolis; the new names being chiefly taken from those of men of more or less eminence in past and present time, whether literary, scientific, poetical, political, or any other. In the mean time, however, it is proposed that the 571 streets with seventeen names (or one among twenty) should be first dealt with. In doing so, we would suggest that the greatest care should be used; but we will take another opportunity to speak more fully on the subject.

THE CHELSEA EMBANKMENT.

A DEPUTATION from the vestry of Chelsea, consisting of Mr. Tite, M.P.; Mr. Fielder (churchwarden); Mr. Perry; Mr. Slade, Q.C.; Mr. Foy, and Mr. Hall, attended by Mr. C. Lahee, vestry-clerk, waited on Sir Benjamin Hall at the office of the Board of Works, Whitehall-place, on Thursday, December 11, on the subject of the Chelsea embankment.

Mr. Tite having introduced the deputation, said,—The embankment, as originally proposed, was to have extended from Vauxhall-bridge to Battersea-bridge, and to complete the work a sum of 143,000*l.* was voted by Parliament. It so happened, however, that in executing one-half of it, the money was nearly all expended, and when the deputation urged upon Sir Benjamin the absolute necessity of completing it, he had said there was no compulsory power vested in the Board, but that he would ascertain if any money were left of the sum which had been voted for the purpose. We produced on that occasion also pledge after pledge given by former commissioners that the work should be completed.

Sir Benjamin Hall said, in reply, he had been over the whole of the works, beginning at Vauxhall-bridge, and found that they had been dragging on in a very improper way. He was quite prepared to carry them out as far as the property of the Government went, but had no power to go further: our power, said he, only allows us to negotiate with the parties who possess property along the embankment, and it is permissive with them to agree to or reject the proposals. They had rejected them, and had stated that if the works go on, they will resist: indeed beyond Chelsea Hospital we have been thwarted in every possible way, and our means do not enable us to prevent it. He was anxious to carry out the work, and believed it would be one of the finest things in the metropolis. As a local Board they had considerable power under the Metropolis Local Management Act, and in that capacity should take these parties in hand, and see and get some terms from them? The Government had a large sum of money saved out of the sum which Parliament voted for that purpose, and of course the Board should have it. They might also lay their plans before the Metropolitan Board of Works, and get them to assist; but if the Government had funds enough, they would carry the works on as soon as the difficulties respecting the property were removed.

THE MANAGEMENT OF COMPETITIONS.

IT has happened, in too many instances of late, that where competitions have been advertised, and elaborate designs sent in from all parts of the country, architects resident on the spot have had members of the committees frequently at their offices, and both rendering assistance by their suggestions, and all but pledged for their support, to say nothing of rejected designs having been first traced or borrowed from. By such means, not only have competitions been rendered useless, and the mottoes on the drawings and "address in sealed envelopes," been only "a mockery, a delusion, and a snare," to honourable men at a distance; but the practice of architecture, alike as a science and an art, has received serious injury. For no architect who can forget what is honourable and manly, so far as to adopt such a course, will ever be likely to throw that exalted sentiment into his compositions which architecture is capable of embodying, when the mind and hand labour under the inspiration of a noble and manly soul.

I cannot allow myself to give utterance to my feelings on a practice so unworthy and faithless, alike in the members of committees and architects, who are guilty of it; but I do think that it ought to be most openly and severely denounced, if the noblest of all the fine arts is to be raised from a degradation by which it has suffered so extensively. BETA.

INSTITUTION OF CIVIL ENGINEERS.

ON December 2nd, Mr. Locke, M.P. Vice-President, in the chair, the paper read was "On Recent Improvements in Water Meters," by Mr. T. T. Jopling. After alluding to the generic merits and defects of piston and bucket meters, the author proceeded to describe a meter constructed on the piston or diaphragm principle, to meet the objections hitherto made to that class of meter. It consisted of two measuring cylinders, set parallel to each other, with working pistons, the rods of which projected out of the cylinders in opposite directions, carrying at their extremities slide-valve frames, for supporting and operating on the slide valves that governed the ports of the cylinders. These measuring cylinders were contained in a cast-iron case, or tank, into which the water to be measured entered under a certain pressure. The water thence passed into the cylinders, from which, after having acted upon one, or other, of the pistons, it made its escape. Through the agency of suitable counting apparatus connected with one of the piston rods, the reciprocating movements of the piston were counted, and thus the quantity of water passed through the meter in a given time was indicated. The measuring chambers were made somewhat like ordinary steam-engine cylinders, as respected the inlet and outlet ports, but in one of the cylinders the direction of the inlet ports was inverted, in order that the right-hand port might pass the water to the left-hand end of the cylinder, and the left-hand port to the right-hand end. By this means the two pistons were enabled to follow each other in the same direction, and to maintain a continuous stream of water, without the use of cranks.

ST. MARY'S CHURCH, SPRING-GROVE, HOUNSLOW.

THIS church has lately been erected on the Spring-grove estates, Hounslow, and is of large dimensions, in order to meet the requirements of the residents of a largely increasing neighbourhood. The accommodation on the ground-floor is for one thousand. Foreseeing the probable necessity of largely extending this number, it was thought desirable to provide for such contingency, by considering galleries in the north and south aisles as parts of the structure; the architect has accordingly so arranged his design, that the building shall at any time be prepared to receive such additions without interfering with the appearance of the church. Hence, the windows in two ranges in the aisles and the corbels, and other preparations internally.

The church consists of nave, 84 feet by 27 feet;

north and south aisles, 84 feet by 13 feet; chancel, 44 feet by 27 feet wide; chancel aisles, 29 feet by 13 feet wide; north porch, 10 feet by 9 feet wide; tower, 12 feet by 12 feet, internally, which also answers as a south porch. Vestry, 18 feet long, and of the width of the north aisle. The tower, which is 76 feet high, when completed, will be surmounted with a spire, 84 feet high, with cross and vane, altogether 160 feet high. Ample means of access to the galleries have been provided by lateral lobbies to each aisle, which assume in the elevations a quasi transeptal appearance, occurring as they do near the junction of the nave with the chancel. The organ will be placed in the gallery provided at the west end. The church is in the Gothic style, of the Geometrical or Early Decorated period. Internally we find the nave united with the aisles by arcades of six bays. The nave opens into the chancel, with a moulded arch spanning the whole width of the nave, and resting upon massive corbels from piers here increased in size for that purpose. The chancel opens to the chancel aisles by a similar arcade of two bays to that in the nave. The church is more fully lighted by a large east window, and by a wheel window in the nave, of the diameter of 15 feet.

This building is an example of the application for such purposes of the stone facings invented and patented by the architect, Mr. John Taylor, jun. of Spring-grove, and 40, King-street, Cheapside. This facing, in connection with solid Bath stone dressings, has been used, externally and internally, for the structure, which is mainly built of brick.

PAYMENT OF SURVEYORS.

APPEALS AGAINST THE RATING OF WHITECHAPEL PARISH.

In the year 1850 a professional friend, who was engaged by several parties in Whitechapel to survey and value their premises, and support an appeal against the new rating made on their respective properties, directed me to make the required surveys and valuations to strengthen the evidence, which I accordingly did, the rating being reduced by the magistrates, and the clients appearing well satisfied with the result.

Expecting that the solicitors would apply for my claim, I neglected for a long time to send it in; but did so at length to the respective parties, on learning that all the other claims had been paid. Another long interval elapsed, and after many applications for payment, the liability was disputed by each, under the plea that they never employed me.

On this I issued summonses in the Whitechapel County Court, which were heard on Thursday last, when the surveyor directly employed by the appellants attended, and testified that at a meeting of the several parties and the solicitors, he had suggested the necessity of obtaining further evidence, which was agreed to, and upon which he engaged my services. A letter from the solicitors to myself was also read in court, in which, although repudiating the employment of me by themselves, they stated, "We admit that our clients had the advantage of your services."

The first and second cases the judge decided must be paid, no objection having up to that time been raised to the charges. The parties then shifted their ground, and objected that the charges were too high for the services performed, and attempted to show that I had made the surveys of four manufacturing premises in half an hour. The ultimate decision was, that the charges in each case should be somewhat reduced.

Although I could not be well satisfied with the amounts awarded, I yet was content in assisting to establish the principle that a surveyor is not to be called in to do service in such cases, and then to be told to apply to his professional brother for payment of his claim. W. F. Meakin.

THE MANSIONS AND PALACES OF ENGLAND.

Architecture is now becoming so prevailing a science among all classes of people, that every assistance ought to be given to it, by means of works descriptive of cathedrals and churches, palaces and mansions. Cathedrals and churches have been written about and illustrated, but of the other class of buildings—palaces and mansions—there is so little account, that, except to a few, these

"Stately homes of England"

are almost entirely unknown. This deficiency must, I should think, be lamented by all true lovers of the art, and it is to remedy this want that I shall take up a few lines in your valuable paper.

In surveying many of the English residences, such as Chatsworth, Holkham, Castle Howard, and Hamilton Palace, I have been struck by the beauty and almost antique purity of many of their details, the effective grandeur of their exterior (noticeable especially in Castle Howard), and the elegance, comfort, and, at the same time, splendour of their interior. "Cannot," I have often thought, "some of these details be transferred to paper, as helps in design, not to builders only (for more works, 'for the use of builders,' are now almost superfluous), but to the architects of the whole world?"

Look at a map of England, and behold it jotted over with green to mark the residences of the princes, nobles, and gentry of our land. Many of these parks are adorned with buildings which might take their stand against the boasted palaces of Italy, designed though they be by the master minds of Palladio and Bernini. The walls of the Italian palaces may glow with more of the paintings of Raffaelle and Guido: they may be situated in fine scenery, and in a more general clime: *they* have been written about, until travellers may now, untaught, and without the help of the cicerone, recognise the Villa Borghese; but no one has thought it worth his while faithfully to mention or illustrate our English homes!

Before concluding, I would humbly offer some suggestions on the subject in hand. Could not a work be written and illustrated on our English palaces and mansions? The letter-press might be written by an accomplished architect, who would be thoroughly able to cope with the subject, and the necessary engravings taken from photographs. A work in parts makes it purchaseable by persons of smaller means than if published at once. In each part, let one residence, if large, or two, if small, be described. A ground-plan, two elevations, and several details (the first three on steel, but the others woodcuts), would constitute the engravings.

The size of the work would depend mainly on the amount of subscribers: but surely, when we see the debased Gothic of Windsor described in the huge work of Mr. Nash, it is possible that a work of such utility as the one I propose might receive the same patronage as the one before mentioned. And will not Englishmen bring out a work illustrative of those homes, the happiness of which is famed in prose and verse, with the generosity and in a manner worthy of our great nation? E. G. Culling Eardley.

THE WESTMINSTER CLOCK AND BELL.

After divesting Mr. Denison's letter, published in the *Builder* of December 6, of the peculiar tone and epithets with which it is decorated, the matter it contains resolves itself into the following:—

First, that the proportion of weight and fall given in my communication, viz. 120 lbs. for the hammer and 6 inches for its fall, are "fabrications" of my own, and not to be found in the parliamentary papers, unless I have, as Mr. Denison expresses it, "blunderingly transferred the folly of the company of clockmakers to his account." Secondly, that in designing the clock he made provision for its having to lift a hammer of 400 lbs. and give it a fall of 12 inches, and that evidence is to be found of his having long contemplated this as the least quantity of work which the clock would have to do; and further, that now the bell has been cast, he finds even this weight and fall of hammer will have to be considerably increased.

In reply to the first part, I have to state that before writing the letter to which Mr. Denison refers, I carefully examined all the published parliamentary returns to the House of Commons, viz. No. 724, session 1847; No. 257, session 1848; No. 500, session 1852; and No. 436, session 1855; and that I have since gone diligently through them again, and the result is that I have not found any inaccuracy or error whatever in my former statement. The weight of 120 lbs. and fall of 6 inches are neither "fabrications" of my own nor were they quoted, according to Mr. Denison's other suggestion, from the "blundering statements of the Company of Clockmakers," but were taken from a table given by the late Mr. Dent, at page 56, parliamentary return No. 724 of 1847; and let me add, that I purposely confined myself throughout the letter to the quantities and figures given by Messrs. Dent and Denison themselves, thinking that the latter gentleman would not then question their accuracy.

In reply to the second part, I have to observe that I can find no mention or hint throughout the whole of the returns, either from Mr. Denison or any one else, that a hammer of 400 lbs. falling 12 inches would probably be required for the bell, which it was understood, before the first return was published in 1847, was to weigh from fourteen to fifteen tons; neither has any provision been made by enlarging the clock for the enormous and indefinite increase of work which Mr. Denison, in order to get his bell purchased by the Government, seems now disposed to throw upon it. The main striking wheel remains at 3 feet diameter, and it has never been increased in any of the plans of Messrs. Dent and Denison from the date of the first return in 1847 to the last return in 1855, and at this date the clock had been made.

In justice to the late Mr. Vulliamy, I must remark, that the plan for the clock which was sent in by him, and which Mr. Denison ridicules under the title of the fraternity of clockmakers' plan, as being too small for the purpose, was larger than any of the plans proposed or carried out by Messrs. Dent and Denison, as the diameter of Mr. Vulliamy's main striking wheel was 3 feet 7 inches; nor is this the only advantage in durability which Mr. Vulliamy's plan exhibits over Mr. Denison's, for it had gun-metal wheels throughout, whilst the wheels of the clock that has been made are all of cast iron, the commonest and cheapest material that could be used; nor is this all for which the public have to thank Mr. Denison, for he has so managed matters, that the Government will have to pay as much for the clock as though it had been made of the more durable and costly material.

In conclusion, I again set forward the principal questions to be kept in view, which are:—

1. What is the force which the clock now made is calculated to lift? To this I reply, that taking into consideration the size of the striking part, the time it should last, and the fact of the wheels being composed of cast iron, 120 lbs. for the hammer, and 6 inches for its fall, is the greatest quantity of work which the clock should be allowed to do.

2. What is the force which a good bell of 16 tons should require? To this I reply, that taking the Oxford bell as the standard, which weighs 152 cwt. and is struck by a hammer of 54 lbs. falling 4½ inches, and considering that Mr. Denison's bell was to have been much superior to the average quality; a hammer of 120 lbs, falling 6 inches, ought to be amply sufficient to bring out the tone. E. T. Loseby.

Miscellanea.

The Photographic Society.—On the evening of Wednesday last, the council of the Photographic Society gave a *soirée* in the large room of King's College. It was very numerously attended—the company including many persons eminent in the arts and sciences, as well as an array of photographers, both professional and amateur. On the walls and tables were displayed an immense collection of photographs of every degree of merit. Some of the portraits were admirable. The whole affair was well arranged.

Aluminium now in use at Sheffield.—The value of this new metal is beginning to be felt at Sheffield. Little more than a year ago, it was dearer than gold. It is now produced at much less cost, and its production may probably be still further cheapened. It is found to be applicable to the plating of goods for which gold and silver has hitherto been used. A correspondent of a contemporary, evidently not knowing much of what he is talking about, adopts the safe and advantageous tactics of speaking contemptuously of those who are hopeful as to the ultimate introduction of this new metal as a substitute for silver, and for many other purposes; but infers that because it is still, as he says, "twice the price of silver," therefore it is scarcely possible that articles of common utility, such as forks and spoons, can already be made of it as a substitute for silver; whereas, even were the cost of the articles made from it twice as much as those of silver, *which by no means follows*, the freedom from tarnish, and the greater hardness, as well as the lightness of the new material, are valuable properties which may render it not only preferable to silver for such articles, but as such actually *worth* twice the price. That although aluminium be "twice the price of silver," however, articles of utility may, even as a matter of actual cheapness as well as economy, be already made of it and sold at an absolutely lower price than those of silver, no one who is acquainted with the well-known fact that its specific gravity is only 2·25, and hence that it is only about a fourth part of the weight of silver, bulk for bulk, or, in other words, that its bulk is four times that of silver, weight for weight,—and who at same time is capable of apprehending the very obvious inferences deducible from that fact,—can for a single moment doubt. Even at "twice the price of silver," weight for weight, aluminium on the "own showing" of this "*gobemouche*," as he calls several of our daily contemporaries and others, is thus actually *already* only half the cost of silver, bulk for bulk! and that it may yet be obtainable at far less cost than even at present there is every reason to hope.

Manchester and Salford Sanitary Association.—The annual meeting of this very useful association was held on Thursday in last week, the Bishop of Manchester in the chair. The bishop addressed the meeting at some length, as did various other gentlemen, and several appropriate resolutions were passed approving of the report of the association and of their purposes and proceedings. A similar meeting of the Ardwick and London-road District Association was also held last week at Ardwick, the Mayor of Manchester in the chair. To these meetings we shall again advert.

Deodorizing Tanks.—The Town Council of Glasgow have recently constructed some tanks for purifying water, and a chemist has been appointed to advise the sanitary committee in making the necessary experiments. The council have now three tanks, 60 feet in diameter and 6 feet deep, with a mixing well 10 feet in diameter, an engine of 8-horse power, and a pump capable of raising 1,000 gallons in a minute, the calculation being that these tanks are quite capable of purifying the whole of the contents of the Pinkston Burn. The cost is 750*l.* but that includes 195*l.* for which sum the contractors have engaged to work the engine for three months, or 250*l.* if for six months.

Railway Matters. The total number of plans and sections for Irish railways and other public works deposited for session 1857, was 176, of which about 109 were railways, and the rest for miscellaneous purposes. The number deposited last year was 122. ——A large iron pontoon is now in course of construction at the Neyland terminus of the South Wales Company, to be placed as a floating stage at the end of the pier. An iron bridge to connect the two is nearly finished: it is 60 yards long and 8 yards wide, and by its means the pontoon can rise and fall with the tide. The question of a new hotel has been settled in the affirmative by the Company, and a suitable site has been fixed near the terminus. The importations of Irish produce are now enormous, and more steam transit for goods and passengers is absolutely necessary.——The Grand Trunk Railway of Canada is now open throughout, from the St. Lawrence, where the great Victoria tubular bridge is in progress, to the western terminus at Lake Ontario, near Toronto, a length of 850 miles. A single line only has as yet been laid down. The whole route is level, the chief cuttings seemingly having been forest opening. The Victoria bridge will not be finished till 1860.

Carmarthen and Cardigan Railway Contract.—Mr. J. Jay has undertaken to complete this line from the Myrtle-hill station of the South Wales Railway to Llandissil for 135,000*l.*

Electro-telegraphic Progress.—Mr. Newhall, of Gateshead, according to the *Observer*, of that town, is now engaged in the manufacture of the telegraphic cable for the Atlantic. Mr. Newhall is under a contract to complete his portion of the cable (altogether of scarcely less than 1,500 miles in length) in the course of the ensuing summer. Messrs. Kuper and Co. of London, are to make one half of the cable, and Mr. Newhall the other.

Slate Walls, and How to Prevent Damp rising up Stone and other Walls.—Two years ago I built 48 square of stone wall, 2 feet thick at the bottom, rising gradually to 9 inches at top, with a coping 13 inches wide: the inside was faced and perpendicular, the outside rough, and what is called "battered." The stone in my part of the country is very porous, and when taken out of the quarry soft and easily worked, it becomes, on exposure to the air, case-hardened and very durable. All our old churches and abbeys are built of this sandstone. In consequence of the porosity of this stone damp rises rapidly, and causes it to look dark and green, so that brick has now almost taken the place of stone. To counteract this I hit upon the following expedient:—Immediately above the ground-line on the inside of the wall I had boiling coal-tar poured on evenly from an iron ladle; on this as much slaked lime as the tar would absorb: this was left for a few days to harden. The next course of stone was bedded in mortar in the tar: this cost me five shillings for a wall 400 feet long and 20 inches thick at the ground-line. These are the results: immediately above the tar-line the stone is perfectly white and hard, and the mortar, composed of hot gray lime and finely-sifted coal-ashes, as hard as cement, and not affected by frost. On the outside of the wall, the ground being here, a course of stone is visible below the tar-line: this course is green, damp, and soft: the mortar is also soft, and the frost has crumbled it away. I am aware that slate in cement cuts off capillary attraction, but it is very expensive when the wall is thick. I have lately used the same means with the same success in brick walls.—Sigma, in *Gardeners' Chronicle*.

Free Library and Museum for Leamington.—Steps are being taken to obtain the introduction of the Libraries and Museums Act into Leamington.

The Copper Trade.—A notice was recently issued by the copper smelters announcing that the prices of copper have been advanced as follows:—Manufactured, 13d. per lb.; tough cake and tile, 117*l.* per ton; best selected, 120*l.* per ton; sheathing, 11¼d. per lb.; and since then a second advance of 1d. per pound has taken place, making tough cake and tile 126*l.* 10s. and best selected 129*l.* 10s. per ton, which is 10s. per ton dearer than it was prior to the last reduction. The intelligence, says the *Birmingham Journal*, seems to have taken consumers by surprise.

Gas.—The gas committee of the Salford Corporation report a steady increase in the consumption of gas. The profit upon the sale of 133 million cubic feet last year was 9,570*l.* The gas is made from the best Wigan cannel.——The *Dublin Freeman says*,—"We perceive by an advertisement in the Cork papers, that the Hibernian Gas Company are about to reduce the price of gas to their Cork customers to 5s. per 1,000 cubic feet, which is 10d. lower than the present Dublin price. We suppose the result of this reduction will be an immediate change in the Dublin prices. The price in Belfast, according to the Cork Municipal Committee report, is 3s. 6d.—nearly 2s. less than the Dublin price."——Two very curious applications of science have lately been made in the town of Lyons. One of these, as the *Indépendence Belge* informs us, is the application of gas-light to the diligences running in and about that town. The gas is carried in a cylinder under the driver's box, and communicates by means of a tube with the interior of the vehicle. The cylinder is so strong as to admit of its being charged with gas in a highly compressed state. The second of these applications is what we lately noted as the *laying on of time*, like water or gas, the municipality intending to have 150 clocks placed in various parts of the city, all moved by the same electric apparatus, and giving the same time. For the payment of an annual rate, the citizens may have a wire laid on for the supply of the electric time to their own houses.——At the annual meeting of the Atherstone Gas Company, it was stated that, by the reduction of the price of gas to the consumers, of 6d. per 1,000 feet, during the year, they had received an increased sum for consumption of gas, of nearly 50*l.* and that the financial state of the company was in so encouraging a condition, that a dividend of 7½ per cent. upon the paid-up capital of the company, free from income-tax, would be given, leaving a very satisfactory fund to be carried forward to next year's account. Thanks were voted to the directors "for their zeal in protecting the interests of the company during the past year;" the protection of the company's interests comprising that reduction of the price of their gas to which they were indebted for their own increased profits.

Durability of Massachusetts Marble.—The *Berkshire Eagle* says a committee have been experimenting at Washington to ascertain the effect of weather on the marble of which the extension to the capitol is being constructed. They find that after every freezing and thawing, a scale of 1,500,000th of an inch thick clears off from the surface, so that, allowing fifty freezings and thawings for every winter, it would require ten thousand years for the surface of the building to be exfoliated one inch by this cause. The stone is from Lee, in Berkshire county.

Condition of "Field Lane." — Having frequent occasion to pass by the remaining half of the once celebrated Field-lane, at the foot of Holborn-hill, I feel a sort of personal interest in the fate of the old rubbish, called houses, which stands there; which leads me to ask the favour of a little space in your columns to invite the attention of the "powers that be," to its dilapidated condition. I am told by those who have seen it, that some parts are actually shored up inside to prevent the floors falling in upon the occupants. Your readers will recollect that four houses in the upper part of this lane, at the commencement of Saffron-hill, did fall down some time since: they will not either have forgotten "Swan-alley," and one or two other little events of that kind; and more recently the stack of old chimneys in Cock-lane, which was blown over on last Sunday morning. Of course, it does not *follow*, that if any of such events happen in Field-lane, it will be whilst I am passing; but I should prefer to think, that the probability did not exist of their occurring at all. And although I have no wish to be a "busy body" in such matters, I do feel some interest in the safety of others, who, like myself, may be obliged to frequent these parts.—K.

Cathedral of St. Mark, at Venice. — The Emperor of Austria has just granted a yearly sum of 20,000 florins for the repair of the Cathedral of St. Mark, at Venice. Whenever the whole of this sum shall not be wanted in the course of the year, the remainder is to be capitalised to increase the funds belonging to the cathedral, and the interest is likewise to be applied to keeping the edifice in repair.

New Roman Catholic Church, in Commercial-road East.—A new church, designed by Mr. William Wardell, architect, and dedicated to St. Mary and St. Michael, was opened in the Commercial-road East, on Monday in last week. It is calculated to hold 2,000 persons, and is in the Decorated style, with nave, two side aisles, and tower. The chancel has no chancel arch: it is of a uniform height and breadth with the nave, and is visible from all parts of the interior. The aisles are of one continuous length with the body of the church.

Safety for Workmen.—Too little attention has hitherto been paid to preserve the lives of those engaged in the more dangerous occupations, such as bricklayers, carpenters, and painters. I, who from my occupation have no such risk to incur, feel it my duty to send to you a suggestion which has occurred to me. I often feel very uneasy when I see workmen upon ladders, the ends of which are on the pavement: the least slip, and the consequences must be frightful. I suggest that these ends should be covered with a thick pad of leather, or other durable material: this would not only prevent slipping, but would render them firmer. Where the ends are fixed upon the earth, I think a long spike might be employed, having a screw form at one end, this screw to be inserted in the ladder ends, and the spike then pressed into the ground would produce security.—Probe

Sir R. M. Stephenson, C.E.—The Queen has conferred the honour of knighthood upon Mr. Rowland Macdonald Stephenson, of Gloucester-terrace, Hyde-park, and late of Calcutta, Civil Engineer.

Pernambuco Gas-works.—The drawings and specifications of the buildings, gas-making apparatus, and mains, for the distribution of the gas throughout the city, have been prepared by Messrs. Law and Blount, of Essex-street, Strand. The general contract for the complete works (including buildings, machinery, thirty miles of mains, and 1,000 public street-lamps) has been let for the sum of 53,000*l.* to Messrs. Edwd. T. Bellhouse and Co. of Manchester, who have just completed the general contract for the gas-works at Buenos Ayres. The privilege from the Government is in the hands of two English mercantile houses, Messrs. Fielden, Brothers; and Messrs. Richard Rostron and Co. of Manchester, represented by Messrs. Rostron, Rooker, and Co. of Pernambuco.

Preston Surveyorship.—The committee of local council appointed to consider the list of candidates for the office of surveyor to the local Board of Health, reported to the council that there were sixty-seven candidates, from whom eight were first selected, and that finally Mr. John Newton was chosen for recommendation to the council. Mr. Newton was accordingly appointed to the vacant office.

The Archæological Society of Glasgow.—An archæological society has just been organized at Glasgow, by the Lord Provost, and other gentlemen, among whom are Mr. Honeyman, jun. the honorary secretary; Mr. J. T. Rochead, architect; Mr. J. Baird, architect; Dr. Strang, &c. At a preliminary meeting held in the Merchants'-Hall, Hutcheson-street, the society was resolved upon. In course of the proceedings, Mr. Rochead remarked that Glasgow and its neighbourhood were a very favourable field for the progress and operations of such a society. When they looked at the magnificent old remains, at the Roman wall, at the Roman forts at Kirkintilloch, it was with regret that they knew they were not in possession of all particulars regarding them. The society when this preliminary meeting was held comprised fifty members.

Cambridge Architectural Society.—The third meeting for the present term was held on December 10th, when the Rev. C. J. Evans, Fellow of King's College, read a paper on the Colleges of Cambrae and Glenalmond, and the Cathedral of St. Ninian, Perth; and gave an account of the studies and discipline there in use.

Artistic Obituary.—We record with regret the death of Mr. Nash, one of the oldest members of the Society of Painters in Water Colours. He was elected an Associate in 1810, six years after the establishment of the society, and was made a full member the following year. Mr. Nash devoted his attention in early life to making drawings of ecclesiastical and other ancient buildings for the illustration of topographical works, and continued afterwards to paint similar subjects.——With even more sorrow, because of personal knowledge, we mention the death of Mr. R. R. M'Ian, the artist, formerly well known as a delineator of Scotch characters on the stage. His "Dougal creature," in "Rob Roy," was altogether unrivalled. Mr. M'Ian was an Associate of the Scotch Academy, and would have been elected a Fellow, but for some technical plea about non-residence in Edinburgh.

ROYAL POLYTECHNIC.—Patron, H.R.H. Prince Albert.—This Institution has for eighteen years continued to instruct and amuse the public.—The Christmas Lectures and Entertainments provid d this year are on the most liberal scale.—1st. Entire New Lecture, by J. H. Pepper, Esq. "On Optical Illusions," illustrated with all the apparatus for which this Institution is so justly celebrated, every Tuesday and Friday, at Three and Eight.—2nd. The Lecture by J. H. Pepper, Esq. "On Fireworks," every Wednesday, at a Quarter-past Four and Quarter-past Nine, with increased illustrations by Mr. Darby; and in the evening, exhibition of "The British Bouquet," displaying in magnificent fireworks the portraits of her Majesty, Prince Albert, and the Royal Family.—3rd. Exhibition of an ingenious Juvenile Mechanical Model Theatre, displaying every scenic movement, with novel machinery invented by Mr. Freeman, who will illustrate his new system with the drama of "One o'Clock; or the Knight and the Wood Demon," accompanied with the whole of the original music by the Misses Greenhead; also the Ghost Scene from "The Cenci an Brothers," and the Mechanism of the Rising of the Ghost. Daily at Half-past Two and Half past Seven. 4th. Mr. Logrenn will exhibit his astonishing Conjuring Tricks and Comic Delusions, every Monday, Thursday, and Saturday, at Three and Eight.—5th. An entirely new and beautiful Series of Views, by Mr. Clare, illustrating "The Traveller's Portfolio, or, Visits to Many Lands." Daily. Grand Programme. 6th. Gratuitous Distribution, every Thursday Morning and Evening, of thousands of beautiful ornaments, and hundreds of Mappin's pocket-knives, from the Giant Christmas Tree.—7th. A second and most costly Series of Dissolving Views, designed by Mr Newman, and chiefly executed by Mr Rine, illustrating "Ye Pitifull and Dreary Comical History of Fire Beard," with an original humorous description by Leicester Buckingham, Esq. late of the Panopticon. Admission to the whole, 1s.; Children and Schools, half-price.

MARBLE CHIMNEY-PIECES, and every other description of marble work, supplied to architects, builders, and the trade, at prices to compete with slate, manufactured by the LONDON and CONTINENTAL MARBLE COMPANY.—Offices and Depôt, 3, Crooked-lane, London-bridge. Paving for Halls, Conservatories, &c.

MARBLE GALLERIES, 17, Newman-street, Oxford-street.—Mr. ALFRED E. EDWARDES, upwards of ten years with the London Marble Company), has opened the above premises, late in the occupation of Bailey, the celebrated sculptor, under the firm of EDWARDES, EDWARDS, and COMPANY, with the largest stock of BRITISH and FOREIGN MARBLE CHIMNEY-PIECES, &c. &c. in London. EDWARDES, EDWARDS, and CO. solicit the favour of an inspection of their stock by architects, builders, and others connected with the trade; and beg to assure them that for design, style of execution, and price, it will be found unrivalled. Estimates for every description of marble work.

MARBLE CHIMNEY-PIECES.—The nobility and gentry of the United Kingdom who are building or refitting their mansions are respectfully invited to inspect the most Extensive Collection of MARBLE CHIMNEY PIECES lately imported from the Continent. They comprise Statuary, Giallo di Siena, Vert Rouge, Dove, Black and Gold, Rouge de Belmont, Bardiglio, and other choice foreign marbles; and are designed with great taste, and executed by first-class artists. On sale, in the show rooms of Messrs. EVANS, SON, and CO. King William-street, London-bridge.

LLOYD'S MARBLE WHARF, Thames-bank, Pimlico, adjoining Vauxhall-bridge.—Italian Statuary, Veined, Sicilian, Dove, Sienna, and other Marbles, for Sale, at import prices. A resident manager on the wharf at all hours.

MARBLE.—The ITALIAN MARBLE COMPANY have just landed, and constantly keep an assortment of MARBLE MORTARS and GARDEN VASES of all dimensions. Orders executed for the above, and every description of Italian works of art. Vein and Sicilian marble in blocks of all sizes.—Apply at Bridge Wharf, Millbank, adjoining Vauxhall-bridge, to WILLIAM W. BONNIN, Secretary.

TO BUILDERS, MASONS, AND OTHERS.
THE largest STOCK in England of MARBLE in Blocks and Slabs, veined, Bardilla, dove, black, black and gold, Sienna, St. Ann's, statuary, serpentine, verd antique, &c. Portland, Harehill, Park Spring, and other stone, in blocks, slabs, landings, and headstones. Yorkshire paving, granite curb, &c. All goods carefully packed and forwarded to any part of England.—THOMAS JACKSON, Marble and Stone Sawing-Mills, Commercial-road, Pimlico, London.

THE LIZARD SERPENTINE COMPANY manufacture and sell in block and slab the beautiful stone now raised from the new beds of quarries. Chimney-pieces, Columns, Fonts, and ornamental works on view, at 20, Surrey-street, Strand.
HENRY COX, Manager at the Lizard.
F. W. RUFFLE, Agent in London.

ANSTON STONE.—FOR SALE, 30,000 cubic feet. This lot is suitable for Dock and Embankment Work. It is well sampled, and was got for the Great Grimsby Dock Works. It will be sold reasonably, to clear the wharfs. Deliverable by rail or sea. Apply to Mr. DUNCAN LIDDLE, 67, Princes street, Soho, London; or Rose-bank, Fulham, either personally or by letter.—Dec. 17, 1856.

RAWDON-HILL STONE.—Messrs. THICKETT and PERKIN are prepared to execute orders to any extent for their much-admired building Stone. Depôts where large stocks are kept. No. 3, Stone-wharf, Great Northern Railway Station, King's-cross; Victoria Stone-wharf, Millwall, Poplar. Blocks quarried to suit customers for columns, cornice, landing, steps, ledgers, head lines, cills, &c. Delivered to any part by vessel or railway trucks.
"This stone when better known, must come into extensive use I should think it singularly suitable for the London market."
C. L. DIESSER, F.G.S.
Address, JOHN THICKETT, Headingley, Leeds, Yorkshire; or, SAMUEL THICKETT, Victoria-wharf, Isle of Dogs, London.
N.B. A large quantity of Foundation Landings for sale.

GATES and GEORGE, CAEN, AUBIGNY, and GENERAL STONE MERCHANTS.
CAEN WHARF, ROTHERHITHE, LONDON.

STONES, GRANITES, SLATES, &c.—W. and J. FREEMAN supply the various British and Foreign Stones, Cornish and Aberdeen Granites, in scappled blocks, or worked to specification. Also, the usual quarry worked articles of York-shire flags, landings, &c. &c. DIRECT FROM THE QUARRIES TO LIVERPOOL, HULL, OR ANY OF THE OUTPORTS (FOR EXPORTATION OR OTHERWISE), or by rail to any part of the kingdom.—Stocks of each description always ready for immediate delivery from their Wharfs, Millbank-street, City-road Basin, and (adjoining Commercial Docks) Deptford.—Office, 27, Millbank-street, Westminster.

STONE! STONE! STONE!—To the TRADE.—The cheapest place in London for Portland and Bath Stone, Yorkshire Landings, Steps, Curb, Paving, Self-face Slab, Granite Pitching and Curb, Guernsey Broken Road Materials, and every other description of stone, at JOHN KNIGHT and SONS, Devon Wharf, Mile-end. York tooled paving, 33s. 6d per 100 feet; slab for hearths, 4d. per foot sup.; slab for chimney-pieces, 3½d. per foot sup.; 8 by 9 windowsills, 6d. per foot run; 13 by 9 coping, 8d. per foot run; box chimneys (any opening), 8s. 6d. each. Terms cash on delivery.

BRAMLEY FALL STONE.—To ENGINEERS and CONTRACTORS.—The quality so well known and highly approved, in numerous public works, is SUPPLIED from their QUARRY at MEANWOOD, and the several Quarries at Horsforth, with punctuality, and at the lowest possible rates, by JAMES AKEROYD and SONS, Gepton-wood Quarries and Canal-basin, Leeds.

CAEN and AUBIGNY STONE.—P. FOUCARD, Stone Merchant and Quarryman. Cargoes shipped to order from Caen to any port. Contracts taken for any quantities. Depôts: Granite Wharf, East Greenwich; Lett's Wharf, Waterloo-bridge. Office: 246, High-street, Southwark, near the Townhall.

DARLEY DALE STONE.—One of the Stones selected for the New Houses of Parliament, and highly commended by Sir Charles Barry, is supplied direct from the Quarry, or at the Darley Dale Stone Wharf, City-road Basin. In addition to numerous other works, it is the stone of St George's Hall Liverpool, and the Staircases at the Gresham Chambers, Old Broad-street. Office, 37, Millbank-street, Westminster.

MARKET-WHARF, REGENT'S-PARK-BASIN.—WEST-END DEPOT, for Yorkshire Paving, Portland and Derby Stone, Bangor Slates, Slate, &c. Also Bricks, Lime, Cement, Plaster, Tiles, Laths, and Fire Goods (COLES' and WOOD'S), the attention of Builders, Masons, and others, to their Stock as above, where everything will be charged at the lowest prices. Headstones, Ledgers, Steps, Landings, &c cut on the shortest notice. Country orders promptly attended to.

O. M'CARTHY, CARMAN, and SAND and CEMENT MERCHANT, Whitefriars Wharf, Whitefriars, Fleet-street, City. Sand, from above or below bridge, delivered by the yard or per barge. Ballast screened or unscreened, by the yard or per barge. Stocks, lime, and old bricks. Dry rubbish delivered per barge, in any quantity, alongside the Thames.

RANSOME'S SILICIOUS STONE.—All kinds of ARCHITECTURAL EMBELLISHMENTS executed in this beautiful and indestructible material, at prices not exceeding the ordinary cements. Full particulars furnished on application to Mr. FRED. RANSOME, Whitehall-wharf, Cannon-row, Westminster; or Patent Stone Works, Ipswich.

JOHN BAZLEY WHITE and BROTHERS, MARBLE MERCHANTS, MILLBANK-STREET, WESTMINSTER.
Marble of all kinds and of best quality, in block and slab. Marble mortars, &c.

BATH STONE OF BEST QUALITY.
RANDELL and SAUNDERS, QUARRYMEN AND STONE-MERCHANTS, BATH.
List of prices at the quarries and depots, also cost for transit to any part of the kingdom, furnished on application to Bath Stone Office, Corsham, Wilts.

GRANITE.—The Welsh Granite Company, Carnarvon, supplies Paving or Paving Sets of this Material to order. The Sets, which have for several years been extensively used in Manchester, Bristol, Leeds, and other large towns, combine in a higher degree than any others, the qualities of roughness in wear and durability. The stone is also well adapted for foundation courses, plinths, &c. for public buildings and for mill-stones.

GRANITE.—King William and Nelson Monuments, Plinths and Steps of the Royal Exchange, and Terraces at the Crystal Palace.—Supplied by the Haytor Company under Royal Charter.—For terms, apply to Mr. C. HOAR, Haytor Granite Office, 4, Millbank-row, Westminster.

GRANITE.—The Cheesewring Granite Company (Limited), Liskeard, Cornwall.
London Agents—TREGELLES and TAYLOR, 34, Old Broad-street. Manager—JAS J. TRATHAN, Liskeard.
This Granite is selected for the New Westminster-bridge.

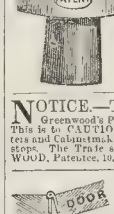
SLATE.—The Bangor Royal Slate Company have now on hand a LARGE ASSORTMENT of ROOFING SLATES, blue and green, of the usual sizes, which they are prepared to supply on the usual terms, for shipment from their depôt, at Bangor, or to transmit by railway. Also Slabs of all sizes. Orders to be addressed to Mr. EDWARDS, Manager, Royal Slate Quarries, Bangor.

SLATE.—An assortment of the best BANGOR ROOFING SLATE ON SALE, at Bridge-wharf, Millbank.—Apply to Mr. GEORGE BAXTER, Foreman.

SLATING, 22s. per square, in town; Slate Paving, 1½ in thick, averaging 4 feet in a stone, planed and squared, ready for laying in runs, 4½d. per foot super. warranted stronger than 3 inch York (45,000 feet can be seen laid at Beal's Wharf, Tooley-street). Roofing slates, slate cisterns, sinks, &c considerably lower than the usual quotations.—T. B. HANAFORD'S Slate Works, Trevalga Wharf, Ratcliff cross.

PARIS EXHIBITION.—ENAMELLED SLATE.—TWO FIRST-CLASS MEDALS!—Mr. MAGNUS is the only exhibitor whose productions received this double honour; also the Prize Medal at the Great Exhibition of 1851, and the Medal of the Society of Arts in 1848. This beautiful material, handsomer and more durable than marble, is now finding its way into palaces, into the mansions of the nobility at home and abroad, into the highest class of public buildings, as well as into humbler dwellings. The cost is immeasurably below that of any other production that can at all compete with it. It is applicable to a variety of useful and ornamental articles, too numerous to be separately specified. Among the chief are chimney-pieces and ornamental stoves for all apartments; plain and exquisitely decorated slabs for the tops of loo tables, chiffoniers, consoles, &c.; baths baptistries, altar-tablets, pill ulers, columns, vases, pedestals, and brackets; wash-stand tops, billiard tables, linings to halls, vestibules, and dairies.—Price lists can be had on application to Mr. MAGNUS, 39 and 40, Upper Belgrave-place, Pimlico.
N.B. Plain slate work executed from a single article to the most extensive contracts, for home and abroad.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality. They have been used at the British Museum, National Gallery, Bethlem Hospital, various Lunatic Asylums, the Ordnance Works, Model Prison, Pentonville, and other Penitentiaries; Malting Floors in Bedfordshire and Hertfordshire, Breweries, the Race Stand at Brighton, Portsmouth Barracks, and are kept in stock in large quantities by Messrs. FREEMAN, Millbank-street; and at Messrs. Braby's, Belvidere-road, where terms may be obtained.



ASPHALTE.—GERVASE FOOTTIT TRINIDAD ASPHALTE WORKS, ROTHERHITHE, LONDON. Established 1834.—TRINIDAD, SEYSSEL, and BRITISH ASPHALTES, manufactured by Steam power, laid down in the best manner, or supplied in any quantity. Information for using forwarded with material. Post-office orders or reference in London promptly attended to.—Estimates given for every kind of the above work.

ASPHALTE, FOREIGN and BRITISH, for FLAT ROOFING and every description of PAVING, especially in damp situations,
FROM 2s. 9d. PER SQUARE YARD.
Country Builders supplied with Asphalte for footings and barn floors, with instructions for using it.
Apply to JOHN PILKINGTON, Poloneeau and Limmer Asphalte Office, Monument-chambers, 14, Fish-street-hill, London.
N.B. Importer of the PURE ROCK ASPHALTE, from the LIMMER Mines in Hanover.

CROGGON and COMPANY, Manufacturers of PATENT ASPHALTE ROOFING, BOILER, RAILWAY SHEATHING and INODOROUS FELT. For Damp Walls, and Lining Iron Houses, 2, DOWGATE-HILL, LONDON.

THE SCOTTISH EQUITABLE LIFE ASSURANCE SOCIETY.—Instituted 1831.
Accumulated Funds—ONE MILLION STERLING.
Annual Revenue—ONE HUNDRED AND SEVENTY THOUSAND POUNDS.
Existing Assurances—FOUR MILLIONS AND THREE-QUARTERS.
At the Division of Surplus, at 1st March, 1856, a Policy for 1,000l effected at 1st March, 1832, was increased to 1,571l. 13s 10d., being at the rate of Two and a Quarter per Cent. per Annum on the sum assured. This addition may be converted into a present payment, or applied in reduction of the future premiums.
Profits are divided triennially, and belong wholly to the assured. Policies effected before 1st March next will receive six years' additions at the division of surplus in 1863.
Copies of the Report by the Directors on the recent division of surplus, and all information, may be had on application at the Head Office, or Agencies.
ROBERT CHRISTIE, Manager.
WILLIAM FINLAY, Secretary.
Head Office—26, St. Andrew-square, Edinburgh.
Office in London—26 Poultry.
A. T. RITCHIE, Agent.

SMOKY CHIMNEYS.—The best Cure is KITE'S PATENT ALBERT CHIMNEY-CAPS, patronised by Her Most Gracious Majesty—200 on Buckingham Palace; on St. James's Palace, Claremont, Windsor Castle, Ordnance Departments, Government Offices, Public Buildings, &c. Also extensively adopted by the Nobility, Gentry, and the Public in general. Wrought iron, 25s.; Galvanised do. 20s.; Cast-iron, 33s. each; the latter as durable as the building itself. The merits of this invention are proved by practical experiments; they are likewise architectural in appearance.—Depôt, Barton's Iron Works, and Manufactory for the Patent Steele Pitmen, and Enamelled Mangers.—Address JAMES BARTON, 370, Oxford-street, London.

GALVANIZED WINDGUARDS.
No 1. 3 feet high, 14 in. by 9 in. bottom, 18s.
No. 2. 4 " " " " " 20s.
A DISCOUNT ALLOWED TO THE TRADE.
This Windguard is highly recommended by the Manufacturers,
F. EDWARDS, SON, and CO.
42, POLAND-STREET, OXFORD-STREET.

SMOKY CHIMNEYS.—TWO YEARS' TRIAL, and PERFECT SUCCESS of UTER'S PATENT WIND-GUARD, in curing the most inveterate Smoky Chimneys, induces the Patentee to recommend all persons suffering from that nuisance to try one.
Price 18s.
To be had of Ironmongers and Builders, and of the Patentee, at his Office, 65, Fenchurch-street.

NOTICE.—The Third Year's Stamp Duty on Greenwood's Patent (see advertisement), has just been paid. This is to CAUTION against any INFRINGEMENT. Carpenters and Cabinetmaker will do well to use and recommend these stops. The Trade supplied on liberal terms.—J HN GREENWOOD, Patentee, 10, Arthur-street West, London-bridge.

DRAUGHTS of COLD AIR and DUST round room, office, or outside doors and windows, EFFECTUALLY PREVENTED by GREENWOOD'S patent INDIA RUBBER STOPS, the most simple and effectual method of making air tight joints to joiners' or cabinet work, old or new. These Stops can be had any length or pattern. Self-acting spring Stops, for the bottoms of doors. The Trade supplied.
JOHN GREENWOOD, Patentee, 10, Arthur-street West, London-bridge.

VENTILATION.—PURE AIR.

Sheringham's Ventilator for the admission of pure air through an EXTERNAL WALL.
With single pulley, from 6s. each; with leading pulley, from 6s. 6d. These Ventilators are arranged that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants; and as they are closed in the external wall, their action is not impeded when the house is closed for the evening, at which time a constant supply of fresh air is most required.—HAYWARD, BROTHERS, sole Manufacturers, 136, Blackfriars-road, and 117, Union-street, Borough; and of all respectable ironmongers, builders, &c.

PATENT SOLID SWISS PARQUETERIE, This beautiful, unique, economical, and elegant description of Flooring, so extensively used in Paris and other continental cities, is now introduced into this country: an extensive assortment of specimens and patterns commencing at 1s. per foot super. together with every particular of its cost and adaptation, can be obtained of Messrs. H. P. BURT and CO. 2, Charlotte-row, Mansion-House; or of Messrs. ARROWSMITH and CO. 86, New Bond-street.

BATH, PORTLAND, and ROMAN CEMENTS.—The London and West of England Cement Company can offer to Contractors, Builders, and Others the best natural HYDRAULIC CEMENTS, at REDUCED PRICES. Bath Cement much recommended; the best quality for all modelling, cornice decorations, &c. Blue Lias Lime, ground and lump, direct from the kilns, every day, per Great Western Railway, from whence it can be delivered alongside any part of the river Thames, canal, or any railway station, in London. Communications to be addressed to Mr. TIMEWELL, the Depôt, No. 9 Wharf, North Wharf-road, Paddington; or Purfleet Wharf, Hampstead-road, Camden-town; or to the Works, Dunball, Bridgewater, Somerset.

SOUTHAM BLUE LIAS LIME DEPOT.
Glazed Stoneware Sewage Pipes.
Bricks, Lime, and Cement Merchants,
TATHAM and CO.
14, South Wharf, Paddington.

PORTLAND and BATH CEMENTS.
TATHAM and CO.
14, South Wharf, Paddington.

PARIAN CEMENT, reduced in price 25 per cent. This article is valuable for inside stucco, and especially for skirtings, for flooring of brick arches, &c. It takes paint in a few hours after its application on walls or laths, is without efflorescence, and may be papered in a couple of days. A finer quality forms a beautiful Scagliola, with any admixture of colours. Manufactured by FRANCIS, BROTHERS, Cement Works, Nine-elms, London.

CEMENT.—ROMAN and PORTLAND CEMENTS, and PLASTER of PARIS, manufactured by C. J. HILTON, can be had in any quantity, wholesale and retail, at his wharf, 6, Great Scotland-yard, London; and also at the manufactory, Faversham, Kent.—N.B. These Cements supplied for shipment, on advantageous terms.

DAVIES and NORMAN,
CROWN WHARF, GREAT SCOTLAND-YARD.
ROMAN and PORTLAND CEMENTS,
LIME, BRICKS, TILES, SLATES, FIRE GOODS, &c.
STONEWARE PIPES, PANS, TRAPS, &c.
A Liberal Allowance to the Trade.

THE PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs. ROBINS and CO. to WHOM THE PRIZE MEDAL WAS AWARDED in 1851, are prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes to which Cement is applicable. Orders received at Great Scotland-yard and at the Works.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL.—Light, Dark, and Portland Cements equal to any made. Manufacturers also, and Dealers in Plaster, Paris White, Mastic, Hair, Lias Lime, Laths, Slates, and Slate Slabs, Fire-bricks, Grindstones, Cement Chimney-tops, ditto Vases, Ridging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Porzolano.

JOHNS and CO.'S PATENT PERMANENT STUCCO WASH (perfectly non-absorbent), STUCCO, CEMENT, STUCCO PAINT.—CLARK and BENGOUGH, Manufacturers, Grand Surrey Canal Bridge, Old Kent-road. Office, 4, George-yard, Lombard-street.

PORTLAND and ROMAN CEMENT.
PLASTER of PARIS
Manufactured by J. M. BLASHFIELD, at Millwall, Isle of Dogs,
Warehouse, No. 1, Wharf, Paddington-basin.

CHARLES RICHARDSON, 2 & 6, SOUTH-WHARF, PADDINGTON BASIN.
PORTLAND, ROMAN, AND OTHER CEMENTS,
TAMWORTH GLAZED SEWAGE PIPES,
BLUE VITRIFIED BRICKS, COPINGS, PIPES, &c.
2 & 6, South Wharf, Paddington.
NOTICE.

CHARLES RICHARDSON takes the earliest opportunity of informing Engineers, Architects, Contractors, and others, that he is now bringing GREAVES'S BLUE LIAS LIME per the Great Western Railway from Harbury to Bull's-bridge and Paddington, from whence it can be delivered alongside any part of the river Thames, canals, or railway stations in London the day after it is burnt and ground, in any quantity, and at a great reduction in price.
All applications for prices and terms will meet with prompt attention.
N.B. Please observe the lime is ground at the works, not in London.

BLUE LIAS LIME.—Messrs. GREAVES and KIRSHAW having completed their Works on the Birmingham and Oxford Line of the Great Western Railway, at Harbury, are now prepared to supply LUMP and GROUND LIME of the best quality, direct from the kilns, to all the stations on the Great Western Railway. Greaves's Blue Lias Lime, Portland, Bath, and Lias Cement Works, at Harbury, Stockton, and Wilmcote Office, at Warwick

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not require so damp a mixture. Accounts of COMPARATIVE EXPERIMENTS on the strength of this and other Cements, by the Inventor of Civil Engineers, to be obtained from the Makers, JOHN BAZLEY WHITE, and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

ATKINSON'S CEMENT, so long known and esteemed in London for plastering purposes, is a quick-setting Cement, that requires no colouring.—Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster; and Seel-street, Liverpool.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER, for internal uses. These well-known hard Stuccoes dry quickly, and can be painted upon within a few days.—Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

PORTLAND CEMENT WORKS, NORTHFLEET, Kent.—KNIGHT, BEVAN, and STURGE, Manufacturers only of first-class quality, for the home and foreign trade. Portland Cement is manufactured at these works with especial reference to its destination, whether for stuccoing, brickwork, blocks for breakwaters, tidal work, or otherwise.—London Wharf, Belvedere-road, Lambeth.

PORTLAND and BATH CEMENT.—PULLWOOD THOMPSON and CO. request the attention of Merchants and Contractors to the quality of their Portland and Bath Cement, which they manufacture on an improved system, securing regularity of strength and colour, and at a less cost than is attainable by most other makers.
These cements set under water in a few minutes, and are not affected by extreme heat or cold.
FULLWOOD THOMPSON & CO. will be happy to send prices and samples in reply to application by post. They deliver free into the Bristol and Exeter Railway Company's trucks at their works, or free on board in the Port of Bridgewater.

DAMP WALLS.

STENT'S COMPOSITION FOR PREPARING NEWLY-PLASTERED OR DAMP WALLS FOR PAPERING,
Is the result of practical experiments and long experience; it is unfailing in its application. Entire houses have been papered a few days after plastering. In repairs of old plastering it is invaluable. A moderate room can be papered for 2s. 6d.
London Agents: Messrs. GEO. and THOS. WALLIS, 64, Long-acre. Agent for Ireland: Mr. S. BOYD, 46, Mary-street, Dublin.

HUBBUCK'S PATENT WHITE ZINC PAINT,

The Permanent White of the Ancient Artist.

HUBBUCK and SON, the Original Manufacturers, are enabled, by their process, which is patented, to supply Pure White Zinc Paint at the price of White Lead. Neither heat nor tropical climes act upon it. It is entirely free from any poisonous or pernicious property. The careful painter, the polychromatic and painters' oxlis, will be altogether enabled The Powdered White Zinc may be had for grinding in Oil, and where it is used with Size, Varnish, &c. To prevent the prejudice against Zinc paint, which the adulterated article must otherwise produce, this is sold by the Wholesale Paint-dealers in Original Pakages, each cask stamped, HUBBUCK LONDON PATENT. And when so marked the quality is guaranteed. THOMAS HUBBUCK and SON, the Original Wholesale Manufacturers, Pans and Varnish Works, opposite the London Docks, London.
N.B. OLD ZINC AND ZINC CUTTINGS BOUGHT TO ANY EXTENT FOR REFINING.

COLES, SHADBOLT, and CO. CEMENT and PLASTER MANUFACTURERS, LIME BURNERS,
Brick, Tile, Drain-pipe, Hair Lath, and Fire Goods Merchants,
ST. JAMES'S and THORNHILL WHARFS,
Caledonian-road, London.

CHADWICK'S CEMENTS.—To Railway and Dock Directors, Gas and Waterworks Companies, Coal-Mine Proprietors, Builders, Contractors, &c.—JOHN CHADWICK, Manufacturer of the Patent Lithic, Roman, and Portland Cements, is prepared to enter into contracts with any of the above branches that may favour him with their orders. The advantages to be derived from the above Cements manufactured by J. C. over all others, are their extraordinary hydraulic properties.—Samples and references may be had on application either at the Works, Ashton New-road; or the Warehouse, 5, Broomstreet, Shude-hill, Manchester.

NOTICE.
SOUTHAM HYDRAULIC BLUE LIAS LIME.
WILLIAM OLDHAM begs to inform those parties requiring genuine Hydraulic Blue Lias Lime, that he is prepared to deliver the best quality of ground and lump, into Lords, at the Works. Address, WILLIAM OLDHAM, Blue Lias Lime and Cement Works, Southam.

GREY STONE LIME WHARFS,
12, UPPER GROUND-STREET, Blackfriars (Surrey side),
7, NORTH WHARF-ROAD, Paddington.
WILLIAM PETERS begs to inform the trade he is in a position to supply the best GREY STONE LIME in any quantities from the above wharfs, or per barge direct from the kilns.
Large Grey Stone, or Grey Chalk, free on board at Works, 1s. 9d. per ton.
Small ditto, ditto, 4d. per ton.
Barges loaded in a few minutes.
Wouldham-hall Grey Stone Lime Works, on the Medway, near Rochester.

BLUE LIAS LIME.—CHAS. NELSON begs to offer to consumers a supply of Blue Lias Lime direct from his Quarries in Warwickshire, the quality of which has been tested by several of the largest building firms in the metropolis and approved by them; and those who have favoured C. N. with their patronage during the last three years have always expressed themselves satisfied with his system of weighing or measuring the lime. When the lime is delivered by boat, the master has instructions to produce on demand) the canal gauger's pass, by which the purchaser may know the exact weight delivered.—Orders addressed to the London Depôt, 16, South Wharf, Paddington, J. D. BLYTH, Sole Agent, will have immediate attention.—Quarries at Manufactories, Stockton, near Southam, Warwickshire

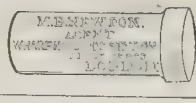
BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings, of good and sound quality, constantly on sale at R. DODD'S Brickfields, which are only a quarter of an hour's walk from the City. H. D. respectfully requests purchasers to favour him with a visit, in order to inspect his stock, and to judge for themselves.
Malm Place, half washed Stocks, and Place Bricks, also on sale. These bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing.
Apply to HENRY DODD and CO. at the Counting-house, Horton Brickfields, Grange-walk, near the Rosemary Branch, Hoxton.
N.B. Light-coloured Pitt Sand of approved quality constantly on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand.

BRICKS.—Mr. Rydon having made more bricks than he requires for the builders on his estate, Highbury, New-park, would be willing to enter into arrangements with builders and others for supplying first-class STOCK and RED BRICKS upon advantageous terms.—For particulars, apply at the Estate Office, Delli's Farm, Stoke Newington Green.

THE BEST HERTFORDSHIRE MALM SECONDS;
THE BEST WHITE SUFFOLK and RED FACINGS;
WHITE SUFFOLK PERFORATED BRICKS;
DEEP-RED ROBBING BRICKS.
Also COWLEY and KENT STOCKS, in any quantities.
J. EASTWOOD and SONS, Belvidere-road, Lambeth; and Surrey-canal-bridge, Old Kent-road, Surrey.
N.B.—Lime, Cement, Slates, Fire-bricks, &c. and all kinds of Building Goods.

BRICK-FIELDS, QUEEN'S-ROAD, PECKHAM, SURREY
(Within a short distance of the five bridges).
THE BEST MALM-CUTTERS, SECONDS, PICKINGS, and PAVIORS, in any quantity.
Also, STOCKS, of FIRST QUALITY
J. EASTWOOD and SONS, Belvidere-road, Lambeth.

BRICKS of all kinds (clamp-burnt or kiln-burnt), Lime, Chalk, Chalk Rubbish for brick-making, Fire-bricks, building and pottery work, Foundry Loam, Whiting, Whiting Sand for ashphalte, Land Drain Pipes, Patent Drain Pipes, Gas Soil for brick-making, &c. &c. sent by barge from Messrs. MEESON and CO.'S works at Grays, Essex, to any part of the Thames, the various canals, the river Lea, &c. or by rail to any station on the London and Southend and Eastern Counties lines, or any railway connected with them. Vessels of 200 to 300 tons can load alongside the wharves at Grays. At MEESON and CO.'S wharf and kilns, Bow-bridge, Stratford, Essex, the above named articles can also be procured, as well as all kinds of fire goods; both Welsh and Newcastle. Fire-clay, Flare-burnt Lime, and Marble and Temper Lime; and here lime is packed in hogsheads, casks, jars, &c. for exportation.
General Office No. 12, GEORGE-YARD, LOMBARD-STREET.
Letters addressed to Grays Essex, will meet with immediate attention.



BRICKMAKING, UREN'S PATENT.—A PERSON desirous of WORKING this PATENT, wishes to know where a LICENSE can be PROCURED.—Direct to Mr. REMBLEY, Brick Works, Sutton, Surrey.

BRICKS.—A quantity of ARCH BRICKS, well made and hard burnt, for SEWERAGE PURPOSES, are now open to public inspection. They are moulded so as to work in with the ordinary sized bricks, and are capable of forming arches of from 2 feet to 8 feet in diameter. A saving of at least 10s. per 1,000 in cement and labour can be effected by their use,—while a single ring of brickwork will be as strong and more solid than a double course constructed in the usual way. Price 27s. per 1,000, cash on the ground.—Malms, stocks, seconds, and a quantity of good place, at low prices. Agricultural draining tiles of very superior make and hardness.—Address Mr. LEWETT, Railway Brick and Tile Works, Brentwood, Essex.—The works adjoin the goods' station of the Eastern Counties Railway, at Brentwood, where all materials are loaded into the trucks and forwarded thence to any station on the Eastern Counties lines.

UPHALL BRICKFIELD, ILFORD, Essex WILLIAM HILL, late Henry Kilvington, respectfully invites Contractors, Shippers, &c. to inspect his superior STOCK of the undermentioned BRICKS, which can be purchased at the lowest market price, and can be put alongside any vessel in the Thames, or unboarded vessel, viz: Malm Cutters, Seconds, Pickings and Malm Stocks. Paviours, Shippers, best Washed Stocks, Stocks, ditto second quality.
N.B. Orders received at 204, Whitechapel-road.

FIRE-BRICKS, LUMPS, TILES, &c. of every description, at HONDURAS WHARF, 74, Bankside, London.—JOHN NEWTON and CO. (late with James Newton, of Falcon Dock, Bankside, Fire brick and Tile Merchant) have taken the OLD ESTABLISHED BUSINESS and PREMISES carried on so many years by WM. WARD and CO. and solicit the patronage of Consumers, Gas Companies, Engineers, Builders, &c. Ramsay's superior Newcastle Fire-bricks, Retorts, Fire-clay, &c.; also Sanitas pipes Chimney-tops, Dutch Clinkers, &c. all at the lowest prices. Shipping orders executed with despatch

FOR
FIRE-BRICKS and GAS RETORTS
apply to

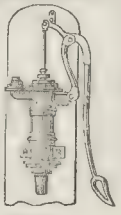
MINTON and CO.'S ENCAUSTIC and other PATENT TILES, for Churches, Entrance Halls, Conservatories, Balconies, &c.; Antique, Geometrical, and Alhambric Mosaics, manufactures of a highly decorative character, and extreme durability, Slate and Tiles for Fireplaces and Hearths, Combined Grates, Door Furniture, Wire Glazed and Ornamental Tiles for Baths, Dairies, and Kitchen Ranges, may be had, in great variety at their Warehouse, 9, Albion-place, Blackfriarsbridge, London; and at their Manufactory, Stoke-upon-Trent, Staffordshire.

BEADON'S PATENT IMPERISHABLE GUTTER-TILES.
For Spouting Roofs of Houses (either old or new, whether of thatch, slate, or tile), and other structures.
SOLE AGENT,
J. B. LAWES, 1, Adelaide-place, London-bridge.
This is the cheapest kind of spouting known; for, besides its lower cost, it will last without pain or repair as long as the building itself. It will bear the weight of any ladder; and in case of accident a labourer can repair it. It occupies the room of a large amount of roofing, effecting a great saving in slates, tiles, &c. It is especially applicable to the backs of houses in town, cottages, and agricultural buildings.
Price 4d. each tile of about 13 inches long; stop-ends and outlets, 6d. Any mason can put them up, or, if over 100 feet are required, a man will be sent to fix them at 8d. per foot. This charge to include tiles delivered in Agnes's yard, cement, and labour. May be had in London, Gloster, Bridgwater, and Madeley, Staffordshire.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 21, WHARF, Macclesfield-street North, City-road Basin. Secondly, that the trade term, "Terro-Metallic," is the exclusive right of the Proprietor; and, thirdly, that the "REMARKS OF THE JURIES," page 681, of the Great Exhibition, rank the Manufactures known as "The Tilerica," Tunstall, Staffordshire, as the first of the kind in the world.

PATENT TERRA-COTTA. Tracery for Parapets and Terraces, Mullions, Pinnacles, Moulded Bricks, Coats of Arms, Crosses, Label Mouldings, Friezes, Trusses, Vases, Balusters, Capitals and Bases of Columns, Paving, Facing Bricks, Coping, Kitchen and other Sinks, Chimney Shafts and Tops, and numerous other Articles, manufactured by J. M. BLASHFIELD, in Patent imperishable Terra-Cotta, at Mill-wall, Isle of Dogs; and sold at No. 1, Wharf, Praed-street, Paddington-basin.

WINDOW BLINDS.—TYLOR & PACE, Window Blind Manufacturers, 104, New Bond street, and 3, Queen-street, Cheapside, London, submit the following PRICES of WINDOW BLINDS, which they can recommend as being made in the best manner:—Venetian blinds, per square foot, 9d.; best holland blinds, on rollers, 6d.; best ditto, on spring rollers, 9d.; gauze wire blinds, in mahogany frames, 2s.; perforated zinc blinds, in ditto, 3s. 10d.; outside blinds of striped cloth, 2s. Transparent blinds in great variety. Engravings, with prices and discounts to builders and the trade forwarded on application, post free.



TO ARCHITECTS and BUILDERS.—T. TRELOAR, 42, Ludgate-hill, Manufacturer, supplies Cocoa-nut Fibre Matting, Door-mats, Hassocks, &c. of the best quality, on the most reasonable terms.—Warehouse, 42, Ludgate-hill.

PAPER HANGINGS! PAPER HANGINGS!! PAPER HANGINGS!!!—Builders, the Trade, Country Dealers, and others, will find an immense STOCK and endless variety of all classes of PAPER HANGINGS, at W. CROSBY'S MANUFACTORY, 29, Lowther Arcade, Charing-cross, London. Splendid new designs, both in machine and block printing, not to be surpassed by any house in England. Patterns sent for approval in town or country. Cheapest house for panel decorations. Terms, Cash.

PAPER-HANGINGS.—The CHEAPEST HOUSE in London for every description of PAPER HANGINGS is CROSS'S WHOLESALE WAREHOUSE, 22, GREAT PORTLAND-STREET, Oxford-street, where one can select from the LARGEST and MOST EXTENSIVE Assortment in the Kingdom, THIRTY PER CENT. CHEAPER than any other house in the trade. Builders, Decorators, Dealers, and large consumers will do well to visit this establishment.

TO BUILDERS AND PLUMBERS.

The attention of the Trade is called to JOHN WARNER & SONS' PATENT VIBRATING STANDARD PUMP,

which is recommended for the simplicity of its construction, and the ease with which it works.

By the introduction of the vibrating standard, the cumbrous carriage and expensive slings and guides are unnecessary, rendering the price considerably less than Pumps made on the old plan.

Beer and Water Engines for raising fluids from a depth not exceeding 28 feet; also, Garden Engines constructed on the same principle.

JOHN WARNER & SONS,
8, Crescent, Jewin-street, London,
Manufacturers and Patentees.

R. RICHARDS and CO. PUMP MANUFACTURERS and ENGINEERS.

Pumps in Wrought and Cast Iron and Brass, bored by machinery, and fitted in the best possible manner, suitable for excavators, roads, brickmakers, farms, gardens, stables, liquid manure, ships, barges, well-sinking, &c. adapted for any depth. Hydraulic Pumps for deep wells.

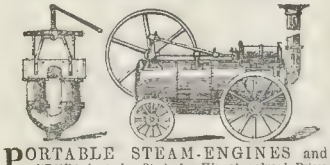
PUMPS ON HIRE.

Pumps of any size, single or double barrel, up to double 18-in. diameter, kept ready for use at reduced prices.

N.B. The above can be worked either by hand, horse, or engine power.

Iron Pails 32s. per doz. painted.
Ditto .... 48s. per doz. galvanized.

Upper Ground-street, Blackfriars Bridge, Surrey Side.



CONTRACTORS' STEAM-ENGINES.—TO BE LET, on HIRE, or for SALE, several NEW and SECOND-HAND STEAM-ENGINES, of various powers, suitable for contractors' work generally.—Apply to Messrs. MEDWIN and HALL, Engineers, Surrey Iron Works, Blackfriars-road, where they may be seen.

STEAM PUMPING ENGINES.—PATENT PORTABLE STEAM-ENGINES, from four to ten-horse power, always ready to let on hire, by the week or month, for pumping, sawing, pile-driving, raising materials, &c. &c.

Contracts taken for pumping any quantity of water.

JAMES BURTON & SONS,
Engineers and Contractors,
John-place, Holland-street,
Southwark, London.

PORTABLE STEAM-ENGINES and PUMPS kept in Stock for Hire at reduced Prices, R. RICHARDS and CO. Pump Manufacturers and Engineers, Upper Ground-street, Blackfriars-road (Surrey Side).

TO WATER COMPANIES AND PLUMBERS.

HIGH-PRESSURE COCKS & CLOSETS.

The Health of Towns Commissioners having recommended the adoption of the high-pressure principle, WARNER'S HIGH-PRESSURE COCK is recommended as a Cock free from leakage, and applicable for all purposes and situations. Patent Closets and Basins with supply-valve for attaching direct to main pipes without a cistern, cocks, or wire.

LEAD, IRON, and TIN PIPE.

JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin-street, London.

TO WATER COMPANIES, LOCAL BOARDS OF HEALTH, AND OTHERS.

LAMBERT'S NEW VALVE COCK, For Preventing Waste of Water.

Is so constructed that it cannot be left open accidentally or wilfully, and further it will at each action deliver a specific quantity, and under the same pressure this quantity will never vary.

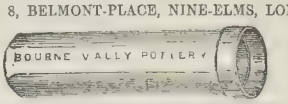
It is peculiarly adapted for closets, self-acting or otherwise.

Price, complete for high pressure, 10s. 6d. each.
low 12s. 6d.

THOS. LAMBERT and SON, Patentees and Manufacturers, Founders and Machinists, Short-street, New-cut, Lambeth.

GREAT REDUCTION in PRICE of STONEWARE DRAIN-PIPES.

WILLIAM NORTHEN,
UNION POTTERY, 14, VAUXHALL-WALK, LAMBETH,
Begs to call the attention of Surveyors, Contractors, Builders, and others, to a very great REDUCTION in the PRICES of his
GLAZED STONEWARE DRAIN-PIPES.
LISTS OF PRICES FORWARDED ON APPLICATION.



REDUCTION IN THE PRICE OF CLOSET-PANS

DOULTON AND WATTS,
LAMBETH POTTERY, HIGH-STREET, LAMBETH,
Have reduced the Price of their PATENT ENAMELLED CLOSET-PANS WITH TRAPS, to
5s. 6d.

These Pans, therefore, which have a strong Vitrified Body, as well as a White Interior Glaze, may now be obtained at the price of the commonest description [illegible].

BOURNE VALLEY POTTERY, NEAR POOLE, DORSET.
DEPOT, 8, BELMONT-PLACE, NINE-ELMS, LONDON.

EXTENSIVE REDUCTION IN THE PRICES OF SALT-GLAZED STONEWARE DRAIN-PIPES, FLUE-PIPES, BENDS, JUNCTIONS, CLOSET-PANS, &c. &c.

The Proprietors of the above Works are prepared to supply the various articles in the drainage, &c. in any quantities. The pipes, &c. are made of the finest clay, the produce of the estate, by skilful and experienced workmen, assisted by new and patent machinery, and are so thoroughly vitrified by the intense heat to which they are subjected, as to prevent the possibility of the absorption of any liquid. They will bear comparison with goods made in any part of the kingdom.

Lists of prices, and any other information may be obtained, on application to the Manager, Mr. J. T. BUNSALL, Bournemouth, near Poole; or of the Agent in London, Mr. G. S. WHITTON, 17 and 18, Princes-street, Lambeth.

CHEAP AND DURABLE ROOFING.

By Her Majesty's  Royal Letters Patent.

F. McNEILL and CO. of LAMB'S-BUILDINGS, BUNHILL-ROW, LONDON, Manufacturers and ONLY Patentees of
THE PATENT ASPHALTED FELT, FOR ROOFING HOUSES, VERANDAHS, SHEDS, &c.

Patronized by
HER MAJESTY'S WOODS AND FORESTS,
HER MAJESTY'S COMMISSION OF CUSTOMS,
HONORABLE EAST-INDIA COMPANY,
HONORABLE BOARD OF ORDNANCE,
HER MAJESTY'S ESTATE, ISLE OF WIGHT,
ROYAL BOTANICAL GARDENS, KEW, AND ST. JAMES'S PARK,

And by the most eminent members of the Royal Agricultural Societies of England, Scotland, and Ireland, at whose great national shows it has been exhibited, and OBTAINED THE PRIZE, for being the best and cheapest article for roofing; also used for under plates at the Royal Agricultural Society's House, in Hanover-square. Its advantages are lightness, warmth, durability, and economy. It is impervious to rain, snow, and frost, and a non-conductor of heat and sound. The Felt can be cut to any length, by 32 inches wide. The price is only ONE PENNY PER SQUARE FOOT. Samples, with full directions as to its use, and the manner of applying it, with TESTIMONIALS, some of them of seven years' experience, from Architects, Builders, Noblemen, and Gentlemen who have extensively used it, sent free to any part of the town or country. A Dry-hair Felt, for covering Boilers, &c. is also manufactured, by which a saving of about 25 per cent. in fuel is effected. The TRADE are respectfully solicited to send their orders DIRECT to the FACTORY, as the surest means of being supplied with the genuine article, and in lengths best suited to their roofs. They are likewise CAUTIONED AGAINST MISREPRESENTATION, as the only works in Great Britain where the above roofing is made are F. McNEILL and CO.'s Manufactories, LAMB'S-BUILDINGS, BUNHILL-ROW. Roofs covered with the Felt to be seen at the Factory, also the new Vice-Chancellor's Courts, the passages and offices leading to Westminster Hall, and other buildings at the New Houses of Parliament.—A Liberal Discount allowed to the Trade.

ORSI AND ARMANI.
THEIR PATENT METALLIC LAVA IS FIFTEEN PER CENT. CHEAPER THAN THE GENUINE SEYSSEL ASPHALTE OF MESSRS. O. AND A.
OR THIRTY PER CENT. LOWER THAN ANY OTHER MATERIAL CALLED BITUMEN OR ASPHALTE
Offices, No. 6, Guildhall Chambers, Basinghall-street, City.

ANCIENT HOUSE FURNITURE

In order to supply the deficiency which has hitherto existed in Furniture suitable for the many Mansions that have been erected or restored in the MEDIÆVAL STYLES, Messrs. TRAPP have directed their particular attention to this subject, in addition to their other works, and have prepared appropriate specimens in the various branches of Furnishing.

STUFFS for HANGINGS, in simple Worsted Damask, in Silk; also in Tapestry of Bayeux.
CARPETS, plain or in rich Velvet pile, with appropriate Borders.
PAPER-HANGINGS of various kinds.
OAK CABINETS, Buffets, Octagon Library and Occasional Tables, Benches, Chairs, and other useful and appropriate Furniture.
The whole of the above-mentioned Furniture, &c. is designed by the late Mr. A. W. PUGIN, Architect.
To render this Furniture generally available, a considerable portion has been arranged in the simplest manner, consistent with its ancient character.
14, Wigmore-street, January, 1853.

AND AT LAMBETH POTTERY, LONDON

NEW WINDSOR ESTATE. — Valuable BUILDING LAND TO BE LET, in Plots for first and second class Villa Residences, with Stabling, which are much needed in this beautiful locality. The situation is the finest in or near Windsor, abutting on the Park and Long Walk, and commanding a splendid view of the Castle. Within ten minutes of the Great Western and fifteen minutes' walk of the South-Western Railway Stations. Advances can be had by responsible parties.—For particulars apply to Mr. WILLIAM SIM, Architect and Surveyor, 2, Danes-Inn, Strand.

VALUABLE FREEHOLD LAND, EAST BARNET. — TO BE SOLD by PRIVATE CONTRACT, about THIRTY ACRES (in separate fields or plots) of FREEHOLD BUILDING LAND, finely situated in the vicinity of the Great Northern Railway station, and admirably adapted in every respect for building purposes, having extended frontages upon the high road on each side of the railway, and also upon newly-formed roads. The situation is noted for its salubrity, scenery, and facility of communication with London. — For further particulars, apply at Mr. THYNNE'S Offices, 11, Great George street, Westminster.

FREEHOLD BUILDING LAND, HOLLOWAY.—TO BE SOLD or LET, about EIGHTEEN ACRES of very eligible BUILDING LAND, in large or small quantities; or the freehold may be purchased at annual rent-charges, whereby builders may erect and sell the houses as freeholds instead of leaseholds, free from the law of forfeiture and probate duty.—Apply to Mr. PEACHEY, 17, Salisbury-square, Fleet-street.

FREEHOLD LAND WANTED, about Fifty Acres, within an hour's ride of London by railway, suitable for the ERECTION of a LUNATIC ASYLUM, and contiguous to a high road.—Particulars, stating the locality, spoil, quantity of land, and price, to be sent to Mr. BUNNING, Architect, Guildhall, London, on or before the 1st of JANUARY, 1857.

ELIGIBLE OPPORTUNITY for INVESTMENT or OCCUPATION.—ROUPELL PARK ESTATE, Palace-road, Streatham-hill, on a gravelly soil, within two miles of the Crystal Palace and five miles of town.—TO BE LET, furnished or unfurnished, or for SALE TO BE SOLD, of a capital FAMILY MANSION, built and finished by the freeholder in the most superior manner, regardless of expense; containing nine bed-rooms, dressing-room, morning-room, bath-room, nursery, elegant drawing-room, dining-room, and library, with all the usual offices appertaining to a first-class mansion. Attached is a good coach-house and stable, with lofts and rooms over. The whole stands in a large walled garden, with carriage drive to the front entrance. From its elevated position, the house commands uninterrupted views of the park and surrounding country. The neighbourhood is select. There are three churches in the immediate vicinity, and the station to the City, West end, or South Coast Railway is within half-a-mile of the house. The estate is well-lighted with gas, has excellent drainage, and a plentiful supply of pure water. The lease of ninety years may be purchased at a ground-rent to pay the purchaser 7 per cent.; and if desired, two-thirds of the money may be left on mortgage at 4 per cent.—For further particulars, apply to Messrs. ROBINSON and ROBSON, Upholders, &c., 38, Margaret street, Cavendish-square.

FINCHLEY.—LAND fronting the Regent's Park-road, and East-end-road, TO BE LET on Building Leases for ninety-nine years, with, power of enfranchisement. Plots from one to four acres for large villa residences; smaller plots for semi-detached houses, and plots for shops in the village. Apply to W. A. BOULNOIS, Esq. Architect, 6, Waterloo-place, Pall-mall; or to Messrs. BARKER, BOWKER, and PEAKE, 1, Gray's-inn-square.

FREEHOLD LAND TO BE LET, on Building Lease for ninety-nine years. Money advanced to responsible parties. Freehold Land to be Sold for building purposes in eligible situations. Apply at the Offices of Messrs. MORGAN and PHIPSON, Architects, 3, Danes-Inn, St. Clement's, Strand.

ALDERSHOT.—Several eligible BUILDING SITES TO BE SOLD, immediately fronting the permanent Barracks at the South Camp. For particulars, apply to Mr. R. A. DAVIS, Land and Engineering Surveyor and Valuer, Basing-stoke, Hants.

EXTENSIVE WATER-SIDE PREMISES, TO BE SOLD, or LET, partly freehold and leasehold, immediately adjoining the South Western Railway Goods Station, known as Brunswick Wharf, Vauxhall, many years successfully carried on as the brick, lime, stone, slate, &c. &c. trade, but available for other purposes. The present proprietor retiring from business, would dispose of the Premises either with or without the said trade. Apply on the Premises.

SITE for a HOUSE, at Reigate, Surrey, within three quarters of an hours' ride of London.—TO BE SOLD, a very desirable SITE for a RESIDENCE, with about TEN ACRES of FREEHOLD LAND, ornamentally timbered, situate on the southern slope of Reigate hill, about half a mile from the Reigate Town Station on the South-Eastern Railway, commanding extensive views.—Apply to Messrs. PAGE and LEES, Reigate.

WATERSIDE PREMISES, with 130 feet frontage to the Regent's Canal, Steam Power, &c. TO BE LET or SOLD.—LEASE TO BE SOLD, of those valuable MANUFACTURING PREMISES, known as Tussaud's Wharf, Kingsland, situate close to the Shoreditch Church, with brick-built warehouses, counting-house, plaster-grinding mills, and machinery, the whole in good order, and will be let at the low rent of 20l. a year, or the lease to be disposed of.—For terms and particulars, apply to Messrs. EVERSFIELD and HORNE, Auctioneers, &c. 1, Parliament-street, Westminster.

TO ENGINEERS AND MANUFACTURERS. LARGE PREMISES TO BE LET, with or without the machinery, situate near Stamford-street, Blackfriars-road. Apply to WILLIAM CLARKE, House Agent, 71, Broadwall, Blackfriars-road.

TO CABINET-MAKERS and UPHOLDERS.—WANTED, a BUSINESS in the above line.—Address, pre-paid, stating lowest terms, situation, and amount of business, to F. K. 34, King street, Soho, London.

TO CARPENTERS and JOINERS.—A BUSINESS in the Country TO BE DISPOSED OF, in an improving Market-town. This is an excellent opportunity for a person of business habits. The present practice has been a good one, and the premises (recently repaired) contain about 15rl. required for stock, implements, &c.—Address, W. C. Office of "The Builder."

THE THAMES STEAM-TUG and LIGHTERAGE COMPANY, (Limited.) The business of the Company, including collection of rates, &c. can be obtained of the Managers, Messrs. KEEN and BLAKE, No. 11, Bermondsey Wharf, Bradford; and Corn-Exchange, Mark-lane.—By order,

CHARLES ELEY, Jun. Secretary.

28, Parliament-street, Westminster, Dec. 1, 1856.

ARCHITECTS, BUILDERS, ENGINEERS, and SURVEYORS, can be IMMEDIATELY SUPPLIED with COMPETENT ASSISTANTS (temporary or otherwise). Those only recommended whose efficiency and qualifications can be guaranteed. The registry is open to employers, or lists furnished therefrom (free), on application to Mr. RICHARDS, Engineer and Surveyor, 4, Trafalgar-square.

TO PARENTS AND GUARDIANS.

GLAZIER.—WANTED, one who thoroughly understands his business, and has been used to a lead and glass warehouse.—Apply at London Lead and Glass Warehouse, JOSEPH POULSON and SON, 164, Edgware-road.

KEIGHLEY CEMETERY, Yorkshire. — WANTED IMMEDIATELY, a Person to fill the Office of REGISTRAR for the above cemetery. He will be required to keep the books, perform the duties of head-gardener, and also occasionally to officiate at interments in the unconsecrated portion of the ground. The salary will be fifty guineas per annum, with house, free of rent and taxes. For further particulars, apply to Mr. GEORGE SMITH, Clerk to the Burial Board, Keighley; to whom all applications, with references, must be addressed, on or before FRIDAY, the 1st day of JANUARY, 1857.—By order of the Burial Board. Keighley, Dec. 5, 1856.

OUT-DOOR APPRENTICE.—A respectable Youth REQUIRED, by a Grainer, Writer, and Decorator, of first-rate practice in the City. Liberal wages given at the commencement.—Address, H. S. Mr. Borton's, 8, Bishopsgate-street, London.

PUPIL.—A SURVEYOR, in good practice, has a VACANCY for a PUPIL, of respectable connections and good abilities, with whom a very moderate premium would be required. WANTED, also, in the same Office, a YOUTH of about fourteen years of age, who can write a good hand, trace drawings, and is quick at figures. Address, prepaid, in own handwriting, stating terms and how last engaged, to J. W. 12, Montague-street, Russell-square.

WANTED, in the Office of a Surveyor to a Local Board of Health, in a flourishing sea-port town, a PUPIL who will have ample opportunities of becoming practically acquainted with the various branches of the profession. A premium required.—Address, A. 11, Cheltenham-buildings, Cheltenham-road, Bristol.

WANTED, a MANAGING CLERK, in a BUILDER'S OFFICE. One who could look after buildings and the general business in the immediate absence. He will require to be a good draughtsman, write specifications, make out detailed estimates, keep the books of the office, and make himself generally useful. A Protestant preferred. State the age. Apply to JOSEPH MAULEY, Post-office, Ballymena.

TO ARCHITECTS' AND SURVEYORS' CLERKS.

WANTED, by an Architect and Surveyor, in the country, a steady, respectable MAN, at a moderate salary, fully competent to execute working drawings, take quantities accurately, and assist in the general practice. He general business of the office. Apply, by letter, stating full particulars as to age, length of experience, and salary required, to R. O. Post-office, Farnham, Surrey.

TO IRONMONGERS' ASSISTANTS.

WANTED, a Young Man who has had three or four years' experience in the BUILDERS' IRONMONGERY BUSINESS, in London or its vicinity.—Apply by letter only to A. B. at Messrs. Dale and Son's, 193, Upper Thames-street.

TO ARCHITECTURAL DRAUGHTSMEN.

WANTED, an ASSISTANT familiar with Italian, Gothic, or Classic Architecture, for a Government Office. Hours from Ten to Five o'clock.—Apply to Mr. RICHARDS, 4, Trafalgar-square.

TO VENEER SAWYERS.

WANTED, a Man to take the MANAGEMENT of a VENEER WHEEL, in Newcastle-on-Tyne. No one need apply who does not thoroughly understand the work and cannot give a satisfactory reference to his former employers as to character and ability. Apply to Messrs. GILLY, Saw Mills, 59, Newgate-street, Newcastle-on-Tyne.

TO BUILDERS, PLUMBERS, AND OTHERS.

WANTED, by a respectable Young Man, a SITUATION as PLUMBER, PAINTER, and LEADCLEANER. Is thoroughly acquainted with his business, having had care of large jobs. Good reference can be given if required.—Address, P. H. Office of "The Builder."

TO CARPENTERS, BUILDERS, &c.

WANTED to APPRENTICE, a respectable Youth to the above business. A situation where he would be part of the time in the office and the other portion in the shop would be preferred. A moderate premium will be given, and a responsible connection from no objection to the receipt of the highest responsibility can be given, and will be required.—Address, B. C. Mr. Crossley, No. 9, Thayer-street, High-street, St. Marylebone.

TO SURVEYORS, AUCTIONEERS, &c.

WANTED, by the Advertiser, aged 22, a SITUATION in an OFFICE of the above; has a knowledge of land and building surveying, and is a good draught-man. References from the party he is about leaving.—Address, C. A. D. 16, Broad-street Buildings, City.

TO BUILDERS.

WANTED, a SITUATION as FOREMAN in a Joiner's Shop. Has had several years' experience.—Direct, A. B. 57, Vauxhall-bridge road.

TO ENGINEERS, MACHINISTS, AND OTHERS.

WANTED, by a Young Man, a SITUATION as MANAGER in a small ESTABLISHMENT, or as MECHANICAL DRAUGHTSMAN; has had seven years' practice (what few months he was drawing apprentice) in two of the first houses in the town of Leeds, and has a theoretical and practical knowledge of all kinds of machinery; can make first-class working and finished drawings and designs in engineering, mill work, machinery, &c.; has a good knowledge of levelling and surveying. First-class testimonials can be produced. No objections to go abroad.—Address, S. J. care of J. Barr, Grafton-street, Leeds.

TO TIMBER-MERCHANTS, SAW-MILL PROPRIETORS, &c.

THE Advertiser is desirous of an ENGAGEMENT to SUPERINTEND a TIMBER-YARD and SAW-MILL; has had several years' experience in the erection and control of saw-mills, and is well acquainted with machinery; has also a perfect knowledge of the timber trade, and having conducted many extensive building operations, would be very useful to a builder; thoroughly conversant with accounts, and a ready correspondent.—Address, L. Office of "The Builder."

TO ARCHITECTS.

THE Advertiser, who is an expeditious Draughtsman, and thoroughly understands detail and construction, is open to an ENGAGEMENT.—Address, G. G. 39 Mabaely place, Hampton.

TO BUILDERS AND OTHERS.

A HIGHLY RESPECTABLE, middle-aged Gentleman, accustomed to the routine of a counting-house or builder's office, an efficient penman, and accountant, wishes for EMPLOYMENT in any capacity where the above qualifications, added to steadiness and assiduity, are deemed desirable. The most satisfactory references can be given.—Address, V. T. X. Office of "The Builder."

AFTER CHRISTMAS, a Young Man, 33 years of age, who has had many years' experience as Bookkeeper, is desirous of meeting with EMPLOYMENT, either temporary or permanent, in making up tradesmen's accounts, whether in a small or large way of business.—Address, V. T. C. Office of "The Builder."

TO BUILDERS AND OTHERS.

A YOUNG MAN, of business habits, desires an ENGAGEMENT. He is a good accountant, can trace, copy, or put drawings, and has some knowledge of building.—Address, A. Y. Z. Albion House, Bow, Middlesex.

TO MASTER BUILDERS AND CARPENTERS

A YOUNG MAN, who has some knowledge of the above line, wishes to RE-ENGAGE himself, to complete his knowledge of the trade. — Address, stating terms, to J. B. 6, Brindley-street, Harrow-road, Paddington.

A YOUNG MAN, of eight years and a-half's experience, as Carpenter and Joiner, would be glad to ENGAGE himself to a SASH-MAKER, or STAIRCASE HAND, or at JOINERS' WORK, in a good shop, at moderate wages.—Address to A. B. 162, Shoreditch.

A STAIRCASE HAND, SASH-MAKER, and GENERAL JOINER wishes an ENGAGEMENT or JOB. No objection to terms or distance.—Address, R. S. 17, Albion Coffee-house, Cleveland-street, Fitzroy-square.

TO ARCHITECTS

A FRENCH GENTLEMAN, Fellow of the Imperial School of Paris, who is a first-class draughtsman and colourist, and is thoroughly conversant with Classic and Mediæval Architecture, and who has published an Architectural Work in the course of an ENGAGEMENT, either permanent, or for the competition advertised for Public Offices.—For particulars and references, apply by letter, to Mr. W. BLACKETT, 69, Lincoln's-inn-fields, London.

A COMPETENT BUILDERS' CLERK, about leaving his present situation, reasons for which will be given, and who has carried on the business to the satisfaction of his employers, is desirous of a RE-ENGAGEMENT.—Address, F. B. Office of "The Builder."

MONEY on LOAN, at 3l. per Cent. per Annum.—ARNEWAY'S CHARITY.—Notice is hereby given by the Trustees of this Charity, that their powers having recently been enlarged by the Court of Chancery, they are now enabled to lend out the Trust Moneys to "poor occupiers or traders resident within the Bills of Mortality of the Metropolis, and the Parishes of St. Marylebone and St. Pancras, in the county of Middlesex, preference being given to those resident within the City and Liberty of Westminster." The amount of each loan is not to exceed the sum of 200l.; is to bear interest at 3l. per cent. per annum, and to be secured by the bond of the borrower, and two sureties, who are householders, or one such surety, at the discretion of the trustees, or upon real or long leasehold property. Printed Forms of Application, and all necessary information, may be obtained by applying personally, between the hours of TEN and THREE o'clock to-day, at the Office of the Clerk and Solicitor to the Trustees, No. 7, Great Queen-street, St. James's-park.

By order, EDWARD S. STEPHENSON, Clerk and Solicitor to the Trustees.

NOTE. The Trustees meet on the second WEDNESDAY in every month, to take into consideration such applications for loans as have been sent in one week at the least before the first day of the month.

Established 1838. Registered pursuant to 53 sec. 7 & 8 Vict. cap. 110.

MONEY LENT for Two Years, One Year, or Six Months, on Personal Security, Freehold or Leasehold Property, Good and Silver Plate, Watches, Jewellery, and every description of available security. Repayable by weekly, monthly, or quarterly instalments. Sums from 3l. to 500l. may be obtained three days after application. This office being open daily from Nine till Six, the unpleasant necessity of applicants having to explain their affairs before a large number of persons is entirely avoided. FINSBURY LOAN OFFICE, 144, St. John-street-road, Corner of three doors from Mr. Dodd's-street.

LOANS, from 10l. 10s. to 100l. ADVANCED, within twenty miles of London, repayable weekly or otherwise, at 2½ per cent. for twenty-five weeks, and 5 per cent. for fifty weeks. Forms, price 2d.; by post, three postage stamps to be enclosed.—METROPOLITAN LOAN COMPANY, 3, Craven-street, Strand. Established 1839. Office hours from TEN to FOUR o'clock. ROBERT NORTON, Secretary.

WOLSTON'S TORBAY IRON-PAINTS, warranted to stand the action of the Atmosphere, Steam, Gases, Non-Oxidizing Vapours, Damp, and Salt Water; also intense heat without blistering. These Paints have been tested for five years in Her Majesty's Dockyards, and two Official Reports made thereon, which testify that 63lbs. of Wolston's Torbay Iron-Paint will effectually cover as much surface as 120lbs. of either White or Red Lead, and last many years longer. It is cheaper than Lead Paints. For all Iron Work Coating, Tanks, and other Iron Roofing, Fencing, Shipping purposes (Wood or Iron), Stucco and Cement Fronts, economy and durability will be secured. To Builders and Painters, for all priming purposes, the saving will be immense. Manufactured at the TORBAY IRON-PAINT and ORE WORKS, Brixham, Devon; London Depôt, Chamberlain's Wharf. Letters or orders addressed to Mr. WOLSTON, at the Works, or No. 34, John-street, Bedford-row, will have immediate attention.

TO SURVEYORS, ARCHITECTS, ENGINEERS, &c.

PATENT TRACING-CLOTH. The Patent Tracing Cloth is an invaluable substitute for tracing paper, and is used by the first eminent Engineers, Surveyors, and Architects in this kingdom and in foreign countries. It will also be found useful for oil-painting, &c.

Sold wholesale and retail by JOSHUA SMITH, Manufacturing Stationer and Patent Advertising Envelope Maker, 43, RATHBONE-PLACE, LONDON.

LONDON: Printed by CHARLES WYMAN, at the Printing Office of COX (Bros.) & WYMAN, 74 & 75, Great Queen-street, Lincoln's-inn-fields, in the Parish of St. Giles-in-the-Fields; and published by the said CHARLES WYMAN, at the Office of "THE BUILDER," 1, York-street, in the Parish of St. Paul, Covent-garden, also in the County of Middlesex.—Saturday, December 20, 1856.

ARCHITECTURAL EXHIBITION and COLLECTION of BUILDING MATERIALS and INVENTIONS, Suffolk-street, Pall-mall East, open from Nine till dusk.—First Lecture on Tuesday, JANUARY 6th, by Professor DONALDSON, "On the Architectural Magnificence of Rome." Admission, One Shilling, or by Season Tickets, at all times and to all the Lectures, Half-a-crown.

JAMES FERGUSSON, F.R.A.S.} Hon.
JAMES EDMESTON, Jun. } Secs.

THE ANNUAL EXAMINATION of SCHOOLMASTERS, for Certificates to teach Drawing, will be held at the Offices of the Department of Science and Art, Cromwell-road, South Kensington, on MONDAY, the 19th of JANUARY next, at TEN o'clock, a.m. Persons desiring to be examined should send their names in on or before the 5th of JANUARY. NORMAN MAC LEOD, Registrar.

COMPETITIONS.

TO ARCHITECTS and OTHERS.—BANBURY CORN EXCHANGE COMPANY (limited).—The Board of Directors are prepared to receive DRAWINGS for the proposed building, which will be erected on the site of the Premises on the Corn-hill, Banbury, in the occupations of Messrs Thomas Taylor and Joseph Scrivens. The whole of the drawings to be in one uniform scale of 8 feet to an inch. The drawings are to comprise a plan of the ground-floor, elevations, longitudinal and transverse sections. The plans and sections to have the size and length of the room figured thereon; the sections and elevations to be tinted in Indian Ink only. The estimated outlay not to exceed the sum of 1,500*l.* The author of the design approved by the Directors will be employed to superintend the execution of the work at the usual commission of 5 per cent. The author of the next best design in the opinion of the Directors, will receive the sum of 30*l.*; and the author of the design that shall be considered by the Directors next in point of merit shall receive the sum of 15*l.* The designs to be addressed to "The Secretary of the Banbury Corn Exchange Company (limited), Banbury," and to be sent in on or before the 31st day of DECEMBER instant. A ground plan of the site may be seen at the Office of the Secretary of the Company.—By order of the Directors,

THOS. G. JUDGE, Secretary.

Banbury, 5th December, 1856.

CONTRACTS.

BRAINTREE LOCAL BOARD OF HEALTH.—TENDERS for HORSE SERVICES.—Any person willing to TENDER for PROVIDING and LAYING the DRAIN and WATER PIPES from the Sewers and Water Mains to the Houses, and for providing and fixing the necessary soil pans, cocks, &c and for doing other works required for house services, may obtain printed copies of the specification, schedule, and form of Tender, price five shillings each, on application to JAMES FENTON, Esq. Chelmsford; or to me, on or after the 29th DECEMBER instant. Sealed Tenders, endorsed "Tenders for House Services," to be delivered on or before the 6th of JANUARY, 1857, at the Office of the Board in Braintree. The Board do not pledge themselves to accept the lowest or any Tender.—By order of the Board, A. CUNNINGTON, Clerk.

Braintree, December 20th, 1856.

TO BUILDERS.

THE Guardians of the Tonbridge Union are desirous of receiving TENDERS for the Building of a HOSPITAL and FEVER WARDS, at the Workhouse, near Pembury, according to plans and specifications, to be seen at the Office of the Clerk, 4, Bevedere terrace, Tunbridge Wells. Sealed Tenders to be sent to the Clerk, marked "Tender for Hospital," on or before THURSDAY the 8th of JANUARY, 1857. The Guardians reserve to themselves the right of rejecting the lowest or any other Tender.—By order of the Board.

Tunbridge Wells, Nov. 29, 1856. W. H. WALL, Clerk.

CONTRACTS.

NOTICE to BUILDERS.—The Commanding Royal Engineer, Portsmouth, hereby gives Notice, that sealed TENDERS will be received by the Director-General of Contracts, War Department, Pall mall, London, on THURSDAY, the 15th day of JANUARY, 1857, before TEN o'clock a.m. from such persons as may be desirous of CONTRACTING for ERECTING an ADDITIONAL STORY to the main out-buildings of the Garrison Hospital, Portsea, in the county of Hants. The plans, specification, and conditions of contract may be seen, and every information obtained, together with form of Tender, at the Office, on and after the 26th DECEMBER 1856 between the hours of TEN and FOUR, each day (Sundays excepted), until the last previous. The War Department reserves to itself the right of rejecting the whole or any of the Tenders. No notice will be taken of any Tender unless upon the printed form. Tenders to be endorsed "Tender for Erecting an additional Story to the main out-building of the Garrison Hospital, at Portsea, in the County of Hants."

Royal Engineer Office, Portsmouth, December 17, 1856.

ROYAL ENGINEER CONTRACT.—The War Department being about to enter into a CONTRACT for the ERECTION of FIVE BUILDINGS on WOOLWICH-COMMON, Two to consist of Twenty-four Rooms each, and Three of Eight Rooms; the buildings to be two stories high; such persons as may be desirous of Tendering for the same may inspect the plans and specification, and receive all necessary information relative thereto, by applying to Mr. J. REES, Clerk of Works, at the Royal Engineer Office, Royal Artillery Barracks, Woolwich, between the hours of TEN a.m. and FOUR p.m. up to the 29th of DECEMBER, 1856. Sundays and Christmas-day excepted. Tenders to be delivered at the Office of the Director-General of Contracts, War Department, Pall-mall, London, on the 30th of DECEMBER, 1856. The War Department reserves to itself the right of rejecting the whole or any of the Tenders.

Grand Depôt, Woolwich, December 18, 1856.

TO BUILDERS.—The Committee of the Congregational Church at Weston-super-Mare, Somersetshire are prepared to receive TENDERS for the ERECTION of a NEW CHURCH and SCHOOL, at Weston-super-Mare afor said. The drawings may be seen, and printed copies of the specification, quantities, and form of Tender obtained, on application at the Vestry of the present Chapel, on and after MONDAY, the 22nd instant. Tenders will be received on or before noon on MONDAY, the 5th of JANUARY, 1857.

PRITCHETT and SONS, Architects.

Darlington, December 12, 1856.

TO BUILDERS.—BOROUGH of WALSALL.—The Town Council of the Borough of Walsall acting as the Burial Board, are prepared to receive TENDERS for the ERECTION of TWO CHAPELS, ENTRANCE LODGE, and ENTRANCE to the new Cemetery, and the said Works are according to Plans and Specifications which may be seen at the Town Clerk's Office, Bridge-street, Walsall, on and after MONDAY, the 8th of DECEMBER next. Payments on account will be made monthly. The Board do not pledge themselves to accept the lowest or any Tender, and the Contractor will be required to enter into a Bond with one or more sufficient surety or sureties, to the satisfaction of the Board, for the due performance of the Contract. Sealed Tenders, endorsed "Tender for Cemetery Building," to be sent to the Town Clerk's Office on or before TUESDAY, the 13th JANUARY next.

SAMUEL WILKINSON, Jun. Town Clerk.

Walsall, December 5th, 1856.

TO BUILDERS. — Persons desirous of TENDERING for the ERECTION of a DETACHED HOUSE, with Stabling and Offices at Brecon, may see the drawings and specification, at the Office of the Architects, Messrs. WILLIAM HARRISON, 38, Bloomsbury-square, London; or at their local Office, Watton, Brecon, on application to Mr. ALBON, on or after the 1st day of JANUARY, 1857. Tenders are to be sent in on FRIDAY, JANUARY 16th, but no engagement is to be implied to accept the lowest or any of the Tenders.

BERMONDSEY VESTRY, Surrey. — To STONE MERCHANTS.—The Vestry of this parish will meet at the Workhouse, in Russell-street, on MONDAY, the 5th day of JANUARY next, at SIX o'clock in the evening precisely, to receive TENDERS for the SUPPLY of 5,000 feet run of 6 inch ABERDEEN GRANITE, straight edge curb; 2,000 feet run of 6 inch Aberdeen Granite round edge curb, and 1,500 feet sq. or second class fine RICHMOND PAVING, delivered on or before the 14th day of MARCH next, alongside Springfield's Wharf, below bridge in the river Thames. The time named for the delivery of the stone will form part of the essence of the contract. Payment will be made for the stone within a month after the surveyor has given his certificate as to quantity and quality such certificate to be binding on the parties. The Vestry do not bind themselves to accept the lowest or any Tender.

GEO. HENRY DREW, Clerk.

Vestry Offices, Maltby street, Dec 19, 1856.

TO BUILDERS and CONTRACTORS.—ST HELEN'S GENERAL CEMETERY.—In pursuance of the 31st sect. of the 15th and 16th Vict. c. 85, the Burial Board for the Parish of St. Helen's, in the county of Lancaster, hereby gives Notice that it is prepared to receive TENDERS for the several CHAPELS, LODGES, DRAINAGE, FENCES, RETAINING WALLS, EARTH WORK, ROAD MAKING, &c. All persons desirous of submitting such Tenders must for the whole work, or for the buildings, or any other part of the work separately, can inspect the plans, settings, and specifications, and obtain billsof quantities together with any other information, at the Office of the Architect, Mr. THOMAS D. BARRY, 47, Bedford-street North, Liverpool. The plans will be on view from the 22nd inst. to the 5th JANUARY next, and all Tenders must be sent sealed, after cover, to the undersigned, not later than the 12th JANUARY next. Two proper sureties will in all cases be required for the due performance of the works.

THOMAS HADDOCK, Clerk to the Board.

St Helen's, December 19th, 1856.

CONTRACTS.

LUTON LOCAL BOARD of HEALTH.—To MASONS, CONTRACTORS, and OTHERS.—The above Board are prepared to receive TENDERS for the SUPPLY and LAYING DOWN of about
81,500 feet super. of YORK PAVING,
15,700 " DENNER HILL GRANITE CHANNELLING,
20,200 feet run YORK CURB.
Comprised in the following streets, being CONTRACT No. 1:—

Castle-street,	Hitchin-road,
Chapel street,	Langley-street,
Church-street,	London road,
Dunstable-road,	Love-lane,
Dunstable-place,	Manchester-street,
Bridge-street,	Old Windsor-street,
George street,	Park-street,
Hightown-road,	Stuart-street.

The plan of the streets and specification of works, may be seen at the Offices of the Board, on and after WEDNESDAY, the 14th day of JANUARY next, when forms and Tenders, and further particulars, may be had, on application to Mr. T. L. EVANS C.E. the Surveyor. The Tenders are to be delivered at the Board-room, endorsed "Tender for Paving," addressed to the Chairman, by SIX o'clock on the Evening of TUESDAY, the 10th day of FEBRUARY, 1857.

CONTRACT No. 2, of about the same quantities, will be advertised shortly. GEORGE BAILEY, Clerk to the Board.

Luton, Beds, December 16, 1856.

THE BURIAL BOARD for the PARISH of LEWISHAM, in the County of Kent.—Notice is hereby given, that at the Meeting to be held on THURSDAY, the 8th day of JANUARY next, at TWO o'clock in the afternoon, the Board will receive TENDERS for the execution of the necessary works in DRAINING, FORMING ROADS, LAYING OUT and BUILDING the BOUNDARY WALLS of the new Burial ground for the said Parish. The works are submitted for Tender a second time, in consequence of unavoidable alterations in their nature and extent. A specification, plans, and sections of the works will be for inspection at the Offices of Messrs. TINKLER and MORPH, Architects, 3, Queen-street-place, Cannon-street. The Board do not bind themselves to accept the lowest or any Tender. Sealed Tenders to be sent in on the printed form to be obtained at the Offices of the Architects, and of the Clerk to the Board) by or before TWO o'clock on the 8th day of JANUARY next.

By order,
OCTAVIUS G. THYNN EAGLETON, Clerk to the Board.
Grove place, Lewisham, Kent, S.E. December 20, 1856

MIDLAND RAILWAY.—The Directors of the Midland Railway are prepared to receive TENDERS to CONTRACT for the REPAIRS and MAINTENANCE of the STATION BUILDINGS on the Bristol and Birmingham Branch of the above Railway, for a period of SEVEN YEARS, as per annum. The specification may be seen, and particulars obtained, upon application at the Engineer's office, Derby Station, on and after TUESDAY, the 23rd instant. Tenders to be delivered to the Secretary to the Way and Works Committee, Derby Station, by TEN a.m. on TUESDAY, 6th day of JANUARY, 1857. The Directors do not bind themselves to accept the lowest or any Tender.—By order, JOHN MOORE, Assistant secretary.

TO BUILDERS.—Persons desirous of CONTRACTING for the various Works required in the ERECTION and COMPLETION of PARSONAGE-HOUSE, Central-road, Belper, may see the plans and specifications for the same at my Office, from MONDAY, the 22nd inst. until SATURDAY, the 27th day of DECEMBER; and on Field-house, Belper, from DECEMBER 29th, 1856, until SATURDAY, the 10th day of JANUARY 1857. Sealed Tenders to be sent in to the Rev. J. BANNISTER, Field-house, Belper, on or before the 6th day of JANUARY, 1857, endorsed, "Tender for Parsonage-house."

Copies of the quantities supplied if required.
HOLLINSON, Architect and Surveyor.

Chesterfield, Dec. 16th, 1856.

TO TIMBER MERCHANTS, &c.—TO BE DISPOSED OF, an old established BUSINESS in the DEAL and TIMBER LINE, with a first-rate connexion, situate in the centre of a city in the west of England. The premises are fitted up with steam saw-mills, and the rent is moderate, with a small but well-selected stock of deals, &c. A most favourable opportunity of embarking in business can be seldom met with. A satisfactory offer for partnership in the above business will receive attention.—Apply to Mr. S. N. WILMOT, Palmer's hill, Salisbury, Wilts.

THE THIRD BIENNIAL EXHIBITION of ARCHITECTURAL, MECHANICAL, and ORNAMENTAL DRAWINGS, executed by the Students in the Architects', Builders', Civil Engineers', and Mechanics' Drawing Classes will be open for inspection on Monday, Tuesday, and Wednesday, the 29th, 30th, and 31st of December; and Friday and Saturday, the 2nd and 3rd of January 1857, from 10 o'clock in the Morning, to 5 in the Evening, at the Offices of the Establishment, 15, Old-street, City road. Admission by ticket, to be had at the Offices; and at the Office of "The Builder."

T. J. HILL, Architect, Conductor of the Classes.

COMMANDMENTS, TEXTS, &c.—A. O. P. HARRISON, Church Decorator and Writer, 47, Bathpool, Newcastle.

N.B. Designs for reredos panels, organ-pipes blinds, scrolls, &c. submitted for approval.

BOOKS POSTED and BALANCED by Partnership Accounts Arranged, and Balance-sheets made out, Bookkeeping Accounts investigated, and assistance rendered with Creditors on the most moderate terms, by an experienced Accountant.—Address, ROBERT HATTON, Esq., New Broad street, E.C.

TO BUILDERS, SCAGLIOLA WORKERS AND OTHERS.

WANTED, FOUR COLUMNS, either in Marble, Scagliola, or Wood, with Ionic Capitals and Bases of Stone or Marble. Full height, 10 feet 1 inch. If in scagliola or wood, to represent the serpentine marble. Lowest price, full description, and where to be viewed.—Apply to J. LATTIMER and SON, Architects and Surveyors.
Stratford-on-Avon, December 23rd, 1856.

MARBLE WORKS by PATENT MACHINERY, Commercial-road, Pimlico, London.
THOMAS JAY & SON begs to draw the attention of the public to the most extensive stock of Marble Chimney-Pieces in the Metropolis; consisting of a selection of upwards of two hundred and marble used by steam power from the finest Italian and other marble, and with that careful attention to the details and finish so necessary in good marble work. The Stock consists of elegant Drawing-Room Chimney-Pieces in Statuary Marble; bold massive Chimney-Pieces, in Black, Black and Gold, Sicilia, Sienna, Verd Antique, Brocatello, Dove, St. Ann's, and Serpentine Marble, suitable for Dining-Rooms, Libraries, Vestibules, and Entrance-Halls; and a great variety of others in Veined, San Juan, Emperor's Red and Amber Marble, for Boudoirs, Breakfast-Rooms, Bed, and secondary Bed-Rooms, &c., also, Monuments, Tombs, Tablets, and Pedestals for Busts and Statues, and Slabs for Cabinet Work, &c.; the whole executed from the most classical designs, and in all the varieties of the finest Italian and British Marble, at the lowest remunerative prices.

BUILDERS, ARCHITECTS, AND MASONS.

MARBLE.—The ITALIAN MARBLE COMPANY beg to call the attention of Architects, Builders, and Others connected with the trade, to their large and well-assorted STOCK of VEIN SICILIAN, and other MARBLES. The liberal system of business adopted by this company, the superior quality of their marble, and their very moderate scale of prices are combined, to form an inducement to buyers. An inspection is solicited at the Depôt Bridge Wharf, Millbank, adjoining Vauxhall Bridge, where no office (persons are authorized to sell except Mr. Baxter, Wharf Foreman, or the undersigned.
WILLIAM W. BONNIN, Secretary.

MARBLE CHIMNEY-PIECES, and every other description of marble work, supplied to architects, builders, and the trade, at prices to compete with slate, manufactured by the LONDON and CONTINENTAL MARBLE COMPANY.—Offices and Depôt, 3, Crooked-lane, London-bridge.
Paving for Halls, Conservatories, &c.

MARBLE GALLERIES, 17, Newman-street, Oxford-street.—Mr. ALFRED E. EDWARDES, (upwards of ten years with the London Marble Company), has opened the above premises, late in the occupation of Bailey the celebrated sculptor, under the firm of EDWARDES, EDWARDS, and COMPANY, with the largest stock of BRITISH and FOREIGN MARBLE CHIMNEYPIECES, &c. &c. in London EDWARDES, EDWARDS, and CO. solicit the favour of an inspection of their stock by architects, builders, and others connected with the trade; and beg to assure them that for design, style of execution, and price, it will be found unrivalled. Estimates for every description of marble work.

MARBLE CHIMNEY-PIECES.—The nobility and gentry of the United Kingdom who are building or refitting their mansions are respectfully invited to inspect the most Extensive Collection of MARBLE CHIMNEY-PIECES lately imported from the Continent. They comprise Statuary, Giallo di Siena, Vert Rouge, Dove, Black and Gold, Rouge de Belmont, Basalte, and other choice foreign marbles; and are designed with great taste and executed by first class artists. On sale in the show rooms of Messrs. EVANS, SON, and CO. King William-street, London-bridge.

LLOYD'S MARBLE WHARF, Thames-bank, Pimlico, adjoining Vauxhall-bridge.—Italian Statuary, Veined, Sicilian, Dove, Sienna, and other Marbles, for Sale, at import prices. A resident manager on the wharf at all hours.

BRAMLEY FALL! BRAMLEY FALL! On account of greater facilities than possessed by any one else, THOMAS TAIT and PERKINS are prepared to supply in any quantity BRAMLEY FALL STONE, at greatly reduced prices, having opened the extensive quarries in the Hawkesworth Cottage, on the North Eastern Railway, near Horsforth. The stone is of the same quality as the well-known Old Bramley Fall and Horsforth Quarries, but has the advantage of being of a lighter and more even colour. The North Eastern Railway Company have put up steam cranes on both sides of the railway. Power cranes are fixed so that the stone can be got to any size and the stone being loaded in the quarries on the railway tracks, can be forwarded the same day to any part of the kingdom, or supplied in London in any Saturday in full in any quantity.—For particulars apply to JOHN TRICKETT, Stone Merchant, Headingley, near Leeds, or to SAMUEL TRICKETT, Victoria Stone Wharf, Isle of Dogs, London.

QUARRY WORKED STONE.—Architects, Masons, and Builders would effect a great SAVING in cost by ordering Jambs, plinths, templates, sills, corbels, imposts, cornices, landings, steps, staircases of all kinds moulded or plain, square or spandril, from the quarries ready worked for fixing. Experienced foremen kept, and the stone is clean worked and carefully packed or stowed, and delivered direct in one bottom by vessel or railway truck.—Prices and every information given on application, accompanied by plans or sketches to SAMUEL TRICKETT, stone-wharf, Isle of Dogs, or to JOHN TRICKETT, Headingley, Leeds, York-shire.

BANGOR WHARF, King's-road-bridge, Camden-town.—STRINGFIELD and COOPER late W. W. Rawlins, beg to call the attention of Builders and others to their stocks of Roman, plain, and Parian Cements, Portland, and Keene's cements, blue lias, Dorking and chalk lime, plasterers' hair, Yorkshire plain, pan, and ridge tiles, glazed sewer pipes, closet-pans, and traps. Welsh slates, Kentish and Welsh forest garlenpaths, ballast, sand, &c. Materials landed, wharfed, and carted.

STONES, GRANITES, SLATES, &c.—W. and J. FREEMAN supply the various British and Foreign Stones, Cornish and Aberdeen Granite, in scapped blocks or worked to specification. Also, the usual quarry worked STONES, KEN, Bath, Caen, & HOLT Farley Hill QUARRIES, ROYAL HILL, ORNAN OF TAIL QUARRIES FOR EXPLANATION OR OTHERWISE on by rail to any part of the Kingdom.—Stocks of each description always ready for immediate delivery from their Wharfs, Millbank Street Chelsea Basin, and adjoining Commercial Docks, Deptford Office, 27, Millbank-street, Westminster.

STONE! STONE! STONE! — To the TRADE.—Cheapest places in London for Portland and Bath Stone. York free Landings, Steps, Curb, Paving, Sills, &c. Granite Fitting and Curb, Guernsey Pickup Road Materials, and every other description of stone, at JOHN KNIGHT and SON'S, Devon Wharf, Strand. York landing steps, 3s. 6d. per foot run; slab for fire clay, 4s. per foot sup.; slab for chimney-pieces, 3s. per foot sup.; 8 by 3 window-sills, 6d. per foot run; 13 by 3 copings, 8d. per foot run; box chimneys (any opening), 8s. 6d. each Terms cash on delivery.

MARKET-WHARF, REGENT'S-PARK-BASIN, WEST-END DEPOT, for Yorkshire Paving, Portland and Derby Stone, Bangor Slates, Slabs, &c. All Bricks, Lime, Cement, Plaster, Tiles, Laths, and Fire Goods. STOCKS and WOOD invite the attention of Builders, Masons, and others, to their Stocks as above, where everything will be charged at the lowest prices. Headstones, Kerbs, Steps, Landings, &c. put on the shortest notice. Country orders promptly attended to.

CAEN and AUBIGNY STONE.—F. FOUCARD, Stone Merchant and Quarryman. Any shipped to order from Caen to any port. Contracts taken for any quantities. Depôts: Granite Wharf, East Greenwich; Lee Wharf, Waterloo-bridge. Office: 246, High-street, Southwark, near the Townhall.

DARLEY DALE STONE.—One of the Stones selected for the New Houses of Parliament, and highly commended by Sir Charles Barry, is supplied direct from the Quarry, or at the Darley Dale Stone Wharf, Cotwood Basin. In addition to numerous other works, it is in the st ne of St. George's Hall, Liverpool, and the Staircases of the Grosham Chambers, Old Broad-street.—Office, 37 Millbank-street, Westminster.

GATES and GEORGE, CAEN, AUBIGNY, and GENERAL STONE MERCHANTS.
CAEN WHARF, ROTHERHITHE, LONDON

O. M'CARTHY, CARMAN, and SAND and CEMENT MERCHANT, Whitefriars Wharf, Whitefriars, Fleet-street, City. Sand, from above or below bridge, delivered by the yard or per barge. Ballast in best of unscreened by the yard or per barge. Stocks, lime, and old bricks. Dry rubbish delivered per barge, in any quantity, alongside the Thames.

RANSOME'S SILICIOUS STONE.—All kinds of ARCHITECTURAL EMBELLISHMENTS executed in this beautiful and indestructible material, at prices not exceeding the ordinary cements. Full particulars furnished on application to Mr. FRED. RANSOME, Whitehall-wharf, Cannon-row, Westminster; or Patent Stone Works, Ipswich.

JOHN BAZLEY WHITE and BROTHERS, MARBLE MERCHANTS,
MILLBANK-STREET, WESTMINSTER.
Marble of all kinds and of best quality, in block and slab, Marble mortars, &c.

BATH STONE OF BEST QUALITY.

RANDELL and SAUNDERS, QUARRYMEN AND STONE-MERCHANTS, BATH.
List of prices at the quarries and depots, also cost for transit to any part of the kingdom, furnished on application to Bath Stone Office, Corsham, Wilts.

GRANITE.—The Welsh Granite Company, Carnarron, supplies Pitching or Paving Sets of this Material to order. The Sets, which have for several years been extensively used in Manchester, Bristol, Leeds, and other large towns, combine in a higher degree than any others, the qualities of roughness in wear and durability. The stone is also well adapted for foundation courses, plinths, &c. for public buildings and for mill-stones.

GRANITE.—King William and Nelson Monuments, Plinth and Steps of the Royal Exchange, and Terrace at the Crystal Palace Supplied by the Haytor Company under Royal Charter. For terms apply to Mr. C. HOAR, Haytor Granite Office, 4, Millbank-row, Westminster.

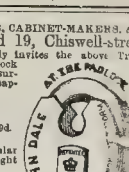
GRANITE.—The Cheesewring Granite Company (Limited), Liskeard, Cornwall.
London Agents.—PITCHFORD and TAYLOR, 54, Old Broad-street. Manager.—JAS. J. THATHAN, Liskeard
This Granite is selected for the New Westminster-bridge.

SLATE.—The Bangor Royal Slate Company have now on hand a LARGE ASSORTMENT of ROOFING SLATES blue and green, of the usual sizes, which they are prepared to supply on the usual terms, for shipment from their depôt at Bangor, or to transmit by railway. Also Slabs of all sizes.—Orders to be addressed to Mr. EDWARDS, Manager, Royal Slate Quarries, Bangor.

SLATE.—An assortment of the best BANGOR ROOFING SLATE ON SALE, at Bridge-wharf, Millbank.—Apply to Mr. GEORGE BAXTER, Foreman.

PARIS EXHIBITION.—ENAMELLED SLATE.—TWO FIRST-CLASS MEDALS!—Mr. MAGNUS is the only exhibitor whose productions received this double honour; also the Prize Medal at the Great Exhibition of 1851, and the Medal of the Society of Arts in 1846. This beautiful material, handsomer and more durable than marble, is now finding its way into palaces, into the mansions of the nobility at home and abroad, into the highest class of public buildings, as well as into humbler dwellings. The cost is immeasurably below that of any other production that can at all compete with it. It is applicable to a variety of useful and ornamental articles too numerous to be separately specified. Among the chief are chimney-pieces and ornamental stoves for all apartments; plain and exquisitely decorated slabs for the tops of loo tables, chiffoniers, consoles &c. baths, baptistries, altar-tablets, pilasters, columns, vases, pedestals, and brackets; wash stand tops, billiard tables, linings to halls, vestibules, and dwellings. Price list can be had on application to Mr. MAGNUS, 39 and 40, Upper Belgrave-place, Pimlico.
N.B. Plain slate work executed from a single article to the most extensive contracts, for home and abroad.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality. They have been used at the British Museum, National Gallery, Bethlem Hospital, various Lunatic Asylums, the Ordnance Work Model Prison, Pentonville, and other Penitentiaries, Malt Floors in Bedfordshire and Hertfordshire, Breweries, the Royal Stand at Brighton, Portsmouth Barracks, and are kept in stock and are quantities by Messrs. FREEMAN, Millbank-street; and at Messrs. Bruby's, Belvidere-road, where terms may be obtained.



ASPHALTE.—GERVASE FOOTTIT and BROTHERS' ASPHALTE WORKS, ROTHERHITHE, LONDON. Established 1834.—TRINIDAD, ELYSEE, and BRITISH ASPHALTES, manufactured by steam power, delivered in the best manner, or supplied in any quantity. Before contracting for laying pavements with material, Footitt's experience of twelve in London previously attended to.—Estimates given for every kind of the above work.

ASPHALTE, FOREIGN and BRITISH, for FLAT ROOFING and every description of PAVING especially in dampproofing tanks.
FIVE SHILLINGS PER SQUARE YARD.
Country Builders supplied with Asphaltic for footings and basement floors, with instructions for using it.
Apply to JOHN PHILLIPSON, Poloneeau and Limmer Asphalte Office, Modern Chambers, No. 14, Fish-street-hill, London.
N.B. Importer of the PURE ROCK ASPHALTE, from the LIMMER Mines in Hanover.

FOR HIRE, a SPACIOUS TENT, adapted for the Laying of Foundation stones for Public Buildings, &c.
Also, for Sale, a Quantity of Cocoa Matting for Churches, at greatly reduced prices.
Apply to H. PIGGOTT, 115, Fore-street, City.

TO BUILDERS, CARPENTERS, CABINET-MAKERS, &c.

JOHN DALE, 18 and 19, Chiswell-street, Finsbury-square, respectfully invites the above Trades to the inspection of his immense stock of ironmongery, which cannot be surpassed in variety, quality, and cheapness by any house in London.

JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS.

J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior tone, truer in form, and at less cost than has heretofore been accomplished.
Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any size, note, weight, singly or in peals.
TUNED BY MACHINERY.
Stocked and wheeled ready for fixing. Old Bells recast or taken in exchange.
MUSICAL HAND-BELLS tuned to the Chromatic Scale, with improved Clappers, and pegged on a new system, which give superior tone and facility for ringing.
The great 16-ton Bell, for the Houses of Parliament, was made by JOHN WARNER and SONS, 1856, under their Patent.

ESTABLISHED 1817.

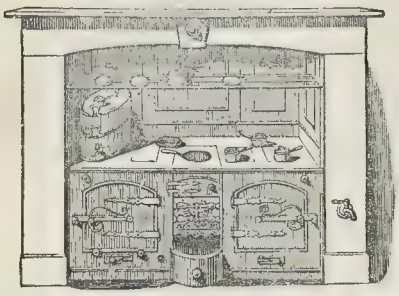
TYERMAN'S PATENT HOOP-IRON BOND,

FOR BUILDING PURPOSES,

ADOPTED BY SEVERAL DEPARTMENTS OF THE GOVERNMENT.

TARIFF OF PRICES

Beyond the current Price of Hoop iron.			
Gauge.	In. wide.		Per 1,000 ft.
No 16	.. 1¼	..	7s. 0d.
15	.. 1½	..	7s. 6d.
15	.. 1¾	..	8s. 0d.
15	.. 2	..	8s. 0d.
15	.. 2½	..	9s. 6d.



THE PATENT BOND (which is prepared from the ORDINARY HOOP IRON, by notching it at intervals of 1¼ inches) is now being extensively used in the leading GOVERNMENT WORKS DOCK BUILDINGS, BANKS, ASYLUMS, BRIDGES, VIADUCTS, PRISONS, ENGINE-HOUSES, and MANUFACTORIES, as well as in other PUBLIC and PRIVATE WORKS, in London and in all parts of the Kingdom.

Sole Manufacturers—THOMAS PERRY and SONS, Highfields Works, Bilston.

London Depôt—ST. ANN'S WHARF, EARL-STREET, BLACKFRIARS.

FLAVEL'S PRIZE KITCHENER.

The only Kitchen Range which obtained a Prize Medal and special approbation at the Great Exhibition, 1851.

These Ranges are strongly recommended for their simplicity of construction and their economy and cleanliness in use.

The top forms a Hot-plate, and the open fire removes many of the objections which are felt to close Ranges.

They are made in all sizes, from 3 feet to 18 feet in width, suitable for large or small establishments.

They are admirably adapted for the Cure of Smoky Chimneys.

SOLE AGENTS:

BENHAM AND SONS,

19, WIGMORE-STREET, LONDON;

and at the Crystal Palace, Sydenham.

GURNEY'S WARMING APPARATUS, for CHURCHES, PUBLIC BUILDINGS, and PRIVATE HOUSES.—This Apparatus is a modification of that invented by Mr Goldsworthy Gurney, and now used by him for warming the House of Commons and House of Peers. It is constructed so as to be available for private houses, churches, and other buildings. It is simple, inexpensive, and powerful (the fuel may be coal, coke, or gas combining the laws of conduction and convection of heat, to temper and warm air for respiration, without drying or reducing its natural hygrometric brisk. For further particulars apply to Mr. WOODCOCK, 5, Beaconsfield-gardens, Pimlico, who will supply the Apparatus, and is empowered to grant licenses for agencies under the patent.

RADIATING and REFLECTING STOVE. WILLIAM S. BURTON'S NEW REGISTER STOVE combines completely the well-known principles of both Stephen's and Sylvester's celebrated patent stoves, while it has others equally valuable, which are peculiarly its own, and for which a patent has been granted. Its reflecting and radiating powers are perfect, it is very simple, and cannot be put out of order, consumes but little fuel, is most cleanly and cheerful in use, while its general appearance, no fender being needed, is most imposing. Prices, complete, black or bronzed, from 2l. 12s.; bright, 14l. 5s. and upwards. One may be seen in action in his Show-rooms, which contain such an assortment of fenders, stoves, ranges, fire-irons, and several ironmongery, as cannot be approached elsewhere, either for variety, novelty, beauty of design, or exquisiteness of workmanship. Bright stoves, with bronzed ornaments and two sets of bars, 4l. 4s. to 13l. 13s.; ditto, with ormolu ornaments and two sets of bars, 4l. 5s. to 23l. Bronzed fenders, with standards, 7s. to 5l. 12s.; steel fenders, 2l. 15s. to 11l.; ditto, with rich ormolu ornaments, 3l. 16s. to 16l. Fire-irons, from 1s. 9d. the set to 3l. 3s.

The late additions to these extensive premises (already by far the largest in Europe) are of such a character that the entire of EIGHT HOUSES is devoted to the display of the most magnificent stock of GENERAL HOUSE IRONMONGERY (including Cutlery, Nickel Silver, Plated Goods, Baths, Brushes, Turnery, Lamps, Gasoliers, Iron and Brass Bedsteads, Bedding and Bed Hangings), so arranged in Sixteen Large Show-rooms as to afford to parties furnishing facilities in the selection of goods that cannot be hoped for elsewhere. Illustrated catalogues sent (per post) free—39, Oxford street; 1, 1a, 2, and 3, Newman-street; 4, 5, a, 6, Perry's place, London. Established 1820.

DR. ARNOTT'S SMOKE-CONSUMING GRATE.

Will this Grate become universally used?

Its advantages over every other consist in—

1. A saving of 30 per cent in fuel.
2. Its being a cure for a Smoky Chimney.
3. Its not requiring one half the attention of an ordinary fire.
4. Its being perfectly safe.

A Prospectus, with a Second Series of Testimonials, just issued, from all parts of the country will be sent on application.

F. EDWARDS, SON, and CO. 42, Piccadilly, Oxford-street.

PARIS EXHIBITION, 1855.

PRIZE MEDAL

AND

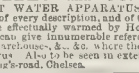
HONOURABLE MENTION AWARDED TO

THOMAS WALKER,

STOVE-MAKER, BIRMINGHAM.

Signé NAPOLEON BONAPARTE.

The only Stove for which a Prize was awarded at the French Exhibition.



For Churches, Gentlemen's Halls, Shops, &c.

The last invention of Modern Times ever brought before the Public.

These Stoves show a bright fire; are durable, economical, and burn from twelve to sixteen hours with one supply of fuel.

Prospectuses and testimonials may be obtained at the Manufactory,

58, OXFORD STREET, BIRMINGHAM.

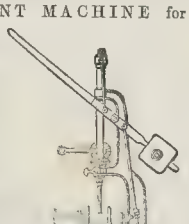
HEATING BY  HOT WATER.

JOHN WEEKS and CO. King's-road, Chelsea, HOT WATER APPARATUS MANUFACTURERS. Buildings of every description, and of the most extensive dimensions, can be effectually warmed by Hot Water. JOHN WEEKS and CO. can give innumerable references of Churches, Dwelling-houses, Warehouses, &c. &c. where they have fixed their Hot Water Apparatus. Also to be seen in extensive operation at their Premises, King's-road, Chelsea.

VENTILATING STOVES! SUSPENSION STOVES! Approved by thousands of purchasers, and recommended as the two best, cheapest, most healthy, and economical for churches, chapels, halls, schools, warehouses, shops, greenhouses, bedrooms, libraries, &c. Prospectuses, with prices, sent post-free — DEANE, DRAY, and CO. Stove Range, Ironmongery and Furnishing Warehouse, London-bridge.

WARMING and VENTILATING CHURCHES and PUBLIC BUILDINGS generally with PURE WARM AIR.

CUTLER and SONS respectfully state that they are prepared to Contract for the Erection of their improved Warm-Air and Ventilating Apparatus, for Halls, Churches of the largest dimensions, and every description of public buildings, the perfection of which they undertake to guarantee.—One may be seen in constant use at their Foundry and Gas-Engineering Works, 16, Great Queen-street, Lincoln's inn-fields, London.



ASHDOWN'S PATENT VENTILATING and SMOKELESS GAS-FIRE.

CUTLER and SONS, Licensed Manufacturers, under the immediate superintendence of the Patentee.—This is the only gas fire adapted to open grates, it differs materially from all others hitherto offered to the public, it combines the most perfect combustion with ventilation, and presents a glowing warmth from an open radiating surface, unequalled by any other gas-stove; it is also well suited to the drawing-room, library, bed-room, or hall; and may be seen in action, daily, at CUTLER and SONS' Gas Engineers, Founders, and Manufacturers of Gas-heating and Cooking Apparatus of every description, 16, Great Queen-street, Lincoln's-inn-fields.

PATENT PURE WARM-AIR VENTILATING STOVES.—The only Pedestal Stove which gained a Prize Medal (Class 478) at the Great Exhibition, 1851, especially adapted for warming churches, chapels, schools, entrance halls, libraries, warerooms, &c. with great economy.—CUTLER and SONS, Sole Licensees and Manufacturers, Founders and Gas Engineers, 16, Great Queen-street, Lincoln's-inn-fields, London.

BATHS and HOT-WATER APPARATUS. J. TYLOR and SONS' ILLUSTRATED CATALOGUE of BATH WORK, &c to be had on application. Estimates and Plans for fixing given. J. TYLOR and SONS, Manufacturers, Warwick-lane, Newgate-street, London.

NEW PATENT MACHINE for MORTISING and TENONING HARD or SOFT WOOD and BORING WOOD or IRON.

House and Coach Builders, Joiners, Cabinetmakers, and others, doing similar work, are invited to call at the Patentees', BOWIS, JAMES, and Co. Wholesale Builders and Cabinet Makers, Ironmongery Establishment, 28, Wading-street, City, and see in action this very simple, powerful, and expeditious machine, which is the only one yet brought out, for performing these three separate kinds of work by one machine; and as it is self feeding, it does not require any skill or care in using like the older inventions introduced. It can either be worked by a boy, or made to go by steam power.

P.S. Steam Engines and Machinery contracted for.

A PRIZE MEDAL for SUPERIOR LOCKS was awarded to J. H. BOOBBYER at the Great Exhibition of 1851, who invites the attention of Builders, &c to his Stock of Ironmongery, Brass Foundry, Nails (wrought and cut), Copper and Zinc, Patent Locks of all descriptions; China, Glass, and Wood Furnitures of all kinds, with Patent Shifting Spindles; Dr Arnott's Ventilator, &c.; and the new registered Venetian Ventilator, so much admired, 4s. 6d. each.

J. H. BOOBBYER (late STURCH and BOOBBYER), established nearly 200 years, for the supply of Goods from the best Manufactories, at the lowest prices.

14, Stanhope-street, Clare-market, London.

LIGHTNING CONDUCTORS.—R. S. NEWALL and CO. Patentees of the Copper Rope Lightning Conductor, supply Lightning Conductors, with the point and all staples complete for fixing, at one shilling the foot.

R. S. NEWALL and CO.'S Patent Copper Rope Conductor is being specified by architects, engineers, and scientific men in all parts of the world.

ALNWICK LOCAL BOARD of HEALTH.

TO BE SOLD by PRIVATE CONTRACT, a MACHINE for TESTING WATER PIPES.—For further particulars, apply to Mr. THOMPSON, Town Surveyor to the Alnwick Local Board of Health, Alnwick.

Alnwick, December 10, 1856.

MACHINERY for SAWING, PLANING, MOULDING, &c.

SAMUEL WORSSAM and CO. beg to call the attention of Contractors, Shipbuilders, proprietors of Saw-Mills, and others, to their improved Inventions and Adaptations in Saw Frames and Benches, Roller and Chain Planing Machines, Endless Saw Frames, and all other kinds of Machines, for Sawing, Planing, Grooving, and Moulding Wood. They have constantly on hand machinery, either wholly or partly made, so that they can at all times on short notice supply them. S. W. and CO. beg to state that they have hitherto confined their attentions to this sort of machinery, and have had the honour of supplying some of the most distinguished companies, ship builders, and contractors in the world with their machines, for home and foreign use. One of their Saw Benches and also a smaller one, with Boring Apparatus, may be seen at the Machinery Department, Crystal Palace—A descriptive Catalogue, with Drawings, may be had on application to SAMUEL WORSSAM and CO. Engineers, &c King's-road, Chelsea, London.

COMPLETE IMMUNITY from FIRE, THIEVES, and GUNPOWDER. EDWIN COTTERILL Inventor, Patentee, and Sole Manufacturer of the Royal Climax Detector Locks. The only locks which have not been picked, and cannot be blown up with gunpowder. TO BELL-HANGERS, GAS-FITTERS, IRONMONGERS, &c. &c.—The Trade supplied on the best terms with House Bells, Zinc, Tube, and Copper Wire. Gas Pendants, Brackets, and Joints of all descriptions for Gas-fitting, in Brass and Iron; Tin, Composition, Iron and Brass Tubing, Cornice-poles, Rings and Lacquered Case Tube for Picture Rods, Desk Rails, &c. &c.

Superior Rolled Brass for Engravers, Castings in Fine and Common Brass, Gun Metal, &c. at

RICHARD EVERED'S, Brass and Bell Foundry and Metal Warehouses, Nos. 10, 11, and 12, Charles-street, Long-acre, London.

HARTLEY AND CO.'S GLASS TARIFF FOR THE FIRST OF DECEMBER

IS NOW READY, AND MAY BE OBTAINED ON APPLICATION TO

MESSRS. JAMES HARTLEY AND CO. SUNDERLAND.

It contains:—

No. 1. TARIFF.—CROWN GLASS.
" 2. SHEET.
" 2B. SHEET FOR EXPORTATION.
" 3. HARTLEY'S PATENT ROUGH PLATE.
" 4. PATENT FLUTED.
" 5. PATENT QUARRY.
" 6. PATENT DIAMOND.
" 7. PERFORATED GLASS FOR VENTILATION.
" 8. PATENT PLATE.
" 9. POLISHED AND CAST PLATE.
No. 10. COLOURED GLASS AND GLASS FOR RAILWAY PURPOSES
" 11. MISCELLANEOUS GLASS ARTICLES.
" 12. SHADES.
" 13. STAINED GLASS WINDOWS.

The whole of the foregoing Tariffs have been simplified—the nomenclature altered to correspond with the terms employed by Architects in their specifications and the nominal High Prices reduced, so that the whole is now subject to one uniform rate of Discount to the Trade.

Having now abolished all the anomalies engendered by fiscal regulations, it is believed the present Tariff will meet the general requirements of the Trade, and that Shippers will be able to compete with Glass of Foreign Manufacture in all parts of the World.

TO ARCHITECTS, BUILDERS, CONTRACTORS, AND OTHER CONSUMERS OF GLASS.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th of an inch thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th or 4 lbs. is now universally used for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, MILLS, MARKET HALLS, BATHS AND WASH-HOUSES, FACTORIES, WORKSHOPS, SHIP-BUILDING SHEDS, AND OTHER EXTENSIVE BUILDINGS.

By a carefully prepared Estimate, it has been ascertained that FOUR-FIFTHS of the ROUGH PLATE, or non-transparent Glass, consumed in the United Kingdom in 1854 was manufactured by HARTLEY'S PATENT—thus affording the most incontestable evidence of its superiority over every other article of the kind, and as being the only description of Glass suitable for the purposes above named. It combines size and strength with economy of cost, and is manufactured in sizes expressly for RIDGE and FURROW ROOFS, giving a SPAN of TWELVE FEET, at a price not exceeding, weight for weight, that of Common Crown Glass. Its non-transparency renders BLINDS UNNECESSARY, and no scorching occurs in Greenhouses glazed with it; hence the preference given to this Glass for all Horticultural purposes.

For further particulars, apply to

JAMES HARTLEY AND CO. SUNDERLAND; AND PURFLEET WHARF, EARL-STREET, BLACKFRIARS, LONDON.

Sole Manufacturers of Lockhead's Patent Perforated Glass for Ventilation.

*** *Hartley and Co.'s Glass Tariff Newspaper will be forwarded gratis, on application.*

FACING FOR BUILDINGS COMPANY—TAYLOR'S PATENT.

BUILDINGS PERFECTLY RESISTANT TO WET WITHOUT ADDITIONAL EXPENSE, OR THE USE OF COMPO,

REQUIRING THE CONSTANT EXPENSE OF PAINTING. EXTERNAL WALLS FACED WITH AN INDESTRUCTIBLE MATERIAL.

STONE-FACED BUILDINGS AT LITTLE MORE COST THAN CEMENT.

No necessity for Iron Cramps and Bond-stones, and the Stone Ashlar never ingeniously weighted by the settlement of the Mortar joints of the inside Brickwork. The INSIDE of CHURCHES and OTHER BUILDINGS FACED WITH STONE instead of Plastering. Also Dining halls, Lobbies, Staircases, &c. of Private Residences. It can be had ready for fixing from the quarries at a small cost for carriage, or prepared at home. Can be used with the ordinary Bricks of any locality, and by the ordinary workman. The CHURCH faced inside and out-side in this manner, and the other Buildings at SPRING GROVE HOUNSLOW, and elsewhere, can be inspected, and all particulars obtained, of

Mr. JOHN TAYLOR, ARCHITECT, OFFICES OF THE COMPANY, 40, KING-STREET, CORNER OF CHEAPSIDE.

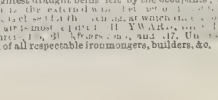
ROUGH PLATE, CROWN, SHEET, COLOURED, and ORNAMENTAL GLASS, in every variety, of the best manufacture, at the lowest terms. Designs and estimates furnished for ornaments with gas, either for house or church decoration. All applications for estimates and copies of prices to be made at their warehouses, EXMOUTH-STREET

CRYSTAL WHITE SHEET GLASS, First, Second, and Third Qualities in Cases of 100, 200, and 300 feet, suitable for Pictures and superior Glazing, from 3d. to 6d. per foot; also in Cases of 100 and 200 feet, assorted sizes. Belgian Sheet Glass, in Cases 200 feet each, 4ths, 32s.; 5ths, 30s.; Squares, in Boxes of 100 feet each, 3 by 4, to 10 by 8, 3½ per foot. Larger sizes up to 24 by 14, 2d. per foot. Ground Glass, in Cases 3½d. per foot. Crown and Sheet, British and Foreign Patent Plate, HARTLEY'S Patent Rolled Rough Plate, English and Foreign Fluted, Stained Glass, Glass Slates, &c. &c. Price-lists and estimates forwarded on application to ROBERT METCALFE, 30, Princes-street, Leicester square

TO ARCHITECTS and BUILDERS.—GLASS CHANDELIERS, CANDELABRA, &c. for Gas or Candles, at LEAVATT and CO.'s, late Pellatt and Green's, Falcon Glass Works, Holland street, Blackfriars. Sketches, with prices, free per post.



CRYSTAL SHEET GLASS, first, second, and third quality, in cases about 2 feet each, suitable for pictures and superior glazing, from 3½ to 6d. per foot; Belgian sheet glass, in cases 200 feet each, 4ths, 32s.; 5ths, 30s.; squares, in boxes, 100 feet each 8 by 4 to 10 by 8, and larger sizes up to 22 by 14, 2d.; ground-glass, in cases, 3½d. per foot; Crown and Sheet, British, Plate, and Hartley's Patent Rolled Rough Plate, English and Foreign Fluted, Stained Glass, Glass Slates, &c., Sheet Lead, Pipe, White Lead, Oils, Colours, &c.

G. FARMILOE and SON, 113 St. John-street, West Smithfield

IMPROVED REVOLVING SHUTTERS. FRANCIS RICKABY and SONS are now enabled to offer the following reduced prices: IRON SHUTTERS, hung on their new and improved principle, 4s. 6d. per foot. WOOD SHUTTERS, with bead, quirk, and ovolo, 3s. 6d. per foot. Machine-drawn Brass Sash Bars and Stall-board Plates in use to any design.—Sun Glass Works, Holborn

J. MILLS (late Shop Foreman to Messrs. Lawrence and Sons), JOINER to the TRADE, 7, Princes-street, Soho, and 3, Little Pulteney-street, Haymarket, &c. Workmanship and materials of the best description at the lowest possible prices. A quantity of doors and sashes always in stock.—By enclosing a post-age-stamp, a full list of prices will be returned. Workshops, 19, Broad-court

VENTILATION.—PURE AIR.

EXTERNAL WALL.

With single pulley, from 6s. each; with reading pulleys, 8s. each. These Ventilators are arranged that the requisite quantity of air may be admitted for the due ventilation of any room without the slightest draught being felt by the occupants, and as the air enters in the external wall, and at such a height that the coldest will rise to the ceiling before it can reach the occupants. Also a constant supply of fresh air almost without draught. SHERRINGHAM'S PATENT VENTILATOR, 98, Upper-street, Islington, and 3, Whitehall-place, Charing-cross, Westminster, and 3, Bridge-street, Borough; and of all respectable Ironmongers, Builders, &c.

ADAPTED FOR A CHRISTMAS PRESENT OR NEW YEAR'S GIFT.

Second Edition, in 6 vols. 8vo. 10s. 6d. each, or the Set complete in gilt top,

THE LIFE of LUTHER, in Forty-eight Historical Engravings.

By GUSTAV KOENIG. With Explanations by ARCHIBALD SHARE: containing both Sunday and Week-day Subjects.

"A work admirably adapted for Christmas-day, Sunday-day, or any day you like."—*Bell's Life*.

"The whole volume teems with artistic beauty, and, apart from the interest which attaches to the subject, is admirably suited for the drawing-room table as well as the shelves of the library."—*John Bull*.

"These engravings are of no common interest and the letter-press which is seldom written to explain a series of engravings. . . . Every lover of Luther should therefore keep fresh memories, such rapturous pleasure, and not the less that it is to his memory is this volume a drawing-room book so to beauty, but for use: short, like a volume deserving to be standard."—*Athenæum*.

London: LONGMAN, BROWN, GREEN, LONGMANS, and ROBERTS.

ILLUSTRATED BOOKS SUITABLE FOR CHRISTMAS PRESENTS AND NEW-YEAR'S GIFTS, BY WILLIAM AND MARY HOWITT.

By WILLIAM HOWITT.

VISITS to REMARKABLE PLACES. 2 vols 8vo. 21s.

THE RURAL LIFE of ENGLAND. 8vo. 21s.

THE BOY'S COUNTRY-BOOK. Fcp. 8vo. 6s.

By MARY HOWITT.

THE CHILDREN'S YEAR. Square 16mo. 5s.

London: LONGMAN, BROWN, GREEN, LONGMANS, and ROBERTS.

THE EDINBURGH REVIEW, No. CCXIII.—ADVERTISEMENTS and BILLS intended for insertion in the next number should be forwarded to the Publishers on or before TUESDAY, JANUARY 6 1857.

London: LONGMAN and CO. 39, Paternoster-row.

Seventeenth Edition, extended and corrected throughout, with the Statutes and Legal Decisions to Michaelmas Term, 19 & 20 Vict. In 8vo. Royal, price 16s. 6d. cloth.

THE CABINET LAWYER: a Popular Digest of the Laws of England, Civil and Criminal; with a Dictionary of Law Terms, and Various other useful Additions. Entirely reprinted, and brought down to the Present Time.

Uniformly with the above, price 10s. 6d. or neat lettered, 12s.

THE CABINET GAZETTEER: a Popular Exposition of all the Countries of the World. By the same Author.

London: LONGMAN, BROWN, GREEN, LONGMANS, and ROBERTS.

NEW AND CHEAPER EDITION.

In Two Volumes, 8vo. with nearly Two Hundred Engravings, price 36s.

GWILT'S ENCYCLOPÆDIA of ARCHITECTURE; Historical, Theoretical, and Practical: illustrated with more than 1,000 Engravings on Wood by R. Branston from Drawings by J. S. Gwilt. With a Supplement on Gothic Architecture.

London: LONGMAN, BROWN, GREEN, LONGMANS, and ROBERTS.

In two Volumes, 8vo. with nearly Two Hundred Woodcuts, price 42s.

DR. URE'S DICTIONARY of ARTS, MANUFACTURES and MINES; containing a clear Exposition of their Principles and Practice. The Fourth Edition, much enlarged and entirely rewritten throughout.

"Dr. Ure has formed the chief of original and excellent text-writers, with a much accuracy and correctness that they may be universally resorted to as authorities as indeed in Dr. Ure's various works he has carried on immense labour research, British and foreign, scientific writers. The author has through out kept in view work kept in strict accordance with the progress of improvements in the best and most economical development of the arts and manufactures, and has produced a work which altogether surpasses every other of its kind with which we are acquainted."—*Mechanics' Magazine*.

London: LONGMAN, BROWN, GREEN, LONGMANS, and ROBERTS.

CHRISTMAS NUMBER OF HOUSEHOLD WORDS.

This day is published, price 3d.; stamped 4d.; and containing Nos. 340 and 341 of Household Words, Half-the

WRECK of the GOLDEN MARY; being the Captain's Account of the Great Deliverance of her People in an Open Boat at Sea.

Household Words Office, 16, Wellington-street North, Strand

And to be had everywhere.

Twenty-fifth Edition, a New Edition of

CROSBY'S BUILDERS' PRICE-BOOK for 1857, price 8s. with a correct Account of the present Practice also an extract from the Metropolitan Building Act, and other new matter, with a plate showing the several sizes of walls for dwelling-houses, and a full, clear, and complete List of surveyors.

Sold by WILLIAM JOY, 11, Paternoster-row.

Just published, 12th Edition, for 1857, price 4s.

LAXTON'S BUILDERS' PRICE-BOOK, containing in addition to other useful matter, what has been the only correct and RELIABLE STATEMENT of the present Prices of Materials and Investment that can be confidently trusted in Accounts with Prices, Weights, and Statistics of Sewerage by Building Act; Cost of work per Rod; Memorandum Book for Measurements; Cost of work per Day; Laws of Practice. The Index has been rewritten.

Just Ready, the Civil Engineer and Architect's Journal Office, 10, Arundel-street Strand; and all Booksellers.

THE BRITISH ALMANAC for 1857. Price 2s.

THE COMPANION to the ALMANAC. Price 2s. 6d.

THE ALMANAC and COMPANION, In cloth, price 4s.

London: KNIGHT and CO. 90 Fleet-street; and all Booksellers.

1 Vol. Handsomely Bound, 21s.

BUILDINGS and MONUMENTS, Modern and Mediæval, being Illustrations of the Edifices of the Nineteenth Century, and of some of the Architectural Works of the Middle Ages.

By GEORGE GODWIN, F.R.S.

Fellow of the Royal Institute of Architects, & Editor of "The Builder," and Honorary and Associate Member of several Societies.

With Numerous Engravings.

Published at the Office of "The Builder," 1, York-street, Covent-garden.

THE FREEMASONS' MAGAZINE and MASONIC MIRROR for DECEMBER, 1856, is now ready. Price 1s.

London: HENRY GEO. WARREN, 6, Red Lion-court, Fleet-street, and 240, Gray's Inn-road, and all Booksellers.

Third Edition.

THE BUILDER'S FRIEND, Price One Shilling.

Office of "The Builder," No. 10, Catherine-street.

A LOCAL BUILDER'S PRICE-BOOK, for 1857, is now ready, which has been compiled chiefly by upwards of twenty practical Builders, and may be had, post-free, of Mr. J. ACTON, Builder, Broad-street, Nottingham, by the remittance of Six Postage stamps, or post-office order.

CHUBB'S ILLUSTRATED LIST of LOCKS, FIRE-PROOF SAFES (CASH, DEED, and DRIVING BOX), and CASH and DEED-BOXES, will be sent post on receipt of two stamps.—Apply to CHUBB and SON, 57, St. Paul's Churchyard, London.

Now ready,

THREE COMPANION MAPS of the CONTOURS of LONDON and its ENVIRONS. By ROBERT W. MYLNE, F.G.S. F.A.S.

Scale, 3 inches to 1 mile. Area, 324 square miles. Size, 5 feet by 3 feet 5 inches.

Price of the complete set, coloured, in sheets, 8l.; in folio cloth cover, lettered, 9l. 15s.; or neatly, in sheets:—

Geological, 2l. 10s.; or mounted in folio cloth, lettered, 3l.

Sewers, 3l. 3s.; or mounted in folio cloth, lettered, 3l. 15s.

Waterworks, 3l. 3s.; or mounted in folio cloth, lettered, 3l. 15s.

"Besides the contour lines and geological features, many interesting facts relating to public works are recorded. The Geological Map shows the various superficial soils. The Sewers Map, which is divided into the thirty-seven new districts, shows the principal sewers with their sixty outlets into the river: and the third map is coloured, to show the areas of supply and the areas supplied by the different water companies. A printed description accompanies each map, containing matter of the highest value to the engineer, and much information of the present time unusually interesting to the public at large."—*Times*.

London: EDWARD STANFORD, 6 Charing-cross.

PHŒNIX FIRE ASSURANCE COMPANY, LOMBARD-STREET & CHARING-CROSS, LONDON, established in 1782.

ACTUARY—Samuel Brown, esq.

LIFE DEPARTMENT. Under the Provisions of an Act of Parliament, the Capital and new effected Assurance Funds of the Policies, with Quinquennial Division, or a low rate of premium without participation of profits.

The next division of profits will be declared in June, 1860, when all Participating Policies which shall have subsisted at least one year at Christmas, 1859, will be allowed to share in the profits.

At the five divisions of profits made by the Company, the total reversionary bonus added to the policies have exceeded 913,000l.

At Christmas, 1854, the Assurances in force amounted to upwards of 2,300,000l. the Income from the Life Branch in 1854 was more than 200,000l. and the Life Assurance Fund (independent of the Guarantee Capital) exceeded 1,200,000l.

FOREIGN RISKS.—The extra premiums required for the East and West Indies, the British Colonies, and the Northern parts of the United States of America, have been materially reduced.

INVALID LIVES.—Persons who are not in such sound health as would enable them to insure their lives at the tabular premiums, may have their lives insured at extra premiums.

LOANS granted on Life Policies to the extent of their values, provided such Policies shall have been effected a sufficient time to have attained in each case a value not under 50l.

ASSIGNMENTS of POLICIES.—Written Notices of, received and registered.

MEDICAL FEES paid by the Company, and no charge will be made for Policy Stamps.

Notice is hereby given, That Fire Policies which expire at Christmas must be renewed within fifteen days at the Office, or with Mr. SAMS, No. 1, St. James's-street, corner of Pall-mall, or with the Company's Agents throughout the Kingdom, otherwise they become void.

Losses caused by Explosion of Gas are admitted by this Company.

THE SCOTTISH EQUITABLE LIFE ASSURANCE SOCIETY, Instituted 1831.

Accumulated Funds—ONE MILLION STERLING.
Annual Revenue—ONE HUNDRED AND SEVENTY THOUSAND POUNDS.
Existing Assurances—FOUR MILLION AND THREE-QUARTERS.

At the Division of Surplus, at 1st March, 1856, a Policy for 1,000l. effected 1st March 1832 was increased to 1,571l. 8s. 0d. being at the rate of Two and a Quarter per Cent per Annum on the Assured, during the period, to convert into present payment, £531 8s. 0d.

Profits are divided triennially, and the only wholly to Assured Policies effected before 1st March next will receive six years' additions at the division of 1859.

Copies of the Report of the Directors, and of the Table of Rates, with every information, may be had on application at the Head Office, or Agencies.

ROBERT CHRISTIE, Manager.
WILLIAM FINDLAY, Secretary.
Head Office—26, St. Andrew-square, Edinburgh.
Office in London—26, Poultry.
A. T. BLACHE, Agent.

PATENT SOLID SWISS PARQUETERIE. This beautiful, unique, economical, and elegant description of Flooring can be seen laid down in Paris and Berne, and is the only work of the kind exhibited in the Universal Exhibition of 1855, for which the Jurors awarded a Medal. Specimens of the various patterns may be seen at the Manufactory, Battle-bridge, Old Kent-road, Surrey, and at the Showrooms of Messrs. H. POLLARD and CO. Chemical-street, Manchester; or of Messrs. ARROWSMITH and CO. 80, New Bond-street.

SURVEYING, LEVELLING, and CIVIL ENGINEERING PRACTICAL FIELD INSTRUCTION is given in Surveying, Levelling, Civil Engineering, &c. by Messrs. HYDE, SMITH, and LEWIS, Civil Engineers, Surveyors, &c. of extensive practice, who beg to inform Gentlemen desirous of acquiring a thorough practical knowledge of the Profession, that they have refitted up their Offices with every requisite, including Models and Instruments of every description. The Courses are all superadded and enlarged, embracing all the latest improvements. Terms for the Course of Three Months, Two Guineas, which includes Field Instruction, Draughting, Mapping, Plan Drawing, &c. &c. Pupils are now treating.—For Prospectuses, &c. apply at the Offices, 24, Guildford-street, Russell-square.

DRAWING, &c.—One Guinea per Quarter, Comprising Architectural Engineering, Mechanical Perspective, Isometrical, Geometrical, Ornamental, and Water-Colour Drawing, Measuring, Taking out Quantities, Abstracting, Valuing, Estimating, &c. &c. Day Pupils, Two Guineas per Quarter; Evening Pupils, One Guinea per Quarter.—For Prospectuses, &c. apply to Messrs. HYDE, SMITH, and LEWIS, Architects, Civil Engineers, &c. at the Offices.

DRAWING CLASSES.—24, Guildford-St. For Architects, Builders, and Engineers' Sons, Assistants, Foremen, Clerks of Works, &c.—At this Establishment Pupils are thoroughly instructed in Drawing of every description. Terms, Day Pupils, Two Guineas per Quarter; Evening Pupils, One Guinea per Quarter.—For Prospectuses, &c. apply to Messrs. HYDE, SMITH, and LEWIS, Architects, Civil Engineers, &c. at the Offices.

ARCHITECTURE and CIVIL ENGINEERING DRAWING CLASSES. Established by Messrs. HYDE, SMITH, and LEWIS, Architects, Civil Engineers, &c. for Architects, Builders, and Engineers' Sons, Assistants, Clerks of Works, Foremen, Draughtsmen, Measurers, &c. and for the EVENING INSTRUCTION in Architectural, Civil Engineering, and Mechanical Drawing; Colouring, Shading, and Tinting; Ornamental and Water Colour Drawing; Perspective, Isometrical, and Geometrical Drawing; Making Finished and Working Drawings; Preparing Specifications, Taking out Quantities, Estimating, Builders' Work, &c. Terms:—Day Pupils, Two Guineas per Quarter; Evening Pupils, One Guinea per Quarter. There are no extras, the terms include the whole of the above, with the use of Drawing Boards, T Squares, Plans Drawings, Models, &c.—For Prospectuses, apply at the Offices, 24, Guildford-street, Russell-square.

MATHEMATICAL DRAWING INSTRUMENTS.—JOHN ARCHBUTT, 20, Westminster-Bridge-road (Lambeth Lease Astley's Theatre), begs to call attention to his stock of Instruments manufactured by superior workmen. The prices will be found considerably lower than ever charged for articles of similar quality and workmanship. Ruler, scales, tapes, &c. at equally low prices.—An illustrated price-list will be immediately forwarded, free, on application.

N.B. A few New and Second-hand Levels and Theodolites always for Sale.

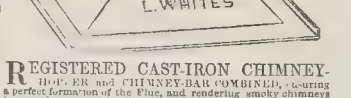
DOULTON'S TERRA-COTTA CHIMNEY-POTS, TWO SHILLINGS EACH, TWO FEET HIGH, AS SKETCH.

H. DOULTON & CO.'S CHIMNEY-TOPS ARE OF A STONE COLOUR, AND ARE QUITE IMPERISHABLE.

Some were erected in London Thirty Years ago, and are now as sharp and perfect as when first made.

About Forty different Patterns are kept in Stock, drawings and prices of most of which will be sent on application to HENRY DOULTON & CO. High-street, Lambeth.

NOTICE.—The Third Year's Stamp Duty on Greenwood's Patent (see advertisement), has just been paid. This is to CAUTION against any INFRINGEMENT. Carpenters and Cabinetmakers will do well to use and recommend these Patents. The Trade supplied on liberal terms.—JOHN GREENWOOD, Patentee, 10, Arthur-street West, London-bridge.



DRAUGHTS of COLD AIR and DUST round room, office, or outside doors and windows EFFECTUALLY PREVENTED by GREENWOOD'S patent INDIA-RUBBER STOPS, the most simple and effectual method of making air-tight joints to fit round or cabinet work, old or new. These Stops can be had any length or pattern. Self-acting, Ring Stops for the bottoms of doors.

The Trade supplied

JOHN GREENWOOD, Patentee, 10, Arthur-street West, London-bridge.

IMPORTANT TO BUILDERS.

REGISTERED CAST-IRON CHIMNEY-HOOPER and CHIMNEY-BAR COMBINED, ensuring a perfect formation of the Flue, and rendering smoky chimneys impossible. One trial will cause their adoption in every building.

Prices from 8s. 6d. each, according to size.

IRON GUTTERING and COLUMNS to MODEL or DRAWING.

IRON PLATES and connections for gas, water, and liquid measure.

RAIN-WATER PIPE and EAVE GUTTERS, at wholesale prices. Also, weather-vanes, Sash-weights, CABLE FITTINGS, pumps, fanlight-bars, cranes, and pig-troughs, and COLUMNS with caps and bases, to every kind of Builders' castings, in stock, at EACH'S MILLS Iron Wharf, Upper Ground-street, London, near Blackfriars-bridge.

WOLSTON'S TORBAY IRON-PAINTS, warranted to stand the action of the Atmosphere, Steam, Gases, Sea-air, Vapours, Damps, and Salt Water, also intense heat with all the ingredients of these Paints have been tested for five years in Her Majesty's Dockyards, and the Official Reports made thereon, which have established Wolston's Torbay Iron Paint will effectually cover as much surface as 14lbs. of either White or Red Lead and in all cases, in a less atmosphere than before found Lead Paints. Wolston's Torbay Iron Paint for Iron, Zinc, Roofing Slates, and other Wood or Iron Surfaces and Ornamental purposes, is much admired and will be found Lead Paint for all painting purposes, the saving will be immense. Manufactured by the TORBAY IRON PAINT Co. ONE Hundred Gallons, Casks, Drums, and Pipes, Thames Bank Wharf. Letters or orders addressed to Mr. WOLSTON, at the Works, No. 44, John-street, Bedford-row, will have immediate attention.

The Builder.

Vol. XIV.—No. 725.

SOME considerable portion of the space in the galleries appropriated to the Architectural Exhibition is occupied by drawings which had been sent in competition for the Liverpool Free Library and Museum, the Rotherham Grammar School, the Cathedral at Lille, the Middlesex Industrial Schools, and other minor works. The exhibition of such designs especially has a beneficial tendency, which is independent of the desired influence towards reformation in the system of selection by committees. On the advantage from comparison of different designs for the same building, we were induced to dwell particularly, at the time of the Barracks' Competition, under the idea that such exhibitions were hardly estimated as they should be by the profession,—although really they allow the opportunity of the only gain which a general body of competitors can anticipate. A similar advantage offered by the Architectural Exhibition collectively, is now derived more readily than last year, —the hanging having been carefully attended to so far as regards the placing together of drawings belonging to the same design,—omissions in which particular, last year, had induced some of our correspondents to prefer complaints. Drawings illustrating the same subject are placed next one another as much as possible.

There are fewer numbers in the catalogue this year,—the deficiency being in the photographs; but, several works are often placed under the same number,—so that, on the whole, if the exhibition shows a smaller number of meritorious executed buildings, the sum of interest to the visitor is not greatly deficient. The present gallery, we ought to say, is not only unsightly, but absolutely unfitted for the proper examination of architectural drawings: the want of the required abundant light is painfully obvious; and architecture hardly could be striving under greater gloom or disadvantage, than that under which it labours in Suffolk-street, during these short winter days. The present arrangement causes, not merely a reduction of the number of visitors, it is in some degree actively injurious, —as it *deadens* the effect of the art upon the section of the public visiting the gallery. We would not make our notice a summary of grievances: it is desirable, however, to observe, that for the future, errors of all kinds in the catalogue should be prevented. Some of these originate with the exhibitors perhaps; but an equal number are due to the ordinary reading for the press. And the names of the same exhibitors should be printed precisely alike throughout the catalogue; whilst in the department for materials, &c. it should more distinctly appear that all encomiums are those of the *exhibitors*. It would be desirable, besides the cost of executed designs, that the architects should add the dates of commencement and completion;—and a small plan should be appended to every view.

To the examples quoted in our last, of buildings which should have been illustrated, we might add some works of a different class,—as several recently-erected bridges; the Holyhead Harbour Works; the Liverpool Landing-stage; the Victoria Docks, Plaistow-marshes; and even the various works and projects connected with sanitary improvement, and the supply of water to towns, and with the London streets, parks, and river embankment, as also the various plans for the sewerage of London, and the works in operation at Leicester. In the present interest of the subject of bridge-foundations, so often referred to in our pages, we could have wished to see some collective representation of different methods in use. We refer to the latter subject because it will instance what might occupy some portion of the time of the junior members of the Architectural Association, profitably to themselves and others. Would it not further the instruction in the classes of the Association, to require from the students, drawings in one sheet of all different methods used for the same objects in construction?

No. 1 in the Exhibition is a "Composition of Buildings lately erected at Manchester," by Mr. E. Walters, including warehouses and a church in red brick and stone, all in the Italian style, and a portion of the Free-trade Hall, which building is shown in another drawing (14), from which our engraving was taken. Mr. Walters also exhibits a drawing (105) of "Warehouses; Marsden-street, Manchester." These works all serve to illustrate Mr. Walters's invention in details and his skill in the grouping of windows and stories, which have been exemplified in so many buildings in Manchester. Mr. D. Brandon exhibits (2) "North-west View of the Manor House erected at Aylesbury, Bucks," a building of red brick and stone in the late Tudor style of architecture, and (428) a "Sketch for Westhumble Lodge."

Nos. 5 and 6, without titles in the catalogue, are apparently designs for Congregational Chapels. One is Italian and the other Gothic. Regarding them as two designs for the same building, they exemplify the relative positions of the styles with reference to ecclesiastical architecture and general expression of *art*. Waiving the question of the special advantage of either style, we observe that it is seldom that we get any fair comparison between what can be done in one case and the other. A common-place portico, or some of the worst features of the later and degenerate Italian, may be adopted when the building happens to be church or chapel,—though, in buildings of a different class quite enough has been done to show that the scope of the classical styles is not bounded by any bad precedent. One style presents itself as suited to one class of buildings, and another style to the other class, —not altogether because there is any special fitness of mere style for either class, but it would seem, because of the accidental circumstance that exclusive attention is paid by certain architects to one class of buildings, and that equal ability can seldom be shown in two different styles. There is scarcely any creditable modern application of the Gothic style to street architecture; and there is no very high merit in recent designs in the Italian style for churches or chapels: one or the other of such applications of a universal style should be possible, if opinions which have been heard are correct, —but until either of the courses is taken with effect, the question of the value of mere style remains with only half the requisite basis for an opinion. The probability, however, may be, that there is no ground for the exclusive claim as to scope and adaptability of style, put forth either by one side or the other. Either of the styles chiefly in favour, if it could be generally adopted, would probably afford equal scope for *art*, and the reason why such general adoption is not made, must, we think, be sought not in what is within the ability of architects with their materials, but in the general prepossession of the public—with whom mere style seems to occupy a ground, and exert an influence which has, in some measure, been left out of consideration in the recent discussion upon the question of *art*. The tendency of that discussion was towards the common ground of agreement that the requirements of the time, and new art, together must be recognised or expressed in our new buildings: but whilst all could agree as to that aim, there were still the actual differences of style which were left, to be accounted for,—and which differences, had there been perfect agreement, should not have been possible,—as no doubt they would have been found had either of the disputants been called on to express his views in practical building work. There is some element in the difference of *styles* which must hitherto have escaped observation, and distinct from the generally recognised principles of art; and if our view expressed heretofore, be correct,—that mere style produces a more striking impression upon the public than *art* does,—it would follow that changes of style and prevalence of several different styles, should be discountenanced by architects, since both the effort and the result which should be concentrated in *art*, are deteriorated.

The designs to which we referred at the outset of these remarks are by Mr. T. Oliver, jun. The Italian design has an arch below the pediment, the mouldings of the entablature being carried as an archivolt. The Gothic design, which is of better character, has an arcaded porch of three openings,—but two of the number appear to be boarded, with windows inserted. In external character, the design is an advance upon the chief Congregational Chapels—which, correctly adopting two stories of windows as suitable to an interior with a gallery, have seldom got free from a singular uncouthness of proportion. That fault is, however, avoided by Mr. J. Murray, in "St. Michael's Baptist Chapel, Coventry" (11), in the highly-enriched style of Gothic. Mr. Oliver also exhibits, amongst other things, the "West Hartlepool Markets" (93 and 91), in the exterior of which he has managed the difficulty of the combination of heavy and light materials with creditable result.

Mr. Edmeston exhibits "New Public Buildings — Town Hall, Library, Municipal Offices, &c. about to be erected at Singapore—View of the Front towards the Sea; from sketches by James Fergusson" (12), wherein the chief effect is given by the arcaded loggias in the centre of two stories, and the bold projection of the iron hoods over the windows to the wings. The exception to the good treatment of this design is in these hoods, which may serve to illustrate a remark which we could better apply to other recent designs,—that there is some danger from the study of plainness, or rather the too ready acceptance of it under the idea that it is necessarily consistent with "breadth." The main roof here is also of iron. We should be glad to learn the results of experience in the use of iron roofing for habitations, in hot climates. The general use in the native works of a great thickness of non-conducting materials, would seem to be better adapted to the conditions. Mr. Edmeston also exhibits (73) "Offices of the Cambrian and Universal Fire and Life Insurance Company, 27, Gresham-street, as recently altered," a stone-fronted basement and floor above, which aims at novelty by the omission of nearly all the recognised members of Italian architecture.

Mr. H. H. Burnell exhibits (13) an "Arrangement of a Metropolitan Square," designed to effect the architectural improvement which has been advocated by others. Mr. Burnell properly substitutes a balustrade, or some other architectural feature, for the hedge and iron railing. Within the enclosure thus formed by the balustrade, he has a sunk area, and thus he is able to add cellarage to the houses, and a way under the road, and to facilitate, he thinks, the repairs of the sewers and gas and water mains (which he places under the area), without opening up the main roadway. The latter part of his scheme, of course, would increase the cost

of the communications to the houses, and furnish an additional argument to those who advocate back drainage. We should mention as one of the exhibitors in the class of warehouse-architecture, Mr. T. R. Smith, who shows in No. 8, "Warehouses proposed to be erected in Chorlton-street, Manchester;" in which, brick pilasters with Corinthian capitals, are amongst the decorative features. These and the like details, with not quite the same skill as is shown in grouping in other cases, constitute a different character to that which is exhibited there, and which difference, as that which makes the good or the bad architecture of our time in such edifices, it seems well to draw attention to. Mr. Smith's design, however, as to the grouping of the stories, at least, is better than much of the recent warehouse architecture in London. The same architect exhibits also "Designs for Warehouses" (49), and some others. Messrs. W. G. and E. Habershon exhibit nine views of Parsonages which they have built (21); a "Mansion at Llandaff (313); and a "Pair of Double Villas on the Gold Tops, Newport, Monmouthshire" (373). They also exhibit (90) "The Philological Schools," which they are erecting in the New-road, St. Marylebone; the buildings in which, include a lofty red brick structure, and an octagonal building of less height, with a playground under it. The designs all are guiltless of high merit or prominent defect. The architects must be active men of business; but for their *art*, surely attempt too much. Mr. H. Currey exhibits (28 and 32) views of a house now erecting at Leigh, Surrey, for Mr. J. W. Freshfield, M.P. which is of red brick and stone. In the "Warrington Market-hall and Shed" (34), by Mr. J. Stevens, of red brick and stone, with a campanile, there is somewhat too great prominence of heavy details, without the novelty of character which claims some place in good art. The lofty front and pediment carried up considerably above the roof, offend against the structural principle of architecture. Mr. H. P. Horner shows his "St. Augustine's National Schools, at Liverpool" (48), and an "Interior Composition — Study of Stained Glass Effect" (57). He also exhibits a "Sketch" (137), illustrative of a proposition for placing an organ in St. George's Hall, Liverpool, divided into two parts lengthwise in the building, and so as not to obstruct the *vista* through the law courts.

We shall continue our notice of the exhibition next week.

It was our custom, when the *Builder* was younger, to refer, at the close of a volume, to what had been done during the past year to meet the wants and wishes of our readers, and render the Journal more generally serviceable and interesting, and, sometimes, to make promises for the future. Our scope and views, however, are now, we believe, so well known, that such a course would seem to be unnecessary. We shall therefore content ourselves with saying, in very few words, that we are prepared to commence the new year with increased vigour, and that there will be no want of determination on our part to maintain the *Builder* in the position which, by the favour of the public, it now enjoys. In several departments we shall effect improvements, and, pursuing our course honestly and energetically—with no single motive beyond the desire to spread abroad information on all subjects connected with architecture and building, and the arts generally,—to assist in developing and improving the fine-art—architecture, and to advance the character, and maintain the dignity of the profession; to improve Homes; to bind together the employer and the employed; to urge the value of the beautiful, and to be otherwise useful to the extent permitted us,—we shall hope to merit and retain the confidence of our friends and supporters, and to gain, for the objects we have in view, a constantly increasing public.

ON THE LEADING PRINCIPLES IN THE COMPOSITION OF ORNAMENT OF EVERY PERIOD.*

I have now to call your attention to some of those sudden changes in each style which have been the cause of so much development in architectural forms.

The religious laws of the Egyptians forbade any change in their generally received forms, and there is the most remarkable unity of style over a period of probably many thousand years. This, however, did not result in uniformity; and although the lotus and papyrus always formed the types of the capitals of their columns, there was the greatest variety in the arrangement of these types. In the Pharaonic period, however, they were generally confined in the capitals of columns of large diameter to the bell-shape, on which were inscribed the representations of the lotus and papyrus; and in the smaller columns to the bundle of buds tied together and surmounted by a square abacus. During the Greek period, however, this was suddenly departed from, and the idea arose of breaking up the circular form of the capital: the same forms which had before been carved from the surface were here moulded on it; and beginning with the circular form, they surrounded it with four, eight, and then sixteen other circles. This principle once admitted, it will be seen how readily the general form could be varied. As an opposite example to this may be noticed the Corinthian capital, which to our own time has never varied, because no modification in plan has ever been attempted. It is always an acanthus-leaf arranged round a bell-shaped vase; and the only difference ever found between one capital and another, results from the more or less perfection of the modelling of the leaves, or in the graceful, or otherwise, proportions of the bell. Let the same modification in plan be attempted with the Corinthian capital, and it could not fail to produce an entirely new order of forms, whilst still retaining, if such should be desirable, the idea of the acanthus-leaf applied to the surface of a bell-shaped vase.

The development of Roman ornament again was restrained by the fixed law, that each acanthus-leaf grew out of the other with a leaf folded back at the point of junction. During the Byzantine period this was gradually abandoned; and when once free from this, a most rapid development in flowing lines took place in the styles which succeeded, till we arrive at that freedom in ornament which is found in the architecture throughout the world during the thirteenth century. Though other causes have been assigned to it, I myself believe that the Ionic capital of the Greeks is only an application of the volute form, which results from the common rope ornament of the Egyptians. The unwinding of a coil of rope would give the first idea to any people of the volute form, as the twisting of two strands of a rope would give the first idea of the spiral line. The volute of the Ionic capital is produced by repeating in opposite directions the very form which is the groundwork from which all Greek ornament springs. The egg-and-tongue moulding of the Greeks is clearly suggested by the cornices so common in Egypt formed by the pendent lotus. The conventional honey-suckle of the Greeks led in subsequent styles to the formation of ornaments similarly constructed, yet widely differing in general appearance.

But one of the most remarkable series of developments, and which are most easily traced, are those ornaments which result from the intersection of equidistant lines called frets. They are common to every people, and arise so naturally from their very first attempt at ornament, that it is not necessary that they should have been borrowed from each other; but there is such a remarkable series from the Egyptian to the Moresque, that it can hardly be doubted that they have been so. The Greek fret differs only from the Egyptian, in that the jumps are generally uniform, and they are the truest. So long as the idea remained fixed that they were formed by horizontal lines intersecting perpendicular lines, no great development could take place. When we have the simple meander, or one with a second line interlacing with the first, or a fret one under the other, or running in different directions, or back to back, or running round a square, we have exhausted all the combinations of which it is susceptible; but the instant you abandon the law of perpendicular lines intersecting horizontal lines, a rapid development takes place: the raking fret at once suggests to the Arabs to send diagonal lines in the opposite direction crossing the first: from this spring instantaneously the Moresque interlacing patterns. Not content with this, the Moors saw that you could use the horizontal, perpendicular, and diagonal lines in two ways, and they have therefore two varieties which produce patterns totally distinct in effect, though the same in principle: in the first, the divisions are equidistant diagonally, crossed by horizontal and perpendicular lines on each square; and on the other, the perpendicular and horizontal lines are equidistant, and the diagonal lines cross each alternate square. The number of patterns that can be produced by this system may be said to be infinite. The knotted work of the Celts differs from this system only in adding curved terminations to the diagonal lines, and may have either been developed in the same way or from the rope ornaments of the Greeks, which were also so common on Roman pavements.

The history of architecture, as it is written in the monuments, is full of these changes. Architecture never rests; it either goes forward or backward, and runs, as it were, in a series of waves: when the highest point is reached, this is as a knife-edge: it cannot rest upon it, but descends to rise again under fresh impulse.

At present we are, as it were, in a troubled sea, on which the waves have been so tossed about, that they have lost all form: the impulse having gradually got weaker and weaker, we are gradually approaching a dead calm.

In any attempt at progress in art, European nations are under great disadvantages from the general want of unity which exists. In all ages but the present, architecture has been the expression of the religious feelings of the time; but since the Reformation separated the tie between religion and art, the world has become as Protestant in art as Protestant in faith. The artistic mind has indulged in the same liberty of selection for its worship of the beautiful, as is allowed to each human soul in its worship of the Creator.

If, therefore, we would seek for vitality in art, we must turn our attention to the nations who are still faithful to the creed which inspired their art.

This was clearly seen in the Exhibition of the Works of Industry of all Nations, in 1851, which was barely opened to the public ere attention was directed to the gorgeous contributions of India.

Amid the general disorder everywhere apparent in the application of art to manufacture, the presence of so much unity of design, so much skill and judgment in its application, with so much of elegance and refinement in the execution, as was observable in all the works, not only of India, but of all the other Mohammedan contributing countries,—Tunis, Egypt, and Turkey,—excited a degree of attention from artists, manufacturers, and the public, which has not been without its fruits.

Whilst, in the works contributed by the various nations of Europe, there was everywhere to be observed an entire absence of any common principle in the application of art to manufactures—whilst from one end to the other of the vast structure there could be found but a fruitless struggle after novelty, irrespective of fitness, that all design was based upon a system of copying and misapplying the received forms of beauty of every bygone style of art, without one single attempt to produce an art in harmony with our present wants and means of production—the

---

* See p. 682, *ante*. Read by Mr. Owen Jones at Institute of Architects.

carver in stone, the worker in metal, the weaver and the painter, borrowing from each other, and alternately misapplying the forms peculiarly appropriate to each—there were to be found in isolated collections at the four corners of the transepts all the principles, all the unity, all the truth, for which we had looked elsewhere in vain, and this because we were amongst a people practising an art which had grown up with their civilization, and strengthened with their growth. United by a common faith, their art had necessarily a common expression, this expression varying in each according to the influence to which each nation was subject; the Tunisians still retaining the art of the Moors, who created the Alhambra; the Turks exhibiting the same art, but modified by the character of the mixed population over which they rule; the Indians uniting the severe forms of Arabian art with the graces of Persian refinement.

Deprived then as we are of the advantage of a common faith to inspire a common expression in art, does it necessarily follow that we have no hope of progress? Although we cannot have common ground of thought, is there any reason why we should not think rightly? Is there no escape from the disorder which was so apparent in 1851? I think there is, and I firmly believe that it will be found as easy to originate as to copy, if we can only throw off the lethargy which hangs over us, and that discouragement which makes us consider the works of the past as final instead of relative truth. In this very matter, indeed, opinion changes so rapidly that there is reason to believe that as each style usurps the place of honour only for a time, and then rapidly runs its course, the time will arrive when all shall have had a fair trial: we must then in very despair of finding novelty be led to look forward instead of backward.

Let us then, once for all, admit that each style of art which has appeared has worthily filled its appointed purpose. That no one has more claim to our attention than another, except so far as it follows general laws, which laws will be as true in the future as they have been in the past, and will, therefore, be our safest guides in an onward path.

Let us then accept the experience of the past as our inheritance, not rashly to squander it, but rather that we may add to the store.

I have attempted to show that in all the best periods of art, all ornament was rather based upon an observation of the principles which regulate the arrangements of form in nature, than on an attempt to imitate the absolute forms of those works; and that whenever this limit was exceeded in any art, it was one of the strongest symptoms of decline; true art consisting in idealizing, and not copying the forms of nature.

I think it desirable to insist rather strongly on this point, as in the present uncertain state in which we are, there seems a general disposition arising to reproduce, as faithfully as may be possible, natural form as works of ornament. the world has become weary of the eternal repetition of the same conventional forms which have been borrowed from styles which have passed away, and therefore can excite in us but little sympathy. There has arisen, we say, a universal cry of "Go back to Nature, as the ancients did." I should be amongst the first to echo that cry, but it will depend much on what we go to seek, how far we may succeed: if we go to Nature as the Egyptians and the Greeks went, we may hope; but if we go there like the Chinese, or even as the Gothic artists of the fourteenth and fifteenth centuries, we should gain but little. We have already, in the floral carpets, floral papers, and floral carvings of the present day, sufficient evidence to show that no art can be produced by such means; and that the more closely that Nature is copied, the farther we are removed from producing a work of art.

The pleasure we derive in contemplating the rude attempts at ornament of the most savage tribes, arises from our appreciation of a difficulty accomplished: we are at once charmed by the evidence of the intention, and surprised at the simple and ingenious process by which the result is obtained. In fact, what we seek in every art is the evidence of mind—the evidence of creative power,—which all feeling as a natural desire within them, are satisfied when they find it developed in others. It is strange, but so it is, that this evidence of mind will be more readily found in the rude attempts of ornament of a savage tribe than in the innumerable productions of a highly-advanced civilization. Individuality decreases in the ratio of the power of production. When art is manufactured by combined effort, not originated by individual effort, we fail to recognise those true instincts which constitute its greatest charm.

Although ornament is most properly only an accessory to architecture, and should never be allowed to usurp the place of structural features, or to overload or to disguise them, it is, in all cases, the very soul of an architectural monument.

By the ornament of a building we can judge more truly of the creative power which the artist has brought to bear upon the work. The general proportions of the building may be good, the mouldings may be more or less accurately copied from the most approved models, but the very instant that ornament is attempted, we see how far the architect is at the same time the artist. It is the best measure of the care and refinement bestowed upon the work. To put ornament in the right place is not easy: to render that ornament at the same time a superadded beauty and an expression of the intention of the whole work, is still more difficult.

Unfortunately, it has been too much the practice in our time to abandon to hands most unfitted for the task the adornment of the structural features of buildings, and more especially their interior decorations.

The fatal facility, of manufacturing ornament which the revived use of the acanthus leaf has given, has tended very much to this result, and deadened the creative instinct in artists' minds. What could so readily be done by another, they have left to that other to do, and so far have abdicated their high position of the architect, the head and chief.

How, then, is this universal desire for progress to be satisfied—how is any new style of ornament to be invented or developed? Some will probably say, a new style of architecture must first be found, and that we should be beginning at the wrong end to commence with ornament.

I do not think so. I have shown that the desire for works of ornament is co-existent with the earliest attempts of civilisation of every people; and that architecture adopts ornament, does not create it.

The Corinthian order of architecture is said to have been suggested by an acanthus leaf found growing round an earthen pot; but the acanthus leaf existed as an ornament long before, or, at all events, the principle of its growth was observed in the conventional ornaments of the Greeks. It was the peculiar application of this leaf to the formation of the capital of a column which was the sudden invention which created the Corinthian order.

The principle of the foliation, and even the general form of the leaves which predominate in the architecture of the thirteenth century, existed long before in the illuminated MSS.; and, derived as they were, most probably, from the East, have given an almost eastern character to Early English ornament. The architects of the thirteenth century were therefore very familiar with this system of ornamentation; and we cannot doubt, that one cause of the adoption so universally of this style during the thirteenth century, arose from this great familiarity with its leading forms which already existed.

The floral style, in direct imitation of nature which succeeded, was also preceded by the same style in works of ornament; and the facility of painting flowers in direct imitation of nature in the pages of a missal, induced an attempt to rival them in stone, in the buildings of the time.

The architectural ornament of the Elizabethan period is mostly a reproduction of the works of the loom, the painter, and the engraver. In any borrowed style, more especially, this would be so. The artists of the Elizabethan period were necessarily much more familiar with the paintings, hangings, furniture, metal-work, and other articles of luxury, which England received from the Continent, than they would be with the architectural monuments; and it is this familiarity with the ornamentation of the period, but imperfect knowledge of the architecture, which led to the development of those peculiarities which distinguish Elizabethan architecture from the purer architecture of the Revival.

I therefore think I am justified in the belief, that a new style of ornament may be produced independent of a new style of architecture; and, moreover, that it would be one of the readiest means of arriving at a new style: for instance, if we could only arrive at the invention of a new termination to a means of support, one of the most difficult points would be accomplished.

The chief features of a building which form a style, are, first, the means of support; secondly, the means of spanning space between the supports; and, thirdly, the formation of the roof. It is the decoration of these structural features which gives the characteristics of style, and they all follow so naturally one from the other, that the invention of one will command the rest.

It would appear, at first sight, that the means of varying these structural features had been exhausted, and that we have nothing left but to use either one or the other of the systems which have already run their course.

If we reject the use of the column and horizontal beam of the Greeks and Egyptians, the round arch of the Roman, the pointed arch and vault of the Middle Ages, and the domes of the Mohammedans, it will be asked—What is left? We shall perhaps be told that all the means of covering space have already been exhausted, and that it were vain to look for other forms. But could not this have been said in all time? Could the Egyptian have imagined that any other mode of spanning space would ever be found than by his huge blocks of stone? Could the Mediæval architect have ever dreamed that his airy vaults could be surpassed, and that gulfs could be crossed by hollow tubes of iron? Let us not despair: the world has not seen, most assuredly, the last of the architectural systems. If we are now passing through an age of copying, and architecture with us exhibits a want of vitality, the world has passed through similar periods before. From the present chaos there will arise, undoubtedly (it may not be in our time), an architecture which shall be worthy of the high advance which man has made in every other direction towards the possession of the tree of knowledge.

To return to our subject, how is any new style of art or new style of ornament to be formed, or even attempted to be formed? In the first place, we have little hope that we are ever destined to see more than the commencement of a change: the architectural profession is at the present time too much under the influence of past education, on the one hand, and too much influenced by an ill-informed public on the other; but the rising generation in both classes are born under happier influences, and it is to them we must look for hope in the future. It is for their use that I have gathered together this collection of the works of the past; not that they should be slavishly copied, but that artists should, by an attentive examination of the principles which pervade all the works of the past, and which have excited universal admiration, be led to the creation of new forms equally beautiful. We believe that if a student in the arts, earnest in his search after knowledge, will only lay aside all temptation to indolence, will examine for himself the works of the past, compare them with the works of nature, bend his mind to a thorough appreciation of the principles which reign in each, he cannot fail to be himself a creator, and to individualize new forms, instead of reproducing the forms of the past. We think it impossible that a student fully impressed with the laws of the universal fitness of things in nature, with the wonderful variety of form, yet all arranged around some few fixed laws, the proportionate distribution of areas, the tangential curvatures of lines, and the radiation from a parent stem, whatever type he may borrow from nature, if he will dismiss from his mind the desire to imitate it, but will only seek to follow still the path which it so plainly shows him, we doubt not that new forms of beauty

will more readily arise under his hand, than can ever follow from a continuation in the prevailing fashion of resting only on the works of the past for present inspiration. It will require but a few minds to give the first impulse: the way once pointed out, others will follow; readily improving, refining upon each other's efforts, till another culminating point of art shall be again reached to subside into decline and disorder. For the present, however, we are far enough removed from either stage.

I have been desirous to aid this movement to the extent of my power, and in the ten plates of natural leaves and flowers which accompany the examples of ancient ornament, I have gathered together many of those natural types which I thought best calculated to awaken a recognition of the natural laws which prevail in the distribution of form. But, indeed, these laws will be found to be so universal that they are as well seen in one leaf as in a thousand. The single example of the chestnut-leaf contains the whole of the laws which are to be found in nature: no art can rival the perfect grace of its form, the perfect proportional distribution of the areas, the radiation from the parent stem, the tangential curvatures of the lines, or the even distribution of the surface decoration. We may gather this from a single leaf; but if we further study the law of their growth, we shall see in an assemblage of leaves of the vine or the ivy, that the same law which prevails in the formation of the single leaf prevails also in the assemblage of leaves. As in the chestnut leaf, the area of each lobe diminishes in equal proportion as it approaches the stem; so in any combination of leaves, each leaf is everywhere in harmony with the group: as in one leaf the areas are so perfectly distributed, that the repose of the eye is maintained, it is equally so in the group: we never find a disproportionate leaf interfering to destroy the repose of the group. This universal law of equilibrium is everywhere apparent in every work of nature. The same laws prevail in the distribution of lines on the surface of flowers: not a line upon the surfaces but tends more surely to develope the form, — not a line which could be removed, and leave the form more perfect; and this why? Because the beauty arises naturally from the law of the growth of each plant. The life-blood,—the sap, as it leaves the stem, takes the readiest way of reaching the confines of the surface, however varied that surface may be: the greater the distance it has to travel, or the weight it has to support, the thicker will be its substance.

From the same cause it results that the basis of all form in natural flowers is geometry: the impulse which forms the surface, starting from the centre with equal force, necessarily stops at equal distances: the result is symmetry and regularity.

Who, then, will dare say that there is nothing left for us but to copy the five or seven-lobed flowers of the thirteenth century,—the honeysuckle of the Greeks or the acanthus of the Romans,—that this alone can produce art? Is Nature so tied? See how various the forms, and how unvarying the principles. We feel persuaded that there is yet a future open to us: we have but to arouse from our slumbers. The Creator has not made all things beautiful, that we should thus set a limit to our admiration: on the contrary, as all His works are offered for our enjoyment, so are they offered for our study. They are there to awaken a natural instinct implanted in us, viz. a desire to emulate in the works of our hands the order, the symmetry, the grace, the fitness, which the Creator has sown broadcast over the earth.

THE GOVERNMENT COMPETITION.

We have received a score of letters asking a variety of questions, sensible and foolish, as to the requirements in the competition for the proposed Government Offices. Our reply in many of the cases could but be an opinion that might mislead. We hould, of course, in all instances advise a strict adherence to the conditions. One asks if he may prepare his designs for the War Office and the Foreign Office to form one building: and we may say in reply that we have reason to believe it would not be objected to. To the inquiry, is the expression,—"all the requirements for a nobleman's town-house" intended to include stabling and coach-houses? we are able to say, no. Some of the competitors consider they should have permission to visit the various Government Offices to obtain additional information. The Chief Commissioner, however, thinking it unnecessary, has declined to afford it.

"The elevations," writes another, "are to be simply in *outline*. Will you let me know if it is considered that this would prevent the use of a wash of blue to indicate windows and roof, if made a feature of the design." Strictly speaking, the instructions would not permit this, but what latitude the judges may be disposed to afford, we cannot pretend to say.——Those who ask if colour may be introduced to distinguish the materials used, we would remind, that although the elevations are to be "in line only," nothing is prescribed as to the colouring of "enlarged details of portions of the designs." We are unable to say if it is proposed to continue the embankment of the river any further down its course than the part coloured, but the arrangement is doubtless made with that expectation in view.

As to the addition to the block plan, of *designs* for the various buildings comprised, we would suggest, in order to be on the safe side, that these should be sent in in such a way that they might be put aside by the judges should such be their determination, without imperilling the plan. As to the *extent* of the plan of proposed improvements of the leading thoroughfares, we can say that the plan issued by the Office of Works is not to be viewed as limiting it. It may include half London.

To go from great to small, the provision of "a boiler house and space for warming apparatus," will not supersede the necessity for open fireplaces.

We understand that between 1,600 and 1,700 copies of the particulars of the competitions have been forwarded in reply to applications.

ARCHITECTURAL NOTES IN ANGLESEA.*

Many of the houses in Beaumaris are of great age, and constructed generally of a stone base with an upper story of timber framing. Though small, there is good detail in some of them; but during the last year or two many have been destroyed, and more are threatened. The oldest may date as far back as Edward I. The chief renown of domestic architecture is the old mansion of the Bulkeleys, called "Plas coch," corrupted into "The palace," standing a short distance south of the church, in the main street. It consists of two courts, one on the north side, long and narrow, running from east to west, and open at each end, so that it somewhat resembles a short street: the second court, on the south, is nearly square, and extends westward about half the length of the buildings forming the other court. The north side of the street-like court is occupied by the offices, the kitchen in the centre, the stables, bakehouse, brewhouse, &c. now used as stables and cottages. This range stands quite detached from the other buildings. On the south side are the chief apartments, two parlours and two upper rooms, standing on the east, next the street; next, the hall entrance, screened from the hall, the great hall, the staircase (here the cross building of the second court branches southwards), the drawing-room and dining-room above it, and still further to the east, two or three other apartments. The east side of the south court is terminated by a square tower, containing a staircase. Of the south side only a wall remains, with a square window of stone, of two cinquefoiled lights. The great hall is a fine and lofty room, and the style appears to be that of the reign of Henry VII. The roof has been open, and arched with moulded ribs below the tie-beam, above which are two diagonal braces. At the east end, a fine arched and traceried screen framed up to the roof, and acting as a principal, has fenced off a lobby across this end of the hall, connecting the two courts. The entrance to the north court is by an arched door of oak, and has had a timber porch: that to the south court has a four-centered arch of stone. At one side of this passage two oak door-frames, with carved tracery spandrils and doors with depressed arches, enter two rooms next the street. In the passage some of the carved panels remain in the screen. The upper half of the arch in the screen has a good moulding with oak capitals, and contained a music gallery. The whole of this screen is blocked up with rough boards and daubed with plaster, and the lobby used for a cart shed; the music-gallery for lumber. In the reign of Elizabeth, or possibly a little earlier, this fine room was ceiled, below the tie-beams, with a ceiling closely covered with pendants and tracery, and a cornice moulding of arabesque strapwork. This work is of a graceful flowing pattern, and the compartments in the tracery and pendants are filled in with the same: the pendants terminate in acorn-shaped drops, each of different design. The ornaments and tracery of the ceiling have been richly gilt; the lower part of the walls panelled to the height of 9 feet with oak wainscot: the upper portion being rough, has evidently been hung with tapestry, and the effect of this room must have been very rich and good. A large bay window —almost a room—has been thrown out on the south side into the court, and a room constructed above it. The timbers dividing this large window into bays are carved inside and outside with a running pattern of foliage; and bulls' heads in the interior, this being the crest of the Bulkeleys. At the west end of the hall is a deep cove, which rises as high as the spring of the roof: the upper beam crossing the hall has been ornamented with paterœ, and the cove is divided into square panels, subdivided by secondary ribs from angle to angle. This seems to have been intended as a kind of canopy to the dais, and is coeval with the earlier work in the hall. At the north side, near the west end is a two-light cinque-foiled window, with square head; and in the centre of the same side is a large arched fireplace, the arch a flattened ellipse, and quite plain. The hall is paved with slabs of sandstone, in elongated hexagons and squares alternated. It is now used as a joiners' shop, and each month must add to its ruinous state, no care being taken of it; and even the leaky roof is allowed to drip and destroy the fine ceiling. At the west end a door leads to the staircase, which has no architectural character. It is contrived so as to pass between two walls without a handrail. The next room westward is the drawing-room. This apartment runs across the whole breadth of the house, and is very spacious. At the north end was a window of several lights, now closed; and at the south a square two-light window, with transom, and a doorway leading to the garden. It has a flat traceried ceiling of good pattern, the tracery being all in angular figures, with bosses, which are alternately square and round, the round being charged with the heraldic device of the bull's head. This room is wainscotted with oak to the ceiling, the cornice being a kind of crenelated ornament, with a square flower below. The fireplace is quite plain, being a simple square opening; indeed, it is a feature in this mansion, that the fireplaces, with one exception, are without ornament. This room is used as a bakehouse, as well as a residence for the baker, and his large brick oven in one corner has sadly damaged the ceiling, and must be very dangerous. This family has occupied the room for sixty years, and when they first came the oak panelling was polished, and the bosses of the ceiling gilded; now a coat of yellow-wash is the ornament of walls and ceiling. The rooms beyond the drawing-room contain only a little oak panel work, but are large and light.

The dining-room is of the same period as the hall, and is above the drawing-room. The roof has been open-timbered; the principals, of which there are two, spring from short shafts of oak, with moulded capitals and bases, which rise from the floor of the apartment. This room has also been ceiled at the same time as the hall at the tie-beam, the ceiling presenting a semi-hexagon, ornamented by a band, about 2 feet wide, of arabesque ornament, of nearly the same pattern as that in the hall. The walls are panelled, above one half their height,

* Concl. [illegible]

with oak, the fire-place having a simple square moulding. The original windows have been replaced by sashes. The building forming the west side of the south court is built of stone, and wholly of the later date: it has large stone mullioned and transomed windows, with low, angular pediments, and a door in the centre, leading through into the garden. The garden front is an exact repetition of the side next the court, except that the tower at the corner is terminated, below the eaves, with a lean-to roof; and that at a later period the side has been covered with small slates, now partly fallen away. In the upper story of this portion is a long gallery, lighted by a large window at the north end, having the same semi-hexagon roof and ornaments before described. Here at the further end from the window, at one side, is the only ornamental fire-place in the house. Below the lintel, the jambs are divided into small panels, with coped centres above, on each side, are coupled pilasters, or pinnacles, terminating in small pyramids, and jointed or moulded in the way common in Elizabethan work: between each pair a tree is represented; and in the centre of the fire-place a large shield, with coat-of-arms and supporters, two hawks. All I could learn of the heraldic bearings was, that they did not belong to the Bulkeleys. The whole is executed in very hard cement, and has been richly coloured and gilt: the execution is good, and the hawks designed with great spirit. The garden extends, or has extended, as far as the larger fragment of the lower walk, and is not built upon. The mansion is chiefly built of stone, but much of the upper part is timbered. The whole of this very interesting mansion is in a grievous state of neglect: poor families occupy the various rooms: pig-styes are built up against the walls, and sap their foundations with decay and dirt: no pains are taken to keep the roof in order, and unless some repairs are made, not many years hence the place must fall into ruin. It is said that a street is to be cut through this place, and the house and the tower wall both destroyed. It would be a very great pity to destroy this building, even for the sake of a convenient street, especially as the land between it and the church is occupied by few buildings of any value. At any rate, the main building might be allowed to stand on one side of the proposed street, and only the offices taken down to make way for the road. If the roof of the hall were patched and repaired, and the windows opened, and the place cleared of filth, it might still stand many years, and could serve the purpose of a lecture-hall, or any other use that it might be required for. At any rate, Sir Richard Bulkeley should pause before sweeping away the remains of the abode of his ancestors: if once taken down, an interesting remain is lost; and no regret can restore it. If it is, indeed, doomed, which I hope it is not, I trust some clever photographer will at least preserve its similitude. E. W. C.

THE STUDY OF ARCHITECTURE.

IT has often struck me that the opinions held and promulgated by some architects, in your Journal, are more or less inconsistent. As a matter of course, the elevation of his art must be a foremost principle in the breast of every true architect. At the risk of incurring much censure, I venture to lay before you certain ideas which I have myself formed, and which are opposed to the ideas of many others, judging by their writings; but should I be able to provoke an argument, it might, perhaps, be of service in elucidating more decided expressions than have yet been made use of, and, by clearing away unmeaning verbiage, might be instrumental in enlightening the youth who are entering the profession, as to the true position of their art, and their proper vocation.

A great amount of rhapsodical expression has appeared in print, and hard, and strange, and unpronounceable words have been made use of by modern professors, or critics, of architecture; doubtless, with a view of enlightening the public mind, but really productive of much confusion therein. Much has been said of the position of architecture as one of the fine arts, and its professors have been urged to remember that common materials are to be used in such a manner as that they may, in their arrangement, plainly point to the *nature* of the edifice they compose; also, that they should stand as evidence to posterity of the character of the generation which erects them. You yourself, sir, have most ably furnished us, in a series of papers, with the proof that S one may become the material for transmission of History, and that the finger of the architect not only may, but ought to, trace upon his works these valuable characteristics. To this one cannot but devoutly agree. Our churches, our theatres, our palaces, our public buildings, as well as our more humble dwelling-houses and shops, should clearly, by their architecture, point to their purpose. They should also embody the characteristics of their age, in order that they may be beneficial to the future philosophic historian and moralist.

To this most architects are agreed; and in consequence a clamour has arisen for a new style which shall embody these principles. It is urged that in the architecture of the past these desiderata have been complied with, and that in the study of Greek, Roman, or Gothic buildings, the inquiring mind is satisfied with the evident appropriateness of the architecture to the purposes of the edifices, and with the clear exposition of the habits and manners of the generations which erected them. A Roman temple or a Gothic cathedral equally points out the religion and manners of its founder. A modern English edifice, many will agree, does *not*. The causes of it remain to be inquired into and stated with *simplicity*, that the smallest comprehension may understand them, and strive to find a remedy. After having myself studied some of the ruins of antiquity, and carefully considered the subject, I am induced to offer you a few observations, since I confess that I have read many papers which have appeared, professing to guide the aspirant after architectural truth, but which really have more the effect of confounding him and bewildering him. The observations I would offer, I would do in all humility, and seek rather to draw forth in simple and plain language the matured opinions of others, than to set myself up in any way as a guide.

It is of paramount importance that the young architect should study the history of his art from the earliest ages; and, where practicable, it is of great benefit that this study should be prosecuted among existing architectural remains. This is acknowledged by all, and by many is carried into practice; but curiously, very many of those who have so done have fallen into the very error which is now so much deprecated. Instead of approaching their task with reverence, and with the spirit of a philosopher, to learn its *true* lessons, I fear that in several instances, they only find therein a means of satisfying their love of sketching from a beautiful model, and learn to venerate the *model* itself, and take that for a precedent and a law, which should be no more than the exemplification thereof. Hence the controversy about styles; and we find the architect more disposed to reproduce some bygone style in its integrity from the model than to attempt to devise anything new. Hence the profession is divided, some practising chiefly in classic art, and some in Gothic; one man designing all his structures after the model of Roman architecture, another after the model of Mediæval. But it has occurred to me that this strict classification of styles is more in the province of the archæologist than the architect. The architect is bound to study the history of his art in all ages and in all countries of the globe, in such a manner that he may deduce from it the real principles which have conduced to its ancient greatness. It is not the sketcher that is wanted, nor the poetic dreamer, nor the visionary, but the philosopher. He should study in and apart from their buildings the manners and customs of the ancients. Their soil and climate, their habits and their religion, each and all strongly influenced their architecture. Let him study all these, then, and in conjunction with them let him study the plans and elevations of their buildings, the style of ornamentation, the proportions of all parts, and the form of the varied mouldings and embellishments. By studying these in connection with each other it will be hard if he cannot at last trace clearly the progress of cause and effect, and learn for himself in what the great secret of the magnificence of ancient art consisted. The rules which will thus become clearly apparent to him need only application to produce the result "so greatly to be wished for," a "new style" will gradually grow out of them.

Of all the lessons to be learnt from this study that of appropriateness will indelibly fix itself on the mind. I am inclined to consider this *the* great secret. For in investigating antiquity we find that the chief charm of every building is its appropriateness; its adaptation to its determined purpose. In this country, alas! we must too often reverse the phrase, for inappropriateness and want of adaptation to their purpose is the great characteristic of British edifices.

I have written these remarks as preliminary to others which I would make in exemplification of the foregoing maxims. Of all subjects, ecclesiastical architecture will always hold the first rank in the professional mind; and at a future date I will endeavour to lay before you certain hints which have occurred to me in connection therewith, in order that I may elicit the opinions of those whose knowledge and experience in the profession fully qualify them to enlighten the junior branches, and in order that the true principles which should guide the architect in designing ecclesiastical edifices may be properly defined. J. K.

METAL AND OTHER WORKS OF ART IN THE MANCHESTER EXHIBITION.

THE proposed museum of works of art in metal, wood, ivory, mosaic work, glass, enamel, &c. &c. recently placed under the superintendence of Mr. Waring by the executive committee, rapidly assumes a definite form, and will, we trust, at last, successfully illustrate the various schools of art in connection with the materials above mentioned. Amongst the contributions may be selected some fine examples of Venetian glass, by Mr. Nicholson, of Doctors'-commons; some other excellent and remarkable specimens from the collections of the Earl of Cadogan, and Miss Auldjo, of Kensington. Mr. Goff, of Kensington, sends numerous fine ivory carvings, and Mr. Phillips, of Cockspur-street, an exceedingly beautiful ivory-carving, ascribed to Fiammingo; whilst amongst other pieces of elaborate workmanship, Lord Cadogan lends his celebrated knife of Diana of Poitiers, and several grand specimens of cinque cento bronze-work.

Mr. Addington, of St. Martin's-lane, contributes many choice examples of Majolica, Faenza ware, and Oriental and European porcelain, besides other valuable works. From the Tower, her Majesty's Board of Ordnance send a large and important contribution; and amongst collections placed at the disposal of the committee, may be mentioned those of A. J. Beresford Hope, esq. Baron Marochetti, Hon. E. Cowper, Darby Seymour, esq. M.P. the Rev. Walter Sneyd, Octavius Coope, esq. J. Mayer, esq. of Liverpool, and numerous other collectors, well known in the archæological and artistic world: we must not omit also to state that Sir Anthony Rothschild allows some of his very precious Henri Deux ware, to find a place in the Ceramic department.

The committee, then, have good reason to thank the liberality and public spirit of our art-treasure collectors; and we think that when the importance of this exhibition on the public taste generally comes to be considered, they will have no cause to regret the inconvenience they may in some cases suffer, by becoming promoters of what is truly a national undertaking, and for a national purpose.

THE MAIN DRAINAGE QUESTION.

A DEPUTATION from the Metropolitan Board of Works have handed to Sir B. Hall the new plan B* prepared in accordance with the suggestions of Captain Harstal. Sir B. Hall, in receiving it, stated that he proposed to nominate three gentlemen, two of them civil engineers, and one a military engineer, the most experienced he could find, to whom would also be referred all persons *who might wish to place plans before them*.

We may therefore venture to assert, with tolerable safety, that plan B* will *not* be carried out.

ART IN DECORATION.—On Thursday the 18th December, Mr. E. Ball gave a lecture at the Streatham-hill and Tulse-hill Institution, "On Art, as applied to House Decoration and Furniture."

WESTMINSTER ABBEY: THE CONFESSOR'S CHAPEL, SOMETIMES CALLED THE PIX OFFICE.

OUT-OF-THE-WAY PARTS OF WESTMINSTER ABBEY.

Such of our readers as can avail themselves of the opportunity of attending the afternoon service in the venerable Abbey of Westminster, will be pleased with the striking effect produced by the numerous lights that are required in the dim twilight, which in these short days shadows the interior of the Abbey before the service is finished. The appearance of the vast place as thus seen is solemn in the extreme. We can, however, at present, only glance at this, and would direct attention to some of the nooks of the old church with which the public are not generally acquainted. Visitors to the Abbey may notice close to the entrance at Poets'-corner, on the left hand, the small pointed doorway which leads to the crypt below the Chapter-house, given not long ago in our pages. Farther to the west, in the south wall of the transept, below the dial of the clock, is a door opening into the curious chamber shown in the annexed engraving, which is called the Chapel of St. Blaise. It occupies the place of what is known at St. Alban's and elsewhere as the "slype." At the east end of the chapel are the remains of an elaborate painting of a figure holding a gridiron, supposed, therefore, to represent St. Faith; beneath which is the Crucifixion: there is also a monk at his devotions; and the remainder of the pointed arch is filled with red and other coloured zigzag ornaments, inscriptions, and devices; and although the original altar has been removed, the low elevation, with a peculiar circle in front, may still be traced. Near the altar, the wall, for several feet, is built at a different angle from the other parts of the chapel, and the symmetry of the place is still further interfered with by the pier of solid masonry which is shown in the engraving. The place is now so dark that it is somewhat difficult to see the various objects near the altar. There are, however, traces of two Early English windows which have formerly overlooked some space near the Chapter-house. The light now enters from some windows at the west end of the chapel, which are placed at a great height. In modern times a wooden staircase has been placed, leading to a sort of closet used by the canons as a robing-room, and which adds much to the deformity and darkness of the place. Part of the floor is covered with red tiles—some of square and others of diamond patterns. At present the chapel is lumbered with various matters; amongst them a large chest, in which were deposited the remains of Major André, who was captured and hanged as a spy during the American war, while carrying an important despatch to a portion of the British army. There is a monument to the memory of this young officer in the north aisle of the nave. There are also some fragments of old iron belonging to other parts of the Abbey, which will, no doubt, before long be restored to their place.

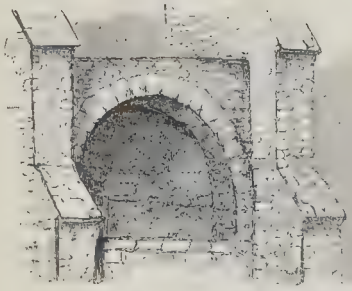
The other engravings of Norman masonry show, first, a portion immediately above the Blaise Chapel. This piece of the exterior of the former Abbey may be seen from the cloisters.

The semicircular arched passage leads from the north cloister, towards the Westminster school, and is of most massive proportions. From this passage is the entrance to the Norman crypt, which is used as the pix office, and is represented above.

We recently made some remarks as to the small number of remains of Roman London, which exist in our days. The same may be said of Norman London, which, although constructed of durable material, and of comparatively recent date, has almost disappeared. The existing fragments of the latter period, above and below ground, would seem to be—the crypt of Bow Church, St. Bartholomew's Church, and a curious chamber below Lamb's Chapel, Cripplegate, the chapel in the tower, as fine a specimen of this style, and as perfect, as any remaining in the country; and at Westminster the Confessor's crypt, the cloisters, and part of the south transept. These, with a few unimportant fragments of not much mark, are, after "ye have sought ye cittie round," all the Norman work which meets the eye.*

The great rarity of these remains makes them the more precious to those who have a proper appreciation of such matters, and causes regret that the chapel in the tower is still hidden from the public. The crypt of Bow Church, filled with mouldering coffins, is not convenient of access, and the chapel of the Confessor is also invisible. This ancient place, curious in its proportions and details (as may be seen by referring to the engraving), has been for a considerable time occupied by the weights and other materials for the assaying of the coinage of the country.

It appears that the matters contained here are of very small bulk, and occupy but a fraction of the area of the crypt: it becomes, therefore, a subject for consideration whether or not, in the great building which has been recently raised for the uses of Parliament, some place equally safe as this portion of the Confessor's Chapel could not be contrived so



* There was inserted in the gate of Bermondsey a Cross, cut in stone, called the Rude of Bermondsey, with zigzag ornaments. On the removal of the gate these, with other fragments of great interest, were removed to the garden of a gentleman, and most likely made into a sort of grotto. We have, from time to time, made careful inquiry after these fragments, but have been doomed to a series of disappointments; perhaps, however, these remarks may fall under the notice of the possessor of these relics, a sketch of which we should be glad to have an opportunity to make.

that the increasing numbers who are interested in such places as this should have the opportunity of access.

When lately looking into Cripplegate Church, in which rest Milton and other worthies, the custodian said,—"You would be surprised at the number of Americans who come here, and at the interest they take in the place. I have seen some kneel upon the stone under which it is said the remains of the poet are buried, in order to say, in their distant land, that they have paid this homage at the great man's grave."

The interest felt by the Americans in Westminster Abbey is as great, and perhaps more so than by many of us at home; and it cannot be without a beneficial use to extend the means of ready access to our important antiquities,—not only to those who, though now strangers, are so intimately connected with us, but also to the thousands who come from all the provinces to visit the metropolis: the sight of such relics of former times, as the Confessor's Chapel, and that in the Tower, cannot fail to be useful.

It is, no doubt, of great consequence, to keep the tests of the coinage in integrity, and without suspicion; and it is in consequence arranged that certain of the state ministers, the master of the Mint, some of the officers of the Goldsmiths' Company, and others, shall have keys, which, only by the assemblage of the whole, can give admission to the important deposit. This arrangement could be equally safely managed in another place,—*of far greater strength*, and more perfect security,—for it must be borne in mind that in 1303 the king's treasury in the cloisters was robbed of its contents, and forty-eight persons were sent to prison on suspicion, some of whom remained in custody for two years.

Let us hope that those persons in whose hands the management of these matters remains, will take into consideration the progress of the age, and not adhere too closely to old-fashioned notions, but hunt up a chamber, "clamped with iron within and without," the doors guarded by Chubb's and other locks, which would defy the skill of the lock-picker, and to that safe place remove the pix, and let us into the old crypt. Let public records also be shifted as soon as possible, from their rather unsafe position in the wreck of the Westminster Chapter-house; a place which might be easily restored, and be one of the finest specimens of English architecture.

It is only at certain periods that the Confessor's Chapel is opened for the purpose above mentioned, and in consequence we have not been able, although much trouble has been taken, to get a sketch of the crypt, but fortunately by chance came upon a drawing in the Guildhall Library: having compared this with other authorities in the British Museum, we feel that the view is tolerably correct, and will enable our readers to form an idea of this remnant of antiquity, which is completely hidden from sight.

TOMBS AT KENSALL-GREEN.

FROM the most remote time the artistic taste of nations has been to a considerable extent displayed in the monuments of the dead. What will be deduced by and by from modern English tombs? We wandered the other day to Kensall-green Cemetery, thinking, by the way, of the vast Egyptian pyramids, of the monuments of Xanthus and Assyria, of the beautiful Gothic tombs of our own land, of the monstrous masses of marble clouds in Westminster Abbey, and the general appearance of our graveyards a few years ago. Nothing can well be more tasteless than the majority of the monuments of that time, and nothing worse than the condition and management of places of sepulture.

Passing under the archway, you find yourself among several hundreds of monuments, some of which are raised to the memory of the worthies of our own age. How few of them speak flatteringly of our taste in art! The visitor in search of information will not be able to gather much from the custodians of the place, and therefore it is better to walk on. You soon meet with familiar names on the tombstones. There is that of John Smeaton, the engineer to the London Docks; and not far off is a stone placed by subscription to the memory of Edward Scriven, an engraver, who projected and assisted in carrying out a most excellent plan for the benefit of his class. The inscription states that "an instance of severe distress having occurred to a member of his own profession, he directed the force of his benevolent mind to the foundation of an institution among the professors of the fine arts to obviate such calamities. Thus, with the effective aid of those he called around him, was founded, in the year 1810, 'The Artists' Fund.'" As we pass slowly along many familiar names of publishers and of others who in their lifetime were well known, are met with. These records are made in various ways. On one tomb is—

"Pain was my portion,
Physic was my food,
Groans were my devotion,
Drugs did me no good."

And this in our own century! Some of the inscriptions are put on the shaped stones which were so common a few years since. Some have the head, cross-bones, and other rudely-sculptured devices in fashion a century ago. The taste, however, seems to lean towards the Greek and Roman forms. There is a very simple monument of the latter style to the memory of Lord de Ross; this is of stone, with a white marble slab inserted for the letters. The stonework in many instances is relieved by plants and flowers; some graves are covered with the "forget-me-not;" on few is the honeysuckle; some are surrounded by palings, overgrown thickly with ivy; others are shrouded in and hidden by a little grove of evergreens. In the middle of one grave has been planted a Scotch fir of 20 feet or 30 feet in height. It is curious to notice the various styles of the legends. Here is the family vault of a person who is as methodical in his gravestone as he would have been in his ledger:—

"J—— H——, born ——, died ——.
T—— H——, ditto ——, ditto ——."

One stone overgrown almost with roses has only MERCY upon it. Here dies a celebrated cricketter, the stone placed by his playfellows; and there, not far off, a famous optician. On some stone tombs, a white marble book has been inserted, on which are inscriptions, such as "Ye know not the hour." In some instances a sculptured hand is pointing to the book.

Crosses of different forms, often of marble, are common. Some of these and other expensive monuments have no inscription at all upon them. One has—

"Thomas ——,
Jane ——,"

No date of birth or death.

To atone for little eccentricities there are some pretty little bits of sentiment. On the grave of a young wife there is a rose, scarce blown, cut from the stem by a sickle; a drooping lily appears on that of a young girl; and a chaplet of "everlastings" on the monument of "*our dear sweet child.*"

In the chapels and in the various avenues which adjoin them, there are long rows of black and white marble records, most of which are quite common-place. In one of these spots there is an old-fashioned wooden-cased clock; the pointer denotes an hour, but it seems to have been long since it was there fixed. We look in vain for anything to interest in those monumental rows, and are glad to get forth again into the sunshine, and leave the remains of those who have preferred the vault manner of burial.

Outside is the tomb of the Princess Sophia, a large erection, surmounted by a sarcophagus, coronet, &c. and which has a stately and sumptuous appearance. Not far off is the grave of the Duke of Sussex, covered by a plain, well-designed tomb of granite. A few yards off is a new monument, similar to the above, which marks the burial-place of a consistent and useful public servant. The inscription is—

"Sacred to the Memory of
JOSEPH HUME.
Member of Parliament for nearly forty years;
Born at Montrose, N.B. Jan. 22, 1777;
Died at Somerton, in Norfolk, Feb. 20 1855.
Keep in memory, and take heed unto the thing that is right; for that shall bring a man to peace at the last."

Smirke, the Royal Academician, has for a memorial a plain squared-up stone of large size, which, by its simple and permanent appearance, contrasts in a remarkable way with some of the ambitious designs which are not far off. Here is one at which we must stop,—that of Loudon, the accomplished and industrious naturalist and journalist, who from a humble condition rose to be a benefactor to the country. This monument consists of a pedestal of polished granite, on which, after the name, it is recorded that "his works are his best monument." We must look over the conceit of rough and unhewn masses of rock, with little bits of polished marble set into them, and some other things, and pass to the grave of a man known through the length and breadth of the land—"Tom" Hood, who has sung with such emphasis on behalf of his suffering fellows. This is one of the most satisfactory in the grounds. The pedestal is of polished granite, at the top of which is written—

"He sang the Song of the Shirt,"

and below—

"In memory of THOMAS HOOD,
Born 23rd May, 1798,
Died 3rd May, 1845.
Erected by public subscription," &c.

Below this is a bronze comic mask, with a lyre and other things. On the sides are medallions, also in bronze, representing a passage in the "Bridge of Sighs,"—

"One more unfortunate,
Weary of breath,
Rashly importunate,
Gone to her death."

Above this is the bust, in bronze, of the poet, of somewhat colossal size, beaming with intelligence and kindness.

There are some ambitious tombs in the Egyptian style, which turn out to be only shells of brick covered with stucco: some of these have knockers upon the doors! We have before now spoken of the ponderous coxcombry of the Ducrow and Soyer monuments, and need not return to them. Few attempts have been made to preserve the image of the persons buried in these grounds, and the attempts at sculpture of any sort are for the most part failures. There is plenty of room for improvement in our funereal memorials.

THE ARCHITECTURAL ASSOCIATION.

THE following reply, signed by the honorary secretaries of the Association, has been returned to the last communication from the Institute of British Architects:—

December 18th, 1856

GENTLEMEN,—On behalf of the committee and the members of the Architectural Association, we have the honour to lay before you the following reply to your communication of the 30th October last, on which the Institute did the Association the honour of requesting an opinion. The committee, then, express the opinion of the Association generally, after full discussion of the question, in saying that they do not regard the establishment of the proposed class of graduates as likely to prove a measure of utility to the profession, and particularly to that class for whose benefit it is designed, or to conduce to the main object of the Association, viz. the improvement of the means of architectural education. But, in their opinion, these objects might be advanced, and important results ultimately attained, by the adoption of a principle they have much at heart, and to which they would earnestly solicit the best consideration of the Institute. They would AGAIN propose the institution of examinations, founded on certain acknowledged principles and well-defined courses of study. The passing of these would become an honourable distinction, and consequent incentive to exertion on the part of those entering the profession. The committee feel confident that the adoption of the principle contained in their proposal would not only be productive of great advantage to those who would immediately profit by it, but would also eventually add to the influence and consideration of the Institute itself. They desire to obtain the creation within the body of the Institute of a class owing its position, not to arbitrary professional distinctions, but to intellectual qualifications only. Should they be successful in their object, they are of opinion that many of the profession who now hold aloof would at once enter the ranks of the Institute, and that a great step would be taken towards that general union of the profession which the Architectural Association earnestly desires to assist in effecting, when it can be done with advantage to those it represents.

In conclusion, the committee beg, in the name of the Association, to acknowledge the courtesy which has afforded them the opportunity for expressing these opinions, and to assure the Council of the full sense in which the Architectural Association regard it.

THE NORTHUMBERLAND WINDOW AT ALNWICK.—The window in memory of the late Duke of Northumberland, for St. Paul's, Alnwick, has been made at the royal manufactory at Munich, and put up in its destined place. The subject is Paul and Barnabas preaching at Athens.

REMARKS ON FARM BUILDINGS AND STABLES.

A paper on this subject was read in October last, at a meeting of the Liverpool Architectural Society, by Mr. Charles Verelst, as we mentioned at the time. In the course of it the reader said improved farm buildings did not depend entirely upon the tenant, who was often unjustly blamed for their defectiveness. The landlords had much to do with this, and there was the difficulty; for though he believed they were generally upright and intelligent, they frequently had their hands tied by settlements, jointures, debts of their own or those who preceded them, too often mortgaged up to the neck, and were, therefore, unwilling, and frequently unable, to effect those sometimes costly improvements which every tenant had a reasonable right to possess, and without which no tenant could effectually get on. He proceeded to lay down that labour was the great outlay of the farmer. Whatever, therefore, was saved in that, became a serious gain. Thus the site should be as near the centre as the nature of the land, vicinity to the high road or station, would permit, or, at least, as near the centre of the arable land as possible, by way of saving cartage. If a railway be near, a tramway therefrom will be no mean saving when near a town, for bringing manures and removing produce. The hay should, of course, be near the stables, the straw near the foddering yard, the roots near the boiling-house and stall-fed cattle, and the whole in close contiguity, and planned in such a manner that every part should, as much as possible, radiate round a centre, from which everything should be supplied. Above all things, there should be good and ample shed room for stock; and few things are better demonstrated than the improvement that occurs in cattle that have warmth and repose, so that chaff and other food should be steamed, at least occasionally—for with warmth less food is eaten, with repose more flesh is obtained, and with even temperature and abundant ventilation good health is maintained.

Assuming the farm to contain about 400 statute acres, the list of requirements for one of a first-rate character would be something like the following, viz.—a stack-yard; a barn of two stories, containing, on the ground floor, a corn and a chaff room, and above, a granary, &c.; engine-room and coal-house; stabling for twelve cart-horses; loose boxes for invalid horses, stallions, brood mares, &c.; stabling, loose box, harness-room, and gig-house, for the farmer's own use; root-stores and a boiling-house; cattle-sheds in a double row for (say) sixty beasts; cow-houses for (say) twenty cows; calf-house; bull-boxes; sheds for heifers, grazing cattle, or young stock, open on the south towards a yard; sheds, pens, and yard for sheep; lambing-house, slaughter-house, extra shed for sick cattle, waggon and large implement shed; tool and small implement shed; smithy, wheelwright's shop, and timber-yard; one or more dung-pits, and one liquid manure-tank; compost-shed for mixing artificial manures; piggeries; poultry-houses for hens, guinea-fowl, ducks, turkeys, &c.; coal and wood houses; dove-cot, dog-house, and privies; a well, rain water, cisterns, &c.

There are some other requisites, but which would rather appertain to the farm house than to the farm buildings, such as the dairy, churning-room, scalding-room, shed to expose the dairy utensils to the sun and air; and, lastly, a cheese-room; whilst in many places a brewery would be necessary.

In a set of drawings exhibited Mr. Verelst showed that the general principle was that of a cross, the barn forming the top or north, the beast-houses the south, the cart-stables the east arm, and the young stock-shed the west arm. The open spaces between the arms were inclosed by sheds on the east and west sides, and by a low wall on the south side. Thus each of the yards was open to the south, and protected from the north, east, and west winds. On the outside of the buildings was a road 15 feet wide, running round the four sides, so as to facilitate the deposit of carts, implements, manure, &c. and the removal of the manufactured produce.

The Stackyard should be to the north of the farm buildings. In some farms the whole of the stacks were erected under a lightly framed wooden roof, which allowed of their leisurely removal, secured them from wet, and saved thatching. If iron wheels were added to the frames under each stack, and a tramway made, they could be drawn up to the north side of the barn, and thrown direct into the feeder of the thrashing-machine. The stacks might be brought up by horses, or by the stationary engine.

The Barn.—This should be as central as possible, and so placed, with reference to other buildings, as to enable a man to go therefrom into stables, beast houses, sheds, &c. with the least inconvenience in regard to time or labour, and without having to go out of doors. For a farm of this size, a stationary engine and thrashing machine should be employed, so placed that, the stacks being drawn up by it, the straw would be put direct into the feeder (by aid of an elevator, if necessary), passing out winnowed to the other side, the corn depositing itself in one room below, and the straw either in another room below, or thrown by shakers to the loft over the cattle, which would be 2 feet lower. This upper barn would contain hay and chaff cutters, depositing their cut material into receptacles below; oat, corn, linseed, oil-cake, and bean crushers, meal grinders, bruisers for various kinds of food, and other machines, the whole worked by the steam-engines, thus sparing horses for other work, necessitating fewer of them, besides doing the work quicker, cheaper, and better. This engine should, in fact, perform likewise a large portion of the work outside the buildings, such as pumping the cisterns full from the well, &c. In the plan, at the intersection of the cross, were a trap-door and tackle for hoisting up and down sacks, &c.

Root Stores and Boiling House.—The same reason of centrality, guiding the position of the barn, governs that of the root and boiling houses. In the plan herewith submitted they adjoin, and are nearly equidistant from, all the feeding places and yards, and the roots can be taken, after being steamed, without going more than a few yards, or at all out of doors. They should be flagged, whilst the root-house might have low brick divisions for turnips, mangolds, potatoes, &c. with wide sliding or folding doors, that a cart might be backed in and upset. The boiling-house is best not to open immediately into the root-house, lest the roots should become affected. There should be boilers, steamers, tubs, &c. for the use of stables, piggeries, or occasionally for preparing seeds of any kind. There should also be a root-washing machine, worked by steam, and a place for wooden shovels, &c.

Cart-horse Stables.—These contained twelve stalls, which, looking at the labour saved by the steam-engine, would probably accommodate a sufficient number of horses to work the 400 acres. He (Mr. Verelst) had paid attention to the subject of stables, and considered that a width of 16 feet was the least that could be permitted, but he preferred 17 feet for single stables. He objected to double stables, but, when used, he considered the total width should be 26 feet at least. No stable should contain over twelve horses. Single ones were best lighted by windows at the back; double ones by skylights along the ridge. It was better to have regular stalls, with boarded divisions; but, as this expense was often objected to, bales (that is, poles hung by short chains at each end) were used; but in that case there should always be a contrivance, that if a horse got under the bale, it should lift itself off. Two horses should not be in one stall. The width of stalls was constantly too narrow. The horse often sprawls and stretches as he lies down, and does not tuck himself in, as the cow does. The size of a cart-horse is about 8 feet 6 inches long, 2 feet 3 inches across the quarters, and about 6 feet 6 inches high, to the top of the head. The least width, therefore, that should be given to a stall, is his own height—that is, from 6 feet to 6 feet 6 inches.

He considered the ordinary range of hay-racks and trap-doors over as highly objectionable. It compelled the weary horse to raise up his head to a considerable height, whereas the form and length of his neck showed that nature intended him to take his food from somewhere near the level of the ground. The trap-doors, over the old hay-racks, allow the seeds and dust to get into his eyes, whilst, as the traps are often left open, the horse frequently catches cold from draughts, and the hay above is injured by the foul air from below. The advantages of crushed corn have been abundantly demonstrated to be equally healthful and more economical, but the old-fashioned long mangers and internal angles prevent his getting at much of it. He therefore proposed, and generally used, cast-iron mangers with rounded bottoms, water-troughs, and racks, all secured by a single cast-iron top plate, not more than 2 feet 9 inches from the ground, nor much less, otherwise there would be a risk of the horse, in times of excitement, getting his foot over. The rack should be on one side, the manger on the other, and the water-trough in the middle; and the two latter should be enamelled, to prevent their becoming fusty or sour. Underneath should be screws, to admit of their being cleaned, whilst a half-inch pipe, with nozzles to each trough, can fill the whole with water simultaneously. This principle might apply to all the horses, cows, bullocks, young stock, pigs, and poultry, upon the whole place, by the turning of a single tap. It is found that horses which have water constantly before them drink no more, nor even so much, as those which only get it occasionally, and which become greedy from fear of losing it. But they are very fond of cooling their muzzles by frequent paddling in it. If it were necessary, a wooden lid could easily remedy this point. In some stables, I have heard of there being no racks at all, as steamed or bruised food alone was used. In order to supply the hay, a cupboard, either in a corner or got externally, is provided, and down that the hay is thrown from above, whilst a door is opened below, the hay taken, and by a fork thrown into the low rack. Iron drawers under the manger are still provided by some ironfounders, to catch all the hayseeds, and this is an economy. On the front of the top plate may be a revolving roller, but double chains are unnecessary to cart-horses when separated by solid divisions between the stalls. Over the mangers he had constantly used a single slab of slate, 2 feet 6 inches high, and the length of the stall, which, in a very simple way, prevented crib-biting. The end stall division may be made movable, so as to join to the last but one behind the stalls. It then makes a good large loose box when required. In a cart-horse stable, instead of iron heelposts, wooden ones may be used, as they assist in supporting the floor above, and admit the rings for the pillar reins being put at their proper height.

The slope of stalls from front to back is generally too much; it fatigues a hard-working horse, by throwing his weight too much upon his hind legs. The floors of stalls should slope from the sides to the centre; whilst the fall from front to back should not exceed 2 inches. The best flooring for stalls is Dutch clinkers on end; the next best substitute, a certain kind of indented brick from Buckley Mountain, made on purpose; and one of the worst is red stone, its porosity retaining urine and damp; whilst the ammonia is unhealthy. For the space behind the stalls he had used rough 3-inch Yorkshire flags, which can always be kept clean. Instead of open sunk channels behind the stalls, a better way was to have all level, but a good sunk drain under, and behind each stall an iron stench trap, with a slight incline thereto from every side. Iron stench traps, or any other gratings, should never be covered with bars: they are weak, apt to break, and sometimes catch the heel of the shoes; flat-iron tops, hollowed, and full of holes, are best.

The height of a stable should be as much as 12 feet, if it have a flat ceiling. In no place is ventilation more required, or less attended to, than in cart-horse stables. The horse is a bulky animal, and throws out much that is injurious in his breath, skin exudation, manure, and urine. Thus, upon entering the majority of stables the first thing of a winter's morning, you are almost knocked down by the heat and ammonia, so utterly different to a state of nature. A hot atmosphere, with its adjuncts of fetid atmosphere, produces directly or indirectly an endless series of ills; but a warm, and at the

same time well-ventilated one, promotes health, strength, and spirit for work, manure of a higher quality, and saves those expensive and doubtful individuals, veterinary surgeons. The best temperature would probably be from 60 to to 65 degrees; this and ventilation are the grand desiderata. To obtain the latter, he had adopted the principle of sliding gratings, with a clear 100 superficial inches of open area, fixed in the back wall near the ground, and behind each stall. To carry off this he used, in the centre of the ceiling, one or two hoppers, according to the number of horses, continuing by a wooden trunk from the stable ceiling through the hayloft and the roof, and terminating on the roof outside with a zinc covering. These trunks should have a superficial area equal to the quantity of air let in, according to the number of stalls. Now, as the ventilating gratings near the floors, and the hoppers, would have the power of regulation, the actual quantity of ventilation would always be according to the number of horses in the stable. Before each ventilator and hopper should be placed perforated zinc, to divide the air into minute currents.

Whilst light is healthy and cheerful, too much causes horses to be wakeful. A moderate degree of gloom conduces to the repose of the weary cart-horse; windows, therefore, should neither be too large nor too numerous.

Great condensation takes place upon the glass of stable windows, which, falling down, rests upon and rots the wooden bars. There should be no horizontal bars, but the glass should overlap, like that in conservatories Stable sashes are best hung on centres; sliding or hanging sashes stick, and get out of order.

Stable doors should be 9 feet high and 4 feet 6 inches wide, with no projecting locks, handles, or fastenings; all should be flush, to prevent the horse hurting himself or the harness catching. To a cart-horse stable the door may be in two heights, that the top may be open in hot weather. The sill of the door should never exceed 2 inches high. A cart-horse stable should only be whitewashed. A regular nag stable may be plastered, and boarded 4 feet high. There should be shelves, recesses, or cupboards for brushes, cloths, combs, &c.

In the loft above, and nearly against the centre of the back wall, should be chests, divided for corn, beans, &c.; lined with iron to exclude mice, raised three inches from the floor to prevent rot, and always kept locked. From these should descend, into the stable below, trunks and double slides, containing exactly one feed. These prevent waste, secure equable quantities, and by lasting a certain time show if robbery has been attempted.

Bullock Sheds, Cow and Calf Houses, and Bullock Boxes.—These should be near the root stores and boiling-house, and are more economical to build and work with a foddering passage down the centre. This last may have a tram-way and simple turn-tables, or be smoothly flagged, so that a low truck on wheels with rounded tires may easily run down the passage, distributing, by outrigging feeders, the food to the beasts on each side. Over this foddering passage, in the floor above, should be long, narrow, open slits, 18 inches wide, by which simple means hay and straw may be let down at any point required. The width of a single bullock shed, exclusive of foddering passage, should be about 15 feet, and the space behind of good width, to facilitate the removal of the manure in trucks. Each bullock should be separate, and as he is about 8 feet long, 5 feet high, and 2 feet 8 inches across behind, the width of his stall should be 5 feet; but if two are put into one stall, the width should then not be less than 8 feet. To each stall should be separate troughs for food and water, the former of stone, the latter of cast iron, enamelled on the inside, and supplied with water simultaneously, and nowhere more than 18 inches high.

The divisions are best made of slate, or York flags, with iron rods for the chains round the bullocks' necks, to slide upon; but where slate or stone is difficult to be obtained, recourse must be had to oak or Baltic divisions, with oak or teak posts for the chains to slide upon.

Behind the stalls there should be an open gutter, not smoothly dished out in a single stone, but square, 14 inches wide and 2 inches deep, the object being to prevent the bullock sliding about upon his own unctuous manure, by the square sides of the gutter. Beneath this open gutter should be the drain for the liquid manure, which should fall through gratings or perforations in the bottom of the open gutter. The stalls, like those of horses, should slope slightly to the centre, and that to the gutter behind. Asphalte for floors here should be avoided, as being dangerously slippery, but a concrete of lime and gravel forms the best.

Outer walls 4 feet high, with moveable luffers above, like those round a brewer's vat, have been recommended, but it is thought these must be too cold in severe winters. Windows with glass, and outside luffer shutters, admitting light in moderate quantity, most contribute to warmth and repose. Venetian blinds, or even nets of small meshes, will prevent insects from entering. Where the bullock sheds are open to the roof a simple mode of ventilation is by two air-bricks behind each beast, and the slates laid by omitting alternate slates, and without tiering: but where a loft is above the bullocks, then the same mode of ventilation may be adapted as to the stables, but increasing the power of extending and regulating the quantity to at least double. The height of these sheds, when of one story, may be 7 feet 6 inches from floor to bottom of eaves; but if there be a loft above, then the height should be 11 feet from floor to ceiling.

Hitherto only stalls have been spoken of, but some high farmers use boxes 10 feet square for single ones, and 12 or 14 feet square for double ones; but it may be a question whether beasts would not be fattened as well and as soon in good separate stalls as in boxes. In Holland, Belgium, and Switzerland, where animals always tied up has long been the system, stalls, and not boxes, is the principle adopted.

Other refinements had been adopted, such as sinking the floors 3 or 4 feet below the ground, and, by gradually elevating the feeding troughs, allowing the accumulating manure to raise the animal up to a level with the surface of the ground. Huxtable praises sparred floors, and Mechi's bullocks may be seen, with well-dunged coats, slipping about on boarded floors; but all this perpetual existence of animals over their own ordure seemed so contrary to the order of nature that it has not been gone into here.

Large and Small Waggon and Implement Sheds.—They should always be of ample size, and of such a height, say 18 feet, that one or two loaded waggons can enter and remain there for the night, secure from rain and ready to start betimes in the morning for market. They should face the north, to prevent the sun affecting the wooden materials inside; and be near the stable, for speedy and convenient harnessing. The roof should always have an extra projection of a few feet, to prevent the slanting rain from entering. At one end should be the drill or tool-house, not alone for tools, but for those implements that take to pieces, being only used at harvest or other annual periods.

Piggeries.—Where a very large number of pigs are kept, it is best to have a central passage, with iron or wood hanging sheets, whereby the troughs can be filled without the feeder being interfered with, with a separate store shed, and a boiling apparatus for them alone. The hog has been undeservedly abused for his love of dirt; but if a wet and dirty sty were placed beside a dry one, clean and full of straw, it would soon be seen that he preferred the clean and dry. His occasionally wallowing in dirt possibly arises from a certain scrofulous habit of body he has, rendering such an operation agreeable to him for the time. It has somewhere been tried to wash and scrub him daily, when it was found he was not only cleaner, but fatter and healthier by the operation. Above all, he should be warm as well as clean and dry, and, in winter time, a swing door, hung upon its upper edge, aids him, and he soon understands how to obtain ingress and egress by pushing the door with his snout The reader rejected the idea of a boarded floor, or of raising himself up on his own dung, though perhaps the pig alone, of all animals, could exist with health in the filth and foulness of his own atmosphere. A door from his house enables him to roam about a yard appropriated to him and the fowls alone. In order to admit ventilation and avoid smell, instead of close walls round the pig court, open tarred fences have been recommended. Troughs of any kind should always have several compartments. The best flooring is a good hard concrete.

Where the district abounded with stone, of course rubble walls would be found cheapest, but the strongest and best are of brick. These should be hollow, for lightness, dryness, and the very great facilities they afford for a perfect system of economical ventilation. All bricks should be laid in "English bond" of alternate courses of headers and stretchers; all interiors should be pointed, for the healthy and cleanly practice of frequent whitewashing. All corners should have rounded or "bull-nosed" bricks. Walls may be coped with rounded bricks pointed in cement, and be kept dry by a course of slates through them at the level of the ground. English oak, though apt to split, is the best of all timber for agricultural buildings, but difficult, in some places, to obtain; the next best, therefore, and the cheapest in the end, is Baltic, and the worst, white or spruce deal. Wooden posts should rest on stone blocks, sloped every way from the bottom of the posts. External woodwork should be painted every three or four years, and all fences tarred. The cheapest, best, and simplest covering for roofs is the pantile or slate, according to the locality. The blue pantile at Trentham, the seat of the Duke of Sutherland, is made to have almost an Italian character.

Barn and large doors are simplest when they slide or hang on rollers, and most out of the way, but they should open in the centre. With ordinary large doors it is sometimes an advantage not only to open perpendicularly in the centre, but even to have them open in two heights; they hang lighter and last longer. All doors on hinges should be made to lie back flat against the wall, should be flush with the riser of the step, and have weather-boards, which together prevent the possibility of wet coming in at the bottom.

ON THE DRYING OF OILS FOR PAINTS AND VARNISHES.

An important paper was read at the Society of Arts on the 5th inst. by Mr. Christopher Binks, "On some new Methods of Treating Linseed Oil, and other Drying Oils, for Improving their Drying Properties, in their application to Paints and Varnishes." Want of space alone has prevented us from largely quoting from this paper, although we have already very fully treated of the subject in a series of articles in our volume for last year;* but we shall now extract the most important portion of Mr. Binks's paper, giving the main results to which he has been led by a numerous series of inductive experiments, undertaken without any reference to *à priori* theories or hypotheses, or rather in the face of these; but, as we shall endeavour to show, only confirming, in all probability, the truth of the researches (recorded in our last volume) by Chevreul, made some years since, and indeed, the empirical practice of the trade at large long before Chevreul's time,—advancing an important step, however, upon the results of these researches and of that practice, by an original discovery, of a kind (as we think) to whose true chemical nature Mr. Binks does not seem to have made any explicit allusion in his paper, wherein, on the contrary, he urges reasons for his results of the very opposite description to those of Chevreul and the trade, and to those, we suspect, which will ultimately be found to be the true reasons, after all, of Mr. Binks's own important results. These results and deductions are thus summed up:—

"Now, the practical results of this long course of experimenting were, first, the discovery of certain materials or forms of materials never previously so used, that exercise specific drying actions upon the oil. Next, to show how very few of all those resorted to experimentally exercise any drying action at all. Then to reduce even these few to two or three, whose properties fully admit of their use for all practical purposes; and, finally, to demonstrate what the kind of action really is that thus issues in the solidification of the oil.

It was discovered that the *hydrated protoxides* of certain metals pre-eminently exercise a specific drying action on

* *Vide* vol. xiii. pp. 109, 193, 243, 373.

he oil. That it proceeds in the *cold* with sufficient rapidity to render the aid of heat not necessary, though the application of heat quickens, and is expedient in the operation. The hydrated protoxides of iron, of nickel, of cobalt, and of manganese, are the most remarkable of the class; but it is through the latter (*i. e.* the *hydrated protoxide of manganese*) that all the singular and happy effects upon the oil are to be practically accomplished.

Linseed oil in its normal condition—*raw* oil—does not dry *per se* under fifty hours. In this, its normal state, it appears (as it may be expressed) to exercise a certain power of resistance against external influences, that would tend to disturb its equilibrium, and transform it from the fluid to the solid state. It yields to these influences only after a few days' struggle, as it were. Now the hydrated protoxides, just mentioned, by mere contact with the oil in very minute proportional quantities, at once break through this state of equilibrium, or power of resistance, and the oil thereupon begins at once to dry; that is, this contact *initiates* the action or series of actions, or removes some obstruction against their exercise, and these then proceed with all the rapidity that unimpeded external or internal influences are capable of. This peculiar action of these hydrated oxides is analogous to, but by no means chemically identical with, that of *fermentation*, that with saccharine matter is *initiated* by addition, in minute quantity, of the fermenting agent, and which then, without further addition, proceeds to completion. The addition to the oil of only from 3 to 5 parts of the hydrated protoxide of manganese to 1,000 of the oil, gives birth to these peculiar changes; and by the simplest of methods of after treatment, this chemical fact is made applicable to the production of any required kind of drying oil.

It is scarcely necessary to remark that this *hydrated protoxide* is, in every respect—in its mode of application, action, and results—different from the old *peroxide*, which at ordinary temperatures exercises no action whatever upon oil. Whilst the latter is used to *give* oxygen to the oil, the property of the former is to *abstract* it. The protoxide is a powerful deoxidising agent; and had the writer been guided by the old theory of *giving* oxygen to the oil, the hydrated protoxide would never have been tried, nor, probably, these curious results obtained. The manganese protoxide is selected out of the others having a similar specific action, because of the peculiar property it alone has, conjointly with its powerful drying action, of *bleaching* the oil finally. The iron oxide gives to the oil a permanent brown stain; the cobalt, a reddish; the nickel, a greenish tinge; and the manganese oxide is readily and cheaply obtained through the medium of the beautiful rose-coloured salt, the crystallised sulphate of manganese."

In this account of his "Results and Deductions," however, there is, strange to say, a very remarkable omission, which Mr. Binks afterwards proceeds to supply under a new heading,—that of the "Manufacturing Arrangements and Products." The omission in question is to the effect that in the manufacture there must be "a contrivance for passing into the oil *a large volume of atmospheric air sent into it by a double-actioned air-pump*." If this be not for the purpose of oxidizing the oil, what *is* its chemical purpose? Mr. Binks himself admits "the necessity of reactions with oxygen," but the simple question which presents itself here is just this,—*is* the oil oxidized by the process, or is it *not*? And surely this might have been ascertained by chemical analysis, of which, however, there is no trace, and without such analysis Mr. Binks's experiments are quite as empirical as those he charges against almost every one else. The reactions *may* be very complicated, as he imagines, but if oxygen *be* added to the oil it will finally speak for itself in the analysis; and, if not, the negative will be no less decisive, for not only will the oil *not* be oxidized, but, if we understand Mr. Binks aright, it is positively deoxidized, a supposition (as it still seems at best to be) which would be equally converted into a certainty or a fact by analysis of the oil before and after Mr. Binks's process was applied to it.

It is a circumstance quite remarkable that *the* substance beyond all others used, which Mr. Binks has proved inductively to be the best for drying linseed oil, should be an oxide of manganese; for Chevreul, too, found that *an* oxide of manganese could be "used with great effect," and *that* oxide of manganese has long been well known and used as a drier. This we say is remarkable, and, what is more, is greatly to Mr. Binks's credit as an original experimenter and a stern and true inductive philosopher, inasmuch as there may be said, metaphorically speaking, to be all the difference in the world between the two oxides of manganese so used. The oxide of Chevreul and the trade is the peroxide, which readily gives up a certain quantity of the superabundant oxygen perched loosely upon it, while the oxide of Mr. Binks is the protoxide, which may be said, on the contrary, greedily to devour oxygen, or absorb it *from the atmospheric air* and various other substances. Mr. Crace Calvert, in a communication to the *Journal of the Society of Arts*,* claims for Chevreul the use of "oxide of manganese" as "the very substance" Mr. Binks "recommends to impart to linseed oil rapid drying properties," whereas it must be admitted that it was the peroxide of manganese which Chevreul treated of as an oxidizer of the oil, not its protoxide; and the difference in power and property between these two is so great as to countenance Chevreul on the one hand in attributing *oxidizing* power to *his* oxide, and Mr. Binks on the other, *à fortiori*, in ascribing *deoxidizing* power to *his* oxide. But if it can be shown to be at least *probable* that both oxides may have really the same kind of influence on the oil (the result being similar), with this difference, that the protoxide is the more potent of the two, we shall of course have gone far to clear away all obscurity and difficulty. Now, if both *do* exercise the same sort of influence on the oil, we cannot see how that influence can be a deoxidizing one, inasmuch as the peroxide probably contributes oxygen to the oil, and at all events cannot withdraw oxygen from it or deoxidize it; whereas, on the other hand, we *can* see (as we shall now endeavour to show) how the influence even of the *protoxide on the oil* may also be an oxidizing one, *although its influence on the large quantity of atmospheric air mixed with the oil must be a deoxidizing one*. There is a chemical process of modern discovery called catalysis, which has been thus explained in just such cases as this:—The catalytic agent, in a case of this kind, to be an oil oxidizer, *must* be one with a pretty strong *affinity for* oxygen, but so *modified by its position, while lubricated by, or solved or suspended in, the oil*, that, on the one hand, as it absorbs oxygen from the infused air, on the other it will hand it over to the oil, thus, it would appear, favourably placed for undergoing this oxidizing process, by aid of the oxygen-condensing power of the drying or oxidizing agent; the manganese at same moment, by a renewed play of its affinities, resupplying its own requirements, by condensing and re-absorbing another doze of oxygen from the infused air, only to be also handed over to the oil, while it simultaneously replaces this condensed doze also from the air, the final result being, that the protoxide, while it has powerfully aided in the combination of a large quantity of oil with the oxygen of the infused air, remains in *statu quo*, or, at least, issues out as the deutoxide, a minor one even still to the peroxide; and, moreover, that a small quantity of this oil-oxidizing agent will suffice to *hand over* an immense quantity of oxygen, or to oxidize an immense quantity of oil, notwithstanding the relatively small quantity of oxygen at any one moment existent in itself, or even the positive and strong tendency of the metallic base of the oxide to absorb rather than to contribute oxygen. This, we say, is a free but strictly accurate account of what a catalytic agent is chemically believed to do in certain circumstances similar to those in question, but the only allusion which by any likely mode of interpretation can be construed into a recognition of catalytic action by Mr. Binks is what he says as to its being like a fermentative process. Now, the catalytic action has been compared to and even regarded as a fermentative process, but let us remember that in this case that fermentative process is only or best explainable as an *oxidous* fermentation, or a process whereby the oil in "drying" *is* OXIDIZED, in strict accordance with the orthodox and longstanding belief of the trade, as well as with the elaborate experiments of Chevreul,—*not* DEOXIDIZED, according to Mr. Binks's new but heterodox idea. His own idea of a *fermentation*, therefore, militates much rather against his own conclusion than in its favour.

* Wherein he complains that Mr. Binks did not refer to the series of articles in our pages on the drying of oils, which series he most erroneously terms an extract from his own lectures

"FROZEN OUT."—A SANITARY HINT.

WINTER will soon be coming upon us with much sharpness, and suggests some consideration which might be usefully attended to. When "John Frost" asserts his authority, the frozen-out gardeners and watercress-women are not the only sufferers, for in the large districts of the metropolis, hundreds of families who have at ordinary times a fair supply, are downright water starved; and thinly-clad women and children may be seen wending their way to some temporary plug, in the hope of getting a precarious supply. It is barely necessary to hint at the annoyance and inconvenience of being without this necessary of life under any circumstances; it becomes, however, in many instances, dangerous, when the ordinarily-constructed dwellings are occupied by several families, and become "frozen out."

Now, although it might not be at first thought so, it is certain that amongst populations which are thickly packed, and poor, the necessity of cleanliness (an object which cannot be attained without plenty of water) is as nearly as necessary for the health of both old and young as during the summer months; for during the hot weather people will, if the atmosphere become too close, open a door or window, or have a broken square unpapered up, or by some other means let in a little breath of air. But when winter comes the dwellings of the ignorant and poor, and also some of those who ought to know better, are regularly barricaded. It is true, that in some instances the greatest amount of industry and ingenuity, and the application of old hats, straw, and old newspapers pasting, &c. fail to the cracks and rents of some houses, which still remain, but which, however, are disappearing. In these instances the places are ventilated in spite of the tenants; and strange as it may seem, the actual improvement of dwellings, without attention to those sanitary rules which one might have hoped would have been by this time better understood, and more generally applied.

The writer of this has taken an opportunity of lately visiting some localities where the houses, new and smart outside, show condition internally to cause alarm. In some instances working men occupied three rooms, probably a couple of kitchens and place above. In summer time the numerous little children are separated and spread about; when cold weather comes, the mother fears that they will catch cold, and the beds of the whole are huddled into one room, the door of which, and also the window, is bound with leather or list, and in some instances the chimney is probably stopped up, and no means are allowed for the admission of the necessary element of health, life, and strength. There are generally other families in the same house, who adopt similar precautions against "Jack Frost" and the north-east winds, and then think cosily "that their doors are all closed and their windows all barred," and that the pinching enemy has been set at defiance, forgetting, or not thinking that they are raising in the garrison a more dangerous enemy than without the walls, which might readily, and would be, in some cases, certain to strike down old and young.

We mention this feeling, from personal observation that great necessity exists for doing so, and earnestly urge on our readers the necessity of cautious and common-sense arrangements, and to impress upon landlords the need there is for having all staircases, and as far as practicable the rooms of such houses as above referred to, vigorously ventilated.

To return, however, after this long digression to the "freezing out," no one will for a moment doubt, that in addition to the shutting out of the air and overcrowding, that the stopping of the water supply cannot fail to add to the evil: the washing-day is put off, and linen, &c. stored dirty in close closets, &c. and it becomes a matter of difficulty to get the children, floors, &c. attended to as usual. In ordinary health this is bad, but when sickness and death are in a house, the need of these remarks is more evident, and their truth will be recognized by many a district surveyor and London missionary.

It is doubtless very important to avoid being "frozen out," and yet it is extraordinary how little of the commonest precaution against a matter which causes the ill effects above alluded to, and also causes the stoppage of drains and water-closets.

Plans to prevent the blocking of the main and other water-pipes with ice, and all the expenses and inconvenience of these bursting, &c. have been already referred to in the *Builder*, and yet little or nothing practicable, so far as we are aware, has been done by the great water companies.

In the Model Building in Bloomsbury, the water is carried quite to the top of that build-

ing of five stories high, and along the outside walls, and yet we are told that during the years since this large place has been finished, the water supply has never failed, though nothing can be less costly and more simple than the means used to exhaust the pipes from all the water in frosty weather after the cisterns have been filled. This operation is performed by a tap, which, after the water has been turned off, allows all the liquid in the pipe to escape and this does not occupy the person having charge of the place a couple of minutes each time.

At Clark's-buildings, and some other houses belonging to the same association as that mentioned above, the pipes have been passed for very long distances above the exterior walls, but they have not been left without care; in part they have been covered with a cheap wrapping of a kind of felt, which, when necessary, is still further protected by a boxing, of about 3½ inches square, filled with sawdust; and this defence which, in ordinary houses, would cost only a very small sum, has been found quite effectual: even a twist band of straw would, in many instances, prevent the freezing out. It unfortunately happens, that in these houses, where precaution is most necessary, that one of the people say, "It's not my place to trouble myself with the water;" and then another says the same thing, and so what is important to all is left neglected. We think, however, that in houses which are let to various tenants, the water, which is as necessary as the daylight, should be protected by the persons who receive the rents. It is, however, not every one who knows how to set about this matter, and would venture to hint, that some ingenious men, who may be thrown out of employment by the hard weather, might pick up a crust by preventing the unpleasant effects of being "frozen out."

CHURCH-BUILDING NEWS.

Norwich.—The contract for benching the nave and aisles of St. Peter's Mancroft in oak, as in the chancel and its aisles, has been taken by Mr. Ringham, of Ipswich, at 555*l.* The tracery and carving will be done at a future period. Messrs. Morgan and Phipson are the architects.

Ingoldisthorpe.—The chancel of this church has recently been entirely pulled down and rebuilt. The tracery fronts to the seats are copied from the old, a small portion of which remained. A new roof has been added, with wall-pieces, shafts and bases resting upon carved stone corbels,—figures of St. Michael (the patron saint), the four evangelists, and angels. The windows are filled with green cathedral glass. The east one, of five lights, is to be filled with painted glass by O'Conner. An enriched sedilia in Caen stone has been fixed, having the emblems of the passion carved on shields in trefoils. The floor is laid with Staffordshire blue and red tiles; the portion within the altar rails of Minton tiles in various colours, arranged to a pattern. The works have been carried out by Mr. Brown, of Lynn, under the direction of Mr. G. E. Pritchett, of Bishop Stortford, at the cost of nearly 800*l.* exclusively defrayed by the Rev. W. Beckett. A rectory-house is in course of erection, at the cost of the same gentleman, who has also offered to contribute largely to the restoration of the nave of the church.

Oxford.—The restoration of the chancel of the church of St. Peter-in-the-East has recently been completed. The most serious defect for the architect (Mr. Buckler) to contend with, was the gaping fissure in the south wall, commencing at the floor, and passing through the Norman window, which was weakened many years since by being cut down nearly 2 feet through the thickness of the wall. The windows of the crypt, in course of the improvements, have been released on the outside from heaps of earth and masonry, which had injured the walls and obstructed the light. An arched aperture, for the admission of light immediately over the altar in the crypt, has been reopened. The restorations have been executed by Messrs I. and W. Fisher, of Oxford.

Haywards Heath.—The *Brighton Gazette* announces the opening of the new church at Hayward's Heath on Tuesday in last week. It is of the Early Decorated style, and was designed by Mr. G. F. Bodley, of Brighton. The general walls are of sandstone; the dressing of Scaynes Hill sandstone; and edgings of the windows and doors of Bath stone. The exterior roofing is of tile, and nearly equilateral in pitch, and the interior of rafters, of foreign deal, stained and varnished. The building was erected by Messrs. C. and E. Newnham, of Hayward's Heath, under the superintendence of Mr. Holloway, and, with interior fittings, cost from 1,100*l.* to 1,200*l.*

Swansea. — St. Peter's Chapel-of-Ease, the foundation stone of which was laid on Whit-Monday (12th May) last (and of which we gave a description at the time), was opened by the bishop of the diocese, on Monday in last week. The building has been erected by Mr. Joseph Richards, of this town, from the design, and under the superintendence of Mr. R. Kyrke Penson, of Swansea, architect. The total cost of the whole building, boundary walls, and entrance-gates, &c. amounts to about 1,500*l.*

Blaenau. — The new church at Aberystwith, has been opened. It stands on the site of the destroyed edifice, near the Blaenau works. The architect is Mr. John Norton. The style is pure Norman, and it is rigidly observed throughout the entire building. The plan comprises a nave, 53 feet by 22 feet 6 inches; north and south aisles, from the latter of which projects an entrance porch: a tower, which is 22 feet square, stands at the east nave, and forms an intersection of the transepts, by projecting from it north and south. The tower is 72 feet high from the ground, and it will be surmounted by a lofty spire of Bath stone (now in course of erection by Mr. Farmer, of London). The roofs throughout are open, the wood used being stained deal: they are lofty, and are externally covered with stone tiling. A centre chancel window was presented by the architect, the subject being the "Crucifixion." This window, with two others in the chancel, of stained glass, is by Bell, of Bristol. The west windows of the nave are of thick ornamental diapered glass, by Messrs. Powell. The stone which has been used is that from Llangattock quarries, and said to be hard and durable, requiring about three times as much labour in dressing as Bath stone; and the roof, apse, and chancel are domed with embossed stone. The church is capable of accommodating between 500 and 600 free. It is warmed by hot-water apparatus, erected by Messrs. Hayden, of Trowbridge. The estimated cost of the church was 4,000*l.*

Leek.—At a meeting of the Leek Improvement Commissioners, they considered the minutes of the Cemetery Committee, who had received plans and estimates, for the laying out of the cemetery, from Mr. Davidson, of London, whose estimate was 680*l.* and 50*l.* for commission and journeys; or for a stone and railed wall north and south, instead of holly, 94*l.* in addition;—from Messrs. Lynam and Rickman, of Stoke, who had sent a model of the grounds as they proposed them: their estimate was 1,758*l.* and a reduced estimate 1,340*l.* or, with catacombs, 1,900*l.*;—from Mr. Dale, the commissioners' surveyor, whose first estimate was 1,450*l.* and reduced estimate 1,087*l.* or, with park palisades for fence, 787*l.* The chairman also opened a letter from him containing a fourth estimate; but it was thought not right that he, having had access to the other estimates, should be permitted to alter his own according to the amount of the others. The minutes of the Cemetery Committee were approved, and the plans and estimate of Mr. Davidson adopted.

Barnsley.—The new Congregational Church here has been recently completed, and opened for divine service. The style of the building is Early Decorated. The front contains a four-light window, with a three-light on each side of it; the whole under one label moulding, and giving the appearance of a window with ten lights. Above them, and divided from them by an enriched string, is a circular window, contained in a spherical triangle, with columns, &c.; the gable finishing with an ornamental finial. The centre window, consisting of ten lights, is of stained glass, grisaille pattern, relieved with rich medallions of ornament; the whole surrounded by coloured borders. The side lights are similarly treated; also containing texts of Scripture. The tracery lights are filled with rich ornament of geometric design. The whole of the glass has been executed by Messrs. Pilkington, of St. Helens. At the front of the building are the tower and spire, attached to the main gable of the nave, and divided into four stages; the lowest having an elaborate doorway, surmounted by a crocketed pediment, terminating in a rich finial. The topmost stage is pierced with two windows of two lights each in either face, and the tower itself finished with canopied pinnacles, rising up from the angle buttresses at each corner. The spire springs from this, and, with the exception of two tiers of spire lights, is kept quite plain, depending more for effect on outline, than enriched detail. The height of the tower is 73 feet, and to the top of the vane on the spire, 167 feet.

Alnwick.—The consecration of the episcopal part of the new cemetery took place on Thursday in last week. The chapels are in the Gothic style, of thirteenth and fourteenth centuries, the episcopal being decorated. The cost of the chapels, gateway, and lodge was 300*l.* Mr. F. R. Wilson, resident architect of Alnwick Castle, was the architect; and Messrs. Armstrong and Hudspeth, the contractors.

INSTITUTION OF CIVIL ENGINEERS.

On the 16th the annual general meeting was held, Mr. G. P. Bidder, Vice-President, in the chair. In the report of the council for the past session, which was read, some few of the foreign works in progress were noticed; mentioning particularly the successful opening and the extension of the East-Indian Railway, under Mr. Rendel, the late distinguished Past-President of the Institution.

On the continent, gradual extensions of all the main lines were being made. The Lombardo-Venetian system had been transferred to a powerful company, now preparing to act with great energy in the prosecution of their plans. The Victor-Emmanuel" line, under the direction of Mr. Bartlett, M. Inst. C.E. acting for Mr. Brassey, Assoc. Inst. C.E. the contractor, was approaching the chain of the Alps, for the traversing of which preparations were being made, and experiments upon the machinery for the work of tunnelling on a large scale were being tried. That portion of the line from Aix-les-Bains, passing through Chambery to St. Jean de Maurienne, upwards of fifty-five miles in length, was opened for public traffic last October. The works were originally laid out by, and to a great extent executed under the direction of, Mr. Nieumann, who was succeeded last year by Mr. Ricceo, under whose supervision they were now carried on.

The statement of the receipts and expenditure showed that there was a balance of upwards of 700*l.* in the hands of the treasurer, and that the financial position was very satisfactory, so that not only would the current expenses be easily met, but a balance would remain to bring up any arrears of publication, or to provide for contingencies.

The following gentlemen were elected to fill the several offices on the Council for the ensuing year:—Robert Stephenson, M.P. President; G. P. Bidder, I. K. Brunel, J. Hawkshaw, and J. Locke, M.P. Vice-Presidents; W. G. Armstrong, J. Cubitt, J. E. Errington, J. Fowler, C. H. Gregory, T. Hawksley, J. R. McLean, J. S. Russell, J. Whitworth, and N. Wood, Members; and R. W. Kennard and Sir Macdonald Stephenson, Associates.

At the previous meeting, December 9th, a paper "On the Laws of the Strength of Wrought and Cast Iron," by Mr. William Bell, was read: to this we may look on another occasion.

Proposed Bridge across the Mersey.—At a recent meeting of the Liverpool Dock Committee, a communication was read from Mr. James Coey, describing a plan by him for improved approaches to the pier. He proposed to erect a bridge across the Mersey, of six spans of 521 feet each, and at a level above the pierhead of 125 feet, to connect the London and North Western Railway with the Chester and Birkenhead Railway, the rail on the Liverpool side of the river to be carried on to the top of a pile of granaries ending at Roscoe-street, where a tunnel could be formed to Edge-hill. Mr. Coey supplied no estimate of the cost.

THE PAST AND FUTURE OF PICTURE GALLERIES.

WHEN, towards the end of the seventeenth century, with other manifestations of languor and decay, the great *picture schools* of Italy dispersed and ceased to exist, pictures began to make their peregrinations; and thus, amongst others, the fine Venuses of Titian, Guido Reni, and Palma, came to Dresden. Before that time, there existed no picture galleries, to be so called; and there are yet voices rising against them, as not conducive to the advancement of art. Pictures, as every art-work, possess a character of *individuality*; and as no individual can adapt himself entirely to another, pictures also, congregated in the same place, combat, as it were, each other; and the general beholder often is seized with a sentiment of confusion and satiety, very antagonistic to art contemplation, and art enjoyment. There is certainly an arcanum against this mind's plethora, but it is resorted to but by few. It consists in singling out each time only one or two pictures, and to confine our contemplation to them.—Still, by what could picture galleries be replaced? A picture is a produce of the time and locality where it arose, and resembles in that respect a plant, which we cannot, without impunity, sever from its maternal soil. A picture, fancied in its analogous position, is quite another thing, then, if placed in a picture gallery. How many things are wanted here, which accompanied it there—explained it, completed it, and surrounded it with an historical glare; thus making it a whole of associations and sentiments. All this is wanting now. No race of men is more capricious than that of artists, and as capricious are their productions. To properly appreciate a picture—an art-work—we ought to know, where and when, and how it arose, how the artist lived and worked. This we can only know, by carrying back the picture to the place where it arose, and for which it was made (!); and here a variety of the tenderest emotions will burst on our mind. We will become aware, that *this* picture once adorned the high altar of some huge cathedral, the other the more modest refectory of a convent, mountain-girt, where the artist had received shelter, hospitality, solace; or that it was made for the banqueting-hall of some eminent man. In a gallery all those recollections are lost, and, with them, a great amount of the pleasantest associations of thought and reverie.

But as galleries *do* exist now-a-days, the question arises, according to what rules and principles are they to be classified and arranged? Generally speaking, pictures have been arranged in galleries *historically*, and there is some good in that sort of arrangement. But we may fancy another system of picture-arrangement in galleries, and this would be one according to the *subjects* treated and represented. Not all historical or ethic matter is of equal pregnancy and richness. There are, as it were, large historical market-halls, where painters obtain most richly their supply of subjects and ideas. Such is the period of the old Hebrew prophets and sages, the myth-time of ancient Greece, the period of old Roman republicanism and virtue, the beginnings of Christendom;—in fine, that marvel of history, the fifteenth, and partly sixteenth century, that age of men with great souls and minds. And then comes the different treating of such subjects. It is, for instance, exceedingly interesting to reflect, how differently the myth of Leda has been seized and represented by painters of the various art-schools and nationalities; how a French, a Spanish, a Venetian, or a Netherland painter will represent it. Equally striking is the representation of the Mother of Christ by various painters, from the dark banditti-bride of a Velasquez—the dry, consumptive old maid of Cravach, the fat, fair kitchenmaid of a Rubens, up to the ideal, luminous face of a Raffaelle, which has more of the angel than the woman! What diversity, what chaos of ideas and lineations in their different seizings of the same subject. Still, however plausible such an arrangement may appear in *theory*, it hardly would be carried out practically, at least not to any extent. But whatever *is* right in theory, *is* capable of being carried out, *at least* to some extent; and this has been done, of late, in the Dresden Gallery, by the isolation of a few such pictures as stand on the pinnacle of beauty and excellence! Thus, the incomparable Sixtus Madonna has been placed in a *separate* cabinet, and there are persons who, for a fortnight, day after day, come to pass an hour or two in nought but the contemplation of this great conception of the Urbinate. They are right!

PROVINCIAL NEWS.

Nottingham. — Besides the ninety model dwellings of three several kinds, erected by Messrs. C. C. and A. Dennett, under the supervision of Mr. J. S. Norris, architect, and which did not, it seems, solve the problem of providing improved dwellings for a numerous class with small means, Mr. C. Paget, M.P., and Mr. L. Heymann, according to the local *Guardian*, have had fifteen cottages erected in the neighbourhood of Robin Hood-street. On the ground-floor, says a writer who inspected them, are a living-room in front, with supply of gas, and a small kitchen at the back, both provided with ovens and boilers, and the latter having a sink-stone with water tap over. A coal place is constructed under the stairs, and a small pantry adjoins. Three good sleeping rooms are obtained above the ground-story, well lighted and ventilated; and each house has its own back-yard, with out-offices, &c. A back-entrance passage skirts the bottom of the yards, and communicates therewith; and in this is contained, under cover, a rain-water pump, with cistern underneath, for the joint use of the occupiers. The rent of each house is 3s. 6d. per week (free from rates and taxes), which yields, although not a high, yet a fair return, for the capital invested. The houses externally have a substantial and attractive appearance, and are finished, both within and without, with an attention to various matters of detail, domestic convenience, and economy, not always found in dwellings of this class. The buildings were designed by, and executed under the supervision of, Mr. J. S. Norris, and the contracts have been executed respectively by Mr. James Acton, and Messrs. Dyer, Bell, and Wood, builders.

Hull.—St. Mary's (H.C.) Schools, Hull, are situated at the junction of Wilson-street and Dansom-lane, and consist of the school buildings and residence for the master. The school buildings comprise a school-room, 90 feet by 30 feet, with a class-room at each end of the school-room, 20 feet by 16 feet. The roofs of both school-room and class-room are open timbered, and are constructed of American red pine, wrought, stained, and varnished. The walls of these buildings are 18 feet high, but the roofs being open, and of high pitch, the school-room has a total height of 43 feet. The walls are constructed of brick, with red stock brick facings and stone dressings: they are 18 inches thick, and have buttresses between each window. The roof is covered with slate, and has a bell-cot rising from the ridge to a height of 16 feet. The floors are boarded. The building is heated by hot water, the pipes being laid round the whole of the building, and the heat admitted through ornamental grates laid in the floor. Fresh air is admitted from beneath the floor, the impure air being removed by eleven ventilators fixed in different parts of the building, in addition to the ventilation provided for in the bell-cots, or by means of an open fire-place. The schools being intended for both boys and girls, separate entrances are provided. The porches on the street front are 10 feet square: those on the north side, and opening into the play-ground, are 10 feet by 11 feet. The works have been executed by Hull tradesmen, as follows:—Mr. C. R. Morehead, bricklayer and plasterer; Mr. R. Wilson, mason; Messrs. Dawber and Son, slaters; Mr. T. Sissons, carpenter and joiner; Mr. Wm. Appleyard, plumber and glazier; Mr. Wm. Waroall, painter; Mr. J. Wilson, ironfounder and smith; Mr. S. Stones, gasfitter. The total cost of the building, inclusive of the land and fittings, will be about 2,600*l*. The buildings, which are in the Early English style, are from the designs, and have been erected under the superintendence, of Mr. D. Watson Aston, architect.

Liverpool.—The dock committee are said to have now under consideration a plan prepared by Mr. Hartley, the dock surveyor, for an immense graving-dock at the north-east end of Prince's Dock, on the site of the slate yards. The proposed dock will not at all interfere with the Prince's Dock basin, as the entrance to it will be through the north-east corner of Prince's Dock. The extreme length of the dock will be 700 feet, or large enough to accommodate three ships of 2,000 tons' burden.

THE NEW STREET THROUGH SOUTHWARK.

IT is notorious to all who travel through High-street, between St. George's Church and London-bridge, that the traffic is almost as often obstructed there as in the most crowded parts of the City; and it is obvious that the proposed new street opening into High-street, by relieving the bridge, will in the same ratio increase the number of vehicles in High-street.

To obviate this difficulty, I suggest that the traffic between the London-bridge railway stations and the new street should be carried over and cross High-street by means of a viaduct leading direct to the south-west point of the stations. By this plan the "circulation" of vehicles between the City and the Borough would be uninterrupted by the cross and confluent traffic which must pour into High-street by the new opening. VIATOR.

AN observation in your paper (page 679), beginning "New street in Southwark," shows something of your opinion of the proposed line, and of your intention to make some observation thereon hereafter. I cannot doubt but your sources of information on this subject are abundant; but still there may be some points laid before you, that I presume would more fully explain the requirements and convenience of the public in passing through this locality.

My daily intercourse with the inhabitants of St. Saviour and Christ Church parishes furnishes me with ample opportunities of knowing the opinion of the inhabitants on this subject. I have prepared a plan of a line differing materially from the proposed line. I deal with the High-street somewhat differently to the proposed line, but arrive at the east end of Castle-street, nearly at the same spot. From thence, instead of going to Stamford-street, I draw a straight line from the east end of Castle-street, to the Obelisk in the Waterloo-road, at the east end of the York-road. This is as near as may be a mile long. I propose this road to be 50 feet between the curbs, with two footways of 12 feet 6 inches each, making together 75 feet. This line would interfere with no large or very valuable property in its course, and would pass on the north side of St. John's Church, in the Waterloo-road, laying the side of the churchyard open to the south side of the road. This line, extended about 300 yards westward, would bring you to the foot of the Hungerford-bridge, and then—suppose at some future period a bridge over to Scotland-yard, and from thence by an easy curve to the front of the Nelson Monument—this would relieve Oxford-street, Holborn, the Strand, Fleet-street, and many of the streets in the City, and would be an easy route from any part lying west or north-west of Charing-cross, to the Dover or Brighton Railways, or any place east of London-bridge. J. H.

I DO not like any of the plans now proposed. If you place a ruler on the map of London from London-bridge or York-street to Westminster-bridge, you will find that it cuts south of Rowland Hill's Chapel and along the New-cut. It is in my opinion bad policy, and creative of great injustice to make new thoroughfares when existing ones can be made available by improvement. The public will always take the shortest road, and the shortest is the straightest. Make a curve if you please from York-street to Union-street, where the Southwark-bridge-road crosses it: widen Union-street to the Blackfriars-road. The New-cut is already a good wide road in the right direction as far as the Waterloo-road, where it turns to the left; but if it were continued straight to the foot of Westminster-bridge, you would have the shortest, best, most convenient, most honest, and the cheapest line that could be made. TOOLEY-STREET.

COMPETITIONS.

Tamworth Union.— Several competitors complain they can get no answer to letters on this matter. Perhaps the Board will inform us what has been done.

THE ALMANAC OF THE ART-UNION OF LONDON.—Amongst the many popular works of the Art-Union of London is their waistcoat pocket almanac, which, with room for engagements, gives information on artistic subjects, meetings of societies, &c. not to be found elsewhere. Every subscriber is, we believe, entitled to a copy.

RECENT AMERICAN PATENTS.*

For Improved Devices in Carving Wood. Nelson Ruger, West Farms, N. Y. *Claim.*—1. The cutters, in combination with the bars, having arms attached to them, the arms having bars pivoted or jointed to their outer ends, to which the cutters and tracer are attached. 2. The bar placed on a rod, which is attached horizontally to the vertical bar; the ends of the bar fitting between the arms.

For an Improvement in Vehicle for Paint Compounds. Frederick Kulhmann, Lille, France. *Claim.*—The admixture of silicate of alkaline substance with a paint, varnish, ink, or dye (instead of using it in layers or coatings, as heretofore done), using, for the protection of the several individual colouring matters, such agents as are known to scientific or practical chemists.

For an Improvement in Furniture Polish. John L. Brabyn, City of New York. *Claim.*—The combination of muriatic and acetic acid with the usual ingredients of furniture polish, in the proportions and manner specified, for the purpose of producing a polish capable of resisting the action of hot or cold water.

For an Improved Clamp for Plumbers. F. R. Langwith, City of New York. *Claim.*—The combination and arrangement of the clamp box, the clamping levers (when either is used), and also, in combination therewith, the screws for adjusting the cock in a proper position during the process of soldering with the main pipe.

For an Improved Mortising Machine. Thomas R. Bailey, Lockport, New York. *Claim.*—The mandrel fitted in bearings attached to sliding-plates—one of the bearings being pivoted to the plate, and the other bearings allowed to slide on the other plate; the mandrel being vibrated laterally by the screw, worm-wheel, eccentric, pitman, and bent lever.

For an Improved Metal Pavement. Solomon B. Ellithorp, City of New York. *Claim.*—A metal block for pavements, formed of a series of groined arches, alternating in position, and connected to ridge or string pieces, with interstices between the arches to be filled with cement, gravel, or sand.

For an Improvement in Bake-Ovens. John P. Hayes, Philadelphia, Penn. *Claim.*—The heating flues, arranged so as to cause the products of combustion to pass from the fire-chamber below, first into the lower flue; thence behind its position, and out; thence, into the next flue above, and out; and so on through the successive flues which may be above, to the escape flue; the said flues being arranged on the two sides of the casing, and divided by the partition, and the products of combustion being directed thereby; together with the partition plates in the wall.

For an Improvement in Brick Machines. Henry B. Ramsay, Indianapolis, Ind. *Claim.*—1st. The wheel, cranks, and catches, in combination with the springs, for the purpose of regulating the stroke of the knives for cutting the clay at the top of the moulds. 2nd. The sliding mould table, for the purpose of raising the moulds to the grate under the clay-box.

For an Improvement in Brick Machines. Isaac Harman, assignor to self, and William Bickel, Tamaqua, Pennsylvania. *Claim.*—The moulds, composed of the two halves having any convenient number of angular projections and recesses, the points of the angular projections of one-half coinciding with those of the other half, the said moulds being caused to expand and contract.

For an Improvement in Machines for Sawing Stone in Taper Form. H. J. Behrens, City of New York. *Claim.*—Giving to a saw, placed in a line inclined to the line of motion of the saw-frame, a lateral motion independent of the motion of the frame, or at right angles to the line of motion thereof.

Books Received.

We are forced to postpone notice of a number of books which have been before us for some time;—Dr. Smith's "Classical Geography" (an admirable work); a new edition of Baildon on Rents and Tillages; Mr. Cross's useful little volume, "Landed Property,—its Sale, Purchase, Improvement, and general Management;" the seventh part of "The Dictionary of Architecture;" a new edition of Mr. Howitt's "Visits to Remarkable Places;" "The Early Flemish Painters," by Messrs. Crowe and Cavalcaselle; a new edition of "The Cabinet Lawyer," to enable every man, as Bacon wished, to know as much law as will enable him to keep himself out of it; and various others. To some of these we shall give early attention in our new volume.

* Gleaned from the numerous lists in the 'Journal of the Franklin Institute' of Pennsylvania.

Miscellanea.

Bishop Monument.—At a meeting of the committee appointed to erect a suitable memorial over the grave of Sir Henry Bishop, held recently, it was resolved, "That the next meeting of the committee be summoned as soon after the 31st instant as may be found convenient, and that designs for the monument be then submitted for the consideration of the committee."

Liverpool Architectural Society. — At a meeting of this society held on Wednesday evening, the 10th, Mr. E. H. Strype read a paper—"On the Study of Mathematics as applied to Architecture." Mr. Horner said, he fully appreciated the desirability of a division of labour as distinguished from generalisation, and added that the immense space over which science was spread was such, that each man could only grasp the surface, rather than go to any great depth. With regard to the relative position of architects and engineers in reference to scientific knowledge, he thought mathematics was too much neglected by architects, and they were much indebted to engineers for the admirable tables by which their labours were shortened in mathematical calculations.

Sale of Farm in Essex.—The name of Mr. John Tucker is familiar to some of our readers as an exhibitor of fat stock for many years past, at the metropolitan and provincial cattle shows. His farm-homestead, at West Ham Abbey, Essex, is said to be one of the most complete. It was sold by auction, by Messrs. Baker and Son, at the Auction Mart, during the past month; Messrs. T. Geere and Son, of Stratford, Essex, timber-merchants, being the purchasers for 3,200*l.* exclusive of the fixtures, which are estimated at 500*l.* more, making a total of 3,700*l.* which we are told, but cannot answer for it, is less than one-fifth of the sum originally spent upon it by Mr. Tucker.

Fatal Accident at Worcester Cathedral.—In course of procedure with the extensive works being carried on for the purpose of strengthening and restoring the edifice, an accident happened last week, being the second fatal occurrence at the cathedral within a few weeks. Three workmen on the south transept had raised a scaffolding to a height of 45 feet, and were occupied in raising it still higher: short poles had been fixed into the wall, and upon it were rested a number of planks forming the scaffolding: the men were at work upon this scaffolding when one of the supporting poles suddenly broke, and the poor fellows fell to the ground, the planks and other timbers falling upon them. One of them received fatal injuries (of which he died an hour or two after); another, a concussion of the brain and a broken leg and shoulder; and the third also suffered serious injuries.

Hatherop House.—We have been requested to say, with reference to the particulars we gave of this building, that it has been restored and enlarged, and not entirely rebuilt, and that, in addition to the sum named, 20,000*l.* a very large amount has been spent, and much work yet remains to be done. The amount stated, it appears, surprised some who happened to know that the sum of 20,000*l.* of trust money had been provided, and that private money to a considerable amount had been expended. The architect of the building, nevertheless, confirms the correctness of the statement in our pages that the sum spent under his supervision upon the building amounted to about 20,000*l.*

Drainage-Tenders, Bury St. Edmund's.—At a meeting of the local commissioners last week, a motion for opening the tenders for a portion of the main sewer, with a view to carrying the work thus far into execution, was carried by a majority of ten to four against a motion for delay till funds were provided, as suggested at a meeting of ratepayers previously held. The tenders being opened, were found to be as follows:—

Jos. Dierden, Barnsbury	£679
Edw. Pilbrow, Bedford-square	507
[Reduced 50*l.* by a subsequent letter, if no extra pumping required.]	
Thos. Docwra, Waltham Cross	420
Andrew Pretsell, London	420
Edward Thirst, Chelsea	409
H. Frost, Bury	350
Wm. Rednall, Bury	340
John Brewster, Bury	320
Thomas Farrow, Bury	279

Mr. Farrow's tender was accepted. It was agreed that Mr. Croft should act as surveyor, at 2*l.* 10*s.* per week, for six weeks. Mr. Burnell stated that in his estimate of 6 000*l.* for the projected works, he had allowed 2,000*l.* for the deodorizing process; and if Mr. Walker should succeed in his undertaking to deodorize the sewage of Rugby at his own charge, a large deduction might be made on this account; but as yet the process had not succeeded commercially, though it had in a sanitary point of view.

Relics from the Crimea in the British Museum.—Some antiquities of very great interest have been added to the national collection in the British Museum. These relics from battle-fields of the Crimea consist of Greek, Roman, and Saxon remains, found at Sebastopol, Kertch, and the adjoining neighbourhoods. Amongst those of Grecian date are vases of various shapes, material, and colour; sculptured figures, and fragments of tombs: the latter consist of carved flowered ornaments in wood, richly gilt, and elaborate cuttings in ivory, wall paintings (the tints very beautiful, particularly some of deep purple and red); there are also nails of coffins, fragments of dresses, &c.; the twined brass wires from garlands of flowers, &c. In the Roman part of this collection are numerous vessels of glass, of different sizes and shapes. One contains gold, and some of the others ashes, &c.; there are also broaches and other personal ornaments of gold, bronze, &c. The objects which have perhaps the greatest amount of interest to us are some antiquities of Anglo-Saxon date and workmanship, which show that in remote times, after the days of Greece and Rome, our ancestors had habitations on the same spots which have been occupied by our warriors during the recent war. Few can look upon these relics, which have been brought from a place which has on so many occasions and under such different circumstances been made a battle-ground, without feelings of interest. Not far from the Crimean antiquities are some painted bricks and other architectural fragments from Nineveh. We may mention, that great progress has been made in the arrangement of the gallery of Roman bronzes, terra-cotta, and other works.

Westminster-bridge.—I heartily thank you for the able article on the present state of Westminster-bridge. You say, why not proceed with the works at once?—why all this dawdling, sickening delay? Ah! why, indeed? says every one else who thinks at all about the matter; and I verily believe that if something is not speedily done, the old bridge will soon settle the question, and tumble into the Thames altogether, for it is fearful to behold its very insecure state. That other bridges are necessary, I entirely concur with you in thinking; but can a better site for one be chosen than the present old bridge? If a good reason existed for building one here one hundred years since, surely a far weightier reason exists now. And there is one thing, sir, you have not dwelt sufficiently upon, and that is, the condition of the unfortunate inhabitants at either end of the bridge. It reminds one of the fable of the boys and frogs: it may be fine sport to some, but here are we in a state of miserable anxiety and suspense, not knowing what to be at—with the greatest difficulty in letting apartments, or doing any good whatever, as every one is aware that the property in Bridge-street in particular will be required for the approaches. The very sound of this bridge is sickening: thirty years hatching and cobbling, Parliamentary committees and reports, bridge-doctors and heavy fees paid for professional services and advice—and what is the result?—the river scarcely navigable for a mud-barge at this spot, the three centre arches entirely blocked up, and a calamity almost imminent.—N. W. H. Rowe.

TENDERS

For fitting-up offices in Fish-lane, for the London Discount Company. Mr. Edmund Woodthorpe, architect. Quantities supplied by Mr. James H. Fox:—

Myers	£1,400	0	0
Browne and Co.	1,280	0	0
Sergeant	1,280	0	0
Ashby and Sons	1,264	0	0
Brass	1,228	0	0

For the erection of two warehouses in Old Change, for Mr. G. Andrews. Messrs. Tillott and Chamberlain, architects. The quantities supplied:—

Myers	£4,650	0	0
Brass and Son	4,596	0	0
Holland and Co.	4,397	0	0
Brown and Co.	4,080	0	0
Lindsay	4,080	0	0
Jay	3,993	0	0
Wallbutton	3,984	0	0
Ryder (accepted)	3,980	0	0

TO CORRESPONDENTS.

The Westminster Clock.—We have received a letter from Mr. Denison, in reply to a communication in our last, and will print it in our next. Several other correspondents must also excuse us for a time.

HYDRAULIC

PORTLAND and BATH CEMENTS.—These Cements are made from a NATURAL CEMENT STONE, by a method at once simple, certain, and efficient; and are totally distinct from the London artificial cements, which are made from a mixture of CHALK and CLAY, by a costly and complicated process, often producing errors in the manufacture, and consequent disappointment and loss. The HYDRAULIC CEMENTS can therefore be produced at a much less cost; and are THE BEST AND CHEAPEST CEMENTS IN THE MARKET. As there are various imitations of these Cements offered to the trade by other makers, while by some they are obtained through third parties, and mixed promiscuously with inferior articles, FULLWOOD THOMPSON and CO. beg to state distinctly that they are the ORIGINAL INVENTORS of these Cements, and that they alone possess the knowledge of the true and original process in all its details. F. T. and Co. therefore request that all orders and applications may be either addressed direct to them or to their AUTHORIZED AND ADVERTISED CORRESPONDENTS in all parts of the country.—The Bridgewater Portland Cement Works, Brigwater. December 18, 1856.—FULLWOOD THOMPSON and CO.

OBSERVE:—NO CONNECTION WITH ANY OTHER FIRM.

BATH, PORTLAND, and ROMAN CEMENTS.—The London and West of England Cement Company can offer to Contractors, Builders, and Others the best natural HYDRAULIC CEMENTS, at REDUCED PRICES. Bath Cement much recommended; the best quality for all modelling, cornice decorations, &c. Blue Lias Lime, ground and lump, direct from the kilns every day, per Great Western Railway, from whence it can be delivered alongside any part of the river Thames, canal, or any railway station, in London. Communications to be addressed to Mr. TIMEWELL, the Depôt, No. 3, Wharf, North Wharf-road, Paddington; or, Timber Wharf, Hampstead-road, Camden-town; or to Mr. MCNUMENT, 4, Carlline-place, City-road, or to the Works, Dunball, Bridgewater, Somerset.

11, George-yard, Lombard-street, City.

ELMLEY CEMENT WORKS.—ROMAN and PORTLAND CEMENT of the first quality, manufactured on the above works. Also STOCK and KILN-BURNT BRICKS, hand moulded and machine made, for shipment or otherwise.—Apply to G. BOOTH, Agent, as above.

SOUTHAM BLUE LIAS LIME DEPOT.
Glazed Stoneware Sewage Pipes
Brick, Lime, and Cement Merchants,
TATHAM and CO.
14, South Wharf, Paddington.

PORTLAND and BATH CEMENTS.
TATHAM and CO.
14, South Wharf, Paddington.

PARIAN CEMENT, reduced in price 25 per cent. This article is valuable for inside stucco, and especially for skirtings, for flooring on brick arches, &c. It takes paint in a few hours after its application on walls or laths, is without efflorescence, and may be papered in a couple of days. A finer quality forms a beautiful Scagliola, with any admixture of colours. Manufactured by FRANCIS, BROTHERS, Cement Works, Nine-elms, London.

CEMENT.—ROMAN and PORTLAND CEMENTS, and PLASTER of PARIS, manufactured by C. J. HILTON, can be had in any quantity, wholesale and retail, at his wharf, 6, Upper Thames-street, London; and also at the manufactory, Faversham, Kent.—N.B. These Cements supplied for shipment, on advantageous terms.

DAVIES and NORMAN,
CROWN WHARF, GREAT SCOTLAND YARD.
ROMAN and PORTLAND CEMENTS,
LIME, BRICKS, TILES, SLATES, FIRE GOODS, &c.
STONEWARE PIPES, PANS TRAPS, &c.
A Liberal Allowance to the Trade.

THE PORTLAND CEMENT WORKS, NORTHFLEET, KENT. Messrs ROBINS and CO., to whom THE PRIZE MEDAL WAS AWARDED in 1851, are prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes to which Cement is applicable. Orders received at Great Scotland-yard and at the Works.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL.—Light, Dark, and Portland Cements equal to any made. Manufacturers also, and Dealers in Plaster, Paris White, Mastic, Hair, Lias Lime Laths, Slates, and Slate Slabs, Fire-bricks, Grindstones, Chesnut Chimney-tops, ditto Vases, Ridging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Pozzolano.

JOHNS and CO.'S PATENT PERMANENT STUCCO WASH (perfectly non-absorbent), STUCCO, CEMENT, STUCCO PAINT.—CLARK and BENGOUGH, Manufacturers, Grand Surrey Canal Bridge, Old Kent-road. Office, 4, George-yard, Lombard-street.

PORTLAND and ROMAN CEMENT.
PLASTER of PARIS
Manufactured by J. M. BLASHFIELD, at Millwall, Isle of Dogs,
Warehouse, No. 1, Wharf, Paddington-basin.

CHARLES RICHARDSON,
3 & 6, SOUTH-WHARF, PADDINGTON BASIN.
COWLEY and KENT STOCKS.
PORTLAND, ROMAN, AND OTHER CEMENTS.
TAMWORTH GLAZED SEWAGE PIPES.
BLUE VITRIFIED BRICKS, COPINGS, PIPES, &c.

3 & 6, South Wharf, Paddington.

NOTICE.
CHARLES RICHARDSON takes the earliest opportunity of informing Engineers, Architects, Contractors, and others, that he is now being supplied GREAVES'S BLUE LIAS LIME per the Great Western Railway from Harbury to Bull's bridge and Paddington, from whence it can be delivered alongside any part of the river Thames, canals, or railway stations in London the day after it is burnt and ground, in any quantity, and at a great reduction in price.

All applications for prices and terms will meet with prompt attention.

N.B. Please observe the lime is ground at the works, not in London.

BLUE LIAS LIME.—Messrs. GREAVES and KIRSHAW having completed their Works on the Birmingham and Oxford Line of the Great Western Railway, at Harbury, are now prepared to supply LUMP and GROUND LIME of the best quality, direct from the kilns, to all the Stations on the Great Western Railway, Grand Junction Line, Portland, Bath, and Lias Cement.—Works, at Harbury, Stockton, and Wilmcote.—Office, at Warwick.

ATKINSON'S CEMENT, so long known and esteemed in London for plastering purposes, is a quick-setting Cement, that requires no coloring. Sold exclusively by JOHN BAZLEY WHITE and BROTHERS Millbank-street, Westminster; and Seel-street, Liverpool.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER, for internal uses. These well-known hard Stuccoes dry quickly, and can be painted upon within a few days.—Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

HUBBUCK'S PATENT WHITE ZINC PAINT,
The Permanent White of the Ancient Artist.

HUBBUCK and SON, the Original Manufacturers, are enabled, by their process, which is patented, to supply Pure White Zinc Paint at the price of White Lead. Neither heat nor tropical climes act upon it. It is entirely free from any poisonous or pernicious property. Those direful maladies paralysis and painters' colic, will be altogether avoided. The Powdered White Zinc may be had for grinding in Oil, and where it is used with Size, Varnish, &c. To prevent the prejudices existing against Zinc Paint, which the admirable article must otherwise produce, it is now sold by the Wholesale Paint dealers in Original Packages, each cask stamped, HUBBUCK—LONDON PATENT. And when so marked, the quality is guaranteed. THOMAS HUBBUCK and SON, the Original Wholesale Manufacturers, Paint and Varnish Works, opposite the London Docks, London.

N.B. OLD ZINC AND ZINC CUTTINGS BOUGHT TO ANY EXTENT FOR REFINING.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not vegetate in damp situations. Accounts of COMPARATIVE EXPERIMENTS on the strength of this and other Cements read at the Institute of Civil Engineers, to be obtained from the Makers, JOHN BAZLEY WHITE, and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

PORTLAND CEMENT WORKS, NORTHFLEET, Kent.—KNIGHT, BEVAN, and STURGE, Manufacturers only of first-class quality, for the home and foreign trade. Portland Cement is manufactured at these works with especial reference to its destination, whether for plaster-work, brick work, blocks for breakwater or metal work, or otherwise.—London Wharf Belvedere-road, Lambeth.

COLES, SHADBOLT, and CO. CEMENT and PLASTER MANUFACTURERS, LIME BURNERS,
Brick, Tile, Drain-pipe, Hair Lath, and Fire Goods Merchants
ST. JAMES'S and THORNHILL WHARFS,
Caledonian-road, London.

CHADWICK'S CEMENTS.—To Railway and Dock Directors, Gas and Waterworks Companies, Coal-Mine Proprietors, Builders, Contractors &c.—JOHN CHADWICK, Manufacturer of the Patent Lithic, Roman, and Portland Cements, is prepared to enter into contracts for supply of the above brands as that may favour him with their orders. The advantages to be derived from the above Cements, manufactured by J. C. over all others, are those of extraordinary hydraulic properties.—Samples and references may be had on application either at the Works, Ashton New-road; or the Warehouse, 5, Broomstreet, Shude-hill, Manchester.

NOTICE.
SOUTHAM HYDRAULIC BLUE LIAS LIME.
WILLIAM OLDHAM begs to inform those parties requiring genuine Hydraulic Blue Lias Lime, that he is prepared to deliver the best quality of ground and lump, into boats, at the Works.—Address, WILLIAM OLDHAM, Blue Lias Lime and Cement Works, Southam.

GREY STONE LIME WHARFS, 12, UPPER GROUND-STREET, Blackfriars (Surrey side), 7, NORTH WHARF ROAD, Paddington.
WILLIAM PETERS begs to inform the trade he is in a position to supply the best GREY STONE LIME in any quantities from the above wharfs, or per barge direct from the kilns.
Lerre Grey Stone, or Grey Chalk, free on board at Works, 1s. 9d. per ton.
Small ditto, ditto, 6d. per ton.
Barges loaded in a few minutes.
Woodham-hall Grey Stone Lime Works, on the Medway, near Rochester.

BLUE LIAS LIME.—CHAS. NELSON begs to offer to consumers a supply of Blue Lias lime direct from his Quarries in Warwickshire, the quality of which has been tested by several of the largest building firms in the metropolis and approved by them; and those who have favoured C. N. with their patronage during the last three years have always expressed themselves satisfied with his system of weighing or measuring the lime. When the lime is delivered by boat, the master has instructions to produce (on demand) the canal wagger's pass, by which the purchaser may know the weight delivered.—Orders addressed to the London Depôt, 16, South Wharf, Paddington. J. D. BLYTH, Sole Agent, will have immediate attention.—Quarries and Manufactories, Stockton, near Southam, Warwickshire.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings, of good and sound quality, constantly on sale at H. DODD'S, Brick-fields, which are only a quarter of an hour's walk from the City. H. D. earnestly requests purchasers to favour him with a visit, in order to inspect his stock, and to judge for themselves.

Malm Place, half washed Stocks, and Place Bricks, also on sale. These bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing.

Apply to HENRY DODD and CO. at the Counting-house, Hoxton Brickfield, Grange-walk, near the Regent's Canal Branch, Road-ma—

N.B Light-coloured Pit Sand of a proved quality constantly on sale, upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand.

BRICKS.—Mr. Rydon having made more bricks than he requires for the builders on his estate, Highbury New-park, would be willing to enter into arrangements with builders and others for supplying the choicest STOCK and RED BRICKS upon advantageous terms.—For particulars, apply at the Estate Office, Dell's Farm, Stoke Newington Green.

THE BEST HERTFORDSHIRE MALM SECONDS;
THE BEST WHITE SUFFOLK and RED FACINGS;
WHITE SUFFOLK PERFORATED BRICKS;
DEEP-RED RUBBER-FACED BRICKS
Also COWLEY and KENT STOCKS, in any quantities
J. EASTWOOD and SONS, Belvidere-road, Lambeth; and Surrey-canal-bridge, Old Kent-road, Surrey.
N.B.—Lime, Cement, Slates, Fire-bricks, &c. and all kinds of Building Goods.

BRICK-FIELDS, QUEEN'S-ROAD, PECKHAM, SURREY
(Within a short distance of the five bridges).
THE BEST MALM-CUTTERS, SECONDS, PICKINGS, and PAVIORS, in any quantity.
Also, STOCKS, of FIRST QUALITY.
J. EASTWOOD and SONS, Belvidere-road, Lambeth.

BRICKS of all kinds (clamp-burnt or kiln-burnt), Lime, Chalk, Chalk Rubbish for brick-making, Flints for building and pottery work, Pompry Loam, Whiting, Whiting Sand for asphaltic, Land Drain Pipes, Patent Drain Pipes. Gas Soil for brick-making, &c. &c. sent by barge from Messrs. MEESON and CO.'S works at Grays, Essex, to any part of the Thames, the various canals, the river Lea, &c. or by rail to any station on the London and Southend and Eastern Counties lines or any railway connected with them. Vessels of 300 tons can load along the wharves as they lie. At MEESON and CO.'S wharf and kilns, Bow-bridge, Stratford, Essex, the above-named articles can also be procured, as well as all kinds of fire goods both Welsh and Newcastle. Fire-clay, Flare-burnt Lime, and Marble and Temper Lime; and here lime is packed in hogsheads, casks, jars, &c. for exportation.
General Office—No. 12, GEORGE-YARD, LOMBARD-STREET.
Letters addressed to Grays Essex, will meet with immediate attention.

BRICKS.—A quantity of ARCH BRICKS, well made and hard burnt, for SEWERAGE PURPOSES, are now open to public inspection. They are moulded so as to work in with the ordinary sized bricks, and are capable of forming arches of from 4 feet to 8 feet in diameter. A saving of at least 10s. per 1,000 in cement and labour can be effected by their use,—while a single ring of brickwork will be as strong and more solid than a double course constructed in the usual way. Price 27s. per 1,000 cash on the ground. Malms, stocks, seconds, and a quantity of good place, at low prices. Agricultural draining-tiles of very superior make and hardness.—Address, Mr. LEVETT, Railway Brick and Tile Works, Ilford, Essex.—The works adjoin the goods' station of the Eastern Counties Railway, at Brentwood, where all materials are loaded into the trucks and forwarded thence to any station on the Eastern Counties lines.

UPHALL BRICKFIELD, ILFORD, Essex—WILLIAM HILL, late Henry Kilvington, respectfully invites Contractors, Shippers, &c. to inspect his superior STOCK of the undermentioned BRICKS, which can be purchased at the lowest market price, and can be put alongside any wharf in the Thames, or on board any vessel, viz.:—Malm Cutters, Seconds, Pickings and Malm Stocks, Paviours, Shippers, best Washed Stocks, Stocks, little second quality.
N.B. Orders received at 203, Whitechapel-road.

FIRE-BRICKS, LUMPS, TILES, &c. of every description, at HONDURAS WHARF, 74, Bankside, London.—JOHN NEWTON and CO. (seventeen years with James Newton, of Falcon Dock, Bankside, Fire-brick and Tile Merchant) GIVE NOTICE that the OLD ESTABLISHED BUSINESS and PREMISES carried on so many years by WM. WARD and CO. and solicit the patronage of Consumers, Gas Companies, Engineers, Builders, &c. Ramsay's superior Newcastle Fire-bricks, Retorts, Fire-clay, &c.; also Sanitary-pipes, Chimney-tops, Dutch Clinkers, &c. all at the lowest prices. Shipping orders executed with despatch

FOR
FIRE-BRICKS and GAS RETORTS
apply to

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 30, WHARF, Macclesfield-street North, City-road Basin. Secondly, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietor; and, thirdly, that the "FLAVORS OF THE JURIES," page 381, of the Great Exhibition, rank the Manufactories of our locality as "The Tileries," Tunstall, Staffordshire, as the first of the kind in the world.

PATENT TERRA-COTTA. Tracery for Parapets and Terraces, Mullions, Pinnacles, Moulded Bricks, Coats of Arms, Crosses, Label Mouldings, Friezes, Trusses, Vases, Balusters, Capitals and Bases of Columns, Various Facing Bricks, Coping, Kitchener and other Stinks, Chimney Shafts and Tops, and numerous other Articles, manufactured and by J. M. BLASHFIELD, in Patent imperishable Terra-Cotta, at Millwall, Isle of Dogs; and sold at No. 1, Wharf, Praed-street, Paddington-basin.

WINDOW BLINDS.—FULLER, BROTHERS, Manufacturers of every kind of Inside and Outside WINDOW BLINDS, and Importers of the best materials and workmanship, at the lowest possible prices. Builders and the Trade supplied. A List forwarded on application.—29, Charlotte-street, Blackfriars-road; and at Sydney, New South Wales.

WINDOW BLINDS.—TYLOR & PAGE, Window Blind Manufacturers, 104, New Bond-street, and 3, Queen-street, Cheapside, London, submit the following PRICES of WINDOW BLINDS, which they can recommend as being made in the best manner:—Venetian blinds, per square foot, 9d.; best holland blinds, on rollers, 6d.; best ditto, on spring rollers, 9d.; gauze wire blinds, in mahogany frames, 2s.; perforated zinc blinds, in ditto, 1s. 10d.; outside blinds of striped cloth, 2s. Transparent blinds in great variety. Engravings, with prices and discounts to builders and the trade forwarded on application, post free.

Private boxes and stalls may be secured, without extra charge, at the Box-office, Polygraphic Hall, King William-street, Charing-cross.

ROYAL POLYTECHNIC.—Patron, H.R.H. Prince Albert.—This Institution has for eighteen years continued to instruct and amuse the public.—The Christmas Lectures and Entertainments provided this year are on the most liberal scale.—1st. Entire New Lecture, by J. H. Pepper, Esq. "On Optical Illusions," illustrated with all the apparatus for which this Institution is so justly celebrated, every Tuesday and Friday, at Three and Eight. 2nd. The Lecture by J. H. Pepper, Esq. "On Fireworks," every Wednesday, at a Quarter-past Four and Quarter-past Nine, with increased illustrations by Mr. Darby; and in the evening, exhibition of "The British Bouquet," displaying in magnificent fireworks the portraits of her Majesty, Prince Albert, and the Royal Family.—3rd. Exhibition of the ingenious Juvenile Mechanics. Model Theatre, displaying every scenic movement, with novel machinery invented by Mr Freeman, who will illustrate his new system with the drama of "One o'Clock; or the Knight and the Wood Demon," accompanied with the whole of the original music by the Misses Greenhead; also the Ghost Scene from "The Corsican Brothers," and the mechanism of the Rising of the Ghost. Daily at Half-past Two and Half-past Seven. 4th. Mr Ingram will exhibit his astonishing Conjuring Tricks and Comic Delusions, every Monday, Thursday, and Saturday, at Three and Eight. 5th. An entirely new and beautiful Series of Views, by Mr. Glare, illustrating "The Traveller's Portfolio; or, Visits to Many Lands." Daily.—See Programme.—6th. Gratuitous Distribution, next Thursday (being New Year's day) from Twelve to Five and Seven to Seven, of thousands of beautiful ornaments, and hundreds of Mappin's pocket-knives, from the Great Christmas Tree. 7th. A second and most costly Series of Dissolving Views, designed by Mr Newman, and chiefly executed by Mr. Hine, illustrating "Ye Pitifull and Divertynge History of ye Blew Beard," with an original humorous description by Leicester Buckingham, Esq. late of the Panopticon. Admission to the whole, 1s.; Children and Schools, half-price.

TO WATER COMPANIES AND PLUMBERS

HIGH-PRESSURE COCKS & CLOSETS

The Health of Towns Commissioners having recommended the adoption of the high-pressure principle in all towns, WARNER'S HIGH-PRESSURE COCK is recommended as a Cock free from leakage, and applicable for all purposes and situations. Patent Closets and Basins with supply-valve for attaching direct to main pipes without a cistern, cocks, or wire

LEAD, IRON, and TIN PIPE

JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin-street London

PRIZE MEDAL, CLASS 2.

HIGH-PRESSURE VALVE COCKS.—LAMBERT'S PATENT.

These Cocks have, during the last five years, been extensively and most successfully used in many Towns under continuous high pressure, varying from 100 to 350 feet; their efficiency and durability is by experience established.

The Equilibrium Ball-valve is simple and certain in its action and is cheaper than the common Cocks now in use.

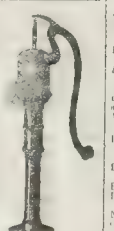
Enamelled iron, self-acting, and other closets, upon economic arrangements, suitable for public buildings, cottages, asylums, &c.

THOMAS LAMBERT and SON,

Brass and Iron Founders, Short-street, New-cut, Lambeth.

TO CAPITALISTS, BUILDERS, and BRICKMAKERS.—TO BE SOLD, by private contract, a FIVE HORSE POWER STEAM-ENGINE, together with other machinery used for the purpose of brickmaking. Also, TO BE LET, a valuable BRICKFIELD, at a rent and royalty, situate at Deptford, Kent, near to estates on which buildings are being rapidly erected. For further particulars, apply to Messrs. WIRE and CHILD, Solicitors, 9, St. Swithin's-lane, City.

CONTRACTORS' STEAM-ENGINES.—TO BE LET, on HIRE, or for SALE, several NEW and SECOND HAND STEAM-ENGINES, of various powers, suitable for contractors' work generally. Apply to Messrs. MEDWIN and HALL, Engineers, Surrey Iron Works, Blackfriars-road, where they may be seen.



PORTABLE STEAM-ENGINES and PUMPS kept in Stock for Hire at reduced Prices. R. RICHARDS and CO. Pump Manufacturers and Engineers, Upper Ground-street, Blackfriars-bridge (Surrey Side).

STEAM-ENGINES (Portable), to WORK WITHOUT MASONRY or FIXING, FOR SALE, or TO BE LET ON HIRE.—Messrs. MEDWIN and HALL have a large STOCK of these ENGINES, from 4-horse to 30-horse power, which have been successfully used by contractors and manufacturers for several years. They may be rented for any time required or purchased.—Apply at the Surrey Iron Works, 92, Blackfriars-road, where they may be seen.

WARNER'S PATENT VIBRATING STANDARD PUMPS. PATENT CAST-IRON PUMPS, for the use of farms, cottages, manure-tanks, and wells of a depth not exceeding 30 feet.

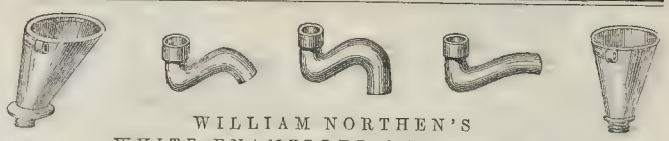
Diameter of Barrel.	Length of Barrel.		£ s. d.
2½ in.	short	1 ft. 7 in.	Fitted for lead,	1 10 0
2½ „	long	3 3	gutta percha	1 14 0
3 „	ditto	3 6	or cast iron	2 0 0
3 „	ditto	3 6	flanged pipe,	2 12 0
4 „	ditto	3 6	as required.	3 3 0
2½ „	short, with 15 feet of lead pipe attached, ready for fixing.....			2 14 0
2½ in.	long ditto ditto			2 18 0

The short barrel Pump is very convenient for fixing in situations of limited height and space, for the supply of coppers and sinks in washhouses with soft water from under ground tanks, or in hot, forcing, and plant houses; they may be fixed, when desired, under the stage.—May be obtained of any Ironmonger or Plumber in town or country, at the above prices, or of the Patentees and Manufacturers, JOHN WARNER and SONS, No. 8, Crescent, Jewin-street, London.—Every description of Machinery for Raising Water, by means of wheels, rams, deep well pumps, &c. Also, Fire and Garden Engines, &c. &c.—Engravings sent on application.

R. RICHARDS and CO. PUMP MANUFACTURERS and ENGINEERS.

Pumps in Wrought and Cast Iron and Brass, bored by machinery, and fitted in the best possible manner, suitable for excavators, roads, brickmakers, farms, gardens, stables, liquid manure, ships' forges, wells, &c. adapted for any depth. Hydraulic Pumps for deep wells

PUMPS ON HIRE.



Pumps of any size, single or double barrel, as the double 12-in. diameter kept ready for use at reduced prices

N.B. The above can be worked either by hand, horse, or engine power.

Iron Pails 38s. per doz. painted.
Ditto ..... 48s. per doz. galvanized

Upper Ground-street, Blackfriars Bridge, Surrey Side.

WILLIAM NORTHEN'S

WHITE ENAMELLED STONEWARE,

UNION POTTERY, 14, VAUXHALL-WALK, LAMBETH, LONDON.

W. N. solicits an inspection of his IMPROVED WHITE ENAMELLED STONEWARE CLOSET-PANS, being an entire new description of stoneware, perfectly vitrified and highly glazed, far surpassing anything of the kind yet offered to the public.

SAME PRICE AS BROWN STONEWARE—Closet and Trap, 5s. 6d.; Closet, 3s. 6d.; Trap, 2s.

WATER-CLOSET, WITH APPARATUS COMPLETE, for 13s. 6d.

DOULTON & WATTS,

LAMBETH POTTERY, LONDON.

DOULTON'S NEW ENAMELLED CLOSET-PAN, REGISTERED,

AND

TERRA-COTTA CHIMNEY-TOPS, FIRE-CLAY FLUE-PIPES, RIDGE & PAVING TILES, &c.

SALT-GLAZED STONEWARE, FIRE-CLAY, AND TERRA-COTTA WORKS,

NEAR BARNSLEY, YORKSHIRE.

The Proprietor, E. B. BEAUMONT, manufactures every description of STONEWARE for drainage, building, sanitary purposes, and fancy ware, in clays which have been proved to the most searching analysis, and pronounced by scientific men of the highest eminence to be of the most durable and indestructible quality. The pipes are wrought by Stephen's Patent Machine, by which tube and socket are cut, without a manufactured joint, and rendered the more compact by high pressure; and as every improved apparatus has been made available to secure the highest excellence with the greatest economy of labour, the wares are put upon the market at a considerable reduction from the prices of inferior articles for others at all assimilating in quality, whilst the stock on hand is always sufficiently large to provide for works of the greatest magnitude.

THE TRADE LIBERALLY TREATED WITH.

Price-lists and Diagrams sent free on application,—
At the WORKS.....To Mr. WM. FORD Darfield Fire-clay Pottery, near Barnsley.

DURABILITY of GUTTA PERCHA

TUBING.—Many inquiries having been made as to the durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in giving publicity to the following letter:—FROM SIR RAYMOND JARVIS, Bart., YELVERTON, ISLE of WIGHT, —Second Testimonial.—"March 10th, 1852.—In reply to your letter, received this morning, respecting the Gutta Percha Tubing for Pump Service, I can state, with much satisfaction, it answers perfectly. Many Builders, and other persons, have lately examined it, and there is not the least apparent difference since the first laying down, now several years, and I am informed that it is to be adopted generally in the houses that are being erected here."

N.B. From this Testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.

THE GUTTA PERCHA COMPANY, PATENTEES,
18, WHARF-ROAD, CITY-ROAD, LONDON.

N.B. All communications and orders punctually attended to, addressed to the Manufactory, JAMES LYNE HANCOCK, Goswell-mews, Goswell-road, London.

SALES BY AUCTION.

TOWER.—SALE of STORES.— By order of the Secretary of State for War.—TO BE SOLD by PUBLIC AUCTION, in the TOWER on WEDNESDAY, DECEMBER 31, 1856, at HALF-PAST TEN o'clock, in the Forenoon precisely, the following Stores, lying at the Ordnance Land Office, viz.:—Accoutrements, Clothing, Cocks, Sheers and Rice Barrels, Hair Beds and Bolsters, Tin Canteens, Copper Powder Measures & Funnels, Anchors, & Screws, and Miscellaneous Articles.—May be viewed at the Victoria Docks, from TEN to FOUR o'clock on the Days previous to the Sale, and Catalogues had at the War Department, Pall-mall, the Tower; Victoria Docks, and Royal Arsenal, Woolwich, on payment of Sixpence each, which will be allowed to purchasers. No person will be admitted to view the lots, or into the Sale-room, without a catalogue.

VALUABLE FREEHOLD LAND, EAST BARNET.—TO BE SOLD by PRIVATE CONTRACT, about THIRTY ACRES (in separate field-lots) of FREEHOLD BUILDING LAND, finely situate in the vicinity of the Great Northern Railway station, and which is admirable in respect for building purposes, having extended frontages upon the high road on each side of the railway, and also upon newly-formed roads. The situation is noted for its salubrity, scenery, and facility of communication with London.—For further particulars, apply at Mr. THYNNE'S Offices, 11, Great George-street, Westminster.

FREEHOLD LAND WANTED, about Fifty Acres, within an hour's ride of London by railway, suitable for the ERECTION of a LUNATIC ASYLUM, and contiguous to a high road.—Particulars stating the locality, soil, quantity of land, and price, to be sent to Mr. BUNNING, Architect, Guildhall, London, on or before the 1st of JANUARY 1857.

ELIGIBLE OPPORTUNITY for INVESTMENT or OCCUPATION.—ROUPELL PARK ESTATE, Palace-road, Streatham-hill, on a gravelly soil, within two miles of the Crystal Palace and five miles of town.—TO BE LET, furnished or unfurnished, or the LEASE TO BE SOLD, of a capital FAMILY MANSION, built and fitted by the freeholder in the most superior manner, regardless of expense; containing nine bed-rooms, dressing-room, morning-room, lofty room, nursery, elegant drawing-room, dining-room, and library, with all the usual offices appertaining to a first-class mansion. Attached is a good coach-house and stable, with lofts and rooms over. The whole stands in a large walled garden, with carriage-drive to the front entrance. From its elevated position, the house commands uninterrupted views of the park and surrounding country. The neighbourhood is select. There are three churches in immediate vicinity, and the station to the City, West end, or South Coast Railway is within half-a-mile of the house. The estate is well-lighted with gas, has excellent drainage, and a plentiful supply of pure water. The lease of ninety years may be purchased at a ground-rent to pay the purchaser 7 per cent.; and if desired, two-thirds of the money may be left on mortgage at 4 per cent. For further particulars, apply to Messrs. ROBINSON and ROBSON, Upholders, &c. 28, Margaret-street, Cavendish-square.

FINCHLEY.—LAND fronting the Regent's Park-road, and East-end-road, TO BE LET on Building Leases for ninety nine years, with power of enfranchisement. Plots from one to four acres for first-class residences; also other plots for semi-detached houses, and plots for shops in the village. Apply to W. A. BOULNOIS, Esq. Architect, 6, Waterloo-place, Pall mall; or to Messrs. BARKER, BOWKER, and PEAKE, 1, Gray's-inn-square.

FREEHOLD LAND TO BE LET, on Building Lease for ninety nine years. Money advanced to responsible parties. Freehold Land to be Sold for building purposes in eligible situations.—Apply at the Offices of Messrs. MORGAN and PHIPSON, Architects, 3, Prince-Imp.st, Clement's Strand.

ALDERSHOT.—Several eligible BUILDING SITES TO BE SOLD, immediately fronting the permanent Barracks at the South Camp.—For particulars, apply to Mr. R. A. DAVIS, Land and Engineering Surveyor and Valuer, Basingstoke, Hants.

TO BUILDERS and OTHERS.—Eligible BUILDING GROUND TO BE LET on BUILDING LEASES, or SOLD, in a neighborhood where leases are in much request.—Plans may be seen, and particulars obtained, of Mr. W. R. GLASHAN, Auctioneer and Land and Estate Agent, Clerkenwell.

NORWOOD.—TO BE LET or SOLD, on very moderate terms, TWO well-built, detached FAMILY RESIDENCES, with stable-buildings and oak gates, being Nos. 2 and 3, Clifton Villas, Albert-road, a route upon an eminence commanding extensive views, and within one mile of the Railway from the Normal Crystal Palace, and the Railway Station. May be viewed on application from the Premises, and further particulars obtained of Messrs. TIRES and CHAMBERS, Auctioneers, 2, Queen-street, Cheapside, and of Mr. BIGGS, Auctioneer, Albion-place, Upper Sydenham.

£83 per year TO BE SOLD for 600*l*. Lease above 90 years. They are livery stables in the main and leading thoroughfare of Chelsea, thoroughly drained, deep well with pump, and good supply of water. Payment would be taken in brick, timber, or iron.—Apply to GILBERT TODD, Jun. Builder, Glebe-place, King's-road, Chelsea.

FREEHOLD ESTATE, of 100 ACRES, forty miles from London, TO BE SOLD, with about a mile-and-a-half of road-frontage, and a capital Residence and Offices. The land is within a ring-fence, about a good carriage-drive, within a mile of Farnham town and railway station, and three from Aldershot Camp. It is free of tithe and land-tax, and a perpetuity for fifty Pounds. Price 2,800 guineas.—Apply to Mr. RIDLEY, Estate Agent, Farnham.

ALDERSHOT CAMP.—LAND TO BE LET, for Shops or Stores, direct opposite the Farnborough station; first-rate situation for all persons who are much wanted. Frontages to be let, at a fair but temporary building rent, for Seven or Twenty Years, with power to remove buildings. Also, some first-rate Frontages, close to the permanent Barracks now erecting, to be Let, on Building Lease for Ninety-nine Years.—Apply to Mr. RIDLEY, Estate Agent, Farnham.

TO BUILDERS and OTHERS.—UNFINISHED HOUSES—TO BE SOLD, FIVE HOUSES, together or separately, in different stages of progress on favourable terms. They are in a neighborhood where they will immediately let when finished, and apply to Messrs. ROBERTS and BULL, Architects, Bedlesstead Cavendish-square.

TO CARPENTERS, BUILDERS, and OTHERS.—A BUILDER'S SHED, with CARPENTER'S SHOP over ditto for sale, of seven bays, in the neighbourhood of Shoe-hill, TO BE LET, suitable for a wheelwright or stabling, &c.—Apply to H. MADGIN, 31, Abbington-street West, Islington.

TO ENGINEERS and MANUFACTURERS. Large PREMISES TO BE LET, with or without the steam power, situate near Stamford-street, Blackfriars road. Apply to WILLIAM CLARKE, House Agent, 54, Broadwall, Blackfriars road.

ARCHITECTS, BUILDERS, ENGINEERS, and SURVEYORS can be IMMEDIATELY SUPPLIED with COMPETENT ASSISTANTS (temporary or otherwise). Those in want of such assistance and qualified parties to be engaged. The registry is open to employers, or their Agents, at the Office, 4, Trafalgar-square.

CHELMER and BLACKWATER NAVIGATION.—WANTED a competent PERSON as SUPERINTENDENT of the above Navigation. Notice to be given of length. The salary will be 120 per annum: full particulars of the duties to be performed may be had of me. Written applications, with references as to qualifications and experience in the erection and repair of locks, sluices, and other ordinary works, belonging to a canal, to be sent to me, on or before TUESDAY, the 6th JANUARY next. By order of the Committee of Proprietors, ROBERT BARTLETT, Clerk.

Chelmsford, December 22, 1856.

KEIGHLEY CEMETERY, Yorkshire.—WANTED IMMEDIATELY, a Person to fill the office of REGISTRAR of the above cemetery. He will be required to keep the books, perform the duties of head-gardener, and also occasionally to officiate at interments in the unconsecrated portion of the ground. The salary will be fifty guineas per annum, with house, free of rent and rates. For further particulars, apply to Mr. GEORGE SMITH, Clerk to the Burial Board, Keighley, to whom all applications with references must be addressed, on or before FRIDAY, the 1st day of JANUARY, 1857.—By order of the Burial Board—Keighley, Dec. 5, 1856.

WANTED, a MANAGING CLERK, in a BUILDER'S OFFICE. One who could look after buildings and the general business in the principal's absence. He will require to be a good draughtsman, write specifications, make out detailed estimates, keep the books of the office, and make himself generally useful. A Protestant preferred. State the age. Apply to JOSEPH M'AULEY, Post-office, Ballymena.

WANTED IMMEDIATELY, in a Builder's Office, a CLERK, one who thoroughly understands keeping builders' books, and making out accounts.—Apply, by letter only, stating age, references, and salary required, to W. 3, Melbourne-terrace, Prafd-street, Caun-ten-town.

WANTED IMMEDIATELY, a middle aged married Man, as CLERK, who possesses a thorough knowledge of land surveying and levelling, and has had experience therein; he must also be a good draughtsman. A residence will be provided; and should the party suit, the situation would be permanent.—Apply, by letter stating terms, with references, and where last employed, to E. B. Mr. May's, *Taunton Courier* Office, Taunton.

TO CARPENTERS AND BUILDERS

WANTED, by a Young Man, aged 28, a SITUATION as CARPENTER and JOINER at low wages. The bench preferred. Testimonials if required.—Address, W. SMITH, 31, Herm-street, Seven Dials.

TO BUILDERS

WANTED, EMPLOYMENT by an experienced CARPENTER and JOINER, aged 31, or to take charge of a small Job, as town or country. Good references.—Address J. W. 35, Mabley-place, Bull's-pond road, Islington.

TO BUILDERS AND PLUMBERS.

WANTED, by a Young Man, a SITUATION as PLUMBER, PAINTER, and LEAD-LIGHT GLAZIER. Good references can be given, if required, from his late employer. Address, M. C. No. 29, Bedfordbury, New-street, Covent-garden.

TO CIVIL ENGINEERS, RAILWAY CONTRACTORS, &c.

WANTED, by a Man of great practical experience, an ENGAGEMENT, to SUPERINTEND the CONSTRUCTION of RAILWAY and other PUBLIC WORKS. Has been constantly employed in a like capacity for the last twelve years in England and Ireland, by one of the most eminent firms in those countries. References of the highest character can be given. For further particulars, apply by letter only, to E. B. 89, Newington-square, Hackney-road, N.

TO ARCHITECTS

THE Advertiser, who is a first-rate DRAUGHTSMAN, and has a thorough knowledge of detail and construction, is open to an ENGAGEMENT.—Address, G. G 39, Michael's-place, Brompton.

TO TIMBER-MERCHANTS, SAW MILL PROPRIETORS, &c.

THE Advertiser is desirous of an ENGAGEMENT to SUPERINTEND TIMBER-YARD and SAW MILL; has had several years' experience in the erection and control of steam-power saw-mills; is well in the habit of buying, has also a perfect knowledge of the timber trade, and having conducted many extensive building operations, would be very useful to a party, the roughly conversant with accounts, and a ready correspondent.—Address, L. Office of "The Builder."

BUILDER'S CLERK.—A Young Man, having just left an eminent firm, and has excellent references and testimonials as good builder's accountant, and fully competent to carry out works, is desirous of RE-ENGAGEMENT. Address, A. P. Mr. Collis's, Ulverston, 3, Prince-terrace, Commercial-road, E.

A PRACTICAL CLERK of WORKS wishes RE-ENGAGEMENT. Is well recommended as to character and ability.—Address, R. T. D. Post-office, Hunderosa, Sandgate, Surrey.

A CLERK of WORKS is desirous of an ENGAGEMENT. Practical knowledge of all classes of building, roads and road-making, measuring quantities, specification, &c.—Address, L. B. 5, Wallbrook.

AFTER CHRISTMAS, a Young Man, 33 years of age, who has had many years' experience as Bookkeeper, is desirous of meeting with EMPLOYMENT, either temporary or permanent, in making up trade-men's accounts, whether in a small or large way of business.—Address, V. T. C. Office of "The Builder."

TO BUILDERS AND OTHERS

A HIGHLY RESPECTABLE, middle-aged Gentleman, accustomed to the routine of a public house or building office, has a few pounds to invest, and would be glad to meet with EMPLOYMENT in any capacity where the above qualification is added to great knowledge of the world, and considerable experience in accounts in arrear, made up on very low terms. The most satisfactory references can be given.—Address, S. V. T. X. Office of "The Builder."

TO WATER-WORKS AND SEWERAGE ENGINEERS

AN ASSISTANT, aged 32, wants a RE-ENGAGEMENT, either to get out contract or other drawings, or to superintend the construction of works. He has recently superintended the construction of sewers in a large provincial town, has experience in steam engineering, pumping and other engines; and understands the levels well. Has good testimonials. Address, A. B. Z. D. Mr. Newsagent's office, Edgeware-road.

DRY WAINSCOT, in all thicknesses.—A large stock of superior, dry, and well-seasoned, at HENRY BATEMAN'S, Timber Merchant, 35, Bird-street, Bishop gate-street, London.

MAHOGANY and WAINSCOT seasoned by Symington's New Patent Process.—JOHN COUMBE solicits an inspection of his stock. The above process enabling him to season his wood in a comparatively short space of time, he sells at prices generally charged for wet wood.—Address, PATENT WOOD SEASONING WORKS, Lady Lake's-grove, Mile-end-gate.

NOTICE of REMOVAL.—EDWARD SIMMS begs to inform his customers and friends that he has REMOVED his business from Wilton-road, Pimlico, to the KING'S-ROAD, CHELSEA, where their orders will be promptly executed as heretofore.—Please address, E. SIMMS, King's-road, Saw mills, Chelsea, opposite Manor-street.

FURTHER REDUCTION of PRICES.—SAMUEL PUTNEY invites the attention of buyers to his large and well-selected STOCK of DEALS, and the reduced Prices of prepared Flooring, &c.

ROBINSON and BARTRAM, SAWING and PLANING MILLS, BELVIDERE-ROAD, LAMBETH, and WOLVERSEY, BURNHAM, having completed powerful MACHINERY for SAWING TIMBER, for building purposes, will be glad to receive ORDERS in this department, and beg to assure their friends that all favours shall be executed in the best manner, and with the utmost punctuality and despatch.

LETT'S WHARF PATENT SAWING, PLANING, and VENEER KNIFE-CUTTING MILLS, Commercial-road, Lambeth. The Proprietors beg to announce to the Trade that they have completed their extensive arrangements, and will be happy to execute all orders entrusted to their care with despatch and punctuality. Wet and dry docks, and powerful cranes for loading heavy goods, offer facilities not to be obtained elsewhere. A large assortment of seasoned prepared flooring match boarding, &c. &c. always in stock at reduced prices.

STAINING DEAL TO IMITATE ALL KINDS of WOODS it requires NO SIZING, and will stand the exposure to the weather. Price 6s. per gallon. Varnishes for W. RAYLOR'S Stains may be had at the Factory, 4a, James-street, Oxford-road; also Manufacturer of Improved Knotting (Prepared Lead for Enamel White), and Varnishes.

TO FRENCH POLISHERS, CABINET-MAKERS, BRASS-WORKERS, &c.—A considerable reduction has taken place in the price of French polish, white and brown hard spirit varnishes, spirit lackers, and finishing spirit. The present price is 6s. 6d. to 7s. per gallon; white French polish, 10s. per gallon; white shellac, is. 8d. per lb.; gums, shellacs, and acid at the lowest prices. A net cash list forwarded on application to JAMES SLIPPER, 87, Leather-lane; and 14 and 15, Dorrington-street, Holborn, London.

PAPER-HANGINGS.—The CHEAPEST HOUSE in London for every description of PAPER-HANGINGS is GROSS'S WHOLESALE WAREHOUSE, 32, GREAT PORTLAND-STREET, Oxford-street, where you can select from the LARGEST and MOST EXTENSIVE Assortment in the Kingdom. THIRTY PER CENT. CHEAPER than any other house in the trade. Builders, Decorators, Dealers, and large consumers will do well to visit this establishment.

TO SURVEYORS, ARCHITECTS, ENGINEERS, &c.

PATENT TRACING-CLOTH. The Patent Tracing Cloth is an invaluable substitute for tracing paper, and is used by the most eminent Engineers, Surveyors, and Architects in this kingdom and in foreign countries. It will also be found useful for school purposes, &c.

Sold wholesale and retail by JOSHUA SMITH, Manufacturing Stationer and Patent Adhesive Envelope Maker, 42, RATHBONE PLACE, LONDON.

LONDON: Printed by CHARLES WYMAN, Printer, at the Printing Office of COX and WYMAN, No. 74 and 75, Great Queen-street, Lincoln's-inn-fields, in the Parish of St. Giles-in-the-Fields: and published by the said CHARLES WYMAN, at the Office of "The Builder," No. 1, York-street, in the parish of St. Paul, Covent-garden, both in the County of Middlesex.—Saturday, December 27, 1856.
